In the same sense that some 6 years ago President Johnson came to the Senate and asked for our concurrence in the Gulf of Tonkin resolution that preceded an escalation of the war, so it seems to me that it is logical for the President, looking at this very complex, divisive, and troublesome issue, to want to share with Congress the responsibility of ending the war.

I must say, speaking as one who has been in the political life of this country for a number of years, that it is difficult for me to understand why the President would not seize on that opportunity to share what will obviously be a very controversial and, perhaps, unpopular decision on his part, and that is to order the withdrawal of American forces at some point, stopping short of a military victory.

The President said that we are not trying for a military victory. He ruled that out as American policy. He said we are trying for a negotiated settlement; that we have long since given up the idea of a military decision. That being the case, it is quite clear there will be large numbers of Americans who will be looking for a scapegoat on which to blame what they will regard as an unacceptable settlement of the war, a settlement that stops short of a knockout punch of our adversary.

So it would seem to me that this being a decision of that kind, one that could set off continued debate and recriminations in the country, the more jointly we can share in the decision of the executive branch, the more we reduce the danger of the kind of "scapegoating" that could divide the Nation for years to come.

I do not think anyone has yet proposed a settlement of this war that will be enormously popular. There is no way to back away from a disaster of this kind, from the blunder we made in Indochina. The best we can do is end the blood bath and our involvement there as quickly as we can. No one has the wisdom to come up with a decision to make everyone happy.

Therefore, I plead with the President and his supporters to see this amendment not as something representing a slap in the face to the White House, the Department of State, or the executive branch of our Government, but as a formula well within the spirit and letter of the Constitution of the United States, which places in the Senate and in the Congress the obligation to make these decisions about the commitment of American forces and American military operations of all kinds.

It would seem to me that would be one of the most compelling arguments in support of the amendment.

Mr. President, the pending amendment to end American military involvement in the affairs of the Vietnamese people raises a number of important issues.

The first of these is that the amendment offers a practical formula for terminating our involvement in what seems to be an endless and futile conflict, and it does that by setting an announced timetable, by which we would agree to a particular time for the withdrawal of our forces.

The alternative of such an action is many more years of brutal and hopeless conflict, in which we can anticipate that thousands of young Americans, to say nothing of thousands of Asians, will be killed and crippled. Billions of dollars more in resources will be wasted, and there will be the further rending of our society.

It seems to me the burden of proof is on those who would gamble with an indefinite continuance of this war, and that it behooves them to demonstrate to us what we hope to gain as a country by continuing this war with no announced timetable for withdrawal of all of our forces. What would be gained by the sacrifice of several thousand additional American lives and many more billions of dollars, and the continued destruction of the people of Vietnam and their countryside?

If it is true, as the President has said—and I believe he means it—that we have given up hope for a military victory, what do we hope to accomplish by continuing this war month after month? What do we believe there is in our present policy to produce negotiations in Paris when that policy has produced no progress at the Paris negotiations session after session?

What evidence is there that the South Vietnamese regime in Saigon is prepared to have us withdraw American forces from their country? To be sure, the President talked in terms of another reduction of 150,000 men, but that still leaves us with 280,000 American forces committed to Vietnam; and with all the pressure remaining on the other side to make it just as difficult and painful for us to stay.

I think the burden is on those who defend the present policy, a policy that has not produced a military victory, a policy that has not produced a negotiated settlement, a policy that has not produced a willingness on the part of the government in Saigon to stand up on its own feet.

Advocates of the policy now being pursued in Vietnam maintain that they

have no dispute with the authors of this amendment in wanting the war to end. Surely, that must be the case. They argue further that the President is meeting the objectives of this amendment; that he is withdrawing troops and moving toward American disengagement; and they ask us why we tamper with the administration policies in view of troop reductions that have already taken place.

I would like to suggest, based on the incredible cost of this war, that we question those policies with all the wisdom and courage we can muster. It is my hope that as the debate proceeds today and continues Friday, Saturday, and Monday, with the vote coming on Tuesday, we can use this occasion as a kind of balancing off of the alternatives that are available to us; that we will consider very carefully the cost we can be expected to pay if we continue on our present course with no set timetable for withdrawal of our troops, against the background of all the likely effects of this amendment upon our own people and the contesting forces in Saigon and Hanoi.

I trust that we have not grown so accustomed to the killing and maiming of our young men that we now regard it as the natural order of things, to be changed or ended only upon the most compelling and convincing evidence. The natural order is for those young men to live. Many of them resent their forced participation in a war they regard as foolish and pointless.

The President has withdrawn troops. Yet, we cannot escape the fact that over 15,000 Americans have died since January of 1969, or that nearly 100,000 have been wounded. The terrible toll mounts each week.

Recently, a former Defense systems analyst prepared a study of the probable U.S. casualty rates we can expect under various policy alternatives. His conclusions are based upon past experience.

He found that in the absence of a definite timetable for withdrawal next year and if current withdrawal rates are continued so that all Americans are out in early fiscal 1973, we should be prepared to accept at least 5,400 more combat deaths and 42,500 combat wounded.

If withdrawals were to stop when the level of 50,000 troops is reached, some 7,200 Americans will be killed and another 57,100 will incur injuries by fiscal 1975.

If we maintain, as is widely expected under the President's program, a force level of about 225,000 men, some 14,700 will be killed and 115,000 wounded in the next 4 years. Meanwhile, the loss of Vietnamese life would continue on a much larger scale.

Other costs of the war seem almost insignificant next to the horrible sacrifice of human life and limb which is still being exacted. But they continue to tear at the very fabric of our society.

We have poured at least $115 billion directly into the conflict. It costs $57 million each day. One economist has calculated that hidden costs such as the loss of productive manpower bring the total cumulative price to $219 billion.

War-borne inflation has robbed the purchasing power of every dollar in circulation by as much as one-fourth since 1964. Real corporate profits have dropped by 17 percent since 1965. The real average income of U.S. production workers has dipped by 2 percent in the last 5 years. The war has brought a painfully unique experience to our economy—a combination of inflation and recession at the same time.

Meanwhile, domestic priorities—schools, housing, conservation, anticrime efforts, and others—have been forced to await the release of Vietnam funds. The needs of millions of Americans are given only half-hearted attention, while we invest our blood and treasure in an unrepresentative band of corrupt rulers in Saigon.

Beyond this and, in part, because of it, we have been forced to watch the deterioration of our national spirit. The violence practiced by a few self-styled revolutionaries has diverted attention from the quiet disillusionment and despair felt by millions of Americans, young and old. We cannot even begin to repair the deep divisions brought by the war until the war itself is ended.

It is on the basis of these enormous burdens that Congress must ask why the war goes on. If those who support current administration policy covet the title "Peacemaker," let them tell us what will be gained by pressing on with this hopeless venture; what we will have, at the end of more years of conflict, to justify the lives and bodies that will be destroyed for so long as it continues.

VIETNAMIZATION

We are told now that we pursue but one essential aim in Vietnam—to secure the right of "self-determination" for the South Vietnamese people. That is the President's description, often difficult to locate amidst the wildly ambitious claims of his supporters.

But even that single goal of Vietnamese self-determination is contradicted by our own actions. We define it in terms of the Thieu-Ky government, whose contempt for self-determination is exhibited almost daily. That regime jails its critics. It steadfastly refuses to conduct economic and social reforms which might broaden its political base. It excludes important non-Communist elements from any sort of political participation. Our embrace of that regime effectively denies to the Vietnamese people the very goal we profess to seek.

How can we sustain this claim while at the same time suppressing surveys indicating that if the South Vietnamese were afforded the opportunity to choose, the vast majority would ask that we leave their country while only a tiny percentage—one-twentieth—want us to stay. What are we to say about self-determination when a public opinion survey sponsored by American officials in South Vietnam this summer indicated that 65 percent of the Vietnamese people want us to leave their soil now, 30 percent had no opinion, and only 5 percent wished us to remain? Is it surprising that a red-faced U.S. command in Saigon suppressed this poll?

Regardless of how we view the objectives announced by the President, we must also question whether there is any hope that they can be achieved under the strategy he proposes to follow.

Today's military approach—Vietnamization—brings to mind previous attempts to turn the war over to the South Vietnamese. The following words might well be employed to describe the current approach:

> With a little more training, the Vietnamese army will be the equal of any other army in its ability to combat the enemy and will be able to defend itself against the Vietminh if attacked.

But they were spoken nearly 15 years ago by then Secretary of the Army Wilbur Bruckner. In truth, Vietnamization has always been our strategy, even before the progressive "Americanization" for the war. It is as barren now as it has always been.

We should be absolutely clear that Vietnamization is not a route toward peace or toward an end to U.S. involvement. At best it can do no more than reduce the number of American forces, and, perhaps, the number of casualties. But they will not end because the war will not end. On the battlefield, Vietnamization merely continues the policy of military attrition in the hope that the other side will eventually become discouraged and come to terms.

It is impossible to calculate the number of troops that can be safely withdrawn under this strategy. The main influence will be exerted by factors totally beyond our control—primarily the competence and dedication of South Vietnamization forces and the level of activity maintained by the adversary.

We do know, however, that our commanders in the field have been in constant dispute with administration civilian policymakers in this country over the withdrawal schedule. They want to slow it down now, even though some 400,000 Americans still remain. General Abrams was reported to resist the April announcement that 150,000 more would be taken out.

The concern expressed by military commanders is understandable. I share it. It is wholly unreasonable to expect our military to pursue the same goals with constantly shrinking numbers. In addition, it poses grave risks to our troops. Their capacity for self-defense is depleted and their dependence upon unreliable South Vietnamese forces grows each time more Americans are pulled out. And so long as there is no commitment to complete withdrawal, we can expect that our manpower will be primary targets of enemy attacks. I submit that Vietnamization exposes American men to more danger than virtually any other alternative. It literally invites the sort of defeat the administration fears so deeply.

Today, we have two fresh illustrations of the fragility of the Vietnamization program. The first is the fact that administration spokesmen almost without fail respond to our proposal for complete orderly withdrawal with alarmed predictions of the imminent collapse of South Vietnam. According to the Vice President, for example, withdrawal in a year's time, as we have proposed, would

bring "collapse of the government, chaos in the country—and ultimately the kind of communism that literally decimated the civilian population of Hue in the Tet offensive." We cannot avoid asking that if South Vietnam is in such dismal shape now, after all these years of help and with a numerical superiority of some 4 to 1 over enemy forces in the South, how can we believe that they will soon develop the capacity for their own defense.

The sequence of events in Cambodia since February of this year is a second clear indication that Vietnamization is a losing game. The administration denies that we have assumed any commitment to the wobbly new government in that country, just as it has denied all along that the decision to send troops on May 1, was inspired by a desire to prevent the collapse of that regime.

Yet, the presence or absence of a formal commitment is really irrelevant in the present context. What is relevant is the rationale for the new program of aid to Cambodia. According to the Vice President:

"We're going to do everything we can to help the Lon Nol government" because, "the whole matter of Cambodia is related to the security of our troops in Vietnam."

We should not be surprised by this statement. It reaffirms what the President said just 5 months ago:

> If this enemy effort succeeds, Cambodia would become a vast enemy staging area and a springboard for attacks on South Vietnam along 600 miles of frontier; a refuge where enemy troops could return from combat without fear of retaliation. North Vietnamese men and supplies could then be poured into that country jeopardizing not only the lives of our men, but the people of South Vietnam as well.

In truth, the administration has been saying throughout the Cambodian episode that the Vietnamization strategy will collapse if the Communists are successful next door. As the Vice President said so bluntly last weekend, the survival of the Lon Nol government has become a precondition to the success of the Vietnamization program and our withdrawal from Vietnam. A commitment to Vietnamization is in practical effect precisely the same thing as a commitment to insure the survival of Lon Nol. It means that we are now, in Cambodia, right back where we started in Vietnam a decade ago. The only difference is that thus far South Vietnamese forces are used to shore up the Cambodian Government while American manpower takes their place back in Vietnam. Yet, even as many as 40,000 ARVN troops are barely able to defend Phno Penh, while the Communists freely roam the countryside. In spite of the President's claim of a great American victory in Cambodia, the hard truth is that events in Cambodia have dealt a staggering blow to the whole Vietnamization strategy. The central Communist headquarters the President said we were attacking in Cambodia was never found, and the border sanctuaries he said we were eliminating have now spread over half of Cambodia.

If the battlefield outlook is alarming, there is perhaps even less reason for optimism about the prospects at the negotiating table.

The U.S. position remains essentially the same as announced in May of 1969. It calls for mutual withdrawal of all United States and North Vietnamese forces, to be followed by elections set up by a commission in which the National Liberation Front would participate.

North Vietnam and the NLF have steadfastly refused to accept these terms. They doubtless regard them as a method of assuring their exclusion from any postwar government. I suspect they see such a settlement as abandonment of the minimum objectives for which they have battled these many years. They insist upon prior U.S. withdrawal and a provisional coalition government preceding elections.

Regardless of whether we can discern reason in their position, we do know that they are not buying our plan and we do not have the power to force it on them. The Thieu-Ky government, meanwhile, adamantly refuses to share their power with any group, ruling out a coalition government which could be an alternative route toward free elections. And we allow them to dictate our own position on this score.

This is the stalemate which prevails in Paris. We cannot pose credible threats of military pressure while reducing our forces, whereas the adversary has 400,000 crack troops poised in North Vietnam not yet committed to battle. We cannot arrange acceptance of the coalition concept by the Thieu-Ky regime because they know we are committed to their political survival and they can therefore dictate our terms by exposing their own weaknesses. Our policy has been imprisoned, Saigon and Hanoi have the only keys, and they have no inclination to release us.

In sum, present policy combines the worst elements, and none of the attributes, of efforts to win and efforts to get out. It enfeebles our hand in Paris and emboldens the Thieu-Ky government to become even less accommodating. It continues the decimation of the Vietnamese people and their ravaged country. It invites the Thieu-Ky government to abuse our help.

Mr. President, this policy simply cannot succeed. To believe that it can defies all of our catastrophic experience in Vietnam, to say nothing of the nearly 20 years of struggle that went before.

THE LESSONS OF VIETNAM

What is perhaps most distressing about the course chosen by the administration is its failure to accept the wisdom which should flow naturally from a mistake as monumental as our early decision to become involved in Vietnamese affairs. Those lessons cry out desperately for our attention.

We should know by now first, that notwithstanding any preferences we might have, South Vietnam's form of government has no bearing at all on any critical interest of the United States. Our own freedoms will not be diminished regardless of what happens there. Surely, we must recognize that tiny North Vietnam could possess no designs upon our national safety.

Second, we must perceive that ideologies do not knock nations over like dominoes. Where governments are unrepresentative and unresponsive to the aspirations of their people, there is danger that Communist insurgency will attract significant support. Where the indigenous government is strong, it need not fear subversion. In either case, its fate will depend almost entirely on local conditions which we are powerless to control.

Third, for the same reasons, the theory of "exemplary wars," holding that by fighting in Vietnam we somehow discourage communist-inspired "wars of national liberation" elsewhere, is mere shadow. Perhaps it is enough to note that the President's pledge of "no more Vietnams" simply cannot coexist with the premise that the example of Vietnam will deter revolutionaries in other nations.

Fourth, the war in Vietnam is not and never has been, except in the imagination of American policymakers, a struggle between global powers. Neither China nor the Soviet Union has regarded Vietnam highly enough to risk direct involvement. It is as peripheral to them as it should be to us, and as much beyond their control.

Fifth, our involvement has been destined to fail from the outset, only in part because of the character of the leadership in Indochina with which we have become identified. In a nation inspired by a 20-year quest for independence, leaders who hold power solely because of the props of a foreign power cannot hope to win the confidence of their own people. They are the antithesis of independence.

Sixth, through our effort in Vietnam, coming on the heels of the French campaign to retain its colonial domination, we have probably done more to encourage communism in Asia than anything else we might have done; certainly more than that dismal ideology might have accomplished on its own.

We have offered it the power to identify with long-held aspirations for national independence, while our alternative is offered through the likes of Thieu and Ky. They, and the horrible, indiscriminate destruction rained by heavy bombing, free fire zones, and other characteristics of battle, are what we supply to the simple people of South Vietnam as a definition of liberty and democracy. They must regard our philosophy of government as something to be avoided at almost any cost. All Americans might well be indignant at the affront to our cherished principles which flows from our embrace of the despotic generals in Saigon.

Seventh, there can be no military solution to the Vietnam conflict—unless we are willing to inflict such incredible destruction that a "victory" would have no meaning for anyone. We can make things more difficult for the Vietcong and the North Vietnamese. We can, if we are to remain indefinitely, prevent a military victory by the other side. But such accomplishments are empty in a guerrilla war. Presidential advisor Henry Kissinger told us why in an article in January of last year:

The guerrilla wins if he does not lose. The conventional army loses if it does not win.

By his definition, the war has been lost for many years.

THE AMENDMENT TO END THE WAR

We must, therefore, define our choices in precise terms.

We do not ask the Senate to choose between withdrawal and victory in Vietnam. The choice is between withdrawal at a definite time—the end of 1971—and withdrawal later, at an unspecified time, after the terrible toll has mounted still further.

We do not pose a choice between abandoning and saving the Thieu-Ky government. Instead, the issue is whether we will let despots in another land—already the beneficiaries of unparallelled American generosity and sacrifice—continue to dictate American policy, or whether we will serve notice that it will soon be time for them to fight their own battles, or make their own peace, and stand on their own feet.

Nor is self-determination for the Vietnamese people at issue, unless we recognize that we will enhance their opportunity for self-determination if we stop imposing upon them a regime whose contempt for democratic process is flaunted every day.

The question is not whether we will hold or lose the credibility of our international commitments. It is whether or not we will begin to regain the international confidence in American wisdom and prudence that wanes each day the war goes on.

The policy we propose will save American lives. It will remove them from danger. And it must be compared to a policy which would leave dwindling numbers of troops increasingly vulnerable to attack and increasingly reliant upon unpredictable South Vietnamese forces for their defense.

Our proposal will improve the chances for release of American prisoners by removing the incentive to hold them and by making possible the creation of incentives to set them free. It stands against our present policy under which the number of prisoners will probably increase.

We suggest a serious search for a means of preventing political reprisals against South Vietnamese. It must be matched against a war in which tens of thousands of innocent civilians are killed each year, mostly by the indiscriminate firepower of United States and South Vietnamese forces.

Of critical importance, our plan offers some hope for meaningful negotiations by breaking down intransigence on both sides of warring Vietnamese. It stands against a policy that has produced only months of deadlock and that can promise nothing but more of the same.

I will discuss the very important constitutional issues involved in the amendment to end the war at a later time in the debate.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. McGOVERN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McGOVERN. Mr. President, I would like to make note of the fact that in the printed version of our amendment that was submitted yesterday an error was made by the Printing Office. In the first subsection, the two words "in Vietnam," which should have appeared after the words "armed forces of the United States," were left out.

The error is being corrected by the Printing Office, but I wanted to mention it now to avoid any confusion that might take place as a result of that error.

This is the section of the bill that would limit the number of American forces in Vietnam to 280,000 after April 30 in Vietnam. Then following that April 30 deadline, the remaining 280,000 would have to be pulled out by December 31, 1971.

Mr. BROOKE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BROOKE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 799

Mr. BROOKE. Mr. President, on behalf of myself, the Senator from New Hampshire (Mr. McINTYRE), and the Senator from Michigan (Mr. HART), I call up amendment No. 799 to H.R. 17123, and ask that it be read.

The PRESIDING OFFICER. Does the Senator ask unanimous consent for its consideration?

Mr. BROOKE. I ask unanimous consent.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be stated.

The legislative clerk read the amendment (No. 799) as follows:

On page 14, between lines—and —, insert a new section as follows:

"SEC. 206. The Secretary of Defense is authorized and directed to initiate a program of research to develop at the earliest possible date, a single reentry vehicle system for the Minuteman III missile and a single reentry vehicle system for the Poseidon missile. For purposes of this section "a single reentry vehicle system" is a system capable of only deploying a single reentry vehicle and its associated penetration aids. The funds to be expended in carrying out the provisions of this section shall be funds transferred from other projects by the Secretary pursuant to his authority under existing law to transfer funds from one project to another."

The PRESIDING OFFICER. Is it the Senator's understanding that the total time allotted to the Senator from Massachusetts on his two amendments is 3 hours?

Mr. BROOKE. No, I think there is a unanimous consent agreement for 3 hours on each of these amendments, Mr. President.

The PRESIDING OFFICER. The amendments are not numbered in the agreement.

Mr. BROOKE. I think there are 3 hours on each of the amendments. This one has 3 hours.

The PRESIDING OFFICER. The Senator may proceed. How much time does he yield himself?

Mr. BROOKE. I yield myself 15 minutes.

Mr. President, Senate consideration of the defense procurement authorization comes at a moment of extreme delicacy in many realms of national security policy—the strategic arms limitation talks are in a crucial phase, the strategic balance is poised at the edge of far-reaching changes, defense spending is tottering under the challenge of competing domestic demands. Among the many issues we must consider in this debate, none is more critical than that of MIRV—the multiple independently targetable reentry vehicles whose incipient deployment is drastically changing the composition and capabilities of American strategic forces.

As Members of the Senate may recall, I have long argued that our security and that of the Soviet Union would be best served by a mutual suspension of MIRV testing and deployment. If such weapons were deployed in large numbers and were developed to levels of very high accuracy, they could seriously threaten hardened missile silos and could undermine the stable deterrence on which both countries depend.

It is, of course, reassuring to know that any such hard-target MIRV systems are years away from being perfected and that the initial systems now being deployed do not in fact pose a threat to the Soviet Union's retaliatory forces. Yet, as has often been pointed out in this Chamber, unless clear safeguards are established, technical improvements could eventually transform the first-generation MIRV systems which are capable only of a retaliatory mission into more dangerous weapons which might seem capable of a first strike. This could only induce a larger arms race, as the Soviets would be obliged to increase the number of offensive weapons or take other countermeasures to insure their ability to deter us, just as we are determined to do whatever is necessary to guarantee that we can deter them.

Under these circumstances, how we resolve the dilemmas posed by the development of MIRV technology will do much to shape the stability of the strategic balance. I remain convinced

that a mutual ban on MIRV testing and deployment is the wisest course, and I am still hopeful that the SALT negotiations will eventually produce such an understanding. However, we do not know when, how, or if SALT will address the complicated problems of MIRV, and we must seek to shape a sound policy which will deal with two contingencies: Either, first, mutual limitation on MIRV in the SALT negotiations, or second, a continued deployment of MIRV in the absence of such a limitation.

In line with the sentiments voiced by the Senate in Senate Resolution 211, which urged a limitation on both offensive and defensive strategic weapons, particularly MIRV, we should do everything possible to facilitate a reasonable agreement on this difficult issue.

Toward this end I am today proposing an amendment which could make a major contribution to this objective. This amendment will authorize the Department of Defense to initiate development of single reentry vehicle systems for both the Minuteman III and the Poseidon missiles, which are presently designed specifically as MIRV launchers.

Mr. President, I ask unanimous consent to modify my amendment No. 799 to read as follows:

SEC. 206. The Secretary of Defense is authorized to initiate a program of research to develop at the earliest possible date, a single reentry vehicle system for the Minuteman III missile and a single reentry vehicle system for the Poseidon missile. For purposes of this section "a single reentry vehicle system" is a system capable of only deploying a single reentry vehicle and its associated penetration aids. The funds to be expended in carrying out the provisions of this section shall be funds transferred from other projects by the Secretary pursuant to his authority under existing law to transfer funds from one project to another.

The PRESIDING OFFICER. Without objection, the amendment will be so modified.

Mr. BROOKE. So long as the United States has only MIRV systems for deployment on these two missiles, a proposed MIRV limitation would be tantamount to a de facto reduction in U.S. strategic forces. This is an especially critical factor with regard to the Poseidon system, since a number of submarines are being converted to a carry this missile and a MIRV ban would mean that those subs could not be on station for a number of months, that is, until the Poseidon missile was altered or the boats refitted to Polaris missiles.

Thus, as a matter of simple prudence, the United States needs to prepare for the contingency of a MIRV limitation by developing single reentry vehicle systems which could be mounted on these weapons. Dr. John Foster and other Defense Department spokesmen have alluded to precisely this possibility in remarking that Minuteman III and Poseidon could be fitted for single warheads. It is important to delay no longer in undertaking the work to make this a live option. This amendment would explicitly authorize such work.

I should perhaps mention that there are several advantages to pursuing such a development. Mounting a single reentry vehicle on the Poseidon could permit the submarines to operate at greater ranges from their targets. By increasing the maneuvering room for the boats, this option would contribute substantially to their invulnerability to attack by antisubmarine warfare forces. This is a significant advantage in its own right, but it could become even more so if the United States were gradually to evolve toward heavier reliance on the so-called "blue-water option," that is, concentrating the largest fraction of its deterrent forces at sea and reducing or phasing out fixed-site land-based missiles. I consider it premature to elect this option at this time, since I believe it could best be pursued in the context of a larger strategic arms agreement which limited ASW forces as well as other weapons. If ASW forces were not so limited, the invulnerability of sea-based forces might erode over the longer term. Nevertheless, the blue-water option is a serious candidate for coming decades and there could be a special value in the added operating space which a single RV Poseidon would give our boats.

The purpose of this amendment is quite simple. If SALT produces a limit on MIRV systems, we will need to have the option of installing single reentry vehicles on the expensive Minuteman III and Poseidon missiles we are buying. I trust that the Senate will agree that the Department of Defense should be encouraged to prepare for that contingency, and I hope my colleagues will accept this modest amendment.

Mr. President, I trust that the distinguished chairman of the Armed Services Committee will seriously consider accepting this amendment, as modified, authorizing the Department of Defense to do the research for a single warhead weapons system.

Mr. STENNIS. I thank the Senator.

I yield myself 10 minutes.

I am familiar with the amendment and the modification that the Senator has made.

The Senator from Washington (Mr. JACKSON) must attend a hearing shortly, and I will yield the floor to him, if he wishes. I would like the Senator to make his remarks on this matter now, before he is compelled to leave the Chamber. I yield 10 minutes, or such time as he may wish, to the Senator from Washington.

Mr. JACKSON. I thank the distinguished chairman of the committee.

Mr. President, I commend my good friend, the Senator from Massachusetts, for the long and diligent effort he has been making to try to see whether there is some way in which we and the Soviets might reach an agreement to limit MIRV. I know that he has given much time and thought to this problem. May I say that I, too, want to see a secure agreement reached. I think the problem here is, How do you do it? How do you find a way and a means of resolving this terrible dilemma?

Mr. President, I think the first problem one faces is the attitude of the Soviet Union. If history bears me out, the Soviet Union has taken the position in the past that they will not reach an agreement on a weapons system that they do themselves possess. I remember well the Baruch-Acheson-Lilienthal proposal which we made to the United Nations in 1946. We offered at that time to turn over to the United Nations, under appropriate safeguards, our entire nuclear stockpile. The objective was to bring to a halt the proliferation of nuclear weapons. We all recall that when we made this proposal in the Security Council, it was vetoed by the Soviet Union. The Soviet Union was determined not to enter into an agreement in connection with a weapons capability it did not then possess.

To my knowledge, there have been no signals, direct or indirect, from the Soviet Union suggesting that they want now to reach an agreement to limit MIRV, to control it, to eliminate it, or otherwise to reach an agreement regarding the role that MIRV is to play in our respective deterrent systems.

This being the case, I am convinced that the Soviet Union is not about to reach an agreement or even discuss seriously the subject of MIRV until the Soviet Union has successfully developed and tested an operational MIRV capability.

Therefore, I think that the President—and the administration—should have available all options that might be of use in order to reach one day a verifiable agreement on MIRV.

I need not go into the difficult problems that pertain to reaching an agreement on MIRV. Obviously, if you are going to have an agreement that is at all secure under present circumstances, you must have onsite inspection. To my knowledge, the Soviet Union has not reached the point where they are willing to permit foreigners on their soil to carry out any role in connection with onsite or other means by which verification can be obtained.

This being the case, Mr. President, I want to reemphasize the importance of making available to the President all possible options, so that he is in a position to negotiate effectively when and if this subject should become a subject of negotiation in connection with the overall effort we are trying to make on a strategic arms limitation agreement.

I want to point out that, as the Senator from Massachusetts has so ably pointed out, this is permissive. The Secretary of Defense is authorized to initiate such a program at his discretion.

I would point out that the single reentry vehicle, as authorized here, would be similar to Minuteman I or to the original Polaris missile system. Of course, there is no limitation on the yield. It could be a much larger yield than is available under the present deployment in connection with single warhead systems. Moreover, the single warhead could well have a greater counterforce potential per booster than the present MIRV systems.

As I understand it, Mr. President, this does not in any manner detract from, nor does it add to, any existing authority that the Secretary of Defense has at the present time.

I fully understand that the Senator from Massachusetts is anxious to make sure that every conceivable signal is sent out from this country of our desire to reach an agreement in this matter.

I want to reach an agreement. But I do not think that we should stop our

efforts to deploy our own MIRV capability at this time. Certainly there is nothing even by implication in the amendment which would exclude our going ahead with MIRV. I would like to see the clearest signal sent to the Soviet Union to get them involved in talks and discussions on the subject of MIRV. I think we need to make clear in this country that we would like to see an agreement reached here, that we are interested in talking about this subject; but, so far, I want to say to the Senator, this has been a one-way street. I know that he is desirous of making clear, once again, our desire to try to get our adversary around to the point that he will discuss the subject.

I want to commend my good friend from Massachusetts for his sincerity, his dedication, and his determination to do everything possible to get something going here in the way of discussions and talks. So that, as I say, it has been very helpful and the Senator has been rendering a great service to the country in getting this issue out in the open.

I only hope there may be some signals coming across the way which would indicate a bilateral interest and not just a unilateral interest in the subject.

Mr. BROOKE. I certainly am grateful for the statement made by the distinguished chairman. I am well aware that he wants to do everything he can, as we all do, to bring about successful negotiations at SALT, and to send forth as clear a signal as possible to the Soviet Union that we are ready, willing, able, and desirous of reaching an arms limitation agreement.

I concur that we want to see some signals come back this way from the Soviet Union, that it should not all be going one way. The Senator from Washington could not help being encouraged—as am I—by the quality of the talks both at Helsinki and Vienna. Hopefully, when they meet again in Helsinki, the talks will continue at a comparable level. Without doubt, the total lack of propaganda emanating from either side in the talks has been extremely helpful.

It is important that we do all we can in the legislative branch as well as in the executive branch to let our adversary know our position in regard to the important negotiations at SALT.

This is a simple amendment which the Senator from Washington very clearly describes as permissive. There is no doubt about that. The Secretary of Defense is not being directed, but merely authorized, to proceed with a single warhead weapon, which I think the Department of Defense is well aware may be needed in the event the SALT talks are successful in calling for a ban on MIRV. We have already gone on record by a vote of 72 to 6 in this body calling for a mutual ban on MIRV—on all offensive and defensive nuclear weapons systems, for that matter. I would want to point out, however, that this single-warhead system, which would be researched and developed by the Department of Defense, could be essential to us in the event the ban is forthcoming on MIRV. As the Senator said, it should go to Minuteman III and to Poseidon. With this new warhead there would be some improvement, of course, in the penetration capabilities.

Mr. JACKSON. I was referring only to the single warhead concept. Since the original Polaris missile deployment, there have been, of course, a number of improvements in the state of the art. The further sophistication basically involves making the warhead smaller with a greater yield. This is the whole art of nuclear weapons technology. This has been accomplished over the years. But I was referring only to the nature of the single warhead.

Mr. BROOKE. I understand. We would be going back to the single warhead concept. But we would have improvements, as the Senator has stated. And now it would be possible to have even further improvement in the hardware itself.

Thus, I am hopeful that the distinguished chairman of the Armed Services Committee would accept this very modest and very simple amendment. And I am hopeful that the Department of Defense, acting under this authorization, would proceed with the vital research in order that we might have this single warhead system. I am most hopeful that the SALT talks will achieve this ban on MIRV, which I consider to be the most destabilizing element of our weapons technology, and something that certainly will not be helpful to us in achieving a mutual deterrent which we both so desperately seek at this time.

Mr. STENNIS. Mr. President, I yield myself 10 minutes.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The Senator from Mississippi is recognized for 10 minutes.

Mr. STENNIS. Mr. President, this amendment, No. 799, has already been modified by the author, the Senator from Massachusetts (Mr. BROOKE), to strike out on line 1 the word "and," and on line 2 the word "directed." Thus it would read:

> Section 206, the Secretary of Defense is authorized to initiate a program of research to develop at the earliest possible date a single entry vehicle system for the Minuteman III missile and a single reentry vehicle system for the Poseidon missile.

Well, Mr. President, of course this relates to MIRV that we had discussion on here at length last year. The Senator from Massachusetts has done a great deal of very fine work on the matter. As a member of the Armed Services Committee, he has presented various phases of the entire subject to us from time to time. On these matters, as I emphasized in the ABM debate, we must give great consideration and thought to the SALT talks that are going on now. I feel that none of us wants to do anything that would jeopardize the President's position at the talks, or diminish the backing that he deserves from the Nation as a whole. We disagreed as to whether the curtailment of the ABM would do that. However, that was a matter of judgment. That has all been settled.

The MIRV question is a big item at the SALT talk tables and I think it will be for some time.

This amendment authorizes the Secretary of Defense, but does not require him, to have a program for research regarding this single reentry system for Minuteman III. That is something I could not particularly have any objection to, the secretary having the discretionary authority to proceed or not as his judgment and that of his advisers might dictate.

It is rather clear that in the initial stage of these final matters, he has discretionary authority to proceed anyway as a general proposition. Until the research gets up to the certain stage of a line item, why the discretion is there for the Secretary.

This matter of the single reentry system is well known. It is not a new process.

If he was going to proceed on it, it is all right to have statutory authority. But I would not support it under any circumstances if it directed him and made it a requirement in view of all the situations at the SALT talks and for other reasons, too.

As we have it now, with the Minuteman and the Poseidon—and I direct this as a question to the Senator from Massachusetts—all the Senator intends, as this amendment now stands, is to give what I call discretionary authority for the Secretary of Defense to proceed only on a research and development program for this single reentry system. Is that correct?

Mr. BROOKE. The Senator is correct. The amendment is permissive in nature.

Mr. STENNIS. The Senator speaks, of course, for the other Senators on the amendment?

Mr. BROOKE. Yes, I do.

Mr. STENNIS. Mr. President, the Senator from Texas has asked me for time. I will yield such time as he might require to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. TOWER. Mr. President, I thank my distinguished friend, the Senator from Mississippi. Actually, I think that all of the questions I had to raise have been answered.

I would like to restate the fact that this in no way puts DOD into a straitjacket insofar as dealing with research and development on the MIRV if they choose to do so. But it does authorize a change of direction, if they choose, to the improvement of a single warhead system.

Mr. BROOKE. Mr. President, the original amendment would have directed them to proceed with research and development on a single warhead system without any authorization or funds for such procedures.

The modified amendment does not direct the Secretary of Defense—but it does authorize him—to proceed with research and development of a single warhead weapons system.

Mr. TOWER. It does not preclude him from going ahead on the MIRV.

Mr. BROOKE. No. It has nothing to do with that at all.

I have always advocated and proposed a mutual ban of MIRV. But I have never advocated, nor have I ever proposed, a unilateral ban on MIRV.

Mr. TOWER. I understand. That question has already been answered. I wanted to restate that that is what we

are doing. I think I can say that I am authorized to state that this meets with the approval of the Executive.

Mr. BROOKE. I am delighted to have that information. I thank the Senator.

Mr. STENNIS. Mr. President, I yield 5 minutes to the Senator from South Carolina.

The PRESIDING OFFICER. The Senator from South Carolina is recognized for 5 minutes.

Mr. THURMOND. Mr. President, before this amendment was amended, in my judgment, it was an unnecessary amendment and possibly a dangerous amendment. The way it is modified now, the Secretary of Defense is authorized to initiate a program of research, but is not directed to do so.

If we have to go to war, the Minuteman missile and the Poseidon missiles—the latter are missiles on our submarines—are going to be used against the enemy. If they are going to be used against the enemy, why should we not have a multiple-purpose warhead instead of a single warhead?

It does not make any sense to me if we are at war not to use all of our power to win the war and to win it quickly and get out and get through with it.

I am not going to oppose the amendment, because it has been modified. It merely authorizes the Secretary of Defense to initiate this program if he sees fit to do so.

The point I am making is why should we ever weaken our military strength in any way, shape, or form in the event we have to go to war?

Mr. BROOKE. Mr. President, will the distinguished Senator from South Carolina yield?

Mr. THURMOND. Mr. President, I would be very pleased to yield to the distinguished Senator from Massachusetts.

Mr. BROOKE. Mr. President, I think the distinguished Senator from South Carolina makes a very valid point. However, the question before us now under this amendment is simply one pertaining to the possibility of an agreement between the United States of America and the Soviet Union at SALT on banning MIRV.

If such an agreement is forthcoming—and I am sure the Senator would like to see such an agreement—then it would mean that MIRV would be banned and we would have then to rely upon a single warhead weapons system.

All this amendment does is to authorize the Secretary of Defense to initiate research and development on a single warhead system in the event that such a ban is forthcoming. If the ban is not forthcoming, then of course no one is suggesting that we give up our multiple warhead weapons system, namely MIRV.

If the ban does result, then we are back where we were initially with a single warhead concept for Polaris and under Minuteman I, and we do not have an upgrading and a stronger penetration or a larger penetration or a harder target capability.

The program I advocate will enable us, if we do have to fall back to the single warhead system, to have a strong, sound system. It will enable the Department of Defense to initiate research and development in this direction.

No one is suggesting that we give up any of our security or any of our strength or that we stop anything that we are presently doing so far as our MIRV is concerned. I can assure the distinguished Senator from South Carolina of that.

Mr. THURMOND. Mr. President, I thank the Senator from Massachusetts. The Minuteman III is a land-based missile. The Poseidon missile will be a submarine-based missile.

If we enter into an agreement with the Soviet Union, of course the Defense Department will have to conform its weapons to whatever agreement is entered into. But the best way to get an agreement and the best way to get the Soviets to agree to anything is to let them know that we have the power. That is all they know.

The goal of the Soviets is to take over the world. They are all over the world now. They directed and inspired the war in Vietnam. They are now inspiring and causing trouble in the Mideast.

Ever since World War II has ended, the trouble that has been caused in this peaceful world has been caused by the Soviet Union chiefly.

Red China has participated in some places, but not to any great extent compared with the Soviet Union. Red China today is revolutionary and they would like to spread communism throughout the world. But they do not have the power. The Soviet Union does have the power. It has tremendous power. But we will stand a better chance not to weaken our Defense Establishment in any way, shape, or form to get an agreement with the Soviet Union; and I hope we do nothing to indicate to them that we are weakening our Defense Establishment.

As I stated, since this amendment merely would authorize the Department of Defense to act on this subject, I am not going to oppose the amendment, but I see nothing to be gained under it. The only possible objection I would see would be perhaps a psychological effect. I do not want to see the Soviet Union get the idea we are going to weaken our Military Establishment in any way because that will encourage them to be more aggressive than ever before.

I am glad the distinguished Senator from Massachusetts explained the amendment and explained that it merely gives flexibility and that the purpose from his standpoint in offering it is to try to get an agreement from SALT.

Mr. JACKSON. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time be charged equally.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JACKSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I yield myself 1 minute before we conclude the discussion on this proposal.

Under the circumstances of this amendment, the wording, the substance, and the legislative history, I am glad to join in the support of the amendment as amended.

I yield the floor.

Mr. BROOKE. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Massachusetts (Mr. BROOKE), as amended.

The amendment was agreed to.

Mr. JACKSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. MANSFIELD. Mr. President, for the information of the Senate, it appears that there is a very strong possibility that tomorrow, following the vote on the Proxmire amendment—for which there is a 3-hour limitation of time, and the time will expire not later than 12 noon—amendments by the distinguished Senator from Oklahoma (Mr. BELLMON), the distinguished Senator from Alaska (Mr. STEVENS), the distinguished Senator from New Hampshire (Mr. MCINTYRE), and others—the Muskie-Smith amendment excluded—can be considered expeditiously and very likely it will be possible to achieve a one-half hour time limitation on such amendments.

Then on Monday, beginning at noon, we have 5 hours of controlled time on the McGovern amendment, on which the Senate will vote on Tuesday morning, after 1 hour of debate on Tuesday morning, coming in at 9 a.m. and voting at 10 o'clock.

That is to be followed by the Proxmire amendment, on which a 1-hour limitation has already been granted.

Then the distinguished Senator from Arkansas (Mr. FULBRIGHT) will have an amendment which will not take too much time.

But it appears as though we will have a very busy session tomorrow, and votes, with Senators who have amendments cooperating to the best of their ability. There is the exception of one amendment, which will have to be worked out between the parties concerned and the manager of the bill.

RESCISSION OF ORDER FOR SATURDAY SESSION

Mr. MANSFIELD. So, Mr. President, with that in mind, and after consultation among the combined leadership, I ask unanimous consent to vacate the order which called for the Senate coming into session on Saturday next.

The PRESIDING OFFICER. Without objection it is so ordered.

ORDER FOR ADJOURNMENT TO TOMORROW AT 8:30 A.M.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to vacate the order for tomorrow, which called for the Senate to convene at 9 a.m., and ask unanimous consent that when the Senate completes its business tonight, it adjourn until 8:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CALL OF LEGISLATIVE AND EXECUTIVE CALENDARS ON TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that tomorrow, after the prayer, unobjected-to items on the legislative calendar and the Executive Calendar be taken up.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that thereafter there be a brief period for the transaction of routine business, to expire precisely at, if not before, 9 a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. At which time the time limitation already agreed to by the Senate will begin to run on the Proxmire 3-hour amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS FROM FRIDAY TO MONDAY, AUGUST 31, AT 9 A.M.

Mr. MANSFIELD. Mr. President, in order to expedite matters, I ask unanimous consent that when the Senate completes its business tomorrow, it stand in recess until 9 a.m. Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS FROM MONDAY TO TUESDAY NEXT AT 9 A.M.

Mr. MANSFIELD. Mr. President, just to make sure, I ask unanimous consent that when the Senate completes its business on Monday next, it stand in recess until 9 a.m., on Tuesday, September 1, 1970.

The PRESIDING OFFICER. Without objection, it is so ordered

Mr. SCOTT. Mr. President, if the majority leader will yield, I express the hope that, in view of the cooperation of the Senators involved, it will be possible to get third reading and passage of the pending bill sometime on Tuesday, under this schedule.

Mr. MANSFIELD. Yes; but do not bet on it. Prospects look good, but the way things happen in this body, anything could happen. Hopefully, we can do that.

Mr. SCOTT. I would like to bet on it, but not money.

Mr. MANSFIELD. It is a good possibility.

I would hope that attachés on both sides will notify each Senator individually about the change in plans for Saturday, because some of them had to cancel engagements, and that was the fault of the leadership, especially the Senator from Montana; and other Senators may have commitments which they now can keep.

So I would suggest to the respective secretaries to the majority and the minority that each Senator be notified immediately of the change in plans.

I thank the distinguished Senator from Massachusetts for yielding.

Mr. STENNIS. Mr. President, will the Senator yield? Will the Senator tell me briefly the change in plans? I was not present in the Chamber when the Senator made his statement.

Mr. MANSFIELD. We have received such good cooperation from Senators who have amendments—there is one exception, which the manager and other Senators will have to work out—that we think we can handle most of them tomorrow and Monday. Therefore, in view of that new factor, the Senate will not come in at 10 o'clock Saturday, but will instead go over until 8:30 a.m. tomorrow and then from tomorrow night until 9 o'clock Monday. In the first half hour tomorrow we will take up unobjected to matters on the calendar, the Executive Calendar, and brief morning business, but, as previously agreed to, beginning at 9 o'clock the 3-hour limitation on the Proxmire amendment will begin.

Mr. STENNIS. I thank the Senator.

The PRESIDING OFFICER. Did the Senator from Montana intend that the Senate recess or adjourn until 8:30 tomorrow morning?

Mr. MANSFIELD. Adjourn.

The PRESIDING OFFICER. Adjourn.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 798

Mr. BROOKE. Mr. President, I ask unanimous consent to call up my amendment No. 798.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be stated.

The assistant legislative clerk read amendment No. 798 as follows:

At the end of the bill add a new section as follows:

"No funds authorized to be appropriated pursuant to this or any other Act may be used for operational development, testing, or procurement of any multiple independently targetable reentry vehicle (MIRV) system in which an individual reentry vehicle provides a capability to destroy a hardened target. For purposes of this section, 'a capability to destroy a hardened target' means that combination of warhead yield and accuracy required to generate the equivalent of one-third the level of blast overpressures and related effects considered necessary to enable a single warhead to neutralize a hardened missile silo."

Mr. BROOKE. Mr. President, I ask unanimous consent to modify my amendment No. 798.

The PRESIDING OFFICER. The Senator has a right to modify his amendment. The amendment will be stated.

The modified amendment was read as follows:

At the end of the bill add a new section as follows:

"No funds authorized to be appropriated pursuant to this Act may be used for operational development, testing, or procurement of any multiple independently targetable reentry vehicle (MIRV) system in which an individual reentry vehicle provides a capability to destroy a hardened target. For purposes of this section, 'a capability to destroy a hardened target' means that combination of warhead yield and accuracy required to generate the equivalent of one-third the level of blast overpressures and related effects considered necessary to enable a single warhead to neutralize a hardened missile silo."

The PRESIDING OFFICER. How much time does the Senator yield himself?

Mr. BROOKE. Mr. President, I yield myself 20 minutes.

CONGRESSIONAL PREROGATIVES AND CONSTRUCTIVE POLICY: THE CASE OF MIRV

Mr. President, I have offered two amendments to H.R. 17123 which deal with U.S. MIRV programs. The second of these proposals would provide a statutory underpinning of a policy already established by the President and endorsed by the Armed Services Committee in its action limiting work on ABRES, the advanced ballistic reentry systems project. It would confirm the U.S. commitment to a retaliatory, rather than a first-strike MIRV program.

The Department of Defense has stated no objection to the policy expressed by this amendment or to the technical provisions it contains. Indeed, I should stress that this amendment was revised substantially in extended discussions with officials of the Department. It was changed to satisfy every technical or substantive issue raised by the Department. In consultation with DOD I have drawn this amendment with great care to be sure that it in no way impedes or disrupts existing or planned MIRV programs.

This amendment would simply implement existing national policy to refrain from a hard-target MIRV capability; it would establish a meaningful ceiling which the Department will surely agree affords ample latitude for a retaliatory MIRV, as in our present Minuteman III and Poseidon systems, and yet avoids the potential instabilities associated with a MIRV system capable of destroying hardened missile silos.

In short, this amendment would be a concrete congressional step to give content to the declaratory policy already long proclaimed by the executive branch; namely, that the United States is pursuing a strictly deterrent, second-strike strategy and will not seek destabilizing first-strike capabilities.

In stressing this point before the Armed Services Committee Secretary Laird testified that the President "has made it perfectly clear that we do not intend to develop counterforce capabilities which the Soviets could construe as having a first-strike potential." We can all appreciate the Secretary's own concern about the destabilizing implications of Soviet weapons with a counterforce potential against U.S. strategic forces. This no doubt makes him especially sensitive to the dangers of proceeding with an American hard-target program which would increase the risk that the Soviets might adopt a reckless "launch-on-warning policy" or undertake further offensive deployments.

Secretary Laird has, however, stated a procedural objection to this amendment on the basis that it allegedly sets "the precedent that Congress will establish the general characteristics of U.S. military systems."

Congressman Laird would never have agreed with Secretary Laird. Neither should anyone else who values the Legislature's constitutional responsibility and authority to determine overall policy for the American Armed Forces. While a Member of the House of Representatives, Mr. Laird repeatedly and vigorously fought for an affirmative congressional role in determining national strategic policy and in defining the weapons systems to implement that policy. For example, as a member of the House Appropriations Committee, Congressman Laird authored an amendment specifying that, rather than develop the mach 2.5 version of the TFX proposed by Secretary McNamara, the Department of Defense should develop and procure a mach 3 aircraft. Congressman Laird's proposal represented a far more detailed specification of weapon characteristics than is incorporated in either of my amendments regarding MIRV.

In 1967 Congressman Laird was one of the most prominent advocates of the view that Congress should press the Executive to expedite work on a supersonic strategic bomber as opposed to continued reliance upon subsonic aircraft for this mission. In addition to doubling the budget request for development of advanced manned strategic aircraft, the House Appropriations Committee sharply criticized the Executive for failure to heed previous congressional guidelines on the number of strategic bombers to be retained in active service, a complaint voiced strongly by Mr. Laird at that time.

Earlier, Mr. Laird had attempted to eliminate funds for several squadrons of Titan missiles, preferring to rely upon the smaller, solid-fuel Minuteman system. Once more, this act represented a clear judgment on his part that, as a Member of Congress, he could and should give preference to a weapons system whose characteristics he considered superior to those of a competitor.

Speaking in the House on June 25, 1963, Congressman Laird pointed to the work of his appropriations subcommittee on the Polaris nuclear submarine program and noted that, some 5 years before, the committee had approved more than was requested for leadtime items for that important system. He properly claimed, as have other knowledgeable Members of Congress, that the Legislature had served the national security well by expediting research, development, and deployment of the Polaris system. Clearly, this action represented an important attempt by the Congress to specify which weapons should be emphasized in composing America's strategic mix.

That same speech stressed that Congress and its committees must deal with defense matters on three interrelated levels. First that of strategy, second, that of tactics and, third, that of weapons, materiel and manpower. At no time did Congressman Laird shrink from the hard decisions on weapons characteristics or other issues which he then recognized were unavoidable if Congress was to meet its high responsibilities. For example, Mr. Laird was instrumental in the Defense appropriations subcommittee's approval of extra funds for preproduction activities on an anti-ballistic-missile system, concluding, in contradiction to the executive branch, that a system of the characteristics and functions of the Nike X should be expedited.

Similarly, Congressman Laird was a vigorous proponent of energetic development of a military space capability. He was instrumental in the Appropriations Committee's 1965 directive that the Department of Defense focus funds upon and accelerate the manned orbital laboratory program. This action by the Committee, no less than on other occasions, constituted a congressional attempt to set the general characteristics of U.S. military systems. Indeed, Mr. Laird's efforts in this case would have specified very far-reaching criteria for a military system, since it would have required emphasis on a system capable of operating in outer space and would have added the costly and controversial capability of including a man in the system.

In short, as Congressman Laird's own performance in the House illustrates, it is by no means unusual for Congress to "establish the general characteristics of U.S. military systems." In the Senate Armed Services Committee this year we have done it in a number of instances, favoring the AX aircraft over the Cheyenne helicopter system, limiting the ABM system deployment to defense of the deterrent instead of thin area defense, and taking comparable actions on numerous other systems.

A perennial issue of this character is the question of a nuclear navy, especially nuclear powered aircraft carriers. As Members of Congress know, the Legislature has had a great deal to do with the technical features of our naval fleets.

Unless the Congress addresses the composition and characteristics of the Armed Forces, its constitutional power is very nearly meaningless. Therefore, I am somewhat appalled that the Secretary would suggest that Congress should not establish the general characteristics of U.S. military systems. His very letter acknowledges that the policy set forth in the amendment parallels the administration's own declarations that the United States will refrain from a hard target MIRV capability program. In other words, the Department in no way suggests that this amendment contravenes existing policy. It does not disturb our present MIRV programs in any way. It is in fact a vital reinforcement to our commitment to successful negotiations in SALT and to stable nuclear deterrence based on a credible second strike capability.

As I have repeatedly stressed, this amendment would merely insure that any MIRV systems which are deployed are in fact compatible with our declared retaliatory policy and do not undermine strategic stability by becoming potential first-strike weapons.

I cannot believe that any Senator or national spokesman would call into question America's longstanding retaliatory posture by voting to pursue an unattainable and highly dangerous first-strike capability.

The important contribution of this amendment is to give meaning to our declarations that we will not develop capabilities threatening the Soviet retaliatory force. There has never been an explicit definition of what we mean when we say we will not pursue the hard-target MIRV capability. This amendment is essential if we are to make those declarations credible. No one could deny that the definition allows ample capability for the retaliatory mission. It would simply establish a threshold well below the level required to destroy hardened missile silos.

The distinction between these two types of capabilities is precisely the one which the Defense Department emphasizes in proclaiming that our first generation MIRV systems are strictly retaliatory, stabilizing, deterrent weapons not capable of a counterforce first strike. That is an accurate description of existing MIRV capabilities and the threshold suggested in this amendment in no way limits our development and deployment of a retaliatory MIRV system.

I know that during much of the 1960's Representative Laird was reluctant to forgo the option of an American counterforce capability. But Secretary Laird has wisely recognized that nuclear parity is a fact and that efforts by the Soviet Union or the United States to obtain a first-strike posture merely generate new pressures for an arms race and new dangers for world peace. Perhaps the best description of the purpose of the strategic arms limitations talks is contained in the phrase "institutionalization of strategic parity." Secretary Laird, more than anyone else, has emphasized how destabilizing potential counterforce systems are, in his repeated criticisms of the possible hard-target implications of the Soviet SS–9.

I find myself in complete agreement with the remarks made by Representative Laird 7 years ago when he said:

> Obviously, if the only capability we are serious about is a second strike capability, there seems to be no logical reason for spending vast sums of money for first strike weapons.

A second-strike policy is the confirmed position of the U.S. Government. It has been enunciated and endorsed by President Nixon as well as by the Secretary

of Defense and their predecessors. I believe it would be a great disservice to American security even to hint that the United States was inclined to seek, under some circumstances, a first-strike capability.

By adopting the proposals I have made regarding MIRV, Congress will be lending force and credence to our country's second-strike posture. We can contribute immensely to the long-term prospects of strategic arms limitation and nuclear stability.

In closing, I am moved to cite the sage counsel of one of the ablest military leaders of our time, Adm. Hyman Rickover. In congressional testimony 3 years ago, Admiral Rickover urged Congress to exercise independent judgment in matters of national security, to demand full information, and to assert its own prerogatives in the interest of forging sound national policy. Representative Laird himself inserted this critical comment by Admiral Rickover in the CONGRESSIONAL RECORD. The admiral expressed his deep concern about the tendency of Congress and its committees merely to accept the standard line of the executive branch:

> The theory is that "mother knows best"; that Government departments are best able to judge issues, setting up a party line and telling congressional committees, "This is it. We know the story, and there is no use going into it."
>
> You will find that it will become increasingly difficult to uncover the real pros and cons that are considered—or not considered—in arriving at the decisions presented to you for ratification. In other words, Congress is merely to listen to the official position. This is tantamount to saying that the Department is capable, but members of Congress are not capable of judging the issue; that the Department must do Congress' thinking for it; that the Department can make a better decision than Congress is able to do. Now, most members of Congress are lawyers or experienced professional and business people. I am sure you have enough wit and intelligence to judge things for yourselves.

Later in the same testimony, Admiral Rickover advised Congress to demand full information on which to base its own intelligent judgments. He said:

> Unless you maintain this right by exercising it, it will be lost—and I am afraid it is being lost. I am sure you are aware of the decline of parliamentary systems all over the world. I hope our Congress will take steps to prevent such a decline in the United States. We were the first to establish representative democracy in modern times; let us be the last to permit its decline.

Surely, Congress is not so contemptuous of its own capacities that it will hesitate to judge an important issue of national security on its merits. The Department of Defense has raised no objection to this amendment on the merits, and I am confident that Senators who study it will lend their support. With all respect for our good friend, Secretary Laird, the procedural point he has raised against these amendments is too weak for serious consideration. His record as a legislator makes clear that he would have rejected such a procedural contention while he was serving in Congress. He was right then and he is wrong now. In support of his wise policy of today—a secure second-strike capability for America—let us follow his wise counsel of yesterday—strong and explicit congressional leadership.

The PRESIDING OFFICER. The Senator's 20 minutes have expired.

Who yields time?

Mr. JACKSON. I yield myself 10 minutes.

Mr. President, I was pleased to join the Senator from Massachusetts and the distinguished chairman of the Committee on Armed Services in accepting the amendment authorizing research and development on a single reentry vehicle for the Minuteman III and Poseidon missiles. This addition to the bill has the effect, it seems to me, of indicating to the world that the Senate of the United States is concerned to keep options open in the configuration of our strategic forces. One such option, which could prove of significance if and when there is a real possibility of an agreement to limit MIRV, is suggested by the authority contained in the amendment. As I pointed out previously, however, the Department of Defense is already empowered, without specific authorization from Congress, to initiate programs of this sort that are essential to the maintenance of a sound defense program—a power limited by congressional review.

The second amendment, offered by the distinguished Senator from Massachusetts, and which is now pending, is much more problematic. This amendment would prohibit the improvement of MIRV yield and accuracy combination so as to keep them ineffective against hard targets. While we have no plans at present to undertake the programs that would be prohibited by this amendment, I am bound to say that a limitation of this kind would be unwise, indeed.

First, to the extent to which the amendment would impose a limitation of a technical nature—on, say, such programs as guidance technology—I oppose it on the ground that questions of this nature are best handled in the executive branch, or at the very least, after review by the Committee on Armed Services.

Second, to the extent to which the amendment is a technical means to the affirmation of a specific strategic doctrine, it should be opposed until there has been full and careful consideration of the doctrine itself. We are not pursuing counterforce programs at present, and I agree in this. But I would not consider it wise to enact a statute—by means of a technical amendment to a procurement act—that determines in law what our strategic policy ought to be, however much one might agree with the policy itself.

This is not, Mr. President, the manner in which questions of the utmost importance should be decided, and the nature of our strategic posture is such a question. We are now involved in serious negotiations with the Soviet Union aimed at the limitation of strategic arms. Our defense policies must now be viewed in the light of their possible impact on our effort to negotiate significant arms control agreements. An effort by which Congress joins with the executive, and acts with great care, in this common goal will brighten our hopes for the future.

Mr. President, I yield back the balance of the time that I reserved to our side.

Mr. BROOKE. Mr. President, will the Senator yield?

Mr. JACKSON. All right, I will continue on my time. I yield to the Senator from Massachusetts.

Mr. BROOKE. The Senator from Washington stated that this is a subject matter that should be left to the executive branch. Is that correct? Is that a correct interpretation of his remarks?

Mr. JACKSON. That is correct. In connection with the pending negotiations, I do not believe that we should endeavor to put the President and his representatives under severe constraints in connection with those negotiations. The Senator knows that all of these problems are susceptible of being considered in connection with the SALT talks. I would not think it wise for the legislative branch to intervene by limiting the options of the President of the United States with regard to these negotiations.

Mr. BROOKE. The Senator is well aware of the fact that the President and the Secretary of Defense both stated publicly, and it is certainly well understood by the Soviet Union, that the United States does not seek a first strike capability. Is that not true?

Mr. JACKSON. That is correct.

Mr. BROOKE. And that the Secretary of Defense, before the Armed Services Committee, made it clear that it is the policy of the U.S. Government not to seek a first strike capability. As a matter of fact, a second strike capability is the foundation of our nuclear deterrence. Is that correct?

Mr. JACKSON. There is a vast difference between the indication that we do not seek this capability, and a statute preventing it. That is what we are really talking about.

Mr. BROOKE. Is there any question in the Senator's mind that the United States would, at any time, seek a first strike capability?

Mr. JACKSON. I do not think anyone can answer that question for all time except in the context of the kind of environments we might eventually face, perhaps as a result of failure to reach agreement. This is very much like a management-labor dispute. Can anyone imagine labor and management sitting down at a conference table with labor having given up its strike power—or part of it—before beginning talks or while they are underway, or management having first given up part of the inventory which it had built up in anticipation of the strike?

If we are going to get an agreement with the Soviet Union, and if it is to cover a wide spectrum of strategic options here, we simply have to leave all the options open.

I do not follow basically the reasoning here. Over a period of years we sent a signal to the Soviet Union, in which we indicated we were not developing a first strike capability.

Years ago we told the Soviet Union, in the development of our Minuteman force, that we were not going for any first strike capability. What has happened? While we have done this in good faith over the years, the Soviet Union, despite that clear signal from us—that we are

not trying to develop a capability to knock out Soviet hardened sites—their response is to deploy around 300 SS–9's each with a throw weight of 25 megatons or three 5 megaton multiples.

I do not know what kind of interpretation they will place on some statutory limitation, after we have, by a most positive act—that is, the way in which we have deployed our strategic forces—made it unequivocally clear that we do not seek a first strike capability.

Mr. BROOKE. Is it the Senator's contention that the Soviet Union is seeking a first strike capability?

Mr. JACKSON. I do not know how the Senator can interpret the capability, which they have developed, except as suggesting that they are working toward that objective. I am not saying that they now have such a capability; but, surely, if it is not for that eventual purpose, then I would say to my friend from Massachusetts they are making very unwise use of fissionable material and delivery capability because one would not use a 25-megaton warhead against a city or a populated area; he would use it only against hardened targets.

Mr. BROOKE. Could not the Soviet Union consider the MIRV'ing of our Minuteman III or the MIRV'ing of our Poseidon force as tantamount to securing for ourselves a first strike capability?

Mr. JACKSON. Let me answer that: Long before we ever talked about MIRV, they were going ahead with a 25-megaton warhead. I want to point out to the Senator that the Soviets cannot claim they went ahead on the SS–9 because of possible MIRVing capabilities on our part. Such a response makes no strategic sense. Our MIRV does not threaten their SS–9, and even if it did their response would not be to invest $9 billion in the SS–9 force.

Mr. BROOKE. Could we not go from a Minuteman force, plus the bomber fleet, to a submarine fleet? Do we not have several options which might, at some point in the future, be regarded by the Soviets as tantamount to a first strike capability?

Mr. JACKSON. No, sir. The bomber force has no first strike capability. The Polaris system does not have a first strike capability; neither does the Minuteman force.

Mr. BROOKE. Is the Senator prepared to say, in his opinion, that the Soviet Union has been aiming for a first strike capability on its part?

Mr. JACKSON. No, sir.

Mr. BROOKE. All right.

Mr. JACKSON. I made it very clear. I made the clear distinction. I said that they do not now have a first-strike capability. I did raise the question of whether they are moving toward a first-strike capability; otherwise, why would they be deploying the SS–9 in such numbers, a route that we avoided and, in fact, refused to follow a decade ago. That was a decision made in 1960–61.

Mr. BROOKE. The Senator has said that in his view the Soviet Union does not at this time have a first-strike capability, and that the United States at this time does not have a first-strike capability.

Mr. JACKSON. Yes.

Mr. BROOKE. Is it the Senator's contention that a first-strike capability is negotiable in the SALT talks?

Mr. JACKSON. Well, I would hope that mutual limits on the procurement of weapons capable of destroying hard targets are negotiable. This would be the most helpful limitation.

Mr. BROOKE. Would the Senator comment specifically with regard to a first-strike capability? Is this a subject of negotiation? Is it not very possible that if Soviet Union thinks that by refusing to deny ourselves a first-strike capability, we might proceed with a first-strike capability, they would then be tempted to fire without warning?

Mr. JACKSON. I am sure that if the Soviet Union would accept limits on the SS–9 deployment, we in turn could work out something in connection with the ABM deployment. The whole purpose of the ABM effort, in terms of the SALT talks, is to convince the Soviet Union that they should not continue with deployment of the SS–9, because they are spending $30 million for an SS–9 and we can counter that for a lot less.

Mr. BROOKE. If the United States and the Soviet Union both do not have a first strike capability—and we both agree that they do not—then it would seem to me there would be no opposition to an amendment which merely makes it statutory that the United States does not seek a first strike capability. I think the Senator from Washington will certainly agree that if either side possesses a first strike capability, it would be destabilizing. Is that correct?

Mr. JACKSON. Surely. I want all of this negotiated. And I hope that we can reach an effective and secure agreement to achieve what the Senator has in mind.

Mr. BROOKE. If that agreement is not reached during that negotiation, certainly the Senator does not want either side to continue toward a first strike capability.

Mr. JACKSON. Mr. President, the Senator is laying down a unilateral constraint which prevents the President of the United States, or his appropriate representatives, from negotiating this matter.

Mr. BROOKE. Mr. President, it only seems to me that if we secure a first strike capability and the Soviet Union knows about it, what we can expect of the Soviet Union is that they might fire without warning. We want to avoid this kind of destabilization.

Mr. JACKSON. Mr. President, let me say to my friend that the United States of America from that day in 1945, well into the early 1960's, had the means of utterly destroying the Soviet Union.

Mr. BROOKE. We know that.

Mr. JACKSON. Just a moment. Mr. President, to say that the United States, if it had a first strike capability, would attempt to strike the Soviet Union and that therefore the Soviets would strike the United States without warning does not make much sense.

The Soviet Union was aware that we had this capability from 1945 to the early 1960's, and we did nothing about it.

In that time, Mr. President, the Soviet Union took all sorts of risks. They kept pushing and pushing. We know what happened in Western Europe. We know what happened in Korea, and so on. They took these risks despite the fact that the United States had the means of totally destroying them.

We practiced restraint. No one is going to make a convincing argument that, because we go about trying to protect our deterrent, we are doing something which would cause the Soviet Union to make a first strike against us.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. JACKSON. Mr. President, I yield myself an additional 5 minutes.

Mr. BROOKE. Mr. President, all I am saying is that there is a danger that if the United States would secure a first strike capability, the Soviet Union could fire without warning.

The Soviet Union should recognize this danger also. They must know that if they develop a first strike capability, then we change our policy to one of "fire without warning," even though we have shown this magnificent restraint to which the Senator referred.

Mr. JACKSON. Mr. President, I may say that we had a first strike capability from 1945 until 1962. We did not strike. If the shoe had been on the other foot, I wonder what would have been the situation.

Mr. BROOKE. We were not as close to parity then as we are now.

Mr. JACKSON. Mr. President, I yield to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. TOWER. Mr. President, I think the Senator from Washington has stated his case with great restraint and in very tempered terms. I would perhaps go a little further and say it is true that neither country now possesses a first-strike capability. It is certain that the United States does not possess a first-strike policy. I think that is important.

The fact is that reading from our present intelligence, even on a nonclassified basis, it becomes obvious that what the Senator from Washington says is true, that they are building a first-strike capability.

By the mid 1970's they may very well have a first-strike capability to the extent that they could destroy our capability to retaliate with absolute impunity.

I think the term "first strike" has been thrown around too long. If the Soviet Union launched an attack against us and tried to destroy our capacity to retaliate, we might want the capacity to destroy that weapon held in reserve. That does not necessarily mean a first-strike policy.

I think it is perfectly obvious, as the Senator from Washington pointed out, the United States does not have a first-strike policy. The Senator from Massachusetts admitted that we acted with restraint. We have been sorely provoked time and time again. There is not one instance since World War II of U.S. provocation of the Soviet Union. However, there are numerous instances of the Soviet Union provocation of the United States. And we have acted with restraint.

The Senator from Washington would agree that in 1948 when we were sorely

provoked, we could have fought a preemptive war and won it hands down.

I think it is naive to think that we have to give some signal of sincerity and some evidence of good faith to the Soviet Union or else they will try to strike us without warning, thinking we have designs on them. They know we do not have designs on them.

The Western powers have spent a great deal of their energies and resources not only in liquidating their Colonial empires but also in trying to shore up their defenses to the greatest extent possible. On the other hand, the Soviet history in that period of time has been one of absolute imperialism.

I think we are fools if we think that simply by taking unilateral action to reduce our capacity, we will convince the Soviets and that they will do the same.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. JACKSON. Mr. President, I yield an additional 5 minutes to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized for an additional 5 minutes.

Mr. BROOKE. Mr. President, will the Senator yield for a question?

Mr. TOWER. I yield for a question.

Mr. BROOKE. Mr. President, does the Senator agree that we have a second strike strategy?

Mr. TOWER. We have a second strike policy. I think that the configuration and deployment of our military forces make it adequately plain that we have no intention of having anything other than a second strike policy.

Mr. BROOKE. Mr. President, that in fact amounts to a second strike strategy.

Mr. TOWER. We do not intend to strike first. I can see no situation in which we would strike first.

Mr. BROOKE. Does the Senator agree that our second strike strategy might be less credible if we develop a first strike credibility?

Mr. TOWER. I would rather use the term "countercharge" in the course of the development of second strike capability. We may have to have a Nike system at the weapons sites. And I see nothing wrong with that.

I do not think that the Russians, even if we develop the capacity—which we will not do, and I do not suggest that we do—but even if we develop first strike capability across the board, I do not think that the Russians seriously believe we would ever use it.

The Russians read history and they do not read the history they put in the textbooks and teach their students. They read the unexpurgated version of it. They are no fools. I think they do have a sense of history. I think they do understand that psychologically they have been superior to us in terms of their waging of the cold war against us.

Mr. BROOKE. Mr. President, the Senator from Texas has indicated that there is a distinction between a first strike policy and a first strike capability. I think he has raised a point.

Mr. TOWER. Yes.

Mr. BROOKE. How can we be assured that the Soviet Union understands this distinction between first strike policy and first strike capability? How can the Soviet Union be sure that if we achieve, obtain, or develop first strike capability, the controlling factor will still be our second strike policy rather than our first strike capability?

Mr. TOWER. Mr. President, is the Senator suggesting that if we develop a first strike capability, the Soviet Union will assume that that is our policy?

Mr. BROOKE. Mr. President, is that not a possibility?

Mr. TOWER. I think it is a possibility. But I think it is highly improbable. As I say, based on history, experience, and our own restraint when we had actual superiority and when we had the capability to reduce the Soviet Union to a shambles, we did not do so.

Mr. BROOKE. Does the Senator from Texas feel the Soviet Union has not shown restraint?

Mr. TOWER. I do not think the Soviet Union has shown restraint. As a matter of fact, the Soviets are obviously afraid. They understand they cannot secure their hegemony in this world without resorting to military force. They proved it in Budapest; and they proved it in Prague. What was happening in Prague? Did the Czechs say they were going to abrogate the Warsaw pact or opt out of the Communist sphere, or establish a capitalist system? No. They asserted that their Government was still Communist and that their economic system was still socialist; but they wanted to liberalize some of their institutions. The Soviet Union feels so insecure in its ability to maintain its programs, that they had to resort to armed force.

Mr. BROOKE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. FANNIN). The time of the Senator has expired.

Mr. BROOKE. Mr. President, I yield the Senator 5 minutes.

Mr. JACKSON. We will divide the time equally.

Mr. BROOKE. The fact remains that in all the time we have been in Vietnam, to my knowledge, there has not been one Soviet soldier in Vietnam. Is that correct?

Mr. TOWER. Not to my knowledge. We have not discovered evidence of any.

Mr. BROOKE. We have not discovered evidence of any.

Mr. TOWER. Nor any Chinese soldiers, nor North Korean soldiers, nor Czechs, nor Albanians.

Mr. BROOKE. Which does indicate some restraint, does it not?

Mr. TOWER. No, it does not, because they operate a little differently than we operate. They establish a clandestine infrastructure with military arms. That is how they secure their ends. They have not extended their control over any territory or people beyond the use of military means, but they use clandestine infrastructures with military arms, or revolutionary warfare directed from the outside.

As long as they can direct this vast apparatus from the outside they do not need the overt action of troops from other countries. But we discovered the considerable presence of North Vietnamese troops in South Vietnam. Regardless of what is said about the Saigon government, the fact is there were apparently more North Vietnamese that wanted to live in the south than there were South Vietnamese who wanted to live in the north because there was no movement of South Vietnamese into North Vietnam after the DMZ was established, but about a million North Vietnamese left North Vietnam. One could consider that not only covert action but overt, as well.

Mr. BROOKE. It seems that whenever we get into a discussion of the nuclear arms race or relationships between the United States and the Soviet Union we become bogged down in the same old, rather hopeless approach to the problem.

I personally have taken great heart from the potential success of the SALT talks. I am sure the Senator from Texas has done the same thing.

Mr. TOWER. I am delighted with the progress.

Mr. BROOKE. The fact that these talks have been lacking in propaganda has been most encouraging. I have taken heart from the meeting of Willy Brandt in Moscow and the apparent agreement which resulted between the Soviet Union and the West German Government. I have taken heart from the ratification of the Nuclear Test Ban Treaty, and the Treaty for the Nonproliferation of Nuclear Weapons. There are many things that give us hope.

The other side of the coin is that we should not have any hope. There are some who say that we are going to be eternally suspicious of the Soviet Union and that the Soviet Union is going to be eternally suspicious of the United States. In the meantime, what is happening?

Since World War II the Government of the United States has spent more than $1 trillion in defense, and the Soviet Union is not lagging far behind in this expenditure. It seems to me we should be willing and eager to do all we can to control the arms race that is going on and that could lead to a nuclear war.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. BROOKE. I yield.

Mr. TOWER. Talking about the relative expenditures of the Soviet Union with those of the United States, I might remind the Senator from Massachusetts that the Soviet Union gets everything it wants at cost, and their costs do not run as high as costs in our capitalist system where we pay our workers more money.

Then, look at it in terms of the gross national product which the Soviet Union spends on arms and the gross national product which we have spent on arms and one will find that they have been more active than we.

Mr. BROOKE. It does not matter if we are spending more of our gross national product or whether they are spending more of their gross national product. The fact is that we are both spending billions and billons of dollars in an insane nuclear arms race, and that it has to stop.

Mr. TOWER. We did not start it.

Mr. BROOKE. I do not care who started it, we or they. The fact is that it is still going on. The SALT talks give us some hope that it may be stopped.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BROOKE. Mr. President, I yield myself 5 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 5 additional minutes.

Mr. BROOKE. It seems to me there is an alternative to what the Senator from Texas has said. Maybe he does not agree with me; and the Senator from Washington may not agree with me. I am not suggesting that if we achieve a first strike capability, automatically the Soviet Union is going to fire first without warning. I pray to God that does not happen, for if it does the world will not be worth living in anyway; it will not matter who has superior weapons for neither side will be able to live on this earth.

Then, there is the other point. As we continue with our Minuteman II and III force, and Poseidon production, getting ever closer to a first strike capability, what will the Soviet Union have to do? It will have to respond by building more accurate SS–11's, SS–13's, SS–19's, and whatever one wants to call them with more megatonnage. And what will we have to do? We will have to get larger Minuteman III's or Minuteman IV's, and MIRV's. We will go on and on, and they will go on and on. We will spend trillions of dollars in an insane nuclear arms race.

What I am suggesting by this very modest amendment which I propose is that the legislative body—not the executive branch because the executive branch has already said it does not seek a first strike capability—but this legislative branch should say that we do not seek a first strike capability. Let it be known to the Soviet Union and to the world that we want to end this nuclear arms race in which we are engaged and which is causing so much suffering to millions of people, not only in the United States, but all over the world. That is all I propose.

Mr. TOWER. Mr. President, will the Senator yield to me for 3 minutes?

Mr. JACKSON. I yield to the Senator from Texas 5 minutes.

Mr. TOWER. Mr. President, I think basically there is a striking difference in the way we view the Soviet Union response to the things we do. I never for 1 minute would question the motivation of the distinguished Senator from Massachusetts. I think he is well motivated. I think he is a great patriot. He has already proved that in his personal life and in his personal experience. He has done more here for his country than I have and I want to make that adequately clear.

I think we have a different understanding of some things. But I do not accept the notion, and I think many of us do not accept the notion, that if we will take this situation and legally bind ourselves against making progress in some field of weapons development or deployment, we will convey to the Soviet Union a signal of good will and sincerity that will remove any suspicion they have of us and make them more amenable to the consideration of a limitation of strategic arms.

Further, it is said that if we show some restraint in the development of new arms systems, they will do likewise. I must say that I can accept neither of those premises. To begin with, we have exercised great restraint. In the past few years and the past decade we have slowed down our development of new weapons systems. We have not developed more than two or three significant new weapons systems in the last decade, and the Soviet Union has developed several.

We have not developed an air-to-air interceptor since 1955. The Russians have developed eight.

We have been dismantling our Navy. We have been retiring ships from operational duty. The Soviets, on the other hand, have gone into extensive expansion of their shipbuilding programs and the modernization of their navy.

We have stopped the deployment of intercontinental ballistic missiles at 1,054, and the Russians have now gone beyond that, and are still going.

We have never gone into extensive development toward a first strike capability that they have—not in recent years—and they continue apace to deploy the SS–9, which is a formidable piece of weapon.

It is my feeling that should we, through statutory action, legally preclude the United States from doing things which the Soviets are not precluded from doing legally, then they will interpret this as a sign of weakness and they will have little feeling but contempt for us; and that it will not hasten the day—indeed, it will postpone the day—when they will sit down and make some meaningful settlement with the United States on the limitation of arms. The only thing they understand is toughness.

One advantage they have over us, being a dictatorship, or an oligarchy, or whatever you want to call it—a country ruled by a very few and a country not subject to the restraints of constitutional, popular government—is that they can do anything they want to do; and we had better place ourselves in a position of being able to move with some degree of dispatch and lack of inhibition and restraint to develop new weapons systems if indeed it appears in the interests of the United States and the free world to do so.

Mr. BROOKE. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts.

Mr. BROOKE. I wish to thank the distinguished Senator from Texas for his very kind reference to my patriotism, and to thank him for for entering into this colloquy. He is a very able and a very skillful debater and has great knowledge of our military weapons systems. I think the colloquy has been very helpful.

I would like at this time to direct a question to the able Senator from Washington (Mr. JACKSON): Is it just possible that the large SS–9's to which the Senator referred in our colloquy are designed for a so-called damage-limiting function—that is, weapons to be used against U.S. weapons in the event that war actually begins?

Mr. JACKSON. Mr. President, I suppose one could so speculate. That would not be the kind of conclusion I would come to, nor is it the conclusion which most strategic weapons experts—and I am not a strategic weapons expert—would come to.

I must say that most people who were hoping for some kind of signal from the Soviets that all they wanted was to protect their own interests—which is understandable—and to have a deterrent which was survivable, were somewhat dismayed—and I guess that would be putting it mildly—when the Soviets made a decision to go ahead with this huge missile system.

I, for the life of me, cannot understand what possible use they would have for the SS–9 other than to use it against very hard targets.

As I have said, I was involved, way back in the 1950's, when we discussed, in the Joint Committee on Atomic Energy, whether we should have available for our arsenal weapons with very substantial megatonnage. We made a decision not to go that route, even with our manned bombers.

I had hoped, of course, that the Soviet Union, in connection with their response, which was to be expected, to build up their own missiles, would have followed the route we followed. That certainly would have been a clear signal that they wanted to reach some kind of agreement.

When one stops to consider the amount of money that the Soviet Union has invested in the SS–9 alone, one cannot help but be disturbed. My recollection is that they have invested, based on the best evaluation that can be made, about $9 billion in the SS–9 force. This is an investment, of course, that is substantial indeed. This is an investment that it was not necessary for them to make if their sole purpose was to achieve parity and to have a force with which they could protect their own vital strategic interest. They have, after all, a wholly adequate deterrent force in their other land-based missiles—more than 1,000 of them.

I think the SS–9 simply cannot be explained away, when one just faces the cold, hard facts of its great size. It is hardly in keeping with the expected goal of a survivable force with which they have in mind only an ability to retaliate against a possible surprise attack by the United States.

I say they cannot, with any objectivity, assume that the United States is bent on a first-strike capability when one reviews the past history in which we had a monopoly and during which time they had a very small nuclear force.

The PRESIDING OFFICER. The 5 minutes of the Senator from Massachusetts have expired.

Mr. BROOKE. Mr. President, I yield myself 5 additional minutes.

I feel that the colloquy entered into by the most able and distinguished Senator from Washington and the very able and distinguished Senator from Texas have been very healthy and very helpful.

I feel very strongly that Congress has a joint responsibility with the President and the executive branch of Government to establish the general characteristics of military weapons systems. We must not shirk our responsibility. I think that, contrary to what Secretary Laird said in another statement to the distinguished chairman of the Armed Services Com-

mittee concerning both of the amendments I have offered today, this is a matter for the Congress as well as for the Department of Defense.

If that were not true, all we need do is act upon those recommendations submitted to us. Without question, the weapons systems and their characteristics would be decided upon solely by the Defense Department.

My amendments are an attempt to reassert the constitutional prerogatives of the Congress.

One of those amendments, of course, has been accepted with modifications. A second amendment, having to do with first strike capability, is one which deals with a very vital and very important subject—a matter which goes to the heart of the arms limitation talks, and really to the question of peace or extermination.

I feel that it is a most important subject. And I realize that on this highly technical matter we have not had an opportunity for hearing before the Armed Services Committee. Therefore, I would like to ask the distinguished chairman of the Armed Services Committee, who is present in the Chamber, whether we could have an agreement at some time to have hearings on the subject matter of the present amendment.

Mr. STENNIS. Well, I want to be frank with the Senator. I feel as though I have already said about all I can say now on hearings, and guaranteeing hearings. I would not say I was not going to have any, but we have got this bill for 1972 coming up, selective service coming up, the question of a voluntary army coming up, alleged rumors of more than one pay bill coming up, and a great deal many matters.

I am not indifferent to the Senator's request at all, but I just believe I ought not to make any commitment. We already have a subcommittee, headed by the Senator from Washington (Mr. JACKSON), on the SALT talks. Would the Senator from Washington care to respond?

Mr. JACKSON. Yes.

Mr. President, will the Senator yield?

Mr. BROOKE. I yield to the Senator from Washington.

Mr. STENNIS. On my time, if he cares to.

Mr. JACKSON. First, Mr. President, let me say, as I said in connection with the earlier amendment, that I compliment the able Senator from Massachusetts for bringing these matters before the Senate. I think it is healthy that we have a good colloquy and a good discussion. I know how sincere the Senator is, and I repeat what I said earlier: I disagree with the means the Senator has in mind of trying to accomplish the result which we all want to achieve, an agreement to limit strategic arms.

I shall be happy—it is not possible this fall, but after the first of the year—to go into this matter of MIRV and its role in the Strategic Arms Limitation Talks. As the Senator from Massachusetts knows, I would say that much of the discussion would have to be in executive session. We could have some open sessions where we have outside witnesses.

I would be happy to explore the whole area of MIRV and the ramifications of the pending amendment and other possible amendments that the Senator might have in mind for the future.

I think what has been said here today lays a foundation for an ongoing discussion in the Strategic Arms Limitation Subcommittee, of which the Senator from Massachusetts is a member. I would be very happy to get into it at an appropriate time after the first of the year.

Mr. BROOKE. Mr. President, I am very pleased that the distinguished chairman of the Subcommittee on SALT feels this way about this subject, and that he would be willing—if not before then certainly at the beginning of the next session—to have hearings on this important subject.

I think it is a matter we should not dismiss. It is a matter on which more of our colleagues should be thoroughly informed. It is something that is going to be with us for a long period of time, and it is something that deserves our very serious consideration, and as much knowledge as possible on the complex matters of MIRV technology.

Mr. JACKSON. Will the Senator yield at that point?

Mr. BROOKE. I yield.

Mr. JACKSON. Without getting into any of the classified aspects of our hearings before the subcommittee, I think it is fair to say that the distinguished Senator from Massachusetts has already raised questions about certain aspects of MIRV as it relates to the SALT talks. I think we are in a position to go on from there, and, especially based on the colloquy here today, to dig deeper and spend some appropriate amount of time on this subject.

Mr. BROOKE. Mr. President, I thank the very able Senator from Washington. Though he claims not to be an expert on these matters, he is perhaps as knowledgeable or more knowledgeable about them than any of the rest of us in the Senate. He has spent a great deal of time on them; he has done a lot of personal research, and I am very grateful that he has been willing to spend so much time in colloquy on both of these amendments today.

Mr. President, I feel very strongly about this matter. I frankly do not know what the outcome of a record vote would be. I do not think any of us do, we cannot predict what the Senate will do. But in the event the Senate did reject the amendment overwhelmingly, I would be very fearful that it might be misconstrued by the Soviet Union and by the negotiators at the SALT talks in a way that would be very harmful to us. It might be misconstrued as indicating that this meant we were seeking a first strike capability.

The able Senator from Washington, the able Senator from Texas, and all of us have agreed, as the President of the United States, Mr. Nixon, and the Secretary of Defense, Mr. Laird, did publicly, that the policy is not to seek a first strike capability, and that we are not seeking a first strike capability. The able Senator from Washington and the able Senator from Texas have indicated that they both hope we will not in the future seek a first strike capability. I think this should be clear to the Soviet Union and to the negotiators at SALT on both sides, that the United States is not seeking a first strike capability. That is why I am fearful that if we had a vote today, it could be misconstrued, and could be very harmful to the success of the SALT talks. That is certainly something none of us would want to happen.

Because of that concern, Mr. President, I ask unanimous consent that I may withdraw my amendment.

The PRESIDING OFFICER. The Senator has the right to withdraw his amendment.

Mr. BROOKE. Mr. President, before I withdraw the amendment, let me briefly summarize its merits. A grave contingency confronts us and it is imperative that the Congress prepare to meet it. That is the possibility—one might say the probability—that the initial MIRV deployments will continue and that these weapons will be in the arsenals of the United States and probably the Soviet Union for the indefinite future. If that trend continues, our fundamental concern must be to insure that the MIRV's that are deployed reinforce strategic stability. They can do so only if they are exclusively, explicitly, and credibly designed for the retaliatory, second strike mission. In short, we must erect standards which make clear that the United States will not deploy MIRV systems capable of threatening the Soviet strategic forces.

The United States has, of course, been committed to a second strike posture for many years. The task here is to see that the MIRV systems are compatible with that posture. President Nixon has consistently stressed this principle in his decisions and declarations on strategic weapons. For example, in proposing the Safeguard anti-ballistic-missile system, the President wisely underscored his concern to avoid actions which appeared to threaten the Soviet retaliatory forces. In his remarks of March 14, 1969—surely one of the most important and enlightened strategic statements by any statesman—Mr. Nixon repeatedly applied the American doctrine of deterrence. We rejected the possibility of a heavy ABM defense because:

> It might look to an opponent like the prelude to an offensive strategy threatening the Soviet deterrent.

He also decided against meeting the Soviet buildup by increasing U.S. offensive capabilities, since such an increase "could be misinterpreted by the Soviets as an attempt to threaten their deterrent. It would therefore stimulate an arms race." And the President partially justified the reorientation of the U.S. ABM system to defense of the Minuteman force by stating:

> The program is not provocative. The Soviet retaliatory capability is not affected by our decision.

President Nixon applied the same standard in his redirection of the U.S. MIRV program. As the Senate will recall, Mr. Nixon informed us some months ago that a proposed development of a hard-target MIRV system had not been approved and that the United States has no such program.

In testimony before the Armed Services Committee Secretary of Defense Laird further commented on this im-

portant decision by pointing out that the President "has made it perfectly clear that we do not intend to develop counterforce capabilities which the Soviets could construe as having a first-strike potential." I believe the Secretary, who has been so deeply concerned by the deployment of Soviet weapons with an evident potential for attacking U.S. ICBM's, must have a special appreciation of the hazards of such destabilizing weapons. It is clear to every careful analyst that weapons capable of counterforce attacks only make the existing strategic balance more dangerous and the ensuing arms race more costly.

There is, obviously, no disagreement that, if MIRV is required to penetrate a Soviet ABM system and to maintain a credible second strike capability, then this country will continue deploying such systems. However, the retaliatory mission can be performed with relatively modest yields and limited accuracies that would be unsuitable for any first strike against enemy missile forces. The truth of this simple axiom is apparent when one recalls that Hiroshima was almost obliterated by a 20-kiloton atomic bomb—much smaller than today's missile-borne payloads—delivered with an accuracy which has long since been surpassed.

The Armed Services Committee has expressed its concern about the implications of MIRV for the credibility of America's commitment to a second strike or mutual deterrence doctrine. In reducing the funds for the so-called ABRES—advanced ballistic reentry systems—program, the committee has stressed in its report that the reduction is related to "any future hard-target kill capability." The report points out that the strictly retaliatory objective "can be met with substantially less accuracy and more modest yields than needed for the counterforce mission." Thus, the committee has thoughtfully discouraged even preliminary development work which might be viewed as pointed toward a destabilizing counterforce capacity—a capacity that is unnecessary and indeed highly detrimental to deterrence.

In pursuit of this same objective, so clearly enunciated by the President, the Secretary of Defense, and the Armed Services Committee, I am proposing a second amendment setting the standards for deployment of a retaliatory MIRV capability. This amendment would prohibit the use of funds for operational development, testing or procurement of a hard-target MIRV system, and would specifically define what a hard-target MIRV system capability is.

Much discussion of this issue has been impeded by the absence of an agreed definition of hard-target capability. Obviously it is meaningless to declare that the United States will forego a capability to attack Soviet strategic forces unless that capability is defined in believable and understandable terms. Both in the interest of our own understanding, and even more, of Soviet perceptions of our intentions, this amendment would limit U.S. MIRV systems to yields and accuracies no greater than one-third the level considered necessary to enable a single warhead to neutralize a hardened missile silo.

I have developed this definition in extensive discussions with the Department of Defense and with colleagues in and out of Congress. As I am sure the Department of Defense agrees, it provides more than ample latitude for MIRV systems to meet the requirements of a second strike, while it establishes a threshold well below that which could jeopardize Soviet missile forces. I believe it to be an even more urgent provision than the first amendment I have presented. On the real likelihood that MIRV deployment may continue, we must have firm guidelines for our subsequent action in this field.

Because of their deep concern on this matter, more than half the members of the faculty of the Massachusetts Institute of Technology have individually joined in a petition to the President and the Senate to forgo any hard-target MIRV development. Growing numbers of responsible spokesmen in the technical community, including many proponents of MIRV, recognize that we do not need and in fact cannot afford to move toward hard-target MIRV's, since the result can only be a diminution in our own security. This amendment can be a decisive affirmation of our determination to avoid ambiguous or provocative improvements in MIRV systems.

The logic for this proposal is rooted in mutual deterrence itself, as President Nixon has so well indicated. Stable deterrence requires that neither side threaten the other side's capacity to retaliate. This is necessary not only to avoid endless cycles in the arms race, as one of the other side moves desperately to protect its retaliatory capacity. It is primarily important because, should a nation find its forces to be vulnerable, those weapons can only be used if they themselves are launched first. If they are withheld, they run the risk of destruction. This is the insight which years ago led Albert Wohlstetter and others to note that the "balance of terror" is delicate, and that security in the nuclear age demands that strategic weapons be invulnerable. Thus, U.S. security is in no way served by any capability to threaten Soviet strategic forces. Such a capability would only raise the prospect that Soviet weapons might be launched in some moment of crisis out of fear that otherwise they would be disarmed in a first strike. The same is no less true of any Soviet deployment threatening our retaliatory forces.

We cannot tolerate hair triggers in an era of instant and total devastation. The only sane policy for both countries is to refrain from such destabilizing systems and to take those measures which create unambiguous and invulnerable second strike forces.

That is the purpose of this amendment. By setting this criterion for American MIRV systems, we can enhance our own security and set a model for the Soviet Union to match. Even if they fail to do so, we will have insured that any American MIRV systems are compatible with the policy to which the United States is dedicated. We will also have struck a note of prudence which could resound very helpfully in the Strategic Arms Limitation Talks.

To sum up, the subject of MIRV is complex but the case for this amendment is itself quite simple. If MIRV deployment continues, we shall need to insure that the American MIRV systems remain strictly retaliatory weapons which do not undermine the stable deterrence on which our security rests.

Mr. President, I withdraw the amendment.

I yield back the remainder of my time.

Mr. JACKSON. I yield back the remainder of my time.

Mr. THURMOND. Mr. President, I rise in distinct opposition to the proposed amendment, No. 861, which would require a $5 billion across-the-board reduction in military spending to the fiscal year 1971 defense authorization bill. Spending would be reduced from $71.2 to $66 billion. A $5 billion across-the-board cut would of necessity involve the termination or stretching out of many defense contracts. Either action could be disastrous both from a cost efficiency and military preparedness standpoint.

The Senate Armed Services Committee and the two special ad hoc subcommittees appointed by Chairman STENNIS reviewed the requests by the military departments over a span of months in painstaking detail. Senator STENNIS and Senator MCINTYRE I know will comment on their endeavors. I would like to comment specifically on the work and efforts of the Tactical Air Power Subcommittee, due to the temporary absence of Chairman CANNON.

On July 29, Senator CANNON presented to the Senate a detailed résumé of the work of the subcommittee. I do not intend to repeat that information today, but I am ready to discuss any of these programs today to reaffirm the basis for the actions recommended to the full committee.

In brief, 10 major aircraft programs and 12 major missile programs were examined. The funds requested for these weapon systems was $3.2 billion.

The subcommittee recommended reductions of $173.3 million—a reduction of 5.4 percent. Each member of this subcommittee took his job seriously. We were keenly aware that our national security interests, and the world in which we live today, presented a clear mandate that we not act hastily or arbitrarily. If we had attempted an arbitrary across-the-board cut as a method of procedure, it would not have been necessary for us to explore any of these programs in any detail. There would have been no need to do so. No matter what the justification presented by the Department of Defense with respect to any weapon systems, our minds would have been made up. The only question that we would have found necessary to resolve was the percentage cut we desired to inflict on the Defense Department requests.

Quite frankly, Mr. President, I do not think the subcommittee would have properly discharged its responsibility to the American people by resorting to such a course of action. We would have left the clear implication that we neither had the time nor the interest to review the validity or the merit with respect to the programs and weapon systems of the Department of Defense.

I am sure everyone would agree that it would not be a commendable performance for us to throw up our hands—state

the task was impossible—and thereby rubberstamp the entire financial requests of the Department of Defense. Not at all. The American taxpayers expects more of Congress than to merely rubberstamp the requests of any branch of the Government, including the Defense Department.

We then proceed to the precise opposite of a rubberstamp, which is resorting to an arbitrary cut in the request of the Defense Department.

This approach is wanting in both wisdom and logic. First of all, if we abrogate our responsibilities and fail to make the wisest judgments possible after a thorough review of the individual programs, we would be making an uninformed judgment. To determine the amount the Defense budget should be cut would invoke an arbitrary rule of thumb whose accuracy would be a sheer guess. Who could knowledgeably tell the American people that Defense expenditures should randomly be cut by $5 billion? What would make that figure any more correct than $1 billion or $2 billion? What would make $10 billion more exact than a $50 billion cut? The arbitrary figure would be based on guesswork rather than judged on merit.

Therefore, Mr. President, such a procedure was rejected during the Tactical Air Power Subcommittee's deliberation on the $3.2 billion in requests for tactical weapon systems as being entirely unfounded. There were no preconceived ideas or opinions on which programs would be supported or not supported. There were no preconceived ideas on the specific amount of money that should or should not be cut from the budget. It was our sole objective to let each program and the facts surrounding each program speak for itself and either justify or not justify the funds requested.

As Senator CANNON told the Senate on July 29, in presenting the recommendations of the subcommittee, he felt Secretary Laird's budget—which he characterized as a "rock bottom" budget—was a reasonable one. After all, the Secretary and hundreds of people in the Defense Department had worked long and diligently in its preparation. This, coupled with the importance of these programs to our national security, requires that we on the Armed Services Committee exercise the best possible judgment. It requires that we act with caution and restraint and obtain all relevant facts on each weapon system. Every effort was made to achieve this objective.

The full committee held hearings resulting in 2,715 pages of printed testimony. We in the Tactical Air Power Subcommittee had 1,367 pages of hearings in an effort to properly discharge our responsibilities. These classified hearings are available to any Senator who desires to review them and to explore the details relative to 22 major tactical aircraft and missile systems.

I know that the Armed Services Committee, under the excellent leadership of the distinguished Senator from Mississippi, shares with me this philosophy and approach toward handling the Defense Department's budget.

As we know, the full committee, after months of intensive hearings, presented to the Senate a budget which had been reduced by $1.3 billion, from $20.2 billion to $18.9 billion. This action was not done arbitrarily by the use of a percentage cut. It was done with deliberativeness and careful attention to the justification surrounding each of the major weapon systems. Questions raised on the floor with respect to the justification or lack thereof concerning any major weapon system were welcomed. Senators who wanted more facts received a prompt answer. However, now that many amendments dealing with specific weapons systems have been defeated after lengthy and extensive debate, I certainly do not believe the Senate should resort to an across-the-board reduction of $5 billion without any justification whatsoever to support this amendment.

In my judgment, wielding a large ax on military programs and to "cut for the sake of cutting" lacks wisdom and foresight. Our national security interests must not be abrogated or discounted in the pellmell rush to achieve economy. We must not permit the desire for economy to sweep everything before it. As long as we have our worldwide commitments and expect the military to be capable and responsible to meet them, we must provide them with the weapons and hardware; otherwise, we are only kidding ourselves.

There is an associated issue that has come in for considerable discussion on the floor. That issue underlies in some large degree the reasoning of the proponents of the amendment to make a flat $5 billion cut. That issue revolves around the principle of concurrency. As the term was used, it represents some degree of overlap between research and development and production.

The Tactical Air Power Subcommittee indirectly has been commended on the floor of the Senate for some of its actions in reducing the request for production funds where research and development had not shown sufficient progress. It is true. We did cut production funds for the Sparrow-Aim 7–F, the Maverick, and the Condor missile programs. However, we did not do so arbitrarily. Most importantly, we did not reduce these funds merely because research and development had not been completed. We did it after reviewing all the facts available and reaching a judgment that procurement funds could safely be deferred in order to obtain another year of intensive research and development. A satisfactory level of progress in research and development must be achieved before significant production is permitted to proceed. Frequently, these are difficult decisions. An informed judgment can be made only after the facts on each weapon system has been reviewed. It is not proper and fitting to jump to a conclusion that no procurement funds are warranted until research and development has been 100 percent completed. Unfortunately, Mr. President, that is the impression I have received from some of the statements made recently here on the floor.

Concurrency is a very important subject but one which is frequently misunderstood. As we have been discussing it, concurrency is the overlap at some point in time where some research and development is taking place simultaneously with production. First of all, there is nothing wrong with some concurrency as long as it is properly understood and properly applied.

The major factor that has to be realized and fairly evaluated is the "degree of risk" involved in a given program. If the "degree of risk" is deemed acceptable by the experts, then reasonable production funds should be approved and some production permitted. This applies in particular to the procurement of long-lead items. If we fail to authorize the procurement of long-lead items before research and development is completed then not only is valuable time lost, but the cost of the weapons system jumps enormously. I should say in passing that long-lead items are those complicated hard-to-get components of a weapons system that take the longest period of time on which to obtain delivery.

Every new weapons system should have a "degree of risk" involved. If there is no risk involved, we are not improving the state of the art. We are merely maintaining the status quo. We might as well purchase older military hardware that we have been buying over the years which has the inherent disadvantage of obsolescence. Every Senator should recognize, Mr. President, that new weapons systems involve risk. Risks cannot and should not be eliminated. The key issue to be determined is the "degree of risk." Where we deem the risk acceptable, we authorize the funds; and where we deem the risk unacceptable, we deny production funds.

I wonder if people who believe concurrency is "evil" have analyzed the enormous increases in cost that would be incurred if Congress were to insist that research and development be completed prior to authorizing any production funds. The slow rate of development and production on all weapons systems under this procedure would make most of them economically impossible to procure. None of them could pass the test of cost effectiveness.

Let us take a specific example. On the F–14 aircraft program there will be 12 research and development aircraft. These aircraft will be delivered between January and December 1971 at the rate of one per month. The first aircraft will fly ahead of schedule in December of this year under present plans. There was some misunderstanding on the floor the other day indicating that the 26 aircraft in this year's bill were prototype or development aircraft. This is not the case. They are production aircraft. Some people have suggested we finish F–14 research and development before buying the first production aircraft. On the surface, this may sound reasonable in theory, but in the world of reality, Mr. President, it would be terrible. Why is this so?

The Navy will not receive the 12th research and development aircraft until December 1971. Although research and development will go beyond that point, let us assume for the moment that research and development will be substantially completed with delivery of the 12th aircraft in December 1971. Then assume the administration acts with unprecedented speed and includes a procurement request in the fiscal year 1973 budget request which will come to the

Congress in January 1972. It would then be about September or October 1972 before the Congress completed action on the bill and hopefully the Navy would be in a position to let a contract by January of 1973. Meanwhile the contractor has had no production work or funds during 1972. His work force has of necessity been disbanded and the existing contract has been completely abrogated. The result would be an utter and complete procurement disaster.

Assuming that a contract was ultimately let we would not receive the first operational squadron until approximately 3 years later than the present program—namely, 1976. Under this approach, we could not protect our national security interest in any realistic manner. The F–4 requires replacement by 1975—there is no question or doubt about that.

We authorized 26 production F–14 aircraft this year. The first one will not be delivered until January 1972, more than 1 year after the first flight of the F–14. The balance will be delivered during 1972. Thus it is readily apparent that we will have spent very little of the funds authorized this year for the 26 aircraft until substantial flight test data has been accumulated.

Now let us examine some of the associated cost figures. If we require delivery of the 12 research and development aircraft prior to authorizing the procurement of any F–14 aircraft it would cost a staggering sum of money and a 2-year production gap. If we permitted a 2-year production gap, under the analysis previously mentioned, where we wait until the fiscal year 1973 budget year to authorize F–14 aircraft there is no accurate cost figure available. In my judgment, I feel confident the increased cost would exceed $2 billion over the present program. Why do I say this? The Navy has analyzed the cost impact for a 1-year production gap. The increased costs thereof were $896 million over the present program. I do not think the American taxpayer would knowingly support this concept of purchasing weapons systems if he is provided an awareness of the facts involved. We cannot and must not let simplistic or idealistic approaches be used to govern the procurement of complicated weapons systems. Any proposed changes must be thoroughly reviewed to determine their impact on any given program in time, cost, and impact on our national security position. Otherwise we do ourselves and the Nation a grave injustice.

I would add further, Mr. President, that the Tactical Air Power Subcommittee examined the impact of reducing the F–14 program this year from 26 to 15 aircraft. This would have incurred a minimum increase in cost of $64 million. In addition the unit cost of the 15 aircraft would have risen $9 million each for a total of $135 million more than necessary. Also, the unit cost of aircraft purchased in later years would be higher. I hasten to add that the unit cost figures are for this year only. The initial aircraft of any type costs more. The average price is less as additional planes are produced.

Mr. President, the subcommittee looked at an extreme example. Suppose the F–14 was a catastrophic failure at the time of first flight this December and the program was terminated shortly thereafter. The estimated Government liability for the 26 aircraft in this year's bill is $165 million. Its liability if it purchased 15 aircraft is $124 million. We did not feel that the difference as to potential Government liability was sufficient to justify reducing the program from 26 to 15 aircraft and to incur the minimum $64 million increase in cost as a consequence. We felt the "degree of risk" was such that we could justifiably authorize the 26 aircraft—and we did so.

It is possible, Mr. President, for anyone to conjure up all sorts of problems that may arise on the F–14 or any other weapons system for that matter. Quite frankly, I cannot support this premise. We endeavored to arrive at reasoned judgments based on the facts available and not on a hypothesis that some problem may arise. Problems will be incurred. This is no secret. They are incurred on any major weapons system where there are significant advances in the state-of-the-art. If we did not have problems we would have no degree of risk. But as to those programs that we have acted upon affirmatively, it was our judgment the degree of risk was acceptable.

In summary on this point, Mr. President, I cannot emphasize too strongly the enormous—extremely enormous—increase in price that the American taxpayer will have to pay for his defense if we resorted to the philosophy or management practice that concurrency by its very nature is wrong and should be completely avoided.

Another important area I feel compelled to comment on today is the fact that this bill which was brought to the floor after searching scrutiny and thorough work by the Committee on Armed Services now has had numerous amendments introduced to it and had they been adopted it would have resembled a "Christmas tree." Many of these amendments are germane and many are not. In my opinion, the amendments should principally deal with the justification or lack thereof for the funds dealing with the weapon systems involved. Many of the amendments introduced, in my opinion, should properly be the subject of separate and distinct legislation.

Another comment I feel compelled to make, Mr. President, is that the Congress over the years has earned the title of the most deliberative body in the world and I think we have eminently lived up to that title. This bill came to the Senate floor on July 24 and the certain end does not appear in sight.

The Department of Defense commenced a new fiscal year on July 1, hence it must operate under continuing resolutions. Of equal importance is the fact that it, of necessity, is already hard at work on the fiscal year 1972 budget, without any precise knowledge of what this bill will contain. This is an extremely difficult way in which to conduct the largest business in the world. We properly expect DOD officials to be most efficient in the administration of this department, but we seldom sit back and reflect on one of the most important reasons why their efficiency is reduced—because their budgets are given to them several months after the fiscal year commences. This is not an efficient or economical way to "run a railroad" and we all recognize it.

Every Member had a willingness this year to dispose of the appropriation bills early. We had every intention of doing so. Several issues arose which found us engaging in weeks of debate on nonappropriations issues. It is my earnest suggestion that the President and the Secretary of Defense give earnest consideration toward recommending to the Congress a change in the fiscal year covering the executive branch of the Government. I firmly believe that we should change to the calendar year basis so that our appropriation bills, and particularly that of the Defense Department, would be acted on by October or November—which has been the real world in recent times—for the calendar year commencing the following January 1 so a more efficient and orderly procedure of running our Government could be realized.

I want to say that I am not criticizing any individual or any amendment. I am sincerely convinced, however, that our system of doing business in the Congress must be materially improved upon. The American people and the executive branch of the Government are depending on us to legislate in a timely manner. I refer particularly to the appropriations bills which have encountered increased difficulties during recent years due to the presence of other major issues.

Finally, Mr. President, I do not believe the Senate can or should act as a "committee on the whole." Over the years we have established a very essential and invaluable element in the legislative process, known as the committee system without which we cannot operate or function effectively. I am sure every Member recognizes this fundamental premise. Yet, with respect to the military authorization bill, a good deal of debate on the floor has revolved around basic and fundamental questions—questions which have been explored thoroughly by the Committee on Armed Services. The hearing records are available to any Senator or his staff. Certainly they should have the information they desire, to make an informed judgment, but I do not think we can afford endless discussion to basic questions here on the floor. We must move ahead with this vital legislation and rely on the integrity of the committee system to a large extent.

In conclusion, Mr. President, I think that after we have debated at length amendments dealing with certain individual weapon systems, that it would be extremely unwise for the Senate to accept any across-the-board cut to this authorization bill. No one, no matter how well intentioned, can state with any degree of certitude what that reduction should be—in order to be completely equitable and objective—and more importantly, permit the protection of our vital national security interest.

In conclusion, I want to say there is nothing magic in the cuts we made or our recommendations to the Senate. I do state that we took our actions only after lengthy hearings, and a serious delibera-

tion of the available facts to reach our judgments. In my opinion, anyone who desires to cut our bill further should advance persuasive and specific facts to support their position.

Generalized expressions, feelings, and opinions are not, in my opinion, a sound basis for invoking additional cuts.

I would urge the Senate, Mr. President, to respectfully but summarily reject amendment No. 861 whose purpose is to pursue such a course of action by a cut of $5 billion.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. FANNIN). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 861

Mr. STENNIS. Mr. President, I speak now in opposition to amendment No. 861, which is the Proxmire-Mathias amendment, proposing a limitation of $66 billion on fiscal year 1971 budget outlays for military functions of the Department of Defense.

Mr. President, with all respect to the sponsors of the amendment, I am convinced that it does not have the merit that would make it deserving to be adopted, and, therefore, it should be rejected.

I am certain that the Senator from Wisconsin agrees that we should not spend 1 cent more on defense than is absolutely necessary. But we disagree on how much is necessary.

Thus far we have been debating the military procurement authorization bill for fiscal year 1971, for which the Committee on Armed Services has recommended $19.3 billion. This is a decrease of $1.3 billion, or 6.7 percent from the $20.6 billion requested.

The budget request upon which this bill is based represents only 29 percent of the total defense request for new obligatory authority.

Therefore, the proposed amendment goes far beyond this bill we have under consideration, and would impose an expenditure reduction of $5.2 billion on the entire defense budget, which is not before us, has not been debated, and has not been discussed.

In other words, this cut would apply to many other appropriations which are beyond the cognizance of the Committee on Armed Services and which have not been reported by the Committee on Appropriations of the Senate or of the House.

Here is a case where Appropriations Committees have been waiting for the passage of this bill, and now we come along in this authorization bill and cut appropriations that come in on the other bill, and which cannot come in until consideration of this bill is finished. It is an impossible situation we continue to get ourselves into. I believe this body will pay the cost in prestige, importance, and the fullest respect of informed people.

It is a matter of concern to me—and I am not talking about individual Senators—but we are getting the cart before the horse. We are reversing the procedure and making reductions before we ever get the bill, even before the bill is written.

I emphasize that the fiscal 1971 authorization is for new obligatory authority, and that only a small portion will normally be expended during 1971. For obvious reasons, Mr. President, these funds had to be authorized and the money appropriated in advance so that the Department of Defense, as to weaponry especially, will be in a position to proceed and make contracts so that these matters may move forward.

I have already mentioned the fact that this goes over into the business of appropriations that have not been written yet, much less presented to this body.

I have a communication before me from the chairman of the Committee on Appropriations. He is obviously concerned about this reversal of the processes. The letter is dated August 27, 1970, and is addressed to me as chairman of the committee. The letter reads:

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, D.C., August 27, 1970.

Hon. JOHN STENNIS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR STENNIS: I am enclosing for your consideration a memorandum prepared by the staff of the Committee on the Proxmire-Mathias Amendment to the pending Department of Defense Procurement Authorization Bill (Amendment Number 861) imposing a limitation of $66 billion on fiscal year 1971 budget outlays for military functions of the Department of Defense.

Sincerely,

RICHARD B. RUSSELL,
Chairman.

Mr. President, the Senator from Georgia (Mr. RUSSELL) is chairman of the Committee on Appropriations and chairman of the Defense Subcommittee that handles that bill.

The memorandum is dated today and it is from the Chief of Staff and his able assistant. It sets forth the situation as to fiscal years 1969, 1970, and 1971, and it shows the enormous effect of this proposed amendment and how it cuts into several years' programs and bills that have not even been written up, much less that have come before the Senate.

Mr. President, I ask unanimous consent that the memorandum which was enclosed in the letter from the distinguished Senator from Georgia (Mr. RUSSELL) dated August 27, 1970, may be printed at this point in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

Date: August 27, 1970.
Memorandum to: Chairman RUSSELL.
From: Tom Scott and Bill Woodruff.
Subject: The Proxmire-Mathias Amendment to the pending Department of Defense Procurement Authorization Bill (Amendment No. 861)

1. As requested by you, we have reviewed the Proxmire-Mathias Amendment, and in our opinion, the following points should be carefully considered before such an amendment is enacted:

a. The President's budget for fiscal year 1971 is based on budget outlays for "military functions" of the Department of Defense totaling $71.2 billion. The Proxmire-Mathias Amendment would impose a ceiling of $66 billion on such outlays—a reduction of $5.2 billion, or approximately 7.3%.

b. Attention is called to the fact that the estimated fiscal year 1971 outlays for military functions represents a reduction of $5.3 billion below the fiscal year 1970 level and $6.7 billion below the fiscal year 1969 level. However, when we look at these expenditure levels stated in constant fiscal year 1969 dollars, the decreases are even greater. Stated in fiscal year 1969 dollars, the fiscal year 1971 estimate for military functions is $65.3 billion—a reduction of $12.6 billion below the fiscal year 1969. These comparisons are set out in the following tabulation:

[In billions of dollars]

Fiscal year	Actual dollars	1969 dollars
1969	77.9	77.9
1970	76.5	71.8
1971	71.2	65.3

c. The pending bill relates only to a portion of military outlays. The Proxmire-Mathias Amendment applies to all outlays under military functions. A more appropriate and more timely measure for this type of limitation was the Second Supplemental Appropriation Bill, 1970, which included Section 501 imposing a limitation on total budget outlays for all departments and agencies for fiscal year 1971.

d. As reported by the Committee on Armed Services, the pending bill includes authorizations for fiscal year 1971 appropriations totaling $19.2 billion. If the Department of Defense Appropriation Bill includes 100% of these authorizations, the fiscal year 1971 budget outlays from these appropriations would only total approximately $6.5 billion.

e. In recent years, the Congress has not seen fit to impose a limitation on the outlays for specific programs of a single Department of the Executive Branch. While such a provision is workable, it should be enacted well before the beginning of the fiscal year in order that the appropriate plans and controls could be set up. However, in this instance, we are two months into the fiscal year with the likelihood that the provision will not be enacted for another month or so. To impose such a limitation this late in the year would create great management and administrative problems.

f. Of the estimated total of $71.2 billion for fiscal year 1971 budget outlays for military functions, approximately $26.5 billion is for the payment of obligations incurred under appropriations for prior years and for July and August under the existing Continuing Resolution, over which the Department of Defense can exercise very little control. When this fact is considered, we find that, of the $71.2 billion, only $44.7 billion is subject to control, and this $5.2 billion reduction would have to be made here—a reduction of approximately 12%.

Mr. STENNIS. Mr. President, the Senator from Wisconsin proposes a 7-percent reduction in outlays in fiscal year 1971. His description is that:

It is a reduction of almost the same percentage that the Senate Armed Services Committee cut the $20.5 billion military authorization bill. It carries over the same percentage cut to overall military spending that the Senate Armed Services Committee cut the military procurement authorization—

Mr. President, the committee cut the authorization request by 6.7 percent. That is a 6.7-percent cut in new money. We actually reduced outlays in fiscal year 1971 by less than 1 percent—three-tenths

of 1 percent to be more accurate. I want to emphasize that the committee cut 6.7 percent of the new obligational authority, not 6.7 percent of the outlays. To make a cut of 6.7 percent in outlays, the committee would have had to deny an amount representing practically the entire request.

Mr. President, I recognize that the Senator from Wisconsin leaves the specific items up to the executive branch. I want everyone to understand, though, that a cut in outlays in a given fiscal year translates into a significantly greater reduction in total program. This seemingly small 7 percent cut in outlays is not small in its effect on the defense program. I do not say "Defense Department" now. Everybody wants to criticize the Department. I am talking about the defense program. Consider also that 2 months of the fiscal year are gone and it will take even more of the fiscal year before plans can be put in effect to make the reduction. The Defense Department is already operating on what we call contingent authority. It is mighty bad business, but it is the best we have been able to do. As I have already said, the Department is now 60 days into the new fiscal year. The bill will not get to the President's desk for another month, so about one-fourth of the fiscal year will be gone before the contents of the bill are ever made available.

Mr. President, I must emphasize the severity of the proposed reduction in outlays. It will make a shambles of the Military Establishment.

The Senator from Wisconsin quoted Mr. Packard as saying:

> Frankly... in Defense Procurement we have a real mess on our hands.

Amendment No. 861 is not a solution. The solution will come from carefully considered planning and well executed programs—not from the precipitous action called for by the amendment under consideration.

It is one thing to say that area after area has been identified where cuts could be made. It is yet another thing to say cuts should be made, and still another to say that all the cuts should be made in this fiscal year. I can speak now only for the procurement and research and development areas. The committee has examined every major program in detail and that includes all the programs recommended for reduction by the Peace Through Law report. The Senate has already rejected the proposed ABM cuts. The committee adjusted the B–1 program. We are not rushing into production without building and testing prototypes. We have specifically addressed stretching the art in the authorization of new weapons systems. We are recommending only the urgent requirements this year. We are not "filling every request for dollars for defense and the Military Establishment."

Mr. President, military functions expenditures are budgeted at $71.2 billion for fiscal year 1971—$5.3 billion below fiscal year 1970.

The proposed amendment would reduce fiscal year 1971 expenditures another $5.2 billion—a total of $10.5 billion below fiscal year 1970 or almost 15 percent within 1 year. But the amendment is even more drastic. Even if it were enacted before the end of the first quarter of this fiscal year had passed, little, if any, of the reduction could be effective before January 1, 1971. This means that reductions in the last half of this fiscal year would have to be at a rate of over $10 billion to remain within the annual expenditure limitation.

Mr. President, with all deference to everyone, that is ridiculous. We have cuts that are going to operate on appropriation bills on which testimony has not been finished. They have never been written up by the committee. There are no reports here. They are not before the Senate. It is worse than what we call blind meat-ax cuts on a bill that has been heard and presented. This is reaching back and cutting bills that have never gotten here, and most of those reductions would have to be made within the last 6 months, rather than 12 months.

Congress is already 3 months behind in providing the means to operate the Government for 1971. It seems to me we could well stay our hand rather than, in effect, cut off 3 more months here and then require this unjustified, ill-considered, unmeasured reduction, all of it to occur within the last 6 months.

Because different areas of Defense programs spend at different rates in the year moneys are appropriated, an expenditure reduction at the rate of $10 billion for the last half year would represent a $25–$30 billion rate of program reduction in the last half of fiscal year 1971. For example, procurement accounts spend about 25 percent the first year; so for each dollar of procurement expenditure reduction, $4 of program authorization must be cut. Similarly, research, development, test and evaluation spends about 50 percent; thus, there is a two for one program reduction involved with research and development expenditures.

The impact of an expenditure reduction of $5 billion in the last half of fiscal year 1971—a $10 billion annual rate—would be chaotic. Expenditures programed for the last half of fiscal year 1971 are approximately $35 billion. This would be reduced by 14 percent during the 6-month period causing massive turmoil in personnel employment, and procurement and research and development programs.

A program reduction of $12 to $15 billion would be required on an annual basis. This would leave a Defense program in fiscal year 1971 of $60 billion or less. Converted to fiscal year 1964 dollars, this would represent a program level of $45 billion as compared to the fiscal year 1964 program of $49.6 billion. The program reduction required would represent a massive reduction in force levels, and procurement and research programs below pre-Vietnam levels. This is at a time when we have 400,000 men still deployed to South Vietnam, engaged in a war which will still cost at an annual incremental rate of $10.5 billion by the end of fiscal year 1971.

We would have to go back, disentangle the mess we had created, come back here, and recommend and have passed appropriations that would make up for what we would do under this drastic amendment.

Mr. President, my desires to reduce expenditures for the Department of Defense are well known. What we have been doing here last year and this year is well known. Many others have joined in it, including Secretary Laird. But there is a way to do it. I think the people want reductions to come about. At the same time, the people do not want our national security imperiled. They do not want our military might destroyed. They do not want to dismantle the Army, Navy, Marine Corps, and Air Force. They do not want to neglect our men when our policy still requires them to fight in Vietnam. The people want to have options in that. They want the best weapons, the best equipment possible, the most safety for the men doing the fighting, the most security for themselves and their children. As long as they think a reasonable effort is being made here to reduce those amounts and conserve our resources, but protect our security, they are going to be satisfied; and they have a right to expect the very things I have described.

Reductions of this magnitude would endanger the support of U.S. forces in South Vietnam. They would reduce our overall military readiness to such a degree as to seriously endanger the country. U.S. commitments would be defaulted and the support of our forces worldwide greatly jeopardized.

The proposed amendment should not be approved. Now, this is not an alarmist talking here. This is someone who has been trying to make some orderly, reasonable reductions. Our committee, not just the chairman but the entire committee, is familiar with this problem and knows something about the operations and what funds are required, and we have brought this money bill here and it has been under attack for days and days and days. Yet, while there has been a chance to debate these matters out, dollarwise I do not believe it has been changed one bit, unless it was on the basis that the subcommittee, on the discovery of additional facts, had agreed to it.

I state that as additional evidence that the committees have worked through these things from one side to the other, topside and bottom, for the purpose of taking the water out of it. But this is a meat-ax approach, to move in here, without rhyme or reason, in some cases without the bills even being before the Senate. This proposal is a drastic reduction that would take part of the bone and muscle away. Should we let this amendment become law, it would cost more to go in and repair the damage and restore the strength than the amendment would save.

Of course, I am for reduced military spending. At the same time, I am particularly concerned that we do not, in the name of economy, overly react to the winding down of the unpopular Vietnam war. I remember all too well the state of the military at the beginning of World War II and the Korean war. We were not prepared. I remember sitting right there in the seat behind the one I now occupy, near the beginning of the Korean war. I was sitting there when I learned, through a speech on this floor

by a Senator knowledgeable on the subject, that our airmen and our pilots who were having to fight in Korea in what we called fighter planes, were actually having to go up every day against a plane that we found out, all too late, was superior to our own.

I do not ever want to have that feeling again. No one does. There is no excuse for it any more. And I do not think, from that date until now, there has been any more neglect of our need to have the best weapon, whether it is a plane or a rifle.

But if we follow the meat-ax method, with amendments like this, we are going to tear down our strength, and have second-rate weapons, and the other man will have the best.

We were not prepared for World War II. We were not prepared for the Korean war. We lost huge chunks of territory because we were not strong enough. We fought a delaying action to buy time to train and equip military forces, at enormous cost in money and manpower. The unpardonable part was the lives of our fighting men that were lost to retake ground that should not have been lost in the first place.

National security is no accident—it results from sound planning and proper funding. Amendment 861 would abrogate all of the planning and analyses that have been accomplished within the executive branch. It would negate the careful and probing look at Defense programs by the appropriate congressional committees. It makes a judgment more on size than on commitments and requirements.

As President Eisenhower once stated:

Until war is eliminated from international relations, unpreparedness for it is well nigh as criminal as war itself.

In my opinion amendment No. 861 would push us perilously close to a state of national unpreparedness.

God forbid that, in our anxiety to reduce some military spending which is already being reduced at a very reasonable rate, in our zeal and our desire, that we run by and overlook some of the guidelines, some of the mileboards, and some of the cautions of time and experience, and have to pay for it in loss of our men on the battlefield, loss of first quality weapons, and a diminution and impairment of our national security.

I just do not believe it will happen. My only concern is that Senators get the facts, and that is why I am speaking here tonight to these empty chairs, in order to get this matter into the RECORD so that in some way, some of it will percolate through and get to their attention. I shall be back tomorrow, standing right here with additional facts and with a repetition of some of these, and we will hammer on, here, in an effort to get the facts through. If we do, the judgment of the Senate will be sound.

Mr. President, the question of manpower alone has been under discussion here. It is a question I am particularly interested in, also. But I want to state the facts on that subject tomorrow.

Mr. President, I do not know of anyone who wants the floor.

LIMITATION ON STATEMENTS DURING THE TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that statements made during the period for the transaction of routine morning business tomorrow be limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. STENNIS. Mr. President, regarding the subject upon which I have just spoken—that is, the amendment providing for a $5.2 billion reduction in military expenditures for fiscal 1971—I have a copy of a letter dated today, addressed to each of my colleagues, regarding this amendment and its meaning, which I have had hand-delivered to them this afternoon. I ask unanimous consent to have it printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 27, 1970.

DEAR SENATOR: Tomorrow about twelve o'clock the Senate will vote on Amendment #861 which would place a spending ceiling on the Department of Defense on all Department of Defense activities for fiscal year 1971 in the amount of $66 billion. This would be $5.2 billion below the planned outlay of $71.2 billion. I strongly urge that you vote against this amendment in view of the facts I cite below:

(1) By placing a spending ceiling on all military functions, the amendment goes far beyond the scope of the pending procurement authorization bill. In fact, only $6.5 billion of the $19.2 billion in the pending bill would be affected by expenditure limitations in fiscal year 1971 although the total procurement program would necessarily be drastically cut.

(2) No one knows how the $5.2 billion reduction would be applied. I can only emphasize the chaotic results that could be anticipated in the Department of Defense especially in view of the various reductions already underway. This reduction is about 12% rather than 7% since $26.5 billion out of the $71.2 billion budget outlay for fiscal year 1971 has already been committed under continuing resolution authority leaving only $44.7 billion subject to control.

Even more important, this amendment would have an impact mainly in the last half of fiscal year 1971—January through June—and therefore would require a $10.4 billion reduced expenditure rate for this six-month period.

(3) The present budget calls for a manpower reduction of 311,000 (military and civilian) by June 30, 1971, resulting in a total of 4,051,000. If $3 billion of the $5.2 billion cut is applied to manpower, the total reduction would be an additional $1.2 million people or four times the present planned cut with catastrophic results on our defense posture in this period of time.

(4) If the remaining $2.2 billion is applied to procurement, the annual level of effort will be reduced by $12 billion per year because of lead-time and delivery problems. This costly disruption would affect about one million people in the defense industry.

Present and future budget pressures will restrict defense spending to the minimum without the necessity of the proposed amendment. I will set forth in detail on the Floor of the Senate the efforts already being made in this regard.

Sincerely,

JOHN C. STENNIS.

UNANIMOUS-CONSENT AGREEMENTS

Mr. BYRD of West Virginia. Mr. President, having discussed the unanimous-consent requests about to be made with the authors of the amendments and with the manager of the bill and the able assistant minority leader, I am authorized by the distinguished majority leader to ask unanimous consent that time on the amendment to be offered by the Senator from Oklahoma (Mr. BELLMON), amendment No. 857, be limited to 30 minutes, the time to be equally divided between the author of the amendment (Mr. BELLMON) and the manager of the bill (Mr. STENNIS); that if there be amendments thereto, the time on each amendment to be limited to 10 minutes, to be equally divided between the author of the amendment to the amendment and Mr. BELLMON, the author of the basic amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that time on the amendment to be offered by the distinguished Senator from New Hampshire (Mr. MCINTYRE), the so-called NSF research amendment, be limited to 1 hour, the time to be equally divided between the author of the amendment and the manager of the bill (Mr. STENNIS); and that all amendments thereto be limited each to not to exceed 20 minutes, to be equally divided between the author of the amendment to the amendment and the author of the basic amendment (Mr. MCINTYRE).

The PRESIDING OFFICER. Without objection, it is so ordered.

The unanimous-consent agreements, subsequently reduced to writing, are as follows:

Debate on an amendment to be offered by the Senator from Oklahoma (Mr. BELLMON), numbered 857, to be laid down after the vote on the above amendment, to be limited to 30 minutes to be equally divided and con-

trolled by Mr. BELLMON and the Senator from Mississippi (Mr. STENNIS), with the time on any amendments thereto limited to 10 minutes each to be equally divided and controlled by the mover and Mr. BELLMON.

Debate on an amendment to be offered by the Senator from New Hampshire (Mr. McINTYRE), to be limited to 1 hour to be equally divided and controlled by Mr. McINTYRE and the Senator from Mississippi (Mr. STENNIS), with the time on any amendments thereto limited to 20 minutes each, to be equally divided and controlled by the mover and Mr. McINTYRE.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BURDICK). Without objection, it is so ordered.

THE AMENDMENT TO END THE WAR

Mr. GOODELL. Mr. President, the war continues—carried by its own momentum and bereft of all purpose.

Having lost any other justification, the conflict in Vietnam has become justification for itself. We fight on, no longer to preserve any perceived stake in Indochina, but because we do not know how to end the fighting—because we cannot bear to accept any outcome short of the military success that perpetually eludes us.

The time has come for a national reckoning on the war. That reckoning shows the real interests of our Nation in preserving the present South Vietnamese Government by force of arms are marginal or nonexistent; that the human toll and the economic costs of preserving our military presence there clearly outweigh any benefit that would conceivably result from our continued commitment.

The time has come for complete termination of our military participation in the Indochina war.

ESSENTIAL ELEMENTS OF DISENGAGEMENT

Any viable plan for disengagement from this tragic war must include these elements:

First. It must be a plan for complete disengagement of all American military personnel—both combat and noncombat—from Vietnam. It cannot involve the indefinite retention of a residual force of any size in Indochina.

Second. It must set a firm, publicly announced target date for the completion of the withdrawal. Our final disengagement cannot be conditional and cannot be deferred by the decisions or actions of Hanoi or Saigon.

Third. The withdrawal should be accomplished with reasonable swiftness, in order to limit further loss of American lives and further disruption of American domestic priorities.

Finally, the target date for completion of the withdrawal should be established by law. Legislation should be adopted barring the expenditure of funds for the continuance of the American military presence in Indochina beyond that terminal date, except with the express prior consent of the Congress.

We—Senators McGOVERN, HATFIELD, CRANSTON, HUGHES, and myself—have endeavored to embody these principles in the amendment to end the war, now pending before the Senate. It is our view that Congress should share with the President the awesome responsibility of removing our military presence from Southeast Asia.

The amendment had its origin in a bill that I proposed in September of 1969—S. 3000, the Vietnam Disengagement Act.

My bill was the first legislation ever to be offered to mandate an end to the war. It spelled out, for the first time, the two basic concepts that are now central to the amendment:

Setting a fixed deadline for the withdrawal of all American forces from Vietnam; and

Enforcing that deadline through Congress' constitutional power of the purse, by providing for the cutoff of funds for any continuation of the American military presence in Vietnam after that deadline.

At the time I offered my bill, I encountered little support and much hostility. Only two Senators were ultimately willing to announce their support of the legislation. The President of the United States and the Governor of my own State denounced it. It was said that if the legislation came before the Senate, it would attract only a handful of votes. Time, the Cambodian invasion, and the continued bankruptcy of the policy of Vietnamization changed all that.

After the Cambodian invasion, four of my colleagues and I decided to combine our forces in offering a single legislative proposal to end the war.

Each of us had offered our own legislative plans for ending the conflict. Mine, S. 3000, was the earliest and had stated the basic ideas. Senators McGOVERN, HATFIELD, and CRANSTON had on the day of the invasion offered an amendment that prescribed separate disengagement timetables from Vietnam, Laos, and Cambodia. Senator HUGHES had introduced a resolution to cut off military aid to the Saigon government, if it failed to make specified reforms.

We decided to lay aside our differences and our individual proposals and develop a joint approach—one based on the concepts of my original legislation. Our product was the amendment to end the war.

We endeavored to persuade those of our colleagues who had spoken out against the war to support our amendment, rather than introducing variations of their own. Our objective was to avoid the fractionalization of effort that occurred in the prior year, when nearly a dozen Senators had offered their own differing legislative proposals on the war.

We wanted a measure that had force of law, not just another resolution that gave advice to a President who had already disregarded all similar advice.

We also wanted a measure that would actually be brought to a vote, not merely referred to a committee for study and probable oblivion.

We achieved the objectives.

The amendment has become the vehicle for legislating an end to the war.

It has attracted the cosponsorship of over one-fourth the membership of the Senate.

It now is up for a vote—the first congressional vote on the war.

It may become law.

The amendment requires all American Armed Forces to be withdrawn from all of Indochina by December 31, 1971. It enforces that deadline by barring the expenditure of funds for maintaining any U.S. troops in Indochina after that date.

The December 31, 1971, deadline provides a little more than a year for the completion of withdrawal. That is the time span which I envisioned when I introduced my original bill in September of last year, requiring withdrawal to be completed at the end of this year.

The amendment permits the President to extend the withdrawal deadline by 60 days if he finds our troops are exposed to "unanticipated clear and present danger"—in the words of the amendment—in meeting the December 1971 deadline. Any further extensions beyond the 80 days permitted to the President on his own behalf, however, would require express congressional authorization.

PROTECTION OF AMERICAN LIVES

A publicly announced deadline such as we have been proposing would make certain that after a specified date, no more American soldiers would die in Indochina. The vain sacrifice of thousands of American lives would be over.

After the Cambodian adventure, we heard much rhetoric from the administration that the invasion somehow had saved lives. It did not. Lives can only be lost—not preserved—by an extension of the war. If we are seriously concerned with saving American men, there is only one course—to bring them home.

We do not advocate—our amendment does not propose—the denial of funds for our combat troops while they are facing the enemy in the field. We urge, instead, the adoption by Congress of a deadline that provides sufficient time for our troops to be withdrawn in a safe, orderly fashion.

Throughout the period of withdrawal, the Commander in Chief should be permitted to utilize whatever tactics are necessary to insure that maximum safety is achieved. This would include all forms of defense against attack. The most prudent course might be to withdraw combat troops last, but in any case the entire range of protective options would be available to commanders.

The safety of our troops during the process of withdrawal will depend, at least in part, upon the response of North Vietnam and the Vietcong. It is difficult, however, to calculate a motive for them to attack troops that are in the process of being removed from the war. Something approaching an informal cease-fire during the withdrawal period is quite plausible, with a reduction in the overall level of violence.

THE NEGOTIATIONS

The Paris negotiations are bogged down, as everyone concedes. Two fundamental issues confront the Paris talks: The presence of U.S. troops on Vietnamese soil and the control of the Government of South Vietnam. There is stalemate on both issues.

Talks may well proceed. We hope that secret talks will begin again. The hope of any eventuality of agreement is very dim, however.

The North Vietnamese will not negotiate, according to all reports, without a firm commitment by the United States for a complete and rapid disengagement of its forces.

The United States refuses to give an unconditional commitment to withdraw. The President has spoken only of an "eventual" withdrawal of all American troops—and that conditioned on the pullout of all North Vietnamese forces and the assurance they will not return. Meanwhile, plans go forward for the retention of a residual force of American troops for an indefinite period until Vietnamization succeeds.

The North Vietnamese, in turn, are equally adamant in refusing to accept any "mutual withdrawal" plan, since it would leave its arch enemy the Saigon government—while still unable to win—in exclusive control of all governmental machinery in South Vietnam.

The political issue is still more tangled. Yet out of all the bickering about coalitions and elections, one thing stands out clearly. The Vietcong, backed by their North Vietnamese allies, demand a major voice—perhaps a controlling voice—in the Government of South Vietnam. The Thieu-Ky regime, backed by its American sponsors, remains adamant in refusing to share any real power with its enemy.

By announcing a timetable for complete withdrawal of its forces, the United States would break the deadlock on one of the two basic matters in dispute—the U.S. military presence in Indochina.

The other issue—control of the Government of South Vietnam—is more difficult to settle, as it depends principally upon the flexibility and reasonableness of Hanoi and Saigon. Announcing a timetable for our withdrawal would, however, create an environment more favorable to real practical political negotiations.

Our decision to withdraw would give the Saigon government a powerful incentive to seek a political accommodation, by meeting what is perhaps the central dilemma facing American policy. The Thieu-Ky administration has been vocally and embarrassingly unwilling to make any of the concessions necessary to break the deadlock. Its intransigence derives in large measure from our open-ended commitment to its preservation. No regime, born as this one in the heat of war, would be likely to hazard its fortunes in peacetime politics as long as it could enjoy the underwriting of the most powerful military nation in the world. Our commitment, in effect, gives Saigon an almost dictatorial power over the direction of U.S. policy. Paradoxically, it is a power best exercised by military and political failures. Palpably, the Thieu-Ky government's interests lie in continuing the conflict which keeps it in power, in retaining the hazards of war and avoiding the hazards of politics. To further this interest Saigon can prevent agreement indefinitely, unless the United States sets precise, unquestioned limits upon the extent and duration of its military commitment.

Our decision to withdraw would also provide an inducement for our adversaries to seek a political agreement. They have long benefited from the fact that we, as the foreign intruder, have polarized the political situation in the South and driven many nationalist elements underground or toward the NLF. Our withdrawal would foster a depolarization—that could place pressure on all factions, including the NLF, to seek to share power, rather than fight on.

If this route is followed, it is possible to conceive of a settlement which, while perhaps not reflecting the preferences of Saigon, would square fully with U.S. advocacy of self-determination for the Vietnamese people.

THE SURVIVAL OF SOUTH VIETNAM AFTER OUR WITHDRAWAL

A decision to terminate our military presence would neither abandon our South Vietnamese allies nor invite the destruction of the South Vietnamese people.

Our withdrawal would leave South Vietnam with roughly 1 million men under arms in the regular forces, plus perhaps another quarter million in the national police, all arrayed in combat against enemy forces only one-fourth to one-fifth as large. This numerical superiority would hold even if North Vietnamese troops held back thus far were committed to battle. The South Vietnamese Army is, in comparison to the North Vietnamese and Vietcong forces, elaborately equipped and trained. And South Vietnam would continue to be eligible to receive U.S. arms and economic aid in amounts to be determined by the Congress.

Mr. President, I wish to emphasize that we who advocate the amendment to end the war have never urged that we cut off all aid to South Vietnam. If they wish to go on fighting, and the President and Congress determine that it is in our interest to supply them, that is a separate decision to be made. The amendment to end the war would remove American forces from combat. The amendment would not bar military supplies or economic assistance from being sent to Vietnam, if Congress and the President so authorize.

Suggestions that South Vietnam would be overrun and its people slaughtered after withdrawal do not, therefore, reflect realities of existing power—unless the Saigon government is totally unable to marshal the support of its people so that no numerical superiority of forces and no amount of American aid can preserve it. To suppose that such a large force, operating in a defensive role, could simply be destroyed by a much smaller and less well-armed enemy assumes profound debilities in the South Vietnamese Army and Government—and this assumption, in turn, would mean that President Nixon's own plan to train South Vietnamese forces to take over the burden of the fighting would have virtually no chance of success in the foreseeable future.

Our withdrawal would not abandon the Saigon government. Rather, it would choices, based on realistic assessments of their own strength without the artificial inflation of an American guarantee. As noted, they might assume a more amenable posture in Paris. They might implement the kind of economic and political reforms long recognized by American advisers as essential to the achievement of broad indigenous support. They might adopt less ambitious military strategies aimed at defense of critical areas, instead of seeking to control the entire countryside and parts of other countries as well.

PRISONERS OF WAR

Whatever Vietnam policy is pursued by the United States cannot alter the fact that the North Vietnamese have life and death control over Americans shot down and captured over years of conflict. The same truth renders impossible a guarantee by advocates of any policy that the course—be it escalation, Vietnamization, or withdrawal—will result in the certain return of American prisoners.

The perpetuation of our military involvement in Indochina created, however, a strong incentive for the North Vietnamese to hold our prisoners. A decision to terminate our involvement will eliminate that incentive, and thus reduce much of the reason for their continued incarceration. Moreover, by enhancing the outlook of meaningful negotiations on all war-related issues, it will advance the resolution of this issue, which is essential to any acceptable settlement.

EFFECT ON U.S. GLOBAL POSTURE

An argument in favor of our continued military presence in Vietnam has been that disengagement there would somehow do irreparable injury to our entire global posture.

It is far more likely, however, that the opposite is true—that disengagement would enhance the return of this Nation's global standing and influence.

The war does not improve the U.S. position in Asia; it weakens it.

The Vietnam experience has clearly shown that the United States cannot establish a bridgehead in an Asian nation in defiance of indigenous forces of nationalism. A reason for our lack of success in Vietnam is that we permitted ourselves to become identified as the foreign occupier and the successor of the French colonialist in a country in which anticolonialist and nationalist sentiments far surpass the appeal of any other political ideology or system.

Nationalism is also the great catalyst in the rest of Southeast Asia—and for that reason our continued involvement in what is widely regarded as a colonial war has and will seriously undermine our credibility in the region.

The war has been advertised as a deterrent to Communist expansion in Asia, but thus far has succeeded chiefly in being a magnet for it. Our stand in Vietnam appears to have precipitated, rather than prevented, the spread of the war into the rest of Indochina. Our new involvement in the internal affairs of Cambodia has, for the first time, drawn the Communist Chinese into unequivocal support of a "war of national liberation" in that country.

The way to influence in Asia does not lie in continuation of the war and the propping up of unpopular regimes in

the face of the rising forces of nationalism. It lies, rather, in ending the war and forging strong economic and political links with independent and internally strong nations. We have much more to gain, for example, from improving our ties with Japan—now one of the world's leading industrial and economic powers—than in shoring up a sagging military dictatorship in Cambodia.

On a global basis, the war has been weakening, not strengthening, our influence and power. By tying down our resources, our military capacities, our energies and our attention to a futile and endless war in one corner of the world, it has drained our capacity to influence developments in Europe, in the Middle East and elsewhere, and damaged our credibility and prestige in the view of our allies.

Above all, the war has weakened us in the eyes of the world by dividing us internally. American power and resources were never in doubt—but our ability to utilize these capacities for global objectives have been placed in serious question by our profound internal split over Vietnam.

And if it is our moral leadership with which we are concerned this can only be enhanced by ending a war that the rest of the world largely regards as a futile and immoral effort to rescue a corrupt dictatorship.

Those who argue that disengagement would make us seem, in the President's words, a "pitiful helpless giant" have forgotten their recent history. The Russians themselves were compelled to disengage their missiles from Cuba in 1962—a move that certainly had the appearance of a setback, if not a defeat. Yet no one—least of all the architects of Vietnamization within the administration—ever discounted Russian power. The reverse in Cuba did not undermine that power because like our own, it was based upon overwhelming and incontestable economic and military resources. Similarly, the French termination of the colonial war in Algeria proved a prelude of a sudden resurgency of French prestige and influence. The same holds true of us, were we to terminate the war in Vietnam. No rational observer in the Kremlin or elsewhere would regard our Nation—with its armies and rockets and missiles and technology and riches, and with a sense of renewal born of the ending of a divisive and hopeless war—as anything but a force to be reckoned with.

THE RESPONSIBILITY OF CONGRESS

Mr. President, the amendment to end the war has the force of law. It is not merely advice to an administration that has ignored all similar advice in the past. If enacted, it would actually accomplish its stated objective of disengaging our Nation from this hopeless war.

The Constitution vests in Congress the power to declare war. Surely Congress should share with the President the responsibility for undeclaring a war that never was declared in the first place.

The President does not have the power of war and peace under the Constitution of the United States.

Our major role in the war began when Congress adopted the Gulf of Tonkin resolution, and President Johnson interpreted the resolution in a manner that deprived Congress of its responsibilities in the field of foreign affairs in Southeast Asia.

In the last 2 years, Congress has taken some significant steps in reclaiming its responsibilities. The Congress has barred the deployment of combat troops in Laos and Thailand. The Senate has repealed the Gulf of Tonkin resolution, and the House is expected to follow suit. The Senate has adopted the commitments resolution, requiring congressional consent for commitments of American military force abroad. And the Senate has approved the Church-Cooper amendment, restricting further direct or indirect U.S. incursions into Cambodia.

The enactment of legislation terminating the U.S. military presence in Indochina by a specified date, would restore Congress to its proper foreign affairs role.

There is yet another reason why Congress must cease being merely a bystander in the conflict and assume a partnership with the President in disengaging the Nation from Vietnam.

The ending of a major war inevitably involves extremely controversial and sensitive issues—and this is especially true of a war we have not won. If one man—the President, but also the leader of a political party—bears the responsibility of making these decisions alone, there is great danger that division and partisan recrimination will ensue. If this man shares the responsibility with the Members of Congress, who represent both parties and a wide spectrum of opinion, the chances of a solution which will command the confidence of the people are much improved.

President Roosevelt at Yalta took upon himself virtually the entire burden of deciding the peace settlement after World War II. The suspicion, bitterness, and partisan bickering that followed—typified by the Joseph McCarthy movement in the 1950's—is a matter of history. This time, since the issues are still more delicate, let us be sure the burden is shared.

The issue before us is not the constitutionality of the actions already taken by the President in expanding the war in Vietnam, Laos, and Cambodia, in the absence of a strong stand by the Congress.

The issue is whether Congress may now exercise its constitutional authority over appropriations, in order to require a termination of U.S. military activities in Indochina by a certain date.

Congress is supreme under the Constitution in its control of the expenditure of tax money. The military resources available to the President remain in the exclusive domain of Congress, along with its decisive share of the power to choose which objectives shall be pursued and which shall not. Legislation restricting the expenditure of tax money for war operates no differently than legislation restricting the expenditure of more money for foreign aid.

The Constitution, moreover, explicitly provides that military appropriations may never be made for a period exceeding 2 years. This provision was designed by the Founding Fathers to force a continuing, affirmative reexamination of the executive department in the military sphere.

Last year, in more direct parallel to the amendment to end the war, the Defense Appropriations Act of 1970 provides:

> None of the funds appropriated by this act shall be used to finance the introduction of American ground combat troops into Laos or Thailand.

The provision is an obvious limitation on the kinds of actions and the location in which the President may command the military forces made available to him. Its propriety under the Constitution is beyond question.

The kind of legislation we are proposing leaves the President with full discretion as Commander in Chief, to manage the removal of U.S. forces from Indochina. It does no more than exercise a power clearly held by the Congress to determine that military forces shall not be available for a particular purpose, and thus comports exactly with the constitutional arrangement.

THE FAILURE OF VIETNAMIZATION

Vietnamization is nothing new—it is as old as the Indochina war. It was attempted by the French, by the Kennedy administration, and by the Johnson administration in its first year. In each case this strategy—of arming, training, and directing the South Vietnamese armies—has not worked, and has proven the prelude to further military involvement.

Vietnamization is not, therefore, a true policy of disengagement. It is not a delayed version of the complete withdrawal policy we are urging. It is, at best, a troop reduction stratgey—a plan aimed at reducing the American presence to a level that would sustain the Saigon government and army and at the same time seem "acceptable" to American public opinion.

Last April, the President announced that he would withdraw 150,000 men from Vietnam within the period of about a year. Even if this schedule is followed, there will be over a quarter of a million American troops in Vietnam well into the third year of the Nixon administration's term in office. That is about the same as the American force level 4 years ago.

I commend the President once again for reversing the course of escalation, but I cannot be satisfied with that alone.

By all indications, the administration is contemplating the retention of a residual force in Vietnam for an unspecified and possibly indefinite period. Even a relatively low residual force figure represents a permanent troop commitment of the same order of magnitude as that which existed when we initiated bombing the North.

The price of this American commitment will be from 5,000 to 10,000 or more American dead by the end of 1972. It will be from 25,000 to 50,000 or more American wounded by that time—the most serious casualties of any war in our history. And the cost will be $30 to $50 billion or more—a cost that must be measured in the opportunities forgone to respond to urgent domestic needs.

No U.S. interest in Vietnam justifies

such sacrifice in this seemingly interminable war.

This is the staggering price if Vietnamization works as planned. And recent developments in Cambodia show that Vietnamization is plainly unlikely to work.

The South Vietnamese Army, whose capacity to defend even South Vietnam is still critically dependent upon American military forces, now seems intent upon spreading its resources even more thinly in long-term ground operations throughout Cambodia. It is clear that the number of Vietnamese soldiers available to relieve American manpower in Vietnam is significantly reduced. To extend assignment of Saigon's forces to wide areas of Cambodia make a travesty of whatever prospects for success Vietnamization might have enjoyed, had the role of Saigon's troops been confined to Vietnam. Since Vietnamization means substitution of Vietnamese soldiers for Americans, it is clear that the process set in motion by the Cambodian invasion works directly against prospects for achievement of that policy and bringing American soldiers home.

The loss of Cambodian neutrality thus presents a striking illustration of the fragility of a policy which relies upon military pressure in a widening war with shrinking numbers of men. Encouragement of an alliance between Saigon and Phnompenh will weaken rather than strengthen the U.S. position. It brings into the fray a dismally weak new military force on the allied side, while extending the battlefront over thousands more square miles of jungle. It offers both political and military advantage to the enemy by identifying American interests with a new narrow dictatorship and in opposition to a deposed leader enjoying broad respect and support among the populace.

In Cambodia, we have seen that—despite our supposedly successful invasion—the enemy has taken over the entire eastern and northeastern sections of the country, cut most of the major roads, and is able to menace the capital at any time it chooses.

The enemy response to the invasion has also threatened other areas of Southeast Asia not previously contested in earnest. North Vietnamese forces have recently expanded their position in southern Laos—seizing Attopeu and Saravene, both major strategic centers. U.S. intervention has invited the North Vietnamese to extend their operations anywhere in Cambodia, including districts opposite the Thai frontier. This, in turn, would threaten the security of Thailand whose open southeastern flank was previously protected by the existence of a neutralist Cambodia.

It is thus difficult, indeed, to perceive how Vietnamization has deterred the Communist "aggression" in Southeast Asia, of which the President so often speaks.

COSTS OF CONTINUING THE WAR

If the benefits of continuing the war are—as we have seen—minimal, the costs are staggering. It is this gross disproportion of benefits and costs that is, in my opinion, the most compelling argument for swift and complete disengagement.

In Vietnam, the war—ostensibly fought to prevent a bloodbath from occurring—has created a bloodbath of incredible proportions. To date, more than one million men, women, and children have died as a result of hostilities in Vietnam. If the war continues for 5 years more, another million people will die.

In Vietnam, the war—supposedly fought in the name of "self-determination"—has imposed on a people who want peace a brutal and corrupt military dictatorship that wants war.

Those are hard words, Mr. President, but I speak them advisedly, and I believe from the depths of my being they are true.

The overriding interest of a clear majority of the South Vietnamese people is to stop the killing, to stop the destruction of the cities, villages, and farms of Vietnam.

The overriding interest of the military regime of South Vietnam is the perpetuation of the war. Truly, the South Vietnamese people have become the "silenced majority" in South Vietnam.

It is the war that is the basis of the regime's absolute rule. It is the war that gives the regime the excuse to persecute, imprison, and even torture its non-Communist opponents. It is the war that gives the narrow clique undergirding the regime an artificially high standard of living based on war profits and commodity imports.

THE IMPACT OF THE WAR UPON OUR NATION

The loss caused by the war to our own Nation surpasses all reckoning. Human accounting would have to begin with the 50,000 Americans killed and the quarter of a million Americans injured—many of them maimed for life.

Perhaps some would have the war continue precisely because of this toll of life. But surely it is unacceptable to make further sacrifice in a futile cause, to give meaning to sacrifice already made. Instead of the casualties we can expect from further conflict, their memory can be best honored by the preservation of life.

If some bear the burdens of war most heavily, no one in America can escape its pervasive, pernicious influence. The economic crisis engendered by the war touches each of us.

The first half of the 1960's was a period of great economic promise—of sustained growth coupled with relatively stable prices. This came to an end when the United States began its involvement in the Vietnam conflict.

Because of the war, our economy has become plagued by the twin evils of inflation and unemployment. Because of the war, we have seen the dollar's value eroded to the point where any apparent growth in the economy has been offset by a decline in real worth.

The war has also warped our national priorities.

The money we should be spending to build housing in America is being used to destroy housing in Vietnam. The billions needed to restore our own environment are being spent to ruin the ecology of Vietnam.

Beyond these material costs, are the still more pernicious spiritual ones: the divsions within our Nation, the rise of violence and intolerance, the diminution of belief in our political processes.

Mr. President, the worst the enemy can do in the field does not compare with the injury this war is inflicting on the spirit of our Nation.

This war must end. This amendment will end it. I urge the adoption of the amendment.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. GOODELL. I yield.

Mr. DOLE. Mr. President, first let me state that I have listened with great interest to the statement of the junior Senator from New York. There have been so many "amendments to end the war"—or, as I designate them "amendments to lose the peace"—that it is difficult for any of us to follow, from one day to the next, just what the subject matter of them may be.

I was encouraged today by a statement of the majority leader, the Senator from Montana (Mr. MANSFIELD), who was quoted as saying he was pleased with President Nixon's efforts to withdraw troops from Southeast Asia, the Senator said, quote:

> I think there should be further withdrawals from the Far East. In this regard I am pleased to note that President Nixon has already brought home a substantial number and I think our troops should be withdrawn from Western Europe as well.
>
> Agnew's statement is encouraging and Nixon's actions even more so. Since he has been in office, the President has withdrawn 167,000 troops from the Far East, including naval forces from the Western Pacific.
>
> The trend is there.

Mr. President, I believe that statement indicates recognition that there has been a marked change by this administration. I am not surprised that those who seek the Presidency on the Democrat side would now want to vote for an amendment to end the war, and then, of course, blame President Nixon for not withdrawing all the troops. Such a tactic makes political sense. But I might suggest, as we shall in the next few days, that what the sponsors of the so-called end the war amendment did initially was raise over half a million dollars on the wording of one amendment, and then, after raising nearly $600,000 by an appeal on national television to the American people on May 12, and after pleading for support of the so-called amendment to end the war or amendment to lose the peace, they have made radical changes in the amendment on two occasions, so the amendment, as I read it now, at least the latest version, introduced yesterday by the junior Senator from South Dakota, is in effect an endorsement of President Nixon's Vietnamization program, as compared with the amendment used to raise the $600,000.

I find it rather difficult, and will say so in the next few days, to know just what we are to believe. We have had, for the first time in history, Members of this body appealing to the public for funds, and using those funds, to lobby their own colleagues, if you will, in the various States, through paid political advertisements, through newspaper ads with a flag draped casket. The inference in this campaign is clear and is to the

effect that only those 25 Senators who are listed want peace, and that those who support President Nixon apparently enjoy the war and the killing.

I find now, Mr. President, that the revised so-called amendment to end the war—better designated the amendment to lose the peace—is, by and large, an endorsement of President Nixon's Vietnamization program.

Mr. GOODELL. Mr. President, will the Senator yield at that point?

Mr. DOLE. I yield.

Mr. GOODELL. I am intrigued by the Senator's interpretation, which is not my interpretation, of the amendment to end the war. If it is the interpretation of the Senator from Kansas that, in its present form, the amendment to end the war is an endorsement of President Nixon's policy, I would invite his vote in favor of it.

Mr. DOLE. Well, I think perhaps I could support it with some further changes.

The vast difference, of course, is that suddenly there are some in the Senate who say, "We want to determine when the war ends; we want to take that flexibility away from the President"—the only President I know of, since the war started, who has done anything about ending it.

Perhaps if we could make some additional amendments and, instead of saying "April 30, 1971" say "on a date determined by the President," and make some other changes, it might be worthwhile.

But I say to the Senator from New York that really, if he looks at the six or seven different versions introduced by the Senator from New York and others, he will find a very radical change between the first version and the latest one. We find one amendment offered for fundraising purposes, apparently, and then, following the raising of a half-million dollars, we find that amendment was changed. And it was changed again yesterday, and now we no longer talk about ending hostilities next April or next June. Now we are discussing, in this amendment, the end of February 1972. Of course, the President could still come to Congress and extend it beyond that date.

So there has been a rather marked change, I say to the Senator from New York, with respect to amendment No. 609 and the present amendment, No. 862.

Mr. GOODELL. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr. GOODELL. There have been changes.

Mr. DOLE. Yes, radical changes.

Mr. GOODELL. I would not define them as radical changes.

Let me cite to the Senator from Kansas the fact that last September, I was the first Member of the Congress to introduce a bill to cut off funds by a fixed date. It was a very simple measure. It provided simply that no funds will be expended to support military personnel in Vietnam after December 1, 1970.

That basic approach has been retained throughout.

There are the two vital features of any proposed legislation to end the war: First, setting a fixed date by Congress, by law; and second, using Congress power over the purse to cut off funds after that date.

The amendment to end the war succeeded my S. 3000. It added other phrases. There were attempts to bring in other senatorial support. But never in any of the versions have we compromised the two basic features: Setting a fixed date and using congressional power to share the responsibility with the President by cutting off funds.

I might say to the Senator that when I went around the country last fall, last winter, and this spring, I faced many groups, particularly student groups, who would hop up and down and shout, "Out now!" I defied them.

I said, "You are asking for an instant tomorrow, an unrealistic objective. From my viewpoint, in the briefings I have had from the military and other experts in the Pentagon, it would take a minimum of about a year for a safe and orderly withdrawal of all American troops from Southeast Asia."

So my original proposal provided for complete withdrawal approximately a year hence. The amendment to end the war in the spring provided for it approximately a year hence, June 30, 1971. Time has elapsed.

Mr. DOLE. Eight months have not elapsed.

Mr. GOODELL. The pending amendment provides for final withdrawal by December 31, 1971. Anticipating delay in final enactment of the measure by Congress, the deadline is set in approximately a year, giving ample time for orderly and safe withdrawal. That has been the consistent approach since my original S. 3000.

In addition, we add to this measure—again, because of the concern of some Senators about the issue of Presidential prerogative and having an interim period for the President, as Commander in Chief, to exercise his discretion and come back to Congress—a 60-day extension, completely in the President's discretion. That is new. During that 60 days, he could come to Congress and make his case that some troops should remain there for a longer period of time. If he persuades Congress, Congress will approve.

But the two vital features—I might say three vital features—have been preserved: Setting a fixed date; fixing that date approximately a year hence from the date of enactment; and cutting off funds through congressional power. These features have been retained consistently throughout all amendments, and that was the appeal we made to the people for support for the amendment to end the war. It is the appeal we make for support today.

I thank the Senator for yielding.

Mr. DOLE. I thank the Senator from New York.

The basic question, the basic issue, is still, who shall determine when the last man is withdrawn from Indochina—and specifically, South Vietnam? Shall it be a committee of 100 or 535—Congress—or shall it be the President, whoever he might be?

Mr. GOODELL. I agree with that.

Mr. DOLE. That is the issue.

Mr. GOODELL. I agree with that. I think only Congress has the power to declare war.

Mr. DOLE. We are not declaring war.

Mr. GOODELL. We are trying to declare peace.

Mr. DOLE. As I recall, the Senator from New York did give some credit to President Nixon for changing direction in South Vietnam but charged that he was not proceeding quickly enough and that the Vietnamization program was a failure.

As I read the amendment, it is perfectly all right for Congress to say, in effect, not by name, that we can continue the Vietnamization program until the end of next February 1972. It is fine if Congress says that, if we are permitted to fix the date. The Senator does not call it Vietnamization, but he certainly does not deny that it is Vietnamization.

Let me point out one other significant fact. In amendment 609, which is referred to as the fundraising amendment, it is stated very specifically:

> Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended in Vietnam after December 31, 1970.

There has been a basic departure from that statement. We are now talking about February of 1972. So we are adding approximately 14 months. And the Senator from New York has just stated that nothing is intended to deny aid to South Vietnam or any other country. So that is a departure.

Mr. GOODELL. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr GOODELL The latter point is not a departure at all. No amendment to end the war—my original S. 3000, the amendment to end the war offered in the spring during the Cambodian intrusion, and the modification today—as denied the continued supply of arms and training to the South Vietnamese. There has been no change in that.

The Senator points out that the dates for final and complete withdrawal have changed. The Senator very adroitly chooses to interpret that as an endorsement of Vietnamization. The reason why the dates have been changed is the practical reality of protecting the safety of our troops. We cannot remove them in a month. I do not believe they could be removed safely and in an orderly fashion in 3 months.

December 1, 1970, which was my first proposal, has become unrealistic, because we have not been able to get the amendment adopted. We have been consistent in saying that we want to protect our troops, the safety of our troops, and have them withdrawn in orderly fashion; and the best military evidence is that that will take approximately a year.

So, consistently, we have provided the final termination date as approximately 1 year hence.

Mr. DOLE. Let me say to the Senator from New York that I do not quarrel with his consistency, and I say so in all respect to the Senator from New York. I understand, as he understands, that the issue next Tuesday will be who makes the determination.

Mr. GOODELL. I agree.

Mr. DOLE. Shall it be the President?

Shall it be President Nixon, who is disengaging in Southeast Asia? Shall it be the President, who found this war on his doorstep on January 20, 1969, and who has thus far returned more than 120,000 Americans, and who will return another 150,000 by next May 1, which, I might say to the Senator from New York, is 15,000 more than advocated 2 years ago by the principal sponsor of this amendment, the junior Senator from South Dakota?

The point I seek to make is that President Nixon has kept his word with reference to South Vietnam. It would seem that we would do a great disservice to the President to say to him, and to signal the enemy in advance, that we fix the date, December 31, 1971, plus the 2-month grace period, beyond which the President is powerless to act in Southeast Asia. The President might have a faster timetable. I assume that this amendment would not require the President to continue the war, would it, until February 1972?

Mr. GOODELL. If the Senator will yield, he reminds me of the comment the President made last year—2 days after the introduction by me of S. 3000, the Vietnam Disengagement Act. That bill provided for final and complete withdrawal by December 1, 1970. At the time, it was a little more than a year beyond the date of enactment, if it were enacted.

The President's comment at the press conference was that my proposal was "defeatist". He wanted to get all those troops out before December 1, 1970. Of course, we all want to get them out as soon as possible. If we can withdraw them faster, the President is at full liberty to withdraw them faster.

I would say to the Senator that I agree with him that the question is who makes the decision, but I do not think it is a question of whether it is the President or Congress, it is a question of whether the President makes it alone or Congress shares that responsibility with the President. I believe that the Constitution provides Congress has that responsibility and that obligation.

I might say to the Senator from Kansas that he might welcome the posing of this issue. I welcome it. It would be my guess, much to my regret, that next Tuesday, the amendment to end the war will be defeated in the Senate, although I think there will be a substantial vote in favor of it. The Senator from Kansas can then go forth and interpret the vote by the Nation's elected representatives as being in support of the President's policy of withdrawal. I hope that all my colleagues understand that.

I, too, praise the President. I will go before any forum and say that President Nixon inherited this war. He has turned it around. He has withdrawn troops. But that does not mean that he has got the right policy. That does not mean that we have a vital interest in staying in the war and winding it down gradually while 20,000 to 30,000 more Americans die.

I am sure that whatever President Nixon's policy—and this is not a partisan matter, obviously, and it was not the Johnson administration's and it is not under President Nixon—while I prefer the Nixon policy to the Johnson policy, it is not the right policy in terms of the country, in terms of its vital interests.

Thus, I think that Congress should step forward and vote on it. I know that the Senator is ready and willing to vote on it. Other Senators, of course, will do so. The vote will be on the record and they can go before the people and defend their actions.

Mr. DOLE. I appreciate the Senator's comments. We have participated in the rather lengthy debate on past amendments and resolutions on this subject. I voted for the Church-Cooper resolution, after the extended debate on that measure, and I recognize the responsibility that Congress has. We must share the burdens, but I say again that, for some reason, the burdens were not shared when the conflict was escalated in 1964, 1965, 1966, and 1967.

Again I recognize that the Senator from New York has been consistent. He has been an active opponent of escalation. I applaud him for it. The point is, there was no rush at that time, by the Senate or the House, to limit the withdrawal date, or any escalation date, or any escalation figure, or any troop level, as this amendment does. It appears to me that we say, in effect, in fact, section (a) states:

SEC. . (a) In accordance with public statements of policy by the President, no funds authorized by this or any other Act may be obligated or expended to maintain a troop level of more than two hundred and eighty thousand armed forces of the United States after April 30, 1971.

As the Senator knows, that is precisely what the troop level will be at that time; so there is no quarrel with that section. It is an endorsement of the program and the progress achieved by President Nixon. The sponsors of the amendment recognize that as President Nixon's achievement, and not in a partisan way. It is a recognition that the President has made progress.

Mr. GOODELL. I agree with that.

Mr. DOLE. The troop level will have gone from 485,000 odd men down to 280,000, or fewer, by May 1 of next year.

Mr. GOODELL. On that point let me say that I agree wholeheartedly with the Senator from Kansas in the point he has made, that no one proposed this before, that no one proposed a fixed date. I must say to the Senator from Kansas that I was in the House of Representatives at the time. There were 100 Senators here. Apparently, no one thought of it. I did not. The first time it was proposed was in 1969, after I had agonized for 9 months. I tried various approaches that would be a responsible exercise of legislative power, recognizing the realities of the conflict in South Vietnam, and I came up with this device.

I did not choose to vote against military appropriations because that would be voting against giving our troops the supplies and equipment they needed. At least it would be interpreted that way by many. Any effort to cut off funds immediately for the military would be interpreted as meaning we are not going to give our boys the ammunition and the guns they need after we have sent them over. Therefore, it occurred to me that the only way to approach it was to set a fixed date about a year away—by which time we would cut off all funds, which would give a warning to all the combatants, and notice to the President, that this was the date Congress felt should be observed.

I made that proposal on September 26 of last year and we see now a series of other proposals that use this device.

I must say to the Senator from Kansas that I agree with him, had I thought of it in 1967 or 1966, I hope and expect that I would have offered it as an alternative to the Johnson administration then in power.

Certainly my offering it on September 26, 1969, had nothing to do with the fact that the President of my party was in the White House. As a matter of fact, it made it more difficult. But it was my view that this question—and I know it is the view of the Senator from Kansas—was one in which politics did not enter. This is not a political debate, obviously, between the two of us.

Mr. DOLE. I appreciate that. I appreciate the Senator's responding. I am certain he agrees that every Member of this body wants the war to end today, wanted it to end years ago, 5 years ago, and wants it to end next week. But that is not the issue. It never has been and it never should be.

Mr. GOODELL. I agree. That reminds me of the point the Senator made earlier, regarding the advertisements which were printed and placed on the media. Anything that might have implied a lack of patriotism or a lack of concern for peace among those who supported the President, I disavow completely. It certainly was not my intent, and I am sure it was not the intent of the sponsors of the amendment to end the war. I respect the position of the Senator from Kansas. I respect the President's position. I know that they do not like the war, either. They want peace. It is a question between us—among us, if you will—how to attain the peace. That is where we differ.

Mr. DOLE. I agree with that statement and I am certain that the debate on Monday and Tuesday of next week will be on that level, as to how we can, through constructive debate, perhaps bring about an end to the conflict in South Vietnam perhaps 1 day sooner, or a month sooner, or a year sooner. But I do not agree with the response to this matter contained in the so-called amendment to end the war. The Senator from Kansas has great confidence that President Nixon is definitely trying to disengage and extricate us and to hold down the casualties. The Senator from Kansas happens to believe the President's plan is working. Perhaps there is a better plan. But I find no such policy enunciated in the most recent so-called amendment to end the war—or its recent modification.

Mr. GOODELL. I thank the Senator from Kansas very much.

THREE-PRONGED ATTACK

Mr. DOLE. Mr. President, I have today launched a three-pronged effort to block a recent ruling of the Federal Communications Commission.

The decision in question was issued on August 18 and dealt with the so-called fairness doctrine for presentation of conflicting viewpoints on major issues over radio and television.

The three points are:

An appeal taking the FCC into the U.S. Court of Appeals in Washington, D.C.

A motion with the Commission asking postponement of its decision until the court gives a ruling.

A letter to NBC President Julian Goodman asking that opposing spokesmen be allowed to answer an NBC program featuring Senators GEORGE McGOVERN and WILLIAM FULBRIGHT scheduled for broadcast on NBC August 31.

That, incidentally, is a day or two before the vote on the so-called amendment to end the war.

I was one of 11 U.S. Senators who unsuccessfully sought an FCC ruling to obtain free time on NBC to respond to a May 12, 1970, NBC television show promoting the McGovern-Hatfield so-called amendment to end the war. My petition, along with several other related cases concerning radio and TV coverage of controversial issues, was dealt with in one FCC opinion. In taking the Commission to the Court of Appeals, I have challenged portions of the FCC decision which require the major television networks to grant free prime time for opponents of the President's Southeast Asian policy to answer five televised Presidential addresses on the subject.

At the same time the court case was begun, a separate petition was filed asking postponement of FCC enforcement of its decision until a court ruling is obtained.

If the confusion the FCC has created is to be clarified and further misapplication of the law is to be avoided, we must have an authoritative decision by the courts. If the Commission's order is allowed to stand until the court can rule, the damage will have been done regardless of the court's final decision.

NBC announced on August 21 that it was making free broadcast time available to Senators McGOVERN and FULBRIGHT in response to the recent FCC decision.

In my letter to NBC President Goodman, I pointed out that the so-called end the war amendment would be voted on the morning after the McGovern-Fulbright program, and opponents would have no other chance to reply. I have asked that two additional Senators with opposing viewpoints be allowed to appear on the August 31 program.

Mr. President, I ask unanimous consent that the notice of appeal to the U.S. court of appeals, the motion to stay filed with the FCC, and a copy of my letter to Mr. Goodman may be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[In the United States Court of Appeals for the District of Columbia Circuit]

NOTICE OF APPEAL

ROBERT DOLE, appellant, *v.* Federal Communications Commission, appellee

Robert Dole, United States Senator, State of Kansas, pursuant to the provisions of Section 402 (b) of the Communications Act of 1934, as amended, hereby appeals from the actions of the Federal Communications Commission, as contained in a Memorandum Opinion and Order released August 18, 1970, FCC 70-881 (— FCC 2d—) entitled *In Re Complaint of Eleven United States Senators Against National Broadcasting Company, Inc.*, and other closely related and mutually dependent cases contained in the same Memorandum Opinion and Order. In its order, the Federal Communications Commission denied the complaint of the appellant, and ten other Senators, against the National Broadcasting Company (NBC) involving the May 12, 1970 program on NBC which supported the "Amendment to End the War." This matter is treated in what the FCC Memorandum Opinion and Order refers to as "Section D", Paragraphs 46 through 51.

Because portions of the Commission decision, Section B, "The Complaints that a Spokesman be Given Equal Opportunities to Respond When the President has Addressed the Nation on Broadcast Facilities," and Section C, "The Complaints that the Networks or Licensees Have Not Achieved Fairness in View of the Number of Presidential Broadcasts on the Indo-China War and Their Efforts to Present the Contrasting Viewpoint," are apparently interrelated in the Commission's rationale, contained in the Order, appeal is taken from these portions of the Order, also.

If the decision of the Commission in respect to Sections B, C and D is allowed to stand as the law, the rights of the Appellant, and many other similarly situated individuals, will be aggrieved and adversely affected. Broadcast licensees would be encouraged to act unreasonably and to fail to fulfill their obligations to the public which they serve.

Respectfully submitted,

ROBERT DOLE.

MOTION FOR STAY

(Before the Federal Communications Commission, 11 U.S. Senators against National Broadcasting Co., Inc.)

Re FCC 70-81, memorandum opinion and order released August 18, 1970.

To: The Commission

Robert Dole, United States Senator, State of Kansas, hereinafter referred to as Movant, by his attorney, respectfully submits this Motion for Stay of the Commission decision in the above captioned proceeding. In support of the Motion, Movant shows:

Movant was one of the eleven United States Senators filing a complaint with the Federal Communications Commission against the practices of the National Broadcasting Company, Inc. (hereinafter NBC). Said complaint was filed on July 13, 1970. Thereafter, on July 16, 1970, Movant and other United States Senators submitted a Brief in support of their request for time and their complaint against NBC. The latter filed a reply on July 30, 1970. The Federal Communications Commission released its Memorandum Opinion and Order on August 18, 1970, which denied the complaint of Movant and the other ten Senators. See Section D, Paragraphs 46 through 51 of said Memorandum Opinion and Order, pages 21 and 22.

As a party aggrieved and adversely affected, Movant has filed a notice of appeal with the United States Court of Appeals for the District of Columbia Circuit. The appeal raises questions of law involved with all aspects of the Commission's decision, save for that portion that dealt with the complaint of the Republican National Committee. In view of the pendency of the appeal, Movant asks that the Commission stay the effectiveness of its decision, until the United States Court of Appeals for the District of Columbia Circuit has had an opportnuity to pass upon all aspects of the appeal.

Specifically, the Commission should enter an order requiring that the parties preserve the *status quo* pending the outcome of the appeal before the United States Court of Appeals for the District of Columbia Circuit.

As will be shown below, a stay is vital in the instant case, in order to maintain the *status quo* and avoid disruption which would be of a substantial nature in the event the Commission declined to enter a stay of the effectiveness of its decision of August 18. If the appeal is successful before the Court, the National Broadcasting System would be required to grant thirty minutes of prime time to the Movant and the other Senators to respond to the program of May 12, 1970, presented by the "Committee to End the War" over the NBC network. The FCC decision recognizes that there was a controversial issue of public importance and that the Fairness Doctrine was applicable. No one has been permitted by NBC to answer that specific program on NBC. Instead, the Commission has merely relied upon vague generalities to the effect that the "Administration" has had opportunity to present a contrasting position.

Instead of the opportunity for Movant and other Senators to debate the issue, the effect of the FCC decision has been to permit, and encourage, NBC to grant further time to Senator McGovern, as well as Senator Fulbright, to overwhelm the public with their views, presented free over NBC.

A stay of the decision is necessary to avoid serious injury to the public and to nullify the overall effect of the Commission decision. The granting of a stay in this matter will not harm anyone. The lack of injury to the public dictates that the Commission stay the effectiveness of its decision.

In conclusion, the grant of a stay would protect the public interest as well as the interest of Movant and other United States Senators, pending a final decision by the United States Court of Appeals.

Note is taken of the fact that a petition for reconsideration of that portion of the decision dealing with the Republican National Committee complaint is pending before the Commission. A grant of the stay would simply permit the Commission to maintain orderly processes during the pendency of review, both by it and by the Court.

Respectfully submitted.

ROBERT DOLE.

Mr. JULIAN GOODMAN,
President, National Broadcasting Co.,
New York, N.Y.

DEAR MR. GOODMAN: I note that the National Broadcasting Company has announced a one-half hour program on August 31, 1970, featuring Senators Fulbright and McGovern as "spokesmen to present the contrasting viewpoint to the Administration" on the "issue" of the Indochina War. It has also been reported that NBC does not intend to appeal the August 18, 1970, decision of the Federal Communications Commission dealing with the Fairness Doctrine. I have also read your article in the *Wall Street Journal* of August 3, 1970, entitled, "TV: Formulas Won't Bring Fairness."

Taking the FCC decision the NBC announcement and your article together, I am concerned and alarmed at your failure:

1. To invite Senators, opposed to the positions espoused by Senators Fulbright and McGovern, to appear on the same program with them; or, alternatively.

2. To refrain from presenting Senators Fulbright and McGovern until all legal and administrative remedies have been exhausted.

In the first place, it is difficult to understand how you define the "issue" of the Indochina War, or what you have determined the "viewpoint of the Administration" to be or what *the* contrasting viewpoint to it is. Nonetheless, in the light of the importance of the issues involved, your actions appear to be incomplete and ill-considered.

Although the second above enumerated course of action does not have the greatest appeal, it does appear to be a possible way of complying with the letter and spirit of the

law, because the points of law raised by the August 18 FCC decision have not yet been finally determined by the Commission or the courts. It seems somewhat unusual that NBC would take this action under the August 18 ruling before all administrative and legal remedies have been exhausted.

I believe the first course outlined above would provide the greatest freedom of information and most complete discussion of the issues for the public. If you carry Senators Fulbright and McGovern on August 31, 1970, you will be obliged to present spokesmen opposing the views they will express. Under the circumstances surrounding this matter, the most reasonable and effective way to illuminate the controversial issues to be discussed by Senators McGovern and Fulbright would be to simultaneously present spokesmen from the U.S. Senate who hold opposing views.

You have stated that there is no formula and that there should be none for balancing Presidential appearances on television. You are certainly correct both as to Presidential statements and the general question of all controversial issues. In this case it is also important to remember that the Presidential appearances in question took place long before August 31, and that the circumstances and issues have changed considerably in the interval. Particularly important is the fact that the McGovern-Hatfield Amendment has twice been altered significantly within the past few days, and one would expect the latest version of this proposal to be the principal subject of discussion on August 31. Thus, the appearance of Senators Fulbright and McGovern will be the first discussion of a controversial issue (viz. the new version of the McGovern-Hatfield Amendment), to which opponents will have a clear right of reply. On this point it should also be noted that the Senate will vote on the McGovern-Hatfied Amendment on the morning following the appearance of Senators McGovern and Fulbright. Therefore, August 31 will be the last day any discussion of the opposition viewpoint would be relevant.

I call upon you to insure that the major portions on each issue presented on the August 31 NBC program are expressed by including in addition to Senators McGovern and Fulbright two other Senators who hold opposing viewpoints on the issues to be discussed.

You should also be aware that I am today taking an appeal of the August 18 FCC decision to the U.S. Court of Appeals for the District of Columbia and am filing a motion for stay of said decision with the FCC.

Sincerely yours,

BOB DOLE,
U.S. Senate.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I am about to propose a unanimous-consent request which has been cleared with all principal parties concerned, meaning the authors of the amendments, the manager of the bill, the able assistant minority leader, and the able majority leader.

Mr. President, I ask unanimous consent that on tomorrow, immediately following the vote on the amendment offered by the Senator from Wisconsin (Mr. PROXMIRE), the amendment of the Senator from Alabama (Mr. BELLMON), amendment No. 857, be laid before the Senate and made the pending business. A limitation of 30 minutes has already been agreed to on amendment No. 857.

The PRESIDING OFFICER (Mr. BURDICK). Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that immediately following the vote on the amendment to be offered by the Senator from Oklahoma (Mr. BELLMON) on tomorrow, the amendment by the Senator from New Hampshire (Mr. MCINTYRE), the so-called NSF research amendment, be laid before the Senate and made the pending business. A limitation of 1 hour has already been agreed to.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be 5 hours of controlled time on the amendment which will be offered by the Senator from Maine (Mr. MUSKIE), the first 2 hours of controlled time to begin running on Monday next at 10 o'clock in the morning, and going until noon on Monday next, the 3 remaining hours of controlled time to begin running on Tuesday next, immediately following the vote which will occur on the amendment to be offered by the Senator from Wisconsin (Mr. PROXMIRE) with respect to draftees; that upon the conclusion of the 3 hours on Tuesday next, a vote occur on the amendment to be offered by the Senator from Maine (Mr. MUSKIE), the debate on the Muskie amendment both on Monday and Tuesday, to be equally divided and controlled by the able Senator from Maine (Mr. MUSKIE) and the manager of the bill, the Senator from Mississippi (Mr. STENNIS), and that any amendments thereto, appeals and motions, except a motion to lay on the table, be limited to 30 minutes, the time to be equally divided between the author of the amendment to the amendment and the author of the basic amendment, the Senator from Maine (Mr. MUSKIE), or if the Senator from Maine (Mr. MUSKIE) is not opposed to the amendment to the amendment, then the time in opposition to be under the control of the able manager of the bill, the Senator from Mississippi (Mr. STENNIS).

Mr. President, I ask unanimous consent further that, immediately upon the conclusion of the vote which will occur on Tuesday, circa 3 in the afternoon on the Muskie amendment, the bill be advanced to third reading, that there be 1 hour on the bill to be equally divided between the manager of the bill, the Senator from Mississippi (Mr. STENNIS), and the minority leader or his designee, and that a vote occur on final passage of the bill at the expiration of that 1 hour.

The PRESIDING OFFICER (Mr. BURDICK). Is there objection?

Mr. STENNIS. Mr. President, reserving the right to object—and I certainly do not intend to object—one point is not clear to me with reference to amendments to the Muskie amendment.

There was to be 30 minutes allowed on each amendment. Nevertheless the agreement says that a vote on the Muskie amendment shall come at 3 o'clock.

Mr. BYRD of West Virginia. I said circa 3 o'clock, approximately 3 o'clock.

Mr. STENNIS. All right. Reserving the right further to object, does that mean that if an amendment is to be offered and debated, a vote could be had on the amendment to the amendment at that time?

Mr. BYRD of West Virginia. If an amendment to the amendment is offered, a vote on the amendment to the amendment would occur only after all time had expired on the basic amendment. I think that is in accordance with the precedents, if I may inquire of the Chair.

The PRESIDING OFFICER. The Senator is correct.

Mr. STENNIS. Mr. President, it seems to me that it would lend confusion if a Senator should offer an amendment. During the rest of the debate, the debators and the listeners would be uncertain as to what was to be voted on, particularly whether it was the final version.

It seems to me that there ought to be some debate after it is known just what the Muskie amendment is going to be.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. MUSKIE. Mr. President, I think there is likely to be only one possible amendment to the amendment as it lies at the desk. If it is offered, it will be offered, I think, early in the 5 hours of controlled time to which the Senator from West Virginia has referred.

In my point of view, I do not think it is necessary to include any time for that amendment. From my point of view, I would be content to let the 5 hours of controlled time remain and we can take the time out of that to consider the other amendment that the Senator from Mississippi and I have discussed.

Mr. STENNIS. Mr. President, if the Senator would yield further, I certainly do not intend to be contentious.

My point is that I think in the final part of the debate, the debaters and the voters ought to all have their minds on the substance of the amendment in making up their minds—I do not know what form the Muskie amendment will take—and debate it before a vote is taken on the amendment to the amendment.

Perhaps the Senator would offer his amendment on Monday during the controlled time.

Mr. BYRD. of West Virginia. Mr. President, would this suggestion be agreeable and meet the point raised by the able Senator?

Would the Senator agree if I should ask unanimous consent that if any amendment to the Muskie amendment is offered, the 30 minutes on the amendment to the amendment start running immediately and that a vote thereon occur at the expiration of the 30 minutes allotted on the amendment to the amendment?

Mr. STENNIS. Mr. President, I would rather have it that way than the way

it was first stated. But the Senator from Maine has the key to this matter.

Mr. MUSKIE. Mr. President, I do not want to be locked in at this point to this unanimous-consent agreement. It is my feeling at this point that if the amendment is offered, I will offer it on Monday.

I think the Senator has made a valid point. On Tuesday we ought not to confuse the issue. It is going to be difficult enough to get the agreement of all Senators on the principal issues. I will give their personal assurance and clear it with all Senators.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. STENNIS. Mr. President, I am satisfied with the Senator's assurance.

The PRESIDING OFFICER. Is there objection to the unanimous consent request? The Chair hears no objection, and it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I wish to be sure we are clear on this point that has been raised.

I so revise my unanimous-consent request to take into consideration the possibility that an amendment to the amendment may be offered. I revise my unanimous-consent request to provide that the time on an amendment to the amendment start running immediately upon the submission of such amendment to the amendment, and that, at the conclusion of the 30 minutes on the amendment to the amendment, there be a vote on the amendment to the amendment.

The PRESIDING OFFICER. That it would be in order before all time is used?

Mr. BYRD of West Virginia. Yes.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection, and it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I wish to express appreciation to the able assistant minority leader, who may have a question or some comment at this point, and also to the manager of the bill, the Senator from Mississippi (Mr. STENNIS), to the author of the amendment, the Senator from Maine (Mr. MUSKIE), and the coauthor of the amendment, the Senator from Maine (Mrs. SMITH), and to all other Senators who have cooperated so will in making it possible for these agreements to be effectuated.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. STENNIS. We are indebted to the Senator from West Virginia and the Senator from Michigan, Mr. President. They worked out this matter.

Mr. BYRD of West Virginia. Mr. President, would the Senator yield to me for 30 additional seconds?

Mr. PROXMIRE. I yield.

Mr. BYRD of West Virginia. Mr. President, it has been called to my attention that in my unanimous-consent request I used the word "advanced" to third reading. I amend my statement to say that "the bill be read the third time."

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 861

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the pending amendment be laid aside.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, I call up my amendment, No. 861, and I ask that it be made the pending business.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

At the end of the bill add a new section as follows:

"SEC. 508. (a) Notwithstanding any other provision of law, the aggregate amount that may be expended for Department of Defense—Military Functions for the fiscal year ending June 30, 1971, shall not exceed $66,000,000,000."

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the name of the Senator from Oklahoma (Mr. HARRIS) be added as a cosponsor of the amendment.

The PRESIDING OFFICER (Mr. BURDICK). Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, earlier today the distinguished chairman of the Committee on Armed Services, the Senator from Mississippi (Mr. STENNIS), made a strong, and, as he always does, a fair but powerful attack on this amendment. I wish to reply to some of the points he made because I disagree very strongly.

One of the points he makes is that this amendment would reverse the usual process, by acting before the Committee on Appropriations reports. What this amendment would do is not to say we can appropriate a certain amount. The amendment states that we would put a limit on the amount the President can spend.

Such a proposal has been voted for in the past and it has been supported in the past by a substantial majority of Senators who are here now. It is not a precedent and it is not a radical departure from past practice, in the sense it has not been done before. Further, the Committee on Appropriations can make any appropriations they wish but there is a limit on the amount the President can spend.

Then, the distinguished Senator from Mississippi objected to the amendment on the ground that already 2 months of the year have gone and although we would cut $5 billion it will have a different effect since the $5 billion has to be treated on a prorated basis of 9 months or 10 months, instead of 12 months. That is an interesting objection because the Senator meets himself coming back in that argument.

If the Senator is suggesting that I wait until the appropriation bill is before us, then it would not be a matter of 2 months or 3 months, but many more months, because the appropriation bill will not be before us until October. Then the Senator from Mississippi could make his argument even more strongly that we are treating the Department of Defense unfairly.

Although this amendment calls for a cut of $5.1 billion, or a reduction to $66 billion, I think all of us are realistic enough to recognize that this bill must go to conference. Unfortunately, Mr. RIVERS and the conferees on the other side are unlikely to share the enthusiasm of the Senator from Wisconsin for a cut of $5 billion. Therefore, I anticipate there will be some compromises in conference and, indeed, leeway, because the House did not make any cuts.

This is a limited, and as I shall demonstrate, a highly responsible proposal. There is no question the Department of Defense can live with the $66 billion. Last year we were told that if we reduced appropriations below President Nixon's request it would do great damage to our defense and that it would be a serious mistake insofar as our defense was concerned because President Nixon had already cut President Johnson's request. We cut President Nixon's defense request by more than $5 billion. What happened? We still have a military force. We still are fighting the war in Vietnam, and I am sure we are all unhappy about it. We still have 3 million men in the Armed Forces, over 400 major bases abroad, and we are still wasting money in procurement, as the Under Secretary of Defense testified in a speech the other night. So there is no question that we have not starved our military. Our military has not become too weak.

WHY THE PROXMIRE-MATHIAS AMENDMENT SHOULD BE PASSED

Mr. President, there are overwhelming reasons why the Proxmire-Mathias amendment should be agreed to. All the amendment does is to place a limitation on the money that can be spent this fiscal year for the "Department of Defense—military functions." It reduces spending by $5.2 billion or approximately 7 percent below the estimated outlays in the President's budget for these purposes. We would cut back the proposed $71.2 billion spending in fiscal 1971 for "military functions" to $66 billion. We do this by placing a ceiling on the amount which can be spent.

SIMPLE, DIRECT AMENDMENT

I think this is a direct, simple, straightforward way to do it. I know there will be all kinds of arguments—mostly irrelevant and procedural or nit-picking—which will be made against the amendment. But it is a direct, simple, and effective means to cut military spending this year. Senators should therefore vote on that issue rather than on some of the irrelevant and unimportant and extraneous issues which will be raised. Later, I will raise some of them myself in order to answer them and rebut them before attempts are made to canonize and cast them in bronze.

DEALS WITH SPENDING

One of the problems Congress faces when it passes an authorization bill or an appropriation bill is that it is the President who determines how much of an appropriation bill will be spent and when. The importance of this amendment is that we limit the actual spending. We can actually effect what is spent in this fiscal year for military functions by passing this amendment.

The Armed Services Committee itself has cut almost 7 percent in the procurement bill. That cut will certainly be

translated into at least that amount or more on the appropriation bill. What our amendment does in effect, is to make it possible to apply the 7-percent cut not only to procurement but the other items—the nonprocurement items—in military spending as well.

WHY AND WHERE WE SHOULD CUT

The amendment does not detail where the cuts should be made. It leaves that to the President and the Pentagon. There is very good reason for that. In the past when we have proposed amendments to specific weapons or for specific items, it is invariably argued that Senators do not have enough information and are not expert enough to second guess the military experts at the Pentagon on these issues. That is always and invariably said.

What our amendment does, however, is to limit the expenditures but tell the Pentagon, in effect, to make the cuts. They can make them where they want them within the limits of the law. They can choose the priorities and the places to cut, within, of course, the military budget.

But while we leave the actual cuts to them, we and others have made detailed suggestions where the cuts could be made and have provided extensive analysis and information as to where the waste lies. Let me be specific.

WASTE IN PROCUREMENT

There is no question whatsoever that there is fantastic fat and waste in the procurement of our weapons systems. And this along with manpower is where the big money is.

But until the debate last year and the debate this year, Pentagon spending was sacred. Finally, we have at least been able to criticize it and to develop what the problems are. That has been a healthy endeavor. But unless the Pentagon cuts and cuts hard, in the procurement area, as the committee itself has done in its 7-percent cut we will get no effective action. Our amendment contemplates that the Pentagon would carry out the committee cuts.

It is not only the Senator from Wisconsin who is critical of procurement. Almost any one who has looked at it objectively concludes that changes are needed. No less a person than Secretary Packard gave a scathing indictment of procurement practices before the Armed Forces Management Association in Los Angeles last week. Here are some of the things he said:

Frankly, gentlemen, in Defense procurement we have a real mess on our hands, and the question you and I have to face up to is what are we going to do to clean it up.

His criticism of routine defense procurement, as opposed to some examples of good procurement he cited, was devasting. After giving some examples of procurement carried out well when it was done outside the system and under good leadership, Secretary Packard had this to say:

On the other hand, when we are not in a hurry to get things done right, we over-organize, over-man, over-spend, and under-accomplish.

I congratulate the Secretary both for his frankness and for his courage in addressing those remarks to a meeting in the citadel of the so-called military-industrial complex.

In addition, the Secretary addressed himself to the problem of the new highly complex systems. This is where much of the trouble has been—in the black boxes, in the avionics, in the computer-radar systems. The Stubbing report brought this out dramatically over 18 months ago. But this is what the Secretary said to the management group:

The Defense Department has been led down the garden path for years on sophisticated systems that you promised would do all kinds of things for some optimistic cost. Too frequently we have been wrong in listening to you, and more frequently you have been unable to deliver on either of these promises—what it would do or what it would cost.

How right he is about that. We know from the General Accounting Office's report comparing the present cost of 38 major weapons systems with the estimates of their cost when the Pentagon originally asked for them, that they have increased by $23 billion or more than 50 percent in cost. And that, I can say, is a most modest and careful estimate.

The Secretary also gave some additional reasons why we are in the "mess" we are in. Let me quote him once again:

Let's face it—the fact is that there has been bad management of many defense programs in the past. We spend billions of the taxpayers dollars; sometimes we spend it badly. Part of this is due to basic uncertainties in the defense business. Some uncertainties will always exist. However most of it has been due to bad management; both in the Department of Defense and in the Defense Industry.

And we could provide example after example after example. The C–5A with its $2 billion overrun, its wing crack, and its late delivery is one.

There is the GAMA Goat, a combination land and water vehicle which the Pentagon assigned to a company which had no experience in making anything comparable. It rose in cost from $69.1 million as a planning estimate to $438.7 million now.

There is, of course, the case of the famous TFX—or F–111.

There is also the Submersible Rescue Vehicle—a vessel originally designed to rescue men from submarines. The original estimate was $36 million for 12 vessels, or $3 million each. Present estimates have risen to almost $80 million a unit. And the irony of it is that we have found that such a vessel might have been successfully used only twice since the 1920's.

BETTER USE OF FUNDS

We say this country could be stronger if we cut back on waste and used those funds in one or all of three ways.

First, those funds are vitally needed for our unmet needs here at home—for schools, for health, for housing, and to fight pollution. When the Congress has increased some of these funds even by small amounts over the President's budget, he has vetoed them with a stinging rebuke to us as "big spenders." But many of us believe that our priorities should be reordered—that we can pay for some or all of these increases in health, housing, education, and anti-pollution, by cutting back on military waste and on unnecessary military expenditures.

Second, there needs to be some reordering in the Pentagon itself. Many experts believe we would be far wiser to spend military funds on new fighter planes instead of the C–5A. Many believe fighters are far more important than a new manned bomber which past Secretaries of Defense said were out of date almost a decade ago.

Certainly we should be spending funds for submarines rather than aircraft carriers. Furthermore, we should be beefing up our combat divisions or our combat-ready divisions and cutting back on supply units, some reserve forces that sit around doing very little, and on the bureaucratic and logistic excesses which give us only one fighting man for every 15 men in the service.

Third, some of the savings we could make in a more efficient Defense Department—and more efficiency elsewhere too—should be returned to the taxpayers of this country who are now terribly overburdened with tremendous increases in their property taxes, sales taxes, and State income taxes.

Let us examine what the $2 billion overrun on the C–5A itself might have been used for.

The $2 billion, at $10,000 per man per year for the cost of a man in the service, would finance the pay and allowances and associated personnel costs for 200,000 combat troops, or more than 10 combat divisions, for a full year.

That fact is precisely why this country can be far stronger than it now is if we will get rid of military waste and redundancies.

Two billion dollars would finance the housing subsidies for some 3⅓ million families under the new homeownership provisions of the 1968 Housing Act for an entire year. Yet this country has the most desperate housing shortage in its history.

The $2 billion Lockheed overrun is five times as much as in last year's budget for rural electrification. It is almost 20 times the limit of $214 million for urban mass transit in the House appropriations bill. It was almost double on the 1970 funds for low- and moderate-income housing in the HUD budget. The $2 billion would have paid for almost all the non-service-connected pensions for all U.S. veterans in the last fiscal year. It is more than all the money we spend for veterans' hospitals and medical care for them.

We are talking only about the overrun on one weapons system. We must cut back on military waste. We must reorder our priorities.

Many people say, "We are against military waste, but how do you cut it back?" There is one way Congress can effectively cut it back, there is one congressional power that is respected, and that is to cut the amount of funds available. Secretary Packard said money available for spending for defense contracts in the past has been far too much. The only way we can provide discipline comparable to the discipline in the private sector is to reduce the funds available.

That is why this amendment is so important if we are going to get efficiency.

No one can doubt that if those who make procurement are limited in the amounts they have, they will have to exercise discipline and responsibility.

OVERSEAS BASES

A short time ago a major story in the New York Times reported that this country had 429 major and almost 3,000 minor bases scattered in 30 countries throughout the world.

Many of these were established for reasons now long forgotten. Many of them are redundant. Many of them should be reexamined to determine if they are really needed.

By remaining at some of them, we may in fact give the appearance of a commitment to deploy our military forces which has never been embodied in a detailed agreement, let alone a treaty consented to by the Senate.

The Senator from Missouri (Mr. SYMINGTON) is examining this question in great detail and with great perserverance. His initial findings alone are sufficient for us to know that a great many of them are redundant and should be closed.

May I make one further point in this regard? When Senators voted for the C–5A, some did so on the grounds that that plane would allow us to bring the boys home and to close down overseas bases and save hundreds of millions of dollars. Now that we have agreed to spend over $3.75 billion for only 42 C–5A's, we should start making some of those savings in the overseas bases which are redundant and out of date. The best way to do so is to put a ceiling on the Pentagon's spending so that they do not delay any longer in getting rid of those bases so unnecessary to our fundamental security.

SHIFT FROM TWO-PLUS TO ONE-PLUS WAR STRATEGY

Last year on the floor of the Senate, the distinguished Chairman of the Armed Services Committee argued against amendments we proposed to make specific cuts in defense procurement on the grounds that this could not be done until we shifted from the two-plus war strategy. That strategy said we should have enough troops and equipment to be able to fight a major land war in Europe and a major land war in Asia plus a minor war or contretemps somewhere else, all at the same time.

Now the policy has been changed. Secretary Laird has announced that we have done away with the two-plus war strategy and now are following a one-plus war strategy. But, this is not reflected in any significant budget cuts. When pressed on this issue, we are told that we had never fully funded the two-plus war strategy. Consequently, they argue, there are no savings.

This is an interesting argument, but there is ample proof that is it not true. There should be major cuts to reflect our shift in policy. The evidence is from a man who should know, namely Mr. Charles Schultze, formerly the Budget Director.

The one-plus strategy was "costed out" by the military departments when Mr. Schultze was Director of the Budget. Based on that knowledge and his own long experience, he has calculated that the one-plus war strategy should cost us $14 billion less than we are spending for strategic and general purpose forces this year. He made that estimate on the basis of his very considerable knowledge of the facts.

One could argue that there has not yet been time to put this $14 billion cut in effect, and I acknowledge that. But I do not see why we could not effect at least $5 billion of it, or along with savings in procurement and bases and other reforms, we could not make a $5 billion overall cut, now that the two-plus war strategy has been discarded and the one-plus strategy is in effect.

We should be getting some of the savings from this shift in policy this year. And a cut of $5 billion in overall military spending would help to bring it about.

MANPOWER

Manpower costs are the single biggest military expense. We now have slightly more than 3 million men and women under arms. Before Vietnam we had about 2.5 million. We should be aiming for that goal again, and soon. That would bring cuts larger in military personnel than are now proposed.

The costs per year for one man in uniform plus the logistics and supplies needed to support him, are variously estimated from about $10,000 per man, upwards to $25,000 per man if that man is in a combat unit in a war zone overseas.

The cutback in troops have thus far brought very slight reductions in costs. But they should have a large payoff soon. Unless we cut back hard on overall military spending, the Pentagon will usurp those savings and use them for their own purposes. That is why it is so important that we place a ceiling on expenditures this year.

ENOUGH IS ENOUGH

The members of Congress for Peace Through Law have published a major study on where savings could be made. Published a few weeks ago, that document has been pored over by the Defense Department attempting to find minor errors or mistakes by which to denigrate it. But they have failed to do so, and the basic substance of that report remains intact.

That report, along with the study by the Brookings Institution early in the year, came to essentially the same conclusions about our strategic forces. They found that we could reduce our strategic weapon expenditures from about $18 billion a year to $14 billion a year, and still continue to increase our strategic weapons and strength. We would increase them from 4,200 to 7,000 deliverable nuclear weapons.

We now have at least 4,200 force loadings—nuclear weapons which can be delivered on an enemy after a first strike by that enemy. This is our strategic deterrent.

According to the Pentagon damage tables published in 1968, 400 of these deliverable weapons could wipe out 74 million Russians and 75 percent of their industry. That is a damage which they would be unwilling and unable to sustain.

But we not only have 400 of these weapons, but we have 4,200 of these weapons—or 10 times as many. In addition, under the present programs, authorizations, and appropriations, we intend to increase the number to over 9,000. This would be done by MIRV'ing our Minutemen, providing for the new manned bomber, and shifting from the Polaris to the Poseidon submarine and its larger number of missiles.

Our intentions are to go from 10 times the number of nuclear weapons we need to over 20 times the number we need to wipe out 74 million Russians and 75 percent of their industry. Both Mr. Schultze and the report by members of Congress for Peace Through Law indicate that we could cut back our strategic spending to $14 billion or less, and still provide some 7,000 deliverable weapons in the near future. We could cut by $4 billion here and still carry out the research and development for the ABM, the B–1 bomber, and the ULMS system, while continuing but not speed up the Poseidon MIRV program.

That policy would soon provide some 7,000 deliverable nuclear weapons or force loadings.

That not only is a "sufficient" deterrent. That is an overwhelming deterrent.

OTHER SAVINGS

There are other savings which could be made as well. The new uniform accounting law, according to Admiral Rickover, should save at least $2 billion a year when fully in effect. I am proud to say that the Senate version was accepted in conference on the Defense Production Act and has now been signed into law. While it will take time to get underway, this should bring a big future saving.

There are numerous weapons and weapons systems which individual Senators and Members of the House have examined and found wanting. We question the MBT tank, the B–1 bomber, and the need for more carriers. There is duplication in our anti-submarine warfare efforts which should be consolidated. Furthermore, the Pentagon spends at least $40 million a year directly on public relations and many millions more indirectly. Reform in food procurement practices, and rotation and leave policies of the services, could effect long overdue reductions in expenses.

In fact, as the old saying goes about the local town imbiber, "He spills more liquor than he drinks."

We believe that a ceiling on Pentagon expenditures $5 billion below the amount now proposed to be spent, is the best possible means of forcing some financial discipline on the military services.

It is not only important to choose among military and civilian priorities. There must also be priorities within the Pentagon. The old programs, the wasteful practices, and excessively costly weapons systems must give way to new programs, more efficiency, and weapons which are built on time at a cost estimated reasonably accurately in advance, and which work when they are delivered.

STOCK ARGUMENTS

There are many more reasons why this amendment should be passed. But on the whole it will not be attacked on substantive grounds. We will hear the stock arguments and I will raise some of them now and answer them now.

It will be asked, why did you put it on this bill? Why did you not offer it at the time when the proposed ceiling on all expenditures was offered, or why do you not wait for the appropriation bill? Those arguments have been trotted out on the Senate floor already.

That is no argument against our proposal. It is in order now. We have a right to offer it now. It is relevant now. The word would go out tomorrow to the Pentagon that cuts were coming.

Furthermore, if we wait for the appropriations bill, our amendment would be the subject of a point of order.

The funds in the appropriations bill will not all be spent this year. What will be actually spent this year by the President will come from funds appropriated last year and funds in supplemental appropriations, as well as money appropriated this year. Since one cannot legislate on an appropriations bill, and since one can only limit the specific funds in an appropriation bill, our amendment to limit "spending" or put a ceiling on the spending in this fiscal year would be out of order on the military appropriations bill. That's why we are offering it now.

WHY THE OVERALL CUT?

Some will argue that against a general cut. "You should make specific cuts; you should not use the meat ax approach," it will be said.

That would be a good argument except for two things. When we tried it, the Pentagon supporters opposed it. In addition, more than 75 Members of the Senate—more than two-thirds—have voted for some form of general cut or to impose an overall ceiling on various bills in the previous two sessions of Congress. If a Senator says, "I am against the meat ax or general approach," one can almost invariably say to him, "But Senator, you voted for a general cut this year or last year or the year before." And interestingly enough, more than half of the handful of Members who have not voted for a general cut in recent sessions, are supporters of the amendment I have offered today.

Members should not be swayed by that argument.

It will be said that we are crippling the Pentagon. But they will still have $66 billion for military functions, and $68 billion overall. Mr. President, that is no crippling amount. The fact is that the Russian budget shows something like 17.5 billion rubles, which is the equivalent of about $20 billion, that they spend on their military. Taking into account the difference between the Russian cost of living and ours, the amount they pay their troops, and so on, the London Office of Strategic Studies reports that the Russians are spending now, this year, about $40 billion. We double-checked this figure with the experts who testified before the Joint Economic Committee on this very matter last year, to update their figures. They said that every evidence they have is that the Russian comparable military spending is still about $40 billion or $45 billion in the equivalent amount, and making do with what that $40 billion will buy.

So even if this amendment were enacted, we would still provide far more than half again as much as the Russians spend. As I say, the only way you can exercise discipline on any department, especially the military, where the waste has been demonstrated so vividly, is to cut the amount available. This is the one check that Congress really has.

CONCLUSION

This is a simple, straightforward vote. Are we willing to cut back military spending at a time when are asked to cut back on the money we appropriated for schools and health, or do we believe that the Pentagon should come first?

Are we willing to continue excesses and overruns and wasteful spending, or are we going to insist upon the discipline of the purse strings, which is the one discipline the Congress has?

Are we to have a top-heavy, gold-plated military, with redundant bases, excessive logistic and support personnel, and $40 million for propaganda, or do we want a lean, lithe, combat ready military force which operates efficiently and operates within its means?

Those are the real choices. The issues are clear. It is up to the Senate to decide.

SENATOR MATHIAS DISCUSSES DEFENSE SPENDING

My distinguished colleague from Maryland (Mr. MATHIAS), joins me in sponsoring this amendment. He has been called away this afternoon on a family emergency, but I would like to include in the RECORD remarks prepared by him in support of this amendment. I ask unanimous consent that Senator MATHIAS' comments be included at this point.

There being no objection, Senator MATHIAS' statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MATHIAS

Mr. President, cutting a defense budget is not a job to be done with a dull blunt instrument. It is a job to be done with care, judgment and foresight. It is probably more of an art than a science.

Failure to recognize this fact is probably one of the reasons the efforts made to date in reducing defense costs have reacted unfavorably to overall security considerations and may cause some understandable concern. We have attempted to reduce total dollar cost without altering our pattern of operation. As a result we pour billions into obsolescing hardware items and into peripheral engagement in Vietnam, but neglect the very bedrock security factors upon which security depends. We might instead practice the doctrine of "fly before you buy" and produce limited numbers of prototypes before we place orders for procurement in the billion dollar category.

It is a little like the farmer who foregoes the purchase of next year's seed in order to gather this year's tares.

The Senate Armed Services Committee has wisely rejected some of the Pentagon requests. But at this time of crisis, when our technical lead is in jeopardy, we cannot afford to continue such expenditure on unnecessary or marginally useful systems. We must stabilize our economy and increase our investment in the educational and scientific programs on which our future security will be founded. Our future security will be based on current activity not at our missile sites but in our classrooms—and our educational system is now in crisis.

President Eisenhower was perhaps our wisest recent President on matters of national security. He kept the country strong and our society stable. Our deterrent is still essentially based on programs researched and developed during his administration while he resisted pressures to deploy unnecessary systems. I would like to quote his words here:

"No matter how much we spend for arms, there is no safety in arms alone. Our security is the total product of our economic, intellectual, moral, and military strengths . . .

"Let me elaborate on this great truth . . . It happens that defense is a field in which I have had varied experience over a lifetime, and if I have learned anything, it is that there is no way in which a country can satisfy the craving for absolute security—but it easily can bankrupt itself, morally and economically, in attempting to reach that illusory goal through arms alone. The Military Establishment, not productive of itself, necessarily must feed on the energy, productivity and brainpower of the country, and if it takes too much, our total strength declines."

I cannot improve on General Eisenhower's prophetic words. I can only say that they describe our current condition. And they dictate the kind of "severe scrutiny of the defense budget" for which another great Republican, Robert A. Taft, appealed in his last public speech. Such "severe scrutiny," I believe, would result in a cut at least as great as that currently contemplated. I urge such a cut solemnly, in the interests of national security and domestic peace.

It is not an easy decision for any member of Congress to advocate a curb on government spending when such a decision involves the vital area of national defense. But I do so in the strong conviction that the amendment is responsible in its substance and is made mandatory by the current economic situation.

The citizens of the United States and their elected representatives in Congress can no longer ignore the implications of the fiscal situation we face. Despite a few hopeful signs, inflation is literally eating the nation out of house and home. It is imperative that we review our priorities in light of this daily menace to our national and individual economic situations. We must act swiftly and decisively to restore fiscal order.

I speak of the eroding forces of inflation in general and the needless waste of defense funds in particular. The President is fighting inflation on a broad front. He is acutely aware of the need for economy. His recent veto of the education appropriations bill, although unpopular, was the only responsible course he had in calling the question of overall federal spending levels to the attention of Congress and the nation.

In addition, we have seen recently the commitment to continue an outdated farm subsidy program, the commitment to advance a premature antiballistic missile system and other, similar massive allocations of federal funds. It now appears that the hoped-for surplus of $1.3 billion in our national budget for the current year is disintegrating into a projected $10 billion to $15 billion deficit. If we are to win the war against inflation, we must come to the defense of our economy now. Until we control this slide, no amount of money, however large, will achieve its original purpose and, in fact, may only provide further fuel to the fires of inflation.

Such considerations gain added meaning when Deputy Secretary of Defense David Packard confirms publicly—as he did last week—what many of us have suspected about military procurement process for a long time. As Mr. Packard put it, "We have a real mess on our hands." Rather than more people and more supervision, he said, the Defense Department requires fewer people and a more concerted, economic approach to spending.

This is precisely what the pending amendment will do. It will save money and en-

courage more efficient managment. Inasmuch as military spending is essentially non-productive and inflationary by nature, we simply cannot afford the expenditure of a single dollar beyond our minimal needs. The Senate Armed Services Committee realized this when it cut nearly seven per cent from the military procurement authorization bill. The pending amendment would cut about 7.1 per cent from all military spending.

There are numerous precedents for Congress to legislate a general cut in spending for a particular department and to allow the administrators of the department involved to determine where to apply the cuts. As recently as February 27, the Senate adopted an amendment offered by the distinguished Senator from New Hampshire (Mr. COTTON) to cut by two per cent spending by agencies covered in the appropriation bill for the Health, Education and Welfare departments.

This amendment, would limit overall military spending this year to $66 billion, would leave to the President and the Defense Department the decisions as to where to impose spending cuts. Many members of the Senate, in debate on the pending bill and on other occasions, have pointed to specific areas where they felt cuts could be made. This amendment would leave the decision on cuts up to the executive agencies which in the past have opposed specific cuts on the ground that only the Pentagon knew where they should be made.

In making these cuts, moreover, I recommend that the Pentagon take special effort to assure that scientific and other technical manpower are not permanently lost to our national security programs. It is crucial that current retrenchments—like current expenditures—be designed with our long term security in mind. Conversion of our defense industry for peaceful purposes should not be considered as a part time concern. Conversion is a necessary instrument of intelligent defense planning, preserving our mobilization base for a future crisis.

In the future our defense spending should be maintained at a relatively steady and balanced level. We should not allow uncertain new appraisals of Soviet intentions and capabilities to panic us into erratic splurges of investment in untested systems.

The area where it is most important for the United States to retain a general advantage is in science and technology. The ultimate commentary on our defense policies in recent years is their failure to provide for leadership in this crucial realm, while entailing levels of expenditure far beyond the reach of our competitors in every other area.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 8:30 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 8:30 tomorrow morning.

The motion was agreed to; and (at 6:44 p.m.) the Senate adjourned until tomorrow, Friday, August 28, 1970, at 8:30 a.m.

EXTENSIONS OF REMARKS

AND WAITING JUSTICE SLEEPS

HON. ROBERT DOLE

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 27, 1970

Mr. DOLE. Mr. President, Kansas City, Kans., recently marked the appointment of a new police chief with a community testimonial dinner. The man of the hour was Police Chief Boston Daniels, a well-known and highly respected law enforcement official in Kansas City for many years prior to becoming the head of the police department. His appointment was hailed by all segments of the community, for he has the respect and support of all age, ethnic, and political groups in the city.

The featured speaker at the dinner was George W. Haley, a native Kansas Citian who has recently come to Washington as Chief Counsel for the Urban Mass Transit Administration in the Department of Transportation. In his remarks Mr. Haley touched on several aspects of recent national trends and events which directly affect the atmosphere in which Chief Daniels undertakes his new responsibilities.

Because they are both timely and worthwhile, I ask unanimous consent that Mr. Haley's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY GEORGE W. HALEY

There is no question but that I am glad to be here tonight. To be invited back home after ten months in Washington on this occasion is indeed a high moment in my life. My reflections—indeed the challenge I feel—on addressing you at this particular banquet—fills me with a great amount of anxiety.

I, of course, am happy to see all of you. To greet the Mayor and City Commissioners; County Commissioner Richard Walsh and Mrs. Walsh; to greet the Honorable Robert Dole, United States Senator from Kansas and the Honorable Larry Winn, Congressman from the 3rd District, both of whom I see in Washington frequently; to greet the Honorable Bruce Watkins, Clerk of the Jackson County Circuit Court; to greet the Honorable James P. Davis, eminent Kansas legislator and president of Progress, Inc. which is sponsoring this banquet and the political, workhorse, dynamo—Clyde A. Townsend, one of my very best friends; to greet Jim Browne, newly appointed director of the Board of Public Utilities (Kansas City is really making strides); and indeed, to greet Police Chief Boston Daniels and his charming and gracious lady, Rosemary; Indeed to greet all of the distinguished dignitaries and the more than six hundred of you—fills me with nostalgia. I confess my family and I are really homesick in Washington. If my wife had her way, we'd have already moved back to Kansas City.

Don't get me wrong. The work in Washington is challenging and exciting and worthwhile. The Department of Transportation, under Secretary John Volpe, may be the youngest Cabinet-level department but it's a sharp outfit with its work cut out for it.

And the Urban Mass Transportation Administration—where I hang my hat—we are really "where the action is". I know Mayor McDowell, the commissioners and many others of you are well aware of the great crisis of inner-city transportation. You know well the need for people from all walks of life to have easy and efficient access to jobs, to training centers, schools, hospitals, parks and good housing.

You know—as we do in Washington—that more and more public transportation must be looked upon as a public responsibility, just like public education, public health, and public safety. The right to basic mobility can no longer be satisfied with the building of sidewalks. America is a growing nation, a moving nation, and our cities must maintain an efficient flow of people and goods if they are to survive.

But I did not come here tonight to talk shop, as they say. Rather—I want with my friends to speak briefly about the times and the troubles that reach out and affect us all.

It seems long years ago in my high school glee club, I sang a Negro spiritual which troubled, I'm troubled in mind . . ." This said, among other things, "I'm troubled, I'm evening—distinguished citizens here assembled—I say to you with my deepest concern "I'm troubled, I'm troubled, I'm troubled in mind. . . ." For these are trying times in the area of law enforcement generally. The horrors of Kent State, Jackson College, Augusta, Georgia and even more recently, the late Leon Jordan of Kansas City, Missouri and two youths on separate occasions in Lawrence, Kansas are incredibly true. These killings cannot be allowed to continue unabated if this nation is to survive. They debase humanity and beget counter-killings on a scale that spells disaster for all of us, black and white alike. They return us to the anarchy and bestiality of that primeval condition in which every man is the enemy of every other man. My friends, these killings must be stopped.

Now I am not here this evening to deliver a speech . . . to go on at length about the crisis of stability that threatens this great nation. (I don't want you to think that I'm a Washington bureaucrat yet—who gives a 2 hour speech every time he gets to his feet!) But I would like to share with you—my friends—and particularly with Chief Daniels—a few words I like very much that happened across my desk the other day.

These words have nothing to do with Transportation, nothing to do with what I'm paid by the taxpayers to do. But they have everything to do with our gathering here tonight; they explain why we honor a man like Boston Daniels.

Let me read this passage to you:

"God give us men! A time like this demands
Strong minds, great hearts, true faith and ready hands . . .
Men whom the lust for office does not kill,
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honour—men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men—sun-crowned—who live above the fog
In public duty and in private thinking.
For while the rabble, with their thumb-worn creeds,

Their large professions and their little deeds
Mingle in selfish strife—Freedom weeps,
Wrong rules the land,
And waiting justice sleeps."

Those words were written by Josiah Gilbert Holland more than a century ago.

But they ring fearfully true today . . . "And waiting justice sleeps . . ."

If we allow justice to sleep . . . if the forces of wrong can polarize and tear this nation asunder . . . Carlyle has said the only thing it takes for evil to overcome good is for good men to do nothing . . . if we fall victim to selfish strife . . . then truly, freedom will weep the bitter tears of failure.

And if freedom . . . and liberty . . . and brotherhood . . . and peace are to be obtained for all Americans and handed down . . . then they will demand men such as the man we honor here tonight.

I wish I could speak to you tonight with unrivaled confidence. I wish I had the specific answers to the specific problems. I wish . . . as I know so many of you wish . . . that I could put my hand into the air and stop a bullet in flight. Is there one of us who would not reverse—were he able—these national tragedies? Al Capp has said that the real martyrs of Kent State were the young men who pulled the trigger. Is it possible each of us—in our own way—died to some extent with these tragedies? It is beautifully said: "Each man's death diminishes me."

But my friends, that is not the nature of fatal mistakes. We cannot turn back the hands of time. The Moving Finger having writ, moves on. But it will be a greater tragedy—a more serious mistake—to ignore these events—to not learn from them. I join you, and all the citizens of this great city, in a feeling of hope and encouragement. Because Kansas City, Kansas—and its most-distinguished City Commissioners—have taken a massive stride forward; a giant step in the right direction.

The man we honor here this evening has the respect of this entire community. He is professional, experienced, and dedicated to his calling. He is a natural leader. He knows fear, but is not afraid of it. He is not unaware of compassion and understanding. He is a man for these times, a man who will serve his city well.

I said earlier—perhaps in a moment of emotion—"these killings must be stopped!" But Boston, I'm sure you know I didn't mean for you to catch bullets with your hands. You know, too, that I am not one who subscribes to anything approaching a police state—something too many people are too quick to prescribe in the face of rising strife.

But I do mean this. And I mean it well and I'm not trying to con you:

The times demand a strong mind, a great heart, true faith, and ready hands. The times demand men of honour who will not lie. The times demand men who live "above the fog" in public duty and private thinking.

And this city now has that kind of a man as their Chief law enforcement officer!

I am delighted, proud, and confident with your appointment.

A public servant such as Chief Daniels will make this great city an even greater place to live—and my wife, my children and I—look forward even more to coming home again.

It is wonderful to be with you on this occasion. I thank you.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

CONGRESSMAN PHILBIN REPORTS TO DISTRICT

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. PHILBIN. Mr. Speaker, in keeping with my usual practice toward the end of each Congress, I circulate in my district a summary of the issues and legislative accomplishments of the current Congress.

This year I am making available a report on the 91st Congress to the third district and under unanimous consent I place the text in the CONGRESSIONAL RECORD at this point:

During the short recess of the House, I thought that this might be an opportune time to provide the Third District with this report on the legislative accomplishments, to date, of the 91st Congress, in keeping with my usual practice.

Overall, the 91st Congress can best be described as a responsible, working Congress that made far-reaching contributions to the nation and one that will be remembered for its legislative "firsts," in several important areas. In addition, the first session of the 91st Congress last year was in session from January 3 to December 23, the sixth longest in history. At this time, adjournment is unpredictable in view of the remaining workload of legislation.

The most comprehensive tax reform bill in history became law, largely through the initiative and work of the Congress. The reform proposal also provided tax relief for lower income Americans and a 15 percent increase in Social Security benefits.

For the first time since 1923, when it was first introduced, the House approved the Equal Rights Amendment and there is prospect of early action in the Senate. I was a cosponsor of the Equal Rights Bill and signed the discharge petition to bring it on the floor of the House for debate. I was glad to support it in the House because I feel the time is long past due to remove from our laws any discrimination on account of sex. In fact, it was largely through my efforts that legislation was finally passed in the 90th Congress to remove restrictions on the promotion for women in the armed services, and we now have the first lady Brigadier Generals in military history with General Elizabeth Hoisington as director of the Women's Army Corps, made up of 12,000 enlisted and 1000 women officers, and with General Anna Mae Hays as supervisor of 5000 Army nurses.

For the first time since World War II, there was the most searching Congressional inquiry into and debate on the foreign and military spending policies of the Executive branch of the government, thus renewing one of the most powerful roles of the Congress under the separation of powers provided by the Constitution. In large measure, the length of the first session was due to the extended debate on defense procurement authorization and appropriation bills.

This debate reflected the deepening concern of many Americans over the widening of the war in Indochina, especially after Cambodia, despite the President's assurances of the June 30 withdrawal from that country.

I am opposed to escalation of the war in Vietnam, Cambodia, Laos or elsewhere and favor a flexible withdrawal of our forces timed to meet the existing conditions without danger to our troops and the commitments we have made not only to the peoples of Southeast Asia, but to other parts of the free world.

Congressional participation in establishing national policies is a healthy thing for the country. It can be particularly beneficial when there is at the same time full realization by Congress of the responsibilities involved when it extends the power of the purse over the shaping of foreign policy.

It must be remembered that ending the war by a stroke of the pen or directing that no funds be spent for the conflict as of a certain date, as some would do, cannot be accomplished without assuming the responsibility for what is to follow. Open debate can provide the necessary guidelines for proper Congressional control over appropriations, subject to the Executive veto power. It is in this way that Congress can limit military spending, as it already has done in a selective way without affecting funds for food, clothing and many other necessities that our troops require.

In fact, the 91st Congress shifted our national priorities by providing increased funding of needed health, education and welfare programs. In the process, there was one Presidential veto of the Health, Education and Welfare Appropriations Bill, upheld by a narrow margin, and a later veto of hospital construction funds which was overridden. More recently, the President vetoed the Education and Independent Offices Appropriations bills. The Education veto was overridden by the House while the Independent Offices Appropriations veto was sustained. I voted to override these vetoes.

In the legislative process, it should be recognized that all legislation is subject to Presidential veto. When the veto is exercised, the Congress can override and the measure becomes law. However, when appropriation bills are overridden by Congress, the President retains discretionary power over full and partial spending of the funds involved.

In the first session, Congress cut $5.6 billions from the President's defense budget and added $1.1 billion more for social welfare programs. This included doubling the food stamp program for the poor to $610 million, approval of a $4.8 billion extension of the housing program, increased education and training benefits for Vietnam veterans, and more adequate funding for badly needed pollution abatement programs. I vigorously supported these measures.

The Congress last year passed one of the most stringent coal mine health and safety bills which I supported, and an additional safety bill has been reported to the House this year.

Congress in extending the Voting Rights Act, one of the landmark Civil Rights laws, approved the vote for 18-year-olds and the issue may be determined by the courts in time for the 1972 Presidential election. The extension also provides for the retention of key remedies for abolishing discrimination in voting.

The House, in approving the Electoral Reform bill, provided for the direct election of the President and Vice President and the measure is now awaiting Senate clearance. If finally approved, the proposal, which amends the Constitution, must then be ratified by three-fourths of the States. I also supported this measure.

The House for the first time in a quarter of a century sought to reform its rules and procedures and the extended debate on the 141-page bill will be resumed after the House recess.

Numerous amendments are being offered to

the bill. One of the most significant amendments, sponsored by Congressmen O'Neill and Gubser, dealing with the recording of teller votes in the Congressional Reocrd, has been adopted and is among the reforms I am supporting.

The Postal Reform bill is another achievement of the 91st Congress. The new law abolishes the Post Office Department and creates in its stead the United States Postal Service, within the Executive branch, to own and operate the postal service. The new service is to be governed by a commission serving rotating terms of office. The law also contains prohibitions designed to end political influence in the postal service.

I supported the postal reform bill, but still have some reservations concerning the desirability of changing the present mode of providing suitable pay for postal workers, which heretofore resided in Congress. I also have some questions about the vast administrative powers vested by the new law in a few top level officials of the new U.S. Postal Service and the lack of Congressional veto of any increased postal rates.

On the whole, the new law demonstrates an effort by the Congress to eliminate huge postal deficits and represents an action which the postal workers and general public appear to favor. I voted for the bill because I was hopeful it would bring improvements in our overall postal system.

Both sessions of the 91st Congress provided increased funding for education programs and this produced the severe tests between a new President and a Congress with the opposition party in control. Two Presidential education vetoes were overridden and in addition, the Congress renewed the Elementary and Secondary Education Act and increased the authorization for the NDEA student loan, work-study and education opportunity grant programs, all very important to the Third District, our State and Nation, which I thought merited my support.

Social Security benefits were increased by 15% in the first session and a House-passed bill in the second session provides a 5% increase effective January 1971 and automatic cost-of-living increases thereafter. I supported both bills and also sponsored H.R. 11603, which contains the cost-of-living increase provision.

Consumer protection legislation was given continued attention in the 91st Congress. The National Commission on Product Safety was extended and the Child Protection and Toy Safety Act laws approved. Awaiting House for Senate action, after extended hearings, are several consumer bills, including the Fair Credit Reporting Act, Poison Prevention Packaging Act, Consumer Protection Act, and Unsolicited Credit Cards bill.

In pollution abatement, the 91st Congress besides increasing funding of existing programs, approved the Endangered Species bill, extended Clean Air Research, and passed the Water Quality Improvement Act and Fish Conservation bill. From the beginning, I have been a committed conservationist and strong, consistent supporter of environmental and ecological measures in the Congress.

Among housing legislation approved are the Housing and Urban Development Amendments, extending existing programs, and the Emergency Home Finance Act to provide home mortgage funds at reduced rates through Federal home loan banks. I was also among the first Members of Congress sponsoring and working for housing legislation and have supported every housing bill coming before the House during my service.

As one of the original sponsors of the Arts and Humanities bill, I supported increased funding of these very desirable programs which could be given real life and valuable expansion through vibrant, intelligent, flexible Government support.

I am very proud to have taken an active, vigorous part in the enactment by the 91st Congress of the continuing social, economic and cultural programs, which if properly administered and funded, will bring inestimable benefits to the health, education and welfare of the American people and also bring new strength and prestige to our nation.

These are some of the highlights of the almost continuous first and continuing second sessions of the 91st Congress which, on the whole, is seeking to be responsive to the needs of the nation. The record is still being written and I believe that the American people will agree that thus far it is a good record.

COMMITTEE WORK ESSENTIAL KEY TO LEGISLATION

Committee work provides the most demanding part of a Congressman's daily job. This can mean an appearance before some other committee on legislation directly affecting his District, on a pending bill of national significance, or on some legislative proposal the Congressman is sponsoring in the House.

For instance, I was glad to record my approval of the extension of the life of the New England Regional Commission before the House Public Works Committee and to stress to my colleagues the involvement of the Third District in this legislation, in view of the proposed activity of the Commission to deal with pollution abatement in the North Nashua River Basin. The benefits of this demonstration work will later be extended to other parts of the Third District, our State, region and Nation.

Again, personal appeals on two occasions to the Subcommittee on Parks helped to clear two separate bills from the House Interior and Insular Affairs Committee on the enlargement of the Cape Cod National Seashore and the Minute Man National Historical Park.

When members of the Massachusetts State Legislature appeared before the House Banking and Currency Committee on pending mass transit bills, I urged consideration of their views on the pressing, serious mass transit problem. At the same time, I sought early consideration of my own H.R. 13203, which seeks to establish a mass transit fund and a more substantial Federal coordination and contribution toward the solution of our mass transit ills.

Of course, during the 91st Congress, my work on the House Committee on Armed Services, of which I am the ranking member, took up much of my time.

In the Committee and on the floor of the House, I was a leader in adjusting and increasing the pay, separation and retirement benefits, medical, dental and hospital treatment for all personnel of the armed services. In fact, all pay, health and other measures for the welfare and benefit of our service personnel originated in and were shaped with every measure of generosity by the House Armed Services Committee, which is noted for fighting the battles of our boys in the Armed Services and their dependents.

Last fall during the debate on the Military Procurement bill, I was successful in getting House adoption of my amendment to regulate lethal chemical and biological warfare components in a compromise acceptable to both sides of this hotly contested CBW issue.

In addition to participating in the full Committee sessions dealing with our military posture and the military procurement and construction authorization bills, I conducted extensive hearings of my own as Chairman of Subcommittee No. 1, which had an unusually heavy legislative agenda.

I also conducted two special subcommittee investigations into the operation of the Post Exchanges and Commissaries and the role of military funding in the field of Independent Research and Development. These inquiries are continuing, and during the House recess, I am reviewing the extensive testimony heard thus far for the preparation of needed reports to the full Committee.

Besides other legislation, my Subcommittee No. 1 has been concerned with the heavy responsibility of our national strategic stockpile. It is this subcommittee which performs the vital oversight of our critical materials, totalling over 100 categories of rare minerals and materials, in the Nation's $6.5 billion stockpile inventory.

During the 91st Congress, as Subcommittee Chairman, I guided through Congress 18 stockpile disposal bills, which were signed into law. The funds resulting from the sale of these surplus items went into the general treasury, thus helping greatly in reducing the budget deficit.

American industry also benefited from the Subcommittee's work, because our stockpile disposal actions helped to alleviate severe industrial shortages of critical metals.

In committee and on the floor of the House, I have emphasized my support of Israel's request for additional aircraft for its own defense on the grounds that further delay in providing this aircraft for defense of this young, democratic government in the Middle East could seriously impair Israel's ability to defend itself.

Peace in the Middle East is of greatest concern to the United States and the free world.

I have moved in many ways to express my warm friendship, sympathetic consideration and support for the brave young State of Israel and its gallant people and to sustain a policy that will contribute to the defense and wellbeing of this free democratic nation in the Middle East so that total peace can be established.

Even before the recognition of Israel by this government, I was vigorously supporting, encouraging and doing everything possible to sustain and further the cause of Israel. I am continuing my efforts and supporting this government in assisting Israel to sustain and uphold its sovereignty and its free institutions and bring total peace to the Middle East.

During my entire service on the Armed Services Committee, I have always worked for a strong affirmative, peace-structured foreign policy and sought to build an impregnable national defense to protect the nation, keep our commitments to the free world, deter aggression, preserve the peace, and encourage the rule of law by justiciable institutions for mankind.

CONGRESS HELPED DISTRICT

The 91st Congress made numerous contributions to the well-being of the Third District and I would like to signal out in this brief report some of the more important actions that are directly beneficial to our area.

Federal action on two broad fronts to abate pollution in the North Nashua River Basin is now becoming a reality with the continued funding of key flood control projects in the Fitchburg area in the Public Works Appropriations bill and the first concerted attack on pollution in the Basin under the $2.5 million allocated to the New England Regional Commission for this purpose in the Commerce Department Appropriations Bill as the first increment of the $9 million program to clean up the Nashua.

A total of $745,000 during the 91st Congress was voted toward the planning of the design of two flood control reservoirs, Whitmanville and Nookagee near Fitchburg. A revision of the original design of these projects is now required as a result of the decision of the city of Fitchburg not to participate in the water supply features of these reservoirs. While it had previously indicated interest in the increased reservoir storage capacity to meet its future water needs at an estimated local cost of $3 million, the city will now explore alternate sources of supply.

The Army Engineers have informed me that preliminary evaluations indicate that both Whitemanville and Nookagee can still meet the economically sound and justifiable requirements for Federal construction assistance and there is the possibility that construction can start in 1972 or 1973 if the redesigned projects meet the governing criteria.

The $100,000 provided in this year's Public Works Appropriation bill will permit the final planning of Whitmanville at a total planning cost of $570,000. Nookagee this year was voted $200,000 to continue the planning for which the Congress has already provided about $300,000. An appropriation next year of $130,000 will permit the final planning of this project.

As chairman of the Massachusetts Congressional Delegation Committee on Flood Control, I helped clear through the Congress the huge $500 million flood prevention program for New England after the disastrous 1955 floods. Consequently, even before the 1962 and 1967 redistrictings which brought many additional Charles River Basin communities into the Third District, I was seeking solutions to the water resources problems of this Basin.

I was successful in pressing for adoption of the Charles River Basin water resources development plan under the guidance of the Army Engineers and during the 91st Congress $275,000 was voted in the Public Works Appropriation Bills which will permit completion of this $660,000 study.

These funds will help provide detailed study of the complex problems peculiar to this Basin, which are largely the result of rapid urban expansion of the area where some towns in the upper reaches have doubled their growth in the last ten years.

The Charles River Basin urgently requires solutions to its land, air and pollution problems, but in addition it has other environmental aspects which require attention. The Charles is a unique river corridor. It has historical buildings and sites, marshlands teeming with wildlife in the upper reaches, and landscaped river banks and parklands in the densely populated urban areas. The preservation of these values is especially important in the face of the urban sprawl.

When the Charles River water resources development plan is completed, the communities along the Charles will have some guidance in meeting such problems as control of flash-type flooding, pollution, wildlife preservation, recreational needs, land use and other water resources priorities.

The 91st Congress also voted $600,000 toward the advance engineering and design of the new $26.5 million dam on the Lower Charles River in Boston, which is designed to provide flood protection for areas of Boston and Cambridge and also control the water level upstream above Galen Street in Watertown.

The 91st Congress took effective action toward the start of the $200 million modernization of the Boston Naval Shipyard. Early last year, I was successful in getting the needed approval of the Real Estate Subcommittee of the House Armed Services Committee for the transfer of the Boston Army Base to the Navy. The formal transfer was made on June 30 this year.

Subsequently, in the Military Construction Authorization bill, the committee approved the transfer of $7.3 million, previously appropriated for drydock modernization at Charlestown, and an additional $300,000 to begin the first phase of the expansion program at the South Boston Naval Annex.

The modernization program was slowed down by a Pentagon freeze on military construction activities early this year, but just recently Secretary of the Navy Chafee informed me that the funds for Boston have now been released.

When the modernization is completed at the combined Boston Army Base and South Boston Annex location, the new Boston naval facility will be able to repair modern class ships, including the new DD–963 class destroyers.

In June, I appeared before the Subcommittee on Parks of the House Interior and Insular Affairs Committee to urge adoption of H.R. 13934, which I co-sponsored with my esteemed friend and colleague, Congressman Brad Morse, who formerly represented Concord in the Congress, to complete Minute Man National Historical Park.

The bill, calling for nearly $6 million for final land acquisition and development, has now been reported from committee and I am pressing for early action in the House so that the Park may be completed in time for the nation's bicentennial celebration in 1976.

Earlier this year, the committee cleared legislation along the lines of my H.R. 5246 to increase the funding authorization for the Cape Code National Seashore. As a dedicated conservationist, I sponsored the first bill in Congress back in 1957 to establish a National Park on Cape Cod.

These are just a few of the legislative actions of the 91st Congress, in which I took part, to provide direct beneficial assistance to the Third District.

The CONGRESSIONAL RECORD is an unique publication. When the Congress is in session, it is printed overnight like your morning newspaper. It carries not only an official transcript of the debate on the floor of the House and Senate, but also a listing of bills introduced, reports submitted, a summary of committee activities, speeches, extension of remarks showing the views and opinions of Members on a wide variety of national issues, and a full report on the day's legislative activities.

Each Congressman has a limited allotment of the CONGRESSIONAL RECORD for distribution in his District. Since coming to Congress, I have made it my practice to send the RECORD to the public libraries and the schools and colleges in the Third Disrict so that maximum use could be made of this valuable public document.

As part of this report to the Third District, I am including a portion of the CONGRESSIONAL RECORD Index listing an account of my work in the House. The complete Philbin index for the 91st Congress to date is far more extensive.

The official index of the Congressional Record presents an accurate record of the nature and extent of the participation of each Member of the House and Senate in the legislative process. While this reprint of the Index of the 91st Congress, to date, reflects my activities in the House, it is far from being complete simply for lack of space. It also does not show my work elsewhere—in my offices in Washington and in the Third District, in committee hearing rooms where legislation is shaped for presentation to the House, in the offices of Federal officials on matters affecting the District, or in the cities and towns making up the District.

I hope that this partial Index will help give you some indication of the range and scope of my activities during the current Congress as your U.S. Representative in Washington. The complete index of my work in the House is available upon request.

While the index sets forth with clarity the very large spread of my Congressional activities, it would be almost impossible to enumerate the thousands and thousands of people whose individual cases and problems I have handled throughout my tenure.

This assistance embraces practically every classification of citizens and people residing in the Third District, and even beyond its broad confines.

Veterans and their dependents, immigrants and their families, persons seeking or receiving social security benefits, medicare, medicaid, the enlisted personnel and officers of all the armed services who have come to me literally by the thousands to seek my counsel and assistance with their problems, business and professional men, labor leaders and their organizations, many municipal and state officials, fraternal and civic organizations, students, scientists, educators at every level, and hosts of people from the rank and file have all sought and received my assistance.

I regard the personal help that I have been able to render to so many during my service to be one of the most important and rewarding features of my Congressional work, because it has permitted me to assist so many people with challenging problems, who otherwise might not have been helped so effectively.

SALE OF ARMS TO SOUTH AFRICA

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FRASER. Mr. Speaker, on August 11, 1970 I joined with 46 Members of the House and Senate in signing a letter to Secretary Rogers and in issuing a statement about the proposed sale of arms by Great Britain to South Africa. The letter, statement, and list of signatories were introduced into the RECORD on August 13, 1970, at page 28831 by the gentleman from New York (Mr. REID) who initiated the letter and statement. During a special order on that day, requested by the gentleman from New York (Mr. LOWENSTEIN) the proposed arms sale was discussed. As an extension of that colloquy I want to introduce into the RECORD some materials on this subject from the Indian and Foreign Review of August 1, 1970. The first is an unsigned "Note and Comment," and the second gives some Indian press opinion on "Arms for Apartheid." I believe it is useful for this House to have the reaction of an Asian Commonwealth nation to Britain's proposed policy.

The articles follow:

NOTES AND COMMENT: ARMS EMBARGO AGAINST SOUTH AFRICA AND UN SECURITY COUNCIL

The numerous resolutions of the United Nations, calling upon the South African Government to desist from its discriminatory policies have had little or no effect. Resolutions calling upon member-states to take measures of political and economic nature against the South African policies have also not produced result.

Meanwhile, South Africa has not only intensified its racist practices but has also built up a formidable military machine to oppose the freedom movement and to spread and support, by force of arms, its racist doctrines and practices in the neighbouring territories of Namibia, Portuguese colonies and Southern Rhodesia. South Africa indeed poses a grave challenge and threat to the peace of Southern Africa. There are few parallels in history where the views and voices of so many have been ignored by the so few and for so long.

In the recent debate in the British House of Lords on the plan of the Government of the United Kingdom to renew arms supply to South Africa, Lord Caradon, till recently British Ambassador at the UN, moved an amendment which would inhibit the present British Government from pursuing its objective. And it is not surprising that in the

British Upper House, Lord Caradon's motion was decisively defeated.

The arguments used by the British Government can be summarized as follows: It was bound by the 1955 Simonstown Agreement providing for British-South African cooperation to defend the Cape Sea route. Secondly, the defence requirements of the British Government, particularly East of Suez, both in their narrower and wider contexts, called for the resumption of arms supply to South Africa.

This argument was met in the British Upper House by Lord Chalfont, who pointed out that the Simonstown Agreement was outdated and out moded for any defence preparations or strategy of the present-day world.

The arguments about communism and Soviet influence in the area too were religiously used by the Government spokesmen. We have heard similar arguments about communism in South East Asia as also in the Middle East. Then the argument was used that the sale and supply of arms to South Africa would bring money. Obviously many British aristocrats and plutocrats are interested in money above every normal consideration although their polished manners forbid them to speak about it in public or private.

Then there are two further arguments—the arms were needed for maritime defence and would only be used against external dangers and not for suppressing the local population. We have heard this type of argument too so often. We have heard of the theory of supplying arms only to be used for specific purposes and no other. We do not have to go deep into history to realise what happened when particular Governments decided to use these arms for purposes very different from what the donors had in mind. Use of U.S. armament in the Indo-Pakistan clash in 1965 is a case in point.

There is another aspect too. United Nations have passed resolutions for encouraging liberation movements. Will these arms help or hinder such movements even if they were to be used for external purposes?

Equally offensive is the theory that the supply of arms does not in any way reduce the detestation which donor countries feel towards apartheid or regimes based on total race discrimination. These countries expect us to believe that such a supply of arms does in fact discourage these racial practices and these racist regimes. Logic and morality can, indeed, be perverted in many ways and it seems, some Christian gentlemen are more adept at it than their barbaric ancestors, heathens and such other inferior breeds.

India has protested against the proposed British scheme to resume sale of arms to South Africa. The Indian Prime Minister has, it seems, conveyed to her British counterpart that the proposed British move will heighten tensions and inject big power rivalries into the Indian Ocean. Besides India, a number of Commonwealth countries have lodged protests with the British Government.

Several African and Asian nations have informed the United Nations that the sale of arms will lead to increasing dehumanisation of non-White Africans and Asians living in South Africa. The proposal is reported to have created such a reaction that African Commonwealth countries may request other member-nations of that organization to boycott or indefinitely postpone the Commonwealth summit due to be held in Singapore next January.

That the only threat to peace and security in and around the southern half of Africa comes from South Africa regime's covert aggression and subversion against the neighbouring independent countries and people under colonial yoke struggling for their freedom is proved by the data on South Africa's defence budget which over the last decade has increased from 44 million rands to 272 million rands a year. Of the nearly one billion dollars spent on defence during this period, more than half was on the acquisition of weapons, aircraft, naval stores, and other heavy equipment. The South African air force is being geared to the task of combating 'Terrorists' i.e. the freedom struggle of the oppressed people.

The contention that South Africa is receiving these weapons for external defence and not for the purpose of enforcing apartheid has not been borne out by facts nor was it ever accepted by the Security Council. On the contrary, the Security Council, during its deliberations in 1963–64, recognized that there was little chance of persuading South Africa to discard its racist policies without an effective embargo on the supply of arms and equipment to South Africa from other countries. This was reflected in Resolution 181 of August, 1963, 182 of December, 1963 and 191 of June, 1964.

The Security Council thus became committed to a certain course of action aimed at weakening South Africa's capacity to impose its racist policies in Southern Africa. But neither these nor other measures such as the cutting off of economic and trade relations and prevention of flow of investments have had much result because of the actions of certain states whose exports to South Africa alone make the crucial difference between success and failure of embargo. Many loopholes have been found to circumvent the purport of these resolutions.

A favoured technique has been the claim that weapons are being supplied under L.D. contracts, the terms of which are rarely specified. In a country like South Africa, where the indigenous people are kept in a virtual state of serfdom, even the supply of shot guns and hunting equipment by South Africa's trading partners adds to the oppressive apparatus of that country. The policy of surreptitious support for South Africa's war machine has done much damage to undermine effective United Nations action against apartheid.

In the light of the foregoing, the UN Security Council, on July 23, approved without any dissenting vote a resolution calling on all states to bar the sale of arms to South Africa "unconditionally and without reservations whatsoever." The vote was 12 to none with Britain, France and the USA abstaining.

The resolution, which was sponsored by the Council's five African and Asian members strengthens the decisions against arms sales to South Africa approved in 1963 and 1964 by applying it also to spare parts, the training abroad of South African forces and foreign investment in and the granting of licenses and patents to the South African arms industry.

Explaining Britain's abstention, the British delegate brought up a ridiculous objection to the condemnation in the resolution of "violations" of the old embargo. He said this did not seem a suitable word to use about recommendations made by the Council. The American delegate trotted up the excuse that the text of the resolution was "too sweeping" and went beyond the limits of what the U.S. Government was prepared to undertake. The French delegate did not explain his absention for obvious reasons. France seems to have actually become now South Africa's biggest supplier of arms.

The struggle against the aggressive and oppressive action of South Africa started nearly three quarters of a century ago when Mahatma Gandhi led the movement of popular defiance against racial discrimination. Since then, this movement nas grown considerably and spread throughout the world. It was the Delegation of India that first brought to the notice of the United Nations the practices of the racist regime in South Africa. Some people never forgave India for it but India is nonetheless proud that she did so and over the years her initiative gathered more and more strength and South Africa stands today universally condemned and can find real solace only in the embrace of colonial Portugal.

ARMS FOR APARTHEID

Commenting on Tory Government's decision to lift arms embargo on South Africa, *The Hindustan Times* (July 10) editorially said:

"By repealing the 1964 arms embargo, Sir Alec hopes to secure the defence of the Cape route, the joint control of which was provided for by the Simonstown agreement. The irony is that in 1967, following the closure of the Suez Canal, the Tories in opposition demanded arms supply to South Africa on the ground that the Cape route had become vital for western shipping. Now they argue that with the likely opening of the Suez Canal the Soviet penetration of the Indian Ocean area will be intensified. So the Simonstown agreement has become crucial.

During all these years of arms embargo South Africa has been emphasising its strategic significance to the defence plants of the West. Even before the British ban on military supplies became effective, South Africa had diversified its sources of supply and found France quite willing to do business. Even as Mr. Debre was thus enlarging French military supplies, the Tories in Britain started complaining bitterly that France was displacing Britain in South African affections and might even acquire the Simonstown naval facilities. Meanwhile Pretoria was assiduously plugging the line that its growing military power coupled with its foreign policy commitment to promote economic integration in southern and central Africa was the best antidote to Soviet penetration in the Southern Hemisphere. The British move shows that Whitehall has swallowed the argument, hook, line, and sinker. But as Lord Caradon, who resigned recently as Britain's chief UN representative, has pointed out, it would amount to undoing all the good work done in the last six years. Though the feeling was widespread among the Asian-African states that Britain could have done more against South Africa's racial policies, nobody grudged acknowledging the importance of the arms embargo. Now the Tories are putting the clock back and placing Britain on the wrong side in the struggle between African nationalism and white minority domination."

Writing on the same subject, The *Times of India* (July 9) in its editorial said:

"It will be a crying shame for Britain if the Tory Government agrees to sell arms to South Africa. It is true that such a deal can earn for it as much as sterling £225 million in three years. But is it in such dire straits that it has to cast all moral scruples to the winds to make that much extra money? In any case the Tory ministers should be honest enough to admit that it is the lure of financial gain alone which makes the idea of selling arms to South Africa so attractive to them. It is disingenuous of Sir Alec Douglas-Home to cite the Simonstown agreement to justify an arms deal. That agreement in no way obliges Britain to sell sophisticated weapons to South Africa. If this had not been so Dr. Verwoerd would have repudiated the agreement the very moment Mr. Wilson refused to sell arms to his Government. It is equally absurd for Sir Alec to argue that there is a threat to the Capetown route just because the Soviet navy has started visiting the Indian Ocean. The United States does not share this view. Even if the Soviet naval presence is greatly strengthened in the years to come, it does not follow that it will interfere with the freedom of movement on the high seas. In the wholly unlikely event of any such interference South Africa by itself will not be able to do much and the Western nations will have to act directly and in concert with the U.S. By selling arms to South

Africa in these circumstances Britain can only help to decrease the sense of isolation of the racist regime there and alienate not only all African people but also all coloured members of the Commonwealth. Even from the financial point of view the deal can turn into a liability if the African nations decide to retaliate.

It is an essentially moral issue. It should not be confused by raising questions regarding the likely use of the weapons for crushing the resistance of the suppressed and restive African majority. Dr. Vorster can comfortably given an assurance on this score. South Africa is self-sufficient in small arms required to deal with guerilla bands and angry crowds. What is more, armed resistance in the country is still so sporadic and ill-organised that the police force is more than capable of dealing with it. In any case, the racist regime in South Africa does not lack weapons of mass terror. France and Italy have been quite generous with supplies. The French Panhard armoured cars, for instance, can serve the same deadly purpose that the British Saracen armoured personnel carriers did in the massacre at Sharpeville a decade ago. The strike aircraft which the Italians are manufacturing for South Africa are ideally suited for counter-insurgency operations. They can do the job of bombing the Africans as well as the far more sophisticated and costly Buccaneers. Similarly, not much purpose is served by references to the UN Security Council's resolution of 1964 which prohibits the sale of arms to South Africa. If France and Italy are not inhibited by it, why should Britain be? Mr. Heath and Sir Alec can legitimately ask their interlocutors if the international community has ever censured countries which have gleefully rushed into the arms market in South Africa and have taken full advantage of the British trade sanctions against Rhodesia."

TOWARD MORE VOTER PARTICIPATION

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CHARLES H. WILSON. Mr. Speaker, the privilege of voting is one of the most cherished which we Americans possess. Yet how many of us bother to exercise this privilege? And how many of us are barred from doing so by archaic and frustrating voting regulations—or antivoting regulations, depending on ones viewpoint—which throw all sorts of obstacles in a potential voter's path? Statistics paint a rather grim picture of just how widespread and extensive the nonvoting population is.

No fewer than 47 million Americans failed to vote in the 1968 presidential election. The nonvoters outnumbered those casting ballots for Richard Nixon by 17 million, and the turnouts in State and local elections are usually even more feeble. While we often pride ourselves on being the world's leading example of democracy, the truth is that we lag far behind other free, western nations, in terms of voter participation.

Although most of the regulations which block many citizens from voting require State or Federal legislation to be altered, we can nevertheless work within the present system to assure that qualified voters are helped to register and to vote in the coming elections. In and around my district in southern California, this kind of work is presently being undertaken.

I would like to salute and compliment the many fine groups in my area, including the League of Women Voters, the California Jaycees and the organizers of the Southwest Voters Registration for their outstanding and nonpartisan efforts in the public interest to help Californians to register and vote. By their worthwhile efforts, these individuals are clearly demonstrating that, "with a little help from its friends," democracy can work more effectively toward the goal of having each citizen's vote be heard by his Government.

In an effort to make a meaningful contribution to the important task of voter registration, I want to include at this point in my remarks the text of a mailing which I will send to all of the residents of my district. This mailing will serve to inform my constituents of what the registration requirements are and where they may write or call to assure that they will be registered for the November election. In this manner, I am hopeful that we can significantly reduce the level of nonparticipation in our important electoral process and assure that all who want to play their rightful roles in our democracy will be helped and encouraged to do so. I include the aforementioned text at this point in the RECORD:

Are YOU Registered to Vote?

DEAR CONSTITUENT: The act of voting is fundamental to a Democracy. But you cannot vote unless you are registered. If you, or anyone in your household, are eligible to vote but unregistered at this address, I urge you to register *before* September 10, so that you may vote in November.

To help you in this process, I am providing the attached card. If you are currently unregistered, please fill it out and return it to Southwest Voters Registration. Their officials will give it to an appropriate Deputy Registrar (guided by whichever party preference you may choose to indicate on the return card), and every effort will be made to register you to vote.

You are *eligible* to register to vote if by November 3: *you will be 21 years of age, and have lived in California for 1 year and the County for 90 days.*

If you have any questions, please call the County Registrar of Voters at 628-9211, ext. 63231, or the Southwest Voters Registration at 758-4750.

Sincerely,

CHARLES H. WILSON,
Your Congressman.

IF YOU ARE NOT NOW REGISTERED TO VOTE FILL IN AND RETURN

(NOTE.—Filling out and returning this card does not register you to vote, but every effort will be made to have a Deputy Registrar contact you.)

Attention: We are presently not registered to vote: (Please print)

Registration closes September 10.

OBJECTIONS TO ABM

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. LUJAN. Mr. Speaker, the following is a letter I have received from a constituent of mine, Ronald Standler, and I believe it should be included in the RECORD. Mr. Standler, a physics major at the University of Denver, has devoted a great deal of time and effort to his research on ABM and his remarks are worth noting:

DEAR MR. LUJAN: This is the survey of my objections to the Safeguard ABM System promised in my letter of 26 July.

As a scholar I have a very strong inclination toward bibliographic integrity. I guarantee that the quotations are accurate and that I have not misrepresented what the speaker said by deleting significant words. I do not include any material that appears unreasonable or inaccurate under the guise of a footnote, I think everything in this paper is credible. I do not know of any satisfactory answer to any of the points in this survey. The following list gives abbreviations used in textual footnotes; the number following the abbreviation in the footnote is the page number of the work cited.

ABM: Abram Chayes & Jerome B. Wiesner: *ABM—An Evaluation of the Decision to Deploy an Antiballistic Missile System* Signet, 1969, 282 pages.

ENW: Samuel Glasstone: *The Effects of Nuclear Weapons*, U.S. Atomic Energy Commission, Revised February 1964, 730 pages.

HAC: Hearings before the Subcommittees on Department of Defense and Military Construction of the *House Committee on Appropriations*, "Safeguard Antiballistic Missile System", 22 May 1969, 89 pages.

HASC: Hearings before the *House Committee on Armed Services*, "Military Posture" 27 February to 8 April 1970, 1856 pages.

JCAE: Hearings before the Subcommittee on Military Applications of the *Joint Committee on Atomic Energy*, "Scope, Magnitude, and Implications of the United States Antiballistic Missile Program", 6-7 November 1967, 154 pages.

JEC: Hearings before the Subcommittee on Economy in Government of the *Joint Economic Committee*, "The Acquisition of Weapons Systems," 29-31 December 1969, 279 pages.

LRS: Donald S. Bussey: *The Safeguard ABM—some of the issues*, Legislative Reference Service, 1 July 1969, 40 pages.

SA: Richard L. Garwin & Hans A. Bethe: "Anti-Ballistic-Missile Systems," *Scientific American*, March 1968, 218: 21-31.

SAFE/INFRO: *Safeguard Information* pamphet issued by Department of Defense, March 1970.

SASC: Hearings before the *Senate Armed Services Committee* "Authorization for Military Procurement, Research and Development, Fiscal Year 1971, and Reserve Strength" 20 February to 11 June 1970, 2492 pages.

SD: Herman Lowenhar: "ABM Radars: Myth vs. Reality" *Space and Aeronautics*, November 1969, pages 56-64.

SFRC: Hearings before the Subcommittee on International Organization and Dis-

armament Affairs of the *Senate Foreign Relations Committee*, "Strategic and Foreign Policy Implications of ABM Systems," 6 March to 21 May 1969, 621 pages.

Let me put before you what I consider the arguments against deploying Safeguard from the scientific-engineering viewpoint.

COMPUTERS

The computers in the Safeguard ABM system will be the "largest and most complex ever built." (ABM 6) Dr. Foster, director of Defense research and engineering, has conceded that "when you try to integrate these two [missile site radar and Sprint] you have a software program that is enormous." (HASC 7070) The computer must interpret the radar signals, distinguish ICBM warheads from satellites, space junk, aurora borealis, astronomical objects (e.g., the moon), decoys, chaff, etc.; correct for refraction and reflection of radar signals by nuclear explosions, guide our interceptor missiles to the target, and arm and fire those ABM warheads that do successfully intercept the target. In addition, 10 to 15% of the computer capacity would be assigned to checking its performance for errors and defects, such as pinpointing the location of equipment failures. (ABM 6, 115) Since all of these tasks must be performed more or less simultaneously, the computer will use "the 'time shared' approach still being developed by data processing theorists." (ABM 6) The computer must be programmed to correctly respond to nearly every possible event if Safeguard is to work in a dependable manner; it has been concluded that "there is a substantial likelihood that . . . unpredictable effects [would cause] the system [to] . . . fail completely, for totally unexpected reasons." (ABM 117)

"To put perfected software into an ABM system would be—and this is the consensus of experienced system programers—impossible. All the large software systems that exist contain 'bugs.' There is no prospect for wholly perfecting any large software system in the next decade." (ABM 123) This, of course, does not mean that the Safeguard ABM is doomed to failure because the computers are not perfect; but it does lessen the chance of Safeguard operating efficiently and continuously. Constant testing and improvements will be done with the Safeguard system. It is in these improvements that another danger comes. "The revising [of the computer program] has to be done very carefully because a programmer is likely to do more harm than good when he makes a 'corrective' change. Correcting one error may expose [or create] another, which, when it gets a chance, may disrupt the whole subsystem—which may then disrupt (or conceivably even destroy) the over-all system." (ABM 126) As has been my experience with very small programs at the University of Denver, debugging a program is an art. True, logic and mathematics helps, but they are not sufficient. (SFRC 494)

The failure of the computer will imply complete failure of the entire Safeguard system, since there would be no other possible manner in which so much information could be accurately processed in a matter of seconds. A highly skilled technician could not manually operate the Safeguard system using only his perceptions and good judgment without the assistance of the computer.

A well known Bureau of the Budget report of late 1968 by Mr. Richard A. Stubbing found that sophisticated electronics systems in their first year of deployment were likely to have failure rates much higher than the standards set forth in the original specifications. "A sample of 13 major Air Force/Navy aircraft and missile programs with sophisticated electronic systems initiated since 1955" showed that only four systems had "reliability over 75% of initial specifications." (SFRC 453) On the basis of this dismal record one may expect the Safeguard computer to perform less perfectly than its designers and proponents claim.

EFFECTS OF IONIZATION ON RADAR

When a nuclear warhead is detonated in the atmosphere, the sudden release of radiation in the form of X-rays creates a fireball (ENW 44, 316) of temperature on the order of several tens of million degrees Celsius. (ENW 29), which in turn ionizes the air. The gamma rays emitted by the initial and residual nuclear radiation will also produce ionization (ENW 373), as will beta rays from the residual nuclear radiation (ENW 470). If the density of the atmosphere is at least 1/10,000 that of the sea level value, the ionized air will absorb energy from the radar wave and attenuate the wave (ENW 506–7). However, if the density of the atmosphere is sufficiently high the collisions between neutral and ionized molecules is frequent enough to cause the ionization to "disappear very rapidly." (ENW 507–8) The two opposing effects of air density limit the most serious attenuation of radar waves to the region 45 miles above the Earth's surface, plus or minus ten miles (ENW 510, 532). Elaborate tables, graphs, and formulae are available to predict the area of the sky and degree of attenuation produced by a one megaton fission bomb at various altitudes. (ENW 512–545) As a physics student I believe in the sanctity of numbers: certainly anyone can make some assumptions and then produce some impressive appearing calculations to "prove" whatever they desire. Only with access to classified information can the dependence upon assumptions be converted to a factual appraisal. I will make one crude caculation to demonstrate how such a calculation might be performed.

We are given that in "the D region of the normal ionosphere, an electron density of one electron per cubic centimeter will cause a ten megacycle signal to suffer an attenuation of about 4×10^{-5} decibel per mile of travel. For other electron densities, and for higher signal frequencies, the attenuation is directly proportional to the electron density and inversely proportional to the square of the signal frequency." (ENW 527) The frequency of the PAR (perimeter acquisition radar) is purportedly 442MHz. (SD 58) $4\times10^{-5}\times(1/44)^2=2\times10^{-8}$ db attenuation per mile of travel in the D region per electron/ml for the Safeguard PAR radar.

A one megaton fission bomb detonated ten to forty miles above the Earth's surface will produce electron densities of *at least* 8×16^6 electrons/ml in the D layer over an eighteen minute period. (ENW 520) If the radar beam is at a twenty degree angle with respect to the horizontal, the beam length in the D layer is given by $10x(1/\cos80°)=59$ miles (ENW 528).

Since the beam passes through the D layer twice (once going to the target and again on the return trip back to the receiver), the total mileage in the D layer is 118 miles.

Hence the attenuation of the PAR beam 18 minutes after detonation is given by

$$2x10^{-8}x8x10^{6}x118=19 \text{ db}=87\% \text{ loss},$$

which is quite high. "No radar can perform adequately with a 20 db loss term, over and above normal losses, added to its range equation." (SD 60) The significant blackout for the PAR will last less than one hour if only one fission bomb is exploded as described above; at that time the electron density will have declined to 10^6 elecerons/ml and the attenuation to 2.4 db. (ENW 520)

The MSR (missile site radar) with its ultra high frequency of 3 GHz (SD58) will have about forty-six times less attenuation than the PAR, so it is relatively immune to blackout.

There are, in addition to blackout (excessive attenuation of radar signals by high ion densities), two other ionization-radar interactions that are important, although usually omitted from discussions of the ABM.

One of these is the refraction problem. This occurs when the radar beam passes through a region where the electron density changes. This is completely analogous to the common experience of a pencil partially immersed in water appearing bent. You can measure the index of refraction of water and, after measuring some angles and performing simple calculations, apply a correction to show that the pencil is straight without removing it from the water. A similar calculation could be performed in the case of refraction of radar waves if the electron densities for the sky between the target and radar were known (they are not known). Fortunately the error is often small: the error will be less than ⅛ degree of arc for angles of incidence less than eighty degrees and changes of 10° electrons/ml for a 400 MHz radar. (ENW 528–9.) However, a small angular error can correspond to a large error in position for distant objects. As the angle of incidence increases there is a rapidly increasing refraction error until the beam is reflected by the ions. A 400 MHz beam meeting a 4×10^7 electron/ml density at an incidence angle of seventy degrees or more will be reflected. (ENW 530)

The other problem is the formation of erratic, irregular patches of highly ionized air in alignment with the Earth's magnetic field. The patches reflect radar waves and may give the computer the false impression that the patches are a solid physical object. The phenomena are called "clutter" (SASC 2306) and may appear to twinkle like the stars. (ENW 529) "Not enough is known of these phenomena to permit a quantitative description." (ENW 529) Hence, this precludes our programming the Safeguard computer to interpret these patches properly.

The warheads in our ABM missiles will be designed to contribute as little ionization as possible, but under the laws of physics they cannot avoid some ionization. The enemy may choose to detonate high yield devices at high altitudes inside the range of PAR but beyond the range of Spartan ABM. This is called a precursor attack; its goal is to blind and distort the PAR. To defeat the effects of ionization upon the radar beam, the PAR units at various northern ABM sites will be coordinated in the hope that other PAR units can see behind the blackout region of one PAR. (SASC 260, HASC 7075).

In conclusion, Dr. Hans Bethe, Nobel laureate in physics, said "my favorite penetration aid is blackout." (SFRC 36) Dr. Wolfgang Panofsky, Director of Stanford University Linear Accelerator Center, states "it has now become clear that the MSR and its computer will have to perform autonomously without any benefit from the PAR." (SASC 2307).

MINUTEMEN/SAFEGUARD ANTAGONISM

The high power Safeguard radars may damage the Minutemen missiles in the ground and during the initial part of their trajectory. Some twenty million dollars may be spent on proper shielding for the Minutemen system. (HASC 7592–5) Also, if a precursor attack is mounted against Safeguard, the high radiation and ionization levels might interfere with the Minutemen if their trajectory passed through the nuclear debris.

PENETRATION AIDS: DECOYS

In any rational assault on an ABM system, decoys will be used to exhaust the supply of interceptor missiles at little expense to the offense. A decoy must be lightweight to conserve fuel of the launch vehicle (if the enemy wanted a heavy decoy, they might as well put a warhead inside since ICBMs are in limited supply and every reentry vehicle has a chance of reaching the target) and be placed on a credible trajectory toward an important target so that the defense will find it imperative that the decoy be intercepted.

Two types of decoys may figure prominently in an attack. The first is "tank fragments," so called because they are pieces of the fuel tank and booster rocket which have been dispersed by a small conventional explosive charge after the nuclear warhead has separated. The same explosive that breaks up the rocket will also put each tank fragment on a slightly different trajectory from the warhead. The other type of decoy is an aluminum coated plastic balloon which is inflated and released above the atmosphere. Above the atmosphere there is no frictional drag; balloons will exhibit the same ballistics as warheads. The balloons, of course, can be manufactured to have a shape indistinguishable from warheads.

It is commonly argued by proponents of the Safeguard ABM that the Chinese do not have the technology capable of making decent decoys. The authoritative Legislative Reference Service states that "Chinese technical competence should not be underrated. If the same kind of high priority is assigned to this effort as appears to have been the case for the nuclear weapon, there would appear to be a strong probability that the Communist Chinese could develop penetration aids that could outwit the Safeguard system as presently conceived." (LRS 33)

PENETRATION AIDS: CHAFF

Chaff was originally tinsel much like the material used to decorate Christmas trees that was dropped from bomber aircraft to confuse defense radar. The ABM radar has a much higher frequency than an AA (anti-aircraft) radar and, thus, the chaff may be reduced in size. The size of chaff is usually given as half the wavelength of the radar it is used against: the chaff would be a reflecting dipole. "A wire of a given length is also effective against a radar of shorter wavelength." (SA, 29)

Using the basic relationship $f\gamma=c$ where $c=3\times10^8$ meters/sec. the velocity of electromagnetic waves, we solve for the wavelength γ of the PAR: $\gamma=3\times10^8/4.4\times10^8=0.7$ meter and γ of the MSR: $\gamma=3\times10^8/3\times10^9=0.1$ meter.

Hence wires 35 cm long will be adequate chaff for both the PAR and MSR. Adjusting Dr. Bethe's computation (SA, 29) we find that one hundred million (10^8) copper wires 0.001 inch in diameter and 35 centimeters long will weigh only 140 kilogrammes: "easily carried by an ICBM." (SFRC 36) These chaff wires are admittedly difficult to disperse evenly over a large volume. (SFRC, 36) once this is done, the chaff gives a radar image of "a large obscure volume, many miles across, moving on a ballistic trajectory." (ABM 20) In the ionosphere the chaff cloud would require that several Spartans be targeted inside the cloud to destroy possible warheads hidden inside. The obnoxious stuff (chaff) will "float" in the atmosphere and might be cleaned up with the powerful atmosphere blast of a nuclear ABM warhead.

Since all rationally constructed penetration aids are lightweight, the defense could ignore everything until it enters the atmosphere. At that point atmospheric drag will sort the less dense penetration aids from the heavier warheads. This technique makes area defense impossible and reduces the margin of available time to mere seconds. With decoys the number of objects considered by the computer will be unusually large, which means that the time-shared computer will be slower in issuing instructions—a slowness that may be fatal when every millisecond counts.

PENETRATION AIDS: JAMMING

The final type of penetration aid is electronic countermeasures or jamming. A radio transmitter could be placed inside a decoy which would send out noisy signals on radar frequencies. The transmitter would not require high power since the radar signals are relatively weak at target distances. This might offer great success in confounding the defense.

MSR EASY TARGET

Because the radar must be housed in a building transparent to radio waves and because it is requisite to Safeguard's operation, the radar is an obvious target. The radars are much more susceptible to blast damage than Minutemen silos. (SFRC 271, SASC 2215) "Clearly, if silos can be targeted, so can radars, and there is no doubt which would crumble first." (SD 57) The estimate is that the radars can not endure more than a thirty pound per square inch overpressure. (SD 57, ABM 40) A one megaton bomb will produce thirty psi overpressures up to 1.3 miles from ground zero. (ENW Bomb Effects Computer) Since the radar buildings already contain a ⅛ inch thick steel plate in addition to reinforced concrete walls, it is doubtful if they can be further hardened and still be transparent to radio waves. (HASC7104)

NOT MUCH TIME

It takes an ICBM 34 minutes to travel 6000 nautical miles. (ABM103) Regardless of the detection system we use, we can never have more than this brief length of time to prepare for the onslaught. In order to intercept the enemy's warhead, we must launch our ABM within four to ten minutes after the PAR detects the warhead. (SFRC 265–270) In these few minutes we must acquire accurate data on the trajectory and make a number of decisions. There is one decision that requires special attention. All ABM interceptors are equipped with a nuclear warhead which, under present U.S. policy, would require the consent of the President before we could fire them.

I think most people, both proponents and adversaries of Safeguard deployment, agree that it is a wise policy to require the President to authorize the use of any nuclear weapon by our nation's armed forces. A few people have suggested that it will be necessary (but not necessarily wise) to delegate that authority to a junior military officer at the Safeguard control center. (HASC 7089)

In the few minutes available for his decision, the President will not have very much information available. He will hardly have time for consultation with those standing beside him, not to mention meaningful consultations with his regular advisors. The whole idea of requiring Presidential consent is to allow him the opportunity to deliberate, and not a computer or a military officer. But the concept is almost meaningless if the President has neither the time nor the information available before he makes the decision. Hence the President's decision will be only a token expression.

Representative Otis G. Pike (NY) has declared: "I don't believe you can get to the President a message, have a rational decision made by the President, have the decision made to authorize the firing of the system in [deleted] minutes. I don't know anybody else who believes it either." (HASC 7091) Both Deputy Secretary of Defense Packard and General Starbird (commander of Safeguard) were present but did not refute Mr. Pike's statement except to say that the system had the capability of getting the message to and from the President even if he were in Rumania.

Dr. Licklider, Professor of Electrical Engineering at MIT, has written: "Early in its operation life, the Ballistic Missile Early Warning System [BMEWS] made its now-famous detection of 'incoming ballistic missiles' that turned out to be the moon. Fortunately, cool wisdom in Colorado Springs—and lack of confidence in the new system—prevailed over the reflex of counterstrike, and what could have been the greatest tragedy in history became a lesson. Was the lesson merely to remember that large, distant objects can reflect as much energy as smaller, nearer ones? Or was it that men may not trust the advice of untested electronic systems enough to launch nuclear missiles? Or was it that men should not trust the advice of untested electronic systems?" (ABM 122–3)

Senator Albert Gore has presented an instructive hypothetical case: "A sergeant or a lieutenant . . . or whoever is out in Montana at the missile site, who finally gets the President of the United States on the telephone, and in an excited voice says, 'Mr. President, the radars, 4½ minutes ago, picked up three ICBMs coming over the horizon from the Soviet Union, they are in trajectory bringing them on top of us, which button do I push?' The President asks some questions, and he said, 'Mr. President, I see three more. We have got three minutes left.' 'Well, do you see any more?' 'Yes, Mr. President, there are three more and they are headed for North Dakota; which button do I press?' [Senator Fulbright:] 'The panic button.'" (SFRC 213)

FOBS

The problem of time is intensified if the enemy begins their attack with a "Fractional Orbital Bombardment System" (FOBS). The trajectory used by FOBS is a circular one which follows the Earth's curvature at approximately constant altitude. This altitude is kept as low as possible so that it appears above the horizon only when it is near the target. The advantage of FOBS then is that it has a very short time between detection by our radar and its impact on target; if the FOBS projectile flies at an altitude of 100 nautical miles (115 statute miles) the time difference between initial radar acquisition and impact on target is only three and a half minutes. (ABM 104) FOBS may escape detection by BMEWS because of its low altitude. (JCAE 129) FOBS can also be used to send a missile via the South Pole. (SFRC 278) Fortunately, the payload that can be carried by FOBS is from ½ to ¾ that which can be carried by an ICBM on a conventional trajectory (SA 23) and is probably less than three megatons. (JCAE 18) The accuracy of FOBS is poorer than that of an ICBM. (ABM 220) A small change in trajectory might allow a FOBS to orbit the Earth several times should it be desired that it not impact immediately.

With FOBS it may be possible to stage a successful surprise attack on Safeguard, and if FOBS warheads do knock out the MSR, Safeguard is dead.

SAFETY/HAIR TRIGGER

Professor Herbert York has pointed out a contradiction between "hair trigger" readiness and safety requirements. I wish to quote his explanation of this: "I should like now to turn to a technical problem that pertains to all the forms of ABM so far proposed, but which unfortunately is not so simple to discuss . . . [as other objections].

"Any active defense system such as the ABM must sit in readiness for two or four or eight years and then fire at the precisely correct second following a warning time of only a few minutes. This warning time is so short that systems designers usually attempt to eliminate human decisionmakers, even at low command levels, from the decisionmaking system. Further, the precision needed for the firing time is so fine that machines must be used to choose the precise instant of firing no matter how the decision to fire is made. In the case of offensive missiles the situation is different in an essential way: although maintaining readiness throughout a long, indefinite period is necessary, the moment of firing is not so precisely controlled in general and, hence human decisionmakers, including even those at high levels, can be permitted to play a part in the decisionmaking process. Thus, the trigger of any ABM, unlike the trigger of the ICBMs and Polarises, must be continuously sensitive and ready, in short a 'hair trigger' for indefinitely long periods of time.

"On the other hand, it is obvious that we cannot afford to have an ABM fire by mistake or in response to a false alarm, and, indeed, the Army has recently gone to some pains to assure residents of areas near proposed Sentinel [the ABM system preceding Safeguard; both systems use the same components] sites, that it has imposed design requirements which will insure against the accidental launching of the missile and the subsequent detonation of the nuclear warhead it carries. These two requirements, a hair trigger so that it can cope with a surprise attack and a 'stiff trigger' so that it will never go off accidentally are, I believe contradictory requirements. This problem exists only in the real world and not on the test range [because] on the test range . . . the interceptions do not involve the use of nuclear weapons and the day, if not the second, of the mock attack is known." (SFRC 77–78)

Professor York further states that requiring the President's permission lessens "the probability of its [Safeguard] being fired under conditions of surprise." (SFRC 609) Professor York "strongly endorses" the requirement of Presidential consent, as do I. (SFRC 609). The point is that the process of consent consumes valuable time.

My letter of 19 July 1969 to Colonel Reid and his reply of 11 August 1969 (furnished through your courtesy) explored Professor York's two points: rapid action and safety. Colonel Reid recited past nuclear safety as an assurance for future safety on a new project—an irrelevant reply. (The remarks on the bottom half of page one and all of page two are good points, however.) Colonel Reid completely ignored the other half of Professor York's statement, the part about the necessity for rapid response after being inactive for a long time. Deputy Secretary of Defense Packard was also challenged with Professor York's testimony and he failed to reply to any of it, but he did, unsuccessfully, try to discredit Professor York. (SFRC 309–312) I mention Colonel Reid's and Mr. Packard's reaction only to underscore the importance and apparent irrefutability of Professor York's objections.

WARHEAD KILL MECHANISM

Everybody is aware of the tremendous damage caused by nuclear weapons at low altitude, and since nuclear weapons are used in Safeguard ABMs there is little public question that Safeguard can destroy enemy warheads. Unfortunately, the issue is not clear. Most of the destruction caused by nuclear weapons is a result of blast; about half of the total energy of a fission weapon is distributed as blast and shock. (ENW 8, 102) Above the atmosphere, where the Spartan will detonate, there is no blast to kill the enemy warhead.

The Spartan will use X-rays and neutrons to destroy the enemy warhead; the technical details have been admirably presented by Professor Bethe (SA 25–27). There are effective ways to shield the warhead from X-ray damage and possible ways to shield against neutrons. (SA 27) "The defense, not knowing the detailed design of the reentry vehicle [enemy warhead], has little way of knowing if it has destroyed a given vehicle . . . until the warhead either goes off or fails to do so." (SA 27) The question is not so much "Can the nuclear warhead kill a RV [reentry vehicle or enemy warhead] with radiation alone?" as it is "Can the ABM get near enough to the RV to kill it?" About 70% of a fission warhead's substantial energy is in the form of thermal X-rays. (ENW 26) The Spartan warhead is probably a fusion, not fission, device so neutrons will be produced in large quantities. (ENW 23) Since the flux of particles will decrease as the inverse square of the distance, the ABM must accurately intercept the RV.

The Sprint missile will detonate in the upper atmosphere above a "safe" level. Making a very crude and unreliable calculation: if the Sprint carries a two kiloton warhead as reported (SD 62) using blast overpressure figures computed for sea-level conditions, the Sprint warhead will create a maximum overpressure of ten times normal atmospheric pressure over a radius of four hundred feet. I haven't the slightest notion what overpressure would be necessary to crush a RV, or the overpressure of a two kiloton weapon exploded in the thinner air of the upper atmosphere. But again, the accuracy of Sprint is important.

TESTING ABM

The proponents of Safeguard are fond of saying how well the system is performing on the test range. (SAFE/INFO Question #61; SASC 220, 254, 2328; HASC 7065, 7087, 7078–9) "There have been 16 Spartan firings to date. Eleven of these were completely successful, three partially successful, and two unsuccessful." (SASC 2328) Since no criterion is given for "partially successful," and in the field an enemy warhead is either destroyed or not, I think "partially successful" and "unsuccessful" should be relabeled as "failures." This gives a Spartan efficiency of 11/16 or 69%. When I criticized this in my letter to Colonel Reid, he replied "the reliability of the final production missiles will be greater than the present research and development missiles being fired. In actual combat, the production type missiles will not usually be exercised to their maximum design capabilities as the research missiles are today." (11 August 1969, page three)

With this point in mind, let us look at the progress being made with Spartan. In the period before mid-May 1969 the Spartan efficiency was 5/8=63%; after mid-May 1969 it was 6/8=75%, not a very great improvement and perhaps not statistically significant. (data from SASC 2328) I disagree with the DOD conclusion that this test "demonstrates the readiness of Spartan to perform satisfactorily." (SASC 2328)

Furthermore, the tests results cited above are *not* ICBM intercept trials. The first testing of Safeguard intercept of ICBMs will take place in the fall of 1970, over a year after funds to deploy Safeguard were requested SAFE/INFO question #18, HASC 7069, 7108) Asking to deploy a yet untested weapon is a very rash act. Secretary Packard shrugs off this objection by saying a "fly before you buy concept . . . is simply not feasible" with Safeguard. (HASC 7068)

The only real test would be provided by a real enemy who deliberately tried to be uncooperative and who attacked us with an intelligently thought out plan that we could not anticipate, as opposed to trials held on our test range. Simulated tests and laboratory trials do not provide much assurance of success. (HAC 57)

The environment created by many nuclear explosions at various altitudes within a brief time span is not well understood, confer the paragraph on "clutter" under Ionization of this paper. Dr. Wiesner feels that, even without the 1963 Test Ban treaty prohibiting nuclear explosions in space and in the atmosphere, this kind of environment "could not be simulated." (ABM 13; SFRC 520, 525)

SATURATE ABM WITH MIRV'S

MIRV is an acronym for "Multiple Independently Targetable Re-entry Vehicle." Several MIRV warheads may be carried into space by one ICBM; the defense must contend with intecepting each RV separately. It is conceivable that it would require twenty ABMs to negate what came from a single ICBM. (SA 25) It is obvious that MIRV will be a useful tool, with penetration aids, to exhaust our supply of ABMs and win not only the military engagement but also the cost battle: an expensive ABM system would be overwhelmed by an offense which is cheaper.

Dr. Foster of DOD has clearly stated that MIRV is the highest confidence penetration aid for defeating an ABM defense. (JCAE 40–41; SFRC 318–319; SASC 2193) and Secretary Laird agrees (HAC 11). There can be no misunderstanding: Dr. Foster has said "The principal objective of our MIRV systems is to improve our defense penetration capability [capability to penetrate Soviet ABM] in the presence of ABM defense." (SASC 2193)

In a straightforward statement, Dr. Foster tells how we will defeat the ABM around Moscow: "We propose to go through that system by sheer exhaustion of the defenses." (HAC 62) I think it is obvious that the Russian offensive technology would defeat Safeguard in the same manner that we intend to defeat their ABM.

MORE EXPENSIVE TO DEFEND THAN TO ATTACK

We must consider the next point: which is less expensive, to purchase additional Minutemen ICBMs with the knowledge that Russia can destroy some of them in their silos or to purchase Safeguard to defend the Minutemen we have. In this consideration we make the (unwarranted) assumption that Safeguard will be an effective ABM system, as claimed by DOD.

Let me state that an economic argument is difficult to make because cost data, number of missiles, etc., is difficult to obtain and likely to change. I suggest that you contact DOD and get the data to perform the calculation according to your own assumptions in order to convince yourself of the truth of the following.

We have already paid for the research, development, testing, and evaluation (R.D.T.&E.) for the Minutemen system and would have done so regardless of the status of the ABM. Hence, I think we can fairly neglect RDT&E costs for the Minutemen but include them on Safeguard.

If we assume that the efficiency of the Safeguard system is equal to the efficiency of an enemy ICBM the results will cancel; this is a convenient assumption. (e.g. If we assume Safeguard is 50% efficient we must launch two ABM missiles to destroy one targget; likewise the enemy must launch two 50% efficient ICBMs to provide one target for Safeguard.)

We can also assume the cost of an enemy ICBM is comparable to the cost of our Minutemen if we wish to compare the target vs. interceptor cost.

The entire Minuteman system will cost $17 billion for one thousand ICBMs: $17 million per ICBM. (HASC 8169–70). The missiles themselves cost $4,574 million each in fiscal year 1970. (SASC 907)

The entire Safeguard system of a dozen sites is expected to cost $11.9 billion, including AEC warhead costs, with December 1969 cost levels. (SASC 227–8; SAFE/INFO question #43) The annual operating costs will be $0.35 billion, plus personnel housing, manpower overhead, etc. (SASC 271; SAFE/INFO question #43)

The two Phase I sites protecting the Minutemen will have a total cost of $5.4 billion including AEC warheads. (SASC 271, SAFE/INFO question #43) Annual operating costs will be $0.1 billion. (SAFE/INFO question #43)

DOD omits AEC warhead costs as a matter of policy (JEC 35) and, if you request cost figures, be certain to have the warheads costs included.

The number of ABM missiles per Safeguard site is classified. The usual assumption is 33 Spartans per site, 75 Sprints per Minuteman site, and 12 Sprints at each of the other sites. (ABM 87) The Soviet ABM system around Moscow has 64 ABM launchers and a reload capability. (HASC 7094)

Using the Phase I costs divided by 108 ABM missiles, we see that it costs us exactly $50 million plus operating costs to intercept *one* enemy RV if our system is 100% efficient.

Compare this with $4.6 million per Minuteman!

Other authors have reached the same conclusion that the ABM is much more expensive than the value of the Minuteman it protects and the cost of the enemy's efforts to defeat it. (Dr. Panofsky: SASC 2216 2286–7; Dr. Bethe: SFRC 41; SA 25–26; Dr. Rathjens: SFRC 360, 363–364 [detailed argument presented]; also ABM 23, 88–92)

Despite these inescapable conclusions, a few proponents of Safeguard continue to suggest the contrary. Senator Stennis suggests (page 23 of Senate Report #91–1016 on FY 1971 military appropriations bill) that defensive cost is LESS than "the cost of the offense to offset that defense." And official DOD releases say that if the enemy exhausts Safeguard with a large number of RVs, "the defender wins the engagement. The defense has forced an attrition of the attack force which, of course, is one of the defense goals." (Colonel Reid letter of 1 July 1969 page three; SAFE/INFO question 34 point three) Senator Stennis and Colonel Reid are simply wrong.

WHAT HAPPENS IF SAFEGUARD FAILS

The enemy will assume Safeguard will work: they will assume whatever specifications would be most damaging to their offense. Hence areas "protected" by Safeguard would have more missiles targeted at them in order to exhaust Safeguard. If Safeguard fails, we will experience a "horrible debacle"; we will be "much more severely devastated than if the system had never been deployed." (ABM 121, 52; Dr. Hornig concurs SASC 2297)

CANNOT PROTECT BOMBER BASES

According to the authorative government handbook *Effects of Nuclear Weapons,* an overpressure of three pounds per square inch will cause severe damage to transport airplanes and helicopters. (ENW 167) "Complete destruction or damage [of cargo airplanes] beyond economical repair may be expected at peak overpressures of four to six pounds per square inch." (ENW 253) A one megaton bomb will produce 6 psi overpressure 3.8 miles from ground zero and 3 psi up to six miles from ground zero. (ENW Bomb Effective Computer)

A single one megaton warhead with moderate accuracy would be sufficient to destroy all the aircraft at an Air Force Base. Since it is not claimed that our ABM system is perfect, defense of bomber bases is unreasonable.

DEFENSE OF CITIES IMPOSSIBLE

The Department of Defense has made it very clear that defense of cities against more than a few ICBMs is impossible.

Secretary Laird: "...it does not appear feasible, with existing ABM technology, to erect a defense against the Soviet missile threat to our cities which could preclude a catastrophic level of fatalities." (HAC 8, 40–41, 43)

Secretary Packard: "I am very pleased to know that you [Senator Gore] and I have come to the same conclusion on this matter—that an ABM defense of our cities makes no sense...."(SFRC 304)

DEFENSE OF WASHINGTON, D.C.

One of the dozen Safeguard sites has as its prime objective defense of Washington, D.C. (SASC 246; HAC 44; HASC 7112) Protection of the National Command Authority is an euphemism for city defense of Washington, D.C. I found the preceding quote of Secretary Packard and sent it to you in my letter of 7 February 1970 with a request for a direct explanation. Colonel Steele's cursory letter of 13 July 1970 obviously did not even attempt to answer my question. You also realize that it is a poor attempt: you state apologetically, "I think you can therefore assume this is all the Department of Defense wishes to say on the subject." DOD cannot be blamed for their reluctance to admit that at least some of the Safeguard goals are unreasonable. And yet you, as an elected representative of the people, should not be asked to support a system that cannot be justified.

SECURITY

I am very much aware of the fact that because I do not have access to classified information, I am ignorant of many important facts. Secrecy regarding the construction of the components is obviously justified, but performance claims should be made available to the public. This will not endanger our security since the enemy will, when faced with ignorance of our weapons, assume whatever would be most damaging to them—hence their reaction will almost certainly be an overreaction and the resulting arms race will degrade our mutual security.

Dr. Teller, a supporter of many DOD programs including Safeguard, has called for less secrecy and more public discussion on the ABM. (SFRC 517–8, 523) Dr. Panofsky and Senator Symington have objected to selective declassification of old facts to conjure up the image of a new threat. (SFRC 194, 316; SASC 2214) It is inconceivable that DOD classifies performance figures on Soviet systems: they are apparently trying to honour our enemy's security system? (SFRC 268; HASC 7516, 7915) A rough calculation of Dr. Foster was severely censored (HASC 7089), but Mr. Packard's erroneous statement on the very same subject was later corrected for the record by DOD (SFRC 266). General Betts was not able to justify why DOD classified some statements (HASC 8307–8). DOD classified a public report that embarrassed it (SFRC 453). Congressmen sometimes leave notes on secret material on their desks after a closed hearing (HASC 6813, 6984).

IS THE ABM DEFENSIVE?

Proponents of the Safeguard ABM state that a defensive weapon will not provoke an arms race. I fail to understand this argument. If Safeguard works, it will have increased the number of Minuteman ICBMs and cities that might otherwise have perished. The obvious reaction of the enemy to this effect would be to increase his offensive force, probably with MIRVs. (SASC 2319–20; HAC 51–52) The proposed deployment of the ABM around Minutemen sites is not purely defensive since it will purportedly enhance the effectiveness of an offensive weapon.

INDEPENDENT ADVICE

It was very ironic (and really quite humorous if anyone could retain a sense of humour while talking about nuclear weapons) that the only scientist independent of DOD and its contractors Secretary Packard remembered consulting on the ABM prior to the decision to deploy Safeguard was Professor Panofsky of Stanford. (SFRC 307–308) As it turned out, this consultation was when the two met accidentally at the San Francisco airport for half an hour. (SFRC 328) The discussion was, of course, "informal" and "unclassified." (SFRC 327, 337) Moreover, Professor Panofsky opposed deployment of the ABM!

CONCLUSION

Professor York, director DOD Research and Engineering from 1953 to 1961, expressed the "gravest doubts as to the capability of any ABM system." (SFRC 78) He was not concerned with the possibility of a few failures but "catastrophic failure in which at the moment of truth either nothing happens at all or all interceptions fail." (SFRC 78)

Each of these technical problems by itself could probably be satisfactorily solved. As a composite it is almost certain that they will not be solved. In a nuclear missile exchange the offense has all the advantages. The ABM systems now technologically and economically feasible are all members of one class: failures.

Safeguard will not work.

I have never written a paper or considered problems so dismal, so depressing. Even so, I have ignored other vital considerations: the arms race, the economic situation of our country, and the domestic/international political scene.

Respectfully yours,

RONALD B. STANDLER.

CONTINUE THE INVESTMENT TAX CREDIT FOR SMALL BUSINESS

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CULVER. Mr. Speaker, recently I introduced legislation which will be of particular benefit to small businessmen and farmers. My bill, H.R. 17532, amends the Internal Revenue Code to provide for the continuation of a tax credit for investments of up to $15,000.

Prior to enactment of the Tax Reform Act of 1969, a business was permitted to take a Federal income tax credit for a percentage of qualifying investment, which consisted mainly of machinery and equipment. The taxpayer was allowed a credit equal to 7 percent of the investment for facilities with estimated useful lives of 8 years or more. Assets with lives between 4 and 8 years were, in effect, allowed a reduced percentage.

If a business invested $40,000, for example, in a piece of equipment with a useful life of at least 8 years, the taxpayer could reduce his tax liability by $2,800—that is, 7 percent of $40,000. The Tax Reform Act of 1969 repealed this credit for property acquired after April 18, 1969.

My bill provides that if the taxpayer constructs, reconstructs, erects, or acquires qualifying property after 1969, he may take a credit for the amount of investment up to $15,000 a year. Thus, a taxpayer who buys a machine for $15,000 will be entitled to a $1,050 tax credit—that is, 7 percent of $15,000—the same as he was prior to enactment of the Tax Reform Act of 1969.

While H.R. 17532 would allow a tax credit on the amount of qualified investment up to $15,000 for any size business, the bill is designed to help primarily small businesses and small farms, for whom a tax saving of $1,050 will have a significant financial impact. It will be helpful to those who have difficulty in obtaining adequate financing for purchase of machinery and equipment, and it may well be a means of survival for many marginal firms.

At the same time it will serve to stimulate the economy of rural America. It will provide the opportunity for farmers to improve and modernize their equipment to meet the challenges of an ever-changing and more competitive agricultural economy. It will also benefit the business of the small firms which provide for the farmer the materials and services he needs. The result will be to stimulate the economic activity of rural

America, providing greater opportunities for employment and increasing the attractiveness of life there.

I believe that the complete repeal of the investment tax credit in the Tax Reform Act of 1969 was unfortunate. A limited credit is an appropriate and effective way of aiding the small businessman and farmer to compete with large corporations.

I insert a copy of the bill at this point in the RECORD:

H.R. 17532

A bill to amend the Internal Revenue Code of 1954 to provide for the continuation of the investment tax credit for small businesses, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 49 of the Internal Revenue Code of 1954 (relating to termination of credit) is amended—

(1) by inserting after "pre-termination property" in subsection (a) the following: "and property to which subsection (e) applies", and

(2) by adding at the end thereof the following new subsection:

"(e) SMALL BUSINESS EXEMPTION—

"(1) IN GENERAL.—In the case of section 38 property (other than pre-termination property)—

"(A) the physical construction, reconstruction, or erection of which is begun after December 31, 1969, or

"(B) which is acquired by the taxpayer after December 31, 1969,

and which is constructed, reconstructed, erected, or acquired for use in a trade or business, the taxpayer may select items to which this subsection applies to the extent that the qualified investment for the taxable year attributable to such items does not exceed $15,000. In the case of any item so selected (to the extent of the qualified investment attributable to such item taken into account under the preceding sentence), subsections (c) and (d) of this section, paragraphs (5) and (6) of section 46(b), and the last sentence of section 47(a)(4) shall not apply.

"(2) SPECIAL RULES.—

"(A) MARRIED INDIVIDUALS.—In the case of a husband or wife who files a separate return, the amount specified in paragraph (1) shall be $7,500 in lieu of $15,000. This subparagraph shall not apply if the spouse of the taxpayer has no qualified investment for, and no unused credit carryback or carryover to, the taxable year of such spouse which ends within or with the taxpayer's taxable year.

"(B) AFFILIATED GROUPS.—In the case of an affiliated group, the $15,000 amount specified in paragraph (1) shall be reduced for each member of the group by apportioning $15,000 among the members of such group in such manner as the Secretary or his delegate shall by regulations prescribe. For purposes of the preceding sentence, the term 'affiliated group' has the meaning assigned to such term by section 1504(a), except that—

"(i) the phrase 'more than 50 percent' shall be substituted for the phrase 'at least 80 percent' each place it appears in section 1504(a), and

"(ii) all corporations shall be treated as includible corporations (without any exclusion under section 1504(b)).

"(C) PARTNERSHIPS.—In the case of a partnership, the $15,000 amount specified in paragraph (1) shall apply with respect to the partnership and with respect to each partner.

"(D) OTHER TAXPAYERS.—Under regulations prescribed by the Secretary or his delegate, rules similar to the rules provided by sections 46(d), 48(e), and 48(f) shall be applied for purposes of this subsection."

CONGRESSMAN MYERS 1970 QUESTIONNAIRE RESULTS

HON. JOHN T. MYERS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MYERS. Mr. Speaker, during the 4 years it has been my privilege to serve as a Member of the House of Representatives, it has been my practice to seek opinions and comments of the residents of the Seventh Congressional District through public opinion polls. These surveys have afforded a quick and effective means for residents to make known their views on a wide variety of national issues and have been very useful to me in my efforts to represent the people of the district.

In June of this year, we sent the latest in our series of questionnaires into every home in the district. The results of that poll are now in and I would like to bring to the attention of the Congress and the administration the tabulation of the survey. There was no effort to restrict the distribution of the poll or to affect the results by limiting it to any particular interest or economic group. This tabulation represents a broad sample of prevailing opinion in the 15 counties of the Seventh District.

Nearly 20,000 persons responded to the poll. This compares to 18,000 in 1969; 15,000 in 1968, and about 10,000 in 1967. This represents about 11 percent of those who received the poll which is considered an above average response. To see so many people calmly showing an interest in questions affecting our lives and government is a sign of encouragement.

Although the issues represented in the poll cover a wide variety of topics, it was clear that thousands of those participating were not satisfied with a declaration of views on a simple yes or no basis. The thoughtful comments they added provided an understanding of their opinions in far greater depth than would have been possible otherwise.

NIXON'S PERFORMANCE

It was clear from the poll that President Nixon's performance since he assumed office 18 months ago enjoys the overwhelming support of the people of the district. A total of 75 percent rated Nixon's performance either excellent or good while only 20 percent said they feel he is not doing so well. I do not pretend to believe that the 75 percent agrees with everything President Nixon has done since taking office. There has never been—there can never be—that kind of agreement in a free society. I do believe it does indicate the degree of confidence the people of our district have in the President.

The President has leveled with the American people. Whether you agree with him or not, he has told us how he feels and what he is going to do—and then has fulfilled his promises. This is the record that matters in the long run.

VIETNAM

This same confidence in the President's ability was reflected in the response to the question on Vietnam. A majority, 51 percent, favor the administration plan for the orderly withdrawal of troops. Only 16 percent call for the immediate withdrawal of all U.S. troops which would preclude the administration's Vietnamization program. Another 28 percent support sufficient military action to defeat the enemy on the battlefield. The significance of this latter figure is brought into sharp focus when compared to our 1967 poll taken at the time President Johnson was sending large numbers of troops into Vietnam. Then, 74 percent of those responding favored an all-out military victory. Today, almost the reverse is true with 67 percent favoring withdrawal.

When President Nixon assumed office, more and more Americans were going to Vietnam. Since he has been President, American troops have been coming home. No partisan debate can change the fact that by next spring we will have about 270,000 fewer American troops in Vietnam than we had when the Nixon administration took office. No doubt this has had a major influence on how the people of the Seventh District rate his performance.

THE ECONOMY

The views expressed by many of those responding showed concern about inflation to be second only to concern about the war in Vietnam. Congress was criticized for its insistence upon adding additional appropriations which would assure continuing deficit spending. A total of 59 percent believe that spending for even the most desirable Federal programs should be cut back until inflation is brought under control. Another 34 percent favor wage and price controls similar to those imposed during World War II. Understandably, only 2 percent expressed support for raising income taxes as a means of controlling inflation.

I have supported the President's veto of appropriations bills which would have cost the American taxpayer more than $1 billion. I will continue to support his efforts to introduce a new spirit of self-discipline in Government spending—a willingness to make hard choices and to enforce a strict sense of priorities. Nearly every economic indicator now predicts victory in the administration's war on inflation but Congress must continue to hold down Government spending if this victory is to be a lasting one.

DRAFT

There is broad support, 42 percent, for a Selective Service System based on the lottery and eliminating all deferments, thereby making all physically able young men eligible for the draft. This is similar to the system now in effect with the exception that undergraduate student deferments are still granted. Thirty percent favor the administration proposal for an all-volunteer army. The fate of this proposal in Congress is uncertain. Twenty-two percent favor retention of the present system. The Congress and the administration are concerned about correcting the inequities in the present system. The report of the Gates Commission was promising in that it indicated the feasibility of establishing a volunteer military force as soon as the manpower demands of the Vietnam con-

flict diminish. Certainly, this issue will get a full review before the present legislation expires next year.

WELFARE REFORM

Proposed reform of the welfare system drew a heavy response with 75 percent opposed to the guaranteed annual wage which is one of the major sections of the bill now before Congress. I voted against the plan because I feel strongly that the provision of a minimum income could only serve to discourage initiative and eliminate incentives among those who most need the help. We must develop programs to insure meaningful employment for those on the welfare rolls instead of developing yet another handout on top of those which have failed so miserably in the past.

STUDENTS AND THE 18-YEAR-OLD VOTE

Two separate but related questions evoked responses indicative of the deep concern over the disorders which have plagued our colleges and universities. An overwhelming 86 percent of the people of the district favor ending Federal aid to students found guilty of disrupting classes or other normal college operations. At the same time, 66 percent are opposed to lowering the voting age to 18. Opposition to the lowering of the voting age has increased from 61 percent in the 1969 poll, perhaps a reaction to the campus disorders within our district. As you know, since this poll was taken Congress approved legislation lowering the voting age to 18. That legislation is now being contested in several States including Indiana.

DRUG ABUSE

One of the major proposals of the Nixon administration providing tougher penalties for drug pushers and users has the support of 67 percent of those responding. Only 14 percent favor easing or eliminating penalties imposed upon those involved in the drug traffic, while 13 percent oppose any changes in the present law. Legislation revising the Federal narcotics laws has been stalled in Congress for more than a year. This inaction is a disservice to the public and to the thousands of people whose lives have been jeopardized by the illicit drug traffic.

ENVIRONMENT

I was encouraged to note the support of 82 percent for my package of seven bills designed to wage a constructive and effective campaign against air and water pollution. In a nutshell, these bills are designed to clean up our water resources, to improve the quality of the air we breathe, and to remove from the landscape the litter and trash which has been a national eyesore.

I also am sponsor of a resolution which would establish an annual observance of Earth Day which this year served as the focal point for those of us who sense the urgency of the environmental crisis. I am convinced we must act now in order to assure future generations of an environment capable of sustaining life.

POSTAL REFORM

Residents of the district differed in their approach to much-needed postal reform but nearly all agreed that some form of sweeping reorganization is necessary if we are to provide the people of the Nation with an efficient and responsible postal system. Thirty-seven percent expressed favor of the postal corporation plan which passed Congress and was signed by President Nixon early in August. Hopefully, the new system will result in modernized procedures and improved working conditions.

SALT TALKS

Support for a strategic arms limitation treaty (SALT) with the Soviet Union came from 71 percent of those responding with only 13 percent expressing some doubt about the effectiveness of any agreement with the Soviet bloc. Progress in these talks has been very encouraging to date. If success is achieved in this conference, the day may come when Russians will decide that the best course for the Soviet Union as well as for the world is to concentrate their energy and know-how on improving the well-being of mankind rather than on developing the machines of destruction which threaten all of civilization.

AGRICULTURE

A total of 42 percent believe the Federal Government should promote rural development through programs of economic incentives and aid to private industry. Twenty-nine percent oppose Government playing such a role while another 25 percent were undecided. The unusually high percentage of undecided votes is indicative of the depth of this problem and the controversy over what is needed to stimulate rural development. The House recently approved a new agricultural act which I believe will result in greater income for the Nation's farmers. The Senate must act before it becomes law. Rural America has more than its share of need and a major thrust in public policy in the 1970's must be aimed at filling these needs.

The complete questionnaire results follow:

(In percent)

1. Do you believe our Selective Service System should be—(A) Retained as is, (B) Abolished in favor of an all-volunteer Army, (C) Based on a lottery system without deferments—

(A)	22
(B)	30
(C)	42
No response	6

2. Do you favor a Government-Guaranteed annual wage as a means of eliminating poverty—

Yes	12
No	75
Undecided	9
No response	4

3. Which do you believe should take preference in efforts to control inflation: (A) Raise income taxes, (B) Reduce Federal spending, (C) Wage and price control—

(A)	2
(B)	59
(C)	34
No response	5

4. What course do you favor in Vietnam—(A) Administration plan for orderly withdrawal of troops (B) Immediate withdrawal of all troops (C) Seek complete military victory—

(A)	51
(B)	16
(C)	28
No response	5

5. In dealing with the possession and use of marijuana, do you favor—(A) Easing and eliminating Federal minimum penalties (B) Increasing the penalties (C) No change in present laws—

(A)	14
(B)	67
(C)	13
No response	6

6. With regard to the question of granting 18-year-olds the vote in national elections, do you favor—(A) A change by amendment to the Constitution (B) A change by act of Congress (C) No lowering of voting age—

(A)	15
(B)	14
(C)	66
No response	5

7. Should the Federal Government promote rural development through programs of economic incentives and aid to private industry to help create jobs in rural areas—

Yes	42
No	29
Undecided	25
No response	4

8. Do you support Congressman Myers' legislation providing strict controls over pollution of our environment—

Yes	82
No	3
Undecided	10
No response	5

9. Do you support efforts by the Administration to reach an enforceable arms control agreement with the Soviet Union—

Yes	71
No	13
Undecided	11
No response	5

10. Do you favor ending Federal aid to individual students found guilty of disrupting classes or other normal college operations—

Yes	86
No	9
Undecided	2
No response	3

11. Concerning the operation of the Post Office Department, should Congress reorganize the department by—(A) Changing it to a non-profit public corporation (B) Allowing private industry to take over postal functions (C) Granting present postal authorities additional control with specific Congressional oversight—

(A)	37
(B)	25
(C)	29
No response	9

12. How would you rate President Nixon's overall performance since he took office—(A) Excellent (B) Good (C) Not so good—

(A)	30
(B)	45
(C)	20
No response	5

COMMONSENSE AND ACADEMIC FREEDOM

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CRANE. Mr. Speaker, Prof. Sidney Hook recently delivered an address at the 116th commencement of Rockford College in Rockford, Ill. This speech is entitled "Commonsense and Academic

Freedom," and its message is particularly poignant since it was probably the first commencement address to be given after the spring tragedies at Kent State and Jackson State.

Dr. Hook discusses the campus situation with amazing clarity and vision, and I commend his very thoughtful address to the readers of the CONGRESSIONAL RECORD:

COMMONSENSE AND ACADEMIC FREEDOM

(By Dr. Sidney Hook)

I wish to thank the members of the Graduating Class of Rockford College for extending an invitation to me through Dean Wattles to address them on this memorable occasion. It is a memorable occasion for various reasons, not only for you but also for the larger community, academic and non-academic, of which you are a part. It is especially memorable in that it is among the first commencements in this area of the nation, if not the first, to be held since the tragic events at Kent State College and Jackson State College, catastrophic occurrences for which we must all grieve and within our power atone.

As we live through these anguished days, it is difficult to think about anything except the tragedies, heartbreaking blunders and "might-have-beens" of the past. But if these tragedies and blunders are not to recur, we must turn our thoughts to the future. If we think about the future as citizens concerned with and about education, the overriding priority in the order of our concern, must go to the future of our colleges and universities. For on their development, the direction in which they move, much in our culture, in our very way of life—in your own way of life—depends. For the fate of our institutions of higher learning both reflects and helps redetermine the society in which they are found.

American colleges and universities today face the gravest crisis in their history—a crisis in their governance, their curriculum, their structure, their philosophy of education—to the extent that they have one—and, above all, in their freedom to inquire and to teach. From one end of the country to another, they are being subjected to unprecedented attacks from within their own academic communities that may close them down intermittently as they become transformed into centers of political action.

ACADEMIC FREEDOM ECLIPSED

There is a serious danger that unless this trend is resisted and reversed, colleges and universities will no longer be dedicated to the primary educational task of the discovery, publication and teaching of the truth but to the furtherance of ideological goals imposed by political activists among the faculties with the aid of student forces they have inspired and helped organize. The upshot may well be the gradual eclipse, under vague and misleading populist slogans of "participation" and "community control," of the very principles of academic freedom.

The development of free institutions of higher education in the United States has been a matter of slow but sure growth from the early days when they were the instruments of religious denominations and parochial political groups. Until yesterday, so to speak, the struggle for their liberation from these extraneous controls might have been considered won. One might have said with confidence that the faculties of our colleges and universities have been free to inquire into and teach the truth as they saw it in their respective fields of competence in complete independence. They were not compelled to subscribe to any ecclesiastical, economic or political dogmas to win or retain their posts. Occasionally, to be sure, there were episodic violations of these principles of academic freedom. But their very infrequency and the public outcry these violations evoked, testified to the strength of the tradition of freedom.

All this is under attack today; but no longer by the traditional enemies of academic freedom. During the last few years academic freedom has been threatened often openly and directly by political fanatics among students, and sometimes, with greater subtlety, by their faculty allies. On some campuses student extremists have set themselevs up as arbiters of what may be taught in certain controversial fields. They have with relative impunity disrupted the classes of professors of whom they disapprove, and even threatened them with bodily harm. In some places they have reinforced their demands for unilateral concessions by faculties and administrations with fire-bombs and widespread vandalism. In other places they have refused to permit student bodies to choose freely among curricular options offered them with respect to subjects connected with national defense, or to abide by the majority decision once it was expressed. They have invaded the laboratories of scientists whose projects they have declared to be not in the public interest as they have conceived it, destroyed apparatus, ransacked and scattered files. And since the latest turn in foreign affairs, some of these elements have sized the opportunities and facilities, provided by institutions for *all* students, to further their own political interests and programs. The result has been chronic and serious interference with normal educational activities by other students who do not share these political interests or who, sharing them, feel that they can be best fulfilled through the normal educational processes. In short, fanatical students and some of their faculty allies have set themselves up as censors not only of what is good for man, society and the university, but of the methods and ways by which that good is to be realized.

FACULTIES NEED THE COURAGE OF PRINCIPLE

Responses by administrators and faculties to these desecrations have on the whole been feeble and defensive. Although the reaction of public opinion to acts of criminal violence has been much stronger, in the nature of the case, the proposals of educational laymen for meeting these conditions are unsophisticated and sometimes uninformed. They are usually hit-and-miss affairs which sometimes undermine educational autonomy, and harry the innocent in order to get at the guilty. Instead of isolating the hard core of fanatics from the mass of students, they make it easier for them to take a leadership role. There is really no need for punitive legislation on either federal or local levels to discipline violators of legal and educational due process. Experience has shown how ineffective such an approach is. The truth is that the faculties almost everywhere already have the power to do what is necessary if only they have the insight, and above all, the moral courage to do it. It is moral courage that has been in conspicuously short supply, and its deficiency has resulted in cumulative evils that become progressively harder to meet.

It is an attractive illusion to hope that if a faculty or a representative faculty-student agency that has relevant jurisdiction yields on a matter of principle in order to insure peace, this *will* insure peace. Experience confirms what should be apparent to any thoughtful person. Once the principle is yielded, the violation becomes a premise for escalating more and more imperious demands. Then when they become intolerable and an attempt is made to return to some form of the abandoned principle, the effort is sure to be interpreted by those skilled in the arts of demagogy as a needless provocation.

The first thing we must try to do is to insure a change in the climate of violence that has engulfed so many of our colleges and universities since the fateful events at the University of California at Berkeley a few years ago ushered in the academic revolution. There is no panacea by which this can be done. We cannot abolish history or retrieve the errors of omission and commission of the past. It is not enough to proclaim our rededication to the fundamental purpose of the college and university as an institution of learning and teaching. I am assuming that every well-regulated institution has established through the cooperation of its constituencies—faculties, students, and administrators—well-publicized guidelines on the rights and limits of expression in the academic community. The very nature of the quest for truth, of the process of negotiating differences about the scope of campus action presupposes that independence, criticism and dissent are integral to the life of the academic community. We cannot stress too much that it is never the right to dissent that is in question but only the form it takes. Protests, speeches, peaceful parades and demonstrations concerning real or fancied grievances are always in order. They are part of the birthright of all Americans. What is not part of this birthright are assault, arson, vandalism, the hurling of rocks and fire-bombs, the seizure of classrooms, offices and laboratories that disrupt the educational process.

FACULTY/STUDENTS CAN POLICE THEIR OWN CAMPUSES

It might be desirable as part of the ritual of academic life to have a joint meeting of faculty and students (or their representatives where numbers are large) at the outset of the school year to reaffirm the guide lines regulating the amenities of rational discourse and activity on the campus. To avoid as far as possible ultimate showdowns with law enforcement authorities, it is advisable to rely on student and faculty members to police their own campuses. If this were done, it would be easier to move more swiftly and justly against those who wish not to improve the university by remedying its defects but wish to establish a beachhead in the university and use it as a sanctuary for hit-and-run raids against the society they wish to destroy.

In the long run, however, the greatest threat to colleges and universities does not come from acts of criminal violence, as costly and senseless as they are. With or without faculty sanctions the law will ultimately be enforced against law-breakers as the toll of their depradations mounts. Even with the surcease of violence, and perhaps as a price for its surcease, there still remain grave threats to the academic freedom of teachers and students in some tendencies strongly in higher education today. The wounds that the academy inflicts on itself in its bewildered effort to ward off attacks by its enemies may prove most dangerous to its future as a center of independent critical and creative thought. I can list only briefly some of these tendencies but their cumulative effect is weighty.

THE PROBLEM OF ACADEMIC TENURE

(1) Among these tendencies is the attempt to undermine and politicalize the conditions of academic tenure without which academic freedom is not viable. There are many legitimate problems connected with questions of life-long academic tenure. In the educational interest of students, abuses of this tenure system should be corrected. But I am now calling attention ot a new strategy, projected by extremist student groups on several campuses, that uses concern for conditions of tenure as an entering wedge to control both the content and personnel of instruction, and to achieve by indirection what direct action and confrontation cannot accomplish.

I speak of the demands for what has been called the principle of "parity," i.e. for 50% student voting rights on all decision-making

committees in the university, in colleges, or in departments. Among the chief issues on which parity of student power is demanded is tenure—both the granting of tenure and periodical renewal of tenure. Those making the demands are not content with being consulted before tenure is granted, with evaluating their teachers' abilities to communicate effectively and helpfully. This is an educationally legitimate procedure for which much can be said. But the demand goes far beyond that. It seeks power for students to decide on an equal footing with a professor's colleagues and peers whether he is to be invited to teach, whether he is to be granted tenure, and whether he is to have his tenure renewed every three or five or seven years—the time interval apparently depending upon the political militancy of those making the demand. The organizers of this movement towards parity, and its most zealous advocates, are those extremist political activists who have stressed political "relevance" as among the chief criteria of satisfactory teaching. It is not difficult to predict the upshot of the decisions of a tenure committee in which political fanatics enjoy parity with others. It would require only one faint-hearted faculty member, who feared for his own tenure or who sought to ingratiate himself with student activists or who agreed with their political criteria of relevance and acceptability, to give dominant power to a new and intolerant orthodoxy. A purge of the faculty would begin, ostensibly for technical pedagogical reasons, but actually on ideological grounds. In this way tenure as a basic safeguard of academic freedom will be eliminated. It is already under attack at universities on both coasts where extremist political activists have agitated for the dismissal of outstanding scholars whose views they caricature and denounce as "racist" or "fascist," and whose classes they often disrupt.

THE ATTACK ON RESEARCH

(2) In some prestigious institutions engaged in technological and scientific research, questionnaires are being circulated to the faculty requesting members to indicate what controls on research other than the judgments of their own scientific peers, should be established. Here, too, there are many legitimate problems on which men of good will and intelligence may differ. But there is reason to believe that under the cover of political and ethical criteria of selection, a program is being developed to eliminate research on all "war-related-problems"—a catch-all phrase for a vast number of actual and potential projects including many that have no, or extremely peripheral, bearings on national defense. This is coupled with the suggestion that "the community" or "the people" be brought into deliberations since they are affected by the consequences of all research. There is obvious danger here that the loudest and perhaps the decisive voices in determining the legitimacy of research will be, not the professionally trained and responsible scientists in consultation with his qualified colleagues and representatives of the electorate, but "the people" or the "community" whose moral and political judgment will be interpreted by a small activist élite desirous of imposing their own foreign policy line on the nation. Basic decision on research may be subjected to artfully concealed vetoes by those whose ruling passion is some political commitment or overarching ideological bias rather than the advance of scientific knowledge.

THE DEFEAT OF REASONED DISCOURSE

(3) There is even a grosser and more manifest threat to academic freedom which increases in boldness and arrogance every day. In centers of learning and teaching, of discovery and evaluation, we have taken it as axiomatic that reasoned discourse is the method by which conclusions are reached and disagreements resolved. This presupposes freedom for all points of view to present their position, to marshal arguments, to offer alternatives to any policies and proposals in any field. Universities have flourished as the amenities of civilized discourse became the common law of the life of mind.

Today on many American campuses this freedom no longer exists. Certain extremist groups have destroyed the rights of students and faculty to hear views that challenge or even disagree with their own. The very freedoms which these groups have enjoyed and exploited to the fullest extent in the past, they now flagrantly deny to others. It is hardly an exaggeration to say that after the victory of the so-called Free Speech Movement at the University of California at Berkeley—which actually had little to do with free speech although it sparked student disruptions at home and abroad—free speech, in fact, disappeared in many areas at Berkeley. It has become hazardous to speak there in criticism of extremist causes or groups. No one can present positions that favor American policy. In hundreds of other universities, revolutionary or subversive or anti-government speakers are made welcome, but the meetings of other groups critical of them are not tolerated. Their meetings are disrupted. Their speakers are harried, shouted down, sometimes assaulted. While spokesmen for movements hostile to the government have unlimited freedom to incite to violent action in opposing governmental policies, spokesmen for these policies are often barred from campuses or can appear only under military cordons. By and large in these institutions the faculty and administration remain silent or content themselves merely with issuing ineffectual releases deprecating the worst excesses. They seem fearful of initiating disciplinary action even when official guests of the university have been insulted or scandalously mistreated lest this exacerbate the situation.

All of these threats to academic freedom come to a head in precipitate attempts to politicalize the university in the aftermath of recent tragic events. It is sad to observe the capitulation to the movement towards politicalization by scholars and administrators in leading institutions of learning who until recently regarded it as unthinkable that the university as a corporate body take a *political* stand in behalf of any cause no matter how exalted.

THE UNIVERSITY MUST NOT BECOME PARTISAN

Grant that there are many worthy causes in this world. Grant, since we believe in academic freedom, that all faculty members, students and administrators are free to devote themselves to the pursuit of these causes. Grant that the exercise of one's rights as a citizen of a free society should not jeopardize a scholar's standing in the academic community. But granting all this does not entail in the least that the university *as such* is thereby politically committed or should be. For when the university as a corporate body takes a stand in behalf of one political position rather than another, it is being inescapably partisan and hence unfair to those among its faculty and students who disagree with that stand or who, agreeing with it, regard it as a betrayal of the mission of the university to take a partisan political stand.

As *individuals*, faculty members and students have a right to support any position with respect to American involvement in Viet Nam or elsewhere. But when universities formally or officially shut down in protest, and on top of that declare that university resources are to be devoted to the termination of American involvement by bringing organized pressure to bear on Senators, Congressmen and the Executive in behalf of one strategy rather than another, it is obvious that this is a *political* commitment. The university cannot claim to be neutral with respect to any political issue unless it permits all those who hold different positions on this issue to use its educational resources, too. But the variety of possible positions on the multiple issues that arise make such a course absurd. For if all groups used the university resources for political purposes, educational life would come to an end.

As *individuals*, faculty members and students have every right to throw themselves into the maelstrom of political activity during the coming electoral campaigns. But when universities as corporate bodies declare that they propose to shut down for two weeks next fall to permit faculties and students to engage in political activity, they are betraying their responsibility to serve "as citadels of reason, sanity and civility in a deeply troubled world." There are scholars, teachers and students who may not wish to engage in political activity of this kind, or who may wish to choose other times and other ways to influence political decisions. No institution has a right to restrict *their* freedom of choice in these respects.

Were any university as a corporate body to decide to shut down so that its staff and its students could engage for two weeks in prayer and other forms of religious worship, there would be an immediate outcry that such action violated the religious and academic freedom of the secular members of the academic community. No corporate body is justified in determining whether, when or how I should worship at the altar of my faith or any faith. It has no more justification to legislate for me in the field of politics. It is a shabby pretense to assert, as the President of one such Eastern institution has, that shutting it down for a fortnight "neither commits the university to any particular political position nor interferes with its prime educational responsibilities." It is no secret that the university is being shut down to mobilize its students and teachers for the election of one set of candidates over another, of so-called "peace" candidates, as if all candidates were not peace candidates differing only on how best to achieve it. But no matter how worthy a specific political strategy is, it is still a partisan one. And for those teachers and scholars who prefer not to engage in any political activity at this time or in this fashion, the assertion that the closure of the university is no interruption of prime educational responsibilities is sheer mockery.

THE FREE MARKET OF IDEAS MUST BE PRESERVED

Actually any college or university that has announced that its corporate resources are being devoted to the prosecution of a partisan political position or that it intends to close so that its faculty and students can march or descend on Washington for political purposes, has violated the clearly specified rules of its tax-exempt status. It is inviting taxpayer's suits.

What really is at stake in our current crisis is our pluralistic educational system, and ultimately the quality of our political democracy. If we have faith that we can learn from experience, the processes of learning must remain open to meet the problems of an open society. The challenges to its survival, to its survival as a free society, can only be met by preserving and strengthening what Justice Oliver Wendell Holmes called the free market of ideas—which is not identical with the free market of commodities. This entails the rejection of all authoritarian dogmas and practices that would transform the colleges and universities of the nation from communities of independent seekers for truths into instruments of ideological indoctrination.

To keep the institutions of higher learning open and free should be the task not only of professional educators but of all citizens. And to this double duty all of us must rise today—especially the young. For although it is true that the young will inherit the world, whether the world they inherit will be free, depends largely on them.

SENATE—*Friday, August 28, 1970*

The Senate met at 8:30 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Reverend Ronald Winters, pastor, Mount Pleasant Baptist Church, Floris, Va., offered the following prayer:

Blessed is the nation whose God is the Lord; and the people whom He hath chosen for His own inheritance.—Psalm 33: 12.

O God, our Father, unto Thee we pray. We thank Thee for permitting us to be a part of Thine inheritance. Let every soul be subject unto the higher powers. For there is no power but of God.

Give strength of purpose to these Senators who have been chosen by the people of this Nation. We pray Thee, O God, that they will shoulder their responsibilities with wisdom and justice.

Grant them that greatness of spirit that enables them to be sensitive to the needs of mankind, kindly in thought, and generous in deed. May we remember that Thou, O God, giveth the peace that passeth all understanding through Jesus Christ our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 28, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, August 27, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be permitted to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to consider executive business.

CORPORATION FOR PUBLIC BROADCASTING

The assistant legislative clerk proceeded to read sundry nominations for the Corporation for Public Broadcasting.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that those nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations will be considered en bloc; and, without objection, the nominations are confirmed.

COMMUNICATIONS SATELLITE CORPORATION

The assistant legislative clerk read the nomination of Rudolph A. Peterson, of California, to be a member of the board of directors of the Communications Satellite Corporation.

The ACTING PRESIDENT pro tempore. Without objection, the nomination will be considered; and, without objection, it is confirmed.

Mr. MANSFIELD. Mr. President, I request that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

There being no objection, the Senate resumed the consideration of legislative business.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of the following unobjected-to measures on the Senate Calendar: Calendar Nos. 985, 1142, 1143, 1156, and 1157.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

IRENE SADOWSKA SULLIVAN

The Senate proceeded to consider the bill (S. 1785) for the relief of Irene Sadowska Sullivan, which had been reported from the Committee on the Judiciary with an amendment, on page 2, line 15, after the word "pay," strike out "out of any money in the Treasury not otherwise appropriated," and insert "out of any money now or hereafter deposited in the War Claims Fund,"; so as to make the bill read:

S. 1785

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any provisions of title II of the War Claims Act of 1948, as amended (50 U.S.C., App. 2017–2017p), limiting the period within which claims may be filed thereunder, including section 211 of such Act (50 U.S.C., App. 2017j), the Foreign Claims Settlement Commission of the United States is authorized and directed (1) to receive, consider, and act upon any claims of Irene Sadowska Sullivan, of Scottsdale, Arizona, filed within six months after the date of enactment of this Act, relating to the loss of a tenement building owned by her father, a United States citizen, in Warsaw, Poland, as if such claims had been filed within the time and in the manner provided in such Act, the said Irene Sadowska Sullivan having filed a valid claim relating to such building prior to the date of expiration of the general war claims program, but not having been able to complete her documentation of such claim until after such date; and (2) to certify to the Secretary of the Treasury its determination as to the amount of any award to which the said Irene Sadowska Sullivan would have been entitled on the basis of such claims if they had been filed within the time and in the manner provided in such Act.

SEC. 2. Upon receipt by the Secretary of the Treasury of the certification described in the first section of this Act, the Secretary shall pay, out of any money now or hereafter deposited in the War Claims Fund, to the said Irene Sadowska Sullivan, the amount of any award so certified by the Commission: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Tne amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–981), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF AMENDMENT

The purpose of the amendment is to cause any funds arising under the bill to be paid properly from the War Claims Fund rather than from the general Treasury.

PURPOSE OF BILL AS AMENDED

The purpose of the bill, as amended, is that notwithstanding any provisions of title II of the War Claims Act of 1948, as amended (50 U.S.C., App. 2017–2017p), limiting the period within which claims may be filed thereunder, including section 211 of such act (50 U.S.C., App. 2017j), the Foreign Claims Settlement Commission of the United States is authorized and directed (1) to receive, consider, and act upon any claims of Irene Sadowska Sullivan of Scottsdale, Ariz., filed within 6 months after the date of enactment of this act, relating to the loss of a tenement building owned by her father, a U.S. citizen, in Warsaw, Poland, as if such claims had been filed within the time and in the manner provided in such act, the said Irene Sadowska Sullivan having filed a valid claim relating to such building prior to the date of expiration of the general war claims program, but not having been able to complete her documentation of such claim until after such date; and (2) to certify to the Secretary of the Treasury its determination as to the amount of any award to which the said Irene Sadowska Sullivan would have been entitled on the basis of such claims if they had been filed within the time and in the manner provided in such act.

The facts of the case as found in the report from the Foreign Claims Settlement Commission are as follows:

Title II of the War Claims Act of 1948, as amended, among other things directed the Foreign Claims Settlement Commission to determine the validity and amount of claims of nationals of the United States for the loss or destruction of, or physical damage to, real property and tangible personal property, located in Poland as well as certain other central European countries, which loss, destruction, or physical damage occurred during the period beginning September 1, 1939, and ending May 8, 1945, as a direct consequence of military operations of war or special measures directed against property because of the enemy or alleged enemy character of the owner, which property was owned by a national of the United States at the time of such loss, damage or destruction. The program was completed on May 17, 1967 in accordance with the statute.

The Commission's records disclose that a claim (No. W-997) was filed by Irene Sadowska Sullivan under title II of the War Claims Act of 1948, as amended (Public Law 87-846), based upon losses of certain household furnishings, clothing, an automobile and an inventory of a fishing equipment business located in Warsaw, Poland, which losses occurred during World War II as a direct consequence of military operations of war.

By a proposed decision dated April 20, 1966, claimant Irene Sadowska Sullivan was granted an award in the amount of $8,556 for the loss of the subject property. Inasmuch as no objections were filed to the award, the decision was entered as the Commission's final decision on May 19, 1966. The award was subsequently certified to the Secretary of the Treasury for payment out of the War Claims Fund and the award was paid in the full amount.

In December 1966, Mrs. Sullivan communicated with the Commission for advice regarding procedures applicable to reopening claims for further consideration for property not previously claimed. She was advised that Commission regulations provided for the reopening of claims for further consideration based upon additional losses. This could be accomplished by filing a petition and appropriate evidence establishing ownership, loss, or destruction, and the value of such property.

A petition to reopen was subsequently filed with the Commission on March 3, 1967, seeking additional compensation for the damage or destruction of a tenement house in Warsaw which had been purchased by claimant's late father. The only evidence submitted with the petition was an affidavit executed by two persons then residing in Poland. After an examination of the affidavit, it was found not to have been of sufficient probative value to warrant the granting of compensation under the statute. Mrs. Sullivan was advised by letter dated May 15, 1967, that her petition to reopen had been denied for the foregoing reason.

The war claims program under title II of the War Claims Act of 1948, as amended, was completed on May 17, 1967, and the Commission's jurisdiction with respect to such claims terminated on that date. In regard to such date, section 211 of the statute reads as follows:

"The Commission shall complete its affairs in connection with the settlement of claims pursuant to this title not later than four years following the enactment of legislation making appropriations to the Commission for payment of administrative expenses incurred in carrying out its functions under this title."

Legislation granting appropriations for the program was enacted on May 17, 1963. Accordingly, the Commission was required to complete all of its determinations on these claims within a 4-year period from that date.

Subsequent to May 17, 1967, the completion date, Mrs. Sullivan submitted a certificate from official sources in Warsaw which established ownership in the tenement house which was the subject of the petition to reopen her claim. This certificate, however, was not received by the Commission until May 22, 1967, which was, of course, subsequent to the date upon which the statutory authority for the determination of these claims terminated. In case this evidence had been received prior to the completion date, undoubtedly the evidence would have been considered for the purpose of reopening Mrs. Sullivan's claim and possibly granting her an additional amount for the loss or damage to the building.

When certain limitations are fixed for the filing of claims or evidence or the performance of any act, there are inevitably cases in which acts either are not, or cannot, be performed within the time limits prescribed. As an example, under the program administered by the Commission pursuant to the Polish Claims Agreement of 1960 which provided for a settlement of claims arising out of the nationalization or other taking of American-owned property by the Government of Poland, approximately 3,000 claims were denied wholly or in part for failure of claimants to meet the burden of proof in support of such claim prior to the termination of the program on March 31, 1966. In many cases the claimants had as long as five years to obtain and submit evidence but were unable to do so prior to the completion of the program.

These denials were subject of public testimony before the Committee on Foreign Relations in connection with the consideration of legislation in the 89th Congress to extend the Polish claims program for the reason that additional time was required by certain claimants to acquire evidence from the Polish authorities.

Because of the extensive property damage in Poland during World War II, the obliteration of 60 percent of the land records and the removal of many former residents from given areas, the Commission was advised that it was impossible for Polish authorities to furnish some of the evidence or information sought by the claimants. The legislation was not enacted and the claims which had been denied for insufficient evidence remained closed.

Upon completion of the war damage claims program under title II of the War Claims Act of 1948, 7,039 awards had been approved out of a total of 22,605 claims filed. It is estimated that between 3 and 4,000 of these war damage claims were denied in whole or in part because of claimant's failure to furnish evidence in support of their claims prior to the completion of the program on May 17, 1967, including the claim filed by Mrs. Sullivan.

In these claims as well as claims under other programs, the Commission has not been in a position to change its decisions and take favorable action upon receipt of evidence despite the fact that such evidence may have been submitted only a few days after the completion of these programs.

Upon completion of the war damage claims program under title II of the War Claims Act, the Commission had certified awards in the aggregate amount of $340.4 million to the Secretary of the Treasury for payment out of the War Claims Fund which consists of the net proceeds of enemy property vested in the United States under the Trading With the Enemy Act. Only $223.7 million, however, was deposited into the Fund for the payment of the approved awards. Awards based on certain maritime losses and losses by small business concerns were paid in full in accordance with the priority payment procedures as prescribed under the act as well as those awards approved in an amount of $10,000 or less. All awards approved in excess of $10,000 were paid to the extent of $10,000 plus a prorated payment of 61.3 percent of the balance in excess of $10,000, in accordance with these payment procedures. Consequently, the payment of these awards has presently exhausted the money in the War Claims Fund. It is anticipated, however, that additional money may be made available for transfer into the War Claims Fund possibly within the near future.

The objections of the Foreign Claims Settlement Commission are, in the opinion of the committee, successfully answered by a brief submitted by the sponsor which reads as follows:

Relative to private bill S. 1785, which I have introduced for myself and Senator Fannin, I would like to respond to the report filed by the Foreign Claims Settlement Commission by letter of September 22. I strongly disagree with the opinion of the Commission relative to the merits of the case and I concur with the Commission relative to the proper source of funds for payment under the bill.

On April 10, I presented a detailed brief to the committee, including an extensive appendix of documentary proof. The brief establishes that on March 3, 1967, Mrs. Irene Sullivan submitted a formal petition, by registered letter, to the Commission to reopen her claim before the Commission so as to include an award for the destruction of a building in Warsaw which had been owned by her late father. (See exhibit 3A.)

Mrs. Sullivan enclosed with her petition an affidavit made by Mr. and Mrs. Konopka of Warsaw, who had been the family attorneys for approximately 25 years. Their affidavit was sworn to before the U.S. Vice Consul at Warsaw and set forth a specific description of the property, including its address, its ownership, its value, the cause of its destruction, and the page number of the official land mortgage book in which the property was recorded. (See exhibit 3B.)

The brief further establishes that these same two persons had furnished an affidavit which had been accepted by the Commission as proof of Mrs. Sullivan's original claim. Thus, the Commission had already determined that these individuals are competent, reliable witnesses. (See exhibit 1.)

In contrast to the actual facts of the case, the Commission has reported that "The only evidence submitted with the petition was an affidavit executed by two persons then residing in Poland." This bare statement is misleading because it completely conceals the facts that these are the same two persons on whom the Commission had once before relied in granting the original award to Mrs. Sullivan. Also, the Commission's report fails to disclose that the affidavit gave a full, detailed description of the property, including a citation of the page number on which the property was listed in the official land records of the city of Warsaw.

It is my belief in these circumstances, the evidence supplied by Mr. and Mrs. Konopka should have constituted sufficient probative value to support an award to Mrs. Sullivan. At the very least, I believe it then became mandatory for the Commission, should it have had any doubts as to the fact, to inquire whether Mrs. Sullivan possessed any additional evidence.

On April 7, 1967, the Commission did respond to Mrs. Sullivan's petition by asking her to complete and return an affidavit of inheritance. The Commission did not use this occasion to ask for any other supporting evidence of any kind. (See exhibit 4.)

Mrs. Sullivan returned the completed affidavit on April 12, 1967, by registered letter No. 3063, and attached to the affidavit a request that the Commission advise her if any further information or documents would be required. The Commission never did acknowledge her inquiry.

The Commission has failed to inform the committee that Mrs. Sullivan was asked to complete an affidavit of inheritance or that

she sought to be advised if any further evidence would be required. To me, these are significant facts because they prove, first, that the Commission never requested any additional evidence other than the affidavit of inheritance and second, that the Commission had been put on notice by Mrs. Sullivan that she stood ready to give any further verification that might be needed.

The equities in Mrs. Sullivan's case are further buttressed by the fact that at the first occasion when she was informed of the need for new evidence, she sent it almost immediately.

The first time the Commission informed Mrs. Sullivan that her petition did not warrant a new award was on May 15, 1967, 2 days before its authority to consider war claims expired. On May 22, 1967, exactly 1 week later, Mrs. Sullivan furnished new evidence in the form of an official certificate of the Governmental Notary Bureau in Warsaw attesting to the ownership of the property, the destruction thereof as a result of military operations during World War II, and its value. The document verified each fact sworn to by Mr. and Mrs. Konopka, even down to the same page number in the mortgage record books as cited by them. (See exhibits 5, 6A, and 6B.)

Consequently, the facts demonstrate that had the commission given Mrs. Sullivan an opportunity to know of and respond to its questions she could have furnished the appropriate evidence promptly.

Finally, there is no question but that the claim as verified by Mrs. Sullivan was sufficient to justify an award. In reply to my letter of inquiry dated February 19th, Mr. Leonard v. B. Sutton, Chairman of the FCSC, says at page 2:

"Your inquiry of February 19, 1967, poses two questions. First, if the submission by Mrs. Sullivan had been timely, would she have presented the type of claim for which an award would have been made under Public Law 87–846? The answer to this question is in the affirmative."

In summary, I must disagree strongly with the opinion given by the Commission that "there does not appear to be any special extenuating circumstances for singling out Irene Sadowska Sullivan for special relief or that she is more deserving than others to receive such relief."

By the very admission of the Chairman of the Commission, Mrs. Sullivan's claim stated grounds "for which an award would have been made * * *" had the Commission deemed it timely. Certainly this unusual statement alone distinguishes the case from all others and establishes equity in her behalf.

If Mrs. Sullivan's original claim was accepted on the basis of evidence given by the family attorneys, why was evidence from the same people not accepted in the case of her amended claim?

If the Commission had any doubts at all relative to the truth of her claim, why did it not respond to her offer of April 12, 1967, to supply any further information that was necessary?

The fact that they failed to give Mrs. Sullivan any opportunity to meet their reservations about her claim, in the face of her specific request to be allowed to do just that, creates a strong equity in her behalf. This is particularly so in view of her proven ability to supply additional evidence quite promptly.

Thus, several features of the case distinguish it from other instances in which persons failed to submit timely evidence to the Commission. How many other cases exist in which an award "would have been made * * *"? How many other cases are there where the pending claim was supported by detailed evidence offered by the same witnesses whose statement had previously served as the basis for the making of an award?

How many other claimants had formally requested an opportunity to provide additional evidence if this would be required? How many other cases are there in which the claimant did in fact transmit to the Commission additional convincing evidence within less than 1 week from the time the Commission's authority expired?

Obviously, there are no other such cases. For the Commission to assert that the enactment of a private bill in the case will open the door to the passage of 3,000 or 4,000 other such bills is ridiculous. The special circumstances of the case are highly unlikely to be present in any other situation, and I am confident that the bill would not create a precedent for other claimants.

Turning to the second comment presented by the Commission, I wish to state my agreement with the position of the Commission that it is unwise to use unappropriated funds in the Treasury for the payment of war damage claims. In order to correct this aspect of the bill, I suggest that the committee accept an amendment to the bill as follows:

On page 2, lines 15 and 16, strike out", out of any money in the Treasury not otherwise appropriated," and substitute ", out of any money now or hereafter deposited in the War Claims Fund,"

On the basis of these reasons, I respectfully ask that the committee approve the bill with an amendment.

It is the opinion of the committee that this is a proper case to waive the bar, and, accordingly, it is recommended that the bill as amended be favorably enacted.

Attached hereto and made a part hereof are the substantiating papers.

FOREIGN CLAIMS SETTLEMENT COMMISSION OF THE UNITED STATES,
Washington, D.C., September 22, 1969.

Hon. JAMES O. EASTLAND,
Chairman, Committee on the Judiciary,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Further reference is made to your letter of May 1, 1969, requesting a report by the Foreign Claims Settlement Commission on the bill, S. 1785, 91st Congress, for the relief of Irene Sadowska Sullivan.

The bill waives certain time limitations under title II of the War Claims Act of 1948, as amended, and directs the Foreign Claims Settlement Commission to act upon any claim by Irene Sadowska Sullivan of Scottsdale, Ariz., relating to the loss of a tenement building in Warsaw, Poland, and to certify the amount of any award to the Secretary of Treasury for payment in accordance with the statute. Such payment would be made out of any money in the Treasury not otherwise appropriated.

Title II of the War Claims Act of 1948, as amended, among other things, directed the Foreign Claims Settlement Commission to determine the validity and amount of claims of nationals of the United States for the loss or destruction of, or physical damage to, real property and tangible personal property, located in Poland as well as certain other central European countries, which loss, destruction, or physical damage occurred during the period beginning September 1, 1939, and ending May 8, 1945, as a direct consequence of military operations of war or special measures directed against property because of the enemy or alleged enemy character of the owner, which property was owned by a national of the United States at the time of such loss, damage or destruction. The program was completed on May 17, 1967, in accordance with the statute.

The Commission's records disclose that a claim (No. W–997) was filed by Irene Sadowska Sullivan under title II of the War Claims Act of 1948, as amended (Public Law 87–846), based upon losses of certain household furnishings, clothing, an automobile and an inventory of a fishing equipment business located in Warsaw, Poland, which losses occurred during World War II as a direct consequence of military operations of war.

By a proposed decision dated April 20, 1966, claimant Irene Sadowska Sullivan was granted an award in the amount of $8,556.00 for the loss of the subject property. Inasmuch as no objections were filed to the award, the decision was entered as the Commission's Final Decision on May 19, 1966. The award was subsequently certified to the Secretary of Treasury for payment out of the War Claims Fund and the award was paid in the full amount.

In December 1966, Mrs. Sullivan communicated with the Commission for advice regarding procedures applicable to reopening claims for further consideration for property not previously claimed. She was advised that Commission regulations provided for the reopening of claims for further consideration based upon additional losses. This could be accomplished by filing a petition and appropriate evidence establishing ownership, loss or destruction, and the value of such property.

A petition to reopen was subsequently filed with the Commission on March 3, 1967 seeking additional compensation for the damage or destruction of a tenement house in Warsaw which had been purchased by claimant's late father. The only evidence submitted with the petition was an affidavit executed by two persons then residing in Poland. After an examination of the affidavit, it was found not to have been of sufficient probative value to warrant the granting of compensation under the statute. Mrs. Sullivan was advised by letter dated May 15, 1967 that her petition to reopen had been denied for the foregoing reason.

The war claims program under title II of the War Claims Act of 1948, as amended, was completed on May 17, 1967, and the Commission's jurisdiction with respect to such claims terminated on that date. In regard to such date, section 211 of the statute reads as follows:

"The Commission shall complete its affairs in connection with the settlement of claims pursuant to this title not later than 4 years following the enactment of legislation making appropriations to the Commission for payment of administrative expenses incurred in carrying out its functions under this title."

Legislation granting appropriations for the program was enacted on May 17, 1963. Accordingly, the Commission was required to complete all of its determinations on these claims within a 4-year period from that date.

Subsequent to May 17, 1967, the completion date, Mrs. Sullivan submitted a certificate from official sources in Warsaw which established ownership in the tenement house which was the subject of the petition to reopen her claim. This certificate, however, was not received by the Commission until May 22, 1967, which was, of course, subsequent to the date upon which the statutory authority for the determination of these claims terminated. In case this evidence had been received prior to the completion date, undoubtedly the evidence would have been considered for the purpose of reopening Mrs. Sullivan's claim and possibly granting her an additional amount for the loss or damage to the building.

When certain limitations are fixed for the filing of claims or evidence or the performance of any act, there are inevitably cases in which acts either are not, or cannot, be performed within the time limits prescribed. As an example, under the program administered by the Commission pursuant to the Polish Claims Agreements of 1960 which provided for a settlement of claims arising out of

the nationalization or other taking of American-owned property by the Government of Poland, approximately 3,000 claims were denied wholly or in part for failure of claimants to meet the burden of proof in support of such claim prior to the termination of the program on March 31, 1966. In many cases the claimants had as long as 5 years to obtain and submit evidence but were unable to do so prior to the completion of the program.

These denials were subject of public testimony before the Committee on Foreign Relations in connection with the consideration of legislation in the 89th Congress to extend the Polish Claims Program for the reason that additional time was required by certain claimants to acquire evidence from the Polish authorities.

Because of the extensive property damage in Poland during World War II, the obliteration of 60 percent of the land records and the removal of many former residents from given areas, the Commission was advised that it was impossible for Polish authorities to furnish some of the evidence or information sought by the claimants. The legislation was not enacted and the claims which had been denied for insufficient evidence remained closed.

Upon completion of the war damage claims program under title II of the War Claims Act of 1948, 7,039 awards had been approved out of a total of 22,605 claims filed. It is estimated that between 3,000 and 4,000 of these war damage claims were denied in whole or in part because of claimant's failure to furnish evidence in support of their claims prior to the completion of the program on May 17, 1967, including the claim filed by Mrs. Sullivan.

In these claims as well as claims under other programs, the Commission has not been in a position to change its decisions and take favorable action upon receipt of evidence despite the fact that such evidence may have been submitted only a few days after the completion of these programs.

Upon completion of the war damage claims program under title II of the War Claims Act, the Commission had certified awards in the aggregate amount of $340.4 million to the Secretary of the Treasury for payment out of the War Claims Fund which consists of the net proceeds of enemy property vested in the United States under the Trading With the Enemy Act. Only $223.7 million, however, was deposited into the Fund for the payment of the approved awards. Awards based on certain maritime losses and losses by small business concerns were paid in full in accordance with the priority payment procedures as prescribed under the act as well as those awards approved in an amount of $10,000 or less. All awards approved in excess of $10,000 were paid to the extent of $10,000 plus a prorated payment of 61.3 percent of the balance in excess of $10,000, in accordance with these payment procedures. Consequently, the payment of these awards has presently exhausted the money in the War Claims Fund. It is anticipated, however, that additional money may be made available for transfer into the War Claims Fund possibly within the near future.

The bill proposes to pay any award due Mrs. Sullivan out of unappropriated money in the Treasury. Accordingly, it would not affect future payments out of the War Claims Fund.

The Commission is of the opinion that if S. 1785 is enacted, it would be discriminatory to the other claimants who were unable to document their claims prior to the completion date of the program. Moreover, there does not appear to be any special extenuating circumstances for singling out Irene Sadowska Sullivan for special relief or that she is more deserving than others to receive such relief. In the absence of such circumstances and because the Commission is of the opinion that the use of unappropriated funds in the Treasury for the payment of war damage claims would establish a highly undesirable precedent for other unsatisfied claimants under other similar claims programs, it is opposed to the enactment of S. 1785.

Advice has been received from the Bureau of the Budget that there would be no objection to the presentation of this report to your committee.

Sincerely yours,

LEONARD v. B. SUTTON,
Chairman.

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., October 21, 1969.

Hon. JAMES O. EASTLAND,
Chairman, Judiciary Committee,
U.S. Senate, Washington, D.C.

DEAR JIM: Relative to private bill S. 1785, which I have introduced for myself and Senator Fannin, I would like to respond to the report filed by the Foreign Claims Settlement Commission by letter of September 22. I strongly disagree with the opinion of the Commission relative to the merits of the case and I concur with the Commission relative to the proper source of funds for payment under the bill.

On April 10, I presented a detailed brief to the committee, including an extensive appendix of documentary proof. The brief establishes that on March 3, 1967, Mrs. Irene Sullivan submitted a formal petition, by registered letter to the Commission to reopen her claim before the Commission so as to include an award for the destruction of a building in Warsaw which had been owned by her late father. (See exhibit 3A.)

Mrs. Sullivan enclosed with her petition an affidavit made by Mr. and Mrs. Konopka of Warsaw, who had been the family attorneys for approximately 25 years. Their affidavit was sworn to before the U.S. Vice Consul at Warsaw and set forth a specific description of the property, including its address, its ownership, its value, the cause of its destruction, and the page number of the official land mortgage book in which the property was recorded. (See exhibit 3B.)

The brief further establishes that these same two persons had furnished an affidavit which had been accepted by the Commission as proof of Mrs. Sullivan's original claim. Thus, the Commission had already determined that these individuals are competent, reliable witnesses. (See exhibit 1.)

In contrast to the actual facts of the case, the Commission has reported that "The only evidence submitted with the petition was an affidavit executed by two persons then residing in Poland." This bare statement is misleading because it completely conceals the facts that these are the same two persons on whom the Commission had once before relied in granting the original award to Mrs. Sullivan. Also, the Commission's report fails to disclosed that the affidavit gave a full, detailed description of the property, including a citation of the page number on which the property was listed in the official land records of the city of Warsaw.

It is my belief that in these circumstances, the evidence supplied by Mr. and Mrs. Konopka should have constituted sufficient probative value to support an award to Mrs. Sullivan. At the very least, I believe it then became mandatory for the Commission, should it have had any doubts as to the fact, to inquire whether Mrs. Sullivan possessed any additional evidence.

On April 7, 1967, the Commission did respond to Mrs. Sullivan's petition by asking her to complete and return an affidavit of inheritance. The Commission did not use this occasion to ask for any other supporting evidence of any kind. (See exhibit 4.)

Mrs. Sullivan returned the completed affidavit on April 12, 1967, by registered letter No. 3063, and attached to the affidavit a request that the Commission advise her if any further information or documents would be required. The Commission never did acknowledge her inquiry.

The Commission has failed to inform the committee that Mrs. Sullivan was asked to complete an affidavit of inheritance or that she sought to be advised if any further evidence would be required. To me, these are significant facts because they prove, first, that the Commission never requested any additional evidence other than the affidavit of inheritance and second, that the Commission had been put on notice by Mrs. Sullivan that she stood ready to give any further verification that might be needed.

The equities in Mrs. Sullivan's case are further buttressed by the fact that at the first occasion when she was informed of the need for new evidence, she sent it almost immediately.

The first time the Commission informed Mrs. Sullivan that her petition did not warrant a new award was on May 15, 1967, 2 days before its authority to consider war claims expired. On May 22, 1967, exactly 1 week later, Mrs. Sullivan furnished new evidence in the form of an official certificate of the Governmental Notary Bureau in Warsaw attesting to the ownership of the property, the destruction thereof as a result of military operations during World War II, and its value. The document verified each fact sworn to by Mr. and Mrs. Konopka, even down to the same page number in the mortgage record books as cited by them. (See exhibits 5, 6A, and 6B.)

Consequently, the facts demonstrate that had the Commission given Mrs. Sullivan an opportunity to know of and respond to its questions she could have furnished the appropriate evidence promptly.

Finally, there is no question but that the claim as verified by Mrs. Sullivan was sufficient to justify an award. In reply to my letter of inquiry dated February 19, Mr. Leonard v. B. Sutton, Chairman of the FCSC, says at page 2:

"Your inquiry of February 19, 1967, poses two questions. First, if the submission by Mrs. Sullivan had been timely, would she have presented the type of claim for which an award would have been made under Public Law 87-846. The answer to this question is in the affirmative."

In summary, I must disagree strongly with the opinion given by the Commission that "there does not appear to be any special extenuating circumstances for singling out Irene Sadowska Sullivan for special relief or that she is more deserving than others to receive such relief."

By the very admission of the Chairman of the Commission, Mrs. Sullivan's claim stated grounds "for which an award would have been made . . ." had the Commission deemed it timely. Certainly this unusual statement alone distinguishes the case from all others and establishes equity in her behalf.

If Mrs. Sullivan's original claim was accepted on the basis of evidence given by the family attorneys, why was evidence from the same people not accepted in the case of her amended claim?

If the Commission had any doubts at all relative to the truth of her claim, why did it not respond to her offer of April 12, 1967, to supply any further information that was necessary?

The fact that they failed to give Mrs. Sullivan any opportunity to meet their reservations about her claim, in the face of her specific request to be allowed to do just that, creates a strong equity in her behalf. This is particularly so in view of her proven ability to supply additional evidence quite promptly.

Thus, several features of the case distinguish it from other instances in which persons failed to submit timely evidence to the Commission. How many other cases exist in

which an award "would have been made . . ."? How many other cases are there where the pending claim was supported by detailed evidence offered by the same witnesses whose statement had previously served as the basis for the making of an award? How many other claimants had formally requested an opportunity to provide additional evidence if this would be required? How many other cases are there in which the claimant did in fact transmit to the Commission additional convincing evidence within less than 1 week from the time the Commission's authority expired?

Obviously there are no other such cases. For the Commission to assert that the enactment of a private bill in the case will open the door to the passage of 3 or 4,000 other such bills is ridiculous. The special circumstances of the case are highly unlikely to be present in any other situation, and I am confident that the bill would not create a precedent for other claimants.

Turning to the second comment presented by the Commission, I wish to state my agreement with the position of the Commission that it is unwise to use unappropriated funds in the Treasury for the payment of war damage claims. In order to correct this aspect of the bill, I suggest that the Committee accept an amendment to the bill as follows:

On page 2, lines 15 and 16, strike out ", out of any money now or hereafter deposited in the War Claims Fund,".

On the basis of these reasons, I respectfully ask that the Committee approve the bill with an amendment.

With warmest personal regards,

BARRY GOLDWATER.

U.S. SENATE,
COMMITTEE ON AERONAUTICAL
AND SPACE SCIENCES,
Washington, D.C., April 16, 1969.

HON. JAMES O. EASTLAND,
Chairman, Senate Judiciary Committee, U.S. Senate, Washington, D.C.

DEAR JIM: In connection with the private bill, S. 1785, which I introduced on April 14, for the relief of Irene Sadowska Sullivan, I would like to submit for your consideration the following statement of facts which I believe will justify the granting of relief in her case.

I

1. On April 20, 1966, the Foreign Claims Settlement Commission of the United States made an award to Mrs. Sullivan of $8,556 for the loss of certain personal property owned by her in Warsaw, Poland, that had been destroyed as a result of military operations during World War II. The Commission made its findings based upon the affidavits of Mr. and Mrs. Zdzislaw Konopka, the family solicitor, and an itemization by a third individual. (See proposed decision of April 20, 1966, labeled exhibit 1.)

2. By letter of November 28, 1966, Mrs. Sullivan communicated with the Commission to request information on how to reopen her claim so as to include additional property losses based upon the destruction of certain property in Warsaw which was formerly owned by her father, a United States citizen. The Commission acknowledged her letter on November 30, 1966, and advised her that her claim could be reopened by petition to include different losses. (See answer by FCSC dated November 30, 1966, labeled exhibit 2.)

3. On March 3, 1967, Mrs. Sullivan submitted a request, by registered letter, to the Commission to reopen her claim to include additional property in Warsaw. She enclosed with her letter an affidavit made by Mr. and Mrs. Konopka of Warsaw, the same two persons whose former affidavit had been accepted by the Commission as proof of Mrs. Sullivan's original claim. Their new affidavit was sworn to before the United States Vice Consul at Warsaw and presented a specific description of the property, its ownership, its value, and the cause of its destruction. (See letter by Mrs. Sullivan, dated March 3, 1967, labeled exhibit 3A; and see affidavit by Mr. and Mrs. Konopka, dated February 21, 1967, labeled exhibit 3B).

4. On April 7, 1967, the Commission responded to Mrs. Sullivan's request and asked her to complete and return an affidavit of inheritance. No other supporting evidence was requested. She complied with this requirement. (See letter by the Commission, dated April 7, 1967, labeled exhibit 4.)

5. On May 15, 1967, 2 days before the Commission's authority to consider war claims expired, it sent to Mrs. Sullivan its findings that her petition did not warrant the reopening of her claim. The Commission stated that the joint affidavit of the Konopkas was not of sufficient probative value and that there was no proof of her father's naturalization. (See letter by Commission, dated May 15, 1967, labeled exhibit 5.)

6. Immediately upon receipt of the Commission's letter, Mrs. Sullivan submitted new evidence to verify her claim in the form of an official certificate by the Government Notary Bureau in Warsaw, dated February 21, 1967. The description of the property, its value, and its ownership was certified to in this document in exact conformity to the description previously given to the Commission by Mr. and Mrs. Konopka. (See registered letter of Mrs. Sullivan, dated May 22, 1967, labeled exhibit 6A; and see translation of official certificate, dated February 21, 1967, labeled exhibit 6B.)

7. Finally, in July 1967 Mrs. Sullivan submitted to the Commission a statement from the U.S. Immigration and Naturalization Service proving that her father had been naturalized as a U.S. citizen on November 16, 1925. (See letter by INS, dated July 7, 1967, labeled exhibit 7.)

II

The evidence in this case conclusively shows that the facts submitted to the Commission by Mrs. Sullivan in her letter of March 3, 1967, were accurate and would have presented the type of claim for which an award would have been made under the war claims program. The facts are also clear that she submitted her claim at a time when the Commission still had authority to consider such claims.

For some reason, the Commission did not accept her documentation as having sufficient probative value, even though her claim included a sworn affidavit by the family attorney and his wife, Mr. and Mrs. Konopka, whose first affidavit had been accepted by the Commission as appropriate to establish the facts supporting her original claim.

On its face, their affidavit, which referred to the official mortgage book, should have constituted sufficient value to create a reasonable belief that the facts stated therein were true. At the least, the affidavit should have served as sufficient ground for the Commission to learn from Mrs. Sullivan if she had any additional evidence available concerning the property.

But the first notice which the Commission gave to Mrs. Sullivan that there was any doubt about her claim was in its letter of May 15, 1967, 2 days before its authority over such claims expired. The record proves that Mrs. Sullivan could have, and did, respond promptly with appropriate evidence as soon as she knew that there was a need for additional confirmation.

As to the question raised by the Commission concerning the citizenship of her father, it is a fact that this element of her claim could have been confirmed almost immediately by the simple procedure of sending an inquiry by cable or letter to the U.S. Embassy at Warsaw, where her father had been registered as a U.S. citizen. Again, Mrs. Sullivan was able to furnish proof on her own once the question was raised.

III.

In summary, I believe the record in this case establishes definite equities for the granting of relief. Mrs. Sullivan's presentation of facts was honest; she submitted a claim of the type for which an award would be made; her claim was documented by the same reputable individuals whose evidence had previously been accepted by the Commission; she was not provided with any indication that the Commission had any questions about her statement of facts, nor was she given any opportunity to meet the questions raised by the Commission, prior to the expiration of its authority; and her claim was pending before the Commission in an active status on the date its authority ended.

For the above reasons, I submit that Mrs. Sullivan is equitably due the relief provided in this bill and that there are unique circumstances in her case that distinguish it from the other cases where persons were barred by the time limit from submitting their claims.

I respectfully request that the committee approve this bill and do report favorably thereon.

With best wishes,

BARRY GOLDWATER.

RURAL HOUSING LOANS

The Senate proceeded to consider the bill (S. 3330) to authorize rural housing loans to lessees of nonfarm rural land, and for other purposes, which had been reported from the Committee on Banking and Currency with an amendment to strike out all after the enacting clause and insert:

That section 501(b)(2) of the Housing Act of 1949 is amended—

(1) by inserting "sections 502 and 504 of" after "For the purposes of"; and

(2) by striking out "the terms 'owner', 'farm', and 'mortgage' shall be deemed to include, respectively, the lessee of, the land included in" and inserting in lieu thereof "the terms 'owner' and 'mortgage' shall be deemed to include, respectively, the lessee of".

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–129), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The purpose of this bill is to authorize the Farmers Home Administration to make rural housing loans under title V of the Housing Act of 1949 to lessees of nonfarm rural land. Under existing law, such loans can be made only to applicants having a leasehold interest in a farm.

This proposal would not be of widespread benefit because of the limited use of leaseholds in most parts of the United States. However, it would be of particular benefit in Puerto Rico and Hawaii where much of the land is not available for outright purchase and is commonly held under lease. The proposed new authority would be particularly helpful in special situations, such as where title to land which is or could be occupied by Indians is held by the tribe. If such land could be occupied by individual Indians on the basis of acceptable assur-

ance that the purpose of the loans would be carried out, the Indians could then qualify for title V assistance.

Two bills were introduced on this matter, S. 3330 by Senator Metcalf, and S. 3755 by Senator Fong. Although the bills were differently worded, they had identical meaning. The committee reported S. 3330 as being the more briefly worded and as being the first bill to be introduced.

The bill as introduced was amended by the committee to clarify its applicability to rural housing loans to individuals and families. This is accomplished by adding a further amendment to section 501(v)(2) of the Housing Act of 1949. The amendment inserts "sections 502 and 504" after "For the purposes of" in section 501(b)(2).

VETERANS HOUSING LOANS

The Senate proceeded to consider the bill (S. 3775) to amend section 1811 of title 38, United States Code, to authorize the Veterans' Administration to make direct loans to any veteran who is determined to be eligible for assistance in acquiring specially adapted housing under chapter 21 of title 38, United States Code, which had been reported from the Committee on Banking and Currency with an amendment on page 1, after line 4, strike out:

"(1) Notwithstanding the provisions of subsections (a), (b), and (c) of this section, the Administrator is authorized to make or enter into a commitment to make a loan to a veteran who is determined to be eligible for the benefits of chapter 21 of this title, to assist such veteran in acquiring a specially adapted housing unit authorized under chapter 21, if the veteran is eligible for loan guaranty benefits under this title and show to the satisfaction of the Administrator that he is unable to obtain a guaranteed loan for such purpose from a private lender. Such loans shall be subject to all provisions of this section except those contained in subsections (b) and (c)."

And, in lieu thereof, insert:

"(1) The Administrator is authorized, without regard to the provisions of subsections (a), (b), and (c) of this section, to make or enter into a commitment to make a loan to any veteran to assist the veteran in acquiring a specially adapted housing unit authorized under chapter 21 of this title, if the veteran is determined to be eligible for the benefits of such chapter 21, and is eligible for loan guaranty benefits under this chapter."

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1811 of title 38, United States Code, is amended by adding after subsection (k) the following new subsection:

"(l) The Administrator is authorized, without regard to the provisions of subsections (a), (b), and (c) of this section, to make or enter into a commitment to make a loan to any veteran to assist the veteran in acquiring a specially adapted housing unit authorized under chapter 21 of this title, if the veteran is determined to be eligible for the benefits of such chapter 21, and is eligible for loan guaranty benefits under this chapter."

SEC. 2. Section 1811(l) (1) of title 38, United States Code, is amended by inserting after "housing credit shortage area," the following: "or in any area for a veteran who is determined to be eligible for assistance in acquiring a specially adapted housing unit under chapter 21 of this title,"

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 911–130), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The purpose of this bill is to authorize the Veterans' Administration to make direct loans to eligible disabled veterans for assistance in acquiring specially adapted housing as defined in chapter 21 of title 38, United States Code.

Chapter 21 contains authority for the Veterans' Administration to provide grants up to 50 percent of cost not to exceed $10,000 for specially adapted housing for eligible disabled veterans, defined as those who are disabled and entitled to compensation under chapter 11 of title 38 and have total service-connected disabilities.

Under the VA direct loan program, loans are made to veterans to finance housing in credit shortage areas and only if there is a showing that the veteran cannot obtain the money from a private lender at a market rate. Under this bill, as amended by the committee, direct loans to finance specially adapted housing could be made to eligible disabled veterans located anywhere in the Nation without regard to the showing that he cannot obtain money from a private lender.

The bill as introduced and recommended by the administration would have required the veteran to show that he was unable to obtain money from a private lender before he would have been eligible for a direct loan. The committee is recommending an amendment to the bill to remove this requirement because it believes that veterans who would benefit from this bill deserve every consideration and should be assured of these benefits without regard to where they live or the availability of other possible sources of credit.

The following excerpt from a letter from Donald E. Johnson, Administrator of the Veterans' Administration, to Hon. John Sparkman, chairman of the Banking and Currency Committee, reflects the views of the committee:

"We believe that these severely handicapped veterans whose disability resulted from service, in recognition of their sacrifices for the Nation, deserve to be insulated against wide fluctuations in the private capital market. The assurance of credit availability for such veterans through direct VA loans is deemed meritorious and would be a meaningful extension of the special housing benefit which has been provided for the group."

CONQUEST OF CANCER

The Senate proceeded to consider the concurrent resolution (H. Con. Res. 675) expressing the sense of the Congress with respect to the conquest of cancer as a national crusade, which had been reported from the Committee on Labor and Public Welfare with amendments on page 2, line 4, after the word "That," insert "it is the sense of"; and in the same line after the word "Congress," strike out "appropriate the funds" and insert "that sufficient funds be appropriated."

The amendments were agreed to.

The concurrent resolution, as amended, was agreed to.

The preamble was agreed to.

WAR RISK INSURANCE

The bill (H.R. 17133) to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1140), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

H.R. 17133

SUMMARY OF THE BILL

This bill extends the expiration date of section 1312 of title XIII of the Federal Aviation Act to September 7, 1975. Under present law the section expires September 7, 1970.

DISCUSSION

Title XIII of the Federal Aviation Act, as amended, authorizes the Secretary of Transportation, with the approval of the President, to provide premium and nonpremium war risk insurance for the protection of aircraft and of persons and property transported aboard them, and against other liabilities of a kind that insurance would customarily cover, when commercial insurance cannot be obtained on reasonable terms and conditions from U.S. insurance carriers or carriers authorized to conduct business in the United States.

Under title XIII a department or agency of the United States may, with the approval of the President, procure from the Secretary war risk insurance if it enters into an agreement with the Secretary to indemnify him against all losses covered by the insurance provided under the act. This insurance is provided without premiums and is presently provided to air carriers that have contracts with the Department of Defense and the Department of State. The Defense Department believes and the committee concurs that war risk insurance is a vital element in the program to provide airlift requirements for the Vietnam war.

In a letter to the committee, printed in this report, the Department of the Air Force speaking on behalf of DOD said:

"* * * Airlines under contract to MAC (Military Airlift Command) must have some form of protection against war risks if they are to operate into areas like Southeast Asia where damage from hostile action may occur * * *. Through an agreement with the Department of Transportation the Department of Defense has agreed to indemnify the Department of Transportation against all losses covered by such insurance. Because the availability of aviation war risk insurance is essential if the requirements of the Department of Defense for commercial transportation services are to be met, the Department of the Air Force, on behalf of the Department of Defense, supports the proposed legislation * * *."

The premium war risk insurance program is intended to provide coverage for American carriers in addition to what is available to them commercially. The coverage of war risks is necessary because the ordinary aviation insurance policy covers only the usual perils of fire, damage, and other risks, and excepts certain named "war risks" from coverage. Commercial policies usually include a clause or clauses, excluding from coverage any claim for loss or damage occasioned by war, hostilities, insurrection, or acts of foreign enemies, among other explicit situations. The committee believes that U.S. air carriers should not be expected to assume the risk of the loss of their aircraft from such excluded perils and that therefore existing

law should be extended to meet this obligation.

The Congress has extended the war risk insurance program on three previous occasions: (1) for 5 years to June 13, 1961, under Public Law 84–746; (2) for another 5 years to June 13, 1966, under Public Law 87–89; and (3) for another 4 years to September 7, 1970, under Public Law 89–447.

CHANGES IN EXISTING LAW

In compliance with subsection 4 of rule XXIX of the Standing Rules of the Senate, changes in existing law made by the bill are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is printed in italic, existing law in which no change is proposed is shown in roman):

"TERMINATION OF TITLE

"SEC. 1312. The authority of the Secretary to provide insurance and reinsurance under this title shall expire at the termination of September 7, [1970] *1975.*"

COST OF LEGISLATION

There is no way to predict whether or to what extent there may be any costs for the extension of this provision of law. To date, according to the Department of Transportation, only one claim in the amount of $625 has been paid under the nonpremium type of war risk insurance. There is also a pending claim arising out of an incident in Vietnam which is now being litigated. There are also small costs of an administrative nature associated with the program.

Under the premium-type war risk insurance there has never been a claim and it is not possible to determine whether the policy premiums are sufficient to cover any future claims and the administrative costs of the program.

ORDER FOR ADJOURNMENT TO MONDAY, AUGUST 31, 1970, AT 8:30 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 8:30 o'clock Monday morning next.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ALLEN ON MONDAY AND CONSIDERATION OF MUSKIE AMENDMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Monday next, immediately following the prayer and the disposition of the reading of the Journal, the able Senator from Alabama (Mr. ALLEN) be recognized for not to exceed 1½ hours, with the understanding that the Muskie amendment will be laid before the Senate and made the pending business at 10 a.m.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM MONDAY TO TUESDAY, SEPTEMBER 1, 1970, AT 8:30 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Monday next, when the Senate completes its business, it stand in adjournment until 8:30 a.m. on Tusday next.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF UNOBJECTED-TO MEASURES ON TUESDAY, SEPTEMBER 1, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Tuesday next, immediately following the prayer and the disposition of the reading of the Journal, the unobjected-to items on the calendar be called, if there be any.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS ON TUESDAY NEXT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that until 9 a.m., on Tuesday next, following any callup of unobjected-to items on the legislative calendar, there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF McGOVERN AMENDMENT ON TUESDAY NEXT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that precisely at 9 o'clock a.m. on Tuesday next the McGovern amendment be laid before the Senate and made the pending business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

A KNOW-NOTHING APPROACH TO FREE TRADE

Mr. HANSEN. Mr. President, despite the fact that the esteemed chairman of the Ways and Means Committee, WILBUR MILLS, and members of that committee gave great attention to the evidence, witnesses, and the trends in export-import balances before reporting out the President's trade bill, Hendrik S. Houthakker, a member of the Council of Economic Advisers, says that:

> The quota provisions inserted into the President's trade bill are essentially a know-nothing approach to the delicate problems of international economic relations.

I am amazed that Mr. Houthakker would make such a sweeping condemnation of this thoughtfully considered legislation. It is equally shocking that he would impugn the wisdom of such skilled, highly intelligent and respected lawmakers.

Recently Mr. Houthakker delivered an address to the Soybean Processors Association in which he attacked protectionism, particularly in the form of import quotas. He paid special attention to the textile quota legislation as contained in the Mills bill and reported by the House Ways and Means Committee by a vote of 17 to 6.

In order to establish his thesis against quotas and in favor of more liberal trade Mr. Houthakker rewrote some economic history and substituted some myths of his own for those he sought to upset.

In looking over his speech it should be kept in mind to whom his remarks were made. It was to the processors of soybeans. The significance of this is that soybeans and soybean oil have done very well in recent years at exporting to Europe and Japan. At the moment, soybeans and soybean oil represent our No. 1 export, according to the speaker. For this success the growers and processors are, indeed, to be congratulated. Unquestionably, they have done well in making the most of a new product not much produced elsewhere but which has found wide acceptance for a variety of uses, both here and abroad. Full credit should be extended to the industry for its good fortune and enterprise.

However, Mr. Houthakker jumps to several conclusions from this premise. He allows himself to fall under the spell of the old cliche that holds that our export industries pay the highest wages and that, therefore, the workers from the import-vulnerable industries should let imports take their jobs so that these workers might shift to the exporting industries where the wage fields are greener.

Evidently, Mr. Houthakker has not learned that this theory has been rendered obsolete by the developments of recent years.

The steel industry is a high-paying industry. This means, by economic theory, that it is an efficient industry. It was indeed an export industry for years. Then, although it continued to pay high wages, something happened; 1958 was the turning point. From that year on, steel moved into a trade deficit position, and has been there every year since.

What would have happened to the workers in the textile and the shoe industry, where the pay is relatively less, had they been evicted from their jobs by imports and started moving into the steel industry 12 to 15 years ago, while the high-paying steel industry was still in a favorable export position?

The economic adviser, Mr. Houthakker, also mentioned coal as a high-wage industry that does very well today in exporting.

Is he familiar with the history of coal since 1950? At that time, 483,000 coal miners were at work. The industry faced extinction unless it increased its productivity drastically. Oil and gas and imports of residual fuel oil were driving coal out of the market. The coal industry did save itself by the only method open to it; namely, ruthless displacement of miners by machinery. The industry was saved; but at a cost that our economy and our civilization could not tolerate or endure, were the example followed by industry after industry.

By 1968, the number of workers had been reduced to 139,000. This was a loss of well over 300,000. The distress of the Appalachian region as a monument to this epic is too well known to need repeating.

Should the textile and shoe workers, who earned less than the miners, have stepped aside in the late 1950's to make way for imports, which were beginning to come in ever greater vol-

ume, and sought employment in the coal mines, where the wages were so much more attractive? The question answers itself. They would have walked into a morgue.

Thus we see that Mr. Houthakker's prescription would not have worked so well for the lower paid workers in textiles and footwear had they sought a haven in the steel and coal industries, which were among the high-paying industries.

Then there is the automobile industry, also a high-paying field. There was indeed a time when this country was the automobile builder for the world. In recent years, however, the scene has changed vastly. Other countries, notably West Germany and Japan, have, by dint of modern technology, and the advantage of much lower paid factory workers, become highly competitive; and we are now net importers of automobiles. In Japan the average hourly pay is 84 cents and in West Germany $1.81, while the United States pays $3.86 to its factory workers.

Should our textile and shoe workers be willing to retreat before imports and buy tickets to Detroit and go to General Motors, Ford, and Chrysler and say "Here we are. We understand that you are a high-paying industry, therefore highly efficient and therefore also successful at exporting. We come from low-paying, inefficient industries and are sure you will gladly open your doors to us. We will all be glad to join the United Auto Workers. They will surely be glad to see us and to welcome us with open arms"?

But let us not forget about the soybeans. The growers and processors have lucrative foreign outlets. Surely they would have a place for the textile and shoeworkers.

Or would they? How many workers are employed in growing soybeans, and how many in the processing plants? It is unfortunately true that our total farming operations in this country do not employ nearly as many workers as the factories that convert the raw products into a large variety of finished goods.

Today total agricultural employment is only some 4,000,000. For the year of 1969 the employment averaged 3,606,000 according to the Survey of Current Business published by the Department of Commerce. Soybeans and soybean processing cannot account for very many of these; so the textile and shoe workers, after giving up their jobs to imports, might encounter some difficulty finding jobs with the soybean growers and processors.

Mr. Houthakker's thesis falls flat as anyone can see who takes the trouble to track it to its logical conclusion.

He says out of hand that the policy of reciprocal trade in the 1930's served us well and "can continue to serve as well."

Unfortunately, such benefits as the program brought us have run out of steam. Our trade negotiations fell far short of reciprocity. Today nearly all of our manufacturing industries with a few strong exceptions are in a trade deficit. The exceptions are confined to a few industries, such as machinery and transport equipment, including aircraft and computers, and chemicals. By contrast a long line of industries are in a deficit position, such as steel, textiles, footwear, automobiles, typewriters, consumer electronic goods, sewing machines, bicycles, a variety of hardware, watches, glass, pottery, tile, and so forth.

Employment in the trade-deficit industries exceeds that of the export-surplus ones by some 2 million.

The trade trend of the past 5 years can hardly be read as an endorsement of a course or policy that would bring us more of the same. Mr. Houthakker says that there is little truth "in the argument that the negotiations to reduce tariffs during the 1960's have generally worked to our disadvantage." How much more disadvantage can we tolerate without creating the kind of employment crisis that will result if we do not halt the onrush of imports? These not only displace workers but make it impossible for the great number of import-vulnerable industries to hire their share of the millions of new workers who will come on our labor market in the next few years. Can these oncoming armies of new workers all look to the "high-wage" industries to absorb them? Can the steel industry take, not only their proportionate share, but also those who cannot find work in the import-driven industries, that like the coal industry of a few years ago, must strive to displace as many workers as they can in order to remain or become competitive with imports? Can the coal industry come to the rescue, or the aircraft industry? Or the soybean processors or the computer manufacturers?

The outlook is indeed not good for such a consummation. The problem will be difficult enough even if we seek to avoid the capture of our market by keeping imports within reasonable bounds.

Reasonable and flexible import quotas will not only not cripple our trade but will put it on a healthy basis by allowing imports to share in the growth of our market instead of badly disrupting industry after industry.

Mr. Houthakker is so clearly on the wrong track in his reading of our trade trends and the writing on the competitive wall, he should pay a little more attention to the towering facts in the premises, and less to academic economic theory.

Mr. McINTYRE. Mr. President, the distinguished Senator from Wyoming (Mr. HANSEN) has made a number of points this morning which are well worth commenting upon.

To begin with, I would like to compliment him for the method of his analysis of Dr. Houthakker's speech on the trade bill. The Senator has quite properly avoided any recourse to broad, theoretical statements covering the range of cliches about foreign trade and the role of competition in determining which American workers can keep their jobs and which cannot. Instead, the distinguished Senator from Wyoming has discussed the trade bill in terms of the specific industries involved.

For example, the Senator from Wyoming has pointed out in his carefully researched speech that soybean processors enjoy significant advantages over their foreign competition, as a result of which their industry clearly has no need for protection from imports.

On the other hand, as the Senator so correctly points out, workers in the shoe industry face a much different situation. They receive, as he points out, relatively low pay. They are employed, as he so clearly points out, in an industry with a trade deficit. And indeed they are, as he implies, properly deserving of protection from foreign competition which will have the effect of driving large numbers of shoe workers from their jobs. And clearly, the same is true of the textile workers of whom the Senator speaks.

Indeed, Mr. President, I believe that this industry-by-industry approach of the Senator from Wyoming is one which the Senate would be well advised to follow as it considers the trade bill. Many other industries, such as petroleum, which were not mentioned in the Senator's prepared remarks today, are also affected by the bill now in the House of Representatives. I would hope that the case for protection of each of these other industries could also be examined separately along the lines described by the Senator from Wyoming, who has performed a distinct public service by his remarks today.

Mr. BELLMON. Mr. President, will the Senator yield?

Mr. HANSEN. I yield.

Mr. BELLMON. Mr. President, I congratulate the distinguished Senator from Wyoming for calling the Senate's attention to this statement by Mr. Houthakker, a member of the Council of Economic Advisers. I feel, as the Senator from Wyoming has stated he feels, that this country is in grave danger of having its growth and economy seriously disrupted by competition for our domestic markets by products produced in countries with vastly different economic conditions than we have here.

This is true in many fields, those which the Senator from Wyoming has mentioned as well as others. I am particularly concerned with the situation as far as imported beef is concerned, much of it from countries with vastly cheaper production costs than we have.

Much of this competition is not fair, and can cause serious disruption in agriculture.

But I wish also to comment on a matter involving my personal acquaintance with Dr. Houthakker. For the information of the Senate, I was amazed to hear him say one time, on a radio program in which we both participated, that what happened to agriculture was really of very little consequence, since agriculture accounted for only about 3 percent of the gross national product. I was completely astounded by that remark. It reminded me of the attitude that some take that the foundation of a building really is not of any consequence, because you cannot see very much of it.

The fact is, of course, that if we allow our agriculture to become disrupted or be destroyed, as the policy recommended

by Dr. Houthakker would do, the total economy of the country would be very greatly shaken; in fact, I think it would be totally destroyed, because if we do not have an efficient way of producing the food and fiber our society must have, then certainly the great industrial complexes that have developed around our urban centers cannot continue to exist, because people have to be well fed and able to provide for their own subsistence, and the failure of agriculture, of course, would make it impossible for them to remain productive industrial workers.

I strongly agree with the position the Senator from Wyoming has taken this morning that the carefully worked out bill that has been reported by the House Ways and Means Committee is on the right track, in that it does allow continued expansion of foreign trade by sharing our domestic markets with products from other countries, but at the same time it assures that American workers and American industries are not going to be disrupted by the uncontrolled competition from products that are produced where the total costs are much below those which we face in our own Nation.

I compliment the Senator, and say that I share his views.

Mr. HANSEN. I thank my distinguished colleague.

The ACTING PRESIDENT pro tempore. Is there further morning business?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE EASTERN AND WESTERN RAILROADS REQUEST FREIGHT RATE INCREASE

Mr. MANSFIELD. Mr. President, the news that the eastern and western railroads are seeking a 15-percent freight rate increase is depressing, saddening, and could be disastrous to the grain producers and growers in Montana as well as to the lumber industry as a whole. After taking a 5-percent rail freight increase only 2 months ago that hiked the per-car cost of shipping by some $60, western lumbermen—I am speaking especially of the lumbermen of Montana—may be at loggerheads soon with a 15-percent increase which they contend—and I agree with them—will further reduce the ability to compete in eastern United States markets.

It appears to me that something must be done. To that end, together with other members of the Montana Congressional Delegation, I have dispatched a letter to the President of the United States asking him to look into this matter, so that the ICC will not give its usual pro forma consideration to this request granting it routinely.

I have directed a letter as well to the chairman of the Committee on Commerce, asking that his committee look into this particular proposal. I am hopeful that something will be done to help the freight rate structure as it exists in Montana, rather to make it more and more difficult by granting these rate increases periodically.

Mr. President, I have said more than enough on this matter up to this time. I have introduced a bill which would seek to place a demurrage rate of $100 a day on freight cars held by railroads not owning them beyond the usual 48-hour limit. I have gotten nowhere with that proposed legislation.

The message apparently was not getting through. So I have made the suggestion that if the ICC cannot deal with the situation, it should be abolished and its activities transferred, in whole or in part, to the Department of Transportation. There, under the Secretaryship of John H. Volpe, I am quite sure that some consideration would be given to this situation which has become a perennial problem.

I am hopeful that this latest increase request coming within less than 2 months after a 5-percent increase, which followed on the heels of a 6-percent increase, will be denied and that the economy of the wheatgrower, and the lumber industry will be preserved and given the kind of protection it needs within this country.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I am delighted to yield.

Mr. HANSEN. Mr. President, I compliment the distinguished majority leader for his usual perception in noting turns in events which can pose real economic hardship on our part of the Rocky Mountain west.

I have joined with the distinguished Senator in appealing to the Interstate Commerce Commission for relief from a practice long engaged in by eastern railroads whereby they gobble up the boxcars and the freight cars belonging to western lines and pay only a pittance of what it is costing those lines to have those cars rolling on the tracks, and thereby make it more difficult for our western lines to haul as cheaply as would otherwise be possible these products that are so important and essential to the economy of the States of Montana and Wyoming and all that great livestock, lumber, and grain producing area of the Northwest.

I have not had an opportunity to study—as I assure the distinguished Senator I will be doing—the facets of this most recent order; but I certainly want to join him in saying that I know full well that the increased difficulty that he cites as following in the wake of this increase in rates will be visited upon the lumber industry in my State of Wyoming, also. It will affect our grain growers. In the fall, when we start harvesting sugar beets, I suspect that we will find a recurrence of the kind of beet-car shortage that we have experienced for the last several years.

I assure the distinguished Senator that I will be happy to do anything I can to help alleviate some of these problems and thereby make unnecessary further increases in freight rates.

Mr. MANSFIELD. Mr. President, I am delighted that the distinguished Senator from Wyoming has entered this discussion. As I have said many times, he has been a leader in protecting the interests of our part of the country. What he has said today is very true.

He mentioned the grain producers, the grain growers, the lumber industry, and the sugar beet industry. Sugar beets will be coming to harvest within the next month or so, depending on the weather. This matter will affect that industry quite dramatically. The Senator has also mentioned its effect on the cattle industry as well.

In other words, our part of the country happens to be an orphan so far as freight rate consideration is concerned. We are always on the receiving end of these increases plowed one on top of the other. The process has upset tremendously our economic development. It has imposed an unfair burden upon the people of our part of the Nation, making it more difficult to survive because of the increased costs which follow increased freight rates.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a news story published in the Great Falls, Mont., Tribune of August 24, 1970, entitled "Freight Rate Hike Would Cut Lumbermen's Ability To Compete."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A 15-PERCENT INCREASE ON WESTERN RAILROAD SHIPPING: FREIGHT RATE HIKE WOULD CUT LUMBERMEN'S ABILITY TO COMPETE

(By Ralph Pomnichowski)

After taking a 5 per cent rail freight increase only two months ago that hiked the per car cost of shipping by some $60, western lumbermen may be at loggerheads soon with a 15 per cent increase they contend will further reduce the ability to compete in eastern U.S. markets.

It was announced last week in Chicago that eastern and western railroads have agreed to move ahead with a 15 per cent across-the-board freight increase petition to be filed with the Interstate Commerce Commission about Sept. 1.

The St. Regis Forest Products Division in Libby, as well as other western Montana forest products manufacturers, would be affected by a rate hike, said Fred Shinkle, Tacoma, assistant regional transportation manager.

Shinkle pointed out that any increases by rail carriers eventually will be charged to the consumer. Moreover, he said, an increase will put western lumbermen at a further disadvantage of competition with southern U.S. lumber producers, who now pay a lower rate than their western counterparts.

"As a matter of principle, of course, we're against anything that would increase costs," Shinkle said, adding that the entire western industry is united in opposition to the percentage increases.

Percentage increases place an unfair burden on western lumbermen because any increase means a larger dollar charge to them than to the southern producers, Shinkle said. "For instance," he said, "if their rate to New York is $1 and ours is $2, then we increase 12 cents on a 6 per cent increase,

while they increase only 6 cents per hundredweight."

It costs the same to ship lumber to the eastern railroad sector from Tacoma as it does from Libby, Shinkle noted. The sector area is from Indiana east and generally north of the Ohio River, he said.

The last increase of 5 per cent, he said, boosted the per-hundredweight rate from $1.60 to $1.68. Since the average car loading is about 75,000 pounds, the increase amounted to $60 per car.

The Libby plant, he said, ships 20–25 rail cars of lumber per day in addition to 8–10 cars of wood chips bought by the Hoerner-Waldorf plant in Missoula.

As general practice, he said, lumber shipments are sent collect, but the freight cost is reflected in the total cost of the product.

Some St. Regis products are shipped by truck, he said, but truck rates are slightly higher than rail charges and have generally kept pace with rail hikes.

Rail rates are lower in Canada, he pointed out, but not very much has been shipped in that manner by St. Regis.

Southern mills enjoy a basic lower rail rate to the eastern and midwest markets, he said, and within the southern states, western trade influence is nil.

Another facet of the problem, he said, is that competitive materials such as steel, plastic and cement will make further inroads into building preference for wood if the retail price continues to climb for lumber as the result of rail freight price increases.

Freight rates to the midwest and southeast, he said, are lower than for the eastern sector.

He pointed out, the rail rate has increased 27 cents per hundredweight over the past three years. In 1967, the per-car cost of transportation at 75,000 pounds would have been about $1,057. It now is about $1,250 and could grow to almost $1,500 if another increase does amount to 15 per cent.

The most recent increase, Bob Barnes, Libby, traffic manager said, did not increase lumber prices in Montana appreciably. The company's shipments of wood chips to the Missoula area plant, he noted, come under a slightly different rate schedule because the cars go to Missoula via Sandpoint, Idaho, crossing a state line. More lumber and studs are shipped out of state than plywood, he added.

Nationwide, Barnes, said, the lumber market has been slower than usual, partially because of the "tight money" situation that makes it somewhat more difficult for persons to secure new home loans.

The Western Wood Products Association, Portland, which counts St. Regis among its members, issued a letter last May commenting on the differences between consideration shown by Canadian and U.S. rail carriers to the marketing needs of their lumber customers.

WWPA's transportation manager, James G. Manning, said that, "Agreement was reached between representatives of the British Columbia and Alberta forest products industry and the Canadian railroads to publish a new level of rail rates on forest products from all British Columbia and Alberta shipping points to destinations in eastern Canada.

"The published rate . . . from Vancouver, B.C., to Windsor, Ontario, is $1.38 per hundredweight. The comparable U.S. rate from Portland to Detroit . . . is $1.60 per hundredweight on the blanket rate. Our initial reaction to this development of rate reductions in Canada is that it appears the Canadian railroads are more receptive to the needs of their lumber shippers than are the U.S. lines.

"Another feature to be considered in the use of these border (rate) combinations is the Canadian-U.S. currency exchange factor. A shipment billed from British Columbia to Windsor . . . and then re-billed beyond can have the Canadian portion of the freight paid in Canadian funds. The currency rate of exchange then of 7¾ per cent will produce another 10.69 cents per hundredweight saving for the Canadian product.

"The example of rate disparity outlined above," Manning wrote, "illustrates what happens when the U.S. lines continue to seek percentage freight rate increases without any regard to the competitive effect on their shippers. Even more alarming is what is apparently in store for our mills. It is our understanding (last May) that the Canadian lines are very near to approving a new level of rates applying to eastern Canada that will further drastically reduce the present level.

"It will be a sad commentary on U.S. railroad rate-making when the day arrives that lumber producers in the State of Washington, for example, are able to barge or truck shipment to western Canada to obtain a better freight rate to eastern U.S. points than they would have by shipping the entire distance by U.S. lines."

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

REPORT ON VALUE OF PROPERTY, SUPPLIES, AND COMMODITIES PROVIDED BY THE BERLIN MAGISTRAT

A letter from the Assistant Secretary of Defense, reporting, pursuant to law, on the value of property, supplies, and commodities provided by the Berlin Magistrat, for the quarter ended June 30, 1970; to the Committee on Appropriations.

REPORT ON LOCATION, NATURE, AND ESTIMATED COST OF FACILITIES PROJECTS PROPOSED FOR THE AIR FORCE RESERVE

A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), reporting, pursuant to law, on the location, nature, and estimated cost of facilities projects proposed for the Air Force Reserve; to the Committee on Armed Services.

PROPOSED LEGISLATION DECLARING THAT CERTAIN FEDERALLY OWNED LAND IS HELD BY THE UNITED STATES IN TRUST FOR CERTAIN INDIANS

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to declare that certain federally owned land is held by the United States in trust for the Lac Courte Oreilles Bank of Lake Superior Chippewa Indians of Wisconsin (with an accompanying paper); to the Committee on Interior and Insular Affairs.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on continuing problems in providing nursing home care and prescribed drugs under the medicaid program in California, Social and Rehabilitation Service, Department of Health, Education, and Welfare, dated August 26, 1970 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on improvements needed in determining graduate education requirements for military officer positions, Department of Defense, dated August 28, 1970 (with an accompanying report); to the Committee on Government Operations.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

Dwight Dickinson, of Rhode Island, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to the Republic of Togo;

Charles R. Harley, of Maryland, to be U.S. Alternate Executive Director of the International Monetary Fund;

Emory C. Swank, of the District of Columbia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Cambodia;

Nicholas G. Thacher, of California, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to the Kingdom of Saudi Arabia;

L. Dean Brown, of the District of Columbia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to the Hashemite Kingdom of Jordan; and

Artemus E. Weatherbee, of Maine, to be U.S. Director of the Asian Development Bank.

By Mr. JAVITS, from the Committee on Labor and Public Welfare:

Laurence H. Silberman, of Hawaii, to be Under Secretary of Labor (Rept. No. 91–22); and

Peter G. Nash, of New York, to be Solicitor for the Department of Labor.

Mr. STENNIS. Mr. President, from the Committee on Armed Services I report favorably the nominations of two general officers in the Amy and ask that these names be placed on the Executive Calendar.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

The nominations, ordered placed on the Executive Calendar, are as follows:

Lt. Gen. Frederick Carlton Weyand, Army of the United States (major general, U.S. Army) to be assigned to a position of importance and responsibility designated by the President, in the grade of general; and

Gen. James Karrick Woolnough, Army of the United States (major general, U.S. Army), to be placed on the retired list in the grade of general.

Mr. STENNIS. Mr. President, in addition, I report favorably 1,100 appointments and promotions in the Army in grade of colonel and below; 1,945 appointments and promotions in the Navy in grade of lieutenant commander and below; 4,492 appointments and promotions in the Air Force in grade of major and below; and 106 appointments in the Marine Corps in grade of captain and below. Since these names have already been printed in the CONGRESSIONAL REC-

ORD, in order to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Mike VanRollins, and sundry other enlisted personnel, to be ensigns in the Navy:

Bruce L. Bosworth, and sundry other Naval Reserve officers, for assignment in the U.S. Navy.;

Joseph V. Virostko, U.S. Navy, retired, to be reappointed from the temporary disability retired list, as a permanent chief warrant officer in the Navy;

James H. King, Jr., Army Reserve Officer Training Corps graduate, for permanent appointment in the Marine Corps;

Leland A. Aber, and sundry other Air Force Officers, for appointment in the Regular Air Force;

Kenneth E. Cook, and sundry other persons for, appointment in the Regular Army;

Joseph Y. Kurata, and sundry other persons, for appointment in the Regular Army of the United States;

Rallin J. Aars, and sundry other officers, for promotion in the Regular Air Force;

William Walter Asbye, and sundry other officers, for promotion in the Navy;

Kevin R. Danehy, and sundry other officers, for appointment in the Marine Corps; and

Lester W. Abrams, and sundry other officers for promotion in the Regular Army of the United Sates.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MAGNUSON, from the Committee on Commerce without amendment:

H.R. 13716. An act to improve and clarify certain laws affecting the Coast Guard Reserve (Rept. No. 91–1152).

By Mrs. MOSS, from the Committee on Interior and Insular Affairs, with amendments:

S. 3553. A bill to amend the Water Resources Research Act of 1964 to increase the authorization for water resources research and institutes, and for other purposes (Rept. No. 91—1153).

AUTHORITY TO FILE REPORT ON H.R. 18546 NEXT WEEK (S. REPT. NO. 91–1154)

Mr. ELLENDER. Mr. President, from the Committee on Agriculture and Forestry, I report H.R. 18546, with an amendment, and ask unanimous consent to file the report together with minority, supplemental, and individual views next week.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS:

S. 4300. A bill for the relief of Kimura Koshun; to the Committee on the Judiciary.

By Mr. MATHIAS:

S. 4301. A bill for the relief of Fernando Agustin Maldonado; and

S. 4302. A bill for the relief of Sara Elena Rasines de Maldonado; to the Committee on the Judiciary.

By Mr. STEVENS:

S. J. Res. 233. Joint resolution proposing an amendment to the Constitution of the United States with respect to the flag of the United States; to the Committee on the Judiciary.

(The remarks of Mr. STEVENS when he introduced the joint resolution appear below under the appropriate heading.)

SENATE JOINT RESOLUTION 233— INTRODUCTION OF JOINT RESOLUTION RELATING TO PROPOSED AMENDMENT OF THE CONSTITUTION TO PERMIT HONORING AND PROTECTING OUR FLAG

Mr. STEVENS. Mr. President, in recent years we have seen a strange and unparalleled development in this country. The American flag—the symbol of our Nation's heritage and ideals—has been taken over by extremists, utilized for crass commercialism, and worn as clothing. Amid all this the vast majority of loyal Americans have been trying to continue to honor the flag in traditional ways, but we feel, as Time magazine put it, "that their flag has been expropriated."

It is, indeed, a strange situation to find that some citizens of the Republic fear that, if they show pride at seeing our national symbol or if they display it on holidays, they will be indicating that they agree or disagree with a particular present-day policy.

That is not the purpose of our national symbol. The American flag belongs to all of us, and I, for one, would like to see it returned to the people.

I am, therefore, introducing legislation today to authorize a constitutional amendment which will permit the flag to be saluted in our public schools and which will permit Congress to enact laws designed to prevent desecration of the flag.

The amendment is needed because several rulings of the U.S. Supreme Court indicate that desecrating the flag can be an act protected by the first amendment's free expression clause. My amendment will not impinge on free speech since it does not prohibit the expression of any idea or philosophy, but merely allows Congress to prohibit the use of the American flag as part of such an expression.

The amendment is also needed to permit the saluting of the flag in our public schools.

The flag is a cherished national symbol of which we should be proud. It represents, at once, all that we have been and all that we hope to be. It belongs to no group or party, and it should not be identified with any policy or practice. It belongs to all of us, and we should take steps now to see that it always will.

I ask unanimous consent that the full text of my proposed constitutional amendment be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. EAGLETON). The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 233) proposing an amendment to the Constitution of the United States with respect to the flag of the United States, introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S.J. RES. 233

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. Nothing contained in this Constitution shall abridge the right of persons lawfully assembled, in any public building, school, or educational institution which is supported in whole or in part through the expenditure of public funds, to participate voluntarily in the pledge of allegiance to the flag of the United States.

"SEC. 2. Notwithstanding any other provision of this Constitution, the Congress shall have power by appropriate legislation to regulate the display and handling of the flag of the United States and to protect it from desecration.

"SEC. 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress."

ADDITIONAL COSPONSORS OF A BILL

S. 4092

At the request of the Senator from West Virginia (Mr. RANDOLPH) the Senator from New York (Mr. GOODELL), the Senator from Tennessee (Mr. GORE), and the Senator from California (Mr. MURPHY) were added as cosponsors of S. 4092, to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure that U.S. requirements for low-cost energy will be met, and to reconcile environmental quality requirements with future energy needs.

Mr. RANDOLPH. Mr. President, on July 16 when I introduced S. 4092, a bill to establish a Commission on Fuels and Energy, I listed in my remarks the distinguished Senator from Wyoming (Mr. HANSEN) as a cosponsor. This is reflected on page 24636 of the RECORD. However, when the bill was printed Senator HANSEN's name was not on it. His name was inadvertently left off the cosponsorship list submitted with the bill.

I genuinely regret this error because the able Senator from Wyoming was one of the first persons to agree to cosponsor S. 4092. More importantly, he has been an active, knowledgeable and effective participant in the discussions of fuel and energy problems. His efforts have contributed significantly to a better understanding of this vital issue and the need for a national policy on fuels and energy.

Mr. President, I am privileged to ask unanimous consent that at the next printing the name of the distinguished Senator from Wyoming (Mr. HANSEN) be

added as a cosponsor of S. 4092, to establish a Commission on Fuels and Energy to recommend programs and policies intented to insure that U.S. requirements for low-cost energy will be met, and to reconcile environmental quality requirements with future energy needs.

The PRESIDING OFFICER (Mr. SPONG). Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 81—SUBMISSION OF A CONCURRENT RESOLUTION AUTHORIZING THE PRINTING OF ADDITIONAL COPIES OF SENATE HEARINGS ON COPYRIGHT LAW REVISION (S. 597, 90TH CONGRESS)

Mr. McCLELLAN submitted the following concurrent resolution (S. Con. Res. 81) which was referred to the Committee on Rules and Administration:

S. CON. RES. 81

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Senate Committee on the Judiciary two thousand additional copies of Parts 1, 2, 3, 4, and index of the hearings before its Subcommittee on Patents, Trademarks, and Copyrights during the Ninetieth Congress on Copyright Law Revision (S. 597).

ADDITIONAL COSPONSOR OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 80

At the request of the Senator from West Virginia (Mr. BYRD), the Senator from Maine (Mr. MUSKIE) was added as a cosponsor of Senate Concurrent Resolution 80, to establish a joint committee to study the treatment of prisoners of war in Vietnam.

EQUAL RIGHTS FOR MEN AND WOMEN—AMENDMENTS

AMENDMENTS NOS. 864 THROUGH 867

Mr. ERVIN submitted four amendments, intended to be proposed by him, to the joint resolution (H.J. Res. 264) proposing an amendment to the Constitution of the United States relative to equal rights for men and women, which were ordered to lie on the table and to be printed.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES—AMENDMENTS

AMENDMENT NO. 868

Mr. FULBRIGHT submitted amendments, intended to be proposed by him, to the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which was ordered to lie on the table and to be printed.

(The remarks of Mr. FULBRIGHT when he submitted the amendment appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF AMENDMENTS

AMENDMENT NO. 861 TO H.R. 17123

At the request of the Senator from Wisconsin (Mr. PROXMIRE), the Senator from Arkansas (Mr. FULBRIGHT) and the Senator from New York (Mr. JAVITS) were added as cosponsors of amendment No. 861, to H.R. 17123, the military appropriations authorization bill.

AMENDMENT NO. 862 TO H.R. 17123

At the request of the Senator from Rhode Island (Mr. PELL), he was added as a cosponsor of amendment No. 862, to H.R. 17123, the military appropriations authorization bill.

At the request of the Senator from South Dakota (Mr. MCGOVERN), the Senator from Idaho (Mr. CHURCH) was added as a cosponsor of amendment No. 862, to H.R. 17123, the military appropriations authorization bill.

REMOVAL OF NAME OF COSPONSOR FROM AMENDMENT NO. 846, TO H.R. 18546

Mr. WILLIAMS of Delaware. Mr. President, through an inadvertence the Senator from Colorado (Mr. ALLOTT) was added as a cosponsor of amendment No. 846 to H.R. 18546. I ask unanimous consent that the name of the Senator be removed as a cosponsor of the previously listed amendment.

The PRESIDING OFFICER (Mr. SPONG). Without objection, it is ordered.

ADDITIONAL STATEMENTS OF SENATORS

LONG-TERM DIRECTION OF SOVIET POLICY

Mr. ALLOTT. Mr. President, the question of the long-term direction of Soviet policy continues to be urgently relevant to a number of American policy decisions.

Recently it has been suggested that we pressure Israel to place its confidence in the competence of the United Nations and the good will of the Soviet Union. This suggestion implied an optimistic judgment about the course of Soviet policy.

On the other hand, we have just concluded this year's debate on the ABM system. This debate made clear that the Soviet Union has been increasing its offensive military capabilities. This increase has driven the Soviet economy into increasingly serious difficulty.

This fact has a special relevance to the Soviet-German nonaggression pact which was recently signed in Moscow, and which has yet to be ratified by the German Bundestag.

This pact has been seized upon by some persons as fresh evidence that the Soviet Union is becoming an amicable citizen in the community of nations. I want to suggest that this is not the only possible, and is certainly not the most plausible, interpretation of the pact. I would like to suggest that we evaluate the meaning and desirability of that pact in light of its economic significance. I think the economic aspects of this agreement have not been stressed sufficiently in the press.

As usual, the Soviet economy is experiencing hard times. The only thing unusual about the current situation is that the situation is especially bad. As usual, the Soviet Union is seeking economically advantageous agreements with free nations. This is the background to the recent treaty.

Because I believe that this matter needs to be put into perspective, I should like to recall for the Senate some of the background and ramifications surrounding this treaty.

The Soviet-German treaty renouncing the use of force between the two countries was signed on August 12, just about 10 months after the Social Democrat Government of Chancellor Willy Brandt took office in West Germany. Even its proponents will agree that the treaty was signed under a certain amount of political duress. The new Brandt government was in a hurry to produce the diplomatic breakthroughs promised in the election campaign. Government anxiety was heightened by the fact that new elections are in the offing.

Actually, the nonaggression pact is not a peace treaty in the actual sense, but a bilateral agreement by the European superpower the Soviet Union, and the militarily despondent West Germany, committing both nations not to interfere "by force into each others affairs."

The reason for such an agreement is not clear because West Germany, with its limited military offensive capability, cannot under any stretch of the imagination, be considered a military threat to the Soviet Union either now or in the future.

The Soviet Union, on the other hand, has never been militarily in better condition than it is at the present time. Moreover, the Soviets have never been deterred by a treaty from the intervention into its neighbors' affairs.

The signing of the treaty took place just 1 week short of the anniversary of the 1968 Czechoslovakian invasion. Some political observers in the Christian Democrats Party have charged that this treaty has all of the hallmarks of a "diktate." It was, they say, really dictated by a close friend of Brandt, Egon Bahr, who spent many weeks in Moscow waiting for Andrei Gromyko to have some spare time. Bahr and Gromyko at last met, but the exact nature of their discussions was not made public. When the text of Bahr's arrangements with Gromyko was "leaked" in West Germany through an underground intelligence source, it created a small scale political scandal. Bahr's opponents immediately charged that the arrangement proposed by Bahr would give away West Germany's political trump cards and get nothing in exchange.

The Christian Democrats, as well as leading newspapers and opinion journals in Germany, demanded that Foreign Minister Scheel, a member of West Ger-

many's small but crucial Free Democrats Party, renegotiate the Bahr arrangements. Scheel thus went to Moscow as head of a 19-man delegation and stayed there for 10 days. Unfortunately, the confrontation between Andrei Gromyko, who has been Foreign Minister of one of the two superpowers for the past 13 years, and Scheel, who became Foreign Minister of West Germany just 10 months ago, appears to have been an uneven match. Scheel did not, in actuality, succeed in changing anything in the arrangements originally accepted by Bahr from Gromyko.

The five-point treaty that emerged is a most interesting document. It recognizes the status quo in Europe and strips the western part of Germany of any right to assist those Germans living under Soviet occupation in East Germany. Perhaps it is symbolic that the treaty was signed on the anniversary of the construction of the Berlin Wall. The Wall sealed off East Berlin from West Berlin, while the treaty could have the effect of placing a diplomatic imprimatur on the de facto isolation of East Germany from West Germany. As if to underscore the meaning of the new treaty, a huge delegation of East German officials arrived in Moscow on August 13, the day Willy Brandt departed for home. This delegation, headed by Deputy Prime Minister and Chairman of the State Planning Committee of East Germany, G. Schuerer, were in Moscow to sign the most comprehensive economic agreement ever put into effect between the two countries.

This agreement, called by the Soviet newspaper, Pravda, "the protocol," ties East German industry with the Soviet Union industrial complex for the entire 1971–75 period. It includes 17 interdepartmental agreements and 13 agreements by the industrial ministers of the Soviet Union and East Germany. The practical effect of this arrangement will be to integrate the East German economy into the Soviet economy with nearly all the East German ministries and industries linked directly into Soviet industries and subordinated to the unified Soviet production plan for 1971–75.

The true significance of this parallel development can be appreciated only in light of the fact that the Soviet economy is in serious difficulty. As I mentioned earlier, in an effort to surpass the United States in strategic armaments, the Soviet Union has considerably strained its entire economic structure. The Soviet aircraft industry and its naval forces are also growing much faster than was predicted several years ago. This alarming leap in military hardware production has necessitated considerable readjustment of the whole industrial structure in the U.S.S.R. and placed a very serious strain on the industrial and agricultural segments of the economy.

Mr. President, the strongest economy in Western Europe is that of West Germany. The strongest economy in Eastern Europe is that of East Germany. The combined effect of the Moscow-East German agreement and of the nonaggression pact will be to ease the Soviet Union's economic troubles.

The preamble of the treaty signed by Chancellor Brandt includes a paragraph concerning "extension of economic cooperation." As far as the Soviet Union is concerned, this is the most vital part of the treaty. The Soviet Union needs the West German industrial know-how and equipment to replace that which has been diverted into "sensitive"—their word for military—production. Most of all, however, the Soviets need West German credits. Reports reaching West Germany indicate that the specific amount of credit to be extended by West Germany to the Soviet Union was discussed behind the scenes, but it has never been revealed.

West German Economic Minister Schiller and Finance Minister Moller visit Moscow next month to discuss details of economic cooperation. It is now apparent that this discussion will include West German deliveries of machinery, equipment, pipelines, and so forth, on long-term credit. This arrangement will make it easier for the Soviet Union to continue its arms race with the United States unhindered by the present economic difficulties. Because it is essential for the Soviets to bridge their current economic shortages, the treaty truly comes at a convenient time.

Proof that the economic negotiations and arrangements are important to the Soviets is the fact that some of these arrangements will take effect before the final ratification of the treaty by the West German Parliament. Yet, it is possible that the treaty may run into difficulty in the Bundestag. According to the West German constitution, any treaty concerning settlement of borders requires a two-thirds majority vote of the Bundestag. It now appears that considerable parliamentary maneuvering and complicated political activities will be required to secure the ratification of this treaty.

In an effort to speed ratification, Foreign Minister Scheel attached to the treaty a letter to Soviet Minister Gromyko. This letter, in a very vague form, refers to the national aspirations of the German people. It seems designed to convey the impression that West Germany still has reservations about the finality of the division of Germany. Christian Democrats have charged that this letter amounts to plain political gimmickry. They point out that the Scheel letter is of no de juré consequence since it is a document signed only by himself and not by the Soviet Union. The Soviet papers have chosen to ignore the letter entirely and have not printed it in Pravda or Izvestia or any other paper. Observers have indicated that the letter is meant only to produce some votes in the West German Bundestag and does not in any way alter the permanency of the West German-Soviet agreement for the division of Germany and the abandoning of compatriots in East Germany.

All concerned Americans will watch with interest as the Germans debate this matter which, in its economic aspects, may make it easier for our Soviet enemy to fuel the arms race.

Mr. President, while I have chosen to emphasize the economic aspects of this treaty, I must not conclude before taking note of one way in which it might have a significant effect on the political life of West Germany.

This treaty might cast a shadow over the lives—and political power—of the millions of Germans who were driven from their homelands by the onrushing Red Army at the end of World War II These persons have been exemplary citizens of West Germany. They have been active in the political life of that vibrant new democracy. All the while they have been aware that, in an important sense, they are the only voice of those who could not flee to the West at the end of the war.

The West Germans who settled in the freedom of the West did not abandon those they left behind. They formed vigorous refugee organizations which have been a constant source of embarrassment to the Soviet occupiers of East Germany. It would be a terrible shame if, in order to produce an illusion of amity with the Soviet Union, the West German Government ignores these organizations, or seeks to undermine their stature.

There can be little doubt that the Soviet Union would like this. It is reasonable to expect that they urged this course upon the West German Government. I assume the West German Government will not pay this price to purchase the fragile good humor of the Soviet Union.

Mr. President, I want to share with all Senators two interesting commentaries on this treaty I have been discussing. One is a letter published in the Washington Post of August 20. It was written by Dr. Kurt L. London, professor emeritus of international affairs at George Washington University. The second commentary is an editorial published in the National Review of August 25 and entitled "The Brandt-Brezhnev Pact." I ask unanimous consent that the commentaries be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

THE MOSCOW-BONN TREATY

If we penetrate the clouds of euphoria which have polluted the political thinking of our government, we can see that the Moscow-Bonn treaty of Aug. 12, gives the Soviets everything they want at this stage of European development. It makes West Germany a third-class power, thereby decreasing the strength of NATO which already has been weakened by France's narrow-minded policy and Senator Mansfield's compaign for reducing the American forces in Germany. The renunciation of forces is the facade behind which the Soviet goal of a European staus quo has been achieved. From the Soviet point of view, this is the first step toward its growing involvement with European affairs, both East *and* West—a Russian version of de Galle's "Europe to the Urals."

The treaty has been signed but must be ratified to come into force. The Soviet "parliament" is no problem; it does what it is told. The Bundestag in Bonn, however, will ratify it only if the Berlin problem is solved, at least to some degree. The Brandt government is committed on this point. Minor gestures will not suffice; Moscow will have to make meaningful concessions, whether East Germany's Ulbricht likes it or not. Previously, there have been no indications that the Soviets would "give" what the Western

powers want most: free access to and from Berlin, easier traffic between East and West Berlin, and the recognition of the economic and political presence of the Federal Republic in West Berlin.

At the forthcoming four-power meeting, the attitude of the Kremlin toward these issues is critical. If Moscow makes concessions, this may indeed usher in a new era of better East-West understanding. If it does not, the treaty may become a dead letter and East-West relations may deteriorate badly. In foreign policy and international politics an "either-or" situation is dangerous. It seems to me that Chancellor Brandt, possibly for domestic reasons, acted far too hastily at a time when, for reasons of their own, the Soviets were quite ready for a new *modus vivendi*. Continuation of his government will depend largely on Soviet concessions regarding Berlin and subsequent ratifications. Should the Soviets renege, the political polarization in the Federal Republic will harden and the Kiesinger forces will have an excellent opportunity to return to office.

At best, the treaty has an uncertain future, and there is no reason for jubilation.

KURT L. LONDON,
Professor Emeritus of International Affairs, George Washington University.

WASHINGTON.

THE BRANDT-BREZHNEV PACT

The news of the initialing of the new German-Soviet treaty by Foreign Ministers Walter Scheel and Andrei Gromyko inevitably awakens strange echoes along the corridors of memory. What are the shades of Ribbentrop and Molotov murmuring as they look over the shoulders of their Minister-successors? Still further back in the darkness, what flickers through the ghostly minds of Adolf Hitler and Joseph Stalin? Did not that protocol of 31 years ago also "pledge both sides to renounce force in settling disputes" and look forward, "through an improvement in bilateral relations," to peace and advancing well-being for all Europe?

But Willy Brandt is no Hitler, and Leonid Brezhnev no Stalin. . . . Let us not skip quite so fast. Brandt is no Nazi, certainly, but he, as Hitler was, is chief of the German Reich. And is it not this same Brezhnev who two short years ago sent his tanks and guns to crush a people who sought in some small degree to order their own lives according to their own notions? (Those tanks rumbling through the streets of Prague wore stars instead of swastikas, but the news photos could otherwise have been of the tanks in the streets of Vienna; or Prague itself, too, thirty years earlier.) Is this not the Brezhnev who, by his doctrine of "limited sovereignty," has proclaimed Communist Russia's imperial suzerainty over all "socialist nations and peoples" wherever situated? What does signing with him a treaty of peace, friendship and mutual good will signify to his colonial subjects?

This new accord, then, is not the first between Germans and Slavs, nor the second. Back of the Pact of 1939 is Rapallo, and on back through the centuries to Roman times a recurrent series, as the Germans—that dynamic, industrious, seemingly unconquerable *volk*—from their position at the strategic center of the European peninsula have swung slowly back and forth from east to west and then to east again. Now once more through the person of a Socialist Chancellor the *drang nach osten* reasserts itself.

"The agreement on which we reached accommodation," Herr Scheel stated, "is oriented toward the future." What is in that future, as Scheel and Brandt sense it, that brought them to Moscow this summer? For one thing, undoubtedly, the vast potential markets of Eastern Europe that have beckoned German industry and technology for generations and that now become more tempting and more necessary than ever as the German and world economies advance to new heights of production. The German government wishes to liquidate or suspend the political obstacles left by the War to economic expansion to the east. In addition, this accord can be seen as an initial move in one more of the perennial German drives to gain the hegemony of Europe, or at any rate of Western Europe. Although Germany has kept in touch with her Western allies, it is Germany that has taken the initiative to break further out of the postwar frame than has been heretofore attempted; Germany, not France, not France and Germany together, not NATO, not Germany and America.

Though this accord "should open a new page in relations between the Soviet Union and the Federal Republic of Germany," Herr Scheel carefully explained, "at the same time, we are striving for better relations between Eastern and Western Europe. From the very outset, we made it clear that for us it is not only a matter of representing the national interest of the Federal Republic of Germany." We Germans, that is to say, are speaking and acting not only for ourselves but for all West Europeans. And not only West Europeans, it would seem: "We want to contribute to the relaxation of tension, which will be to the good of all peoples in Eastern and Western Europe."

Minister Gromyko did not disagree, and carried the picture of the future a frame further: "The Soviet government is convinced that these results are in the interests of . . . expanding the cooperation between our countries and in the interests of further détente in Europe." "Further détente": Gromyko meant the all-European security conference that Moscow, acting in part through Finland, has long been pushing.

To sum up: This future is evidently a post-NATO Europe, a Europe from which the American influence and presence would be limited (Bonn) or eliminated (Moscow).

The long-term aim of the Soviet Union, implicit in the accord, is thus strategically offensive: the progressive isolation and exclusion of the U.S. from Europe, with (whatever the illusions of German Socialists) the consequent extension of Soviet domination over all Europe. Meanwhile, for the nearer term, there are other substantial gains in prospect. The Soviet empire, with its economy of late faltering even more badly than usual, needs the infusions of advanced machines, products and technology that Germany can supply. The Presidium has not forgotten Lenin's dictum that German technology plus Russian space, resources and manpower would rule the world.

And this accord, Moscow believes and hopes, will help complete the process she deems essential but has been unable to complete even after a full generation: the legitimization of her empire. That the empire exists in fact is sufficiently demonstrated whenever a colony or vassal state acts in a manner that breaches the imperial discipline. But in the eyes of the Kremlin the de facto relation is too bare and even precarious. The Kremlin desires that the imperial order—formulated in its political essence as "the Brezhnev doctrine"—should be accepted as legitimate and unchallengeable by the non-Communist world.

Up to now one of the plainest standing challenges to the imperial legitimacy has been West Germany's "Hallstein doctrine," refusing diplomatic recognition to all states that recognize East Germany, thus to all the vassal nations. In signing this new Moscow accord, the German Socialists complete the slow burial of the Hallstein doctrine that began two years ago.

Third, and surely not last in importance: along three major fronts: the European (southwestern), Mideastern (actually, southern), and Far Eastern. Soviet strategy Russia confronts the non-Communist world seeks and must seek to avoid active involvement on two of these fronts, above all on three, simultaneously. By this accord, the Kremlin is getting a German promise of all quiet on the European front, so that attention may be focused on the present and potential troubles on the other two.

All in all, not a bad deal for Brezhnev.

HEALTH PROFESSIONS ASSISTANCE AMENDMENTS OF 1970

Mr. KENNEDY. Mr. President, I am pleased to join in cosponsoring S. 4296, Senator CRANSTON'S proposed Health Professions Assistance Amendments of 1970, which he introduced yesterday. I have long been deeply concerned about the role which the health manpower shortage plays in our national health crisis. I have been equally concerned over the desperate shortage of health professionals from the ethnic and economic substrata of our society.

It is estimated that only slightly more than 2 percent of America's doctors are black. In addition, an estimated 45 percent of medical students today are from families in the upper 10 percent of income groups. This unequal ethnic and economic representation translates into unequal opportunity to enter the health professions. The losers are not only the individuals to whom opportunity is denied, but the community, particularly the poverty community, which might otherwise benefit from the return of its sons and daughters as doctors, dentists, and other health professionals.

I believe that the Federal Government has the responsibility to help medical schools to expand their enrollment. In turn, medical schools must make greater efforts to recruit and assist low income and minority individuals who wish to become doctors.

The bill which Senator CRANSTON has introduced today is a creative and effective response to the needs which must be met. It would provide much needed additional assistance to medical and other health professions schools and to students enrolled at such schools. It would encourage the enrollment of potential health professionals from low income or minority backgrounds. And it would authorize assistance to schools to establish programs to help low income and minority students in the successful completion of their course of study.

It is a pleasure to join with Senator CRANSTON in support of this legislation and the important objectives which it seeks to attain.

STATUS OF REMAINING LEGISLATION

Mr. SCOTT. Mr. President, I wish to commend the majority leader for placing in the RECORD a few days ago a status of legislation still remaining as of August 20, 1970. In looking over the list, I find some items that were initiated by the administration and some that had their origin in the Senate.

I know it will be impossible to complete action on all the legislation still pending, but I would hope that committees could report some of the more necessary bills and that the Senate could

pass as many as possible before we adjourn sine die.

I again commend the majority leader for putting the report in the RECORD so that we may all know the task that still lies ahead.

ARE BASES IN SPAIN WORTH THE COST?

Mr. CHURCH. Mr. President, at extraordinary costs, the U.S. developed a strategic, global deterrent consisting of long-range bombers, intercontinental missiles, and nuclear submarines. Yet, at the same time, the United States retains, at considerable cost, many forward foreign bases, acquired in an earlier period when our weapons lacked intercontinental range. The question arises as to the present value of these bases on foreign soil, when related to the price we pay for them.

Our military bases in Spain are a case in point. Mr. Douglas C. Wilson of the Providence Journal-Bulletin has addressed himself to the question of their current value to us, as compared with what we pay for them. I ask unanimous consent that his cogent article of May 17, 1970, entitled "Are They Worth the Cost?" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE THEY WORTH THE COST?

(By Douglas C. Wilson)

WASHINGTON.—This year, once again, the Franco dictatorship in Spain is demanding U.S. payment for the survival of American hostages in that country.

The hostages are military bases on Spanish soil which have lost almost all of their original strategic value for the United States. Despite this loss of value, and despite American liabilities in the bargain, Washington, once again, is paying the piper.

By all odds it is one of the most fatuous set of circumstances in our entire foreign policy.

At issue is the rent which the U.S. government must pay to continue using two major air bases and a nuclear submarine base. The United States spent 42 million dollars to build these and other military installations under terms of an executive agreement with Spain which was signed in 1953.

The original base agreement was reached at a time when American strategists were building a deterrent of overseas air bases to "contain" communism. Manned bombers were our main deterrent, in those days, and in order to be effective they had to be placed within easy striking distance of the Soviet Union.

Then as now, liberals in this country and Europe were sharply critical of Franco's dictatorial regime, the last vestige of fascism on the continent. But American officials felt it necessary to have bases in Spain, so they set aside political scruples and worked out the agreement.

THREE SITES

Airfields were paved at three sites—Moron, Torrejon and Zaragosa—strung diagonally across Spain from southwest to northeast. A 485-mile oil pipeline was built along a similar path from the Atlantic to the Pyrennes. And an Atlantic seaport for the U.S. Navy, equipped with a mile-long breakwater and a 1,000-foot pier, was established above Gibraltar at Rota.

Once regarded as vital links in our global defense line, the airfields are now obsolescent. During a recent period, in fact, Zaragosa was closed down under a caretaker status, and now there are plans to deactivate Moron. The airfields have lost their strategic value if only because we now have perfected methods for refueling bombers in flight. While the bases still provide secondary support to our aircraft, they are no longer essential.

The airfields have lost their value for a more fundamental reason, however: the manned bomber, itself, no longer plays any crucial role in U.S. deterrent strategy. It has been supplanted for many years now by the ICBM and Polaris warheads.

The submarine base at Rota, to be sure, is not so archaic. But the U.S. Navy has gained other footholds in the Mediterranean region since this Spanish port was completed; so even Rota does not have the unique value it had earlier, when it was the only U.S. port in the area.

In spite of these factors, the U.S. military, a jealous proprietor, has been loathe to abandon its outposts. It is always easier to perpetuate the status quo, to protect the vested interest. So the U.S. renewed the agreement with Spain last year and is about to renew it again this year.

2 YEAR PACT

The astonishing part is that Franco has been able to raise the price we pay for this declining investment. Up until September, 1968, the U.S. was paying for the real estate at a rate of 20 million dollars a year. This payment took the form of military assistance.

When the lease expired in that month, the Franco government tried to raise the rent to 35 million dollars for the next five-year period. Washington balked, but the new, two-year agreement, reached last year, was for 55 million dollars in further military assistance, an increase of 37 per cent in the annual rate—plus 35 million dollars more in bank credits.

This new lease, retroactive to 1968, will expire next fall, and the two governments already are negotiating terms which would allow the U.S. to remain at the bases still longer. In a recent joint statement the two governments said they have "made substantial progress" toward an agreement.

This time the payment will be made in the form of economic and cultural assistance, rather than military armaments. No doubt this change is meant to pacify the critics—leaders in Congress like Sen. J. William Fulbright, D–Ark., the chairman of the foreign relations committee—who find "people-to-people programs" far less objectionable than arsenal-to-arsenal programs.

But there is little reason to doubt that the dollar cost may again be increased; and whether the payment is guns or butter, the arrangement is hard to fathom. Indeed, Franco's extortion for the Spanish bases may be the cleverest maneuver since the one carried out by Tom Sawyer, when Tom got the other kids to whitewash the fence, to like the chore, and even to pay him for letting them do it.

GREATER PROFITS

With or without these bases, the Franco government profits from the nuclear shield we help to maintain through NATO. Spain does not belong to NATO. Franco's government has been kept out of this club for 20 years because it takes a unanimous vote of the allies to admit a new member and Franco's despotism is still anathema to some of the European democracies.

Along with being shielded by NATO, however, Franco draws an even greater profit. This comes from the base agreement—a tie with the U.S. which has bolstered Franco's prestige through long years of European disfavor. What's more important, it has strengthened his arm: in 17 years, we have provided the Spanish government with about 65 million dollars worth of military assistance—including Sabre jet fighters, Sidewinder missiles, tanks and anti-tank weapons, artillery pieces, anti-aircraft guns, and U.S. training for the Spanish forces.

The U.S. government has received little in return. First and always, of course, the Spanish bases belong to Spain and not the United States. The agreement reserves for the Spanish government the right to use the bases however it wishes.

The contract doesn't guarantee the same for the United States. Four years ago, when four of our H-bombs were lost off the Spanish coast, the Spanish government said no more American planes carrying nuclear bombs could use the bases. And all the U.S. planes were banned from the airfields during the Arab-Israeli war in 1967. Franco was afraid the Arabs might take offense at them.

With our access subject to sudden cutoffs like these, especially when wars break out, it is hard to see their value at all.

In the 1967 war, Spain regarded our presence on Spanish soil as a liability. Potentially, however, the arrangement has always stood as an even greater liability for the United States.

Townsend Hoopes, who was assistant secretary of defense when the agreement was formed in 1953, wrote 12 years ago that our development of the ICBM and Polaris systems would "render our long-range atomic force independent of forward bases located on foreign soil." He said "the added freedom of action resulting from this development would permit United States diplomacy . . . to eliminate bases where they are no longer needed." He also said it would free us from the "awkward commitments that embarrass our true purposes."

The United States has constantly risked embarrassment in its links with the Franco dictatorship. These ties do not constitute a formal alliance, but they don't need to. This was recognized at the end of 1968. When the chairman of the Joint Chiefs of Staff, Gen. Earle G. Wheeler, assured Franco in a secret memorandum that the Spanish government had the best security guarantee it could want: the presence of U.S. forces on Spanish soil.

DOUBLE LIABILITY

The obvious question is how this military tie with the Franco government might involve us if Spain should become embroiled in open conflict—either at home or abroad.

As it is, Franco and his hand-picked successors are armed with American-supplied weapons, to use against any challenge.

As it is, the Franco government for years has fought political battles ruthlessly, to suppress liberal elements within Spain itself. It has denied basic freedoms by incarcerating political opponents and controlling religious activities.

Such activities make the Franco regime a strange bedfellow for the United States. Yet we have been very obliging; and to safeguard our own dubious investment, we have even sought to curb free expression ourselves. Only a year ago, U.S. authorities directed Americans in Spain to say nothing about Hitler and Nazi Germany, because Franco still thinks kindly of these past associates.

The force of 10,000 American servicemen stationed in Spain was told in the same directive that "talking about Spanish restrictions on Protestant religious activities is not permitted." They were told that references to dictatorship "should be avoided"—that servicemen should "be especially wary of comparisons between dictatorships and freedom."

This, then, is still another price the U.S. has paid to "defend" the free world with these relics of military strategy. It may be the most incalculable and incomprehensible price of all.

WHAT ABOUT SDS AT KENT STATE?

Mr. HANSEN. Mr. President, the testimony that was given to the President's Commission on Campus Unrest during its investigation of the tragedy at Kent

State neglected to present important information toward finding the truth about the causes of the violence.

I refer particularly to the record of activity of Students for a Democratic Society at Kent State University. Such testimony, as best I can determine, is absent from the Commission's initial report. This poses somewhat of a mystery. The fact that there was SDS activity there was clearly brought out in the 1969 Annual Report of the House Committee on Internal Security. Chapter 4 of this document, entitled "SDS Activities at Kent State University, Kent, Ohio," is a report of hearings held on June 24 and 25, 1969, before the committee. Many of the Kent State officials who testified at these hearings have also testified before the Scranton Commission, including Dr. Robert I. White, president of the university.

What the testimony before the Internal Security Committee showed was that there has been an extremely active SDS chapter at Kent State with close ties to the national organization; that the SDS was dedicated to "defeat the system"; and that members of the SDS at Kent State were advocating the use of any means, including guns and explosives, to achieve their objective.

I do not think the Scranton Commission can ignore this documented evidence; but apparently it has been inadequately considered. In my opinion, too much of the search into the causes of violence at Kent State involved a parade of witnesses who unleashed their inflammatory rhetoric on the Commission.

It may be of some interest to the Scranton Commission that it achieved certain publicity for its endeavors in some parts of the Nation's press. As a case in point, I refer to a story published in the Washington Post of August 20.

This story, headlined "Campus Panel Told of Grim Outlook at Kent," was a report of the previous day's hearings. The article was 21 paragraphs long. However, the first six paragraphs were devoted to the testimony of two students who predicted that there may be a war coming at Kent State, that students will be armed and will shoot back if fired upon, that there is a class polarization sweeping the country, and that the United States may be faced with civil war.

It is not until we reach the last four paragraphs of the story that the reader learns the fact that the commander of the Ohio National Guard, Sylvester Del Corso, testified that his troops had been assigned to more than 30 civil disturbances in the past 2½ years and had never harmed anyone until the Kent State incident.

Had a reader reached the next to last paragraph—and most readers probably did not—he would have learned that Chester Williams, campus security director, testified that student demonstrators who burned an ROTC building on the campus 2 days before the shootings were so "vicious looking" that he refused to send his 22-man riot squad up against them.

Finally, in the last paragraph of the story, the reader learns that Glenn Frank, a professor described as highly popular with the Kent State students, said, "Never in my 17 years of teaching have I seen a group as arrogant, as bent on destruction" as the crowd that burned the ROTC building.

Mr. President, I believe the Scranton Commission could have lowered the emphasis on proviolence witnesses and given equal forums to those who can shed light on the real causes of campus unrest.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAMPUS PANEL TOLD OF GRIM OUTLOOK AT KENT

(By Richard Harwood)

KENT, Ohio, Aug. 19—The Presidential Commission on Campus Unrest was warned today of the possibility of more bloodshed at Kent State University this fall.

"I'm very fearful about things to come at Kent," Robert Pickett told the commission. He is a black alumnus of Kent State who is now a law student at the University of Michigan.

Pickett said the university in certain of its policies—enlarging the campus police force, for example—is "asking for a war, calling for it, praying for it and to a large extent they will get it."

If it comes this fall, he declared, "students will be armed and will shoot back if fired upon."

He warned also of a polarization that is sweeping the country, a polarization of class which pits students and intellectuals against "hard hats."

Another pessimistic witness was Steve Sharoff, a white graduate student in history. A "growing minority of students is prepared for armed conflict," he said. "I feel," he went on, "that we in the United States face civil war if things are not changed soon. And we know who the winner will be. It won't be us."

The commission began hearings here today into the general causes of campus unrest and into the particular events that led to the killing of four Kent State students last May in a confrontation with National Guardsmen.

A state grand jury is preparing to investigate the deaths, a fact that led commission chairman William Scranton to promise that the commission would do nothing to interfere with the grand jury's actions.

Opening witness was the university president, Dr. Robert White, who described the events leading up to the shootings on May 4 and surmised that Kent State had been "targeted" for disruptions by unnamed radicals "interested in either doing some burning or shutting us down."

He had no recommendations for the commission to make to the President but implied that some of his own problems were the result of too many unqualified students at Kent State.

"We have a lot of human debris on this campus," he said, "several thousand students who shouldn't be here and who would be happier and more productive elsewhere."

The commander of the Ohio National Guard, Sylvester Del Corso, was questioned sharply about the weapons issued to guardsmen and the circumstances under which they can be used.

He said he would prefer his men to carry non-lethal weapons, perhaps shotguns loaded with rock salt. Instead they are now armed with M–1 rifles, which were used on May 4, and will be getting M–16 automatic rifles this fall.

He implied that that decision was made by the Pentagon.

He had no coherent explanation as to how the shooting by guardsmen began at Kent State. No sniper has ever been identified, he said; there is no evidence his men had run out of tear gas, and they were never given a command to fire.

In fact, Del Corso said, "I cannot imagine any circumstance under which we would order men to fire."

The only justification for a guardsman firing his weapon, he said, is in self-defense and maybe "an individual decision."

"But throwing a rock," he said, "is not sufficient cause to fire." He said his troops have been assigned to more than 30 civil disturbances in the past 2½ years and have never harmed anyone until the Kent State incident.

The mood and behavior of the students during that period may have been a factor in what occurred, according to two witnesses.

One of them, Chester Williams, the campus security director, said student demonstrators who burned an ROTC building two days before the shooting were so "vicious looking" he declined to send his 22-man riot squad up against them.

Glenn Frank, a professor described as highly popular with the Kent State students, said, "Never in 17 years of teaching have I seen a group as arrogant, as bent on destruction" as the crowd that burned the ROTC building.

CANCER CURE MUST BE A NATIONAL GOAL

Mr. YARBOROUGH. Mr. President, the Wall Street Journal for August 26, 1970, carries an article about what I consider to be a most important goal for the American Nation: finding a cure for cancer.

The article is entitled "National Goal: Curing Cancer by 1976." It describes the resolution I sponsored to create a committee of research and financial authorities who can pull together a program for future research on this disease that will produce a cure.

Three hundred thousand Americans die each year of this scourge. Such a toll is unconscionable in a country so advanced as we are in science and research. A successful American cancer cure would do more for mankind and for American prestige in the world than any military device we could possibly invent.

Ths committee of consultants has already begun work. They are surveying all present cancer research activities. They will weigh them for their progress and signs of success.

The most important part of their work will come when they make their recommendations as to what should be done—what avenues give the greatest hope for success.

These will not be easy decisions. But they will be essential to the focusing of research money and talent on the end of finding the answer to cancer in its many dreaded forms.

I urge Senators and others to read this account of the purpose and progress of the committee, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL GOAL: CURING CANCER BY 1976

(By Jerry E. Bishop)

NEW YORK.—For the last few years medical researchers, particularly those delving

into the mysteries of cancer, have watched the nation's space program with frustration and envy.

Over a period of seven years the American taxpayer poured $24 billion into landing men on the moon, the most concrete result of which was a few pounds of rocks and soil of interest to a handful of physical scientists. At the same time, cancer scientists, whose researches could ultimately save thousands of lives, have struggled along on, at most about $250 million a year in cancer research funds.

To many cancer researchers this fickleness of the taxpayer has seemed almost incomprehensible. They have searched hard for ways to stir up the same type of public enthusiasm for cancer research as that which opened the Federal coffers for the manned moon landings. A frequently heard plea is that elimination of cancer should be declared a "nation goal," just as President Kennedy, in 1961, declare the moon landing a national goal.

A serious attempt to finally answer this plea is now under way. Its success or failure could change the approach to almost all the nation's disease problems. A little-known committee of scientists and laymen has begun meeting privately, sometimes in Washington, sometimes here in New York. Known as the National Committee of Consultants to Conquer Cancer, it was set up by a Senate resolution, sponsored by Sen. Ralph Yarborough of Texas, and 53 other Senators and given a $250,000 appropriation.

The committee's assignment, in Sen. Yarborough's words, is to "recommend to the Congress and to the American people what must be done to achieve cures for the major forms of cancer by 1976. . . ."

The committee's attention, Mr. Yarborough said, should be directed in particular "toward the creation of a new administrative agency which would guarantee that the conquest of cancer becomes a highly visible national goal."

The committee's 26 members, half of them scientists and half laymen, are as illustrious as the panel is obscure. Among them are venture capitalist Laurance S. Rockefeller, Olin Corp., chairman G. Keith Funston, Steelworkers' Union president I. W. Abel, Nobel-prize-winning geneticist Joshua Lederberg, Boston's famed cancer researcher, Dr. Sidney Farber and Solan-Kettering Institute's vice president, Dr. Joseph Burchenal.

The committee, according to its chairman, Benno Schmidt, a partner of J. H. Whitney & Co., expects to report to Congress by year's end.

The committee's assignment is formidable, for there are some sharp differences between landing men on the moon and conquering cancer.

The moon-landing effort had the drama of a feat that man had speculated about for centuries and the competitiveness of beating the Russians and renewing the American ego. Both of these elements are lacking in the "conquest of cancer." There is, of course, no "cancer race" in the same sense of the "space race." And, as Dr. Farber notes, it wasn't so many years ago that even physicians regarded cancer as an incontestable feature of nature. Only recently, he explains, have doctors begun to express a "restrained optimism" that cancer is a solvable problem.

There is also a more basic difference. At the time the moon effort was begun there was no question that it could be done. The technology was available, and no new scientific discoveries were required.

For instance, not only have rockets been around for centuries, but the ability of a rocket to carry men to the moon had been realized almost three-quarters of a century earlier, "scaling-up" the military rocket to the giant Saturn V was an amazing engineering feat, but basically it wasn't much different than scaling-up the primitive suspension foot bridge to the Golden Gate bridge. There was considerable confidence in Mr. Kennedy's order to reach the moon "by the end of the decade," the only question being what month the moon landing would occur.

By contrast, little is known about cancer. Surgeons and radiotherapists can cure almost all skin cancer, a majority of breast and uterine cancer and varying percentages of other cancers by either excising the malignancies or destroying them. Some cancers can be prevented; elimination of cigaret smoking, for example, should prevent a large portion of the lung cancer deaths.

Beyond this, however, the disease, or diseases, (doctors count scores of different types of cancer) remain much of a mystery. Although to a trained radiologist the appearance and behavior of a cancer cell differ from those of a normal cell, the exact difference and how and why they occur, are largely a mystery. Without such basic knowledge, researchers are more or less stabbing in the dark in developing new methods of treatment of prevention. Such stabs are sometimes successful, often not, and it is impossible to be certain in advance which effort will work and which won't.

When engineers could predict a successful moon landing, the outcome of cancer research is highly unpredictable. The key to the disease may come from a single laborator next month or it may not come until scores of laboratories have been at work for another decade.

It is highly unlikely that any group of experts can promise that cures for major forms of cancer will be achieved within five years even if appropriations for cancer research were unlimited. To do so could raise high hopes among the public and result in a disenchantment, as 1976 rolled around, that might do considerable harm to public support of cancer research in the long run. Yet without such dramatic promises, public enthusiasm for a major "assault" on cancer that the researchers have longed for may be more difficult to arouse.

Some committee members have already indicated that rather than promise cures the group may well propose a master plan to reorganize Government support of cancer research. The master plan would be in operation by 1976, and the only promise would be that it holds the best chance of conquering cancer at some unspecified future time.

This isn't to say there aren't some tantalizing possibilities for bringing cancer under control. The expansion of cancer research over the last 15 years has started to yield some exciting leads. Virologists appear to be only a step or two away from linking viruses with at least leukemia and possibly some other human cancers. A flood of new knowledge about the way the body protects itself against disease is suggesting that it might be possible to direct the body's immune system against cancer cells. Chemists and biochemists are beginning to think they can design drugs that would selectively attack cancer cells. New tests for the early diagnosis of common cancers, such as bowel cancer, are starting to emerge from the laboratory.

But this also makes the cancer problem sharply different from the moon landing. There was only one way to reach the moon—mounting a self-contained, man-carrying capsule on a series of rockets. The "conquest of cancer" probably will require a multitude of approaches.

A vaccine, for example, may be the key to leukemia control but not necessarily for breast cancer. A public education program on the dangers of smoking and air pollution might reverse the rising death rate from lung cancer, while early diagnosis may be the weapon to use against bowel cancer.

Any group sitting down to map out an "all-out assault" on cancer, then, must come to some decisions on allocating money and manpower among a variety of different approaches. By implication, this means setting up a system of priorities, which in medical research is extremely difficult. Should $100 million be thrown into virus research on the possibility that this will produce a leukemia vaccine? Or should the money be plowed into chemical research for a drug that would cure leukemia? How much effort should be devoted to perfecting a method of diagnosing bowel cancer in its early stages as compared to support of basic research in the body's immunity?

Some of the priorities are bound to be wrong. The $100 million of research on leukemia viruses might come to nought while $10 million into anti-cancer drugs might yield a cure for the same disease. And, at any moment, a single scientist may make a key discovery that, if it is to be exploited, would require an immediate reshuffling of priorities, and the transfer of scientists and money from one area of research into the new area.

As Dr. Farber explains, the committee's recommendations be necessity "will be subject to change without notice."

There is no lack of confidence among the committee members that they can come up with a space-age type of program in cancer research. "We think we can design recommendations which, if acted upon, can be used to build a major assault on this disease," says committee chairman Mr. Schmidt.

If the committee is successful it could set a new pattern for Federal support for medical research. There's no reason, for example, why a similar approach couldn't be used for heart disease, which kills twice as many Americans as cancer, against arthritis, or against birth defects.

At the very least, the committee, one way or another, may answer that question that many Americans asked a year ago, when Neil Armstrong stepped on the moon: "If we can land men on the moon why can't we find a cure for cancer?"

POW PROPAGANDA

Mr. GRIFFIN. Mr. President, Hanoi is busily exploiting its harsh and illegal prisoner-of-war policy. Like animal trainers, the North Vietnamese Communists regularly broadcast "interviews" with the men they hold prisoner. These so-called "testimonials" endlessly repeat the same propaganda line:

We are well treated; We receive food and mail from home; Our hosts—as the North Vietnamese like to call themselves—are friendly and humane.

It would be nice if we could believe the glowing reports transmitted by those broadcasts. But every shred of evidence indicates that they represent nothing but blatantly false propaganda.

If our men are treated so well, why does not Hanoi allow international inspection of their prisons?

If they really want Americans to come home, why do they not start by releasing American POW's?

THE STATE OF THE JUDICIARY REPORT

Mr. NELSON. Mr. President, event follows upon event so quickly now that important messages receive media attention one day and are forgotten the next.

Chief Justice Burger's state of the judiciary report to the American Bar Association is a case in point.

Fortunately on September 8, the Washington Evening Star carried a commentary on Justice Burger's speech that was most pertinent. The author of the

commentary, Milton Viorst, made important points that Congress and Chief Justice Burger should seriously consider.

I think it most ironic that at the very time the Chief Justice was suggesting "we should look more to State courts familiar with local conditions and local problems," President Nixon endorsed the report of Russell Train's Council on Environmental Quality recommending stricter Federal laws concerning environmental problems—laws that would be enforced in the Federal courts.

The Chief Justice deserves support for his proposals for improving, reforming, and enlarging facilities of the Federal court system. Congress and the executive branch, however, must push forward to solve those national concerns that otherwise might suffer parochial defeats in State courts.

I ask unanimous consent that Mr. Viorst's column be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURGER'S THEORY WAS OUTDATED DECADES AGO

In his State of the Judiciary address this week, Chief Justice Warren Burger put on an interesting display indeed of what it means to be a "strict constructionist."

It wasn't enough for him to complain of the procedural safeguards incorporated into the law enforcement system by judicial decisions in recent years. With accuracy, he said they increased the burdens on the nation's courts.

He went a step further, however. He had the audacity to tell the Congress what laws it should and should not pass.

Not surprisingly, they are laws conventionally described as "liberal." He did not inveigh against preventive detention, for example. They were laws the Nixon administration doesn't like.

"People speak glibly of putting all the problems of pollution, of crowded cities, of consumer class action and others in the federal courts," he said. "We should look more to state courts familiar with local conditions and local problems."

Such a view is fine in theory—except that it's a theory which has been discredited for decades.

The federal court system—like the federal government itself—has grown not by some grand design, but because the state courts have shown themselves so parochial, so inept, so subject to the political and social control of local vested interests that they have been unable to assure to Americans the justice guaranteed to them under the Constitution.

The Brown case in 1954, and a hundred other civil rights actions, came to the federal courts because state courts had failed to face up honestly to the issues they raised.

The same factor applies to such cases as one man-one vote, the right to counsel and the validity of the state poll tax. The Warren Court did what the state courts would not.

Justice Burger surely knows that air and water pollution is a matter over which local courts have been effectively powerless. Local judges don't take on industries—and if they do, their orders don't get enforced.

It is odd that the chief justice also pointed to "consumer class actions," which would allow consumers as groups to bring suit for damages against frauds. Such legislation is currently under consideration in both the House and Senate.

This legislation has been a special target of the Nixon administration, the National Association of Manufacturers and, for that matter, the American Bar Association, before which Burger delivered his jeremiad.

It is interesting that he chose the bar association, the Gibraltar of "establishment" conservatism, for his State of the Judiciary address. Would the surgeon general report to the American Medical Association? If the chief justice wants to make this an annual message, he should go before Congress, as the President does with the State of the Union.

Indeed, what Justice Burger's entire message reflects is his lack of understanding of the federal court system as a channel through which concerned Americans can fight "within the system" to redress their grievances against the "establishment."

If many young people, both black and white, have become militantly "anti-establishment," many more have refused to join them for the very reason that, in the Brown case and so many others, the federal courts did respond to a need for social justice.

Justice Burger is, of course, correct in saying that the federal judiciary must have more money, more judges and more modern administrative methods. He has, perhaps, overlooked his own powers to assign judges where he sees fit and to reduce the length of court recesses, as a means of speeding up procedures. Yet there is no denying that genuine reform is essential.

Where Justice Burger seems disturbingly insensitive is in the emphasis he puts on efficiency without acknowledging that the first objective of the court system is justice.

In the case "of pollution of crowded cities, of consumer class actions," it is the responsibility of Congress to set the terms of justice. Justice Burger has no right to tell Congress that they cannot be met.

Indeed, the chief justice would have been on stronger ground declaring that the goal of his message was a compassionate court system. Even a "strict constructionist," after all, must know that quick courts are not necessarily the same as good courts.

SCHOOLBUS SAFETY

Mr. KENNEDY. Mr. President, the National Transportation Safety Board this week issued a special study on the "Inadequate Structural Assembly of Schoolbus Bodies" following an investigation into schoolbus accidents. The conclusions of the Safety Board clearly demonstrate that the 19 million schoolchildren who ride buses to and from school are not being provided with the maximum safety consistent with current engineering capabilities.

I can only describe as "shocking" the Safety Board's discovery that at least four different types of schoolbuses exhibited "inadequate and inefficient" body construction. In the accidents studied, the Safety Board concluded that:

Inadequate or inefficient fastening of structures at the roofline and other locations in the rearmost section of the bus substantially contributed to these injuries, one of which was fatal.

The report noted a failure of the design of the bus joints to conform to standard engineering guides and commented:

It would appear that such calculations were not used in connection with the design of the joints in these schoolbuses.

The Board found that far more fasteners are used in the intercity bus than in the schoolbuses studied and also added that:

Board personnel have examined such intercity buses and studied reports of damage to such buses in a number of severe accidents and have not found the type of disintegrative damage and gross separations at fasteners such as that exhibited by school buses.

It is important to note that there are approximately 10 different schoolbus manufacturers who share the annual market of some 30,000 vehicles. Not all of the manufacturers were studied by the Board, and the majority of the buses produced each year may not reflect the inadequacies cited in the current report. However, it should be incumbent upon the National Highway Safety Board of the Department of Transportation to ascertain immediately whether this condition is as widespread as the present study indicates.

Mr. President, I am writing today to the Secretary of Transportation, to the Schoolbus Manufacturers Institute, and to the National Education Association to ask that an immediate study be made into this question.

The Safety Board acknowledges that remedying the inadequate fastening might only affect 0.1 percent of the total national fatality toll. However, I cannot believe that all of the agencies associated with schoolbuses will not share the conclusion of the Board that there is a "unique need for protection of the innocent children who ride schoolbuses, and who are almost totally unable to assure their safety by their own actions."

The Board estimates that the simple act of providing an adequate number of rivets to the joints of the schoolbus will save from 20 to 30 lives each year and will reduce the number of children who are seriously injured.

Mr. President, I believe we would be guilty of the grossest negligence if we did not immediately ask all schoolbus manufacturers to alter their construction methods to reflect the recommendations of the Safety Board.

The Department of Transportation has authority to issue rules to require such changes and I would hope that the Department will act at once in this matter.

I would suggest that the Secretary might take advantage of the offer made last February 11, 1970, by the National Academy of Sciences to assist in a detailed study of schoolbuses. I believe that the resources of the Academy would be particularly appropriate for the task of evaluating the methods used in schoolbus construction.

At the same time, I would urge the Secretary of Transportation to expedite the issuance of rules concerning other aspects of schoolbus safety, many of which have been pending for 3 years.

Eight months ago, I recommended that the Department issue national standards in relation to the construction and operation of schoolbuses to insure minimum standards of safety to all schoolchildren regardless of the State in which they reside. Until these national requirements exist, the accident of residence will mean that one child is afforded less protection when he travels to and from school than a child who resides in a different State.

While I am aware that many of the recommendations I made in January and February are under active review, I

would reemphasize the need for the earliest possible issuance of these regulations. We are at the start of a new school year. The latest statistics show an ever-increasing number of accidents, injuries, and deaths involving schoolbuses. We must act now to reverse that trend.

The recommendations which again I intend to call to the attention of the Department are the following:

First. Performance standards requiring high-back, padded seats.

Second. A 20-G resistant seatbelt for the schoolbus driver.

Third. The prohibition of standees.

Fourth. Rules requiring maintenance and inspection programs specifically geared to schoolbuses.

Fifth. Research to produce a prototype safe schoolbus.

Sixth. A rear emergency exit.

Seventh. Side emergency exit doors.

Eighth. Elimination of interior protrusions—that is, metal stanchions.

Ninth. Standardization of bumper heights.

Tenth. Requirements that States establish standards for qualifications and training of schoolbus drivers based on Federal minimums.

Eleventh. Guidelines to the States for the planning of schoolbus routes and loading zones.

Mr. President, I also want to commend particularly the National Transportation Safety Board for its study "Inadequate Structural Assembly of Schoolbus Bodies." I ask unanimous consent that the study conclusions and the correspondence from the National Academy of Sciences be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

JANUARY 28, 1970.

Dr. PHILLIP HANDLER,
President National Academy of Sciences, Washington, D.C.

DEAR DR. HANDLER: As noted in the enclosed copy of a letter I sent to the Secretary of Transportation, the Department of Transportation has failed to establish safety standards in the manufacture, operation, maintenance or inspection of school buses.

The safety of the nation's school children is a matter that concerns us greatly and I would like to know if the Academy might be able to suggest minimum safety standards that could immediately be issued. We have been extremely tardy in bringing our knowledge and experience to bear on this question. I would hope that your organization might be able to offer the Department some assistance in this matter.

I look forward to your suggestions on this subject.

With best regards.

Sincerely,

EDWARD M. KENNEDY.

NATIONAL ACADEMY OF SCIENCES,
Washington, D.C., February 11, 1970.

Hon. EDWARD M. KENNEDY,
U.S. Senate, Committee on Labor and Public Welfare, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 28, enclosing a copy of your correspondence to the Secretary of Transportation concerning safety standards in the manufacture, operation, maintenance and inspection of school buses. No one can fail to be concerned over the loss of life or injury to any individual child who is entrusted to the care of the school system. For this reason the nationwide cooperation of both public and private organizations is essential if we are to reduce the failure in this system of transportation.

As your letter to the Secretary indicated, the Department of Transportation has been working for some time on this question. Their study and the work of other organizations have improved our understanding of the causes of accidents and injuries that occur in the transportation of school children. As an example, the National Conference on School Transportation (administered by the National Education Association) has for many years issued guidelines for school bus equipment and for the selection and training of school bus operators. It is our understanding that the Association has scheduled a meeting for this spring to update these guidelines.

Thus a beginning has been made in developing the necessary information that is needed to formulate national standards and guidelines for improving school bus safety. Unquestionably, we must now move ahead as rapidly as possible in applying this knowledge and experience. In this regard we should not overlook the related safety problems involved in the operation of school transportation systems (i.e., the problems of scheduling, loading and unloading).

The National Academy of Sciences, of course, stands ready to assist and advise the Department of Transportation on the problems outlined in your letter. Our Highway Research Board has recently completed studies in the areas of driver education and ambulance design at the request of the Department and would be pleased to make a detailed study of school buses.

I appreciate your interest in bringing this correspondence to my attention and I have transmitted a copy of my response to the Secretary of Transportation for his information.

Cordially,

PHILIP HANDLER,
President.

SPECIAL STUDY: INADEQUATE STRUCTURAL ASSEMBLY OF SCHOOLBUS BODIES—THE ACCIDENTS AT DECATUR AND HUNTSVILLE, ALABAMA

(Figures referred to not printed in the RECORD)

INTRODUCTION

Indications that the structural assembly of schoolbus bodies might be inadequate were found and reported by the Safety Board in a grade-crossing accident which occurred October 2, 1967, at Waterloo, Nebraska. That accident showed that major elements of the schoolbus body had separated cleanly under crash forces. This separation involved high-crash forces produced by the collision between a train and a schoolbus. The separations occurred where fasteners used to assemble many elements of the schoolbus were few and widely spaced. Because no observations of injuries were made, it was not possible to determine whether the spacing of the fasteners contributed to the four fatalities in that accident. Since that time, the Safety Board has reviewed two additional accident reports in which there is sufficient information to relate certain features of the schoolbus structural fastenings to the injuries.

The first of these accidents occurred at Decatur, Alabama, April 23, 1968, and the second at Huntsville, Alabama, November 19, 1968. These accidents were initially investigated by accident research teams organized to provide both engineering and medical investigation by the Georgia Institute of Technology, under contract to the National Highway Safety Bureau. The group is called the Atlanta Medico-Engineering Research Team.

Actions have already resulted from these two reports in areas not covered by this review. The first accident was followed by the passage of schoolbus inspection legislation by the State of Alabama, and the second accident investigation initiated the recall of a large number of brake master cylinders by the General Motors Corporation. This study is based upon evidence of the two reports, and additional analysis of the evidence, including a thorough inspection of the schoolbus body involved in the Decatur, Alabama, accident by Safety Board personnel.

This study will review the examples of injuries in these accidents, explain how the design of joints and fastenings was involved in the injuries and in structural strength of schoolbuses, and compare schoolbus construction with construction of other types of buses which employ more efficient and complete fastenings. The study relates entirely to the type of schoolbus which is manufactured by attaching a schoolbus body to a truck chassis. No review has been made of the integral-body-and-chassis type of schoolbus which constitutes less than 10 percent of total production. The examples in this study involve different makes and models of schoolbuses. Although there are indications that the problems discussed are widespread, the study has not covered all makes and models of this general type. The study will also discuss the factors of cost, safety benefits, and justice factors in the protection of the child passengers involved. Although the number of fatalities contributed to by inadequate or inefficient structural strength of schoolbuses is a relatively small proportion of the national highway toll, the Board recommendations are consistent with the scope of the problem, the need for just treatment of schoolchildren in schoolbus accidents, and the technical capabilities of the schoolbus manufacturing industry.

INJURIES IN THE DECATUR, ALA., ACCIDENT

The accident at Decatur, Alabama, involved failure of the schoolbus brakes at the top of a long hill, and the inability of the driver to control the bus. The bus ran off the right-hand shoulder of the outside of the turn at the bottom of the hill and into a deep, eroded gully. The forward right-hand upper section of the bus body struck exposed tree roots and rocks and a fencepost, while in a partially overturned condition. The forward part of the upper right-hand portion of the bus was destroyed by rearward impact. Four fatal injuries occurred, two near the collapsed forward portion of the bus structure, two at unknown seat locations. In addition, some seats were torn from the floor, seat cushions were loosened from their normal positions, and a variety of injuries were associated with unrestrained passengers thrown from the left side of the bus to the right side. The motion of schoolbus passengers and the floor attachment failures during collisions of this type are typical. Such factors are under consideration by studies of the National Highway Safety Bureau. Thirty-four injury cases were studied in the Decatur accident.

A predominant source of reported injury was the laceration of child passengers by exposed edges of the bus interior sheet metal, including the ceiling, which were raised and opened by the distortion of the upper right-hand front structure of the bus. This area of the interior is shown in Figure 1. The exposed sharp edges of the sheet metal were raised into shapes similar to the edge of a shovel or a cookie cutter. Lacerations were attributed to contact with these edges in the report of the Atlanta Medico-Engineering Research Team:

"The predominant injury pattern was to the face and scalp, with multiple lacerations, abrasions and contusions. . . . Upon impact the bus evidently received a strong longitudinal and tangential force causing the sheet metal panels on the interior bus ceiling to

open up, exposing the children to sharp metal contact. Evidence indicated that a number of the children were injured by this hazard. . . ."

In addition, Board personnel carefully examined these edges, and found a fragment of blue yarn snagged on one of the edges in a place which was not normally exposed. The most probable source of this fragment of yarn was the clothing of some child in the bus; however, there is no basis for determining whether the snagging occurred during the impact or during rescue operations.

The raising of these sharp edges was made possible by the very wide spacing of the screws which were used to fasten the edges of the sheet metal interior roof panels to each other and to the roof bows. Furthermore, as can be seen in the illustration, the panels are connected to each other and to roof members so that their strength is *potentially* a source of added structural strength of the bus. However, the fastening of the panels serves primarily to attach them to the roof bows as a form of cover. The wide spacing of the fasteners does not permit substantial transfer of the structural loads developed in a crash. Thus the raising of sharp edges between fasteners produces a source for injuries and is also a manifestation of poor capability of the joined steel interior panels and bows to act together in carrying the crash load. There is an implication that the collapse of the bus body might have not been so complete if all the ceiling panel joints had held.

An additional indication of the injury potential of the raised edge is seen in Figure 2. This photograph shows an area rearward of the area shown in Figure 1. Here, near the right of the picture, a panel edge is opened and folded forward. The folding could not have occurred prior to the opening of the panel. The necessary inference is that during the crash some object, either a child or possibly a seat cushion, struck the edge after it had been raised, and with an impact sufficient to fold it forward. To produce this folding, the impact would necessarily have been generally against the edge, the direction most likely to have produced lacerations. The bloodstains on the panel immediately forward (to the left in the picture) of the folded edge may or may not have been associated with injuries due to the edge.

It is concluded that the cause of this predominant class of reported injuries was with the inadequate fastening of the roof panels to the bows. The assembly was inadequate in the sense that it was insufficient to prevent separation of the panels from the bows and the raising of sharp and injurious edges under collision conditions.

Figure 3 shows a separation which occurred between the schoolbus body and the cowl of the truck body to which the schoolbus body was mounted. Schoolbuses of this type are customarily manufactured by bolting the schoolbus body onto a truck chassis frame. In this case, the rearward forces placed upon the upper right front of the bus body structure separated the lower part of the schoolbus body from the cowl. At this point the schoolbus body was attached to the cowl by widely spaced bolts, the holes for which are indicated by arrows in the illustration. The absence of distortion around these holes indicates that the bolts failed. This separation may have increased the amount of rearward deflection of the upper part of the schoolbus body.

FATALITIES AND INJURIES IN HUNTSVILLE, ALA. ACCIDENT

This accident occurred when brakes failed on a schoolbus which was descending a hill. The bus ran off the road to the outside of a right-hand curve. The bus rolled over to the left and the rear portion struck a tree which penetrated the passenger compartment at the last row of seats. Figure 4 shows a rear view of the area of the bus which struck the tree. The photograph was taken after the bus had been turned back upright. The right-hand rear seat in which two children were seated was torn out, and the undamaged seat seen at right is the next section forward. One child seated in the absent seat was killed and another seriously injured. The wreckage in the lower half of the picture consists of the rear wall of the bus, the rear door, the rearmost roof bow. Part of the lower portion of the right wall is also shown, but its shape is better seen in Figure 5.

Figure 4 also shows that the rear section of the bus was separated neatly from the forward section, with very little deformation of the next forward section of the bus. This indicates that the forward section of the bus shared only a little in supporting the forces of impact imposed by the tree. The very wide spacing of rivets on the outer shell of the bus can be seen in this photograph. The wide spacing of rivet holes is indicated on the roof bow. Close observation of the illustration showed that the rivets were pulled through the parent material or had pulled through the edge. The ceiling panel, having been separated at the rivets, is simply hanging down. Note that the door is relatively intact, the glass unbroken.

Analysis of the destructive effect in this photograph indicates that only one of the heavier gauge structural elements ruptured through its main section. All the other destruction which allowed the tree trunk to penetrate and destroy the area of the right rear seat appears to have resulted from separation of joints where they were connected by fasteners.

A view of the right rear of the bus is shown in Figure 5. The straight line of cleavage between the rearmost section and the next forward section is especially evident. The rearmost right sidewall below the window line, still flat and undistorted, has been rotated rearward and downward. Separation occurred along the vertical line of fasteners between the rearmost section and the next forward section.

It is most significant that the two "impact siderails," which are major structural members, are still extending to the rear in their normal position, almost perfectly straight with litle distortion. There are three siderails, showing as black bands in the picture. The upper and lower are still in place. The middle siderail remained attached to the panel, but separated where riveted to the forward section of the siderail. Thus both the sidewall panels and the heavier gauge siderails have been neatly separated with little or no damage other than the breakage of fasteners. The rivets or bolts by which the siderail is attached to the panels and bows are spaced approximately 5 to 6 inches apart.

Figure 5 indicates separation with virtually no distortion of either joined portion and is direct evidence of fastening inadequate to develop the potential strength of the structure. Because the separation occurred, the next forward section of the body was prevented from carrying any of the load of impact with the tree. This localized the effect of the tree's impact, leaving the rearmost section almost alone to resist the impact. Thus it is concluded that the tree penetrated more deeply into the rear section of the bus than would have occurred if the fasteners had been sufficiently complete to transfer a significant portion of the load into the next section. The tree, because of the weakness of the fastenings, merely disassembled and crushed the rearmost section of the bus.

The report of the Atlanta Medical Engineering Research Team said:

"The injuries to the three occupants in the rear seats resulted from contact with either the tree, which entered the passenger compartment, or from undetermined portions of the bus structural frame and skin which were forced into the compartment. . . ."

The Safety Board concludes that inadequate or inefficient fastening of structures at the roofline and other locations in the rearmost section of the bus substantially contributed to these injuries, one of which was fatal.

In defining the fastening of structures, no distinction has been made between the heavier structural frame and the skin. It is evident that the panels would lend substantial strength if they were adequately fastened. If the strength of panels is not employed then it would be necessary to use heavier members to obtain adequate strength in the structure. The separation of structure with little or no distortion indicates that neither approach was employed sufficiently to provide adequate strength.

ADDITIONAL EXAMPLES

Additional examples of the separation of bus structure at joints and the raising of sharp edges capable of inflicting injury in the interior of the bus are shown in the photographs of the appendices. These accident investigations did not include sufficient information to determine the relationship of injuries to the failures in the bus construction; however, these photographs illustrate the variety of the failures. A total of four different makes and models of schoolbuses are involved in the Decatur and Huntsville accidents and in the two examples in the appendices. This indicates that the problems of inadequate assembly are not restricted to any one type of bus, but are fairly widespread.

Figure A is an illustration used in the Board's report of the accident at Waterloo, Nebraska. The right side of the schoolbus is shown and a number of clean separations are visible. For example, the roof is separated in large sections at joints. The sheet steel interior panel at the left is neatly separated and shows no effect of having carried a load whatsoever. This disassembly was a result of snagging engagement of the structure by extremely heavy members on the railroad locomotive involved.

Figure B shows a rear view of the same schoolbus struck by the train. This illustration should be compared with the rear view of the schoolbus which was disintegrated by a tree impact in the Huntsville, Alabama, accident, Figure 4. Figure B shows the same phenomenon of neat separation at joints with little or no distortion of the nearby supporting structure. The left wall interior panel is seen best in Figure A. The corresponding outer panel is also relatively undistorted, and the bus structure is separated cleanly along a vertical line.

Figure B also shows clean separation of floor sections. This bus floor was formed by assembly of a number of transverse sections, each of which carried a pair of seats. The transverse sections are flanged at the front and rear and are joined at the flanges by fasteners. All of the transverse sections rest across the chassis frame of the truck to which the schoolbus body is bolted, and thus vertical stiffness is obtained from the truck frame rails. In this case, the rear floor sections were separated neatly at the flanged joint and there is little or no distortion of the flange, indicating that the fastenings were insufficient to provide mutual support. The separated flange was damaged in a later phase of the accident.

Figure C shows the exterior of a schoolbus which was struck on its right side by an automobile in an accident at Atlanta, Georgia. The bus was deflected from its path and rolled over a highway guardrail which penetrated the top of the bus. The guardrail was somewhat flattened and reduced in height. Separation between the roof panels and upper frame rail has occurred exactly along the line of fasteners. This sep-

aration occurred both forward and rearward of the line of penetration of the guardrail. At the rear separation, an entire corner of the roof panel has been separated.

Figure D shows the interior of the same schoolbus as Figure C. The localized penetration of the roof produced a clean separation between the roof panels and ceiling interior panels and sharp edges are presented in the interior as in the Decatur, Alabama, accident. The illustration shows the sharp edge only on the near side of the separation; however, there would necessarily be another sharp edge in the rear portion.

INADEQUACY OR INEFFICIENCY IN RIVETED JOINT DESIGN

In the foregoing discussion, riveted joints were referred to as "inadequate" when there was an insufficient number of fasteners to prevent the development of sharp edges when the fastened sheets were subjected to crash loads. The technical term for riveted or bolted joints which fail under loads much lower than can be attained by a sufficient number of fasteners is "inefficient." The "efficiency" of a riveted joint is a percentage number, the percentage of the strength achieved by the joint where 100 percent represents the strength of the parent metal. Handbook data[1] for certain kinds of riveted structural joints indicate that efficiencies of 50 to 94 percent can be attained by careful design and construction. The lower values of efficiency are obtained by using a single row of rivets whose spacing is carefully calculated at the optimum. This, however, is low-cost construction. Much higher percentages of efficiency and strength are obtained for such structures as boilers and air compressors by using three or four rows of rivets.

The efficiencies of the joints seen in these illustrations of schoolbus design appear to be very low, indeed. In typical riveted joints, an efficiency of about 60 percent is reached when rivets are spaced at a distance between centers approximating 2½ times the diameter of the rivet. In the examples of schoolbus construction cited, distances between rivets or other fasteners ranged between 4 inches and 10 inches, and no rivet diameters were larger than ⅜ of an inch. Thus, the actual spacing between rivets varied from approximately 10.5 times the rivet diameter to as much as 25 times the rivet diameter. This was sufficient to resist wind and weather, but the joint could contribute little to structural strength.

The efficiency of such joints is subject to calculation and can be maximized. The subject is covered by standard references such as *Mark's Standard Handbook for Engineers*. It would appear that such calculations were not used in connection with the design of the joints in these schoolbuses.

SCHOOLBUS STRUCTURE VERSUS STRUCTURES USED IN INTERCITY AND TRANSIT BUSES

Schoolbus bodies are primarily constructed of steel joined by welding and riveting and bolting and, in some areas, by the use of sheet metal screws. Buses used in regular passenger service such as transit buses or intercity ("over-the-road") buses, are more likely to be constructed of aluminum external sheets formed and riveted to underlying structural members of aluminum or steel. Substantially higher efficiency in riveted structural joints is apparently achieved in these designs.

Figure 6 shows a comparison between a typical city transit bus and one type of schoolbus. More strength of joints is evident in the transit bus in similar structural areas.

Figure 7 shows a comparison of the external surfaces of a typical intercity bus versus the same portion of the body in a typical schoolbus body. As can be seen, far more fasteners are used in the intercity bus. Board personnel have examined such intercity buses and studied reports of damage to such buses in a number of severe accidents and have not found the type of disintegrative damage and gross separations at fasteners such as that exhibited by schoolbuses.

Figure 8 shows a comparison of the external fastenings at the driver's seat location for a transit bus and another type of schoolbus. As before, it is evident that far more rivets are used to fasten the panels in the transit bus structure than in the schoolbus structure.

The economic significance of this fully joined construction is that the total weight of metal employed in the intercity and transit buses is used efficiently to create an integrated structure able to resist impact damage. The schoolbus structures, on the other hand, rely upon steel bows and columns connected to various lengthwise members to which the steel panels of the side, roof, ceiling and interior panels, and side impact rails are attached by riveting or by the use of sheet metal screws. In general, these panels act to keep out weather or hold insulation in place, but do not develop a sufficiently high proportion of the available strength to be regarded as more than covering material. The strength of the panels reduces shake and vibration so long as the relatively few fasteners hold, but contributes little to the ultimate crash strength.

It is to be recognized, of course, that the schoolbus bodies are substantially lighter in total weight than are the intercity or transit bus bodies. Also, schoolbuses typically carry a larger number of passengers in a smaller space than do intercity buses. These considerations do not change the observation that these schoolbus structures are very lightly joined as compared to intercity or transit buses. It would appear that, if anything, the lighter weight of the schoolbuses would require greater efforts to achieve efficient joints and thus employ all the material to resist structural disintegration.

It should also be noted that the Safety Board has not reviewed or studied all of the schoolbus bodies now being manufactured. There may be exceptions to these generalizations as to inadequate and inefficient joint fastenings. Also, it should be noted that some types of collisions may not place stresses on panels and joints of a type which would reveal these problems.

COSTS AND SAFETY BENEFITS OF EFFICIENT SCHOOLBUS STRUCTURES

It appears that the strength of many joints in schoolbus bodies could be increased by factors of three or four simply by increasing the number of rivets or other fasteners used. In many cases, this could be done by drilling additional holes and adding rivets after the schoolbuses have been manufactured. It would appear that between two to five times as many fasteners could be employed, dependent upon the existing degree of fastening.

The cost of labor in assembling schoolbuses would be increased by increasing the number of fastenings; however, that factor might be reduced by employing mechanical methods of placing rivets which might be practical if larger numbers of rivets were used. The weight of the bus would not be significantly increased by the added fasteners. The question is immediately raised as to whether the benefits would be worth the cost and whether these are priority changes in the perspective of the total highway losses.

The question of cost arises because of a unique characteristic of structures which makes it possible to assemble such a vehicle body without employing high-efficiency joints. That characteristic is the fact that almost the maximum degree of stiffness, freedom from vibration, and watertightness can be obtained in a structure with only a fraction of the number of fasteners required to produce maximum protection when a crash impact occurs. Thus, the doubling or tripling of the number of rivets or other fasteners needed in a bus of this type is not a necessity for normal operation, but is required only to obtain crash protection for occupants. The amount of added assembly cost to achieve the increased structural strength is unknown, but it could be estimated by detailed studies. The question is, are the safety benefits worth the increased cost of assembly which would be necessary?

It is evident that the number of lives to be saved annually by such structural changes does not exceed 20 to 30 children. The number of injuries to children prevented is believed to be much larger, but cannot be estimated. However, theoretically it should be possible to determine the total cost of improving the structural construction and to estimate some type of dollar loss to society represented by the lives of the children saved and the injuries prevented. This type of calculation balancing dollar cost against lives of children has not, so far as can be determined, been attempted in the safety field, although cost-benefit evaluations are frequently urged as a form of insurging economy in policy decisions. It might well be that, in this particular case, it could be shown that the cost of saving lives by fully joining schoolbus structures might be relatively high per life saved.

A second question concerning this proposal is what priority it should enjoy as a project of DOT compared to other methods of reducing highway fatalities. The lives potentially savable by stronger schoolbus structure is less than 0.1 percent of the total national fatality toll. Thus it can correctly be said that among the various safety efforts which might be applied by such agencies as the National Highway Safety Bureau, efforts to establish this particular correction would be of low priority.

STRUCTURAL IMPROVEMENT PRIORITY BASED UPON JUSTICE AND EQUITABILITY

If the priority of schoolbus structural improvement is low in terms of the total national needs in which DOT and the National Highway Safety Bureau must function, schoolbus fatality and injury is nevertheless a predominant concern in two areas, the schoolbus manufacturing industry and schoolbus operators and users. In the schoolbus field, the degree of effort for safety has not been traditionally determined by cost/benefit considerations, but by the unique need for protection of the innocent children who ride schoolbuses, and who are almost totally unable to assure their safety by their own actions. Schoolbus riding children are seated within the buses usually because State laws require schooling, the children are not there totally on their own volition. Society has established many regulations for the safety of school children which may appear exaggerated in other fields. For this reason, it appears that the employment of structural assembly methods in schoolbuses which are less efficient than methods used in other types of passenger buses should be considered primarily a question of justice to schoolbus riding children. This consideration of justice, in the Board's view, should override the question of whether the cost of complete assembly could be demonstrated to be less than the dollar value of the lives saved.

A second consideration in the need to attack this problem is a possible deleterious effect on the structural safety of intercity buses and transit buses if inadequate assembly is allowed to persist in the schoolbus field. If schoolbuses are not corrected, might it not also be argued that intercity and transit bus manufacture were justified in re-

[1] Mark's Standard Handbook for Engineers, 1968 Edition.

ducing the efficiency of joint construction? There is an implication that it might be possible to reduce the number of fastenings in intercity buses to a level consistent with freedom from shake and vibration without respect to crash impact performance. If that were done, the phenomena of complete separation of portions of the structure might occur in other types of buses as well as in schoolbuses. It is not clear that such a reduction in strength would even be considered in the other bus fields, but it seems unwise to tolerate the weaknesses in schoolbuses when the strength of other buses is provided voluntarily.

A question of fairness in some competitive operations is also involved. Schoolchildren can be carried on longer distance excursions, including intercity trips, either by schoolbus or by chartered buses of the intercity type. Long distance trips by schoolbus are often authorized by local school boards in the interest of direct cost savings. It costs less to operate a light schoolbus. Schoolbuses are also sometimes used by the military services for other than local services in preference to the intercity type of bus, again on an apparent direct cost saving basis. The schoolbus type of construction, however, does not appear to be designed for continuous high-speed over-the-road service. Most schoolbus usage involves local service, speeds below top highway speeds, and short duration of passenger occupancy. It may be that some schoolbus manufacturers have adopted the methods of minimal joining under the assumption that schoolbus crashes will occur at low speeds. If that is the case, the occupants of schoolbuses exposed to long high-speed travel may be exposed to greater risks than are occupants of typical intercity buses. The generally low fatality rate in typical local schoolbus service may not apply when the same buses are used for intercity service.

CONCLUSIONS

As a result of this study the Safety Board concludes that:

(1) There have been crashes in which the disintegration of the structure of the schoolbus and the lack of mutual support of structural parts are evident. The failure of the structural parts to support each other in crashes has contributed to injury and fatality and is an implied threat in future schoolbus crashes.

(2) Interior panels present exposed sharp edges because the widely spaced and inadequate fastenings at joints fail or allow edges to be raised between fasteners in schoolbus crashes. Such edges are a source of injury to passengers.

(3) The joints employed to join structural members and potential load carrying panels in schoolbuses are often inadequate and "inefficient" in the technical sense because they employ relatively few fasteners and thus do not develop more than a small fraction of the structural strength which is potentially available.

(4) Other types of buses, such as intercity buses and city transit buses, exhibit much more adequate joining of structural load carrying panels than do schoolbuses. This indicates that more adequate fastening of schoolbus structures is technically feasible.

(5) The question whether the increased cost of more adequately fastened schoolbus bodies would be repaid in reduced fatality and injury is difficult to determine; however, the Safety Board believes that adequate joints are necessary in justice to the innocent schoolchildren passengers.

(6) The correction of this problem is not a high priority matter in relation to the total numbers of national highway losses; however, it is an important matter of justice in the field of schoolbus manufacture and operation. Not only is it unfair to children to allow the sources of injury from inadequate joining to continue, it is also undesirable to allow a source of injury to continue in one field (schoolbuses) when it is voluntarily controlled in another field (intercity and transit buses).

RECOMMENDATIONS

The National Transportation Safety Board recommends:

(1) That the National Education Association and the schoolbus manufacturing industry adopt a policy of using fastening methods which inhibit the raising of sharp edges and which provide much greater efficiency of joints to prevent the disintegration of schoolbus bodies. This policy might well be implemented by voluntary specifications adopted by the National Education Association and used by schoolbus purchasers and manufacturers.

(2) That the National Highway Safety Bureau include in its accident research investigations and studies a search for evidence of the nature of schoolbus disintegration and the significance of the disintegration phenomena in injury causation.

(3) That the National Highway Safety Bureau continue its consideration of the recommendation concerning schoolbus safety made by the Safety Board in its report of the grade-crossing accident at Waterloo-Nebraska, which occurred October 2, 1967.

CULEBRA

Mr. SCOTT. Mr. President, the continuing controversy surrounding the U.S. Navy and the island of Culebra, a part of Puerto Rico, is the subject of an analytical report prepared for the Governor of Puerto Rico, by Dr. Robert A. Kilmarx, Georgetown Center for Strategic Studies, and released August 22. Although I am not wed to the specifics of Dr. Kilmarx's analysis, I do support its main thrust of discontinuance of the use of Culebra as a target.

The citizens who live on the tiny island municipality of Culebra have requested the U.S. Navy to terminate its target practice trainig using Culebra as a target for live shells, bombs, and machinegun bullets.

Dr. Kilmarx's analysis is intended to provide independent advice about naval requirements and use of firing ranges at and near the Culebra Island. The conclusions and recommendations of the analysis are qualified as tentative, indicating that future developments could alter them.

It appears that the ultimate resolution of this matter will be the end of naval use of Culebra as a target for shelling and bombardment.

The time schedule for this discontinuance will have to be worked out between the island and the Navy with consideration given to the problems and difficulties of both parties, in addition to the humanistic consideration for the American citizens making their homes on Culebra.

T. D. ALLMAN'S REPORTING

Mr. CHURCH. Mr. President, until he was declared "persona non grata" by the Lon Nol regime in Cambodia, T. D. Allman was a major source for American readers of on-the-spot information about current events in beleaguered Cambodia. His reporting—accurate, candid, balanced, inquiring—was in the best tradition of journalism that the Indochina war has spawned.

Two of his last dispatches from Phnom Penh vividly detail life in war-torn Cambodia. For example, his comments about arms peddling on the local black market bring to light some of the sordidness our military presence in the region has created. Ironically, when the United States threatens to disengage, the dependent profiteers urge Uncle Sam to remain.

I ask unanimous consent that two articles by T. D. Allman be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

LAL AND BAL LOVE DICK

(By T. D. Allman)

Lal and Bal are two rather plump brothers from Bombay who would appear to make a modest living from a small cloth shop near Phnom Penh's central market. Their shop displays silk, cotton, nylon, underwear, shirts, rain coats and even a few war surplus Eisenhower jackets.

But Lal and Bal, should you wish, can also provide other wares: Would you like to buy a genuine Buddha head stolen from the ruins of Angkor Wat? Or an M-16 rifle peddled by a South Vietnamese MP to buy souvenirs for his family back home? Or perhaps you really want a few tons of rice or salt? Or to change into dollars a few hundred thousand Cambodian riels?

Like dozens of other Indian, Chinese and Cambodian entrepreneurs in Phnom Penh's black market, Lal and Bal are there to help you. They follow the laws of Adam Smith—supply, demand, profits—unpolluted by any contaminants like social responsibility, patriotism or political loyalties.

Like others, these middlesized, middleaged middlemen claim the Cambodian war has hurt business. It does not seem to be hurting too badly. They just bought an apartment house in Hongkong. Lal heartily dislikes Bernie Cornfield. "I lost $75,000 in his business."

"Actually," he says, "things haven't been good since the war started and the VC reduced their buying here. The Vietcong were good businessmen. They paid their bills on time and didn't bargain too hard. In the good old days, a little old Vietnamese lady, dressed in rags, would come in, take out $5,000 from her blouse and change it into riels. The VC, however, preferred mostly to work through the Chinese. You can trust them. I wouldn't know a guy's name, or remember his face, but I would give him a few million riels, and a week later the equivalent in dollars would show up in my bank account in Hong Kong. Mutual confidence is the foundation of all business relationships."

The communists apparently paid hard currency for soft riels to pay for the rice, medicine and other supplies they bought in Cambodia during the days of Prince Sihanouk. "In most countries the communists just come in and take what they want. Sihanouk made them pay for things. That was why the riel was so stable."

According to Bal ready cash was plentiful in Sihanouk's time because of government corruption. "A man would buy a job with the customs and turn a nice profit. Now all these people are out of jobs, or at least trying to looking honest."

Is the new government corrupt?

"They haven't had enough time," answers Lal a little regretfully. "But time heals all wounds as they say."

Despite the war, the communists continue to make some purchases, mostly salt, rice and medicine.

"I've got a little racket going right now I'd love to tell you about," says Bal. "I made 500,000 riels (about $6,000) on it last month. We could even use a journalist in the operation. But I'd better not tell you for a few weeks . . ."

Who are the buyers?

"Our friends in black pyjamas"

Is it legal?

"Is anything worthwhile legal in this life?" demands Bal.

The two brothers do good business in guns thanks to South Vietnamese soldiers. About twice a week, they say, the soldiers come in and sell their weapons.

Who are the biggest purchasers of guns?

"Well, there's a Cambodian," says Lal, "who I bet is in turn selling the guns to s-o-m-e-b-o-d-y." He takes a sip of tea. "He comes in regularly and buys up the market." Interjects Bal: "Last week he bought a pile of guns, and just as he was about to drive away in his sports car, he said, 'Do you have anything else?' So I pulled out this Japanese laughing bag that my kid and brought back from Hongkong. He offered 2,000 riels for it (about $22) if you can believe it. I told him 3,000. He said, 'No, things are tough right now. The VC shot down one of my helicopters over Siemp Reap last week and I lost a whole shipment.'"

"We didn't ask what the shipment was," says Bill, cutting his index fingers across his throat. "We want to stay alive."

On sale at the ferry point of Neak Leong, the most colourful black market, are US mosquito nets and insect repellent, Dutch canned ham, British cigarettes, Vietnamese soap, Portguese sardines, Japanese fruit juice, Chinese cigarette lighters, Russian Vodka and Cambodian girls.

The oddest customer in the black market, however, is the US embassy in Phnom Penh. Recently, according to reliable sources the embassy sent an agent into the market and bought an M-16, for the bargain price of 6,500 riels. This was part of an effort to gather details on the monumental black market drain on US supply facilities in Southeast Asia.

From the door of their shop, Lal and Bal look on the kaleidoscope of Southeast Asian turmoil placidly. "Things aren't going too well now," says Bal. "But I have faith in the Americans. They have brought us prosperity. The Nixon Doctrine and popular opinion may cut down on things a little, but I know America will find a way to stay in Southeast Asia."

NOTES OF A PERSONA NON GRATA

(By T. D. Allman)

There was the Cambodian shoeshine boy who, when asked if he preferred the new government or Prince Sihanouk, replied in perfect French, "I don't discuss politics."

And the Vietnamese, hostess, multilingual in Khmer, Vietnamese, French, Chinese, English and Thai, who was explaining why she carried a *laisser-passer* from the police allowing her to work after curfew. "I belong to a special profession," she said.

In the central market, insects writhe for sale in wicker baskets: they are used to sweeten soups and eaten as casual snacks.

Phnom Penh has a classical ballet, but no taxicabs, an olympic stadium but water that is not safe to drink. Its gardened boulevards are the cleanest and most pleasant in Asia, but more than 50,000 interned Vietnamese civilians must use the Mekong River as a toilet, wash basin and source of drinking water.

Like most Asian cities, the Cambodian capital is new. Traditional Asian life produced rice, war and the occasional royal compound. It took the Europeans, and a wave of Chinese immigration in the 19th century to give Cambodia its first real city since Angkor Wat was sacked in 1353. Historically, the city has three nuclei, only one of them Cambodian. The first is the royal palace, even in republican Cambodian a symbol of the city's primacy and one of the treasures of traditional Khmer architecture with its solid silver pagoda and a graceful stepped gate. It was designed by a Frenchman in the late 19th century. The second is Chinatown. The third is a small artificial hill from which radiate several of Phnom Penh's main boulevards. The city takes its name from the hill. Phnom Penh, in Khmer (the Cambodian language) means hill. Penh was a woman who several hundred years ago decided to build the hill, and top it with a Buddhist temple.

Phnom Penh is bright and bustling in the morning. By noon, the sun has become brilliant, and the government offices, even now, during the war, close down for the day a short time later. Everyone sleeps during the afternoon. Toward five the sun sinks behind a dust bank or a grey monsoon cloud and turns into a yellow orange disk. In either case, the town is diffused with red and orange light, the dying sun reflected in the yellow water paint that covers every French style building absorbed in the red tiles of the city's roofs. This is the time when the whole city seems to be chatting. Europeans on the roof of the Hotel Monorom look out across the flat rice fields to the hills behind. There are, as the saying goes, Communists in those hills, and even much closer. But Phnom Penh now seems less changed by the war that it did two months ago. The ugly anti-Vietnamese posters have come down, the people are less nervous. The Cambodians are replacing the sandbags around the public buildings with smart little guard posts. The evening promises good food, oblivion if you want it, or sex.

After dinner and dancing, the choices are varied: Madame Chum's for opium smoked with friends under a blue light, or pot on the hotel balcony. Some, after a day of war, still want sensation, not numbness. At every corner, the ladies of the night sit in wait. They can ambush you, especially if there are five or six of them and the street ends in a barbed wire barricade. "It was easier just to give in," confessed one European the next morning. And then, if you resist the temptation too well, the cyclo boys will gossip. They are the crows of Phnom Penh. Speaking broken French and English, they hop from the Royale to the Monorom to the Ministry of Information to the briefing to the P. T. T. to Madam Chum's to La Taverne and La Venise. From them you can learn: the sex habits of the last Ambassador of———, the latest black market rate, the name of the chief of Secret Police, what the explosion last night on the other side of town was, that in Phnom Penh one has no secrets, except important ones.

The Street names: some of them have been changed. The Boulevard Norodom Sihanouk is the Boulevard 18 March 1970, the day the Prince was ousted. The Boulevard Mao Tse Tung has become the Avenue de la Liberte. The Cambodian government wanted to rechristen it Nixon Avenue, in thanks for the April 30 invasion, but the low profile prevailed.

The Vietnamese quarter is now filled with Cambodians who have taken over Vietnamese property. There were 250,000 Vietnamese, 250,000 Chinese and only 150,000 Cambodians in Phnom Penh before. Now there are few Vietnamese, except those in prisons and in the camps.

If, for Cambodians dissatisfied with the village, Phnom Penh is a way up, for some foreigners it is simply a way out. Near the insects in the central market, one can buy lotus seeds. Cities, in a way, can be judged by the type of expatriates they attract. Until the war began, Phnom Penh was home for nearly a score of simpering, scraping Europeans, mostly Europeans, who made a living in activities ranging from playing badminton with Prince Sihanouk to smuggling. Most were well known for their kinky sex habits. Swiss bank accounts and an uncanny ability to shift with the prevailing political wind. The most clever have survived, and still work for the government, the rest have taken their sports cars and Swiss bank books and disappeared.

On March 17, 1970, a Western ambassador who had been in Phnom Penh too long, and fallen prey to all its insidious, comfortable, gentle little corruptions looked out of his office window at the immaculate boulevard below. "Things will never change here." he said. "The place is charmed." It can bewitch one, even when the war is 10 kilometers away. One can leave dead children on the ground and half an hour later be eating osso bucco at La Venise where the talk is all about money, France and who is sleeping with whom and find it rather exciting.

Then, reality intrudes, once in a while. It was somehow incredibly more shocking, a few weeks ago, to see a little Chinese girl crushed under the wheels of a car on the gardened Avenue Norodom than to see half a dozen children dead at Takeo. It was so incongruous.

The jungle of war and the jungle of mildew and rotting woods and damp river banks is all around Phnom Penh, pushed back a little every day by the South Vietnamese gunships and American bombers and gallons of yellow water paint and herds of young boys and girls sweeping the streets. The jungle encroaches during the night, and then gets pushed back, like a cuticle, the next morning.

The insects and the dampness and war in the end conquer everything in Cambodia. The Americans are coming, going, everywhere. They have little offices in the Cambodian ministries, and Army officers in civilian clothes wander through the Ministry of Defense. They fill one or two of the recommended restaurants, the only ones wearing short sleeve shirts.

The trains no longer pull out from Phnom Penh station for Battambang and Sihanoukville. There is no place now to go for weekends. The city is isolated in its charm and sophistication.

The isolation, geographically, is new. But Phnom Penh, designed by Frenchmen, built by Vietnamese artisans, operated for a profit by Chinese businessmen, governed by a few Cambodian civil servants, its eyes always more firmly fixed on Paris, Saigon or Peking than on the surrounding provinces from which it draws its wealth, has always been a place apart from those surrounding provinces.

These people, the Phnom Penhoise, are not the stolid, toiling peasants who are the Cambodian nation. Rather, they are animated, rather lazy, dissatisfied. They hated Sihanouk for what he could not give them. They were the core of support for the new government: restless students, low-paid civil servants, the urban underemployed. Now they remain the government's chief source of support, and of potential opposition. But war, if it has ravaged the countryside and left Phnom Penh to gaze more than ever inward on itself, has given the town dwellers a sense of participation. The youths affect guns and fatigues, the students drill, the big merchants give small donations to the Red Cross. In many ways, it is their war, declared out of boredom last March in front of the Vietnamese Communist Embassies.

And for this reason there could be the core of a class war in Cambodia if the Communists were clever enough and nationalism did not intervene: but not the war of capitalist against proletariat, the war of the towns against the countryside.

ARTICLES BY RICHARD WILSON AND SMITH HEMPSTONE

Mr. SCOTT. Mr. President, a recent edition of the Washington Evening Star contains two excellent articles, one by Richard Wilson and one by Smith Hempstone. I ask unanimous consent to have both articles printed in the RECORD.

There being no objection, the articles

were ordered to be printed in the RECORD, as follows:

THAT GREAT GENERATION NEVER WAS LOST

(By Smith Hempstone)

We are, we are told by teen-age philosophers and their sycophants, privileged to be in the presence of a great generation. And, of course, they are right.

We have only to look about to see the faces of that generation which truly can be called great. But you will not find its members on the campuses or among the street people or in narcotics-sustained rural communes. You will find them putting the finishing touches to their careers, bouncing their grandchildren on their knees or—the unlucky ones—incarcerated in old folks' homes by a society which scorns its aged.

One of the characteristics which has distinguished man from other animals long extinct is his capacity to adapt to change. It is this genius which has given him dominion over all the earth and its waters, and thrust his questing spirit to the fringes of outer space.

No generation has shown a greater willingness and capacity to adapt to change, channeling man's exploding knowledge into the conquest of new horizons, than those men and women born in the waning years of the last century and in the first decade of the present century.

These tough-minded Americans fought a grisly world war, kept their balance through the heady years of the 1920s and endured a grinding depression. They knew what it was to be hungry and cold and—because they knew—vowed that it would never happen to their children or their children's children. And it didn't.

When that peace for which so many had died collapsed in the face of a twisted tyranny, they didn't cringe: They went out and, at the cost of much blood and tears, kicked the stuffings out of Mr. Adolf Hitler. And when that nightmare ended, they had the compassion to expend billions of dollars to help their former enemies reconstruct their lands and their lives.

Buffeted by an ideological hurricane, they spurned the easy solutions of fascism on the one hand and communism on the other, believing that, for all its distortions and inequities, democracy remained the one road which free men could travel to a just society.

Born into a world where education was the privilege of the few, they made it the right of the many. They fostered that responsible unionism which has given those who work with their hands a place in our economic sun without parallel in human history, reducing the working day by a third while doubling per capita output.

In the field of health, they virtually eliminated the epidemics of typhus, diphtheria, smallpox, scarlet fever, measles, mumps, polio and tuberculosis which had ravaged their youth, increasing life expectancy by 50 percent. Meanwhile, venereal disease, which had been virtually stamped out, again has become epidemic; and that can hardly be pinned on septuagenarians.

Socially, they clung to and expanded the American dream of an open society which gauges a man's worth by his individual qualities rather than by his accent or antecedents. Inheritors of a legacy of unthinking racism, they moved belatedly, slowly but surely to extend to black Americans whose rights and privileges which are and should be their heritage.

They placed books, music, telephones, radio, television and automobiles, things which—when properly used—enrich the lives of men, within the reach of all. They gave unstintingly to their children and grandchildren, making the present generation of Americans the tallest, healthiest and perhaps the brightest—if not the wisest—in this nation's history.

Having split the atom, they put it to work for the good of mankind, preserving in tumultuous times that fragile nuclear peace upon which the life of the world depends.

Because they were neither angels nor prophets, they made mistakes. They left some tasks unfinished. They began others which might better have been left undone. But in the main, they intended well and they did well, leaving this country and the world better places than they had found them.

If the tantrum tots of today succeed in channeling their inner chaos to construct a more perfect union, they will be building upon the foundation laid by a generation, mistakenly called lost by Gertrude Stein, which never copped out, never stopped trying, never gave up believing.

CRIES OF REPRESSION REFLECT INVERTED LOGIC

(By Richard Wilson)

Repression has now become the favored word for all efforts to restore discipline in a disordered society. Look through the writings of the new and old left, listen to the college presidents and professors, harken to the students and hear the ugly word repression ringing down the centuries as the cruel weapon of the oppressors.

It is repression if a college president calls in the police to restore order when the criminal laws are violated by rioters whose only visible purpose is to disrupt the educational process.

It is repression if Congress passes a law, and the Preident signs it, to hold in jail those deemed by careful judicial process to be imminently likely to commit another crime if released on bail because they have done so before.

It is repression when a vice president speaks out openly expressing the convictions of many millions that the practices of the news media overemphasize and glamorize dissent and disorder.

It is repression when the President of the United States refuses to be swayed by the advice of college presidents that he let student opinion control his policies.

All is repression, in fact, if it is a rejection of the nonnegotiable demands that the nation be reorganized forthwith on the lines desired by the residual legatees of the affluent society who toil not but dislike their prospective inheritance.

The latest gambit is that it is probably true that repression does not exist as an instrument of Washington's policy, but because some of the students and some of the blacks think it exists, their belief is a reality which must be dealt with. Reality or pretense?

A certain number of blacks not long ago pretended to believe that the government of the United States was preparing unused military installations as concentration camps in a studied program to wipe out the Negro race in America.

A distressingly large number of students and professors have "believed" the pretense that the Nixon administration, and particuarly Vice President Agnew, were studying a scheme to call off the 1972 presidential election, presumably for the purpose of converting the country into a dictatorship under Nixon.

The pretense is believed that Nixon, in spite of a civil rights record which in another presidency would have been regarded as activist, is anti-Negro. The record is simply ignored by indulging in polemics on the Nixon-Thurmond political relationship which is, in fact, resulting in the irreversible desegregation of the public school system in the South.

So far as the campuses are concerned, Nixon's policy is the opposite of repression. What he has been trying to get across for the past two years is that the responsibility lies with the university administrations and he will not intervene with the power of the federal government.

It is true that Nixon is attempting to repress crime and, along with a large majority of Congress, has implemented measures which may prove impractical. The nation will find out if they are impractical by the way they are administered in a tryout in one of the major crime areas of the country, the District of Columbia.

Alexander Heard, chancellor of Vanderbilt University, and President James E. Cheek of Howard University apparently wish policy to be based in considerable part on the pretense that repression does exist as an instrument of national policy.

This essentially insincere attitude can be compared to asking a parent to pay attention to the teary remonstrances of a child who feels repressed on being ordered to bed. The way he feels about it is the reality not his need for sleep.

Much of this kind of inverted logic runs through the Heard-Cheek report on campus unrest, but much more in their hurt response to Nixon's rejoinder that they have placed the blame in the wrong place.

The federal government is not running the colleges and universities, and that is a good thing. Messrs. Heard and Cheek are not meeting with much success in their effort to pass their troubles on to Washington. But it is not surprising they tried to do so. Everyone else does.

RESOLUTIONS BY ASSOCIATION FOR EDUCATION IN JOURNALISM

Mr. FULBRIGHT. Mr. President, the Association for Education in Journalism recently held its 53d annual convention at the American University. The AEJ is the major organization of professors and others involved in the teaching of journalism.

Two of the resolutions adopted by the AEJ at this meeting are, I think, of particular interest and significance and I would like to call them to the attention of the Senate and the public.

One resolution, referring to "the current spate of repressive language against the American press," condemns "in the strongest possible terms the infringements on those media freedoms being pursued under the leadership of President Nixon and Vice President AGNEW."

A second resolution condemned the administration for distorting information about the war in Indochina; for attempts to suppress responsible discussion of war in news media; for building secret files on war reporters; and for employing spies impersonating newsmen.

Mr. President, I ask unanimous consent that the text of the resolution on press freedom and an article on the AEJ convention which appeared in Editor and Publisher magazine, August 22, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY AEJ

The text of the resolution adopted by the Association for Education in Journalism:

"Whereas the current spate of repressive language against the American Press, led by Vice President Spiro Agnew, constitutes in its intimidation and harassment a direct attack on the freedoms assured under the First Amendment—freedoms of speech, press, petition, and assembly; and,

"Whereas the present wave of repression is formidable for its sources among high officials, and for its pervasiveness at national, state and local levels and across the executive, judicial, and legislative branches; and,

"Whereas similar periods of repression in American history—such as the 1793 Alien and Sedition Law, the abolitionist period, the

years during and just after World War I, and the McCarthy era—can be recalled with general disgust and profound national embarrassment; then be it therefore

"Resolved, that the Association for Education in Journalism reaffirms its faith in the freedoms guaranteed by the First Amendment and it condemns in the strongest possible terms the infringements on those media freedoms being pusued under the leadership of President Nixon and Vice President Agnew."

PRESS INTIMIDATION CONDEMNED: TEACHERS REPRIMAND NIXON AND AGNEW FOR HARASSMENT

Several hundred of the nation's journalism teachers sent President Nixon and Vice President Agnew to the principal's office this week to be reprimanded for bullying the news media.

A formal resolution adopted by the members of the Association for Education in Journalism, in annual meeting in Washington, condemned "in the strongest possible terms" the infringements on First Amendment freedom "being pursued under the leadership" of the White House.

Deploring the spate of repressive language directed at the American press, amounting to intimidation, the educators likened it to the periods of the Alien and Sedition laws in the early days of the republic and the McCarthy era of the 1950s.

The original text of the resolution named only the Vice President but an amendment adding the President to the condemnation carried by an overwhelming voice vote.

WAR NEWS DISTORTED

A second resolution condemned the Administration for distorting information about the war in Indochina; for attempts to suppress responsible discussion of the war in news media; for building secret files on war reporters; and for employing spies impersonating newsmen.

AEJ urged its members to promote discussion and investigation among students in respect to the consequences of the repressive practices on American society.

If they didn't already know it from doing their homework, journalism teachers learned in Washington that there is a wide difference of opinion among members of the press on whether the news media are fulfilling their primary responsibilities to the public.

Much of the time at the 53rd annual AEJ convention at the American University—the first time the group has ever met in the nation's capital—was given to discussion of the criticism of journalism.

TWO SIDES TO CRITICISM

The professors heard Ben Bagdikian, national editor of the *Washington Post* and a well-known "conscience" of the press, call for a more definite policy of allowing editors to select the news, regardless of pressures from radical demonstrators and creators of "pseudo events."

Then Norman E. Isaacs, past president of the American Society of Newspaper Editors, disagreed with Bagdikian's premise and advocated establishment of a press council here similar to the one that keeps tabs on journalistic shortcomings and outrages in Great Britain.

Despite present opposition, Isaacs said, "we may have the beginning of such an institution within four to five years." He has found support for it among many editors and some publishers, but he admitted the creation of a press council may be difficult because of the reluctance of people of stature to assume the task. Isaacs said he had encountered this problem in initiating the idea in Louisville where he has been executive editor of the *Courier Journal* and *Louisville Times* and has conducted a daily "beg your pardon" department where corrections are made promptly, as well as an ombudsman service to handle readers' gripes.

"The Nixon Administration and the Media—Professional Perspectives" was the title of a general session where the teachers became aware quickly that there are two sides to the story of whether the criticism directed at the press is justified.

Some speakers from the press maintained that the Administration had effectively intimidated the news media; others held that the attacks by Vice President Agnew and remarks by President Nixon and some of his intimate advisors were "right on target."

FOREIGN POLICY BRIEFING

The association's gathering began Sunday with 500 attending a State Department reception where a huge "off the record" sign hung overhead. On Wednesday evening the delegates went to the White House for a reception, little more than 24 hours after the President had paid a call on the editors of the *New York News* in New York City in another of his planned visits to news media offices. Herbert Klein, director of communications, greeted about 800 AEJ members and guests in the President's name. He said he was unable to be there.

ERRONEOUS IMPRESSION

Michael Collins, the astronaut who is assistant secretary for affairs, greeted the teachers at the State Department. In his remarks he said there is an erroneous impression abroad of the department being remote, "as if it is a space capsule on the other side of the moon."

The State Department, Collins corrected, is always open to new lines of communication with the public.

Dr. Ray Cline, director of the bureau of intelligence and research, briefed the visitors on the Administration's foreign policy. He said he favored the issuance of visas to journalists to go to North Vietnam, Red China and Albania.

The reporting in the American press, he said, constitutes one of the major sources of information for the State Department.

Asked for his personal opinion on the use of the Attorney General's guidelines for subpoenaing newsmen to obtain information, Cline replied: "I would rather take a reporter to lunch than subpoena his notes, which nobody could read anyway."

In a reminiscent introduction to his formal talk, George Reedy, a White House press secretary in the early days of the Johnson Administration, said he believes that reporting is more accurate and more informative today than in pretelevision days.

A "DELIBERATE" EFFORT

Les Moeller, Iowa University, chaired the panel session where Senator George McGovern of South Dakota, smarting from Vice President Agnew's most recent blast at the Hatfield-McGovern resolution to compel withdrawal of U.S. forces from Indochina, levelled the charge that the Administration has made a "deliberate effort to harass and intimidate the press."

"The President himself," McGovern asserted, "has joined in the attack on the press and on the intelligence of the American public." The Nixon people, he went on, have created a climate of fear, designed to intimidate the media and this is a serious threat to a free society.

The Senator cited Agnew's remark: "To penetrate the cacophony of seditious drivel emanating from the best publicized clowns in our society and their fans in the Fourth Estate, yet, my friends, to penetrate that drivel, we need a cry of alarm, not a whisper."

Then McGovern said, the President claimed that the press, as he saw in Los Angeles, "glorified a man who was guilty, directly or indirectly, of eight murders without reason."

Attorney General Mitchell's announcement he personally will decide on subpoenas to be issued for reporters' notes and unused film and tapes is still another assault against freedom of the press, McGovern declared.

"Part of the Administration attack on the media," the Senator continued, "has been cloaked in criticism of too much concentration of ownership of newspapers and television stations. Those news institutions which have been singled out are those which editorially have been critical of the Administration. Far bigger news conglomerates, which often support the Administration, are exempt from trust-busting."

"ADMITTEDLY ON TARGET"

The Senator's address was followed by a panel moderated by Marquis Childs, *St. Louis Post-Dispatch* columnist, said there is an air of depression in some parts of the country because the news is so horrendous." Many people are so alarmed that they simply do not want to hear these reports and Agnew has contributed to it, he said.

William Eaton, *Chicago Daily News*, said he disagreed that "there is a climate of fear among the press." The Administration's remarks about the press are nothing new, since governments have always made charges of that nature.

James Jackson Kilpatrick, columnist, characterized all the supposed intimidation of the press are pure "humbug." On the contrary, he added, more journalists are trying to demonstrate their independence. In fact, Agnew's remarks were "admirably on target," Kilpatrick said.

James McCartney, Knight Newspapers, asserted that Agnew has created an air of suspicion that greatly worries me," and added: "I would not hesitate to use the phrase incipient fascism."

McCartney also described the difficulties reporters encounter in getting information on military operations and other matters which so frequently are "classified."

CONTACTS WITH EDITORS

Robert Phelps, *New York Times*, said he did not feel newsmen had been intimidated by Agnew's remarks. He described how the Administration is trying to bypass the Washington press corps by sending copies of Presidential speeches to local editors and by developing other contacts, whereas most Presidential press conferences are "very formal."

Jules Witcover, *Los Angeles Times*, said the public had not recognized the scope and effectiveness of Herbert Klein's operations in sending "briefing teams" around the country and in cultivating other ways in order to maintain direct contacts with editors. Agnew, he added, has tended to divide the press into "good guys and bad guys" and in this there is "a danger of creating civil war among the members of the press."

NICHOLAS VON HOFFMAN ON THE SENATE

Mr. PERCY. Mr. President, this morning's Washington Post contains a column of commentary by Mr. Nicholas von Hoffman in which he states that if the Republicans should capture the Senate this fall, the Senate would be turned into "a docile nullity" and that coal miners, welfare mothers, sick people, grocery shopping housewives, Mexican stoop laborers, automobile drivers, and many other kinds of people will lose "the only effective protection they could get at the Federal level." He appears to take delight in referring to one Republican as a "dear, somewhat lost man" and to others as "mediocrities." He goes on to extoll the virtues of Democratic commit-

tee chairmen and subcommittee chairmen.

I find this somewhat amusing and ironical as for years one of Mr. Von Hoffman's prime targets has been the ineffectiveness and blind obeisance of the Senate. Perhaps Mr. Von Hoffman has forgotten that since 1954 the Senate has been controlled by Democrats. One would think by reading his column that the world has been in great shape since 1954 and that the Senate has been the shining light of faith, hope, and freedom in the Western World. Where, oh where, are the columns of yesteryear?

Mr. President, another column has been written in a different publication in May of this year. In May 1970, the Ripon Forum wrote an article comparing present Senate committee chairmanships with what would be the case if the Republicans took control this November. The article concludes that on balance, "the Senate would be led by more progressives than at present if the Republicans are in control." Using its own rating system, the Ripon Forum finds that present committee chairmen obtain an average score of 38; their GOP counterparts receive an average of 48. It contains at least one error, as Senator SCOTT would become chairman of the Committee on Rules and Administration; and we hope for Senator MUNDT's recovery. Mr. Von Hoffman omits mentioning that Senator JAVITS may become chairman of the so-called Hunger Committee.

Mr. President, I ask unanimous consent that the Ripon Forum article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR A GOP SENATE

When Senator Harry Byrd Jr. of Virginia left the Democratic Party a few weeks ago, he said that the reason he was not joining the Republicans was that they were too liberal for him. If the Ripon ratings (FORUM, March, 1970) are any indication, leadership of the Senate will pass into more liberal hands if the Republicans win control in November.

Given the Senators who are retiring, as well as probable preferences of those faced with the choice of more than one chairmanship, present Democratic and potential Republican committee chairmen, with their Ripon ratings, are:

Committee	Present chairman	Republican potential
Aeronautics and Space.	Anderson (56)	Curtis (31).
Agriculture	Ellender (31)	Miller (48).
*Appropriations	Russell (22)	Young [N.D.] (29).
*Armed Services	Stennis (15)	Smith [Maine] (41).
Banking and Currency	Sparkman (24)	Tower (29).
Commerce	Magnuson (55)	Cotton (25).
District of Columbia	Tydings (76)	Prouty (50).
*Finance	Long (32)	Bennett (41).
*Foreign Relations	Fulbright (60)	Aiken (82).
Govt. Operations	McClellan (7)	Percy (86).
Interior	Jackson (55)	Allott (31).
*Judiciary	Eastland (9)	Hruska (28).
*Labor and Welfare	Yarborough (58)	Javits (85).
Post Office	McGee (48)	Fong (42).
Public Works	Randolph (45)	Cooper (95).
Rules and Administration.	Jordan [N.C.] (15)	Thurmond (21).

In the Ripon ratings, present committee chairmen obtain an average score of 38; their GOP counterparts receive an average of 48.

As for the top six committees (asterisked), Democrats average 33, Republicans 51. The ADA also rates the six Republicans higher than their Democratic counterparts; the ACA and AFL–CIO rate the Republicans lower.

Therefore a credible argument can be made that on balance, the Senate would be led by more progressives than at present if the Republicans are in control. This gives progressive Republicans all the more reason to concentrate on delivering a GOP majority in the Senate this year.

Mr. PERCY. Mr. President, Von Hoffman states at one point that "unhappily we have to survive the worse to arrive at the better." I agree, only in a different context than he is driving at. I think we will arrive at the better if the Republicans take control of the Senate this fall. In the spirit of fair competition that is the essence of the two-party system, I shall be working with my Republican colleagues this fall if we ever adjourn, to bring about an increase of seven Republican Members in the Senate.

A NEW KIND OF MURDEROUS VIOLENCE

Mr. ALLOTT. Mr. President, this summer is drawing to an end.

It is a measure of the disagreeable nature of the times that we end every summer by trying to decide how terrible the summer has been in terms of violence and disorders. And it is some measure of how bad the times are that many people seem to feel that this has been a "good" summer—relatively speaking.

One frequently hears it said these days that the summer of 1970 has been a "good" summer because there have not been large-scale urban riots. And, of course, the universities have been on vacation, so another source of violent disorder has been relatively quiet.

Mr. President, I think this judgment involves a serious misreading of the nature of the summer that is ending. The fact of the matter is that this has been a summer featuring a new kind of murderous violence.

Mr. President, Columnists Rowland Evans and Robert Novak have discussed this matter with customary clarity, and with proper urgency, in their column in Thursday's edition of the Washington Post. So that all Senators may ponder their important column, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TERRIBLE SUMMER OF 1970

The two most notable victims of recent racial violence, an Omaha policeman and a Houston black militant, typify the alarming increase in organized urban guerrilla warfare—often directly connected to the Black Panther Party.

Both the Omaha dynamiting and the Houston shootout can be traced to local revolutionary organizations intimately connected with the Black Panthers. Taken together, they help dispel two widely held notions: First, the feeling by liberals that the Panthers, though unpleasant, are not really much to worry about; second, the comforting impression held by politicians generally that we have made it through most of the summer without racial trouble.

In truth, the absence of any Watts-style mass riot has masked the fact that this has been the terrible summer of '70. Instead of headline-producing rioting, the pattern of black militancy has changed to ever better organized urban guerrilla warfare deeply influenced by Black Panther philosophy. Law enforcement experts believe that this year has moved the U.S. far down the road toward white counterguerrilla action and virtual civil war.

For instance, the killing of the Omaha police officer Aug. 17 by a dynamite booby trap was no solitary event but intertwined with Black Panther activity. David L. Rice, charged with conspiracy to commit murder, is a leader of Omaha's National Committee to Combat Fascism—which until a year ago was an official Black Panther chapter.

Moreover, the Aug. 17 tragedy in Omaha was the eighth dynamite bombing in Omaha, Des Moines and Ames, Iowa, since the theft of dynamite from a Des Moines supply company May 5.

Black Panther fingerprints are similarly all over the killing by police of black militant Carl Hampton in Houston July 26. People's Party II founded in Houston by Hampton, aped the Black Panther Party in its ten-point program, its rules, and its adherence to Mao Tsetung's teachings.

Following Black Panther dogma, Hampton stockpiled arms at People's Party II headquarters and directed that "all party members must learn to use and service weapons correctly."

These are not isolated incidents. Black Panther propaganda glorifying the killing of police abounds in Negro ghettoes. Furthermore, authorities believe the Panthers are conveying expert guerrilla instruction from Communist Cuba—including an English-language version of an urban guerrilla manual printed in Cuba which has been circulated throughout Negro neighborhoods (including high schools).

The Cuban manual contains detailed instructions for city street fighting, bomb construction, hijacking airplanes, and—with special recommendation—kidnaping public officials. Only by killing police and other instruments of "repression," it advises, can the terrorist maintain his identity.

Still more ominous are specific blueprints charted by local black guerrilla bands. Earlier this year, Detroit police uncovered plans for recurrent ambush assassinations of police intended to trigger race riots. The document detailed how police could be lured into secluded ghetto areas to be cut down by high-powered sniper rifles—precisely the fate of two Detroit policemen before the document was captured.

The epidemic is worsening. Unlike the centrally directed Communist Party underground, black guerrillas are decentralized and difficult to infiltrate. The hard fact is that police are losing the fight to control them. The terrible summer of 1970 may be followed by escalated black guerrilla war year-around with frightful consequences that nobody today can dare guess.

BLACK PANTHER THREAT

Mr. DOLE. Mr. President, recent killings of a judge near San Francisco, policemen in Omaha and Detroit, and a Houston black militant indicate the serious threat which extremist groups pose to the orderly process of our governmental system.

The summer of 1970 has not witnessed mass rioting, rather the more terrifying specter of organized urban guerrilla warfare. This tactic is basic to the philosophy of the Black Panthers and other revolutionary groups, as evidenced in their teachings and police discoveries of caches of weapons and blueprints for more assassinations.

Mr. President, blind and naive support of organizations like the Black Panther party has become fashionable in some circles today. I would hope that these killings will alert Americans to the very real danger which extremist groups and their revolutionary spokesmen pose to our society.

A column written by Rowland Evans and Robert Novak and published in the Washington Post of August 27, 1970, and an editorial published in the Chicago Tribune of August 17, 1970, draw attention to this threat. I ask unanimous consent that these items be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

THE TERRIBLE SUMMER OF 1970

The two most notable victims of recent racial violence, an Omaha policeman and a Houston black militant, typify the alarming increase in organized urban guerrilla warfare—often directly connected to the Black Panther Party.

Both the Omaha dynamiting and the Houston shootout can be traced to local revolutionary organizations intimately connected with the Black Panthers. Taken together, they help dispel two widely held notions: First, the feeling by liberals that the Panthers, though unpleasant, are not really much to worry about; second, the comforting impression held by politicians generally that we have made it through most of the summer without racial trouble.

In truth, the absence of any Watts-style mass riot has masked the fact that this has been the terrible summer of '70. Instead of headline-producing rioting, the pattern of black militancy has changed to ever better organized urban guerrilla warfare deeply influenced by Black Panther philosophy. The hard fact is that police are losing the fight to control them. The terrible summer of 1970 may be followed by escalated black guerrilla war year-around with frightful consequences that nobody today can dare guess.

INNOCENT COMMUNISTS AND PANTHERS

The district attorney at San Francisco has confirmed that two guns used recently by three black convicts who fatally shot Judge Harold Haley in an attempt to escape from a courtroom in San Rafael were purchased by Angela Davis. She is a self-proclaimed Communist who has been fired from her teaching job at the University of California at Los Angeles.

The weapons, a carbine and semi-automatic pistol, were smuggled into the courtroom by Jonathan Jackson, 17, who was killed along with a convict defendant and a convict witness. Jackson was Miss Davis' companion-bodyguard and accompanied her when she sought to interview one of Judge Haley's killers and two other San Quentin convicts accused of murdering a prison guard. Her public comments on the accused convicts represented them as martyrs.

Huey P. Newton, a cofounder of the Black Panther Party and its "defense minister," hailed the killers of Judge Haley as "true revolutionaries" and said that young Jackson "would have been my successor" had he not died. Newton was released from prison on bail only a week ago, after the California Supreme Court upheld the reversal of his conviction of shooting an Oakland policeman.

Miss Davis, a philosophy instructor, was dismissed by U.C.L.A.'s board of regents for "extramural activities"—i.e., after-hours Communism. She was supported in her efforts to retain her university post by "liberals" who think that Communists are harmless and that it was unthinkable that she would infect students wtih her radicalism.

The Panthers also have become fashionable with those who toy with radicalism. Most of the Yale student body shut down the university with demonstrations in support of Panthers on trial in New Haven for the murder of a party member they considered to be an informer. The Leonard Bernsteins invited a group of Panthers to their Park Avenue apartment to mix with society's upper crust.

We think that black Communist lady professors who supply guns for murder and Panthers who smuggle them into court or acclaim killings in cold blood are hardly innocents, but these murderous activities don't seem to register wtih those who compose their fan club.

THE ATOM: ITS DANGEROUS AFTERMATH: PART VII—CONVENTIONAL FUELS, THE COMING POWER CRISIS, AND THE ATOM

Mr. CHURCH. Mr. President, in a four-part series entitled "Electricity for the Future," published in the Washington Post, staff writers Morton Mintz, Robert K. Warner, Thomas O'Toole, and John Hanrahan discuss in depth the centralization of control over critical fuel sources in our Nation; our Nation's coming power crisis; and the promise and perils of the atom in meeting our Nation's burgeoning electrical energy needs in the decades ahead.

These gentlemen point out shocking facts which Congress would do well to heed. In the first article, Mr. Mintz and Mr. Warner point out that:

At least 18 oil companies have invested in producing and processing uranium; one key step is entirely controlled by two oil firms. Although the petroleum industry now accounts for only one-sixth of uranium production, it holds 45 percent of all known uranium reserves and makes more than one half the new discoveries.

All of the 25 largest oil companies have natural gas interests, which may be inevitable since gas is usually found with petroleum. At least 11 of the 25 have significant interests in coal as well: The two largest owners of coal reserves are both oil companies, and the petroleum industry as a whole accounts for at least 25 per cent of the nation's coal production.

Six of the ten largest oil companies have interests in every other fuel.

This concentration is occurring at a time when demand for electricity is expected to increase by 50 percent in the next 5 years. One need not have a vivid imagination to realize the consequences to our Nation in the years ahead when this demand is coupled with the fact that ownership of the sources to fulfill it is centralized in the hands of a few corporate giants.

In the second of the series, Thomas O'Toole examines the movement of utility companies toward the use of the atom as a source of energy in the production of electrical power. The rising cost of conventional fuels has made atomic fuel a more attractive commodity. The projected growth curve for atomically produced electrical energy suggested by O'Toole is phenomenal, indicating atomic power will have 20 percent of U.S. markets by 1980, 75 percent by 1990, and 90 percent by the year 2000. The article also discusses the special problems associated with nuclear plant development and concludes with a quote from AEC Commissioner Milton Shaw that "atomic power is the only answer" to meet our increasing electrical power demands.

In the third of the series, O'Toole examines pollution problems associated with atomic plants. Thermal pollution caused by the huge amounts of water necessary to cool a nuclear plant, accident hazard, effluent discharges, and finding a final resting place for radioactive waste materials produced by the plants. When we combine the huge growth curve projected for the role of atomic power with the questions we face with regard to pollution problems, it becomes obvious that more research is needed to make nuclear plants as compatible with our environment as is humanly possible. We cannot afford to make the same mistakes with pollution from atomic fuels that we made with conventional fuels. Atomic power is, after all, an infant science. There is still much we do not understand. Ongoing research in the field of atomic safety is essential

and I, for one, intend to support such programs.

In the final article of the series, John Hanrahan presents a case study of the construction of one atomic plant at Calvert Cliffs, Md.

Mr. President, my brief summary of these four articles cannot possibly cover the wealth of information which they contain. I commend them to the attention of Senators and ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ELECTRICITY FOR THE FUTURE—I: BIG OIL COMPANIES ACQUIRE GRIP ON COMPETING FUELS

(By Morton Mintz and Robert K. Warner)

Since 1965 the nation's largest oil company has become one of the two largest holders of coal reserves. The same corporation, Standard Oil of New Jersey, has also become a principal operator in the newest competitor to coal and oil—uranium, the source of nuclear power.

In the last five years, most of the country's major oil companies have acquired significant holdings in every fuel, a trend that could end effective competition between oil, gas, coal and uranium and result in large increases in the future cost of electricity.

The trend is especially ominous in the uranium industry because nuclear fuel is expected to produce more than half of all electricity by about 1990.

Sen. George D. Aiken (R-Vt.) says:

"There is some group determined to get control of electrical energy in this nation."

At least 18 oil companies have invested in producing and processing uranium; one key step is entirely controlled by two oil firms. Although the petroleum industry now accounts for only one-sixth of uranium production, it holds 45 per cent of all known uranium reserves and makes more than half the new discoveries.

All of the 25 largest oil companies have natural gas interests, which may be inevitable since gas is usually found with petroleum. At least 11 of the 25 have significant interests in coal as well: The two largest owners of coal reserves are both oil companies, and the petroleum industry as a whole accounts for at least 25 per cent of the nation's coal production.

Six of the ten largest oil companies have interests in every other fuel.

The Justice Department's deputy assistant attorney general for antitrust warned last May against the growing concentration.

"While few forms of energy supply are not subject to some type of governmental regulation," Walker B. Comegys told the Senate antitrust subcommittee, "we cannot lightly forgo interfuel competition as the most effective long-term force for consumer protection in the energy field."

National Economic Research Association (NERA), a private consulting firm, compiled data for the Senate antitrust subcommittee showing the penetration of the 25 largest oil companies into other fuel industries.

Nine of the oil companies, some of them already corporate giants, had interests in all the other fuel sources—coal, gas, uranium and shale. They are Standard of New Jersey, second in sales volume among all American industrial corporations; Texaco, eighth in sales; Gulf, tenth; Shell, 16th; Atlantic Richfield, 29th; Continental, 35th; Sun, 47th; Standard of Ohio, 97th; and Ashland, 101st. Not only are such firms buying competitive fuels, but because of their size they are in a strong position to outbid other kinds of industries that wish to venture into the energy field.

"The acquisitions by the oil companies across the energy market spectrum . . . may be viewed as classic horizontal integration on a scale comparable to the formation of the trusts in the latter decades of the nineteenth century," NERA said.

"In short, the oil companies, themselves portraying their activities as efforts at diversification, are in fact systematically acquiring their competition."

This economic concentration is occurring at a time when the Country is entering an era of unprecedented demand for electric power and growing difficulty in satisfying the demand.

Over the next five years, the national demand for electricity is expected to increase by at least nine per cent annually, or more than a 50 per cent increase by 1975. In the 10 Northeastern states and Maryland, power needs are expected to grow even more rapidly.

Should these increases continue beyond 1975, and the Federal Power Commission believes they will the Nation's utilities must more than quadruple their power capacity in the next 20 years.

Opponents of the oil industry's involvement in other fuels say that the increased demand for electricity will give the petroleum industry a strange hold on utilities and on their corporations that depend on energy.

The oil industry has always dominated natural gas, but its penetration of other competing fuels was thin until the mid-1960s.

In September, 1963 Gulf Oil acquired Pittsburgh and Midway, a coal company that accounts for about 2 per cent of national production.

Then, on Oct. 13, 1965 Continental Oil Co. announced a break through: An agreement in principle to buy Consolidation Coal, the largest producer, which alone accounts for about 12 per cent of total coal production.

The Justice Department did not challenge this first giant step by the oil industry into the territory of a rival fuel. The merger was formally completed in October, 1966.

Other acquisitions followed. In January 1968 Occidental Petroleum acquired Island Creek, the third-ranked coal producer, with about 7 per cent of annual output. In August 1968 Standard Oil of Ohio acquired Old Ben, for another two per cent. Today, eight of the ten largest coal companies are owned by oil, mineral or large industrial concerns with interests in the energy field.

In addition, oil companies such as Humble, Jersey Standard's major domestic affiliate, have been spending millions of dollars each year to acquire thousands of acres of coal reserves which they do not mine despite the fact that utilities have been complaining of a serious coal shortage.

The oil companies say that current prices do not provide enough incentive for them to produce coal, and that their coal reserves are long-range investments for the time when they are forced by dwindling oil supplies to artificially convert coal into natural gas and oil.

Oil opponents say that petroleum companies are creating an artificial shortage of coal that will lead simply to higher prices.

The same acquisition trend exists in the nuclear fuel industry. Until 1966, only two oil companies were significant uranium producers. But in 1968, oil companies did 44 per cent of the drilling for uranium exploration and development. In 1969, they did 37 per cent.

S. David Freeman, of the White House Office of Science and Technology, told the Senate antitrust subcommittee last May that as of Jan. 1, 1970, petroleum companies controlled 45 per cent of the known uranium reserves.

NERA described the position of oil companies in the uranium industry as "truly dominant."

Kerr-McGee, an oil company, owns 23 per cent of total uranium milling capacity directly and another 4 per cent through a half-ownership. This capacity exceeds that of any other firm.

Only two companies are in the business of converting "yellow cake," the uranium concentrate that results from milling, into UF6, a compound used in uranium enrichment. One is Kerr-McGee, which has building plans for half the national capacity. The other is Atlantic Richfield.

In the reprocessing field, which involves taking spent nuclear fuel and preparing it for further use, five plants are in existence or under construction. Oil companies own four of them.

There is one crucial step in atomic power that neither oil companies nor any other private enterprise controls. This is the enrichment of uranium by increasing its content of the fissionable isotope U-235. The complicated process is done only by government plants, at a fixed fee. The Nixon administration wishes to raise this fee by about ten per cent.

Members of the Joint Committee on Atomic Energy are resisting this increase but not because they disagree with the need for a specific price change. They object that the administration plan would be part of a new set of pricing guidelines that would be based not on the actual costs of running the plants, but on projections of 1980 costs of running a hypothetical new plant as "a commercial operation."

The Council of Economic Advisors defends the new guidelines, partly because it wants to make sure that the government is not unfairly subsidizing the uranimum industry at the expense of competing fuels.

A Council staff member said that the real costs of enrichment are obscured by the advantages of using risk-free government money, official bans on imports of foreign uranium and federal support of nuclear research.

A recent report by the General Accounting Office may have settled the issue, however, in saying that the proposed guidelines are of doubtful legality. The Joint Committee has reported out a bill that retains the existing criteria. But even if Congress passes it, the President could veto it, leaving the whole matter unsettled—along with the question of the increase's ultimate impact on the cost of electricity.

Today, an even more basic, long-range issue is unsettled.

At present, a crucial step in converting uranium into usable fuels is accomplished at three gigantic government plants in Oak Ridge, Tenn., Paducah, Ky., and Portsmouth, Ohio.

These gaseous diffusion plants were built by the government for $2.3 billion. The government still owns them, although they are operated by private companies, Union Carbide and Goodyear. As a crucial link in the economic chain that establishes the price of nuclear power, these plants and their product have a profound effect on the competitive sources of electricity—coal, oil and gas.

Originally the plants were built to make material for nuclear bombs and they still do. But defense needs have begun to diminish and demands for the same kinds of materials for peaceful nuclear fuel has begun to increase. This demand for nuclear fuel is still relatively small.

The Federal Power Commission estimates that this year nuclear power will provide only 4 per cent of all electricity. Commission figures show that in 1969, coal generated 49 per cent of electricity; natural gas, 23 per cent; and oil, 9 per cent.

Hydro-electric power accounted for 17 per cent, but it is expected to decrease, since most profitable sites of falling water have already been exploited.

But most authorities agree that we are on the threshold of a rapid expansion of the role of uranium in generation of electricity. While in 1970 nuclear reactors produced only

4 per cent of electricity, by 1980 they are expected to produce 29 per cent, and by 1990 about 52 per cent.

There are clear reasons for the expected rise of nuclear power. The demand for power is rising rapidly, both from an expanding population and the dependence of ever-larger numbers of devices run by electricity. If nuclear power does not contribute substantially to these new demands, then the projected use of electricity will have to be reduced and the price of electricity greatly increased.

Another reason to expect more nuclear electricity is the rapid rise in the last two years of the cost of coal and oil.

Rep. Chet Holifield (D-Calif), chairman of the Joint Committee on Atomic Energy, points out that in 1968, power companies paid 28 cents for the quantity of coal needed to produce one million British Thermal Units (BTUs).

In 1969 they paid 30 cents. But last March they had to pay 35 cents and in April 38 cents. A survey by The Washington Post found that some utilities in non-mining areas are now paying about 40 cents per million BTU's, and they expect the price to climb much higher.

Before year's end, Holifield warns, the price of coal may be 50 per cent higher than in 1968. And the requirements of many areas for low-sulfur coal, because of air pollution, pushes the fuel's price still higher.

Thus, whatever changes the status of nuclear fuels will have an important influence on the competitive position of coal and oil.

In the view of some, government involvement in the nuclear industry represents a dilution of private enterprise and unfair competition for coal and oil.

For others who fear a growing monopoly on fuels, the nuclear plants represent the only major fuel installations beyond the control of the present energy entrepreneurs.

President Nixon has announced that he intends to sell the government enrichment plants to private industry "at such time as various national interests will best be served . . ."

The possibility of selling the plants was suggested long before the Nixon administration took office. Four years ago the Atomic Industrial Forum, a nuclear trade association, appointed a committee to study the future of the plants.

The committee was chaired by Kenneth D. Nichols, an AEC general manager during President Eisenhower's first term who has worked in recent years for Gulf Oil, the Mellon family and other concerns.

The group concluded, in June 1968, "It is desirable and feasible for the AEC to transfer its enrichment plants promptly to the private sector."

One of the committee's seven members was not so sure. William M. Capron, then an economist at the Brookings Institution, attached a footnote to the committee's report, expressing doubt that "if these plants are sold, the private market thereby created would operate in a sufficiently competitive manner so as to adequately protect the public interest."

The efficiency of the three gaseous diffusion plants has never been questioned. They are among the largest industrial operations in the world, with a floor space of 640 acres and energy requirements of their own that in 1964 used 4 per cent of the Nation's electricity. If the plants are doing so well, why does the administration want to sell them?

"Sale of these plants could free federal resources for more pressing national uses," the President said last November. "In addition, $2 billion or more is expected to be needed over the next 10–15 years to expand plant capacity to meet increasing commercial demand."

If nuclear generating plants are built as expected, current enrichment capacity will be adequate only until 1978 or shortly thereafter, when new plants, major additions or new technology become mandatory.

Because new facilities take at least six years to build, new projects will have to be started soon to meet needs at the end of the decade. Some officials, such as Atomic Energy Commissioner James T. Ramey, say the new projects should have begun some time ago.

At this point private enterprise has shown little interest in buying the plants.

For some time, the plants have been operating at only 40 per cent of capacity or less, and even at this low level, they have built up a stockpile of enriched uranium that would last the nation's nuclear generators for some 18 months. A purchaser would have to tie up a huge investment for years before the plants would operate near full capacity.

Yet long before the plants approach capacity it will be necessary to start expanding them to meet future needs—a costly venture but a necessary one if the nation's power demands are to be met.

For the past three years, the AEC has been seeking funds for a $407 million "Cascade Improvement Program" that would increase enrichment capacity by about 25 per cent over a six-year period, at the same time, reduce the average cost of enrichment by about ten per cent.

Until this year, the project has been given low priority by the Bureau of the Budget, leading to charges from Sen. Albert Gore (D-Tenn.), a member of the joint committee, that the administration is trying to weaken the plants to help justify their sale.

"What they want to do is turn our nuclear fuel facilities into a shambles by refusing to make improvements," Gore said. "Then they'll say that private enterprise must be brought in to improve things."

A high Budget Bureau official said that the Bureau of the Budget found it "imprudent to build to capacity on estimates alone." He said, however, that the needs for nuclear power are such that a decision probably should be made on support of the Cascade program for the year beginning next July 1.

Even if implemented, the improvement program will add only enough capacity to meet needs for two more years, by current estimates. By 1980, a new $1 billion diffusion plant will be needed—and a decision on whether to build that plant must come by 1974 to insure operation by 1980.

Several members of the Joint Committee have been looking for alternative ways to cut back on the demands for enrichment in order to avoid making such overwhelming expenditures. Among the possibilities:

Licensing a foreign nation or consortium to build and operate its own enrichment plant. Nearly half the work now done in the three U.S. plants is for foreign countries.

Increasing the efficiency with which nuclear fuel is used. For some years the AEC has been doing research on a "fast breeder reactor" that might create great quantities of plutonium—a valuable nuclear fuel not yet feasible for electricity—while burning U 235.

Developing a new "centrifuge process" for enriching uranium that would end total reliance on the gaseous diffusion plants. The centrifuge would entail much smaller capital costs than the diffusion process.

While the huge size of the three diffusion plants limits potential buyers to the very richest corporations, the centrifuge might be purchased and operated by a number of smaller companies. But it, like the fast breeder reactor, is still far from commercial feasibility.

A bipartisan alliance of legislators, many of them members of the Joint Committee on Atomic Energy, fears that if the plants are sold, only the giant oil companies—fortified by such financial advantages as the depletion allowance and import quotas—will have the resources to buy them.

Committee member George L. Aiken, a Vermont Republican, believes that the proposed sale of the plants is a political favor to the petroleum industry.

"The President probably feels indebted to those who helped elect him," Aiken told The Washington Post.

The economic stakes for consumers are huge. Testifying last year before the Joint Committee, Phillip Sporn, retired president of the American Electric Power Co., the nation's largest utility holding company, estimated that private ownership of the plants would cause an increase of as much as 50 per cent in the total cost of nuclear fuel.

The National Rural Electric Cooperative Association said that by the 1980s, when nuclear fuel may account for more than one-third of generated electricity, such an increase would cost the American public $1 billion a year in higher electric bills, and perhaps more, if the fossil fuels raise their prices to take advantage of the reduced competition from nuclear fuel.

Sen. Aiken said that sale of the plants would be "the most advanced step toward private control of the Nation that has ever occurred.

"When you control energy—and oil interests now control coal and are on their way to controlling nuclear fuel—then you control the Nation," Aiken said. "I see this as a very serious threat to political democracy."

Today there are several sources of energy, although their control is quickly consolidating. Some power plants are even designed to switch from coal to oil or natural gas depending on which bids lower on fuel contracts. But many utility companies fear that in the near future, when they shop around for fuel they will find only one store.

Twenty years from now nuclear power—today only an infant in electrical generation—will be a powerful force, providing more than half of all American electricity and therefore creating the competitive yardstick by which other fuels will be sold.

Decisions made in Congress and the White House in the next few years will determine whether it will be a vigorous competitor or a silent partner to the present fuels.

ELECTRICITY FOR THE FUTURE—II: UTILITIES TURN TO THE ATOM AS COST OF FOSSIL FUEL SOARS

(By Thomas O'Toole)

When it comes to generating electricity, King Coal is losing power: the heir apparent is uranium.

The evidence is nowhere more convincing than at the Tennessee Valley Authority. That mammoth electric utility is located in the heart of the nation's coal country, but it is building three of the world's largest atomic power plants.

"The country's private utilities figured if TVA thought the atom could compete with coal," White House energy adviser David Freeman said recently "then by God there must be something to nuclear power after all."

The turn to atomic power comes at a crucial time. In many cities there is already a power shortage and in the next 30 years the national demand is expected to double. At the same time the conventional fuels—coal, oil and gas—are rapidly increasing in cost. Measures against pollution will make them more costly still.

There are only 16 atomic plants generating electricity in the United States now, but 98 additional nuclear power plants are being built or are in the active design stage.

What's more, 80 per cent of these new atomic plants are what utility men call "big" plants able to deliver more than 750,000 kilowatts apiece. Scattered about 27 states and Puerto Rico, these 98 plants

represent an investment of almost $22 billion and an electrical output of almost 90 million kilowatts, which is as much electricity as the entire country generated 15 years ago.

While TVA's decision to go atomic may have triggered it, there is far more to the sudden boom in nuclear power.

First is the fruition of postwar atomic research. The Atomic Energy Commission and the Navy have spent almost $5 billion in the past 20 years to develop nuclear power, and these expenditures have begun to pay off in terms of accumulated experience and understanding.

"We've put nuclear reactors into 98 submarines and we have 17 years experience operating four commercal atomic power plants," said John Simpson, president of Westinghouse Power Systems Co., which has won more than a third of the new atomic orders. "Believe me, it's helped us."

Something that has helped at least as much is the steady rise in the price of coal and oil, the atom's two toughest foes in the struggle for electric power dollars.

While the cost of enriched uranium has barely budged, oil (used in nine per cent of today's U.S. power plants) has risen 50 per cent in price the last five years to about 40 cents per million BTU's of energy, twice that of uranium's.

Many cities have also passed anti-pollution laws requiring utilities to burn only low-surphur oil, which costs more than conventional heating oils that contaminate the air with sulphur dioxide.

"We burn oil in seven of our plants," says Philadelphia Electric Co. "Turning to low-sulphur oil in these plants increases our fuel bill by $10 million a year."

More important is what happened to coal, which heats steam for 58 per cent of the electric power plants in the U.S.

Coal is now scarce, partly because of labor troubles, partly because of productivity declines and partly because of rail car shortages. A survey taken last spring by the Federal Power Commission found coal shortages at more than half the power companies surveyed, including Virginia Electric and Power Co., Chicago's Commonwealth Edison Co. and the Tennessee Valley Authority.

Coal's price is climbing even faster than oil's. Duke Power Co. President W. B. McGuire said recently the utility's coal cost rose from 28 cents per million BTU in 1968 to 30 cents in 1969, to 35 cents last March, to 38 cents a month later and will reach 42 cents before the end of 1970.

"We're in an era of high fuel costs," McGuire told the North Carolina Utilities Commission two months ago, "and we will be until this company can convert to atom-powered fuel."

Despite such strong endorsements, the new atomic power industry is having excruciating growing pains.

One reason is that atomic power has special costs that are getting more expensive every day. It's true that uranium, the nuclear fuel, costs less than coal and oil. But the costs of constructing atomic power plants are almost 50 per cent higher than fossil fuel plant costs.

While general construction costs were climbing 60 per cent in the past five years, atomic power plants were doubling in price, to $220 a kilowatt compared to $160 for plants using coal.

A striking example of escalating atomic costs is the pair of million kilowatt nuclear plants being built at Peach Bottom, Pa., by Philadelphia Electric Co. They will cost $400 million apiece, an unthinkable price 10 years ago.

"There are many reasons for this, including the fact that we spend twice as much time engineering atomic power plants," said Howard M. Winterson, vice president of Combustion Engineering Co., one of the nation's four major atomic equipment suppliers. "Why, we spend $1 million a year on rent for a computer that does nothing but compute specifications for nuclear reactor vessels."

Strikes and shortages of skilled labor aggravate the normal trial-and-error of any new industry. These were made worse by poor planning by electric companies. In one recent 30-month period, utilities overwhelmed the four major suppliers with 60 new orders for nuclear plants. This sudden burden was a major cause of construction delays of atomic power plants, now averaging 11 months.

Exotic materials, precise design requirements, and a new technology sometimes make nightmares of construction plans. Take the case of the Oyster Creek plant of the Jersey Central Power & Light Co. at Tom's River, N.J. Last September it began generating electricity more than two years behind schedule.

To begin with, the plant's 500-ton reactor vessel, or container, was shipped to the Oyster Creek site sooner than expected.

"They stored it in the open salt air like it was a lawn mower," recalls one AEC official. "It's no wonder what happened."

The AEC man claims that the workmen uncrating the reactor vessel bent its intake and exhaust nozzles. This took weeks to correct.

A second delay came about when inspectors found cracks in the welding of all but nine of 137 steel sleeves located where the drive mechanism for the control rods penetrates the pressure vessel. The AEC is convinced the cracks came from the corrosion of sea air. In any case, it took a year to coat the tubes with a more protective alloy.

Next came what one observer called the "case of the vanishing records."

Houston's Alloy Tube & Pipe Corp. had supplied stainless steel pipe for the Oyster Creek plant just before the Texas firm merged with Ohio's Armco Steel Co. In the course of the merger, the records of the pipe's production and testing were either lost or mislaid.

Since the AEC demands rigid testing of all atomic plant parts and documentary proof of the testing, it insisted on records for the pipe. This meant new tests. By this time the piping was already installed at Oyster Creek. So the stainless steel pipes had to be removed and retested, delaying Oyster Creek's start-up another 10 weeks.

The results of delays like these are not soothing for utility men to contemplate. Jersey Central Power & Light, while waiting for Oyster Creek to start producing cheap nuclear power, had to spend $60,000 a day buying power from its neighbors at twice what Oyster Creek power was supposed to cost.

Watching debacles like Oyster Creek from afar, many utilities have either held off on buying atomic plants or have cancelled plans to build them. The AEC admits that so far this year six electric power companies dropped plans for atomic power. The commission expects one or two more to follow suit before the year is out.

Other firms hedged their bets by installing excess fossil fuel capacity while waiting for their nuclear plants to be built.

"We decided we couldn't count on the nuclear plants coming in on time," said Donald C. Cook, president of American Electric Power Co. "None ever had, so we're building enough fossil capacity so that even if they never come in we'll have enough energy. All we want our customers to know is that when they press the switch they'll have enough power."

What worries power experts the most about nuclear plants is their complexity and the overwhelming need to keep them completely safe. These two requirements have forced numerous shutdowns of atomic plants in the last few years.

A typical complex incident occurred a few years ago when nickel-plated silver cadmium control rods in a reactor corroded, flooding the reactor core with contaminating silver from the insides of the rods.

"The plant operator had to scrap $750,000 of core parts," said A. Nelson Tardiff of the AEC's Division of Reactor Development. "The plant was contaminated with silver and the accumulated downtime to effect clean-up amounted to two months."

In 1968, all of the 11 atomic power plants then operating were shut down from time to time for minor repairs. Five of them were closed for a total of 27 months because of major break-downs. The 22,000 kilowatt plant at Elk River, Minn. was shut down in February 1968 because of reactor leakage and was never started up again.

A year ago, 12 plants were in operation and enough troubles were encountered to shut down eight of the plants for a total of more than 30 months. The 50,000 kilowatt La-Crosse Boiling Water Reactor at Genoa, Wisc., had to be closed five times for seven months due to breakdowns.

This year, there are 16 plants in operation and so far there have been three major shutdowns.

Jersey Central's Oyster Creek plant was closed from Apr. 19 to May 22 when the hydraulic seals in the driver mechanism of six control rods failed. Niagara Mohawk's Nine Mile Point plant was closed Mar. 30 by three cracked parts in a furnace and not reopened until July 12.

Most recently, Consolidated Edison's Indian Point plant was closed May 20 by a broken thermal sleeve in a nozzle connection in the primary cooling system and by cracks in a nearby pipe. At the earliest, Con Ed hopes to have the plant back generating power sometime in September.

"We're dealing with an infant technology," says Milton Shaw, director of the AEC's Division of Reactor Development. "I know the utilities assumed that nuclear power brought with it inherent perfection, but this business is a tough one."

It's been very tough on the companies in the business of nuclear supply, the firms that make and deliver the reactor vessels, the nuclear fuel elements, the valves, pipes and turbines that make up an atomic steam supply system.

Fewer than half the firms that started out in the atomic power business are still in. The dropouts include such well-to-do giants as Foster Wheeler Corp., American Machine & Foundry Co. and Allis-Chalmers Mfg. Co.

The main reason such firms have dropped out of nuclear power is the red ink that has bathed the entire industry for the last 15 years.

One firm, Combustion Engineering, figures it has spent $60 million on nuclear research and development, none of which it has recovered through profits. Westinghouse's John Simpson says his firm has spent over $100 million on atomic R. & D., but thinks Westinghouse might turn a profit this year for the first time.

"We'll be the only ones to do so," he says.

General Electric has probably lost the most money on atomic power, but part of its losses might have come from the deals it struck in the early 1960's attempting to launch the atomic industry. By one account, GE lost more than $100 million on the Dresden atomic plants it built for Commonwealth Edison and an estimated $50 million on the Oyster Creek plant it put up for Jersey Central.

The company that has suffered the most in atomic power has been Babcock & Wilcox Co., which a year ago admitted that it was behind schedule on every one of the 28 nuclear pressure vessels it was putting together in its Mount Vernon Ind. works. The resulting losses sank profits too low last year to

cover the dividend. A vice president of the company committed suicide.

Despite the losses and the suffering, the companies that make up the atomic industry see a bright future for nuclear power.

"I think we all feel the future is nuclear," says Combustion Engineering's Howard Winterson. "We've had some discouraging years, but our costs should begin to level off and when that happens atomic power will be in a better over all competitive position than coal and oil."

Westinghouse's John Simpson said a recently completed study of fuel prices has led his company to predict a steady decline in atomic fuel costs to about 17 cents per million BTU by 1980 and a rise in the cost of coal to about 45 cents per million BTU.

Utility experts are also convinced that pollution laws will drive more power companies away from coal and oil, even the relatively clean low-sulphur forms of both. Only last month, Los Angeles County Judge Bernard S. Jefferson turned down a utility's appeal of a Los Angeles County ban on a new oil-fired plant it wanted to build at Playa del Rey.

"We're converting energy and no matter how you do it there's an impact on the environment," says Philadelphia Electric's John Kemper. "We feel the nuclear plant is the cleanest way to do it."

Though it electrifies only about 4 per cent of the power lines in the U.S. today, atomic power is destined to take on an ever larger role in power generation.

The Atomic Energy Commission expects that by 1980 atomic power plants will be generating 180 million kilowatts of electricity in the U.S. Most experts don't think it will get that high, but most of them agree that at least 130 million kilowatts will be nuclear by 1980, which will still be more than 20 per cent of the U.S. total in 10 years.

The AEC also believes that half the new electric power plants being ordered by utilities in 1980 will be nuclear, that 75 per cent of the orders in 1990 will be nuclear and that by the year 2000 nuclear's share of new orders will be 90 per cent.

If this happens, half the electric generating capacity of the country will be nuclear by 1990 and almost 60 per cent by 2000. There will be 450 atomic power plants in the country by 1990 and 950 by the year 2000, generating more than 1.1 billion kilowatts of electricity.

"I don't see how it can turn out any other way," says the AEC's Milton Shaw. "Coal and oil prices are going to keep going up, and there seems no way of getting the sulphur out of them to anybody's satisfaction. Atomic power is the only answer."

ELECTRICITY FOR THE FUTURE—III: BURGEONING ATOMIC PLANTS RUN INTO POLLUTION AWARENESS

(By Thomas O'Toole)

To consumers hungry for cheap electricity, the salvation from blackouts and smog is atomic power plants—graceful, scientific buildings humming quietly in remote locations, unmarred by belching smokestacks and sulphurous fumes.

But to environmental activists, the same nuclear plants are insidious monsters matching in their own quiet way today's pollution from burning coal and oil. At issue is their more subtle pollution from radioactivity and, oddly, hot water.

How this issue is resolved may decide whether the United States can continue to have enough cheap electricity for its growing population and its proliferating washing machines, air conditioners and other electrical appliances.

The issue is far from resolved today.

Of the 55 atomic power plants in the active stage of construction in the U.S. today, 12 have been stopped or blocked from producing power by environmental lawsuits. One reason the other 43 have so far escaped legal action is that they're not far enough along. Long Island Lighting Co. figures legal intervention against its Shoreham plant has now delayed its construction seven months. Consumers Power Co.'s Palisades plant on Lake Michigan has been held up at least that long, and Northern States Power Co.'s Monticello plant outside Minneapolis has been set back almost a year by lawsuits.

LONG TERM THREAT

The inescapable irony is that nuclear power has always been promoted as the "clean" way of making electricity.

Atomic power plants don't belch fly ash and the noxious fumes of sulphur dioxide, nitrogen oxide, carbon monoxide and methane into the atmosphere the way coal, oil or gas-fueled plants do.

But atomic power plants discharge pollutants all their own.

"The fossil fuel plant is a lot dirtier than the nuclear plant," said White House energy adviser David Freeman. "At the same time, it may be that fossil plants are an immediate threat to the environment while nuclear plants represent the longterm threat for the future."

The longterm threat comes from emissions of tiny amounts of radioactivity, none usually dangerous by itself in those quantities. But radioactivity received by humans is cumulative until some day the total may reach the threshold of medical damage, usually cancer. Nuclear plants being built today will be lifetime fixtures on the landscape. Generations of human and animal populations will accumulate their emissions.

The other pollution threat is hot water. All electric generating cores have inner temperatures of about 1,000 degrees and need large quantities of water to cool them. Nuclear plants need 50 per cent more water than fossil fuel plants because, among other reasons, it has no smokestacks to help carry away the heat. The plants take in cool water from a lake or stream and return it much hotter, with effects on marine life that are still being debated.

A one-million kilowatt nuclear plant (the average sized atomic plant being ordered today) discharges half a million gallons of heated waste water every minute. Atomic discharge water is 4 to 5 degrees hotter than fossil discharge.

The Atomic Energy Commission suggests that this so-called "thermal pollution" may do little harm.

In a study being done by the Connecticut Yankee Atomic Power Co., relatively few ill effects have been found in a five-mile stretch of the Connecticut River although every minute the plant discharges 370,000 gallons of water 22.4 degrees warmer than it took in.

The study found that the diatoms that dominated the river plankton disappeared, giving up their role to blue-green algae that thrived in the warmer water.

Catfish entering the discharge canal apparently suffered from a sudden rise in their metabolism and did "not fare as well as those that do not enter" the canal, an effect the study director concluded could "hardly be regarded as calamitous."

In fact, it was pointed out that the warming of the river by the plant drew more insect larvae (beetles, dragonflies, damselflies) to the river bottom and more striped bass to the river at all times of the year.

"In the long run," the study director concluded, the warming of the river "may even prove to be beneficial in one way or another."

The Connecticut River study is one of the few done so far of the effects of thermal pollution on a stream. But critics point out that the Connecticut is a cold-water river, ranging from a winter low of freezing to a summer high of about 86 degrees.

FEW FISH COULD SURVIVE

What of the warm-water rivers and bays of the Southern United States, whose water never freezes and stays above 90 degrees through the heat of a four-month summer? Biologists claim that few fish could survive in water much warmer. Joseph DiNunno, director of the AEC's office of environmental affairs, admits this is one of the problems he's most concerned about.

Another is multiple use of the same body of water by a number of atomic power plants.

"Ten plants on the same lake or river may not hurt you," DiNunno says. "Eleven may not and even twelve may not. But somewhere you'll put in just one more plant and you'll get pushed over the edge."

A survey earlier this month by The Washington Post shows there are two or more nuclear power plants built or being built on at least 25 U.S. waterways.

By 1974, the survey showed, there will be four atomic power plants on the Delaware River, four on the Susquehanna River and four on the Ohio River. There will be five nuclear plants on the Hudson River, five on the Illinois River and six on northern banks of the Mississippi River. Lake Michigan will lead the U.S. in nuclear plants in 1974: It will have nine atomic plants along its shores.

More subtle and potentially more serious than thermal pollution is the threat of contamination of the air and water by the radioactive discharge of nuclear power plants.

TINY TRACES

All nuclear power reactors vent tiny traces of radiation through microscopic cracks in the reactors and through the bombardment of exterior metal parts by neutrons escaping the inner cores.

These small bits of radiation show up mostly as radioactive strontium, cesium, iodine, krypton and tritium. The strontium and cesium escape as miniscule slivers of metal and are usually trapped before they're released to the water outside the plant. While iodine can also be caught, it can also be released as a gas. The krypton is always released as a gas and is allowed to escape through "vent" stacks into the atmosphere above the plant.

Tritium is a radioactive form of hydrogen gas that dissolves instantly in the power plant's cooling water once it escapes from the reactor. Extremely difficult and expensive to separate from the water, it must be discharged into whatever river or lake the coolant was taken from in the first place.

The Atomic Energy Commission says that nuclear plants operating today release iodine, krypton and tritium into the environment that is 1 per cent or less than the allowable limit set by radiation guidelines.

Its critics concede that this is generally true, but complain that this does not tell how much radioactivity the 16 nuclear plants operating in the U.S. today have released in their lifetimes.

THREE IN EXCESS

In a recent study of nine operating nuclear plants, the U.S. Public Health Service found three plants releasing radioactive gases into the air that far exceeded the AEC's "1 per cent" estimates.

For example, Pacific Gas & Electric's Humboldt Bay plant near Eureka, Calif. vented off gaseous radioactive iodine that was 11 per cent of its allowable limit in 1967 and 8 per cent of the limit in 1968. The same plant released almost 900,000 "curies" of radioactive krypton in 1967 and again in 1968, more than half the allowable limits in both years.

While the AEC claims that the almost weightless krypton gas escapes immediately into the upper atmosphere where it can do no harm, skeptics remain unconvinced.

"What happens if the wind isn't blowing up and what happens when it rains?" asks Johns Hopkins University radiologist Edward Radford. "I'll tell you what happens. If the

wind is blowing away from the plant, the krypton goes downwind with it. If it's raining, the krypton adheres to dust particles or raindrops and settles down to earth just like the fallout from an atom bomb test."

Described by most observers as a "middle-of-the-road" critic, Dr. Radford said he almost accepted the idea that krypton was no radiation threat until he saw a public health study on the worldwide growth of nuclear power.

"The Public Health Service estimated," Dr. Radford said, "that if nuclear power grows the way it's expected we would have the maximum permissible concentration of radioactive krypton (half-life 10 years) in the world's atmosphere by the year 2060."

Half-life is the time it takes for half the atoms of a radioactive substance to disintegrate. Then it takes the same amount of time for half the remaining atoms to disintegrate, and so on ad infinitum.

The Public Health Service also measured atomic power plant's leakage of tritium, which is itself a gas but which largely escapes from nuclear plants dissolved in the discharged cooling water.

While still below permissible limits, the amount of tritium discharged by nuclear plants is growing, partly because power production is growing and partly because the plants seem to degrade as they get older.

TRITIUM LEAKS

Con Edison's Indian Point plant on the Hudson River, for example, leaked 125 curies of tritium in 1966, more than twice that a year later and six times that by 1968.

Southern California's San Onofre plant, located less than 5,000 yards from the Western White House at San Clemente, discharged almost 2,400 curies into the Pacific Ocean in 1968, its first full year of operation. So far, no study has been made of subsequent years.

What worries scientists most about tritium leakage is that it's so hard to stop and that once leaked it stays so long (a 12.3 year half-life) and is so difficult to clean up.

"It's not like the other discharges," says Johns Hopkins' Dr. Radford. "You just can't comb tritium out of the air or water once it gets there, and it also combines freely with the hydrogen, oxygen and carbon of every living cell known to medicine."

Tiny traces of radiation released to the air and water, argues the AEC's Joseph DiNunno, don't mean that people are exposed to it, and therein lies another debate about how atomic power strikes the environment.

While it's true that most of the radioactivity released from atomic power plants never gets far from the plant sites, it's also true that a growing number of people live close by.

In studying 21 sites where nuclear plants are being built, the Public Health Service found that more than 1.4 million people live less than 10 miles from the plants' sites, with another 50 million within 50 miles.

These people can come in contact with the radiation released from the plants through their drinking water and food. One of the few studies the Public Health Service has done on that subject was at Commonwealth Edison's Dresden plant.

Strontium 89 was found in snow a half mile from the plant, cesium-137 in corn growing about the same distance away and iodine-131 in the thyroid glands of cattle grazing almost two miles from the plant.

The AEC's Savannah River plant released as much as 100 curies of tritium per day to the air and even more to the river, which led one physicist to wonder what the tritium levels were in a herd of deer living on an island near the plant.

"The deer had tritium throughout their bodies," says Johns Hopkins' Dr. Radford, "even in their DNA," the genetic molecules. "The question is, will this hurt their offspring?"

There is little information about the effect on living creatures of radioactive agents.

One of the few studies of "low-dose" radiation was done by Britain's pioneering Dr. Alice Stewart, who only two months ago published the first results of her 22-year survey of the relation of childhood cancers to X-rays of their mothers while pregnant.

POSSIBILITIES OF ACCIDENTS

Writing in the respected British journal, The Lancet, Dr. Stewart said that she was able to compare 7,649 children who had died of cancer before the age of 10 with 7,649 children who had lived to the age of 10 cancer-free. Both groups of children were matched for sex, age and locale where they grew up. Dr. Stewart found that the rate of fatal cancers went up with the number of times the children had been X-rayed before birth.

"The fetal doses may need to be revised in the light of further evidence," Dr. Stewart said, "but if they are correct we would expect that among one million children exposed shortly before birth to one rad of ionizing radiations, there would be an extra 300 to 800 deaths before the age of 10 years due to radiation-induced cancer."

"One rad" is much more than the five-to-fifteen thousandths of a rad that might be received each year by people living near atomic plants and it is a lot less than the radiation received by victims of the Hiroshima and Nagasaki bomb blasts. But it still lies in the range of what radiologists call "low-dose" effects comparable to the small "fallout" from nuclear power plants.

Critics of nuclear power have also focused on possible accidents in the plants.

Since the nuclear fuel in an atomic power plant cannot come together suddenly, a nuclear explosion in a power plant is not possible.

But there is a remote chance that loss of cooling with abrupt melting of fuel could vent radioactivity outside the plant—more fallout than an atomic explosion.

The AEC has taken elaborate steps to make certain that nothing like this ever happens It insists that each reactor have a second, standby coolant. In addition, automatic controls shut down the reactor immediately when any coolant is lost.

Nevertheless, the AEC requires owners of atomic power plants cover themselves with as much insurance as they can.

The AEC has done what most people believe has been thorough policing of accident possibilities. But is the AEC tough enough?

The question is before the AEC right now, in the application of Long Island Lighting Co. to operate an atomic power plant near the town of Shoreham on the north shore of Long Island. In a recent hearing, it was pointed out that the plant is located 7,500 feet from the launching site of a NIKE missile base and about 3 miles from the end of a runway used by Grumman Aircraft to test experimental planes.

One member of the Lloyd Harbor study group protesting the plant said he was told by a nuclear-safety specialist that the AEC has no experience dealing with nuclear plants near missile bases, nor are there any regulations that cover them. An AEC official says the only thing like a precedent is the nearness (five miles) of Homestead Air Force Base to the Florida Power and Light Co.'s nuclear plant at Turkey Point.

Has the AEC done enough to guard against accidents? The independent Advisory Committee for Reactor Safeguards doesn't think so, and recently complained that "because of funding limitations and other reasons" the AEC has done almost nothing about researching new methods of dealing with ruptures in the primary coolant piping that could bring on partial or complete meltdowns of fuel.

In the face of new fears of thermal pollution, the nuclear power industry has taken some additional steps.

Fifteen utilities building 24 of the 98 nuclear plants now under construction are installing special cooling towers to lower the temperature of discharge water before of discharge water before returning it to the river or lake it came from.

But cooling towers cost anywhere from $8 to $10 million, which utilities are reluctant to add to an atomic power plant that already costs as much as $400 million.

"I personally think," says John Kemper, manager of engineering for Philadelphia Electric Co., which is putting cooling towers in four nuclear plants, "that the public will have to pay for some of this cleanup. We just have to get some rate relief for all this expense."

Many people in the power industry don't think radiation leakage is as big a problem, so they're less willing to do something about it. Others think it is a far more difficult problem than thermal pollution.

One of a few who thinks it might not be too hard to solve is John Simpson, president of Westinghouse Power Co. He says that engineering changes can be made in Westinghouse reactors to cut down liquid radioactive discharges (including tritium) to just about zero. Simpson says such changes would cost no more than $1 million a plant.

Gas discharge such as radioactive krypton might be harder to bring down close to zero.

"You'd need considerably more equipment," says one nuclear expert, "to contain gases like krypton. It might cost you more than the cooling towers for thermal pollution."

It could turn out that the AEC might be forced to reduce radioactive discharges, if for no other reason than the Nixon administration insists on it.

The Department of Health, Education and Welfare has started a two-year study to determine whether the federal guidelines controlling radiation discharge should be made more strict. HEW's Dr. Arthur Wolfe two weeks ago suggested that certain standards would be tightened.

"I'm thinking specifically of iodine-131," Dr. Wolff said. "There is fresh evidence to suggest that the human thyroid gland is two to three times more sensitive to radioactive iodine than we once thought. We may have to adjust our guidelines on iodine releases accordingly."

Many radiologists believe that the federal government must adjust its thinking on radioactivity of all kinds—medical X-rays, emanations from color television sets and the added radiation received by people flying high-altitude jets. Each impact of radiation has some biological influence, though how much is not known precisely.

"There is no threshold to radiation damage, let's understand that," says Johns Hopkins' Dr. Edward Radford. "What's more, we don't understand what latent damage radiation does to cells."

In many ways, atomic power is growing at a difficult time. The public, sensitive about dangerous pollution from its present power plants, is becoming aware that atomic plants may have dangerous pollution of their own.

On the other hand, the country needs more cheap electricity, which nuclear power can provide. Nuclear pollution may be on the way to solution in these early days of the industry instead of waiting for the kind of delayed awareness that happened with coal and oil.

The Advisory Committee on Reactor Safeguards in a letter last year told the AEC to move faster to control radioactive wastes, and one member of the committee said that radiation levels can be reduced to 10 per cent—maybe even 1 per cent—of present levels.

ELECTRICITY FOR THE FUTURE—IV: MARYLAND A-PLANT: BOON OR A MENACE?

(By John Hanrahan)

The nuclear power plant being built at Calvert Cliffs, Md., provides a case study both for those who consider atomic energy the key to the nation's growing power needs and for those who view it as a potential menace.

To the Atomic Energy Commission and many utility companies, such nuclear power plants are a big part of the solution to the electricity shortage that has brought blackouts and brownouts to the Eastern Seaboard in recent years.

C. E. Utermohle, board chairman and president of the Baltimore Gas and Electric Co., says that his firm's $387 million, 1.6-million kilowatt plant will be safe and reliable and will pose no threat to human life or the ecology of Chesapeake Bay.

Utermohle and other supporters of the plant on the Western Shore of the Bay, 45 miles south of Washington, feel that an increasing number of nuclear power plants—in contrast to "fossil fuel" plants using coal, oil or gas—must be built in the near future to cope with the ever-increasing need for electricity.

To the critics, the rapid proliferation of such facilities raises a threat to the environment through release of radiation, heating of waterways and possible accidents. The potential for damage is even higher, the critics contend, when the facility is situated on the Chesapeake Bay, a treasure house of seafood and the provider of millions of hours of recreation annually.

What some critics fear most is that the ten or more nuclear plants projected for the Bay area in the next decade could wreak ecological havoc and endanger future generations. Calvert Cliffs, they think, is a precedent.

But beyond these arguments, common to nuclear power plants around the country, are questions about how the plans moved from the drawing boards to reality. The process, critics and even some supporters of the project say, was carried out so quietly over a period of years that opponents learned about it too late to mount an effective campaign to block the plant or have it relocated.

The company said it picked about 50 possible sites in the early 1960s before settling on Calvert Cliffs.

Jess W. Malcolm, executive director of the nonprofit, conservationist Chesapeake Bay Foundation, Inc., says that there were at least 30 separate actions involved in the decision-making process by federal and state agencies to clear the way for the Calvert Cliffs plant. Seldom, he says, were citizens' views seriously sought.

"In short, the decision to permit a nuclear power plant to operate on Chesapeake Bay is being made in a series of minor decisions, suggesting de facto approval of the facility at every step of the way," Malcolm says. "All of these steps were taken when, in fact, the basic question of whether a nuclear plant that would use Chesapeake Bay waters should be constructed at Calvert Cliffs was never asked."

HEARINGS IN 1969

Dr. Edward P. Radford, professor of environmental medicine at John Hopkins University, is among the scores of people who have criticized the events in the decision-making process.

He notes that in May of 1969, the AEC began hearings on Baltimore Gas and Electric's application for a construction permit.

Although opponents regarded this as the key hearing in blocking the plant, the AEC pointed out that the law governing such proceedings prohibited presentation of testimony regarding the choice of plant location, thermal effects on marine life in the Bay, power line location and the relationship between the size of the plant and the actual power needs of the area to be served.

Testimony was therefore limited strictly to matters regarding actual plant construction.

Radford says it subsequently developed that witnesses were not permitted to challenge the standards for the release of radioactive materials to the environment. The hearing was "pure window dressing," Radford contends.

The next hearing was before the Maryland Public Service Commission in July, 1969. The question was whether a new Maryland law, which became effective July 1, 1968, was applicable to the Calvert Cliffs plant. The new law gave the PSC the right to approve power plant location and operating plans for such plants on which construction had not begun.

At this hearing, less than two months after it had testified before the Atomic Energy Commission for a permit for construction which theoretically had not yet begun, Baltimore Gas and Electric argued before the PSC that it had, in fact, begun construction a year earlier.

The regulatory agencies paid little heed to the apparent contradiction in testimony. The AEC granted the construction permit; the PSC said that the new law did not apply to the Calvert Cliffs plant.

The Maryland Academy of Sciences, a nonprofit organization which receives some state funds, issued a report last winter calling the plant "an acceptable risk" when looked upon as "an experimental tool." The academy report also urged a moratorium on additional nuclear power plants on the bay until environmental studies are made, but efforts by some legislators last winter to impose such a moratorium and to block the Calvert Cliffs plant failed miserably.

The final state permit, for use of the waters of the bay to cool the plant's generators, was granted last spring.

Maryland's director of water resources attached strict restrictions on, among other things, the radiation that would be discharged into the bay. But a Baltimore Gas and Electric spokesman noted that a similiar case in Minnesota is being challenged on grounds that only the AEC can set radiation standards, and said that Maryland's tougher restrictions for Calvert Cliffs "would be null and void" if the court rules in the AEC's favor.

The water use permit issued by Maryland limits the permissable radioactivity level in liquid discharges to 1 per cent of what AEC allows.

Dr. Neil Solomon, Maryland's health director, say the AEC would permit too high a release of radioactive tritium from the plant and possibly "cause unacceptable concentrations in shellfish in the waters receiving the discharge."

Also, Solomon says, Baltimore Gas and Electric must register the plant "as a potential air pollution source" because it will emit radioactive isotopes to the atmosphere. The company contends the amount to be released will be so insignificant as to pose no hazard.

COMPANY'S RESPONSE

As to the frequent citizens' charges that the company kept the proposed Calvert Cliffs plant shrouded in secrecy until it was too late to mount effective opposition, Baltimore Gas and Electric Co. responds that all of its actions have been taken openly and with accompanying publicity.

"I believe that Baltimore Gas and Electric is quite open in its planning about power plant sites," says company president Utermohle.

"More than 3½ years ago, in mid-1966, we publicly requested rezoning of our Calvert County property as the possible location of a nuclear power plant. The Associated Press carried a story on the event.

"About a year after that, in May, 1967, we held the largest news conference in the history of the company to announce specific plans for the project to the public and to answer any and all questions which might arise. . . .

"It was almost a year later that we finally began site preparation and excavation. Yet no clear opposition appeared until the year after that—1969—during the final stages of our application for an AEC nuclear construction permit."

For Maryland, at least, Calvert Cliffs is the guinea pig for the nuclear power industry. Supporters of the project, such as William W. Eaton, chairman of a task force appointed by Gov. Marvin Mandel, foresee a threefold to eightfold increase in the power needs of the Chesapeake Bay region by the year 2000.

SIX PLANTS EXPECTED

According to 10-year plans filed by the utility companies with the Maryland Public Service Commission last winter, at least six nuclear power plants are likely to be built in Maryland in the next 10 years in addition to the Calvert Cliffs facility.

Baltimore Gas and Electric Co. has said it would make a determination sometime this year as to the type of 1.6 million kilowatt plants—nuclear or fossil—that it will build at Bush River off Chesapeake Bay rd. north of Baltimore. Completion would come in 1979.

The Potomac Edison Co. filed plans for a 650,000 kilowatt plant to be located either at Point of Rocks, Md., or Grafton, W. Va., or Washington, Pa.

The company notes, in documents filed with the Public Service Commission, that if nuclear energy is used, the plant will have to be at least 1.1 million kilowatts. At any rate, the company says, construction is to be completed in 1978.

ANOTHER CONTROVERSY

Recently, another storm of controversy developed over the Potomac Electric Power Co.'s plans to build either two nuclear or fossil fuel plants on the Potomac River at Sandy Point in Charles County. Plans call for each unit to be 1,050,000 kilowatts, with completion in 1977 and 1979, respectively.

Still being kept under wraps by Pepco is another planned 1 million kilowatt plant. According to company plans filed with the Public Service Commission, the site and type of fuel for the plant have not yet been determined. Construction is scheduled to begin in January 1971 and be completed by January 1978, but the public has yet to be apprised of the specific plans.

Although these are the only power plant plans currently on file with the Public Service Commission that could use nuclear fuel, additional proposals may be expected in the years to come. As the governors' task force stated:

"Arbitrarily, it can be assumed that half the electric generating plants in the Chesapeake Bay Region in the year 2000 will be nuclear. In this case the increased demand for power during the next three decades in the Bay region . . . could mean building five more 3000-megawatt nuclear power plants in the Chesapeake Bay region, i.e. about 10 more Calvert Cliffs plants."

The Chesapeake Environmental Protection Association, along with other environment and conservation groups, has expressed the view that much of the planning for future power needs constitutes a self-fulfilling prophecy.

The organization expressed it this way in a news release last Spring:

"Estimates of future power needs are based on an estimated increase in population as well as an increase in consumption per person. This is a statistical extrapolation which, if accepted as a goal, can be made to come true.

"The costs of attaining such a goal have not, however, been calculated. Would a

ruined environment make life not worth the candle? Or would we be better off with candles?"

To CEPA and many other concerned environment groups, "present plans for increased power capacity by the use of nuclear energy should be halted and restudied in the light of what the real need for power may be and how much, if any, of the remaining environmental quality we can trade for it and still survive."

Earlier this month, the AEC turned down still another proposal by opponents of Calvert Cliffs to halt construction.

Before the plant will be allowed to operate, the AEC said, the company will be required to submit a plan detailing the environmental impact of the facility. By that time, with close to $400 million spent, no one seriously believes the AEC would refuse an operating permit.

Perhaps, Chairman Edmund Muskie (D-Maine) of the Senate air and water pollution subcommittee said recently, Maryland and the nation learned something from Calvert Cliffs and can be on guard to see that such future plants are not established facts of life before citizen concern is aroused.

At Calvert Cliffs, Muskie said, the plant built up such a "momentum" that the state and its concerned citizens "were foreclosed . . . from taking sufficient steps" to regulate it.

So the utilities, the citizens and the state government will be watching the Calvert Cliffs plant in the years to come.

If the plant, in the words of Hugh Hunter, chief engineer of the Maryland Public Service Commission, "proves to be a good citizen" and not a hazard to the bay and human life, then nuclear power plants can be expected to spring up all over the state.

"The utility companies are laying back right now, watching what happens at Calvert Cliffs," Hunter says. "If this plant is a success, then there's little question that you're going to see many more such plants built in this state in the years to come."

TERRORIST KIDNAPING MOVEMENTS ABROAD

Mr. ALLOTT. Mr. President, on Monday, August 24, 1970, the distinguished junior Senator from West Virginia (Mr. BYRD) submitted Senate Resolution 454. I assure the Senator of my full support for this wise measure and urge all Senators to give it their prompt and total support.

The resolution is responsive to a new and odious tactic currently in fashion among radical terrorists in various parts of the world. This is the tactic of seizing innocent aliens in a foreign nation and holding them hostage for the achievement of radical political goals in that foreign nation.

This tactic has been refined to a barbarous perfection in recent months. The favorite targets of these mad and cowardly kidnapers are Americans. The most recent outrages have been committed in Uruguay, where the Tupamaros terrorist movement is struggling to win with terror what it cannot win through legitimate political practices.

Twice these political brigands have seized Americans, threatening to murder them if the Uruguayan Government refused to release the leftwing terrorists it has succeeded in putting behind bars. One American—Daniel Mitrione—has already been murdered by the Tupamaros.

As we speak here, Mr. President, another American and a Brazilian are being held by the Tupamaros. The American is Dr. Claude L. Fly from Fort Collins, Colo. Dr. Fly is a dedicated public servant who has been sharing his agricultural expertise with the Uruguayan Government.

The Uruguayan Government is making every effort to rescue Dr. Fly. Our own State Department is cooperating in every way possible. We all pray they will be successful.

What we can do here and now, Mr. President, is to try to minimize the likelihood of such terrorist activities in the future. Senate Resolution 454 calls upon the President to initiate bilateral and, where appropriate, multilateral agreements binding the signatory nations to do all they can to protect American personnel from such terrorists and to prosecute them vigorously when they are apprehended.

In addition, the resolution provides that signatory nations would institute extradition arrangements and other procedures that would frustrate the terrorist goal of getting released comrades to safety in other nations.

Mr. President, I command the distinguished senior Senator from West Virginia for submitting this timely and humane resolution. I urge its swift adoption.

PRESIDENT NIXON REVIVES L. B. J.'S PET "GIVEAWAY"

Mr. WILLIAMS of Delaware. Mr. President, today's Washington Daily News contains an article entitled "Nixon Quietly Revives L. B. J.'s Pet Giveaway'," written by Dan Thomasson.

In the article, Mr. Thomasson suggests that a "multimillion-dollar giveaway" that had been approved in the closing days of the Johnson administration and canceled in the early days of the Nixon administration has now been revived.

As one who was highly critical of this project, I sincerely hope that this report is in error; however, to be sure I am asking the departments for more details and may have some comments on this later.

I ask unanimous consent that Mr. Thomasson's article and my comments on the same project, as made in the Senate on October 30, 1969, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

NIXON QUIETLY REVIVES L. B. J.'S PET "GIVEAWAY"

(By Dan Thomasson)

President Nixon—prodded by former President Lyndon B. Johnson—quietly has revived a pet LBJ project in Austin, Tex., despite charges it is a "multi-million-dollar giveaway."

Top congressional sources said today an angry Mr. Johnson urged Mr. Nixon to resurrect the project which involves more than $7 million in Federal Housing Administration (FHA) grants and loans and transfer of 26.5 acres of federal land to a group of Mr. Johnson's personal friends and business associates.

The project, rushed thru in the last days of the Johnson administration, was killed by the Nixon administration last year after congressional critics questioned its legality.

The Health, Education and Welfare Department confirmed today it had withdrawn its contest of the land transaction with the Austin Geriatrics Center, Inc., a nonprofit organization which plans to use the land and loans to set up a 168-bed nursing home and 250-unit housing complex for the elderly.

100 PER CENT FINANCING

And the Housing and Urban Development (HUD) Department conceded it has worked out a new 100 per cent federal financing deal with the Austin organization. The organizers include J. C. Kellam, manager of radio and TV properties owned by Mr. Johnson's family in Austin; Frank C. Erwin Jr., Austin attorney and longtime Johnson friend, and Roy A. Butler, Austin auto dealer and TV station owner who also has been a close ally of Mr. Johnson's.

The congressional sources said Mr. Johnson, infuriated by the Nixon administration's rejection of the project, pointedly reminded Mr. Nixon that he (Johnson) was supporting the President's policy on Vietnam and Southeast Asia.

"Lyndon considered this sort of a hometown monument to his administration," the congressional source said. "And he didn't like it at all when Nixon axed it."

FISH HATCHERY

The land involved had been a fish hatchery which the Interior Department declared surplus and transferred to HEW, in December, 1968, little more than a month before Mr. Johnson was to leave office. HEW, in turn, deeded it to the Texas group over strenuous objections of some HEW officials.

But in October, 1969, the Nixon administration demanded the land be returned to HEW on grounds the Texas group did not have the proper tax-exempt status, a technical move designed to stop the transaction.

A HEW spokesman said today, however, that this problem has been ironed out and the deed to Austin Geriatrics has been confirmed. Altho the land originally had been appraised at $2 million, its value was set at $640,000 in deeding it over at no cost to the Texas group.

The original deal called for the Texas group to get loans and grants totaling around $9 million from the FHA, HEW, and HUD to put up the geriatrics complex. To finance the 10 per cent down-payment required for FHA mortgage guarantees, the group was permitted to pledge the land it had received free from HEW.

In August of last year, HUD Secretary George W. Romney personally ordered FHA officials not to give the Texas group a 60-day extension on the mortgage commitments. And in September, 1969, a review revealed the commitments "were not feasible" and the project was killed.

In January of this year, however, a month after Mr. Johnson visited Mr. Nixon in the White House, the Texas group contacted FHA and was told it could submit new applications. On May 7, Austin Geriatrics submitted two new applications and on July 8, San Antonio FHA officials said the new plan was feasible.

STATEMENT OF SENATOR JOHN J. WILLIAMS

Mr. President, today I call attention to a highly questionable transaction wherein real estate with a real value of over $2 million was given away in the last 90 days of the Johnson Administration.

Between October 21, 1968, and January 20, 1969, a group of Texans, Mr. J. C. Kellum, Mr. Roy A. Butler, and Mr. Frank C. Erwin, Jr., formed a nonprofit corporation and then received a free gift from the Government of 26½ acres of choice real estate in the center of Austin, Texas. A low value of $642,000 was used, but actually this valuation was far too low since in the Government files

at that same time was an earlier appraisal which showed a valuation on this same land of over $2 million. As if that were not enough, in addition to receiving this gift of land this same group was approved for large cash grants from the Department of Health, Education, and Welfare and for Federal Housing Administration loans totaling over $8 million to build a nursing home and apartments on this same project. F.H.A. loans are not supposed to be for more than 90 per cent of the construction cost. To provide the necessary 10 per cent down payment the group pledged as collateral the land which the government had just given them plus the proceeds of three cash grants awarded them by H.E.W. totaling nearly a half million dollars. This meant that the group would have no money invested in the $10 million project.

The files indicate that these liberal transactions were arranged upon orders from the White House, and official approval was given by the Secretary of Health, Education, and Welfare, who overrode the strenuous objections of subordinates who recognized this deal as a land grab in which the interests of the Government were not being properly protected.

I shall review the chronology of these transactions and let the record speak for itself.

First the President developed the idea of establishing a geriatric center in Austin, Texas. The project was originally supposed to have the sponsorship of the University of Texas; but the University soon withdrew and then a group of individuals formed a so-called nonprofit organization and proceeded with the plans.

On October 29, 1968, there was a special meeting at the White House to discuss this project. Present were Mr. M. Nimetz, Special Assistant to Mr. J. Gaither, representing the President; Dr. Thomas McCarthy, National Center for Health Services, Research and Development; Mr. H. R. Moskof, President, Committee of Urban Housing; Mr. T. Ray Ogden and Mr. C. L. Tilley, of Brooks, Barr, Graeber and White, of the Washington and Austin offices, respectively; Mr. A. H. Dilly, Vice Chancellor for Health Affairs, University of Texas, Austin; Mr. A. D. Grezzo, Chief, Elderly Nursing Homes and Medical Facilities Branch, F.H.A.; and Mr. J. A. Cunningham and Dr. Milton L. Bankoff, both of Division of Medical Care Administration, Public Heatlh Service.

The purpose of this meeting was to develop a definitive program in response to the President's request for a new and innovative nursing home for Austin, Texas, as soon as possible.

The representatives of the University of Texas expressed their desire to cooperate completely with the President; however, they insisted on a permanent well-built building which would be operated according to high standards.

In view of the local bed situation (1,500 nursing home beds in Austin, which has a population of 200,000 and a new medicenter of 225 beds) and the low amount of financial reimbursement under current Texas regulations it was decided at this meeting that the maximum building size should be 250 beds for the nursing home.

The National Medical Association Foundation (N.M.A.F.) program was discussed in depth, and it was decided to use the N.M.A.F. plan of a continuum of care with construction of a nursing home to be followed by construction of housing for the well-elderly as rapidly as possible. Both were to be included in the master plan for the site which was to be approved as soon as possible so that construction could be begun by December 25, 1968.

The group at the October 29 meeting was told that 26 acres of federal land then being used as a fish hatchery and located five minutes east of the center of Austin, Texas, was available. That was prime land and had been valued at $2 per square foot, or over $2 million, but later when transferred this valuation was arbitrarily reduced to $642,000. There appears to be no justification for this lower appraisal.

After much discussion at this October 29 meeting this federal site was chosen. Significantly as of the date this property (consisting of 2 tracts—one of 5.79 acres and one of 20.704 acres) was selected it had not even been declared surplus, nor had the Texas group filed their organization papers.

Two weeks later, on November 15, 1968, the 20.704 acres plus an easement of .390 acres, for a total of 21.094, was conveniently reported as excess to the needs of the Interior Department, and four days later, on November 19, 1968, it was declared surplus. This property was not screened for use by the other federal agencies as is required by the law.

Meanwhile a new group took over. On this same date, November 19, 1968, the Austin Geriatrics Center, Inc., was formed under the Texas Nonprofit Corporation Act with directors and incorporators as follows:

Directors.—Frank C. Erwin, Jr., Roy A. Butler, J. C. Kellam.

Incorporators.—Burnell Waldrep, Richard C. Gibson, William R. Long.

On November 20, 1968, Mr. Sol Elson, Director of Surplus Property, sent a memorandum to Mr. Donald F. Simpson, Assistant Secretary for Administration, giving a status report on the surplus property situation and raising questions which needed to be answered in order to meet time tables set by his superiors (namely, to get this transaction cleared before January 20, 1969). In this memorandum Mr. Elson outlined their problem as follows:

1. They had not yet received an application, so they didn't know what the proposed program was.

2. They had no knowledge regarding the nature of the corporation that was to get the property or its financial ability.

They assumed it would be eligible as a nonprofit organization. Since the construction was going to be fully subsidized by the federal government and since the operation might have to be subsidized Mr. Elson felt serious doubt might exist as to the financial feasibility of the project unless there were a pledge for underwriting continuing long-term operations by some financially responsible organization. He requested additional information so that they could meet the Administration's wishes.

On November 22, 1968, their application was filed and sent to Mr. Sam G. Wynn, Regional Representative, Office of Surplus Property Utilization, H.E.W.

On November 26, 1968, the remaining 5.79 acres were reported as excess to the needs of the Interior Department, and the following day, November 27, 1968, Mr. Donald Simpson, Assistant Secretary of H.E.W., gave Secretary Wilbur Cohen a report promising that the property would be ready for delivery by December 11, but Mr. Simpson raised a question as to whether publicity of the transaction would be appropriate.

On November 29, 1968, the 5.79 acres, which on November 26 had been declared excess to the needs of the Interior Department, was officially declared surplus. Again there was no screening of other federal agencies as to its possible use.

On December 6, 1968, Secretary Cohen advised the President that as of December 2, 1968, the 26.5 acres had been officially declared surplus by the General Services Administration, that it had been assigned to H.E.W. for disposal, and that he would be ready to deliver the deed to the Austin group on December 10, 1968, at 2:00 P.M.

On December 10, 1968, the signed deed was delivered to the Texas group with a provision therein for a right of reverter for thirty years if:

1. The property was not used continuously for health and health research purposes in accordance with the application and "the supplement thereto."

2. The Center sells, rents, encumbers, or transfers the property without the consent of H.E.W.

3. The Center fails to report yearly to H.E.W.

4. The Center violates the Civil Rights Act.

The Texas group did have one problem regarding its ability to pledge the property as collateral to obtain financing from the F.H.A. This was soon resolved by the execution of a Consent Agreement on January 10, 1969, which allowed them to use this property, which was costing them nothing, as collateral for an $8 million low interest government loan.

The plan was for the Center to build a large facility, which meant a large loan and a fair amount of equity money. This could be difficult for the Center from a practical standpoint. From a technical standpoint H.E.W. had the right to revert if the Center mortgaged without first obtaining the Department's consent; however, if the Center could comply and had private financing without F.H.A. help it could be difficult to refuse such consent.

Assuming the Department of H.E.W. refused to consent it would be possible for the Center to abrogate the condition subsequently by paying to the Department $642,000 the low GSA appraised figure.

While $642,000 was the appraisal figure used for the transfer of the property to the Texas group, actually at the time of the transfer the agency files showed that earlier the same land had been appraised at well over $2 million. I found no basis for the lower valuation except to make this giveaway transaction appear less odorous.

As mentioned earlier, in addition to the free land this Texas group needed some cash. They were applying for $8.5 million in loans, and the Government required that they furnish ten per cent collateral.

The land they had received as a gift, while actually worth $2.2 million, had been accepted at a low appraisal of $642,000 and therefore would not cover the required ten per cent. (The Government loans are supposed to be for only ninety per cent of the construction costs.)

Again H.E.W. came to the rescue. On January 8, 1969, Mr. Thomas McCarthy, the Deputy Director of the National Center for Health Services Research and Development, wrote the Chief of the Contract Branch requesting that a contract he awarded the Center in the amount of $150,000 with a 12-month period of performance. Mr. McCarthy claimed that the Center had unique, important, and predominate capabilities to do the work they sought to undertake and that therefore it was impractical to secure competition by formal advertising. I suppose what he really meant was that only 12 days remained before the Administration would be out of office and that they did not have time for competitive bids.

On the following day, January 9, 1969, the Center was invited to submit a proposal, which was done on January 10 by Mr. Frank C. Erwin, Jr., President of the Center. The total estimated cost was $150,000, and Articles of the Center were attached indicating it to be a nonprofit corporation incorporated on November 19, 1968.

On January 13, 1969, Mr. William W. Brownholtz, Chief, Cost Advisory Branch, Office of Financial Management, submitted to the Chief of Contract Operation Section, Procurement Division, Health Services and Mental Health Administration (H.S.M.H.A.) an adverse report recommending against giving this contract to the Center. He com-

mented that the contract was to be a cost reimbursement type and that the organization was not ongoing and had not established an adequate accounting system to implement the contract. He also noted that the contract contemplated charging many overhead costs to the contract program. This naturally would be inappropriate if the Center also carried on activities unrelated to the Contract Program as they would have the benefit of overhead cost payments made through the contract. He felt the Center should file a security bond.

On January 14, 1969, Mr. Samuel J. Dick, Contracting Officer, likewise submitted an adverse pre-award onsite evaluation. Some of the points raised in this report were as follows:

1. The Center had no legal domicile, but Mr. Erwin suggested that his office address in Austin be used.

2. The Center had no assets other than the property deeded to them by the Federal Government.

3. F.H.A. mortgage negotiations had not been concluded, but the Center hoped to break ground by January 23, 1969, and commence construction in February. The Center therefore did not have facilities to perform the contract and would not have them until the nursing home was built.

4. The Center did not have an administrative staff or employees. Mr. Ervin was to select an administrative staff and a Director of Research, and the Center hoped to obtain consultants.

5. The Center did not have an adequate accounting system or controls to administer a government contract.

6. The Center did not have financial capacity or other resources to perform the contract, nor had it demonstrated the ability to obtain such financing. The Center felt advance payments would be necessary for operating capital.

7. The Center had no prior contracts or experience.

8. The contract contemplated was for one year, which was not within the ability of the Center, and it hoped a 2- to 3-year contract would be considered.

In this report of January 14, 1969, it is clear that Mr. Dick felt that the Center did not meet the standards of the Federal Procurement Regulations and recommended that the contract not be awarded.

On January 15, 1969, the following day, a synopsis was published in the Commerce Business Daily indicating that the Center was the sole source for the program by reason of its unique plans and capabilities and that there therefore would be no competition.

On that same day, January 15, 1969, Mr. J. Keesler, Chief, Procurement Branch Office of Procurement and Material Management, H.S.M.H.A., wrote a memorandum to the Deputy Administrator attaching Mr. Dick's memorandum of January 14. He reviewed the file with Mr. Weiner, Office of the General Counsel, and Mr. William Brownholtz, Office of Financial Management, and pointed out that they all agreed that the contract should not be awarded to this Texas group.

But White House pressure was on, and no attention was paid to any of these adverse reports.

On January 17, 1969, H.E.W. signed the contract in the amount of $150,000.

Three days later, January 20, 1969, a government-guaranteed loan in the amount of $2,283,800 was approved for the 168-bed nursing home with the San Antonio Insuring Office issuing a commitment under Section 232 (Project No. 115-43011-NP).

This loan application carried the notation that the closing requirements of about $227,000 would be cared for by H.E.W. grants.

On January 20, 1969, (the same day) a second government-guaranteed loan for $6,350,000 was approved under Section 236 for a 363-unit project designed for elderly with 20 per cent rent supplement units (Project No. 115-44008-NP-SUP).

In addition to the gift of land, this group during the same 90-day period received approval of a series of grants: From H.E.W. $150,000; and from H.U.D. $298,582 interest reduction payment (Section 236) and $58,779 in rent subsidies.

These advance cash grants and the free land received from H.E.W. were the only security advanced as representing the sponsors' ten per cent security for the $8.5-million government loan.

Thus here we have the government, in cash grants and free land, furnishing collateral for their own loans.

Mr. President, an examination of this transaction clearly shows that the free gift of this land and the approval of these cash grants and these $8.5 million in loans were obviously political decisions, and as the result of this last-minute scramble to get just one more grab from the Federal Treasury the taxpayers stand to lose millions.

To illustrate just how bold this deal was I call attention to a memo signed by Secretary Cohen on January 16, 1969, just four days before leaving office.

On January 15 two adverse reports had been received, recommending against the approval of the H.E.W. grants and the transfer of this land to this Texas group.

On January 16, 1969, Secretary Wilbur J. Cohen dictated a memorandum for the file indicating that he had personally reviewed the files, that he knew Mr. Frank Erwin, one of the directors of the Texas group, to be a man of integrity, and that he personally had discussed the project with the officials of the University of Texas who had assured him of their support of the Center. Based on said assurances he was approving the project. There is a hand-written note in the Department files on a route slip, which states:

1. Sign all three copies.

2. Sign memorandum for the record saying you reviewed, etc., and therefore approve the project.

3. Ship whole package to Lewis, and we will get a man on a plane to Texas to get them to sign before January 20.

Mr. President, I question not only the propriety but the legality of this multi-million dollar giveaway transaction wherein all rules governing the disposition of government property were ignored. Grants were made and loans were approved for this group in a manner which underscores bureaucratic contempt for the American taxpayers. This transaction cannot remain unchallenged.

I am today requesting the Department of Justice to investigate this transaction and take whatever steps are necessary to protect the interests of the Government and to recover this property. Meanwhile I am suggesting that all government agencies which approved any grants or loans to this group stop all disbursements until the Department of Justice has had an opportunity to act.

THE RIGHT TO READ

Mr. PERCY. Mr. President, the ability to read is, of course, critical for those who wish to become full and active members of our society. Unfortunately, it is increasingly apparent that too many students are not adequately acquiring this most basic skill.

In recognition of this fact, President Nixon has endorsed the right to read as a national goal for the 1970's and he has indicated that the achievement of this goal will require a national effort to develop new curricula and new methods and to better apply the many methods and programs that already exist.

An article by Mr. Lew F. Palmer, Jr. which recently appeared in the Chicago Daily News clearly and succinctly indicates the wisdom of the President's action. Mr. Palmer not only highlights the problem but reports on the activities of an organization, the Reading Foundation, which appears to have developed a successful method of overcoming the cultural disadvantages of the poor in teaching them how to read.

Mr. President, because I believe that Senators may benefit from Mr. Palmer's article, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOLS NEEDN'T BE THAT BAD

A federal study commission has reported that one student of every seven has trouble reading, with some barely learning to read at all.

According to the American Assn. of Junior Colleges, one-third to one-half of new students need remedial instruction before they can work toward a four-year degree.

An education expert in Tampa says boys and girls there are graduating from high school with reading abilities of "small children."

Recent reports from the Chicago Board of Education show that the average pupil entering first grade had an above-average IQ. By the time they "progressed" to upper grades, they were below national reading norms.

The ability to read, of course, has an overwhelming relationship to the ability to progress in all phases of the educational process. It is interesting to note also that poor reading skills are directly correlated with antisocial behavior.

A committee from the Health, Education and Welfare Department reports that about 75 per cent of all juvenile delinquents are significantly retarded in reading.

This same committee discovered that of 10,000 young offenders in federal prisons, 90 per cent had reading problems in school.

It is ironic that the federal study commission on reading made its dismal report about a month after U.S. astronauts landed on the moon, for education experts estimate that a crash program to teach every American boy and girl to read adequately would cost as much as it took to get those footprints on the moon.

No such expenditure is under discussion now and if it were our system of priorities are such that it would not stand a ghost of a chance of becoming reality.

Until the American educational establishment discovers ways to solve this extraordinary problem and until the federal government decides that it is just as important to teach kids to read as it is to make moon trips, something must be done to keep the situation from getting worse.

Officials at the Reading Foundation in Chicago are convinced they have found a way to overcome reading deficiencies. The plan is called Optimation and the primary objective is to increase immediate comprehension and long-run retention of all materials read.

Actually, it is a rapid reading course and Robert B. Ayres, the foundation president says he has proof that "increasing the rat of reading results in increased and fast understanding of the material."

He says Optimation has been "highly s cessful" with business executives and p fessionals. It has now been tested in sch even among so-called disadvantaged dren, with remarkable success.

A course given at Christian Action try in Chicago saw one student leap

reading rate of 166 words a minute to 27,000. The class average was 12,220. Class comprehension increased from 50 to 53 per cent.

At Holy Angels Catholic school in Chicago, eighth graders participated in 24 hours of class instruction and 22 hours of home practice. Ayres reported that at the beginning of the course, the class' average reading speed was 141 words a minute with 40 per cent comprehension.

"The class average at the conclusion of the course was 5,615 words a minute," Ayres said, "and 58 per cent comprehension. The gain in reading efficiency (reading rate multiplied by comprehension) was 5,815 per cent."

After similar results were obtained at Ocean Hill-Brownsville Demonstration School District in Brooklyn—one of the rare community-controlled school districts in the country—Rhody A. McCoy, unit administrator, wrote Ayres:

"In the beginning, I was apprehensive about the program results that now are very evident in all three pilot classes you have conducted. The constructive, positive attitude that the students display is beautiful.

"If they continue with this new attitude, they can't help but be successful in life."

McCoy listed these "reactions we have had about your course: Students are more confident . . . It has made it possible for the teacher to do a better job now that the students are more receptive and capable of getting through sufficient material to make their classes more meaningful . . .

"Parents . . . report a complete change in reading habits with many who did not read books before now reading four or five a week and more."

The big question, then, is why public school systems are not making use of Optimation? Obviously something is terribly wrong with our present systems of teaching reading. New approaches are desperately needed. Innovation and experimentation are essential.

THE McGOVERN-HATFIELD AMENDMENT

Mr. ALLOTT. Mr. President, I am pleased to be able to share with the Senate today a most informative and cogent document pertaining to the McGovern-Hatfield amendment.

I have been fortunate to receive a memorandum which is a comprehensive discussion of the delusive theories which underlie the amendment. This memorandum was drafted for me by Prof. William H. Roberts, director of the Institute of International Law and Relations at the Catholic University of America, in Washington, D.C.

So that all Senators may profit from the thinking of this distinguished scholar, I ask unanimous consent that his memorandum be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM REGARDING THE PROPOSED MCGOVERN-HATFIELD AMENDMENT TO THE MILITARY PROCUREMENT AUTHORIZATION ACT (H.R. 17123)

INTRODUCTION

1. In his address of April 30, 1970,[1] the President announced his decision that "the time has come for action" in regard to the Cambodian bases and sanctuaries of the enemy forces. This presidential decision was based on the following findings of fact and conclusions:

a. "For the past five years . . . North Vietnam has occupied military sanctuaries all along the Cambodian frontier with South Vietnam. Some of these extend up to 20 miles into Cambodia. They are used for hit-and-run attacks on Americans and South Vietnamese forces in South Vietnam.

"These Communist-occupied territories contain major base camps, training sites, logistic facilities, weapons and ammunition factories, air strips and prisoner of war compounds."

b. "In contrast to our policy, the enemy in the past two weeks has stepped up his guerrilla actions and he is concentrating his main attacks on our forces and those of South Vietnam."

c. "If this effort succeeds, Cambodia would become a vast enemy staging area and springboard for attacks on South Vietnam along 600 miles of frontier—and a refuge where enemy troops could return from combat without fear of retaliation.

"North Vietnamese men and supplies could then be poured into that country, jeopardizing not only the lives of our own men but the people of South Vietnam as well."

d. "The areas in which these [i.e., U.S.-South Vietnamese] attacks will be launched are completely occupied and controlled by North Vietnamese forces."

e. "I have concluded that the actions of the enemy in the last 10 days clearly endanger the lives of Americans who are in Vietnam now and would constitute an unacceptable risk to those who will be there after our withdrawal of 150,000.

"To protect our men who are in Vietnam and to guarantee the continued success of our withdrawal and Vietnamization program, I have concluded the time has come for action." The purpose of the orders to be issued pursuant to the President's determination ". . . is not to occupy the areas. Once the enemy forces are driven out of these sanctuaries and their military supplies destroyed, we will withdraw."

2. Clearly, the findings and the determination as well as the purpose of the actions announced in the President's address of April 30, 1970, are incidental to the fact that American forces have been engaged in military operations in Vietnam for several years. Therefore, the President's decision is a military one which was made in his capacity as Commander-in-Chief of the Armed Forces. This conclusion is strongly emphasized by the fact that the purpose of the action, as stated by the President, is exclusively a military and not a political one.

3. The sequence of events following the President's announcement of April 30, 1970, namely the various amendments offered in the Senate to pending legislation, specifically the so-called McGovern-Hatfield Amendment to the Military Procurement Authorization Act (H.R. 17123) were clearly introduced in response to the President's aforementioned address. Consequently, the amendments, and specifically their operational clauses would, if enacted, impose in effect and of necessity serious limitations and restraints on the President's constitutional powers as Chief Executive, who is solely charged with the conduct of the foreign relations of the United States (hereinafter "foreign relations power"), and as Commander-in-Chief of the Armed Forces (hereinafter "Command power"). Clearly, statements made in the course of the debate on these amendments and even proposed amendments to their preambles, specifically statements, etc., to the effect that the proposed amendments, e.g., the proposed McGovern-Hatfield Amendment are not intended to interfere with the aforementioned presidential powers, contradict the operational clauses of these amendments because they do, in fact, constitute interference with the President's aforementioned authority.

4. This memorandum will attempt to analyze specifically the proposed McGovern-Hatfield Amendment under the following headings: I. The powers of the Executive; II. Interrelations Between the Foreign Relations and the Command Powers of the President; III. The Foreign Relations Power of the President; IV. The Command Powers of the President; V. Limitations on Congressional Interference with the President's Foreign Relations and Command Powers; and VI. Substance and Contents of the President's Command Powers as Determined by International Law.

Clearly, the proposed McGovern-Hatfield Amendment has a much wider scope than the Cooper-Church Amendment to the Foreign Military Sales Act (H.R. 15628), as passed by the Senate. Therefore, the former does not only include and cover the policy and provisions of the Cooper-Church Amendment but it is, in fact, a far more ambitious and farther-reaching projection of the policies which have found expression in the latter, as passed by the Senate. Occasional references to the aforesaid Amendment are, therefore, equally applicable to the proposed McGovern-Hatfield Amendment, and will simply serve the purpose of exploring all its ramifications.

I—The powers of the executive

It is well established that constitutional practice has been firmly based on the doctrine of executive power as originally stated by Alexander Hamilton. He said that:

"The general doctrine of our constitution then is, that the *executive power* of the nation is vested in the President, subject only to the *exceptions* and qualifications, which are expressed in the instrument."[2]

Thomas Jefferson did not only support Hamilton's aforementioned doctrine but expressed it in ever more explicit terms when he said that:

"The executive . . . possessing the rights of self-government from nature, cannot be controlled in the exercise of them but by a law, passed in the form of the Constitution."[3]

The prevailing constitutional doctrine was aptly summarized in the following words of the Solicitor of the Department of State when he said:

". . . where, by the terms of the constitution the national government is vested with control over a certain *sphere of action*, that portion of the field is the president's which is executive in character. . . ."[4]

II—Interrelations between the foreign relations and the command powers of the President

It is well established that the conduct of the foreign relations of the United States has been solely vested in the President.[5] One of the leading academic authorities on the Constitution, Edward S. Corwin, spoke in this connection of ". . . the President's monopoly of the function of international intercourse and his constitutional independence in the performance of that function."[6] In addition, the Constitution makes the President expressly the Commander-in-Chief of the Armed Forces.[7]

The fact that the President's foreign relations and command powers are closely interrelated to each other has been recognized since Hamilton wrote that the executive department was ". . . the organ of intercourse between the nation and foreign nations" and that it was "charged with command and disposition of the public force."[8] He, then, arrived at the conclusion that:

". . . it belongs to the 'executive power' to do whatever else [except a declaration of war] the law of nations, co-operating with the treaties of the country, enjoin in the intercourse of the United States with foreign powers."[9]

John Marshall, when a member of the House of Representatives, spoke of the interrelations between the aforementioned two powers of the President when he said that:

Footnotes at end of article.

"The president is the sole organ of the nation in its external relations. . . . He possesses the whole Executive power. He holds and directs the force of the nation. Of consequence, any act to be performed by the force of the nation is to be performed through him." [10]

Similarly, Monroe, in his capacity as Secretary of War, advised Congress that "The power of command was vested in the President primarily for the purpose of giving him that control over military and naval operations which is a necessary attribute of the executive branch." [11]

Justice Nelson, sitting as Circuit Justice and speaking for the court, epitomized the interconnection between the foreign relations and command powers of the President in the following words:

"For this purpose the whole Executive power is placed in his [the President's] hands . . . and different departments of government have been organized, through which this power may be most conveniently executed *whether by negotiation or by force.*" [12] (Emphasis added.)

The reasons behind this combination of foreign relations and command powers in the hands of the President were aptly stated by Justice Sutherland when he said for the Court that:

". . . he [the President], not Congress, has the better opportunity of knowing the conditions which prevail in foreign countries, and especially is this true in time of war." [13]

III.—The President's foreign relations powers

Constitutional doctrine, Congress, as well as the executive and judicial branches of the Government, have consistently maintained that the power to conduct the foreign relations of the United States (foreign relations power), with the exception *expressly* stated in the Constitution, is solely vested in the President. Alexander Hamilton emphasized this point when he said that "the legislative department is not the organ of intercourse between the United States and foreign nations." [14]

Again, Jefferson emphasized Hamilton's point of view when he said that:

"The transaction of business with foreign nations is Executive altogether . . . except as to such portions of it as are specially submitted to the Senate. Exceptions are to be construed strictly." [15]

As early as 1816, the Senate Foreign Relations Committee in a report to the Senate warned against congressional interference with the President's exclusive powers in the foreign relations field on the ground that such interference was bound ". . . to impair the best security for the national safety." [16]

In 1897, the Senate Foreign Relations Committee made a thorough investigation of the question of presidential powers in the foreign policy field in connection with the question of the recognition of Cuba's independence. The Committee arrived at the following conclusions:

"The executive branch is the sole mouth piece of the nation in communication with foreign sovereignties. . . . In the department of international law, therefore, properly speaking, a congressional recognition of belligerency or independence would be a nullity." [17]

About a decade later, Senator Spooner of the Foreign Relations Committee said in the Senate:

"The Senate has nothing whatever to do with. . . the conduct of our foreign intercourse and relations save the exercise of the one constitutional function of advice and consent which the Constitution requires. . . . From the foundation of the Government it has been conceded in practice and in theory that the Constitution vests the power of negotiation and the various phases—and they are multifarious—of the conduct of our foreign relations exclusively in the President. And . . . he does not exercise that constitutional power, nor can he be made to do it, under the tutelage or guardianship of the Senate or of the House or of the Senate and House combined." [18]

Similarly, the executive branch stated its position clearly in a memorandum of the Solicitor of the Department of State when he said:

"In all cases the President could direct and control, but in the 'Presidential' Department he could determine *what should be done, as well as how it should be done.*" [19] (Memorandum's emphasis.)

The Supreme Court emphasized in *United States* v. *Curtiss-Wright Corp.*, the fact that:

"Not only is the federal power over external affairs in origin and essential character different from that over internal affairs, but participation in the exercise of the power is significantly limited. In this vast external realm . . . the President alone has the power to speak or listen as a representative of the nation. . . . [H]e alone negotiates. Into the field of negotiations the Senate cannot intrude and Congress itself is powerless to invade it." [20]

The Supreme Court then elaborated upon the nature of the President's foreign relations power by referring to it as:

". . . the very delicate, plenary and exclusive power of the President as the sole organ of the federal government in the field of international relations. . . ." [21]

IV.—The powers of the President as Commander-in-Chief

In Federalist Paper No. 74, Alexander Hamilton stated the constitutional doctrine regarding the President's powers as Commander-in-Chief clearly when he said:

"Even those of them which have, in other respects, coupled the chief magistrate with a council, have for the most part concentrated the military authority in him alone. Of all the cares or concerns of government, the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand. The direction of war implies the direction of common strength; and the power of directing and employing the common strength, forms a usual and essential part in the definition of executive authority."

This doctrine was re-affirmed by the Supreme Court in a case arising out of the occupation of Tampico in the Mexican War. Chief Justice Taney, for the Court said:

"As commander-in-chief, he [the President] is authorized to direct the movements of the naval and military forces placed by law at his command and to employ them in the manner he may deem most effectual to harass and conquer and subdue the enemy." [22]

In 1860, Francis Lieber summarized the doctrine in his *Remarks on Army Regulations*. In connection with his elaboration of the President's exclusive power to direct military movements, Lieber said that the war powers of Congress did not give ". . . it, command the Army. Here the constitutional power of the President as Commander-in-Chief is exclusive." [23]

The following words of Senator O. H. Browning in the 1862 Senate debate between him and Senator Sumner state convincingly and clearly the reasons for the presidential command powers and the danger inherent in the attempt to interfere with them. In the Senate debate of June 25, 1862, Senator Browning said:

"And now, I again ask whether it is seriously contended that Congress has either the right or the power to judge of and determine upon any of them [i.e., military necessities] a month in advance of its occurrence? Whatever the seeming necessity be now, when the month has elapsed it may no longer exist.

"These necessities can be determined only by the military commander and to him the Constitution has entrusted the prerogative of judging them. When the Constitution made the President 'Commander-in-Chief of the Army and Navy of the United States' it clothed him with all the incidental powers necessary to a full, faithful and efficient performance of the duties of that high office; and to decide what are military necessities, and to devise and execute the requisite measure to meet them, is one of these incidents. It is not a legislative but an executive function, and Congress has nothing to do with it. . . . Nor can Congress control him in the command of the Army, for, if it can, then he is not Commander-in-Chief, and the assertion of the Constitution to that effect is a falsehood. And whenever Congress assumes control of the Army in the field, it usurps the powers of a coordinate department of government, destroys the checks and balances provided for the safety of the people, and subverts the Constitution.

"Congress is to raise and regulate the Army; when raised and regulated, the President is to have the supreme command and direction.

"He [the President] is as supreme in his sphere as the legislative department is in its sphere; and in the performance of his duties, he cannot, without abnegation of his authority, submit to the control of either Congress or the people." [24]

Several days later, on June 27, 1862, Senator Browning said in elaboration of this point:

"When we are engaged in war, and it [the army] is in the field marshalled for strife, I deny that Congress . . . has any power to say to the President, do this or do that . . . advance today and retreat tomorrow." [25]

This doctrine was upheld by the Supreme Court in the *Prize* cases where it said that "He [the President] must determine what degree of force the crisis demands." [26]

The scope of the command powers of the President over the armed forces in the field has to be understood in terms of the relationship between ends and appropriate means. Alexander Hamilton referred to this problem where he said that:

"The means ought to be proportioned to the end; the persons from whose agency the attainment of any end is expected, ought to possess the means by which it has to be attained." [27]

Once United States forces are involved in military operations against enemy forces, the President as Commander-in-Chief is constitutionally required ". . . to use all means calculated to weaken the enemy and to bring the struggle to a successful conclusion." [28]

In *Durand* v. *Hollins, supra,* Justice Nelson, for the court, said that the question whether it had been the duty of the President to interpose by force for the protection of American citizens in Greytown, Nicaragua, was a question of public policy ". . . which belonged to the executive to determine and his decision is final and conclusive." [29] The Court then held that the two principal means for conducting foreign relations were negotiation or force.

In *Lichter* v. *United States,* the Supreme Court quoted from an address by former Chief Justice Charles Evans Hughes that "The power to wage war is the power to wage war successfully." In elaborating upon the aforesaid statement the Court, then, held that ". . . the primary implication of a war power that it should be an *effective power to wage war successfully.*" [30] (Emphasis added.)

In *United States* v. *Hirabayashi,* the District Court [31] pointed out that:

"The Constitution of the United States was intended by the fathers who framed it to be able to cope with war emergencies. This nation came into being as a result of a successful war. The Constitution was written shortly

Footnotes at end of article.

thereafter and at a time when its framers had every reason, by virtue of their experience and in the light of then world conditions, to expect that this nation be confronted by war in the future."

In the same case [*United States* v. *Hirabayashi*] the Supreme Court held that the war power of the national government which includes the President's command powers over armed forces in the field ". . . extends to every matter and activity so related to war as substantially to affect its conduct and progress. The power is not restricted to the winning of victories in the field and the repulse of the enemy forces. It embraces every phase of the national defense, *including the protection of war materials and the members of the armed forces from injury and from dangers which attend the rise, the execution and progress of war. . . .*" (Emphasis added.)

Consequently, the Supreme Court concluded that the war powers, which include the Presidential command powers, provide a wide scope "for the exercise of judgment and discretion in determining the nature and extent of the threatened injury and danger and in the selection of the means for resisting it."[32] The constitutional doctrine and practice were aptly summarized in the following words:

"The President in time of war has entire control of the movements of the army and navy. Congress has, under the Constitution, the sole power to raise and support armies . . .; but after the forces have been provided and war has begun, the President may order them anywhere he will for the purpose of carrying the war to a successful conclusion.

* * * * *

". . . in time of war the authority of the President is recognized as being absolute as to where the war is to be conducted whether . . . to carry on an offensive war in the enemy territory, in the territory of an ally, or perhaps even in the territory of a neutral.

* * * * *

"Just as the President decides when and where troops should be employed in time of war, so he alone likewise determine how the forces should be used, for what purposes, the manner and extent of their participation in compaigns and the *time of the withdrawal.*"[33] (Emphasis added.)

V.—Limitations on congressional interference with the President's foreign relations and command powers

Already in 1789, the problem of congressional interference with the powers vested in the President and the dangers inherent in such interference were clearly visualized and precisely stated in the following words:

"He [Roger Sherman] seems to think . . . that the power of displacing from office is subject to legislative discretion; because, having a right to create, it may limit or modify as it thinks proper. . . . [W]hen I consider that the Constitution clearly intended to maintain a marked distinction between the Legislative, Executive and Judicial powers of Government; and when I consider that if the Legislature has a power, such as is contended for [*i.e.*, the power to make provisions for removal of officers appointed with the consent of the Senate], they may subject and transfer at discretion powers from one department of our Government to another; they may, on principle, exclude the Presidents altogether from exercising any authority . . . they may vest it in the whole Congress; or they may reserve it to be exercised by this House. When I consider the consequences of this doctrine and compare them with the true principles of the Constitution, I own that I cannot subscribe to it. . . ."[34]

President Taft stated clearly and precisely the narrow limits of permissible congressional interference with the President's foreign relations and command powers when he said:

"Two principles, limiting congressional interference with the Executive powers are clear. First, Congress may not exercise any of the powers vested in the President, and second, it may not prevent or obstruct the use of means given him by the Constitution for the exercise of those powers."[35]

Similarly, a distinguished former American ambassador to Germany who had been a life-long student of international affairs said that:

". . . . the contention that one department of the government may in any way coerce another is a repudiation of the very purpose of the division of power and would result in the destruction of that freedom under law which the Constitution aims to establish."[36]

The Supreme Court has consistently held that the powers of Congress to interfere with the foreign relations and command powers of the President are strictly and narrowly limited. In 1914, the Supreme Court held that:

"It is settled beyond dispute that the Constitution is not self destructive. In other words, that the powers which it confers on the one hand, it does not take immediately away with the other."[37]

In the inter-war period, the Supreme Court reaffirmed the well-established constitutional practice and doctrine that:

". . . he [the President], not Congress, has the better opportunity of knowing the conditions which prevail in foreign countries and especially is this true in time of war.

"This consideration discloses the unwisdom of requiring Congress in this field of governmental power [*i.e.*, federal powers in the field of external affairs] to lay down narrowly definite standards by which the President is to be governed. As we said in *Mackenzie* v. *Hare*, 239 U.S. 299, 311, 'we should hesitate long before limiting or embarrassing such power' . . . ."[38]

Twelve years later, *i.e.*, after the end of World War II, the Supreme Court held again in *Lichter* v. *United States* that:

". . . the primary implication of a war power is that it should be an effective power to wage the war successfully. Thus, while the constitutional structure and controls of our Government are our guides equally in war and in peace, *they must be read with the realistic purpose of the entire instrument in mind.*" (Emphasis added.)[39]

Finally, in 1958 the Supreme Court approached the same problem from a slightly different angle when it said:

"The restrictions confining Congress in the exercise of any of the powers expressly delegated to it in the Constitution apply with equal vigor when that body seeks to regulate our relations with foreign nations. *Since Congress may not act arbitrarily, a rational means must exist between the content of a specific power in Congress and the acts of Congress in carrying that power into* execution. More simply stated, *the means . . . must be reasonably related to the act*—here regulation of foreign affairs." (Emphasis added.)[40]

Doctrine and practice were aptly summarized when the court held in *Palmer* v. *United States Civil Service Commission that*:

"The Congress of the United States under the separation of powers in the federal Constitution cannot require the President of the United States to surrender any of his executive powder [sic]".[41]

President Kennedy relied on the same well-established constitutional practice and doctrine when he said in a letter to the then Chairman of the House Armed Services Committee, the Honorable Carl Vinson, in connection with the RS–70 debate that:

"Each branch of the Government has a responsibility to 'preserve, protect and defend' the Constitution and the clear separation of legislative and executive powers it requires. I must, therefore, insist upon the full powers and discretions essential to the faithful execution of my responsibilities as President and Commander-in-Chief, under Article II, Sections 2 and 3 of the Constitution.

"Additionally, implicit in the Constitution, of course, is the intent that a spirit of comity govern relations between the executive and legislative. And while this makes unwise, *if not impossible any legislative effort to 'direct' the Executive on matters within the latter's jurisdiction . . .*" (Emphasis added.)[42]

VI.—Substance and contents of the President's command powers determined by international law

The decision of the President "to clean out major sanctuaries on the Cambodian-Vietnamese border" is incidental to the state of war existing in Vietnam in which the United States Armed Forces have been involved for several years. The aforesaid decision is, therefore clearly based on the powers vested in the President as Commander-in-Chief of the Armed Forces and as "Executive of the Law of Nations."

As stated heretofore, Chief Justice Taney said for the Court in 1850:

"His [the President's] duty and his power are purely military. As Commander in Chief, he is authorized to direct the movements of the naval and military forces placed, by law at his command. . . ."[43]

In this connection, Attorney General Cushing said in 1855:

"So he [the President], and he alone is the supreme commander in chief of the Army and Navy. . . . That is a power constitutionally inherent in the person of the President."[44]

It is well established that the findings and determinations made by the President in his capacity as Commander-in-Chief are definite and final. The Supreme Court held already in 1827 that:

"We are all of opinion, that the authority to decide whether the exigency [i.e., the President's authority to call the militia into federal service] has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons."[45]

Specifically in regard to armed forces in the field, the constitutional practice and doctrine concerning the command power of the President has been authoritatively stated in the following words:

"As against an enemy in the field the President possesses all the powers which are accorded by International Law to any supreme commander."[46]

Since the substance and the contents of the powers of the President as Commander-in-Chief of the armed forces in the field are determined by international law, the President is under a constitutional obligation to see to it that international law is faithfully executed because the "take care" clause of Article II, Section 3 of the Constitution does not only apply to municipal but also to international law. In this connection, Alexander Hamilton stated already the well-established and generally accepted doctrine when he said:

"The Executive is charged with the execution of all laws, the law of nations, as well as the municipal, by which the former are recognized and adopted.

"The President is the constitutional Executor of the laws. Our treaties and the laws of nations form a part of the law of the land. He, who is to execute the laws, must first judge for himself or their meaning."[47]

Although the Constitution makes the President Commander-in-Chief of the armed forces, the substance and the contents of the command powers are, as heretofore stated, determined by international law. The United

Footnotes at end of article.

States Army Field Manual, The Law of Land Warfare (FM 27–10 (1956), hereinafter "Field Manual") is the principal source for ". . . authoritative guidance . . . on the customary and treaty law applicable to the conduct of warfare on land and the relationships between belligerents and neutral states."[48] The provisions of the Field Manual have "evidentiary value insofar as they bear upon questions of custom and practice."[49]

In his determination, announced on April 30, 1970, the President had to be guided by the customary law of war which ". . . applies to all cases of declared war or any other armed conflict which may arise between the United States and other nations."[50] Therefore, the President was under a constitutional obligation to apply the customary international law of land warfare in any international armed conflict regardless of whether war had been declared or not.

"As the customary law of war applies to cases of international armed conflict . . . a declaration of war is not an essential condition of the application of this body of law."[51]

In his findings announced on April 20, 1970, the President stated that the enemy had:

". . . occupied military sanctuaries. . . . They are used for hit-and-run attacks on American and South Vietnamese forces in South Vietnam.

"These communist-occupied territories contain major base camps, training sites, logistic facilities. . . ."

Therefore, by using Cambodian territory actively, *i.e.*, for the purpose of attack, and passively as sanctuaries, the enemy had, by its own action, and, as will be shown hereinafter, in violation of international law, extended the theatre of war into Cambodia and/or had made Cambodia a base of operations. In such a contingency, the injured party, *i.e.*, the other belligerent, may legally resort to remedial actions one of which are reprisals.[52] The President, as Commander-in-Chief, was under an obligation to initiate such reprisals because ". . . the safety of the troops required immediate action. . . ."[53]

A leading and generally recognized Swedish authority on the law of war and neutrality states that:

"Reprisals are always designed to meet unlawful acts already performed by the enemy, and they aim at putting an end to the situation which has thus arisen or at relieving the danger of later infringements."[54]

In fact, Castren says:

"Reprisals belong to that small class of measures which enable warfare to be kept within legal limits and they may thus be said to be a kind of *sanction* for the laws of war." (Author's emphasis.)[55]

Therefore, the provisions of the proposed McGovern-Hatfield Amendment are an obvious interference with the President's exclusive powers as Commander-in-Chief on the ground that they attempt to limit, restrict and restrain the supreme commander's discretion to select the optimum means of reprisal which are called for by concrete situations in the field as they develop. Clearly, and particularly if reprisal action has to be taken in the territory of a neutral country, it is preferable to enable the local forces of the neutral to participate to the maximum of their capability in effective reprisal actions and specifically by deploying its own forces. If such an opportunity exists, it is the supreme commander's duty to make maximum use of it and to limit the involvement of his armed forces to the degree necessary to initiate and, possibly at a later date, to support the local forces. Any other action on the part of the supreme commander would be inconsistent with the governing principle of economy of force which is one of the fundamental strategic principles by which a supreme commander has to be guided. Inaction or insufficient action along these lines is bound to subject the supreme commander to justifiable criticism for his failure to make use of all available means for adequate reprisal.

Specifically, sub-sections (b) and (c) of the proposed McGovern-Hatfield Amendment would, in effect, attempt to restrain the Commander-in-Chief's discretion to select adequate reprisal measures enabling Cambodia and Laos to take themselves, in due course, "unitary or repressive action of their own."[56] Obviously, the policy which finds expression in the proposed Amendment would force the aforementioned countries, and, specifically, at this time Cambodia, to "bear a passive part in the necessary suppression of courses which are fatal to . . . freedom. . . ."[57] One of the principal duties of a neutral state is to prevent the entry of armed forces of a belligerent power. Therefore, the Field Manual restates verbatim the rule of Hague Convention, V, 1907, Article 1, when it provides that "The territory of Neutral Powers is inviolable."[58] From this follows that "an unauthorized entry into the territory of a neutral state is prohibited."[59] Inability of the neutral power to prevent violations of its territory vests in the other belligerent the *right* to attack enemy forces there.

"Should the neutral State be unable, or fail for any reason, to prevent violations of its neutrality by the troops of one belligerent entering or passing through its territory, the other belligerent may be justified in attacking the enemy forces on this territory."[60]

Specifically, this is the case when the neutral territory is turned into a base of operations and, even more so, if it is turned into a theatre of war.[61] American practice developed in both World Wars continues to be well-established, namely to consider "territory occupied by an enemy power . . . on a par with enemy territory."[62] Clearly, this is to an every greater degree the case if neutral territory is not only occupied but is actively and passively used for the enemy's military operations. If the neutral power is unable to prevent the enemy from carrying out military operations, the duties of a neutral under international law—

". . . are violated whenever an expedition, organized on neutral soil for the purpose of engaging in military operations against a belligerent state, is permitted to depart from the neutral's domain and in consequence causes injury to that State."[63]

In such a contingency, the enemy by his own action has extended the theatre of operations to neutral territory by making it a stopping point for its own military or paramilitary operations or expeditions.[64] Clearly, the injured belligerent has the right and supreme commander has the duty, to take appropriate reprisal actions.

This doctrine is supported by the award of the Greco-German Mixed Arbitral Tribunal in *Coenca Brothers* v. *Germany*.[65] There the Tribunal said:

"In general, Germany was entitled to conduct military operations against neutral Greek territories occupied by allied troops. The occupation of Salonica by the Allies in the autumn of 1915 constituted a violation of Greek neutrality. The question whether the Greek Government protested against the occupation . . . was irrelevant. In any case, the occupation constituted an unlawful act as far as Germany was concerned and justified the latter in conducting on Greek territory the necessary measures of warfare."

Similarly, the French Conseil des Prises ruled in The Anna Maria[66] that:

"Moreover, the presence of German and Italian forces, and the series of war-like actions committed by them in the waters and on the territory of Tunis, had made these waters and that territory a theatre of operations where the right of capture could be exercised."

The same considerations apply if the enemy uses neutral territory as a base of operations, i.e., as sanctuaries where its strength can be augmented. A base of operations has been aptly defined as:

". . . a place where, contrary to international law, a belligerent may augment his strength to wage war more effectively against his enemy, as by recruiting, fitting out expeditions, taking refuge there, and . . . disseminating military information, or performing other acts of a like character."[67]

It is uncontradicted that the establishment of sanctuaries brings

". . . the neutral country . . . under the common military definition of a base of operations; it becomes the territory 'from which an army or a naval force draws its resources and reinforcements, that from which it sets forth on an offensive expedition, and in which it finds a refuge at need.'"[68]

Incidentally, the United States applies this doctrine to the use of its own territory as a base of operations. In this connection, Attorney General Robert Kennedy stated with reference to the neutrality laws of the United States on April 20, 1961 that:

"What the law does prohibit is a group organized as a military expedition from departing from the United States to take action as a military force against a nation with whom the United States is at peace."[69]

CONCLUSION

On the aforementioned grounds, it is submitted that the proposed McGovern–Hatfield Amendment to the Military Procurement Authorization Act (H.R. 17123), if passed, would—if accepted by the President—constitute an interference with the foreign relations and command powers *exclusively* vested in the President in his respective capacities as Chief Executive and as Commander-in-Chief of the United States Armed Forces.

Since the substance and the contents of the President's command powers over the armed forces in the field are determined by international law, as authoritatively stated in the United States Army Field Manual, the Law of Land Warfare, the proposed Amendment would also, if passed, constitute an interference with the rights and duties vested by international law in any supreme commander of armed forces in the field. Thus, the proposed McGovern-Hatfield Amendment would, if passed, constitute an attempt to abrogate or change unilaterally norms and rules of international law. Clearly this would effectively undermine the credibility of the United States which, as Rome and Britain in times past, has probably the greatest interest in protecting and developing generally accepted principles and rules governing international conduct in peace as well as in war.

NEW SUPPORT FOR RATIFICATION OF POLITICAL RIGHTS FOR WOMEN TREATY

Mr. PROXMIRE. Mr. President, in the past 2 days I have discussed the need for organized political action on the part of women to secure permanent guarantees of their rights. Today I shall ask to have printed in the RECORD a letter I received from the Women's International League for Peace and Freedom which endorses ratification of the Political Rights for Women Convention. This is the type of action which is needed if the Senate is to act on this treaty. The Senate will not act on this treaty unless women make their views known to their Senators. I encourage women to organize themselves in order that effective pressure can be exerted on the Senate.

As evidence that women are now demanding action on this treaty, I ask unanimous consent that the resolution and the accompanying letter from the Women's International League for Peace and Freedom be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

RATIFICATION OF U.N. CONVENTION ON POLITICAL RIGHTS FOR WOMEN

To: Senator J. William Fulbright, Chairman, Senate Foreign Relations Committee; all members of the Senate Foreign Relations Committee; Secretary of State William P. Rogers; U.S. Representative to the United Nations Charles W. Yost.

The United States Section of the Women's International League for Peace and Freedom, in Annual Meeting at Waukesha, Wisconsin, June 10–14, 1970, demands that the U.N. Convention on Political Rights for Women, tabled in the Senate Foreign Relations Committee since 1967, be reported out by the Committee and ratified by the Senate without further delay.

WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM,
Washington, D.C., July 27, 1970.

DEAR SENATOR: The Women's International League for Peace and Freedom has been in favor of the U.N. Convention on Political Rights for Women since this convention was adopted by the General Assembly in December 1952. It provides:

(1) that women shall be entitled to vote in all elections on equal terms with men, without discrimination.

(2) that women shall be eligible for election to all publicly elected bodies established by national law on equal terms with men, without discrimination.

(3) that women shall be entitled to hold public office and exercise all public functions established by national law on equal terms with men, without discrimination.

Sixty-five nations have ratified this convention but the U.S. has not acted on it. This convention was transmitted to the Senate in 1963. Hearings were held but the convention has been tabled since 1967 in the Senate Foreign Relations Committee.

The Women's International League finds it inexcusable that the U.S. has delayed ratifying this convention for seventeen years especially since the U.S. claims to be the defender of democracy and human rights in the world. We urge ratification without further delay.

I enclose the Resolution on the Ratification of the U.N. Convention on the Political Rights for Women adopted by the U.S. Section of the Women's International League for Peace and Freedom at its Annual Meeting in Waukesha, Wisconsin, June 10–14, 1970.

Sincerely,

PATRICIA A. SAMUEL,
Legislative Director.

ECONOMIC PROGRESS

Mr. DOLE. Mr. President, we hear much talk today about the need to reorder priorities in this country. But while the critics have been talking, President Nixon has been taking action.

When he assumed office, the President inherited an economy which was overheated by constantly escalating war and defense expenditures. Irresponsible spending had left us a hyperinflated economy.

The President has effected dramatic changes in our defense spending. He has consistently reduced defense outlays to the point that mid-1971 expenditures will be almost back to the 1965 level. Since the 1971 economy is much larger than that of 1965, this is indeed a substantial reduction.

Shifting from the overheated wartime economy that the President inherited to a peacetime program of responsible spending, requires cooperation from the Congress and the American people.

Vice President AGNEW, in the Washington Post of August 16, 1970, outlined the progress which has been made and the assistance which is needed to stabilize our peacetime economy. I ask unanimous consent that the Vice President's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MYTH THAT WE ARE IN A RECESSION
(By SPIRO T. AGNEW)

I welcome this opportunity to make some observations about economic developments and policy that I don't believe have been getting through to the public in most recent newspaper commentary.

To understand what is now going on in our economy, it is important that we realize our economic system is having to make not one but two major adjustments simultaneously. It is having to adjust to a major decline in defense spending while it is also cooling off from a long inflationary overheating that had become increasingly dangerous.

The adjustment in defense spending is a far greater force on the economy than many people realize. From 1968 to mid-1970 defense spending has been reduced over $12 billion (in terms of this year's prices), and by mid-1971 the reductions will approach $20 billion.

Now this is a massive reduction, even in our large economy. It means that defense outlays in real terms by mid-1971 will be almost back to the 1965 level. Since the economy in 1971 will be larger than in 1965, this obviously means that defense will be receiving in substantially smaller share of our

total output than in 1965 before the previous administration escalated the Vietnam conflict.

This is a massive re-ordering of priorities. While some have been busy orating about the need for this, the President has been busy doing something about it.

These shifts, of course, cause some painful dislocations. They mean jobs and careers terminated in defense plants and defense laboratories. Such reductions tend to hit selected professions and skills and regions of the country far harder than reductions in general budget outlays, whose effects would be spread more evenly.

These problems were foreseen and would have been less painful if the Congress had acted more promptly on administration proposals—in some cases made over a year ago—for expanding and strengthening the unemployment compensation system, for more extensive and effective manpower training programs, and for a revolutionary new approach to family assistance.

Early this year the President also sent to Congress legislation to stimulate housing, and its earlier enactment would have augmented job opportunities in our lumber producing states, which have had to bear more than their share of reduced defense employment. The President recognized early that both rational economic policy and simple humanity required programs to soften the transition problems of those who would be affected by reduced defense spending.

The economy has also had to face the transition from complex and tangled problems created by the inflationary overheating that ran unrestrained after 1965. Interest rates began to soar in 1968 as people, fearful of inflation, turned away from bonds and mortgages.

The stock market and its institutions were whip-sawed in a tragic way—forced to overexpand as the inflation caused a frenzy of buying, then forced into a painful contraction as the market inevitably receded from the stratosphere. This was all doubly tragic because many small savers were lured into stock purchases, and housing declined as normal savings flowing into savings and loan associations and other thrift institutions dried up.

The problems posed for economic policy by this double-layered adjustment were formidable. A strategy of policy had to be devised that would cool off the economy but keep within tolerable limits the adverse effect on output, incomes, and employment.

How did we succeed? Far better than the prose often proffered to us might imply.

Suppose, for a change, we skip the rhetoric and simply examine facts.

First, the myth that we are in a recession. The current adjustment is clearly far less severe than that of 1960–61, the mildest postwar adjustment that economists have called a recession. It is closer to, but slightly more severe than, the 1966–67 adjustment, which has not been decreed to be a recession.

It is now about 6 months since this adjustment began, and industrial production has declined 1.5 per cent in that 6-month period. In the comparable period during 1966–67 the decline was only slightly smaller, 1.2 per cent. For 1960–61, however, the corresponding decline was 4.1 per cent (and for 1957–58, 11.9 percent).

The picture would be broadly similar for such other general monthly measures of the economy as personal income or employment. So we are hardly in a recession.

Next, the problem of inflation. There has, of course been progress against inflation. The rates of increase in the wholesale price index and the commodity segment of the consumer price index quit accelerating last year, and the rate of increase has actually been slowing this year. On this the facts are clear.

Americans are not, of course, a patient people. Making progress has been hard going. That had to be expected. The results of severely mismanaged economic policies for three years after 1965 could not be expected to disappear overnight. Our critics conveniently forget that the Democrats occupied the White House in the postwar period's mildest recession, and even after four years the unemployment rate still registered 5 per cent in early 1965.

Next, the budget. Mr. Rowen stated in this column recently that "a sense of panic is sweeping the Nixon administration" about the budget. That was a rather extravagant statement. The budget remains under control. But it will be difficult to keep it that way if Congress doesn't get off the election year spending binge it seems to be yielding to and join the administration in an effort to keep spending under firm control.

For the current fiscal year, outlays will remain well below the receipts that the tax system can generate at reasonably full employment. The President established this as a guiding rule because it makes economic sense. We don't want to return to the conditions of 1966 to 1968, when outlays overshot the revenue-producing capacity of the tax system at full employment by annual amounts up to $25 billion.

In summary, the economic outlook is good and should improve further if Congress will cooperate with the President. We have these favorable indications:

Federal Reserve policies clearly became moderately expansionist about 6 months ago, and if experience is any guide, this action will eventually exert its diffused effects on the economy.

Consumer spending is strong—as has been demonstrated by the rebound of auto sales to a 9¼-million rate.

After-tax incomes rose about $5 billion this quarter because of tax changes alone, and the abnormally high savings rate suggests that spending has not even yet fully adjusted to higher after-tax incomes.

Our foreign trade has strengthened dramatically from a negligible merchandise surplus at the $0.9 billion annual rate a year ago to a $4.0 billion rate in the second quarter this year.

Housing is perking up, as starts rise and mortgage money becomes more available. Inventories are generally well in line with sales.

Indeed, except for growing evidence that the super boom in capital goods is waning, the hard facts about prospects are on the plus side. And that super boom was part of the highly overheated and strained inflationary economy.

We have problems. A double transition such as this one couldn't be painless or instant. Americans, however, are realists. They will not be talked into a direction not indicated by basic facts. Fortunately, the facts are now going our way.

FUNDS IMPROPERLY PAID TO ORGANIZERS OF CHICAGO RIOTS

Mr. WILLIAMS of Delaware. Mr. President, the Wilmington Morning News of August 11, 1970, contains an article entitled "Illinois Report Hits Students," written by Mr. Henry J. Taylor.

The article calls attention to the fact that the Illinois Crime Commission has found that $192,000 in Federal funds and $85,000 in Carnegie Foundation funds were paid to organizers of the riots in the Chicago area.

Apparently these Government funds were distributed under a grant by the Office of Economic Opportunity.

Such use of Government money is an insult to the intelligence of the American taxpayers, and the Government officials responsible should be fired.

I ask unanimous consent that the article be printed in the RECORD. At the same time, I suggest that the Appropriations Committee and the Senate keep this in mind when we act on the appropriations for this agency.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ILLINOIS REPORT HITS STUDENTS

(By Henry J. Taylor)

The Illinois Crime Investigation Commission, noting the convicted Chicago Seven riot instigators, now finds that $192,000 in federal funds and $85,000 in Carnegie Foundation funds were paid the organizers of the riots. The money was channeled through a thing called the Chicago Student Health Organization, nice as you please. And who would know it?

The Office of Economic Opportunity (the official name for the "Poverty War") likewise gave a subsidiary of the so-called Institute for Policy Studies in Washington, D.C., $193,313 when the institute was subsidizing the rioters and providing bail for them. Moreover, the American Civil Liberties Union has contributed funds to the rioters.

The Illinois commission confirms that the Ford Foundation fed money into a TV blasphemy ("Report on Iron Mountain") which pitched at our youth a fictional war and then anonymously ridiculed the United States and our fighting men in Vietnam in scathing critisim.

The commission finds that many chapters of Students for a Democratic Society across our country are supported by grants from the same colleges and universities they attack, bomb and try to burn down.

It also notes that of the 284 rioters arrested with the Chicago Seven the largest single contingent (nine) from any university community outside Chicago was from Kent State University in Ohio. Shouldn't this fact be included in the hearings about the subsequent tragic Kent killings?

The commission finds clear evidence that the appalling increase in youth crime is directly related to the increased lack of good home influence, parental respect, etc. Well, TV is the third parent in our homes. Millions of our youth from their childhood ages spend more time at the feet of this third parent, TV, than they do in school.

They're too seldom watching lessons in integrity, honesty, courage, generosity, patriotism or respect for parental duty—the lessons of civilized society. Countless brainwashed, unhappy children are being conditioned to expect violence and seek violence while the networks pocket the cash.

"Only unstable children will be adversely affected by TV," say some psychiatrists and the moguls of the fast-buck money-making machines known as CBS, NBC, and ABC. Well the commission asks, what child is born "stable"? What, if not the frequent sights and sounds of violence, will make him unstable?

How can the TV moguls conceivably argue that countless millions of impressionable youth can see criminal and violent actions all of their young lives and not expect that they will turn to violence and even to crime for fun?

With our youth being given constant lessons in criminal actions, they are performing the villainy they're taught.

Meanwhile, likewise cashing in on and further encouraging campus violence and revolution as a whole, greedy movie producers are concocting such vicious blasphemies as the picture called, "Getting Straight." In it students destroy a university and then blow kisses to each other across the flaming cam-

pus. In "If . . ." another campus is joyfully burned.

The movie version of infamous Chicago Seven Abbie Hoffman's highly profitable book, "Revolution for the Hell of It," is now scheduled for production. Or have you seen "The Strawberry Statement"? It's playing nationwide at neighborhood movie theaters. It is a similar blast at American institutions. All these and others like them exploit revolution in our country and exploit young bloodshed.

The Illinois Crime Investigation Commission quotes the declaration of the Chicago Seven at the opening of their trial on Sept. 24, 1969: "The battles for social change are not going to be won in the courtroom but on the campuses and in the streets." It is encouraging to read, at long last, a perceiving, thorough and documented report that calls a spade a spade.

AID FOR DISASTER VICTIMS OF HURRICANE CELIA; OFFICE OF EMERGENCY PREPAREDNESS FAILS VICTIMS

Mr. YARBOROUGH. Mr. President, I was shocked to learn yesterday that the U.S. Government is providing substandard housing for victims of Hurricane Celia. The Office of Emergency Preparedness made a decision in Corpus Christi, Tex., to issue trailers for temporary housing to families without sewage connections or septic tanks, provided they can use their own outdoor toilet facilities.

This is a giant step backward. In passing the Disaster Relief Act of 1960, Congress recognized the need of people left homeless by a natural disaster and authorized the Federal Government to provide dwelling accommodations for such persons. It carries an implied responsibility that dwellings provided by the Federal Government be adequate, regardless of the previous economic status of the disaster victim.

I am alarmed that the OEP has implemented such a callous and restrictive interpretation which circumvents the intent of Congress in providing relief for victims of a natural disaster.

I have urged the Director of the Office of Emergency Preparedness, Gen. George A. Lincoln, to reconsider this interpretation.

Mr. President, I ask unanimous consent that my letter of August 27, 1970, to General Lincoln on this subject be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 27, 1970.

Gen. GEORGE A. LINCOLN,
Director, Office of Emergency Preparedness, Washington, D.C.

DEAR GENERAL LINCOLN: As you know, a great part of the devastation caused by Hurricane Celia took place in the rural areas surrounding the City of Corpus Christi. The Department of HUD estimates that two-thirds of the trailers they will furnish as temporary shelters will be located outside Corpus Christi. Most of this rural area does not have sewage systems and consequently most of the poor use outdoor privies.

During the first few days after the disaster, HUD representatives notified applicants for temporary housing that costs for construction of septic tanks would be reimbursed for applicants that did not have other adequate drainage facilities. Subsequently, this aid was withdrawn and applicants had to construct their own septic tanks before temporary shelter would be made available on their private lots. As of last Sunday, August 23, the HUD waived its requirements for septic tanks. Now, families with outdoor privies may be issued a trailer, provided they can continue to use their own outdoor toilet facilities. Ostensibly, if their privy was demolished, a family would still not be able to obtain temporary shelter from HUD.

I do not believe Congress intended its disaster relief bill to be interpreted in this restrictive manner. Housing which requires a family to use an outdoor toilet is not adequate housing. Section 1715.11(a)(4) of your regulations state that expenses for preparing the site and for the installation of utilities are reimbursable by the Federal government. These expenses should include whatever is necessary to insure that the housing provided by the Federal government is adequate, and should specifically include construction of septic tanks to replace outdoor toilets.

I understand that this decision was made under the pressure of the disaster after a hurried evaluation of Congressional intent. I urge you to reconsider the decision which is limiting your assistance and denying it to those persons who need it the most.

Sincerely,

RALPH W. YARBOROUGH.

CAMBODIA OPERATION RECEIVES UNFAIR CRITICISM

Mr. DOLE. Mr. President, President Nixon has withdrawn American forces from Cambodia as promised, and even ahead of the deadline he had established. Yet the President continues to receive criticism for that operation.

Amidst all the noise from those who advocate America shrinking from her responsibilities, the President acted decisively in Cambodia. He outlined limited specific objectives, achieved them, and withdrew as promised.

An article written by James J. Kilpatrick was published in the Washington Evening Star of August 6, 1970. It perceptively examines the Cambodian operation and the unfair response of some Americans to the President's action. I ask unanimous consent that Mr. Kilpatrick's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"SUCCESS" IN CAMBODIA VENTURE WINS NO ACCLAIM

(By James J. Kilpatrick)

A month has passed since the cutting-out operation in Cambodia came to an end. By all the usual criteria for judging presidential decisions, this successful venture ought to be winning acclaim. Yet the President continues to suffer denunciation for his action in Cambodia—and it is a terrible symptom of the national sickness that this should be so.

How is one to define this sickness? Part of it is blurred vision: We look at communism, but do not see it clearly. Part of it is an impediment in hearing: Certain voices—the voices of students, the voices of dissenters—register in our heads with disproportionate volume. But the signs point most sadly to a kind of wasting disease.

"It is a matter of will," Frank J. Johnson has written, "and we no longer have it."

Johnson is foreign editor of the American Security Council's Washington Report. Last month he delivered himself of a somber epitaph to the declining greatness of our country. Johnson is not an extremist; he is a scholar and a thinker. He merits an attentive hearing when he concludes that "the tide of history has begun to run against us, and the day of our world preeminence is over."

Listen to Johnson for a moment: "The internal convulsion which beset Rome in the First Century B.C. did so with her external frontiers at least secure so that she could afford the luxury of domestic strife and still survive. We are not so fortunate. Our Time of Troubles has come upon us in the midst of, and in part because of, a titanic world conflict for the political destiny of all mankind. A large segment of our population seems entirely to have lost sight of what is at stake. We are turning inward and contending against each other, either unmindful or uncaring about the holocaust which our withdrawal from power and responsibility will unleash upon the world and upon ourselves."

Everywhere that one looks, as Johnson remarks, one sees a fretful isolationism growing. In the press, in the Congress, in the universities, the "cop out" counsel swells: Get out of Vietnam. Call the troops home from Europe and Korea. Cancel a scheduled aircraft carrier. Reduce the role of the Joint Chiefs of Staff. Cut the funds for weapons research. Downgrade the anti-ballistic missile system.

It is all part of the same myopia, the same tiredness. Great powers must act as great powers. So President Nixon acted in Cambodia—boldly, decisively, responsibly. He said his action would not enlarge the war; and it has not. He said that destruction of the Communist arms depots would enhance the safety of our remaining forces; and there is every reason to believe this is true. He promised to withdraw the expedition by June 30; and he fulfilled that promise.

Tactically, strategically, psychologically, the Cambodian venture was sound. Yet much of what might have been gained by this stroke of arms has been lost to the strident clamor of immature students and professional liberals who shun the whole concept of power. They want no part of greatness—not if greatness demands cold steel. Let us therefore ridicule "the generals" and "the admirals," and let us make love, not war.

It is all very tempting. But this should be understood. If the United States abdicates its inherited responsibility for defending and preserving Western values, those values are done for. No one else remains to defend them. We must look down the road, in this event, to a twilight of abdication and a long night of tyranny.

For it is just as Johnson says: Willy-nilly, order will be kept. Power vacuums will be filled. In one fashion or another, while we are making love the Communist empire will be waging war. Its purpose never alters. Nixon understands this; but there must be times, in the midst of Washington's cricket chorus, when he wonders in despair if he understands this alone.

THE WOODLAWN SOCIAL SERVICES CENTER

Mr. PERCY. Mr. President, individuals who receive public assistance face a number of problems in obtaining certain elementary social services. In some cases, they cannot afford the cost of these services and they are not eligible to receive them free or at reduced cost. In other cases, even where they are eligible to receive these services as part of the assistance they receive, they are all too often not informed of their eligibility. If they are eligible and they do seek the services, frequently they find that the services are in fact inadequate, inappropriate, or misdirected. Finally, even when appropriate

and adequate services are available, they often can be obtained only after a number of demeaning, conflicting, or senseless regulations are overcome.

These and other problems have caused the school of social services administration at the University of Chicago, with the cooperation of the State of Illinois, to establish the Woodlawn Social Services Center. This center serves two purposes. First, the center makes a number of high quality social services available at a central location to all residents of the Woodlawn area regardless of income. Second, the center serves as an educational tool to train generalist social workers who will be able to perform the functions of a worker trained in casework, community organization, or group work.

Mr. President, Dean Harold Richman of the school of social services administration at the University of Chicago recently explained the concepts behind and the operation of the Woodlawn Social Services Center to the Women's Board of the University of Chicago. Because I believe that the Woodlawn Service Center is a unique institution which is attempting to find solutions to one of our more important social problems, I ask unanimous consent that Dean Richman's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE WOODLAWN SOCIAL SERVICES CENTER

(Presentation to the women's board by Dean Harold A. Richman, May 18, 1970)

Welcome to SSA. I want to thank Mrs. Ranney and Mrs. Heineman for giving me the chance to talk with you about the Woodlawn Service Program, a project in which you have taken such a deep and generous interest. Later on this morning, you will see the new building, which should be ready for occupancy by July 1st. I hope that my description of the concerns and business of the Center will help you to envision the uses to which it will be put by the Service Program staff, this School, and the people of Woodlawn.

The story of the Center begins with the people and problems of Woodlawn. We are now sitting on the edge of a community that is virtually all black and where at least one out of every four families lives below the poverty level, which is $3300 per year for a family of four. About 25 percent of Woodlawn's people receive welfare. The infant mortality rate is 45 per 1000 live births, and in East Woodlawn 54 per 1000, compared with the national level of 24 per 1000. Unemployment runs three times higher than the national level. Housing is very poor. At least half of it is classified as dilapidated, deteriorating, or lacking in the basic facilities necessary for health and decency. Old housing is being torn down faster than new housing is being built. Despite these conditions, rents in Woodlawn are higher than in more desirable areas of the city.

But statistics dehumanize and they don't help us to understand the living dimensions of the problem. For that, we have to turn to what these abstract numbers mean to the people who live there and to how the community, through its services, has responded to these people or, more accurately, failed to respond to them.

There is the blind couple with two young sighted children. Because their mother cannot see to gauge how much food they are eating, the children are undernourished. Because she is afraid of what her oldest child might get into, the mother keeps him immobile in a feeding chair most of the day. There has been no day care or homemaker service available in Woodlawn for this family, which wants, needs and deserves to stay together.

A teen-age boy in a welfare family was accidentally shot in the foot and taken to Jackson Park Hospital. His mother immediately joined him there, but when she produced her public aid medical care, the hospital told her they couldn't treat the boy. After a lengthy argument, she took her son to Billings where he was given first aid treatment, but was told after the card was shown that there was no surgical bed available. It was suggested that she take her son to Cook County Hospital. Wishing to avoid County Hospital, she then took her son to Michael Reese where the same scene was replayed. Finally, the next day, they went to Cook County where the boy was treated although the doctors said it was too late to remove the bullet, an uncomplicated procedure which should have been done immediately.

A child was referred to the school social work unit by her teacher because of disruptive behavior in her fifth-grade classroom. Although the social worker's statement described the teacher as "a disturbed person" who "engaged in very bizarre behavior," it was the child and her family who were treated as the problems and given counseling. The next school year, with a new teacher, the child proceeded to do extremely well in school. No attempt was made to deal with the teacher.

A welfare mother who needed new housing for her family managed to locate a suitable apartment, but was in danger of losing her claim to it unless the landlord received her deposit check. The check, which had been processed and to which she was entitled, was withheld by the welfare agency because the woman had "cussed out" the worker the week before and the worker was "very angry with her."

A family with thirteen children, numerous extreme problems ranging from the birth of illegitimate twins to a daughter, to serious health deficiencies, and a mother totally overwhelmed by the situation, was receiving visits from four different public agencies. Despite four agencies' involvement, the family received only one-third of its entitlement to public assistance, one child who had been seriously injured in an accident was still untreated, the other children could not attend school for lack of clothes, and the entire family continued to live in dangerous housing.

These cases are not particularly dramatic or extreme as life in Woodlawn goes, but they demonstrate yet another problem that is not ordinarily included in the statistical catalog of the pathology of poverty—the failure of the existing services to help people.

Services fail in a number of ways.

First, there are simply not enough of any kind of service to go around.

Second, as the incident of the hospitals shows, some services are just not available to poor black people. Almost all black emergency cases in Chicago are referred to Cook County Hospital, where the average emergency room wait is two hours and the treatment is often inadequate and always impersonal.

Third, many of the services are simply inappropriate and misdirected. For lack of what is needed, the Woodlawn residents get what there is—for the most part too little and too late of what someone else decides they need. As in the case of the child's difficulties with her fifth-grade teacher, the service is too often directed at changing the client, not improving the conditions in the service or in the system it represents. Small wonder that services are often greeted with hostility and resentment by residents.

Fourth, the services are often coercive and punitive as in the case of the withheld housing check. Thus, with some justification, what are called service agencies are often perceived as enemy ground.

Fifth, services are piecemeal and fragmented. When a multi-problem family has to deal with four workers from different agencies, each concerned with a small part of the problem, the family is confused and additionally burdened with the task of putting together the services available to it. It is left to the family, which is hardly equipped for this role, to reconcile the inconsistencies in advice and the often contradictory demands of theoretically cooperating agencies.

Sixth, the agencies, not the clients, define needs for service and rate the success or failure of their efforts. If these efforts fail, they are traditionally explained in two ways: the lack of adequate resources to deliver the services properly or the innate inadequacy of the clients. Very little scrutiny has been directed at the nature and quality of the service systems themselves.

The poor state of social service systems like Woodlawn's are a matter of great concern to SSA. For this School's job is not limited to producing social workers to fill jobs in social services as they are; in educating true professionals, we also, as a school, must work continually on the range of social problems and the institutions by which society tries to meet these problems.

In initiating the Social Services Center project, the School has hoped to create both a resource for Woodlawn and an educational setting which would allow us to examine and experiment, and perhaps improve, the systems in which our graduates would work.

We have been joined in this effort by the State of Illinois, which has made Woodlawn an experimental area for improvements in the delivery and management of social services over which the State has jurisdiction—a jurisdiction which includes all services permitted under public aid, child welfare, vocational rehabilitation, family services, employment services and mental health programs. The Social Services Center will serve as the headquarters for this experimental service program in Woodlawn.

The service program will be guided by several basic premises:

First, the provision of services will be separated from the provision of cash assistance. Clearly, to a welfare recipient, the greatest need is the need for cash. Public aid does not begin to provide support that meet even minimal family needs. This is deplorable and Federal legislation to correct that inequity is now in process. But where the same system provides both cash and service, the lines between need for money and need for help are blurred. Services tend to be emphasized in public aid in an attempt to make up for the deficiency of money; and conversely, monetary help seems to the client to hinge on his willingness to submit services. By separating the two functions and making public aid an independent financial transaction, two things come about; services are not regarded as coercive and thus can be sought out by people—whether they receive assistance or not—as wanted and needed; and family cash needs can be assessed, as is proper, independent of the often punitive judgments about the quality and character of people's private lives.

Services will be offered in one setting—the Social Services Center. A separate office, physically removed from the service program, will handle requests for financial help. These requests will be handled in a businesslike manner. Instead of the currently exhaustive, case-by-case investigation, eligibility will be determined by a declaration by the applicant of his needs. A sample of declarations will be periodically examined for accuracy just as is the practice with income tax returns.

Second, services will be available, insofar as possible, to all residents of Woodlawn—simply on the basis of residence in the area,

not on determination of financial need. People at all income levels, not just the poor, can and should benefit from public services—day care, homemaker help, counseling, skill training services and the like. The Woodlawn Service Program's goal is to serve all of Woodlawn.

Third, use of the Service Program should be totally voluntary; no one *must* use the Service Program, not even public aid recipients. Services that are imposed or are limited to the poor are generally poorly run, poorly regarded, and poorly used. But services open for people by their own choice must be good services—or they will not survive.

And fourth, the services should be of the highest quality possible. The State's resources, the School's educational program, the University's reserves of knowledge, and the willingness of voluntary agencies to work with this program, should all help to contribute to achieving quality service for Woodlawn.

Admirable as these basic tenets are, they will not be simple to translate into reality. However, the State's plan for operating the Woodlawn Service Program should greatly ease the very complicated task of bringing many different services together around the interests and needs of the community.

Administrative authority over all State service programs in Woodlawn will be vested in the program director, Mr. Clinton McKay. This authority will permit him to draw freely on State resources as well as to make contracts and agreements with other public and private agencies for purchase of services needed in the community but not available under State jurisdiction.

This "project manager" approach has several important virtues: the piecemeal nature of the present system can be overcome; the inconsistent requirements and conflicting criteria of existing services can be reconciled; and, not least of all, there will be one person who is accountable for providing quality services and answerable to the community for grievances.

The Program proposes to operate on two basic principles: one, that the client himself knows what he needs and two, that the program's job is to get the client what he needs or else have a good reason why it cannot.

As to the services themselves, I would like to describe briefly some of the major elements in the projected program:

First, the Early Childhood Development Center.

The early childhood program will provide comprehensive nurturing, health, and educational services for pre-school children during that portion of the day when it cannot be provided at home by parents. Due to the necessarily limited facilities of the Center building and the distance of this facility from some parts of Woodlawn, the programs will be provided in a number of other settings as well: outposts in existing structures; mobile units; and in group and individual day care homes. Among the services to be offered under its rubric are: links with other health, educational and social services; emergency short-term care; pre- and post-school care for children whose parents work beyond school hours; individual arrangements for 24-hour care; and a summer program for young school-age children. In addition, the Center will serve as a facility for training community residents in preschool teaching, child welfare, food preparation, and service and secretarial and clerical tasks, and homemaker services.

A second major interest of Woodlawn residents is health care. Given the extreme inadequacy of available health services to the people of Woodlawn, the high priority of health services is not surprising. In keeping with the focus on integrated, comprehensive services, the resources that the State can bring to this program, and the desires of the Woodlawn community, we are currently engaged in discussion with City and State authorities about cooperating in the planning, organizing and financing of a truly comprehensive, prepaid health program.

A third important area of concern is employment. The program will offer the gamut of employment services to the people of Woodlawn—access to manpower, recruitment, placement and job training program. In addition, it plans to operate its own training programs for employees of the service program. It is the hope that the Woodlawn Service Program will ultimately recruit and train 90 percent of its staff directly from the community.

Other services the program intends to offer are: consumer education and protection; vocational and social rehabilitation of the handicapped; housing services; adoption and services to unmarried parents; cultural programs; recreation; special programs for youth and the elderly; liaison with educational institutions; new community correctional services; and new community mental health facilities and services.

This has been a necessarily skeletal description of the Woodlawn Service Program—just enough to outline its community-based philosophy and its commitment to a spectrum of services easily accessible to community residents. I hope you will feel free to question us more closely on its plans later on.

Now let me turn to the School's educational investment in this program.

The School's experimental program within the Social Services Center is to educate students to be generalist social workers who will be able to deal with the complex and multiple problems people in a community like Woodlawn experience. A generalist worker is one who can work on a range of problems at a variety of levels with a repertoire of different methods for the benefit of a particular family or individual. Instead of four workers fragmenting responsibility for the woman with thirteen children and a host of problems, a generalist would be competent to deal with the range of what that family needs. That is not the way it is now.

Typically, there are three major tracks of study in schools of social work: casework, which is primarily work with individuals around personal problems; group work, which is the working out of shared problems between similarly troubled or situated individuals through the medium of small groups; and community organization, which means creating a sense of unity and involving community residents in developing and operating programs to remedy social problems widely experienced in a community.

The generalist student is interested in knowing about elements of all three kinds of practice—and recognizes that, especially in places such as Woodlawn, professionals can be more effective and useful for their clients if they have access to a variety of approaches for problem-solving and if they can follow through on a problem beyond the boundaries that current agency distinctions and professional methods impose.

Let's take an example. Several of our generalist students placed in the public aid office worked with mothers of retarded school-age children. There are only two public residential treatment facilities for such children in Illinois, both down State, and there are no provisions, despite legal requirements, in Woodlawn public schools, for classes for retarded children. Students helped the mothers to make what arrangements were possible for their children, but they worked on the problem in other ways as well. In the home, families were helped to adjust to and to understand the difficulties of life with retarded children. Through the Maternal and Infant Welfare Station, it was discovered that there were 123 such children in Woodlawn. The clinic agreed to contact and interview the mothers of each of these children—and the clinic's para-professional staff were trained by the student workers for these visits. The visitors brought along with them applications for mothers to complete and return to Woodlawn schools requesting that special classes be made available. While this had been possible all along, few mothers had known about or had been encouraged or informed that such an option was open. The mothers were also organized into groups to share their problems, anxieties and concerns about their retarded children. This experience was regarded as extremely supportive. In addition, the generalist students and mothers have worked with the schools as they have moved forward to make arrangements for special classes for the children.

Our students were able to deal with this difficult problem at all levels as it affected individual mothers, their retarded children, and the rest of the family; as it affected groups of people with a common problem; and as it was reflected in the community through its responsibility to make provision for this special need.

Our generalist students will do their practical field work in Woodlawn under the direct aegis of the Woodlawn Service Program as it goes into operations. We have here, I think, a happy marriage: a new generalist social work student learning his work in a new generalist service program.

Our greatest hope is that this joint effort will produce something of great value for the Woodlawn community. Most assuredly this effort has been and will continue to be of great significance for the School. For we are a profession trying to renew ourselves.

The staggering social problems of the past decade have revealed failings in our existing institutions and our methods for coping with social needs. Our institutions and methods have not kept pace with the challenges imposed on them, as a look at Woodlawn's present social service system clearly demonstrates. We must examine how this has happened and lead in the effort to find better ideas and better ways.

A facility like the Social Services Center is essential to this process. Its importance to the community is reason enough for having it; but beyond that, it is crucial to a profession trying to find its role, and essential as a link between the academic community and one part of the society whose plight the academic community must learn to understand—and through this understanding—to help.

STEPS WHICH LEAD TO PEACE

Mr. DOLE. Mr. President, within the past few weeks steps have been taken in several areas, all of which lead to peace. Most prominent are the cease-fire and the talks in the Middle East. Although there is a long way to go before peace between the Arabs and the Israelis is a reality, we have at least begun.

In addition to the Middle East are the Bonn-Moscow treaty, the SALT talks, and the gradual winding down of the Vietnam war.

The Mideast situation is specifically commented upon in the Seattle Post-Intelligencer's editorial entitled "Cooling Mideast" and generally in the Drummonds' column entitled "Don't Look Now, But Peace Is Right Around the Corner." I commend them to the Senate and ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Seattle (Wash.) Post-Intelligencer, Aug. 5, 1970]

COOLING MIDEAST

A super-sized gold star has been earned by the Nixon administration, and especially by Secretary of State William P. Rogers, for their altogether remarkable achievement in the Middle East. Even the most bitter critics of the President cannot diminish the accomplishment.

Getting Egypt and Jordan to agree with Israel on anything is a feat of diplomacy which borders on the incredible. Getting them to agree to start talks on arrangements for a cease-fire and a possibly permanent peace settlement borders on the miraculous.

For 22 years, ever since the founding of Israel, the area has been a cauldron of bubbling hate. Three wars solved nothing except to escalate the violence which only last week threatened to erupt into a confrontation of the two major world powers.

Now, for the moment at least, this ultimate danger has been eased—and it is United States initiative which is responsible. For the moment it is unimportant to think of the risks we have taken; of the possibility of treachery by the Soviet-Arab axis, or of the regrettable arm-twisting we have applied to our Israeli allies.

It also is useless to consider that the hatred continues; that the Arab-Israeli mess is still as prickly as a barrel full or porcupines, and that peace in the Middle East is still a remote ideal.

What is all important is that a potential breakthrough to sanity has been scored—a breakthrough which President Nixon described in these words:

"We do not underestimate the difficulties which still lie ahead. We still have a long way to go before achieving the results we hope to achieve.

"But in a situation where a year and a half ago there seemed to be no hope, there now at least is some hope."

That says it.

DON'T LOOK NOW, BUT PEACE IS RIGHT AROUND THE CORNER

(By Roscoe and Geoffrey Drummond)

WASHINGTON.—It's no mirage; it's real: A more peaceful and stable world is coming into being.

Many moves are being made in many places at the same time that hold great promise. No one has to shy from being an optimist.

The building blocks of peace are actually beginning to be laid: (1) In the Middle East, (2) in the new Bonn-Moscow treaty, (3) in improved relations between Eastern and Western Europe, (4) in U.S.-Soviet nuclear arms control, (5) in including Britain in the European Common Market, (6) and there are even glimmering signs of a settlement of the Indochina war.

These events are developing with breathtaking rapidity. Only when put in a pattern does their significance fully emerge.

The whole peace picture is greater than its separate parts. And each separate part is a large building block in itself.

The Middle East—Is peace near? Not for sure, but it may come faster than many think. The principal adversaries have started on the road to settlement. If either side had thought that continued fighting was in its interest, it would never have accepted the Rogers proposals and especially the 90-day truce.

There is evidence that the Soviet Union wants to get out of what it got into in risking such a perilous confrontation with the United States. Moscow pressed the Arabs to accept, and Washington pressed the Israelis to accept. For the first time the Big Four Powers are taking substantially the same line. The ingredients of compromise are visible.

Europe—Until Willy Brandt became chancellor last year no West German government ever thought it worthwhile to say to the Soviet Union, let's settle some things. Brandt said just that and he meant let's clean up the unfinished business of World War II. He found the Soviets unexpectedly responsive.

The pessimists said nothing would come of it or that it would take many months. A nonaggression treaty was completed in less than two weeks. West Germany accepted long-disputed frontiers. Brandt went to Moscow to sign it and to talk with Premier Alexis Kosygin about better access to West Berlin and trade and credit for the Soviets.

This treaty will almost certainly bring fuller contact between the Eastern European Communist states and Western Europe to the benefit of both. It is a riskful decision for the Soviets who must feel the need to decrease tensions with Western Europe as it faces rising tensions with Red China.

Federation—The negotiations to bring Britain into the Common Market are proceeding slowly but productively. Gaullist nationalism is on the wane in France and the way things are now going some form of European political federation is not to be dismissed.

Arms Race—The U.S. and the USSR seem ready to make real progress to temper down the nuclear arms race.

Indochina—The Soviet Union is reported to be urging a political settlement of the war in Laos and as telling Hanoi that it will not increase its military aid. This may be the precursor to a Soviet move to prod the peace negotiations in Paris.

But whatever happens in Paris, our information is that President Nixon has already decided to step up the pace of U.S. troop withdrawal in the next few months. The war may not be over, but it will not be long before it will be primarily South Vietnam's war.

If anyone had predicted these tremendous events even two months ago, he would have been branded a crackpot by most of the experts.

Not now.

OIL IMPORT QUOTAS AND MEAT IMPORT QUOTAS

Mr. JAVITS. Mr. President, last Friday, when I spoke in the Senate on trade matters, it was agreed that the distinguished Senator from Wyoming (Mr. HANSEN) would have the opportunity to address himself to my remarks in the RECORD and that I, in turn, would have the opportunity to address myself to his remarks. I should now like to respond to the remarks made by Senator HANSEN on August 21 and appearing at page 29675 of the RECORD, on the subject of oil import quotas and meat import quotas.

OIL IMPORT QUOTAS

I shall comment first on the Senator's statement that he cannot understand why Senators from large consuming States such as New York continue their "advocacy of unlimited imports of oil." Mr. President, no one from New York or any other large consuming State that I know of has been advocating practically unlimited imports of oil. What we have urged is a liberalization of existing rigid oil import controls.

There is simply no good reason for the severe limitations now placed on imports from secure Western Hemisphere oil supply sources such as Canada and Venezuela. The Cabinet Task Force on Oil Import Control found that increasing imports from Canada and Venezuela would in no way endanger our national security, and national security, of course, the only legal basis for an oil import control program. Nor is anyone advocating that we become heavily dependent on Eastern Hemisphere oil supplies. The Senator from Wyoming and other Senators maintain that the Cabinet task force recommendations would lead to a flood of imports from the Middle East. This is simply not so; I would refer the Senator to paragraph 337 on page 98 of the Task Force Report which states:

> It remains possible that Eastern Hemisphere imports, considered less secure than those from the Western Hemisphere, might increase unexpectedly despite the high proposed tariff barrier. To guard against this possibility we propose establishment of an absolute maximum for tariff-restricted Eastern Hemisphere oil imports equal to 10% of domestic demand.

I do not know how it can be stated more clearly. I would hope that the Senator from Wyoming and other Senators will in the future direct their remarks to what we and the Cabinet task force are advocating and not set up the straw man of dependence on the Middle East.

As for understanding why we urge liberalization, I ask the Senate's understanding that constituents in our States and, indeed, in an ever-growing number of States across the Nation are weary of subsidizing one of the most profitable industries in the country—the oil industry. In fact, it is surprising to me that we have not heard more from consumers as I have heard from consumers in my State. One wonders whether they know how much the overprotection of the oil industry through the oil import program is costing each citizen. For example, the Cabinet task force pegged the per capita cost in Wyoming at $57 per head. That was the highest per capita cost of any State in the Union and some $33 higher per capita than the national average.

In his statement, the able Senator from Wyoming said that the $5 billion savings to U.S. consumers that would result from lifting oil import restrictions has now "evaporated" and that it now costs some 75 cents a barrel more to buy foreign oil delivered to east coast ports than the delivered cost of U.S. domestic crude. Certainly, it is clear that the industry has itself put out a number of theoretical statements about the high cost of foreign oil. Actually, the facts are very different, and I should like to take this opportunity to set the record straight. First, there is little or no oil coming into this country from abroad at a higher price than domestic crude oil. Hardly a barrel. And if any person has proof that such high priced imports are arriving at our ports, I would like to see the bills of lading or other documentation. Theoretical exercises under which an unnamed company pays a high spot freight rate to move Middle East crude around Africa to the east coast are simply academic speculation. It is not happening that way. The big oil companies who bring in the major share of foreign crude oil do not arrange for freight in the spot market. They move

about half of their oil on tankers which they own. Thus, the only freight cost they pay is the actual cost of operating those vessels. Moreover, most of the rest of their freight requirements are covered by long term charter, involving periods of anywhere from 2 to 20 years. These rates are fixed and are not determined by today's high spot levels. So foreign crude oil is indeed still flowing to the United States at a delivered cost of anywhere between $1.25 and $1.50 per barrel lower than the delivered cost of domestic crude oil, and no hypothetical example can change those facts. And imports into the United States of crude oil and products are higher now than they were a year ago.

Next, I should like to turn to the Senator's assertion that the $2 price for residual fuel oil used by our power companies, hospitals, schools, apartment houses, and other large users has now doubled in price because of "the Middle East situation."

Actually, the shortage of heavy residual fuel is worldwide, and the dramatic price changes he referred to occurred before the rupture in the pipeline in Syria and before Libya cut back oil production. These situations are simply not related. The shortage of heavy fuel is caused, pure and simple, by the oil companies miscalculations of the growth in demand for this product in the United States and in Western Europe and Japan. Besides, our imports of residual fuel come largely from the Caribbean area, with a small balance from Europe. They do not come from the Middle East.

The Senator wonders how I can blame the U.S. industry for the shortage of heavy fuel and how I can blame the quota system when, in fact, heavy fuel can be imported without quotas. What happens, Mr. President, is that oil quotas insulate U.S. oil prices from world price trends. The domestic industry is protected from competition from abroad. This scheme, together with State prorationing, which protects the domestic industries from competition here at home, enables the oil industry to go happily along, taxing the consumer with artificially high prices.

Among the many oil products, some are obviously more valuable—and more profitable—than others. In recognition of this, ever since World War II, oil companies have been cutting back on the production of heavy fuel oil, the least profitable product, and maximizing the production of the most profitable product—gasoline.

Thus, the liberalization of residual fuel quotas did not cause our dependency on foreign heavy fuel. In fact, we were forced to lift limits on heavy fuel because the domestic refining industry simply did not make enough of the product to cover our needs. The same forces—the distortion caused by the oil import program—operated to create a shortage just this year in the Midwest which finally resulted in some imports of heavy fuel into district II—when electric companies and others from that region found they simply could not buy from domestic sources enough heavy fuel oil to meet their demands.

There is talk about the 80 percent dependency on foreign heavy fuel on the east coast. Did the Senator ever ask himself why? The reason is painfully clear. The oil industry has been simply unwilling to cover our heavy fuel needs here at home and has systematically squeezed out heavy fuel production in favor of more profitable products.

Mr. President, it seems obvious that we must have substantially greater imports of No. 2 fuel oil and find a way to create incentives to get some low sulphur heavy fuel No. 6 oil refining capacity built here in the U.S. east coast. On the west coast, there is already an incentive program under which a refiner receives one barrel of import rights for each barrel of low sulphur fuel products. A foreign trade zone refinery has also been approved on the west coast. Yet on the east coast, where the need is far greater, we have no such programs. We are the ones who have to pay the artificially high prices resulting from this program. Our prices are at the highest in the world. I note that the Senator cited some statistics from a Washington newspaper showing that European gasoline prices are higher than ours. What he did not mention was that European governments rely to a far greater extent than the United States on revenue from taxes on fuel. I should like to ask the Senator what the price of gasoline in Europe is, excluding these taxes, as compared with U.S. prices, excluding taxes. I can tell him the wholesale price for all oil products in Europe reflects world market prices; and those prices are far lower than our prices.

The Senator from Wyoming says:

The oil companies and a number of us in Congress have warned for several years that increasing dependence on foreign sources was hazardous.

If the Senator will recall, the northeastern Senators and Governors warned about an impending residual fuel oil shortage 2 years ago. We had a plan for building additional refining capacity on the east coast to provide substantial additional quantities of low-sulfur residual fuel oil. Naturally, the oil industry opposed it. That refinery could have been in operation this winter, but it was scuttled—scuttled perhaps by the same people who claim they warned of a shortage. So it is not the events of recent months that are to blame for our present crisis, but the opposition of the oil industry itself.

MEAT IMPORT QUOTAS

Turning briefly to the question of beef imports, I ask unanimous consent that Governor Rockefeller's recommendation of July 11 to the President on this matter be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM

To: The President.
From: Nelson A. Rockefeller.
Subject: Beef Imports.

I. PURPOSE

The purpose of this memorandum is to present background information and recommendations on a forthcoming decision that directly affects:

A. The consumers of New York and other states in their day-to-day battle against inflation and the rising cost of living.

B. Trade with other nations of the Western Hemisphere, and consequently, the economic progress of the people of the other nations in the Hemisphere.

II. BACKGROUND

A. *U.S. Consumption:* The consumption of beef in the U.S. is currently 22.1 billion pounds a year, up by 6.9 billion pounds, or 46%, in the last ten years. In that period, per capita consumption has gone up from 85.0 pounds per person to 110.5 pounds per person yearly. The U.S. Agriculture Department estimates that total beef consumption in the U.S. will increase next year about 635 million pounds, or 3%.

B. *U.S. Prices:* The price of beef is steadily increasing—at a rate that is higher than the overall cost of living.

1. *Table beef.* The wholesale price of "choice" beef in Chicago in 1960 was 26.24 cents per pound, and now it is 31.56 cents per pound, an increase of 20%. But retail beef prices went up much more in this period. The price of rib roast in one New York City grocery chain increased from 99 cents per pound in 1960 to $1.49 per pound in 1970, an increase of 50%. According to the Bureau of Labor Statistics, the price of hamburger in the New York/Northeastern New Jersey area increased from 49.1 cents per pound in 1960 to 87.9 cents per pound in 1970. This was a price rise of 79%.

2. *Manufacturing beef.* These grades of beef are used in frozen dinners and canned meat products for the lower income consumer market; and the cost of this manufacturing beef has gone up more, proportionately, than higher grades of table beef. For example, the wholesale price of the "canner" grade of beef in Chicago in 1960 was 13.28¢ per pound; in 1970 the price is 20.37¢ per pound, an increase of 53%—as against a 20% increase for "choice" beef.

One reason is that the consumption of precooked beef products has gone up rapidly, but the United States does not now produce in sufficient quantities the supplies of these second grades of beef. Our supplies used to come from milk cows after they had reached an age where they were retired from service. Today, our cow population is half of what it used to be. Simultaneously, U.S. cattlemen have concentrated on producing the higher grades of table beef.

C. *Sources of Supply:*

1. *Domestic.* Ten years ago the United States was producing 17.8 billion pounds of beef annually—about 95% of total consumption. In 1969 the U.S. produced 21.8 billion pounds of beef, about 93% of consumption.

2. *Imports.* Of the 1.35 billion pounds of fresh and frozen beef imported into the U.S. in 1969, Australia shipped in about 50%, New Zealand about 20%, and all of the eight Western Hemisphere countries permitted to ship fresh or frozen beef to the U.S. about 18%.

Of the 1.2 billion pounds of pre-cooked beef imported into the U.S. in 1968 (latest figures available), Argentina shipped 11% and Uruguay 5.6%. This Argentine beef accounted for 40% of Argentina's exports to the U.S.; cooked beef represented 13% of Uruguay's exports to the U.S. As you know, Congress deliberately omitted from the 1964 Meat Import Act any quota or restriction on pre-cooked beef, and subsequent testimony before Congress does not show that there has been a serious adverse effect on U.S. cattle industry. Nevertheless, there was introduced into Congress last year a bill that would restrict cooked beef.

III. RECOMMENDATIONS

In my report to you on the Presidential Mission to the Western Hemisphere actions, I emphasized that all nations of this Hemisphere see agriculture as the productive force

for raising their standards of living, creating employment opportunities, and generating foreign exchange and capital for economic and social development.

In that report I recommended that the United States allocate a major part of future growth in its agricultural consumption to the other nations of the Western Hemisphere.

I also proposed, in view of the widespread malnutrition and the grave shortage of protein for expectant mothers and infants, that the U.S. should provide leadership in a Hemisphere-wide nutrition program.

In view of the continuing increases in the cost of living in New York and other states, in recognition of your continuing objective to hold down inflation, and in pursuance of your goal of expanding trade with the other Hemisphere nations, I offer these recommendations:

A. That the United States continue to increase quotas of fresh and frozen beef imports.

B. That the U.S. Agriculture Department, in allocating shares of the annual increase of fresh and frozen beef, provide for an overall increase of 2% yearly for the Western Hemisphere countries, until the Western Hemisphere share reaches 25% of all U.S. beef imports. This increase would be allotted to each nation involved by a formula based on exports to the U.S. for the past three years, plus a bonus for any country that increased its domestic per capita beef consumption during the previous decade.

Such a bonus would help to reverse a trend evident in some Central American countries—selling beef to the U.S. at higher prices and reducing domestic per capita consumption of beef.

C. That your Administration strongly recommend to Congress that there be no change in present regulations permitting pre-cooked meat to enter the U.S.

COMPENSATION FOR INNOCENT VICTIMS OF CRIMINAL ACTS: SHOWING CONCERN FOR THE FORGOTTEN VICTIMS OF OUR VIOLENT SOCIETY

Mr. YARBOROUGH. Mr. President, the Wall Street Journal of August 26, 1970, contains an article entitled "Aiding the Innocent," written by Mr. W. Stewart Pinkerton, Jr., which describes the plans of compensation for innocent victims of criminal acts that are in force in New York, California, Hawaii, Maryland, and Massachusetts and also points out that a task force of the National Commission of Causes and Prevention of Violence will recommend the establishment of a Federal compensation program. As the author of the first Federal innocent victims compensation bill to be introduced in Congress, I am gratified that more and more attention is being focused on the urgent need for this type of legislation.

For many years, the control of crime was considered to be solely a State function. However, as crime increased and became more mobile in recent years, the Federal Government has assumed a more active role in the whole area of criminal law. This is evidenced by the passage of the Omnibus Crime Control and Safe Streets Act and the recent District of Columbia crime bill, which are crime prevention measures, and the Economic Opportunity Act which is directed at the eradication of the causes of crime.

Despite the growing involvement of the Federal Government in the problems of crime in America, very little attention has been given to the needs and problems of the innocent victims of criminal acts. On the contrary, there has been a general attitude among both State and Federal officials that the compensation of victims of criminal acts for their losses should be left to private sources such as insurance. It is obvious to anyone who has even had any contact with criminal law and victims of crime that government, both State and Federal, has an affirmative duty not only to protect its citizens from criminals and criminal acts, but also to compensate the innocent victims of such violence.

As Mr. Pinkerton states in his article:

> Legal authorities and law enforcement officials say the trend reflects concern over rising violence and the dawning conviction that society is obliged to help its victims. "We're dealing with what used to be the forgotten man," says Mr. Van Rensselaer of the New York board. J. Edgar Hoover, director of the FBI, expressed similar sentiments in a report last year when he said: "Certainly under the rule of law those who abide by the law should have protection equal to that of those who break the law."

Based on a lifetime of experience as a trial lawyer, a State District Judge, and a legislator, I recognize the compelling need for a Government program to protect these innocent victims. The great tragedy in America is that so many victims of criminal acts are themselves poor and disadvantaged people who cannot afford insurance. These people are completely without any source of compensation for their injuries and damages. To compound this unjust situation, it is often the case that the police protection of poor people from crime is very inadequate.

For these reasons, I introduced in June of 1965 the first Federal innocent victims compensation act ever to be presented to Congress. At the time I introduced the bill—then S. 2155—no State had such a compensation plan. At that time, the only countries in the world that provided compensation to victims of criminal acts were New Zealand, which enacted the first such plan in 1963, and England, which enacted its plan in 1964. My purpose in introducing this bill was to establish a plan of compensation applicable to all Federal areas, including the District of Columbia, which would serve as a model for the States. Although Congress has not passed my bill, despite the fact that I have introduced it in each Congress since 1965, I am gratified that at least five States have adopted this idea and have enacted innocent victims compensation laws. These States and the date of their laws are: California, 1968; Hawaii, 1968; Maryland, 1969; Massachusetts, 1968; and New York, 1969.

In addition, the Canadian Provinces of Saskatchewan and Newfoundland and the Australian States of New South Wales and Queensland have enacted innocent victims compensation since 1965. Furthermore, the State legislatures of Illinois, New Jersey, and Pennsylvania are considering such legislation.

At the beginning of the 91st Congress, I again introduced my bill, now S. 9. In addition to S. 9, I also introduced in this Congress, S. 2936, which is similar to S. 9 except it only applies to the District of Columbia. I firmly believe that the District of Columbia with its alarming crime problem and its vast poverty would provide one of the best testing grounds for this type of legislation in America. The District of Columbia Committee held hearings on S. 2936 in December of 1969. At these hearings, my bill received the strong support from such authorities on criminal justice as: Representative ABNER J. MIKVA, of Illinois; Dean Page Keeton of the University of Texas School of Law; Prof. Gilbert Geis of the School of Criminal Justice, State University of New York; and Prof. Norval Morris, professor of law and criminology, director, Center for Studies in Criminal Justice, University of Chicago.

This proposal has also gained support of former U.S. Supreme Court Justice and Ambassador to the United Nations Arthur J. Goldberg.

A common thread of logic ran through all of the testimony in favor of this bill and that is that government, both State and Federal, have assumed the duty of protecting the people from criminal acts. Our citizens pay taxes for this protection and when they are injured as a result of criminal conduct, then government has failed in its duty and thus should compensate the victim. In my judgment, an even more compelling justification for such a plan of compensation is that the victim of a criminal act has no effective remedy at law. As Dean Keeton, one of America's greatest professors of law, so accurately stated during the hearings on S. 2936:

> Even in the rare case where a person is injured by a solvent criminal, the government's dealing with the offender often forecloses or interferes with the possibility of civil recovery. The government's interest in arresting and imprisoning him prevents him from earning money that could compensate the victim. Furthermore, "one effect of requiring the accused to employ his available funds to pay the costs of his defense may be to exhaust or limit the funds from which the victim may recover in a civil suit for the damages against the accused."
>
> Thus, not only is the right of civil recovery limited by the nature of the criminal, but the government often takes an active role in diminishing what little possibility of recovery may have existed. The interests of society in punishment, deterrence, and rehabilitation interfere with the interests of the victim.

The Committee on the District of Columbia favorably reported S. 2936 as a part of S. 2601, the District of Columbia crime bill, and it was passed unanimously by the Senate. Unfortunately, this important program was lost in conference.

Mr. President, the time has come for Congress to decide whether or not it intends to actually do anything to help the innocent people who are being maimed and injured daily by criminals in all parts of the country, including the Nation's Capital. We have seen in the last few years a revolution in the area of criminal justice. We have seen the passage of strong Federal law enforcement measures. However, the victim, the person who crys out for assistance from his government, still is neglected.

The proposals embodied in my bills,

S. 9 and S. 2936, are not revolutionary or unreasonable. Rather the system of compensation that I propose is as sound and logical as workmen's compensation. Under my bills, there would be created a Violent Crimes Commission, composed of members appointed by the President, whose function would be to determine: First whether the alleged victim was truly innocent; and, second, how much, if any, compensation he is entitled to. Compensation would be awarded only for injuries or death resulting from such violent crimes as arson, assault, murder, rape and other sex crimes, robbery, mayhem, kidnaping, manslaughter, and other crimes of force against the person. No compensation would be awarded solely for crimes against property which did not involve some physical injury. The limit of compensation to any victim would be $25,000.

Although compensation of innocent victims of crime is not a new idea, it does represent a legislative experiment in a new phase of criminal law. As has been the case throughout history, there are always those who are hesitant to experiment with a new system or program or even a new idea. However, as Justice Brandeis once said:

If we would guide by light of reason, we must let our minds be bold.

Mr. President, this is a time for bold action. This is a time for Congress to demonstrate to the people of America that it is as interested in the problems and suffering of victims of criminal acts as it is in protecting rights of accused criminals. Therefore, I urge my colleagues on the Judiciary and District of Columbia Committees to report S. 9 and S. 2936 to the Senate so that by record vote the American people can see if we are interested in aiding innocent victims of criminal acts.

Mr. President, for the benefit of Senators who have not had the opportunity to study this matter, I ask unanimous consent that the following documents be printed at this point in the RECORD:

First, copies of S. 9 and S. 2936;

Second, the article entitled "Aiding the Innocent," written by W. Stewart Pinkerton, Jr., and published in the Wall Street Journal of Wednesday, August 26, 1970; and

Third, an article entitled "The Battle for a Federal Violent Crimes Compensation Act: The Genesis of S. 9," which I authored, and which appears in 43 Southern California Law Review 93 (1970).

There being no objection, the items were ordered to be printed in the RECORD, as follows:

S. 9

A bill to provide for the compensation of persons injured by certain criminal acts

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—SHORT TITLE AND DEFINITIONS

SHORT TITLE

SEC. 101. This Act may be cited as the "Criminal Injuries Compensation Act of 1969".

DEFINITIONS

SEC. 102. As used in this Act—

(1) The term "child" means an unmarried person who is under eighteen years of age and includes a stepchild or an adopted child;

(2) The term "Commission" means the Violent Crimes Compensation Commission established by this Act;

(3) The term "dependents" means those who were wholly or partially dependent upon his income at the time of his death or would have been so dependent but for the incapacity due to the injury from which the death resulted and shall include the child of such victim born after his death;

(4) The term "personal injury" means actual bodily harm and includes pregnancy and mental or nervous shock;

(5) The term "relative" means his spouse, parent, grandparent, stepfather, stepmother, child, grandchild, brother, sister, half brother, half sister, or spouse's parents;

(6) The term "victim" means a person who is injured or killed by an act or omission of any other person which is within the description of any of the offenses specified in section 302 of this Act.

TITLE II—ESTABLISHMENT OF VIOLENT CRIMES COMPENSATION COMMISSION

VIOLENT CRIMES COMPENSATION COMMISSION

SEC. 201. (a) There is established a Violent Crimes Compensation Commission which shall be composed of three members to be appointed by the President, by and with the advice and consent of the Senate, solely on the grounds of fitness to perform the duties of the office. The President shall designate one of the members of the Commission who has been a member of the bar of a Federal court or of the highest court of a State for at least eight years as Chairman.

(b) No member of the Commission shall engage in any other business, vocation, or employment.

(c) The Chairman and one other member of the Commission shall constitute a quorum, except as provided in section 205(b); and where opinion is divided and only one other member is present, the opinion of the Chairman shall prevail.

(d) The Commission shall have an official seal.

TERMS AND COMPENSATION OF MEMBERS

SEC. 202. (a) The term of office of each member of the Commission taking office after December 31, 1969, shall be eight years, except that (1) the terms of office of the members first taking office after December 31, 1969, shall expire as designated by the President at the time of the appointment, one at the end of four years, one at the end of six years, and one at the end of eight years, after December 31, 1969; and (2) any member appointed to fill a vacancy occurring prior to the expiration of the terms for which his predecessor was appointed shall be appointed for the remainder of such term.

(b) Each member of the Commission shall be eligible for reappointment.

(c) A vacancy in the Commission shall not affect its powers.

(d) Any member of the Commission may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

(e) Each member of the Commission shall be compensated at the rate prescribed for level IV of the Federal Executive Salary Schedule of the Federal Executive Salary Act of 1964 except the Chairman who shall be compensated at the rate prescribed for level III of such schedule.

ATTORNEYS, EXAMINERS, AND EMPLOYEES OF THE COMMISSION; EXPENSES

SEC. 203. (a) The Commission is authorized to appoint such officers, attorneys, examiners, and other experts as may be necessary for carrying out its functions under this Act, and the Commission may, subject to the civil service laws, appoint such other officers and employees as are necessary and fix their compensation in accordance with the Classification Act of 1949.

(b) All expenses of the Commission, including all necessary traveling and subsistence expenses of the Commission outside the District of Columbia incurred by the members or employees of the Commission under its orders, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Commission or by any individual it designates for that purpose.

PRINCIPAL OFFICE

SEC. 204. (a) The principal office of the Commission shall be in or near the District of Columbia, but the Commission or any duly authorized representative may exercise any or all of its powers in any place.

(b) The Commission shall maintain an office for the service of process and papers within the District of Columbia.

POWERS AND DUTIES OF THE COMMISSION

SEC. 205. (a) Upon request made to the Commission after the filing of an application under the provisions of this Act, the Commission or its duly authorized representative shall have a hearing on such application, shall fix a time and place for such hearing, and shall cause notice thereof to be given to the applicant.

(b) For the purpose of carrying out the provisions of this Act, the Commission, or any member thereof, or its duly authorized representative, may hold such hearings, sit and act at such times and places, and take such testimony as the Commission or such member may deem advisable. Any member of the Commission may administer oaths, or affirmations to witnesses appearing before the Commission or before such member. The Commission shall have such powers of subpena and compulsion of attendance and production of documents as are conferred upon the Securities and Exchange Commission by subsection (c) of section 18 of the Act of August 26, 1935, and the provisions of subsection (d) of such section shall be applicable to all persons summoned by subpena or otherwise to attend or testify or produce such documents as are described therein before the Commission, except that no subpena shall be issued except under the signature of the Chairman, and application to any court for aid in enforcing such subpena may be made only by said Chairman. Subpenas shall be served by any person designated by the said Chairman.

(c) In any case in which the person entitled to make an application is a child, the application may be made on his behalf by any person acting as his parent or guardian. In any case in which the person entitled to make an application is mentally defective, the application may be made on his behalf by his guardian or such other individual authorized to administer his estate.

(d) Where any application is made to the Commission under this Act, the applicant, and any attorney assisting the Commission, shall be entitled to appear and be heard.

(e) Any other person may appear and be heard who satisfies the Commission that he has a substantial interest in the proceedings.

(f) Where under this Act any person is entitled to appear and be heard by the Commission, that person may appear in person or by his attorney.

(g) Every person appearing under the preceding subsect'ons of this section shall have the right to produce evidence and to cross-examine witnesses.

(h) The Commission or its duly authorized representative may receive in evidence any statement, document, information, or matter that may in the opinion of the Commission contribute to its functions under this Act, whether or not such statement, document, information, or matter would be admissible in a court of law, except that any evidence introduced by or on behalf of the person or persons charged with causing the injury or death of the victim, any request for a stay of the Commission's action

and the fact of any award granted by the Commission shall not be admissible against such person or persons in any prosecution for such injury or death.

(i) If any person has been convicted of any offense with respect to an act or omission on which a claim under this Act is based, proof of that conviction shall, unless an appeal against the conviction or a petition for a rehearing or certiorari in respect of the charge is pending or a new trial or rehearing has been ordered, be taken as conclusive evidence that the offense has been committed.

(j) Except as otherwise provided in this Act, the Administrative Procedure Act shall apply to the proceedings of the Commission.

ATTORNEY'S FEES

SEC. 206. The Commission shall publish regulations providing that an attorney shall, at the conclusion of proceedings under this Act, file with the agency the amount of fee charged in connection with his services rendered in such proceedings.

(b) After the fee information is filed by an attorney under (a) above, the Commission may determine, in accordance with such published rules or regulations as it may provide, that such fee charged is excessive. If, after notice to the attorney of this determination, the Commission and the attorney fail to agree upon a fee, the Commission may, within ninety days after the receipt of the information required by (a) above, petition the United States district court in the district in which the attorney maintains an office, and the court shall determine a reasonable fee for the services rendered by the attorney.

(c) Any attorney who charges, demands, receives, or collects for services rendered in connection with any proceedings under this Act any amount in excess of that allowed under this section, if any compensation is paid, shall be fined not more than $2,000 or imprisoned not more than one year, or both.

FINALITY OF DECISION

SEC. 207. The orders and decisions of the Commission shall be reviewable on appeal, except that no trial de novo of the facts determined by the Commission shall be allowed.

REGULATIONS

SEC. 208. In the performance of its functions, the Commission is authorized to make, promulgate, issue, rescind, and amend rules and regulations prescribing the procedures to be followed in the filing of applications and the proceedings under this Act, and such other matters as the Commission deems appropriate.

TITLE III—AWARD AND PAYMENT OF COMPENSATION

AWARDING COMPENSATION

SEC. 301. (a) In any case in which a person is injured or killed by any act or omission of any other person which is within the description of the offenses listed in section 302 of this Act, the Commission may, in its discretion, upon an application, order the payment of compensation in accordance with the provisions of this Act, if such act or omission occurs—

(1) within the "special maritime and territorial jurisdiction of the United States" as defined in section 7 of title 18 of the United States Code; or

(2) within the District of Columbia.

(b) The Commission may order the payment of compensation—

(1) to or on behalf of the injured person; or

(2) in the case of the personal injury of the victim, where the compensation is for pecuniary loss suffered or expenses incurred by any person responsible for the maintenance of the victim, to that person; or

(3) in the case of the death of the victim, to or for the benefit of the dependents or closest relative of the deceased victim, or any one or more of such dependents.

(c) For the purposes of this Act, a person shall be deemed to have intended an act or omission notwithstanding that by reason of age, insanity, drunkenness, or otherwise he was legally incapable of forming a criminal intent.

(d) In determining whether to make an order under this section, or the amount of any award, the Commission may consider any circumstances it determines to be relevant, including the behavior of the victim which directly or indirectly contributed to his injury or death, unless such injury or death resulted from the victim's lawful attempt to prevent the commission of a crime or to apprehend an offender.

(e) No order may be made under this section unless the Commission, supported by

(1) such an act or omission did occur; and

(2) the injury or death resulted from such act or omission.

(f) An order may be made under this section whether or not any person is prosecuted or convicted of any offense arising out of such act or omission, or if such act or omission is the subject of any other legal action. Upon application from the Attorney General or the person or persons alleged to have caused the injury or death, the Commission shall suspend proceedings under this Act until such application is withdrawn or until a prosecution for an offense arising out of such act or omission is no longer pending or imminent. The Commission may suspend proceedings in the interest of justice if a civil action arising from such act or omission is pending or imminent.

(g) Upon certification by the Commission, the Secretary of the Treasury shall pay to the person named in such order the amount specified therein.

OFFENSES TO WHICH THIS ACT APPLIES

SEC. 302. The Commission may order the payment of compensation in accordance with the provisions of this Act for personal injury or death which resulted from offenses in the following categories:

(1) assault with intent to kill, rob, rape, or poison;
(2) assault with intent to commit mayhem;
(3) assault with a dangerous weapon;
(4) assault;
(5) mayhem;
(6) malicious disfiguring;
(7) threats to do bodily harm;
(8) lewd, indecent, or obscene acts;
(9) indecent act with children;
(10) arson;
(11) kidnaping;
(12) robbery;
(13) murder;
(14) manslaughter, voluntary;
(15) attempted murder;
(16) rape;
(17) attempted rape;
(18) or other crimes involving force to the person.

NATURE OF THE COMPENSATION

SEC. 303. The Commission may order the payment of compensation under this Act for—

(a) expenses actually and reasonably incurred as a result of the personal injury or death of the victim;

(b) loss of earning power as a result of total or partial incapacity of such victim;

(c) pecuniary loss to the dependents of the deceased victim;

(d) pain and suffering of the victim; and

(e) any other pecuniary loss resulting from the personal injury or death of the victim which the Commission determines to be reasonable.

LIMITATIONS UPON AWARDING COMPENSATION

SEC. 304. (a) No order for the payment of compensation shall be made under section 301 of this Act unless the application has been made within two years after the date of the personal injury or death.

(b) No compensation shall be awarded under this Act to or on behalf of any victim in an amount in excess of $25,000.

(c) No compensation shall be awarded if the victim was at the time of the personal injury or death of the victim living with the offender as his wife or her husband or in situations when the Commission at its discretion feels unjust enrichment to or on behalf of the offender would result.

TERMS OF THE ORDER

SEC. 305. (a) Except as otherwise provided in this section, any order for the payment of compensation under this Act may be made on such terms as the Commission deems appropriate.

(b) The Commission shall deduct from any payments awarded under section 301 of this Act any payments received by the victim or by any of his dependents from the offender or from any person on behalf of the offender, or from the United States (except those received under this Act), a State or any of its subdivisions, for personal injury or death compensable under this Act, but only to the extent that the sum of such payments and any award under this Act are in excess of the total compensable injuries suffered by the victim as determined by the Commission.

(c) The Commission may at any time, on its own motion or on the application of the Attorney General, or of the victim or his dependents, or of the offender, vary any order for the payment of compensation made under this Act in such manner as the Commission thinks fit, whether as to terms of the order or by increasing or decreasing the amount of the award or otherwise.

TITLE IV—RECOVERY OF COMPENSATION

RECOVERY FROM OFFENDER

SEC. 401. (a) Whenever any person is convicted of an offense and an order for the payment of compensation is or has been made under this Act for a personal injury or death resulting from the act or omission constituting such offense, the Commission may institute an action against such person for the recovery of the whole or any specified part of such compensation in the district court of the United States for any judicial district in which such person resides or is found. Such court shall have jurisdiction to hear, determine, and render judgment in any such action.

(b) Process of the district court for any judicial district in any action under this section may be served in any other judicial district by the United States marshal thereof. Whenever it appears to the court in which any action under this section is pending that other parties should be brought before the court in such action, the court may cause such other parties to be summoned from any judicial district of the United States.

(c) An order for the payment of compensation under this Act shall not affect the right of any person to recover damages from any other person by a civil action for the injury or death.

TITLE V—MISCELLANEOUS

REPORTS TO CONGRESS

SEC. 501. The Commission shall transmit to the President and to the Congress annually a report of its activities under this Act including the name of each applicant, a brief description of the facts in each case, and the amount, if any, of compensation awarded.

PENALTIES

SEC. 502. The provisions of section 1001 of title 18 of the United States Code shall apply to any application, statement, document, or

information presented to the Commission under this Act.

APPROPRIATIONS

SEC. 503. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

EFFECTIVE DATE

SEC. 504. This Act shall take effect on January 1, 1970.

S. 2936

A bill to provide for the compensation of persons injured by certain criminal acts in the District of Columbia

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

TITLE I—SHORT TITLE AND DEFINITIONS

SHORT TITLE

SEC. 101. This Act may be cited as the "District of Columbia Criminal Injuries Compensation Act".

DEFINITIONS

SEC. 102. As used in this Act—

(1) the term "child" means an unmarried person who is under eighteen years of age and includes a stepchild, an adopted child;

(2) the term "Commission" means the District of Columbia Violent Crimes Compensation Commission established by this Act;

(3) the term "dependents" means those who were wholly or partially dependent upon his income at the time of his death or would have been so dependent but for the incapacity due to the injury from which the death resulted and shall include the child of such victim born after his death;

(4) the term "personal injury" means actual bodily harm and includes pregnancy and mental or nervous shock;

(5) the term "relative" means the spouse, parent, grandparent, stepfather, stepmother, child, grandchild, brother, sister, half brother, or half sister of the victim; and

(6) the term "victim" means a person who is injured or killed by any act or omission of any other person which is within the description of any of the offenses specified in section 302 of this Act.

TITLE II—ESTABLISHMENT OF VIOLENT CRIMES COMPENSATION COMMISSION

VIOLENT CRIMES COMPENSATION COMMISSION

SEC. 201. (a) There is established a District of Columbia Violent Crimes Compensation Commission which shall be composed of three members to be appointed by the President, by and with the advice and consent of the Senate, solely on the grounds of fitness to perform the duties of the office. The President shall designate one of the members of the Commission who has been a member of the bar of a Federal court or of the highest court of a State for at least eight years as Chairman.

(b) No member of the Commission shall engage in any other business, vocation, or employment.

(c) The Chairman and one other member of the Commission shall constitute a quorum, except as provided in section 205(b); and where opinion is divided and only one other member is present, the opinion of the Chairman shall prevail.

(d) The Commission shall have an official seal.

TERMS AND COMPENSATION OF MEMBERS

SEC. 202. (a) The term of office of each member of the Commission taking office after December 31, 1969, shall be eight years, except that (1) the terms of office of the members first taking office after December 31, 1969, shall expire as designated by the President at the time of the appointment, one at the end of four years, one at the end of six years, and one at the end of eight years, after December 31, 1969; and (2) any member appointed to fill a vacancy occurring prior to the expiration of the terms for which his predecessor was appointed shall be appointed for the remainder of such term.

(b) Each member of the Commission shall be eligible for reappointment.

(c) A vacancy in the Commission shall not affect its powers.

(d) Any member of the Commission may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

(e) Each member of the Commission shall be compensated at the rate prescribed for level IV under subsection 5315 of title 5, United States Code, except the Chairman who shall be compensated at the rate prescribed for level III under section 5314 of such title.

ATTORNEYS, EXAMINERS, AND EMPLOYEES OF THE COMMISSION; EXPENSES

SEC. 203. (a) The Commission is authorized to appoint and fix the compensation of such officers, attorneys, examiners, experts, and other employees as may be necessary for carrying out its functions under this Act.

(b) All expenses of the Commission, including all necessary traveling and subsistence expenses of the Commission incurred by the members or employees of the Commission under its orders, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Commission or by any individual it designates for that purpose.

PRINCIPAL OFFICE

SEC. 204. The principal office of the Commission shall be in the District of Columbia, but the Commission or any duly authorized representative may exercise any or all of its powers in any place.

POWERS AND PROCEDURES OF THE COMMISSION

SEC. 205. (a) Upon request made to the Commission after the filing of an application under the provisions of this Act, the Commission or its duly authorized representative shall have a hearing on such application, shall fix a time and place for such hearing, and shall cause notice thereof to be given to the applicant.

(b) For the purpose of carrying out the provisions of this Act, the Commission, or any member thereof, or its duly authorized representative, may hold such hearings, sit and act at such times and places, and take such testimony as the Commission or such member may deem advisable. Any member of the Commission may administer oaths, or affirmations to witnesses appearing before the Commission or before such member. The Commission shall have such powers of subpena and compulsion of attendance and production of documents as are conferred upon the Securities and Exchange Commission by subsection (c) of section 18 of the Act of August 26, 1935, and the provisions of subsection (d) of such section shall be applicable to all persons summoned by subpena or otherwise to attend or testify or produce such documents as are described therein before the Commission, except that no subpena shall be issued except under the signature of the Chairman, and application to any court for aid in enforcing such subpena may be made only by said Chairman. Subpenas shall be served by any person designated by the said Chairman.

(c) In any case in which the person entitled to make an application is a child, the application may be made on his behalf by any person acting as his parent or guardian. In any case in which the person entitled to make an application is mentally defective, the application may be made on his behalf by his guardian or such other individual authorized to administer his estate.

(d) Where any application is made to the Commission under this Act, the applicant, and any attorney assisting the Commission, shall be entitled to appear and be heard.

(e) Any other person may appear and be heard who satisfies the Commission that he has a substantial interest in the proceedings.

(f) Where under this Act any person is entitled to appear and be heard by the Commission, that person may appear in person or by his attorney.

(g) Every person appearing under the preceding subsections of this section shall have the right to produce evidence and to cross-examine witnesses.

(h) The Commission or its duly authorized representative may receive in evidence any statement, document, information, or matter that may in the opinion of the Commission contribute to its functions under this Act, whether or not such statement, document, information, or matter would be admissible in a court of law, except that any evidence introduced by or on behalf of the person or persons charged with causing the injury or death of the victim, any request for a stay of the Commission's action, and the fact of any award granted by the Commission shall not be admissible against such person or persons in any prosecution for such injury or death.

(i) If any person has been convicted of any offense with respect to an act or omission on which a claim under this Act is based, proof of that conviction shall, unless an appeal against the conviction or a petition for a rehearing or certiorari in respect of the charge is pending or a new trial or rehearing has been ordered, be taken as conclusive evidence that the offense has been committed.

(j) Except as otherwise provided in this Act, the provisions of subchapter II of chapter 5 and chapter 7 of title 5, United States Code shall apply to the proceedings of the Commission.

ATTORNEYS' FEES

SEC. 206. (a) The Commission shall publish regulations providing that an attorney shall, at the conclusion of proceedings under this Act, file with the agency a statement of the amount of fee charged in connection with his services rendered in such proceedings.

(b) After the fee information is filed by an attorney under (a) above, the Commission may determine, in accordance with such published rules or regulation as it may provide, that such fee charged is excessive. If, after notice to the attorney of this determination, the Commission and the attorney fail to agree upon a fee, the Commission may, within ninety days after the receipt of the information required by (a) above, petition the United States district court in the district in which the attorney maintains an office, and the court shall determine a reasonable fee for the services rendered by the attorney.

(c) Any attorney who charges, demands, receives, or collects for services rendered in connection with any proceedings under this Act any amount in excess of that allowed under this section, if any compensation is paid, shall be fined not more than $2,000 or imprisoned not more than one year, or both.

FINALITY OF DECISION

SEC. 207. The orders and decisions of the Commission shall be reviewable on appeal, except that no trial de novo of the facts determined by the Commission shall be allowed.

REGULATIONS

SEC. 208. In the performance of its functions, the Commission is authorized to make, promulgate, issue, rescind, and amend rules and regulations prescribing the procedures to be followed in the filing of applications and the proceedings under this Act, and such other matters as the Commission deems appropriate.

TITLE III—AWARD AND PAYMENT OF COMPENSATION

AWARDING COMPENSATION

SEC. 301. (a) In any case in which a person is injured or killed by any act or omission of any other person which is within the description of the offenses listed in section 302 of this Act, the Commission may, in its discretion, upon an application, order the payment of compensation in accordance with the provisions of this Act, if such Act or omission occors within the District of Columbia.

(b) The Commission may order the payment of compensation—

(1) to or on behalf of the injured person; or

(2) in the case of the personal injury of the victim, where the compensation if for pecuniary loss suffered or expenses incurred by any person responsible for the maintenance of the victim to that person; or

(3) in the case of the death of the victim, to or for the benefit of the dependents or closest relative of the deceased victim, or any one or more of such dependents.

(c) For the purposes of this Act, a person shall be deemed to have intended an act or omission notwithstanding that by reason of age, insanity, drunkenness, or otherwise he was legally incapable of forming a criminal intent.

(d) In determining whether to make an order under this section, or the amount of any award, the Commission may consider any circumstances it determines to be relevant, including the behavior of the victim which directly or indirectly contributed to his injury or death, unless such injury or death resulted from the victim's lawful attempt to prevent the commission of a crime or to apprehend an offender.

(e) No order may be made under this section unless the Commission, supported by substantial evidence, finds that—

(1) such an act or omission did occur; and

(2) the injury or death resulted from such act or omission.

(f) An order may be made under this section whether or not any person is prosecuted or convicted of any offense arising out of such act or omission, or if such act or omission is the subject of any other legal action. Upon application from the Attorney General or the person or persons alleged to have caused the injury or death, the Commission shall suspend proceedings under this Act until such application is withdrawn or until a prosecution for an offense arising out of such act or omission is no longer pending or imminent. The Commission may suspend proceedings in the interest of justice if a civil action arising from such act or omission is pending or imminent.

(g) Upon certification by the Commission, the Commissioner of the District of Columbia shall pay to the person named in such order the amount specified therein.

OFFENSES TO WHICH THIS ACT APPLIES

SEC. 302. The Commission may order the payment of compensation in accordance with the provisions of this Act for personal injury or death which resulted from the following offenses:

(1) arson (D.C. Code, sec. 22–401);

(2) assault (D.C. Code, secs. 22–503, 504);

(3) assault with intent to kill, rob, or rape, and attempt to poison (D.C. Code, sec 22–501);

(4) assault with intent to commit mayhem or with dangerous weapon (D.C. Code, sec. 22–502);

(5) indecent act with children (D.C. Code, sec. 22–3501);

(6) kidnaping (D.C. Code, sec. 22–2101);

(7) lewd, indecent or obscene acts (D.C. Code, sec. 22–1112);

(8) manslaughter (D.C. Code, sec. 22–2405);

(9) murder (D.C. Code, secs. 22–2401, 2402, 2403);

(10) negligent homicide (D.C. Code, sec. 40–606);

(11) rape (D.C. Code, sec. 22–2801);

(12) robbery (D.C. Code, sec. 22–2901);

(13) unauthorized use of vehicles (D.C. Code, sec. 22–2204);

(14) or other crimes involving force to the person.

NATURE OF THE COMPENSATION

SEC. 303. The Commission may order the payment of compensation under this Act for—

(a) expenses actually and reasonably incurred as a result of the personal injury or death of the victim;

(b) loss of earning power as a result of total or partial incapacity of such victim;

(c) pecuniary loss to the dependents of the deceased victim;

(d) pain and suffering of the victim; and

(e) any other pecuniary loss resulting from the personal injury or death of the victim which the Commission determines to be reasonable.

LIMITATIONS UPON AWARDING COMPENSATION

SEC. 304. (a) No order for the payment of compensation shall be made under section 301 of this Act unless the application has been made within two years after the date of the personal injury or death.

(b) No compensation shall be awarded under this Act to or on behalf of any victim in an amount in excess of $25,000.

(c) No compensation shall be awarded if the victim was at the time of the personal injury or death of the victim living with the offender as his wife or her husband or in situations when the Commission at its discretion feels unjust enrichment to or on behalf of the offender would result.

TERMS OF THE ORDER

SEC. 305. (a) Except as otherwise provided in this section, any order for the payment of compensation under this Act may be made on such terms as the Commission deems appropriate.

(b) The Commission shall deduct from any payments awarded under section 301 of this Act any payments received by the victim or by any of his dependents from the offender or from any person on behalf of the offender, or from the United States (except those received under this Act), a State or any of its subdivisions, for personal injury or death compensable under this Act, but only to the extent that the sum of such payments and any award under this Act are in excess of the total compensable injuries suffered by the victim as determined by the Commission.

(c) The Commission may at any time, on its own motion or on the application of the Attorney General, or of the victim or his dependents, or of the offender, vary any order for the payment of compensation made under this Act in such manner as the Commission thinks fit, whether as to terms of the order or by increasing or decreasing the amount of the award or otherwise.

TITLE IV—RECOVERY OF COMPENSATION

RECOVERY FROM OFFENDER

SEC. 401. (a) Whenever any person is convicted of an offense and an order for the payment of compensation is or has been made under this Act for a personal injury or death resulting from the act or omission constituting such offense, the Commission may institute an action against such person for the recovery of the whole or any specified part of such compensation in the district court of the United States for any judicial district in which such person resides or is found. Such court shall have jurisdiction to hear, determine, and render judgment in any such action.

(b) Process of the district court for any judicial district in any action under this section may be served in any other judicial district of the United States by the United States marshal thereof. Whenever it appears to the court in which any action under this section is pending that other parties should be brought before the court in such action, the court may cause such other parties to be summoned from any judicial district of the United States.

(c) An order for the payment of compensation under this Act shall not affect the right of any person to recover damages from any other person by a civil action for the injury or death.

TITLE V—MISCELLANEOUS

REPORTS TO THE CONGRESS

SEC. 501. The Commission shall transmit to the President and to the Congress annually a report of its activities under this Act including the name of each applicant, a brief description of the facts in each case, and the amount, if any, of compensation awarded.

PENALTIES

SEC. 502. The provisions of section 1001 of title 18 of the United States Code shall apply to any application, statement, document, or information presented to the Commission under this Act.

APPROPRIATIONS

SEC. 503. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

EFFECTIVE DATE

SEC. 504. This Act shall take effect on January 1, 1970.

[From the Wall Street Journal, Aug. 26, 1970]

AIDING THE INNOCENT: MORE STATES AWARD CASH COMPENSATION TO VICTIMS OF CRIME—MEDICAL COSTS, INCOME LOSS ARE DEFRAYED—TASK FORCE TO URGE A NATIONAL EFFORT—A MUGGED TAILOR FINDS HELP

(By W. Stewart Pinkerton, Jr.)

NEW YORK.—As the 67-year-old tailor was preparing to close his little shop on the West Side, a man entered, savagely beat and stabbed him, and took his money. It was not an uncommon crime in the city—and for the tailor, as for many crime victims, it was financial disaster.

Disabled for eight months, he ran up medical bills that far outstripped his insurance. While he was recovering, his shop burned down. Shorn of assets and deeply in debt, the tailor turned to the Crime Victims Compensation Board, a New York State body set up three years ago to aid the targets of violent crime.

The board considered his plight and awarded him $3,133. Of that total, $2,266 was for payment of unreimbursed medical expenses and the remaining $867 for loss of earnings (the latter could have been much higher, but the tailor, who was old enough to collect Social Security, chose to do so and the board took that income into account).

As recently as four years ago, neither the tailor nor any other crime victim in the U.S. could have expected any such public aid; society was more intent on catching criminals than helping the unfortunates they prey on. Since then, however, New York, California, Hawaii, Maryland and Massachusetts have all begun to offer compensation to hard-pressed crime victims, and have paid out about $1.8 million to roughly 1,000 claimants so far.

A SPREADING MOVEMENT

Considering the incidence of violent crime, the amount seems small. Those involved in the programs say that's because they've received little public notice so far, not because benefits are insignificant or limited to a tiny percentage of victims. "The public just

doesn't know much about these programs," says Stanley Van Rensselaer, chairman of the New York State compensation board.

That may change as the idea spreads. Other states, including Pennsylvania, Illinois and New Jersey, are considering legislation that would lead to the compensation of crime victims. And a task force of the National Commission on the Causes and Prevention of Violence will recommend in a report to be published next week, that a Federal program be established.

Legal authorities and law enforcement officials say the trend reflects concern over rising violence, and the dawning conviction that society is obligated to help its victims. "We're dealing with what used to be the forgotten man," says Mr. Van Rensselaer of the New York board. J. Edgar Hoover, director of the FBI, expressed similar sentiments in a report last year when he said: "Certainly under the rule of law those who abide by the law should have protection equal to that of those who break the law."

LITTLE RECOURSE

The idea of compensation for crime victims isn't new. Ancient Babylonian codes specified that the government should replace the lost goods of a robbery victim if the thief escaped with them. Over the centuries, however, the concept faded in favor of a system that viewed crime as an offense against society and not the individual. So victims were left with little recourse except to file civil suits against criminals, a thoroughly unsatisfactory course most of the time; few criminals have any resources worth talking about, and many are never apprehended in the first place.

New Zealand is credited with reviving the idea and establishing the first modern compensation plan in 1963. New York's program, considered one of the most effective in this country, got considerable impetus from the 1965 murder of Arthur Collins, who was stabbed to death while trying to stop another man from molesting two women on a subway. The incident got much publicity, and the New York City Council voted to pay Mr. Collins' widow $4,200 a year for life. Shortly afterward, Gov. Nelson Rockefeller appointed a committee that framed the state's present compensation program.

New York and the other states don't pay anything for casualty losses—a pickpocket's theft of a wallet stuffed with cash, say, or the burglary of a TV set from an apartment. Their programs all are designed to compensate victims for loss of income and unreimbursed medical expenses resulting from criminal violence. Beyond this, the administration of the programs and their benefits vary widely.

DIFFERING PROCEDURES

New York uses a three-man board of attorneys who rule on claims investigated by staff members, and will pay up to $15,000 for loss of income. In Massachusetts, victims file claims in the state court, which refers them to the attorney general's office for investigation; a judge makes the final award, which can be up to $10,000 for loss of income.

Maryland, which has a board similar to New York's, has the highest allowable payout—$45,000 for permanent total disability. Awards are made according to a carefully defined schedule of benefits spelled out in the state's workmen's compensation law; total disability of one leg resulting from criminal assault, for example, works out to $9,400.

To qualify for help under state programs, a victim generally is required to report the crime promptly to the police. Also he can't have contributed to his own injury; the New York board recently turned down a claim by one man who sought out a prostitute in a bar and was later mugged in a hotel room by her accomplice.

In New York, Massachusetts and Maryland, a claimant has to prove he has incurred at least $100 in unreimbursed medical expenses or has lost at least two weeks work due to his injuries. New York, Maryland and California require that the applicant be facing serious financial hardship—a requirement that some legal experts contend smacks of welfarism and is alien to the whole idea of compensation.

"If you're hit by an auto, your compensation isn't based on financial need," says Abraham Goldstein, dean of the Yale University law school, who argues that it shouldn't be any different when you're assaulted by a thug. Herbert Sigurdson, an associate professor in the University of Southern California's school of public administration, agrees. "Compensation should be a right," he says. "Hardship should have nothing to do with it."

But the states that do have such requirements often interpret financial hardship pretty liberally. A 64-year-old New York construction worker, for example, recently was paid on a $115 claim he made for unreimbursed medical expenses arising from a mugging—even though he had $700 in savings and earned $8,000 a year. Says Mr. Van Rensselaer, the compensation board chairman: "He works for a company with a mandatory retirement age of 65, and he's 64. He has a wife to support and has all he can do to stay above water. In this case, $115 was a hardship."

Hawaii has what is considered a particularly liberal program. There is no hardship requirement, and victims can even collect for "mental anguish" suffered as a result of criminal attack. Last year one woman who was robbed and raped in her home was awarded $108 for medical fees and $2,200 for pain, suffering and mental shock.

Not all of the programs have operated smoothly. California's had to be removed from the jurisdiction of the state's social welfare department in 1967 because administrators had been applying the rigid standards used for welfare eligibility to people who applied for compensation as crime victims; few were actually being helped. Responsibility is now shared by the Board of Control, an agency that handles claims against the state, and the California attorney general's office, which investigates them.

However, this year is the first for which the California legislature has appropriated funds to provide additional staffing for the program, at the beginning of the year there were 236 cases backed up, waiting for processing. Though the California program started in 1967, as did New York's, only 159 awards totaling about $180,000 were made by the Golden State through 1969; New York paid out $1.4 million to 630 claimants.

[From the Southern California Law Review]

THE BATTLE FOR A FEDERAL VIOLENT CRIMES COMPENSATION ACT: THE GENESIS OF S. 9

(By RALPH W. YARBOROUGH)

(NOTE.—The response of American jurisdictions to the need for violence victim compensation has been sporadic. United States Senator Ralph Yarborough has been in the vanguard of those advocating a comprehensive federal policy. In this article the Senator renews his call for a national victim compensation program and explains his latest proposed legislation.)

INTRODUCTION

Within the American federal system prevention of crime has traditionally been the province of the state governments. The increasing sophistication and expanded scope of criminal activity, which frequently crosses state jurisdictional boundaries, have prompted an increasing federal commitment to the prevention of crime [1] and the eradication of its causes.[2] The failure of both the state and federal governments to stem this increase in violent crimes,[3] and a sense of indignation at a system of criminal law which seems to be more concerned with the rights of the criminal than the loss of his victim, have led to a growing conviction that the government is morally—if not legally—obliged to provide compensation to victims of violence.

While several foreign jurisdictions [4] and a small minority of American state legislatures [5] have enacted statutes to effectuate this purpose, the persistent efforts of myself and other national legislators have not resulted in a similar commitment at the federal level in this country. This article will be devoted to a brief examination of the rationale for existing violence victim compensation programs and an analysis of legislation which I have introduced, and which is now pending before Congress, to illustrate how that program would meet the pressing need for a federal violence victim compensation law.

EXISTING PROGRAMS

State compensation to victims of crime is not a new concept. While the authors of precursors to modern plans were probably motivated more by a desire to encourage commerce than by sympathy for the victim, the concept of governmental responsibility to those injured by anti-social acts proscribed by the state can be seen in embryonic form in ancient laws. Hammurabi's Code, for example, provided that:

"Section 22. If a man has committed robbery and is caught, that man shall be put to death.

"Section 23. If a robber is not caught, the man who has been robbed shall formally declare whatever he had lost before a god, and the city and the mayor in whose territory or district the robbery has been committed shall replace whatever he has lost for him.

"Section 24. If (it is) the life (of the owner that is lost), the city or the mayor shall pay one maneh of silver to his kinsfolk." [6]

The concept of state liability for criminal depredations was forcefully reasserted in *Arms of the Law*,[7] published in 1951. The author, Margery Fry, underwent a thought transition which parallels the evolution of modern theories of victim compensation. Miss Fry, an English social reformer and magistrate, initially advocated compensation by the criminal because of the obvious deterrent effect of such liability.[8] Ultimately, however, she shifted her focus from deterrence of the criminal to compensation of his victim. She argued that government compensation to victims of violence was a logical extention of an enlightened social policy which already provided transfer payments for the majority of social dislocations occasioned by modern life in industrial society.[9]

"In our modern systems of collective responsibility for sickness and injury, we have evolved a machinery for assuring compensation which could well be extended to injuries criminally caused, affording equal benefits to the man who falls from a ladder at work and the man whose enemy pushed the ladder from under him at home. . . . The logical way of providing for criminally inflicted injuries would be to tax every adult citizen . . . to cover a risk to which each is exposed. . . . The State which forbids our going armed in self-defence cannot disown all responsibility for its occasional failure to protect." [10]

The first official response to Miss Fry's proposals came two years later in a White Paper entitled *Penal Practice in a Changing Society*.[11] Its author suggested that any fundamental reexamination of penal methods must include not only the obligations of society and the offender to one another, but

---

Footnotes at end of article.

also the responsibility of both to the victims of crime. The White Paper specifically agreed with Miss Fry's views that society is primarily obligated to the victims of crime, not only because of its failure to protect him from anti-social behavior, but also because only society has the resources to insure effective compensation.[12] The Working Party, subsequently constituted to study the feasibility of a compensation scheme, rejected the proposition that the state is legally obliged to provide such support.[13] In a report entitled *Compensation for Victims of Crimes of Violence*,[14] the Party concluded:

"The proposition that the State has a duty to protect its members from unlawful violence and that if it fails to do so it should pay compensation seems to us to be both fallacious and dangerous. Fallacious, because we do not believe that the State has an absolute duty to protect every citizen all the time against other citizens: there is a distinction between compensation for the consequences of civil riot, which the force of law and order may be expected to prevent, and compensation for injury by individual acts of personal violence, which can never be entirely prevented. It is true that . . . the public generally are prohibited from carrying weapons to protect themselves, but it does not follow that the State has assumed the duty of protecting them everywhere and in all circumstances; the most it has done is to create an assumption that it will provide a general condition of civil peace.[15]

The Party went on, however, to acknowledge a moral obligation to those without remedy at law for losses occasioned by anti-social conduct.

"The public does, however, feel a sense of responsibility for and sympathy with the innocent victim, and it is right that this feeling should find practical expression in the provision of compensation on behalf of the community.[16]

On the basis of this recommendation the English Compensation for Victims of Crimes of Violence Scheme became operational.[17]

While agitation for a compensation plan began in England before it began in New Zealand, the latter was the first to enact such a program into law.[18] Ironically, there was no great public outcry for a compensation plan in New Zealand; it was advocated primarily to quell opposition to penal reform which, for its supposed generosity toward lawbreakers, had outraged the populace.[19] During the debate on the Criminal Injuries Compensation Act in the New Zealand Parliament, the program was justified in terms of the community's duty to those who suffer from criminal violence.[20] Just as industry has the duty to compensate its injured workers, it was argued, so should the community accept a special responsibility towards its constituents injured by criminal acts,[21] Given the advanced state of social legislation in New Zealand, such a program was readily acceptable as a natural extension of the welfare concept into a new realm.[22]

When the Australian state of New South Wales enacted similar legislation several years later,[23] the government's attitude toward such a measure was explicit—any compensation awarded pursuant to the legislation was given out of grace rather than as a matter of legal right.[24] Speaking about the bill in the Legislative Assembly, the Attorney General stated:

"By this measure the State is not assuming legal liability but it is recognizing—most offenders being men of straw as honorable members know—the need to make some provision for the victims of offenders as a matter of grace in proper circumstances.[25]

In 1967 the Canadian provinces of Saskatchewan [26] and Newfoundland [27] both adopted compensation programs very similar to the New Zealand Act. The strong influence of the other commonwealth jurisdictions was reflected in the Saskatchewan Attorney General's proposal to the General Assembly:

"[I]n 1964, the New Zealand Government introduced what this Government feels to be a very progressive measure. The same measure is presently in operation in that this measure is being very well received by the public in both countries. I refer to the plan of both the United Kingdom and New Zealand whereby compensation is payable to innocent persons who have suffered physical injuries as a result of certain criminal acts or omissions, and whereby compensation is payable to dependents of innocent persons who have been killed as a result of certain criminal acts or omissions. There has been a recognition in recent years for a program of this kind because of an increase in the crimes of violence in the society in which we live. The law as it presently exists is inadequate in many cases, as well as legal remedy is worthless because of the lack of assets of the offender is unknown. The loss of the breadwinner either permanently or temporarily is recognized to cause extreme hardships in many cases. It is primarily to remove this hardship in deserving cases that we propose at this session to introduce a Bill in this House to provide for the payment of compensation in the event of certain injuries or deaths caused by criminal acts or omissions." [28]

Only five jurisdictions [29] within the United States have adopted compensation programs for victims of violence. California's statute, enacted shortly after England's and New Zealand's programs became operative, was the first of its kind in this country.[30] There are several aspects of the California measure which are unique. No compensation board was created to administer the program. Virtually all other programs have created a small (typically 3–5 member) board to adjudicate an applicant's right to compensation and amount of award. In California, these functions were given to the State Board of Control,[31] specific criteria for administering the program were left to the Board.[32] The statute makes financial need a prerequisite to compensation.[33] All of these factors cast the program in the light of "welfare"—something which other jurisdictions have avoided.

The New York program [34] does not limit compensation to those "in need," but rather recognizes that those who are victims of criminal acts are by definition, in need and should be compensated.

"The legislature recognizes that many innocent persons suffered personal physical injury or death as a result of criminal acts. Such persons or their dependents may thereby suffer disability, incur financial hardships, or become dependent upon public assistance. The legislature finds and determines that there is a need for government financial assistance for such victims of crime. Accordingly, it is the legislature's intent that aid, care and support be provided by the State, as a matter of grace, for such victims of crime." [35]

It should be noted, however, that pains were taken to make it clear that the obligation of the State to compensate is moral rather than legal.

The Preamble to the Maryland compensation statute [36] similarly restricts the grounds upon which the duty of compensation is assumed by the state:

"The legislature recognizes that many persons suffer personal physical injury or death as a result of criminal acts or in their efforts to prevent crime or apprehend persons committing or attempting to commit crimes. Such persons or their dependents may thereby suffer disability, incur financial hardships or become dependent upon public assistance. The legislature finds and determines that there is a need for governmental financial assistance for such victims of crime. Accordingly, it is the legislature's intent that aid, care and support be provided by the State, as a matter of moral responsibility, for such victims of crime." [37]

In Massachusetts,[38] the special Legislatve Committee found that the commonwealth "owes" compensation to those of its citizens it fails to protect from crime.[39] General popular support for the compensation plan was grounded in the belief, (similar to that held in New Zealand),[40] that victims should be as much a subject of concern as are criminals.[41]

PROPOSALS FOR A FEDERAL COMPENSATION PROGRAM

Two conclusions can be drawn from the above discussion of compensation programs. First, as long as the effects of crime continue to dislocate members of society, and as long as society continues to assume the task of preventing anti-social behavior, society will continue to owe some obligation (be it moral or legal) to the victims of crime. Second, the need for such programs in the United States—a need which can be measured by the high and ever-increasing crime rates—is not being met by the few state-administered compensation plans. Though existing schemes are to be lauded both for their intent and effect, too few of our states have passed such legislation. Many of our citizens are deprived of the obvious benefits a compensation plan can provide solely because they reside in the "wrong" state. The federal government, in my opinion, has the obligation to step in and fill the void in protecting the welfare of these citizens.

On June 17, 1965, I introduced the first victim compensation legislation in Congress.[42] I have reintroduced comparable legislation in each Congress since that time.[43] The present version of that bill, S. 9, is now pending before the Senate Committee on the Judiciary. In addition to a federal compensation program, I recently introduced similar legislation applicable to the District of Columbia.[44] The remarks I made on the floor of the Senate at that time summarize my reasons for introducing the above legislation: [45]

"[We] must see crime in terms of a three-part equation: The conditions of life that produce a criminal act, the criminal act itself, and the victim's loss. At the moment, our major resources center upon the act of the criminal. Surely we owe as much assistance and concern to the victim of a violent crime as we do to his attacker.

"Society's responsibility to the victims of crimes of violence is directly related to society's dereliction in fulfilling its responsibilities for preserving law and order within the society. Unlike an earlier time in our history when citizens bore arms and largely were responsible for their own protection, various laws, institutions and mores within today's societal structure exist as a pledge that society will provide protection. When society fails in its assumed duty to protect its citizens, society ought to have the responsibility of compensating the innocent victim for his personal pain and injury." [46]

The major features of my bill to establish a federal compensation program, the Criminal Injuries Compensation Act, are based on the best aspects of the English and New Zealand programs.

A. Jurisdictional scope of S. 9

The Criminal Injuries Compensation Act [47] would seek to prevent economic dislocation of the victims of crime by making financial provision for injuries suffered by them. Injury to, or loss of, property is not compensable under the Act. Further, the Act is applicable only to injuries incurred within the special maritime and territorial jurisdiction of the United States,[48] including the District of Columbia.[49]

B. Administration of the act

The bill would create a Federal Violent Crimes Compensation Commission, a three-

Footnotes at end of article.

man tribunal appointed by the President for 8-year staggered terms.[50] The Chairman, who must be a member of the bar of a federal court, or of the highest court of a state for at least eight years prior to appointment,[51] would be designated by the President. Commission members would not be permitted to engage in any other business, vocation or employment.[52] The Commission may appoint necessary officers, attorneys, and employees, and fix their compensation.[53] Members, who are eligible for reappointment, may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. The principal office of the Committee would be in or near the District of Columbia, but Commission powers could be exercised by an authorized representative in any place.[54]

It is the Commission's function and duty to examine the evidence presented to it to determine both the innocence of the victim [55] and the amount of the award. The authority of the Commission to award compensation is not dependent on the prosecution or conviction of the accused for the offensive giving rise to the injury.[56] The Commission may, however, upon application of the Attorney General or the person or persons alleged to have caused the injury or death, suspend proceedings until such application is withdrawn, or until a prosecution for an offense arising out of such act or omission is no longer pending or imminent. The Commission may also suspend proceedings in the interest of justice if a civil action arising from such act or omission is pending or imminent.[57]

The Commission has wide discretion both in granting awards and attorneys' fees,[58] and in determining whether in fact an injury occurred, whether it was caused by a criminal act, whether there exists a relationship between victim and criminal which would prevent compensation, and whether the victim should bear some share of the responsibility for the injury. While appeal to the courts would be allowed,[59] no trial de novo may be had on the merits.[60]

C. Criteria for compensation

The Act provides for compensation in cases where any person is injured or killed by an act or omission within the description of offenses contained in the Bill.[61] "Injury" includes actual bodily harm, pregnancy, and mental or nervous shock.[62] While "victim" is defined as one immediately injured by the criminal act.[63] provision is made in the Act for payment to dependents and close relatives when the immediate victim dies as a result of the injury.[64] In a sense, therefore, compensation is made to consequential or indirect victims.

One somewhat unique feature of S. 9 is that criminal intent is expressly excluded from consideration. "A person shall be deemed to have intended an act or omission not withstanding that by reason of age, insanity, drunkenness, or otherwise he was legally incapable of forming a criminal intent." [65] The only findings essential to the award are that the act or omission complained of did occur, and that injury or death resulted therefrom.

D. Compensation and limitations on its payment

The payment of compensation under the Act may be ordered for:

(a) expenses actually and reasonably incurred as a result of the injury or death of the victim;

(b) loss of earning power as a result of total or partial incapacity of such victim;

(c) pecuniary loss to the dependents of the deceased victim;

(d) pain and suffering of the victim; and

(e) any other pecuniary loss resulting from the personal injury or death of the victim which (is determined) to be reasonable.[66]

Compensation can be made to three categories of persons:

(1) to or on behalf of the injured persons; or

(2) in the case of the personal injury of the victim, where the compensation is for pecuniary loss suffered or expenses incurred by any person responsible for the maintenance of the victim, to that person; or

(3) in the case of death of the victim, to or for the benefit of the dependents or closest relation of the deceased victim, or any one or more of such dependents.[67]

All monetary awards are made in lump sum payments.[68] While this method has been criticized on the ground that a lump sum payment accurately anticipate future expenses, it does serve the beneficial purpose of encouraging those who are away from work to return as quickly as possible.[69] Compensation is limited to twenty-five thousand dollars.[70]

Discretion can be exercised in denying compensation in cases where it is felt that "unjust enrichment to or on behalf of the offender would result." [71] An absolute bar to the right of compensation under the Act is an interspousal relationship between victim and criminal:

"No Compensation shall be awarded if the victim was at the time of the personal injury or death of the victim living with the offender as his wife or her husband." [72]

A large portion of violent crime in America occurs in the home between relatives, and especially between husbands and wives. Not only is there a great possibility of collusion in these cases, but such behavior is hard to detect via investigation. Such investigation, further, would be expensive and time consuming; to require such a degree of care on the part of the decision-maker would divert funds from the primary functions of the Act. For that reason, and for convenience of deciding such matters, we advocate that there be no investigation in those cases where the probability of collusion and unjust enrichment is highest. While this formulation suffers from the defect of all per se rules in that it may lead to injustice in some instances, the per se rule would insure that in most cases the limited funds available will not be dissipated by collusive claims.

Also relevant to the question of compensation is the responsibility of the victim.[73] While there is no absolute bar to compensation for "contributory" behavior, the decision maker may consider the fault of the victim in determining the proper award. Of course the victim would never be considered at fault where injury or death resulted from the victim's lawful attempt to prevent the commission of a crime or to apprehend an offender.[74]

The victim should not receive double benefits or be better off financially by reason of the crime than he would otherwise have been. In assessing the amount of compensation to be paid, "any payment received by the victim, or by any of his dependents, from the offender, or from any person on behalf of the offender, or from the United States (except those received under this bill), a State or any of its subdivisions for personal injury or death compensable under this Act, shall be deducted from the award, but only to the extent that the sum of such payments and any awards under this Act are in excess of the total compensable injuries suffered by the victim. . . .[75]" While the bill also provides for the recovery by the government from the offender, it is probable that the proportion of costs actually recouped in this way will be small.[76]

CONCLUSION

Our society expends billions of dollars every year in the detection and prevention of crime. The tacit focus of many social welfare programs is the elimination of conditions which breed crime. Once the criminal is apprehended he is subjected to a very sophisticated (and expensive) process designed not only to isolate him from society for the duration of his sentence, but to rehabilitate him for the day of his release. Yet nowhere in this pervasive and complex social institution is provision made for compensation to the victim of violent crimes. Inasmuch as the victim's assailant is usually a "man of straw" any legal right which the victim may have to recover from him is largely illusory. The moral obligation of the national government to this forgotten man is at least as compelling as the obligation which has been recognized to victims of other societal ills. Unemployment insurance, for example, is a concomitant of the modern industrial state's responsibility for control of the economy. Detection and prevention of crime are among the most elementary duties of the State. Where the state has failed in its obligation to protect its citizens from anti-social conduct it should rightfully assume responsibility for compensating the victim.

FOOTNOTES

* United States Senator from Texas.

[1] *E.g.*, Omnibus Crime Control and Safe Streets Act of 1968, 18 U.S.C. § 921 (Supp. 1968):

"DECLARATIONS AND PURPOSE

"Congress finds that the high incidence of crime in the United States threatens the peace, security, and general welfare of the Nation and its citizens. To prevent crime and to insure the greater safety of the people, law enforcement efforts must be better coordinated, intensified, and made more effective at all levels of government.

"Congress finds further that crime is essentially a local problem that must be dealt with by State and local governments if it is to be controlled effectively.

"It is therefore the declared policy of the Congress to assist State and local governments in strengthening and improving law enforcement at every level by national assistance. It is the purpose of this title to (1) encourage States and units of general local government to prepare and adopt comprehensive plans based upon their evaluation of State and local problems of law enforcement; (2) authorize grants to States and units of local government in order to improve and strengthen law enforcement; and (3) encourage research and development; directed toward the improvement of law enforcement and the development of new methods for the prevention and reduction of crime and the detection and apprehension of criminals."

Another indication of such concern is manifested in creation by President Johnson of the National Commission on the Causes and Prevention of Violence. Exec. Order No. 11412, 3 C.F.R. 114 (Supp. 1968).

[45] While none of the pending Congressional bills contains a statement of legislative intent or policy, the authors have, from time to time, generally advanced the arguments of Margery Fry (*see* text accompanying notes 9–11 *supra*), and those of the Honorable Arthur J. Goldberg, former Associate Justice of the United States Supreme Court, and later Ambassador to the United Nations, who is an outspoken proponent of such a program in this country. *See, e.g.,* Goldberg, *Equality and Government Action,* 39 N.Y.U.L. REV. 205, 224 (1964): "The victim of a robbery or an assault has been denied the 'protection' of the laws in a very real sense, and society should assume some responsibility for making him whole." *See also* Goldberg, *Preface to Symposium on Compensation for Victims of Violence,* 43 S. CAL. L. REV. 1 (1970).

[46] CONGRESSIONAL RECORD, vol. 115, pt. 19, p. 26270 (remarks of Senator Ralph W. Yarborough introducing a Bill to Create a District of Columbia Violent Crime Compensation Commission).

[47] S. 9, 91st Cong., 1st Sess. (1969) [hereinafter all undesignated citations to Sections are to Sections in this Bill].

[48] Section 301(1). That term is fully defined in 18 U.S.C. § 7 (1964).

[49] Section 301(2).

[50] The President appoints with the advice and consent of the Senate. Section 201(a).

[51] *Id.*

[52] Section 201(b).

[53] Section 203(a). Such compensation shall be determined in accordance with the Classification Act of 1949, 5 U.S.C. §§ 5101–15 (1964). *Id.*

[54] Section 204(a). The Chairman and one other member constitutes a quorum, and should opinions differ at such a meeting, the Chairman's opinion will prevail.

[55] Sections 301(d), 305(a).

[56] One of the criticisms of the New South Wales scheme, for example, is that the interests of the victim and the criminal are basically conflicting. *See* Chappell, *supra* note 24, at 74 & nn. 17–18. While the determination of any trial would have an effect on a subsequent compensation proceeding (*see e.g.,* § 204(i) which provides that a criminal conviction with respect to a claim under the Act shall be taken as conclusive evidence that the offense has been committed) there is no requirement that the criminal be tried or convicted before compensation can be awarded.

[57] Section 301(f). The reasons for this provision are twofold. First, by § 305(b) the Commission may deduct from any compensation award an amount equal to compensation for the same injuries from other sources. The Commission may also institute a civil action against an offender for recovery of funds used to compensate his victim. It is reasonable, therefore, to await the results of any pending civil action between victim and offender from an efficiency point of view. It is also equitable, for reasons of justice among the parties, not to place the stamp of approval on the plaintiff's case in that proceeding by providing a collateral determination of liability for the consideration of court and jury. While it is the function of the Commission to compensate for injuries caused by violent behavior, they are not a judicial agency, and such matters as burdens of proof and admissibility of evidence are at variance with many common law rules. It would be unfair to the parties to allow a governmental body's seal of approval to be placed on the side of one of the parties' cases.

[58] The granting of Attorneys' fees is dealt with in § 206.

[59] Section 207. An earlier version of this Act. § 2155. 89th Cong., 1st Sess. (1965), was criticized by Professor Robert Childres for failing to provide any appeal, as is normally the case in administrative decisions in this country. Childres. *Compensation for Criminally Inflicted Personal Injuries.* 50 MINN. L. REV. 271, 277 (1965). The criticism was well taken, and in this latest version of the Bill, Commission determinations are appealable to the federal district courts. The efficiency value in administrative agencies, however, is maximized by denying courts the right to a de novo review.

[60] Section 207.

[61] Section 302. Those offenses, §§ 302(1)-(18) are assault with intent to kill, rob, rape, or poison; assault with intent to commit mayhem; assault with a dangerous weapon; assault; mayhem; malicious disfiguring, threats to do bodily harm; lewd, indecent, or obscene acts, indecent acts with children; arson; kidnapping, robbery; murder; manslaughter, voluntary; attempted murder; rape, attempted rape; or other crimes involving force to the person.

[62] Section 102(4).

[63] Section 102(6).

[64] Section 301(b) (1)-(3).

[65] Section 301(c). This feature of the Bill (and others which will be discussed *infra*) indicates that its sole concern is with the victim, and the problem caused him by virtue of the criminal act. For reasons not relevant here, certain acts are rendered noncriminal by the law; this does not mean that society has not the obligations to prevent such behavior, but rather that we have decided not to punish the offender. Instead, he is rehabilitated in a fashion suited to his individual characteristics. It is clear, however, that the harm has been done to the victim, and cannot be undone by that rehabilitation. Therefore, compensation is needed.

[66] Section 303(a)-(e).

[67] Section 201(b)(1)–(3).

[68] Section 301(g).

[69] *See* note 17 *supra.*

[70] Section 304(b).

[71] Section 304(c).

[72] *Id.* A two year statute of limitations which begins to run when the injury occurs, also operates as an absolute bar. Section 304(a).

[73] Section 301(d): "In determining whether to make an order under this section, or the amount of any award, the (decision maker) may consider any circumstances it determines to be relevant, including the behavior of the victim which directly or indirectly contributed to his injury or death. . . ."

[74] *Id.*: "[The Commission may reduce the award for contributory acts of the victim] unless such injury or death resulted from the victim's lawful attempt to prevent the commission of a crime or to apprehend an offender."

[75] Section 305(b).

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that morning business be closed and that amendment No. 861 be laid before the Senate and made the pending business.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair

lays before the Senate the unfinished business, which will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selective Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

The ACTING PRESIDENT pro tempore. Under the previous order, amendment No. 861, offered by the distinguished Senator from Wisconsin (Mr. PROXMIRE), is now the pending business. The clerk will state the amendment.

The legislative clerk read as follows:

At the end of the bill add a new section as follows:

SEC. 508. (a) Notwithstanding any other provision of law, the aggregate amount that may be expended for Department of Defense—Military Functions for the fiscal year ending June 30, 1971, shall not exceed $66,000,000,000.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time consumed for the quorum call be charged equally against both sides.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. EAGLETON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, I yield to the distinguished Senator from Missouri such time as he may require.

The ACTING PRESIDENT pro tempore. The Senator from Missouri is recognized.

THE MBT–70 TANK

Mr. EAGLETON. Mr. President, Deputy Secretary of Defense David Packard said recently:

Frankly, in defense procurement we have a real mess.

I concur wholeheartedly.

Speaking at the Armed Forces Management Association dinner last week, Secretary Packard continued:

The lesson that comes through loud and clear here is we should buy *only* what we need—not systems you or anyone else thinks they can develop to do something that doesn't need to be done. The Defense Department has been led down the garden path for years on sophisticated systems that you promised would do all kinds of things for some optimistic cost. Too frequently we have been wrong in listening to you, and more frequently you have been unable to deliver on either of these promises—what it would do or what it would cost. And we in the past have sometimes been guilty of over-optimism on our cost estimates and over-demanding in our requirements. We share the blame together, but the mistakes of the past cannot be repeated if we are to provide for the Nation's defenses in today's climate of a critical public and a critical Congress.

Last year, I questioned a weapons system which could well be the prototype for Secretary Packard's criticism—the MBT–70.

When the technology necessary to make a quantum jump in tanks became available, the Department of Defense was all too willing to be led down the "garden path." Low cost and high performance were promises that contractors and the Pentagon made but never kept.

Justified by the larger number of admittedly inferior Russian tanks in Europe, the MBT–70 was originally to cost less than $300,000 per unit. But its price rose steadily. Any many of the original technical innovations were dropped.

Initial research and development costs have jumped 525 percent, and the cost for the total project has risen to over $8 billion.

In 1969, while the Department of the Army based its decision to continue development on the unrealistically low figure of $520,000 per unit, the real cost had risen to almost $850,000.

Last year, during the debate on the military procurement bill, I asked for a GAO study of the MBT–70.

The GAO, using a per unit figure lower than the present one, raised serious questions about the tank. The GAO concluded:

The need for and role of the complex, large, expensive tank in future warfare would appear to warrant assessment.

The full GAO report was very useful and, in my opinion, highly critical. It cast doubts over the future role of tanks in general, and especially one as expensive and complex as the MBT–70. Although marked "secret," there is an interesting discussion of the role of the tank beginning on page 24 of that report. I commend it to my colleagues' careful attention.

The GAO study also discussed an interesting intelligence estimate which, in my opinion, casts doubts on the future magnitude of the threat—and the need for an MBT–70 to meet it.

Finally, the study summarized an OASD(SA) study of the MBT–70's cost effectiveness and came to conclusions—all classified "secret." Obviously, skyrocketing costs and the MBT–70's degraded capability greatly alter any original calculations of cost effectiveness. This year, even Secretary Packard noted:

Some of the cost-effectiveness analysis indicated that we could achieve capability with a larger number of less capable tanks.

Meanwhile, as our planners have been lured onward by new tank technology, little serious thought has been given to the implications for the role of the tank of parallel advances in antitank weaponry.

So, as a result of the process Secretary Packard so accurately described, the United States will either purchase, at our present level of tank expenditures, fewer expensive and complicated tanks in the face of increasingly effective antitank weapons, or, at far greater cost, a greatly upgraded tank force in an age where the tank is becoming more vulnerable.

But, despite these classic mistakes, the MBT rumbles on.

We now find this great "dream tank" will be delivered more than half a decade late, provide less capability than promised, cost at least 2½ times the original estimate, and face a threat that has not substantially been upgraded.

The Armed Services Committee has earmarked $77 million for further research and development and advance production engineering on the MBT–70 in fiscal year 1971.

I would like to point out that these funds do not commit the tank to production. The committee is aware of the problems and has promised "continued review toward elimination of marginal features and reduction in cost." Further, the committee notes that "In addition, reliability and maintainability is of critical importance and should be emphasized in the development effort."

I share Secretary Packard's hope that the past will not be a guide to the future. And I believe that hope can be partially realized by a careful second look at the MBT–70 before it finally rolls off the production line.

I want to say that although there are some sections of this bill with which I disagree, I believe that the committee's overall efforts are highly deserving of praise.

After all, this bill represents the most difficult decisions which must be made with respect to our military preparedness. It authorizes all our research and development efforts as well as 75 to 85 percent of all procurement for 1971. The committee must deal with myriad long leadtime items and the ever-present threat of new and destabilizing technical breakthroughs by our adversaries. Whereas it takes only 6 months at most to recruit, train, and deploy manpower effectively, research and development once foregone, and stretchouts or cancellations once made, are almost impossible to recover from rapidly. Therefore, cuts in this bill have to be made far more cautiously than in other sections of the DOD budget.

Yet even with these responsibilities the committee, under the able leadership of the Senator from Mississippi (Mr. STENNIS), has managed to prune $1.329 billion from the Pentagon's $20.237 billion request.

And the committee altered the House-passed version by:

Reducing new obligational authority by $334.8 million.

Deleting $688.8 million for five naval vessels added by the House, lead items for the CVAN–70, the improved Hawk missile, the international fighter, and the M60A1E2.

Reducing R. & D. on the B–1, the Cheyenne helicopter, and the SAM–D by a total of $82.6 million.

Deleting $59.3 million for areawide ABM site preparation, Project Mallard and SCAD.

Reducing the advanced ballistic missile defense program and the rebasing program for Minuteman by $47 million.

As the committee states:

The bill as recommended by the Committee in terms of procurement and research

and development funding has been reduced by $1.329 billion or 6% below the House and 6.7% below the Department of Defense request which was described as "rock bottom" when submitted.

I believe that represents a commendable achievement.

But these reductions only cover $20 billion—albeit the most difficult part—of a $71.2 billion Pentagon budget.

Congress can do more. And I believe the Proxmire-Mathias overall spending ceiling is the way to do it. For while the Department of Defense should be able to set priorities within the limits of their expertise, only Congress is charged with maintaining a broader view of the Nation's needs. And today our needs are many.

With a $10 billion or more Federal deficit predicted for fiscal 1971, and urgent nonmilitary needs to be met, Congress should decide where cuts are made in the total Federal budget.

We must provide for the common defense. And we are.

We must remain stronger than Russia. And we will.

The Armed Services Committee has provided guidance for an overall spending limitation by cutting almost 7 percent from the most crucial and difficult part of the DOD rock bottom budget request. The Proxmire-Mathias amendment merely applies this standard to overall DOD spending for fiscal 1971.

There are many examples where the Pentagon could save the approximately $4 billion dollars that the Proxmire-Mathias amendment would recover from the rest of the DOD budget.

For instance, Admiral Rickover testified that up to $2 billion per year could be saved by the single step of instituting uniform accounting procedures.

And while the committee may hesitate unilaterally to reduce or cancel Pentagon programs such as the MBT–70, the B–1 and the F–14, the Department of Defense, faced with a budget restriction, might take another look at them.

Numerous cuts have been suggested by the MCPL report, by Robert Benson, formerly of the office of the Comptroller of the Department of Defense, by Mr. William W. Kaufmann, former consultant to Secretary of Defense McNamara now with the Brookings Institute and by others.

Our present force structure is predicated on our ability to fight the initial premobilization stages of two large and one small war: a war in Europe in response to an attack on NATO by the Warsaw pact; a war in Asia in response to a Chinese attack; and a minor war in the Western Hemisphere against an unspecified enemy—all at the same time.

Considerable savings would accrue, however, if the Nixon doctrine were implemented. According to the former Director of the Bureau of the Budget, Charles L. Schultze:

> One alternative to returning to this type of force structure is to adapt the armed forces and the military budget to a literal interpretation of the "Guam Doctrine." If we truly accept the fact that the United States is no longer prepared to intervene on the ground in a large way in Asia, then those forces in the baseline structure earmarked for that contingency could be sharply reduced. Should we adopt a military posture consistent with this change in our overseas policy, some $10 billion per year could be saved in the military budget. We could eliminate: six Army divisions, three wings of tactical aircraft, six attack carrier task forces, and a significant part of our anti-submarine and amphibious forces in the Pacific. Such a reduction would still leave the U.S. with two Marine divisions, six fighter bomber air wings, and three attack carriers earmarked for service in an Asian emergency. In addition, a reasonable re-evaluation of how we deploy our carriers might release one or two of the Atlantic-based carriers for Pacific service. In short, a military force structure consistent with the apparent foreign policy thrust of the Guam Doctrine could release $10 billion a year . . .

Ten billion dollars—the amount of our projected deficit for fiscal year 1971.

Mr. Schultze's is but one suggestion. The final technical decisions will and should rest with the Department of Defense—within a rational funding level set by the Congress.

The administration has talked a great deal about shifting some of our tax dollars from military uses to investments in human resources. Unfortunately the shift to date is largely an illusion, accomplished by fiscal sleight of hand.

For instance, on July 18, the President said, and I quote:

> Let us set the record straight. We have changed our national priorities. In the budget I proposed for fiscal 1971, spending for defense is exceeded by spending for human resources for the first time in 20 years. . . . It calls for spending 37 per cent for defense and 41 per cent for human resources programs.

This is nonsense. What the fiscal 1971 budget actually shows is the growth of Federal trust funds—for self-supporting programs such as social security—which have, since fiscal 1969, been lumped together with Federal operating funds in an all-inclusive device known as the "unified budget."

While it is true that under the unified budget "human resources" programs account for 41 percent of total outlays, a closer look reveals that $48.7 billion of the $82 billion—a whopping 59 percent—budgeted for human resources are in fact outlays from trust funds.

These billions are not "Federal funds" spent at the discretion of the Federal Government. They are merely held in trust by the Government for specific trust funds—social security, medicare, unemployment insurance, and others—but under the unified budget are reflected as spending for "human resources."

While the unified budget may provide a more precise accounting of inflow and outflow, a "Federal funds" budget, comparable to the old administrative budget, more clearly illustrates the policy decisions and priorities of the Federal Government.

Mr. President, I ask unanimous consent that there be printed at this point in my remarks a functional breakdown of Federal funds outlays for fiscal 1971 as proposed in the President's budget.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FEDERAL FUNDS OUTLAYS BY FUNCTION, FISCAL 1971, AS PROPOSED IN THE PRESIDENT'S BUDGET

[In millions of dollars]

Function	Amount	Percent of total
National defense	$73,615	47.51
International affairs and finance	3,589	2.32
Space research and technology	3,400	2.19
Human resources	33,221	21.44
Education and manpower	8,129	5.25
Health	8,318	5.37
Income security	8,556	5.52
Veterans benefits and services	8,218	5.30
Physical resources	16,123	10.41
Agriculture and rural development	5,364	3.46
Natural resources	2,503	1.62
Commerce and transportation	4,475	2.89
Community development and housing	3,781	2.44
Interest	17,799	11.49
General Government	4,407	2.84
Other	2,782	1.80
Total Federal funds budget outlays	154,936	100.00

Mr. EAGLETON. Mr. President, this clearly shows that there has been no change in our national priorities.

National defense outlays, 47.5 percent of the total, continue to be more than twice those for any other budget category or group of categories. Human resources account for only 21.4 percent of outlays.

Of every tax dollar collected from the American people, the 1971 budget would allocate 50 cents for defense and space, 5 cents for health programs, 3 cents for education, about 2 cents for housing and urban renewal, 2 cents for job training, 1½ cents for all natural resource programs, including water pollution control, 1 cent for food and nutrition, and about one-fifth of 1 cent for mass transportation.

In one way, however, the 1971 budget tells us a lot about the administration's real priorities. Despite all the rhetoric about ending the war, about the transition from a wartime to a peacetime economy, about changing priorities, this administration has chosen not to reveal to the American people what reduction, if any, there will be this year in the cost of the war—or wars—in Southeast Asia. And if we are not told the cost of the war it will be exceedingly difficult for the Congress and the Nation to ascertain the amount of any "peace dividend" available as the war is deescalated.

Mr. President, the question of our national priorities is the single most important and encompassing issue that will be before the American people in this decade.

It is not just a matter of "more for my people and less for yours." It is a question of the goals and the future of a nation.

A change in priorities is not accomplished simply by juggling convenient groups of budget items. Nor is it effected by subtracting X billions of dollars from the military budget and hoping it will be divided among Y number of domestic programs—although I believe this is clearly and urgently in the national interest.

The redirection of our priorities must

be of a more profound nature. It requires first that we free ourselves of certain illusions—the illusion that our national honor is at stake somewhere in the jungles of Southeast Asia—the illusion that national progress lies in the way of repeated space spectaculars and bigger and better sonic booms—the illusion that the defense budget is sacrosanct and that more Pentagon money means more national security.

Only when we see these illusions for what they are, and not before, will the Federal Government and the Nation be capable of changing its priorities. Only then will it be possible to make a national commitment of attention, will, energy, and resources to meet the needs of the American people—for education, health care, jobs, housing, low-cost public transportation, crime control, and an environment conducive to human life.

In closing, Mr. President, I want to make it clear that I commend the President for the small shift in his 1971 budget from military to domestic spending. However, this is not enough. By passing the Proxmire-Mathias amendment Congress can improve upon the President's efforts, as it did last year by cutting the defense appropriation $5.6 billion.

But we should not delude ourselves. This is but a start. The monumental work of reordering our national priorities lies ahead of us.

The best judgment and efforts, and many difficult decisions, will be required of each of us if we are to eventually discover that our progress, our security, and our national honor lies in the strength of our own society and in the quality of the lives of our own people.

Mr. PROXMIRE. Mr. President, I thank the distinguished Senator from Missouri for an excellent statement.

Mr. STENNIS. Mr. President, will the Senator yield me 1 minute, on my time?

Mr. PROXMIRE. I yield.

Mr. STENNIS. Mr. President, will the Senator yield, on my time?

Mr. EAGLETON. I am pleased to.

Mr. STENNIS. Mr. President, I yield myself 3 minutes.

For major parts of his speech and remarks, I want to agree with and commend highly the Senator from Missouri. I believe he is coming around mighty fast. The deeper he gets into the military budget and all, he modifies his views. I believe he has modified his views somewhat on the modern battle tank, which we discussed so much last year, something I was concerned about before I became chairman.

I wish we could stop spending money on these modern weapons, which cost so much, and cost more and more each year. The trouble is that we cannot stop the other side from building antitank weapons. If we could do that, we would get along with our old tanks; but as long as they are going forward with modern electronics, with which the Senator is familiar, we cannot drag our feet. We are caught in that dilemma on many weapons.

It is easy to talk in generalities, but it is hard to get down to the nub of things and reducing these expenditures rapidly. For instance, the 1971 budget has $21 billion in it for military personnel. That is for food, pay, travel, clothes, and items of that kind. Those expenditures will come down only when we reduce the number of men in the military; and we want that to come about as rapidly as possible.

For retired military personnel, there is an amount of $3.1 billion. We cannot reduce that except by changing the law. That is $3.1 billion.

In this budget there is an item of $19.5 billion for operation and maintenance. That is for general operation and maintenance of all the facilities—gasoline, oil, grease and things that make the wheels roll. That amount can be reduced as we reduce the personnel. They run right along together in this shooting war.

Our country comes first, but we have our commitments that we just do not want to turn our back on. We do not want to spurn our word once given.

Procurement plus some other items is really what we are debating about—$19 billion. For research and development, which the Senator emphasizes, it is $7.3 billion. He stated the matter better than I could. Once that time is gone——

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I will yield 2 minutes to the Senator so he can reply.

Mr. EAGLETON. I thank the Senator from Mississippi. I shall take only 1 minute of those 2 minutes.

The Senator is undoubtedly correct that the business of cutting the military budget, with its certain built-in, unavoidable costs, is a very difficult process. I tried to make clear, and I think the Senator understood that from my remarks, that I was not trying to oversimplify the problem involved in trying to cut the budget. It is the same difficulty Secretary Richardson faces in HEW when he is looking at the education budget. He knows, as we know, that there is great need to expand the education budget, whether guidance counseling, technical education, or many other important programs. He has to make some very tough judgments on what the overall Federal budget can afford to spend for the education budget.

And when we have a projected $10 billion national deficit, every department head, defense included, should do some belt tightening.

As I stated in my speech, I commend the Senator from Mississippi and the Armed Services Committee. I think they did the most thorough job in the history of the country in trying to prune the defense budget. I think the Senator from Wisconsin, the Senator from Maryland, and I are trying to give the Department of Defense assistance. I think the Senator is moving in the right direction, by cutting R. & D. and procurement by almost 7 percent and cutting Federal spending. We are helping him attain that goal.

I thank the Senator.

Mr. PROXMIRE. Mr. President, I yield 20 minutes to the Senator from Maryland.

Mr. MATHIAS. Mr. President, I thank the Senator from Wisconsin for yielding me time. I congratulate him for his continued effort in the field of Government economy. No place is it more important than in the area of defense spending, because, whatever differences there may be between us, on the question of how we are going to have a strong America we all agree on the goal. The Senator from Wisconsin has been leading the Senate, the Congress, and the country in the effort to have a stronger America by pointing out the dangers to the economy which have existed in recent years.

A STRONG AMERICA

But I would like to come to recent weeks, Mr. President, because recent weeks have brought ominous reports to those of us who believe that the United States must maintain a position of unchallengeable military strength. In the nuclear age, only a strong America can ensure a safe world. Yet it appears that the United States itself is pursuing policies that are putting our national security into increasing jeopardy. And if the United States is in danger, so is the global balance of military power that has preserved peace among the great powers since World War II.

In the past, the chief dangers to our national security have come from failure to respond adequately to threats from beyond our shores. Before Pearl Harbor, our woefully sluggish mobilization may have encouraged German and Japanese aggression. After World War II, our precipitate demobilization may have encouraged the Berlin blockade and Korean aggression. Then, in the technological realm, we based our defense on bombers long after the Soviet Union had secretly decided to emphasize intercontinental missiles. The result was the the shocking surprise of Sputnik at a time when the military was still chiefly concerned with an illusory "bomber gap."

These discomfiting experiences have created a new determination in the United States to assure our military and technological supremacy. The result today is different from any of the dangers we have faced in the past. We find ourselves excessively prepared for a wide range of impending threats, and yet poorly prepared for the long term maintenance of our security.

Contrary to some reports, we find we have superiority over the Soviet Union in every important category of current military strength, including strategic weaponry. The Soviet Union has deployed a number of relatively primitive ABM's around Moscow, connected to huge and extremely vulnerable radars. But Phase I of the much more sophisticated Safeguard program, already under construction as authorized by Congress, will soon give us a much larger number of deployed interceptors.

In any case, ABM's play a much greater role in defense budgets than in national defense. In more important areas, our Polaris and Poseidon programs give the United States far more and better sea based missile launchers, and our Strategic Air Command affords us a large and unchallenged lead in intercontinental

bombers. Although we are marginally behind in numbers of land based missiles, our lead in MIRV technology—multiple independently targetable warheads—gives us the capability swiftly to acquire a decisive edge even here—in the unlikely event our other retaliatory systems fall in jeopardy. Overall, our strategic lead is now about 3 to 1 in deliverable warheads, even without considering our widely dispersed tactical nuclear capability, also available for attack on the Soviet mainland if necessary.

It is said that with their SS–9's the Soviet Union can deliver greater total megatonnage. But this overkill measure is irrelevant, unless we suppose that our enemy would find some strange gratification in bombing bomb craters—or boiling the sea—and irradiating the world.

In fact, our current strategic position is unchallengeable and invulnerable at least for the next decade. We cannot improve it by adding to it with current technology. That course will only waste our resources and promote the dangerous militarization of Soviet society already described by columnist Joseph Alsop. At the same time, we would exacerbate the real danger to a strong America, the real threat to our national security.

This real danger does not come from strategic inferiority or lack of military preparation. It comes from the condition of American society, particularly as it affects science and education. The writings of historian Arnold Toynbee on the empires of the past have shown that most great nations have fallen not from external attack but from internal dissolution. Although I do not believe that we are suffering a terminal social crisis, our current problems direly affect our future national security.

Dr. John Foster, the Pentagon's Director of Research and Engineering, declared in a recent speech:

> The Soviet Union is now about to seize world technological leadership from the United States.

He cites Soviet expenditures on research and development increasing at a rate of between 10 and 13 percent a year. His appraisal comes in ominous contrast to his observation only last year that "there are no areas at present where we know the Soviet Union is ahead" in technology. It appears that the Soviet gains have been occurring at the same time as U.S. cutbacks in scientific research and education.

Dr. Foster's prediction thus is most disturbing in what it suggests about our recent defense policies. The impending shift in technological leadership—if it occurs—will come desipte an overwhelming U.S. edge in total military spending. With an economy nearly twice as large as the Soviet Union's, the United States has been spending 50 to 100 percent more on defense. Yet we have allowed the Soviet Union to move toward the lead in the one really crucial area—in the words of Dr. Foster, to threaten to "seize world technological leadership." Foster says we are already in a position in which "despite our best efforts, we must expect more Russian firsts and fewer American firsts in the next 5 to 10 years because of the current Soviet momentum."

When one considers the great advantage the United States has maintained in total defense spending, this Soviet achievement in the most crucial realm bespeaks an inexcusable misjudgment in American priorities which, of course, goes back over a period of years to the Kennedy and Johnson administrations.

Where has all the money gone? Much of it, of course, has gone to Vietnam. But even outside of Vietnam and outside of other ground mobilization, the United States has spent far more in defense than the Soviet Union over the last decade. Only in recent years, when the U.S. lead became so overwhelming as to portend a first strike capability, did the Soviet Union approach the United States in strategic spending. But the U.S. excess in strategic spending did not increase our security over the long run. It only increased Soviet spending.

Far too much of our money, moreover, was spent procuring and deploying present technology—even if it was not needed in terms of current threats. Apart from some $28 billion spent on missile systems that were not deployed, billions were spent on repeatedly replacing our land-based missiles with new models as soon as they were developed—from successive forms of Atlases and Titans to Minutemen I, II, and III. We have spent many billions maintaining our surface naval fleet at World War II levels—and protecting it with expensive but sometimes ineffective new defenses—despite the increasing vulnerability of all surface systems to Soviet submarines, missiles, and other offensive weapons. Over $15 billion has been spent on air defense against the minimal Soviet bomber threat.

I could, of course, continue the sad catalog of obsolescent weapons technology we have procured in our resolve to deploy every novelty we develop, in response to every possible threat, regardless of our overall superiority. Suffice it to say that the total of unnecessary spending is in the range of hundreds of billions of dollars.

Meanwhile the Soviet Union has perplexed us by its failure to keep pace. As Foster has said:

> Soviet military hardware frequently has not reflected the most advanced state of the art in the U.S.S.R.

The Soviet Union has concentrated on "proven technology" and "robust, relatively simple equipment," Foster reports.

Richard Wilson described the contrast in the Washington Star of August 3 in a column on the administration's blue ribbon panel on the Pentagon, headed by Gilbert W. Fitzhugh, chairman of the Board of Metropolitan Life Insurance Co. The Fitzhugh recommendations and their favorable reception in the administration are the most promising development in years in the area of defense policies. Wilson wrote:

> Under the McNamara system the United States followed a general pattern of visualizing the weapons it wanted and, without prototypes as in the case of TFX—the faultily operational F–111—creating it. The testing was done by agencies already committed on the scale of billions of dollars to the success of the weapon and thus loath to recognize its failure. The Russians are satisfied with weapons that work but are not things of beauty and technical marvels of the Buck Rogers age. But under the American system the thing has to look like a Cadillac of the 22d Century.

While the Soviet Union was saving money with its Volkswagen procurement policies, we now know from Foster that it was also investing in research and scientific education to assure its future strength, while the United States was cutting back.

The political philosophy of Marxism-Leninism has long held the belief that overspending on armaments will be one of the key factors in what is seen as the ultimate downfall of the West. Former Premier Khrushchev of the Soviet Union, describing this in a discussion of what he called the "general crisis of capitalism," said:

> An integral trait of the aggressive imperialist policy and economy is the gigantic increase of militarism, this cancerous growth of contemporary capitalist society.

Whether or not we accept this argument, there is little question that our adversaries in the global political situation welcome every dollar of our national budget which is siphoned off from other, economically productive fields into the dead end of surplus military hardware.

Let us look at the figures which illustrate the comparison in military spending. Total military spending by the United States in the last fiscal year is estimated at $78 billion to $79 billion. The budget request for the current year is more than $71 billion, a figure, I think, which compares favorably in large measure, due to the work of the Senate and of the efforts of the distinguished chairman of the Armed Services Committee, the Senator from Mississippi, and we want to help him do even better this year. But even if the pending amendment is adopted, we would spend $66 billion this year.

What does the Soviet Union spend on its military operations? The highly respected Institute for Strategic Studies estimates that last year the Soviets spent the equivalent of $42 billion in U.S. purchasing power to maintain its military program.

In Indochina alone, U.S. military spending in recent years has approached $30 billion. But the combined Soviet-Chinese military input into the Indochina war is estimated by responsible U.S. officials at barely $1 billion a year at its peak in 1967 and at not more than $500 million in the years since then.

Our adversaries cite as a philosophical truism that we will spend ourselves into oblivion, and look at what we are doing: spending more than one and one-half times as much as overall defense operations and up to 30 times as much in our one theater of active conflict, an area which is of questionable importance to the true vital interest of the United States.

We are faced today with a new defense budget. In view of Dr. Foster's alarms, I must admit I am disturbed to discover that there is little change in the

old pattern. The Pentagon continues to propose excessive spending on current and impending technology, some of it relatively ineffective or untested, even though our overall position of superiority is unchallenged in the short run. We have been asked for money for ABM, Minuteman III, a new intercontinental bomber, new destroyers, and attack aircraft carriers. A detailed critique of these and other requested programs has been prepared by the Committee on Military Spending of Members of Congress for Peace Through Law. I served on the committee and I recommend its findings, albeit with personal reservations on some points.

Cutting a defense budget is not a job to be done with a dull, blunt instrument. It is a job to be done with care, judgment, and foresight. It is probably more of an art than a science.

Failure to recognize this fact is probably one of the reasons the efforts made to date in reducing defense costs have reacted unfavorably to overall security considerations and may cause some understandable concern. We have attempted to reduce total dollar cost without altering our pattern of operation. As a result, we pour billions into obsolescing hardware items and into peripheral engagement in Vietnam, but neglect the very bedrock security factors upon which security depends. We might instead practice the doctrine of "fly before you buy" and produce limited numbers of prototypes before we place orders for procurement in the billion-dollar category.

While we continue on the course we have followed to date, our basic defense industrial base has been allowed to slow down. By the estimate of a responsible industrial association, it is now 46 percent idle, and Defense Department Comptroller Moot confirms that it is about 30 percent idle. These figures have particular significance in the light of Dr. Foster's warning.

It is a little like the farmer who foregoes the purchase of next year's seed in order to gather this year's tares.

The Senate Armed Services Committee is to be commended for wisely rejecting some of the Pentagon requests. But at this time of crisis, when our technical lead is in jeopardy, we cannot afford to continue such expenditure on unnecessary or marginally useful systems. We must stabilize our economy and increase our investment in the educational and scientific programs on which our future security will be founded. Our future security will be based on current activity not at our missile sites but in our classrooms—and our educational system is now in crisis.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. PROXMIRE. I yield 5 minutes to the Senator from Maryland.

Mr. MATHIAS. I thank the Senator for giving me time to conclude my remarks.

President Eisenhower was perhaps our wisest recent President on matters of national security. He kept the country strong and our society stable. Our deterrent is still essentially based on programs researched and developed during his administration while he resisted pressures to deploy unnecessary systems. I would like to quote his words:

> No matter how much we spend for arms, there is no safety in arms alone. Our security is the total product of our economic, intellectual, moral, and military strengths . . .
>
> Let me elaborate on this great truth . . . It happens that defense is a field in which I have had varied experience over a lifetime, and if I have learned anything, it is that there is no way in which a country can satisfy the craving for absolute security—but it easily can bankrupt itself, morally and economically, in attempting to reach that illusory goal through arms alone. The Military Establishment, not productive of itself, necessarily must feed on the energy, productivity and brainpower of the country, and if it takes too much, our total strength declines.

I cannot improve on General Eisenhower's prophetic words. I can only say that they describe our current condition. And they dictate the kind of "severe scrutiny of the defense budget" for which another great Republican, Robert A. Taft, appealed in his last public speech. Such "severe scrutiny," I believe, would result in a cut at least as great as that currently contemplated. I urge such a cut solemnly, in the interests of national security and domestic peace.

It is not an easy decision for any member of Congress to advocate a curb on government spending when such a decision involves the vital area of national defense. But I do so in the strong conviction that the amendment which has been sponsored by the distinguished Senator from Wisconsin and myself is responsible in its substance and is made mandatory by the current economic situation.

The citizens of the United States and their elected representatives in Congress can no longer ignore the implications of the fiscal situation we face. Despite a few hopeful signs, inflation is literally eating the Nation out of house and home. It is imperative that we review our priorities in light of this daily menace to our national and individual economic situations. We must act swiftly and decisively to restore fiscal order.

I speak of the eroding forces of inflation in general and the needless waste of defense funds in particular. The President is fighting inflation on a broad front. He is acutely aware of the need for economy. His recent veto of the education appropriations bill, although unpopular, was the only responsible course he had in calling the question of overall Federal spending levels to the attention of Congress and the Nation. Unfortunately, the Congress did not heed the warning flag he raised and overrode the veto.

In addition to this action, we have seen recently the commitment to continue an outdated farm subsidy program, the commitment to advance a premature antiballastic missile system and other, similar massive allocations of Federal funds. It now appears that the hoped-for surplus of $1.3 billion in our national budget for the current year is disintegrating into a projected $10 billion to $15 billion deficit. If we are to win the war against inflation, we must come to the defense of our economy now. We must stop this faceless thief—inflation—which steals from the pocketbook of every American family. Until we control this slide, no amount of money, however large, will achieve its original purpose and, in fact, may only provide further fuel to the fires of inflation.

Such considerations gain added meaning when Deputy Secretary of Defense David Packard confirms publicly—as he did last week—what many of us have suspected about military procurement process for a long time. As Mr. Packard put it, "We have a real mess on our hands." And, in a commendably blunt speech, he acknowledged that the Defense Department is suffering from a long-building crisis of "bad management." Rather than more people and more supervision, he said, the Defense Department requires fewer people and a more concerted, economic approach to spending.

This is precisely what the pending amendment will do. It will save money and encourage more efficient management. Inasmuch as military spending is essentially nonproductive and inflationary by nature, we simply cannot afford the expenditure of a single dollar beyond our minimal needs. The Senate Armed Services Committee realized this when it cut nearly 7 percent from the military procurement authorization bill. The pending amendment would cut about 7.1 percent from all military spending.

There are numerous precedents for Congress to legislate a general cut in spending for a particular department and to allow the administrators of the department involved to determine where to apply the cuts. As recently as February 27, the Senate adopted an amendment offered by the distinguished Senator from New Hampshire (Mr. COTTON) to cut by 2 percent spending by agencies covered in the appropriation bill for the Health, Education, and Welfare Departments.

This amendment, which would limit overall military spending this year to $66 billion, would leave to the President and the Defense Department the decisions as to where to impose spending cuts. Many Members of the Senate, in debate on the pending bill and on other occasions, have pointed to specific areas where they felt cuts could be made. This amendment would leave the decision on cuts up to the executive agencies which in the past have opposed specific cuts on the ground that only the Pentagon knew where they should be made.

I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a copy of a memorandum entitled "The Proxmire-Mathias Amendment To Limit Fiscal Year 1971 Military Spending to $66 Billion," which summarizes what this amendment would do and why it must be adopted as a responsible approach to the problems which confront us.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MATHIAS. Mr. President, in making these cuts, moreover, I recommend that the Pentagon take special effort to assure that scientific and other technical manpower are not permanently lost to

our national security programs. Over the last few years, our defense procurement programs have been cut by a total of nearly one-third without close attention to the long-term effects. Our future mobilization base has been jeopardized. It is crucial that current retrenchments—like current expenditures—be designed with our long-term security in mind. Conversion of our defense industry for peaceful purposes should not be considered as a part time concern. Conversion is a necessary instrument of intelligent defense planning, preserving our mobilization base for a future crisis.

In the future our defense spending should be maintained at a relatively steady and balanced level. We should not allow uncertain new appraisals of Soviet intentions and capabilities to panic us into erratic splurges of investment in untested systems. A balanced approach would prevent literal crash programs for new aircraft—and titanic new efforts in shipbuilding—that bring public disillusionment and abrupt retrenchment.

The Soviet Union has long lagged far behind us in the arms race; its economy cannot permit maintenance of long-term defense spending competitive with ours without major social strains. By inducing the U.S.S.R. to increase its proportionate commitment to defense, we will only enhance the power of militarists in Soviet society.

The only area where it is important for the United States to retain a general advantage is in science and technology. The ultimate commentary on our defense policies in recent years is their failure to provide for leadership in this crucial realm, while entailing levels of expenditure far beyond the reach of our competitors in every other area.

We must have a strong America. I believe that a program combining retrenchment in current defense spending with conversion of industry rather than dissolution of it represents our best long-term hope for peace and prosperity.

EXHIBIT 1

THE PROXMIRE-MATHIAS AMENDMENT TO LIMIT FISCAL YEAR 1971 MILITARY SPENDING TO $66 BILLION

LANGUAGE OF THE AMENDMENT

The Amendment reads:

At the end of the bill add a new section as follows:

Sec. 508(a) Notwithstanding any other provision of law, the aggregate amount that may be expended for Department of Defense—Military Functions for the fiscal year ending June 30, 1971, shall not exceed $66,000,000,000."

WHAT IT DOES

The outlays proposed in the President's budget for Department of Defense—Military Functions are $71.2 billion. It includes almost all military spending except 1) foreign military assistance, 2) military spending by the Atomic Energy Commission, and 3) some defense related activities such as stockpiling, and selective service.

The Amendment limits spending. It puts a ceiling of $66 billion on military spending.

It cuts approximately 7 percent below the amount proposed in the budget. This is almost the same percentage the Senate Armed Services Committee reduced the 20.5 billion Military Authorization bill.

WHO DETERMINES WHERE TO CUT

The Amendment leaves the specific determination of where to cut, to the President and the Defense Department. Members of the Senate have pointed to specific areas where cuts could take place. But the precise cuts are left to the Executive Departments who in the past have opposed specific cuts on the ground that only the Pentagon knew where they should be made.

PRECEDENTS FOR GENERAL CUTS OR LIMITATIONS ON SPENDING

There are numerous precedents for general cuts or limitations on spending for both military and civilian programs.

On June 29, 1970, Senator Williams (R.-Del.) offered an Amendment to place a ceiling on fiscal year 1971 spending.

On February 27, 1970, Senator Cotton (R.-N.H.) proposed a 2 percent cut in the HEW-Labor bill.

On April 19, 1968, Senator Williams (R.-Del.) proposed a 3 percent reduction in the military procurement authorization bill.

On April 18, 1968, Senator Hart (D.-Mich.) proposed a $500 million cut in military research and development.

One or another of these general cuts and limitations have been supported by a large proportion of the Members of the Senate.

WHERE CUTS COULD BE MADE

While the amendment does not propose any specific areas where cuts should be made, a thoroughly documented case has been made for cuts of $10 to $14 billion. Among those areas are:

Procurement.—The overruns on 38 major weapons systems, according to the General Accounting Office, amount to $23 billion.

As Secretary Packard said "Frankly . . . in Defense Procurement, we have a real mess on our hands. . . ."

And Mr. Gilbert Fitzhugh, on the release of his report, said in a press conference, "Defense Department's policies have contributed to serious cost overruns, schedule slippage and performance deficiencies."

Overseas bases.—We now have some 429 major and almost 3,000 minor bases scattered in 30 countries throughout the world, many of which are no longer necessary.

New one-plus war strategy.—The shift from a two plus war strategy to a one-plus war strategy should, according to former Budget Director Charles Schultze, mean a $14 billion cut. While the Pentagon has announced the new policy, no reductions have yet occurred.

Uniform accounting.—According to Admiral Rickover, instituting the Uniform Accounting Procedures—just signed into law—should save up to $2 billion.

Manpower.—Troop withdrawals from Vietnam and a general reduction in manpower to the pre-Vietnam level of 2.5 million should bring large savings.

Weapons.—Specific weapon systems could be cut, lengthened in time for delivery, or kept in the research and development stage. Among these are the MBT–70 tank, the B–1 bomber, duplication in the anti-submarine warfare program, and the number of carriers.

Others.—Savings could be made in the amounts spent on public relations at the Pentagon, on food procurement, in the rotation and leave policies of the forces outside Vietnam and combat.

ARGUMENTS FOR THE $66 BILLION CEILING

(1) In light of our burgeoning domestic needs—schools, health, anti-pollution, to name only a few, we must shift priorities from the military to the civilian sectors.

(2) The prospective $10 to $15 billion budget deficit means that no substantial amounts will be available to meet these needs unless a major reduction is made in military spending.

(3) The Education and HEW Appropriations bills were vetoed on grounds of excessive spending. In the battle against inflation, stringent guidelines must be extended to all areas of government spending.

(4) Military spending is non-productive. We should not spend a single dollar more for it than is absolutely needed. A shift from military to needed civilian spending will satisfy pent up needs, be less inflationary, and be far more productive.

Mr. STENNIS. Mr. President, I yield myself 20 minutes on the bill.

The PRESIDING OFFICER (Mr. NELSON). The Senator from Mississippi is recognized for 20 minutes.

Mr. STENNIS. Mr. President, let me say at the beginning that I wish all Senators could be here this morning. We are having a good discussion on both sides. I consider the vote on this amendment to be highly important. It will be a vital vote. If the amendment should be agreed to, it would be, with all deference to its authors, throwing into the junk heap some of the heretofore well considered, reliable and essential guidelines and procedures of our committee work.

The amendment seeks to anticipate appropriation bills that will come up later, in bills that cannot be put together until this bill now under debate is passed. It tries to anticipate all these matters in a rather general way, but in an effective way, if it should become law, it would put a cap on total spending which again, with all respect, I think would be artificial and would cause chaos and confusion and downright danger and harm. To get out of the situation it would take us into, it would cost far more money than the orderly and effective procedure we are under now, and would systematically reduce the military budget, at the same time we were protecting our security and living up to our commitments.

I have mentioned it once this morning, but I point out again the items that go to make up the 1971 budget.

The first item is military personnel, which includes the pay, food, and the travel which go with our military uniformed personnel—$21 billion.

The only way to reduce that, and we are reducing it gradually and rather rapidly, is to reduce our personnel, which is something we cannot do. It is like pruning a peach tree.

The next item is retirement of military personnel—$3.194 billion.

The only way to reduce that would be to change the law, and I have not seen any bills introduced to reduce that money.

Operation maintenance. That is for gas, oil, grease, and things that make the wheels turn—$19 billion.

That, of course, is tied directly to personnel. The cost is coming down. But we cannot just take off the brakes and let everything run downhill because we have other priorities—I have some priorities myself. The item for operation maintenance just mentioned is $2.5 billion down from the last fiscal year.

Just that item alone, procurement, that is the bill we really have up here, which is what is all that is before the Senate except for the amendments. That is the part of the bill which was already honed

and dissected and put back together with a reduction of $1.3 billion.

We appreciate the compliments about having done that but, at the same time, they are turning right around and telling us now that here is something we have not had a chance to pass on and they know more about it than we do. Of course, this is not a matter of personalities.

We have in the bill $19.3 billion, which is now before the Senate, and there has been no disposition on the part of the Senate to change any of the figures we have in the bill proper, that $19.3 billion.

Research, test and evaluation—$7.3 billion. That is the one the Senator from New Hampshire (Mr. McINTYRE) will speak on in a few minutes. That is down considerably and it has been brought down systematically. The Senator from Missouri speaking against the bill and for this amendment said this morning that it represents time that cannot be recalled.

I shall not belabor these items further which have been brought in and contested by this amendment. There is no bill before us on it. The Appropriations Committee has not made any recommendation yet.

Mr. President, I have a "defense budget cutback facts" statement in my hand and ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DEFENSE BUDGET CUTBACK FACTS

Defense spending in FY 1971 is 34.6% of the Federal budget total—the lowest percentage since FY 1950, before the Korean War.

Defense spending in FY 1971 amounts to 7% of the Gross National Product (GNP)—the lowest per cent since FY 1951.

From prewar (FY 1964) to FY 1971, Defense spending is up $21 billion; other Federal agency spending is up $64.9 billion.

From 1969 to 1971, Defense spending drops by $6.9 billion; other Federal agencies increase by $24.6 billion.

Defense spending was $50.8 billion in prewar FY 1964, $78 billion in FY 1968, and $78.7 billion in FY 1969, compared to $71.8 billion in FY 1971— down $6.9 billion from FY 1969 and down $5.2 billion from FY 1970.

Very large pay increases have been provided by the Congress over these years, and increases in the general price level have added 23.2% to the cost of weapons and other Defense purchases since prewar FY 1964.

If FY 1971 pay rates and price levels had been in effect throughout, spending would have been $66.8 billion in 1964, $89.1 billion in 1968 and $86.7 billion in 1969, compared to $71.8 billion in 1971.

Therefore, after allowing for inflation (largely pay increases) Defense spending in FY 1971 (including war costs) is $5 billion or 7% above prewar 1964. Most of the Defense spending increase is due to inflation.

On the same basis (dollars of constant buying power) Defense spending peaked at $89.1 billion in FY 1968, and is down by $17.3 billion (20%) in FY 1971.

There were 2,685,000 military personnel on active duty in prewar June 1964. This peaked at 3,547,000 in June 1968, and is estimated at 2,908,000 for June 1971. 862,000 military personnel were added from 1964 to 1968, and 639,000 are being cut from that peak by 1971. June 1971 strength will be 223,000 (8%) above June 1964. Most of the wartime buildup has been removed.

Civilian employment was 1,035,000 in June 1964, 1,287,000 in June 1968, and is estimated at 1,145,000 in June 1971. 252,000 civilians were added from 1964 to 1968, and 142,000 are cut from that peak by 1971. June 1971 employment is 110,000 (10%) above June 1964. Most of the wartime buildup has been removed.

From prewar 1964 to 1968, Defense-related employment in industry increased by 1.7 million jobs. From 1968 to 1971, industry jobs will fall by 1.3 million, removing most of the wartime buildup.

From the 1968 wartime peak to 1971, Defense cuts amount to $17.3 billion in constant dollars, and over 2 million jobs—781,000 military personnel and direct-hire civilians, and 1.3 million jobs in industry.

In constant dollars (FY 1971 prices) Defense outlays for procurement, construction, and RDT&E were $30.5 billion in FY 1964 and peaked a $40.1 billion in FY 1968, compared to $28 billion in FY 1971. That is, Defense spending for investment and RDT&E drops $12.1 billion (30%) from the wartime peak, and is $2.5 billion (8%) *below* the prewar level.

Procurement spending in constant dollars, including war costs, is 2% below prewar 1964; RDT&E is down 16%; and construction down 10%.

For procurement, construction, and RDT&E, the FY 1971 program, war costs and all, is the lowest since FY 1964. If special war costs are set aside, this is the lowest budget since the 1950's.

The 1971 Defense budget has been cut back to near the prewar level, while war costs continue to be significant. FY 1971 Defense spending is *up $5 billion* from prewar FY 1964, in constant dollars. Incremental war spending in FY 1971 is *more than twice* that amount. The difference represents cutbacks in baseline programs from the prewar level.

Mr. STENNIS. Mr. President, let me make some brief comments on some of the items on this matter. One item, based on these facts, is that 2.6 million military personnel were on active duty in prewar June 1964. I will just use round numbers here. The peak was 4.5 million men in June 1968. It is estimated to be 2.9 million men for June 1971.

Thus, 862,000 men were added from 1964 to 1968 and 639,000 men will be cut from that peak by 1971.

In other words, there was a buildup because of the war, but by the end of this budget year we will have most of that whittled way back down to a more reasonable figure. So that the 1971 strength at the end of this budget year will be 223,000 men, 8 percent above June of 1964. Most of the wartime buildup will have been removed.

On this idea of civilian employment—and that involves tremendous cost—civilian employment was 1,035,000 in June 1964. It was 1,287,000 in June 1968. It is estimated at 1.145 million in June 1971. The 250,000 civilians were added from 1964 to 1968. That is at the peak of its strength. And 140,000 were cut back by 1971. June 1971, the figure will be 10 percent above that for 1964.

So most of the wartime buildup here has already been removed.

My point is that we cannot include a great many more reductions here because the wartime strength has been absorbed from prewar 1964 to 1968.

Defense-related employment increased by 1.47 million jobs from 1968 to 1971. Those jobs will fall to 1.3 million, removing most of the wartime buildup.

So, when we talk about wars hopefully ending and the costs coming down, we can see that that matter has been already worked on and the water has been squeezed out. We are at or approaching almost the level of prewar costs.

I favor coming down below what it is now. However, these things have to be done in an orderly way. They are being done and they must be done in an orderly way.

Another thing that sheds light on the subject is constant dollars, fiscal year 1971 prices; defense outlays for procurement, construction, research and development, and engineering were $30.5 billion in fiscal year 1964. It peaked to $40 billion in fiscal year 1968, compared to $28 billion in fiscal year 1971. That is this fiscal year we are talking about, fiscal year 1971. That is defense spending for construction, research, and development, engineering. It dropped $12.1 billion, or 30 percent, from the wartime peak and is $2.5 million or 8 percent below the prewar level.

Those things illustrate that so far as the costs due to the war is concerned, the luxuries of the budget have been cleared out, cleaned up, and eliminated faster than the war is being eliminated. And those are the reductions that we insisted be made. The committee did that. The Defense Department does not write this bill up any more than our grandchildren write it up. We get information from them, and we have men on the staff capable of evaluating what they say on most every subject in the bill.

That is why it has not been subjected to attack on these individual items. It has been picked to pieces and put back together by men who knew the subject matter and we had reason and grounds for our action.

I want to emphasize that. I was impressed here that the Senator from Georgia (Mr. RUSSELL), the chairman of the Appropriations Committee, long time chairman of the Armed Services Committee, and a long time member of the Appropriations Committee—from the early 1930's—was so impressed with what this amendment would do that he had two very able, competent men on his staff prepare a memorandum.

The Senator from Georgia was moved to send that memorandum out to every member of the committee. I had it printed in the RECORD yesterday afternoon. I think that we will hear from some of these members. There was a time, I believe, when it would have been sent to all members of the committee.

It sets out the enormous impact of the amendment, far beyond the full realization of some of those who propose it in such good faith. I refer to that memorandum now. We will discuss it some later as things develop.

I have information here that our staff has prepared in anticipation of this or any other amendment that might be drawn. I think it is well for these figures to be challenged. They are enormous.

I get concerned. I am concerned all the time. The Defense Department knows where my corns are. They know that this personnel matter hurts my corns all the time. I want them to do even more about a reduction, but I know that

we cannot go in there and eliminate men, either military men or civilian employees.

I know that we have these various weapons. We can stop making them as far as our side is concerned. But we cannot stop the other side from making more weapons and more modern weapons.

We can stop building tanks, but we cannot stop the other side from building antitank weapons and using all the technological improvements, including modern electronics.

We have to weigh these things. The defense budget for 1971 is $71.3 billion. This would be compared with the revised Nixon budget of $74.9 billion and the Johnson budget for fiscal year 1970 of $82.9 billion.

If the factor of inflation is replaced—and this is a major point—in terms of 1964 dollars, the budget for fiscal year 1971 would be only $54.6 billion as compared to the $50.8 billion budget for fiscal year 1964. In other words, when we go back to the 1964 dollars, we find that we are running less than $4 billion above the 1964 budget which was a period before the war buildup. The war is not over yet. The annual budget has increased by two times.

We have put the square and compass on these figures from every conceivable angle, and have got substantially the same result. This bears out what I have been saying; namely, that most of the cost of the war, due to inflation and the increase due to the war buildup, has been taken out, even though the war is still going on. Defense outlays for military functions are projected to drop more than $5.3 billion from fiscal 1970 to fiscal 1971—from $76.5 billion to $71.2 billion. The fiscal 1971 budget has been characterized as a transition budget. The weapons systems being funded are mainly those currently in being except for the ABM.

We have some weapons coming along later, such as the F–14 and the F–15. I do not want to mislead anyone. They are going to be super in cost because they are super in modernity. I think they will be the best weapons in the world in their field. If we are not exactly meeting that test, we must meet it.

Despite the fact that 682,000 fewer people will be on the defense payroll, military and civilian, by June 1971, compared with June 30, 1969, the entire Department of Defense payroll cost—that is, active military, civilian, and retired personnel—will increase by $400 million, from $35.4 billion to $35.8 billion. This shows the effect of inflation and also the mounting cost of military retired pay, which now costs about $3.2 billion annually.

We can do nothing about this under present law. It will be necessary to change the law, but, as I say, no one proposes to do that.

As compared to June 30, 1969, the net reduction in personnel counting DOD military and civilian and defense products industries on June 30, 1970, will be 526,000 and on June 30, 1971, will be 1,026,000. This is a conservative figure since there could be an even greater impact on the defense industries.

The fiscal year 1971 defense budget is close to the prewar, peacetime levels—much closer than many people realize. We studied this matter and do this before the bill was ever filed. Military manpower, for example, is forecast at 2,908,000 for June 30, 1971. That is an 8-percent increase above the level of $2,685,000 at June 30, 1964. And it is less than 4 percent above the $2,808,000 we had on June 30, 1962, another peacetime year. Unless there is some kind of setback we are going to reduce that further.

Never before have we seen such cutbacks in the military while fighting continues. Military manpower is dropping 639,000 from the peak reached in 1968; civilian employment by 142,000; and defense jobs in industry are dropping over 1 million from 1968 to 1971.

REMOVAL OF MISCONCEPTION

Mr. President, I want to remove a widespread misconception that relates to the defense dollar and what has occurred since 1964 with respect to the defense budget as a whole.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield myself 3 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 3 additional minutes.

Mr. STENNIS. Mr. President, contrary to popular belief, the Defense proportion of the total Federal budget is decreasing. From fiscal year 1964 to fiscal year 1968, total Government spending rose by 50 percent and I might add that in the President's budget forecast another increase of 12 percent is projected by the end of fiscal year 1971. In other words, from fiscal year 1964 through fiscal year 1971, total Government spending will have increased by 62 percent.

That is unthinkable, but true.

On the other hand the expenditures of the Department of Defense from fiscal year 1964 through fiscal year 1971 are expected to increase by 41 percent as compared to 62 percent for the Government as a whole. Dollarwise defense spending in fiscal year 1964 was $50.8 billion compared to $71.8 billion for fiscal year 1971.

In summary, Mr. President, from fiscal year 1964 through fiscal year 1971, discounting inflation and pay increases, over 90 percent of the increase in Federal spending has gone to nondefense Federal agencies.

I was surprised at those figures myself but they are borne out and they do stand up.

Mr. President, in summary these figures show definite progress and definite goals, and they show that we are well on our way. All of this has been done despite the fact the war is continuing.

Mr. President, I reserve the unused part of my 3 minutes.

Mr. McINTYRE. Mr. President, will the Senator yield to me for 12 minutes?

Mr. STENNIS. Mr. President, I yield to the chairman of our Subcommittee on Research, Development, Testing, and Evaluation, the Senator from New Hampshire (Mr. McINTYRE), who has done a tremendous amount of effective work and who has filed a fine report.

Mr. McINTYRE. Mr. President, I must voice my opposition to the amendment now pending before us.

I have no quarrel with the amendment's basic goal—a reduction of our overall military expenditures. I have worked long and hard this year myself toward that very goal.

And I will continue to pursue it in the future. For military expenditures are too often nonproductive in nature. They detract from our capability to meet urgent domestic needs. And they add to the budgetary deficit which now looms large before us.

So I oppose the present amendment, Mr. President, not out of hostility to its purpose, but from a deep conviction that it is an improper means for reaching our common end.

Consider for a moment what this amendment would entail.

Two months of the fiscal year have already passed, and 10 months remain. In that remaining time, we must complete Senate and Conferee action on this authorization, and then undertake House, Senate, and conference action on each of the three appropriation bills involved.

And sometime in that process, if this amendment is adopted, we would pass to the Department of Defense the job of cutting spending by $5.2 billion in the months that remain of the fiscal year.

It is important to remember that this amendment is directed to spending—checks issued. Not authorizations, appropriations, or obligations. Not new contracts. It is directed to spending.

Now with respect to Defense spending the 1971 defense budget is divided almost evenly between payroll and purchases. About $35.8 billion is for payroll, and $35.4 billion for purchase of goods and services, for a total of $71.2 billion.

Let us consider the payroll part first. Let us suppose that the Department is forced to achieve $3 billion of the $5.2 billion cut by manpower cutbacks. The total payroll for 1 month is about $3 billion, and there are 10 months remaining in the fiscal year. This means that the Department would have to cut the average number of employees by 10 percent for the remainder of the year—in addition to the personnel cuts already planned.

But this would be a 10-percent cut only if it could be effected immediately—on September 1. This of course is impossible. Decisions must be made as to which jobs are to be abolished. Personnel must then be given notice. Account must be taken that military induction, enlistment, and reenlistment actions are already in process. It takes time before personnel accessions can be further reduced and separations increased, above the plan—and this is the only way to get the payroll down.

If the Department began promptly, the payroll cuts would begin to show up in January 1971, at the earliest, and manpower would then be progressively reduced each month through June 1971.

We would then be saving from 1 to 6 months of budgeted pay for each person separated. And these savings would be offset to some extent by increased separation payments and other costs.

The result is that, if we are to save $3 billion in Defense payroll spending starting now, we would have to cut Defense manpower by about 30 percent below the budgeted level as of June 30, 1971—a further cut of about 1.2 million personnel.

Mr. President, I agree that we should achieve manpower reductions wherever possible. But we are already doing just that. The Defense Department has already budgeted a reduction of 311,000 men—about 6 or 7 percent—for fiscal 1971. And the Appropriations Committees will determine, after a careful and detailed analysis, whether additional reductions are possible. Undoubtedly there will be still further reductions next year.

This is the manner in which manpower reductions should be achieved, not by amendments like the one before us. Just consider the implications, Mr. President, of a 30-percent manpower reduction over the next 10 months.

Now let us look at the other half of the Defense spending picture—the $35.4 billion for the purchase of goods and contractual services.

It is a simple fact of life—which this amendment ignores—that contracts are entered into several months before money is actually spent. Well over half of fiscal 1971 spending will result from contracts entered into last fiscal year—before July 1970. When additional contracts entered into during the past 2 months are considered, it becomes clear that close to three-fourths of this year's purchase spending is already under contract.

As a maximum, then, there will be about $9 billion in fiscal year 1971 spending from contracts to be let after September 1, 1970. If we are to reduce this spending by $2.2 billion—the remainder of the $5.2 billion cut—a 25-percent cutback would be involved. But the process could not be begun immediately. Decisions would have to be made as to where the cuts were to be effected. And, in the meantime, the clock would continue to run so that an increasingly large share of the 1971 spending would be committed—leaving the Department with a 50-percent cutback problem, or worse.

And these areas where the cuts would have to be applied often involve items of high priority, where the Department's discretion is limited. They involve such items as food, medical supplies, and fuel for aircraft and ships—items with relatively short lead times.

Given the magnitude of the cut required, the sole criterion in all these actions by the Department would have to be the spending rate—how fast the particular kind of program spends out. Not how badly the item is needed. Not long-run economy.

Consider the manner in which our priorities might be distorted. It might not be possible for example to cut spending for procurement of aircraft and ships, because this is covered by contracts already in existence. It might be necessary therefore to reduce contracts for such items as ship and aircraft fuel, thereby taking purchased ships and aircraft off station.

It will also be necessary to abandon some needed programs, and to delay others—all at much higher long-run costs—in order to minimize current spending.

This will contribute neither to economy nor to national security. It would be ironic—but not surprising—if the advocates of this spending cut later led the chorus of pious horror over the uneconomical actions sure to result.

Mr. President, we have heard a great deal about the need to be more realistic in allocating resources in terms of priorities and the need to instill better management of public affairs. Nothing could be more destructive of these ends than the spending cut that is proposed here. We have heard a great deal about the need for more congressional and public awareness of relative costs and relative priorities, and more congressional control over military and foreign affairs, and a more informed approach to budgeting and policymaking. Consider the contrast between this objective and the present proposal. I do not know what the Department of Defense would have to do to accommodate a $5.2 billion expenditure slash this late in the game. No one in this Chamber knows. Indeed, neither the President nor the Pentagon could tell us, because they do not know either.

We have heard that the Defense budget must be cut because Defense management is bad—but the remedy proposed here would not be good management. We have heard that congressional oversight must be strengthened—but the remedy proposed here would involve transfer to the executive of some $10 to $15 billion in current program decisions, entirely apart from the established procedures for congressional oversight.

The proposed amendment is unworkable and unsound.

It would produce consequences that none of us can begin to understand. This amendment should be roundly defeated.

I yield back the remainder of my time.

Mr. STENNIS. Mr. President, I thank the Senator very much. Certain Senators expect to be here. There is a very urgent and important meeting of the Committee on Agriculture and Forestry, for one.

I ask unanimous consent that we may, on divided time, have a quorum call.

The PRESIDING OFFICER. Without objection, it is so ordered, and the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. I yield 5 minutes to the Senator from Oklahoma.

Mr. HARRIS. Mr. President, I rise to support the amendment offered by the distinguished Senator from Wisconsin (Mr. PROXMIRE) and the distinguished Senator from Maryland (Mr. MATHIAS), an amendment of which I am also a sponsor.

Mr. President, some years ago, in a very well-meaning effort, the then Secretary of Defense instituted a new program called PPBS—Planning Programing Budgeting System—a program for making up the Defense Department budget—a program that later spread throughout the Government—the central idea of which was that there ought to be a much more logical and rational way to make up the Federal defense budget than had been used in the past.

The idea was that we should not continue the old way of making up the defense budget, which started with a decision in the upper levels of the Government as to how much the maximum defense expenditure would be, and then a decision within the Defense Department to divide out that maximum among the various services.

It was said, with some justification, that that was not the right way to go about it, that, instead, the defense budget should be prepared from the bottom up on a cost-effectiveness basis, and that, based upon the decisions of need and the security of the country and how those needs might be met and that security might best be protected, the budget would be compiled.

On balance, that would seem to be a much better system for making up a defense budget, and I am certain that those who proposed it and who helped to carry it out had in mind that it would result—since it would operate on a more rational basis, and Congress would have access to the basic reasoning and facts which had gone into that budgetary process—in a lowered defense budget, or at least in greater restriction on increases in the defense budget.

But, Mr. President, as we have seen in recent years, that did not prove to be the result. Since I have been in the Senate—and that has been only about 7 years—we have seen the budget of the Defense Department increase enormously in amount, and that cannot be attributed entirely to the Vietnam war, though, of course, that war accounts for a portion of the increased cost.

Beginning last year, led by the excellent work of the distinguished Senator from Wisconsin (Mr. PROXMIRE) and others, the Senate has begun to give the same kind of scrutiny to defense expenditures and requests for defense expenditures that it gives to other kinds of expenditures and requests.

I think it is time that we put an upward limit on defense budgets from time to time, and that is the purpose of the amendment now before us. I do not think that logic and rationality alone in making up the defense budget can be said to have been such an overwhelming success, and, therefore, I think it is time we revert to one aspect of what may not have been such a totally bad system after all—simply saying that we think $66 billion, as this amendment would provide, or whatever figure may be chosen from year to year, is as much as we can afford to spend this year, in consideration of national security, other needs, our gross national product and Federal revenues in general.

I say that, Mr. President, because with defense expenditures we have had a different kind of attitude than we have had

about other kinds of expenditures. We have been willing to take all sorts of risks in the field of health; we have been willing to take all sorts of risks in the fields of education, housing, crime, pollution and all the other myriad problems which afflict us in growing degrees these days; and yet our budgetary process in regard to defense seems primarily to have been built upon the premise that we could accept only zero risks in that field.

We should not say that we will accept only zero risks in that field, and then say we will accept whatever risks may be involved in the mounting problems of education, housing, health, crime, pollution, and all of the other domestic problems which we face.

What I am saying, Mr. President, is this: I think it is time—though it is almost a cliche to say it these days—that we reorder our priorities in this country. For while it is almost a cliche to say it, it has not become a trite thing to do. We have made very little progress toward actually reordering our priorities in fact.

But if we are going to face up to the fact that there are still, in this country, the richest country in the world, 25 million people or more who live in poverty and despair; that there are at least 11 million substandard and overcrowded housing units in the United States today; that more than 60 million of our citizens are not served with any kind of sewer system; that the shortage of doctors for our elderly and veterans and poor people is really approaching a national disgrace; that one out of 50 Americans cannot get a doctor today under almost any kind of circumstances; that our environment continues to deteriorate alarmingly; that we face a crisis in education; that our streets are increasingly unsafe; then we have to recognize that we must reorder the priorities of this country and decide to put first things first. We cannot do that so long as defense expenditures stay at an unnecessarily high level, and that is why I support this tough-minded amendment which is before the Senate, and I hope it will be adopted by the Senate.

We should not—either for economic reasons or the pressure of domestic needs—jeopardize national security; on that we are agreed. But on one item alone, the withdrawal of some troops from Western Europe and Korea, withdrawals which even the administration is coming closer to agreeing can be made without damage to our security or that of those countries to which we are committed, would virtually provide all the savings required by the pending amendment. I urge its adoption.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. I yield myself 3 minutes.

Mr. President, I covered this point yesterday afternoon, and I am sure this is the way the matter will figure out: If we impose this so-called reduction now of $5.2 billion, which is in addition to the other reductions that the committee has made in the bill, it will all have to be absorbed in the last 6 months of the present calendar year. It is just a fact of life that we have already let July and August pass, operating on a continuing resolution. As Senators know, that is set for the previous year's level. This bill cannot possibly be finished and signed by the President in less than a month from now, and that will be 3 months of the time gone.

The appropriation bills take more time. Last year, the appropriation bill for the Department of Defense became law, I think, on the 22d of December. It could have been a few days before then, but it was in December. Then, for the first time, they will know where they are in the Defense Department.

We cannot just run out as though we are catching an animal or something and do these things. They have to be set in motion. So it will take the last 6 months of the year in absorbing this reduction of $5.2 billion, and that will be doing it at a rate of $10 billion a year, in a 6-month period.

There are a million employees, people in military uniforms, contracts that are in force, and many thousands of civilian employees. The machine cannot be stopped that fast, in such a short period of time.

A precedent was established here a few years ago, when a cap was put on spending, through a resolution. It came up at one time in connection with a tax increase. But we started that at the then current level of spending, and some exceptions were made, and we wound up with approximately half of the Government excepted from this operation. The war was on then, and the war is on now. We forget that. So I do not think that that resolution was a realistic precedent as applied to the present problem.

I would not create a job just to give it to some individual; but, at the same time, when all this machinery is going and these people are in jobs, to throw them out literally without any decent notice and no orderly procedure, simply because we want to vote for a resolution with respect to a reduction, is not the American life.

I have some actual figures on this. To save $3.2 billion in the defense payroll under the circumstances to which I have been alluding, it would be necessary to cut direct civilian and military manpower by approximately 30 percent—1.2 million people below the level planned for June 30, 1971. In short, Mr. President, to cut defense spending by $5.2 billion after the year already is well underway, as I have described, will be cutting more than 2 million jobs—about 1 million in the defense industry and more than a million in direct employment.

That is the way the knife will cut if we adopt this amendment and it becomes law. It might be said that that is not correct. I believe it is correct. We asked them to make the calculations, and I think we are dealing with people who are as honest as they can be with the calculations and their estimates. I think this is the only evidence before the Senate on what this will do to these civilian employees, in such a short period of time, with no chance to get ready. There is no way to do it in an orderly fashion, if it is just demanded that it be done.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. I yield myself 1 additional minute.

The only thing before the Senate that has been carefully weighed by a committee, with a report filed and a recommendation—although the other Senators are very able and very conscientious—the only thing before the committee, in a legislative way and according to our general operation schedule, is that $19 billion plus bill for procurement—hardware, tanks, ships, guns, submarines, airplanes, and other things that are necessary, particularly for the years ahead.

I plead with the Senate: Let us not go off at an angle here, not on this bill, in an effort to try to change the priorities that we all want to change—but in an orderly way—and do something we will have to come back and undo later, to the great harm of many citizens, and without saving money but losing money.

The PRESIDING OFFICER. Who yields time?

Mr. McINTYRE. Mr. President, will the Senator yield me 5 minutes?

Mr. STENNIS. I yield 5 minutes to the Senator from New Hampshire.

Mr. McINTYRE. Mr. President, the impact of the amendment offered by the distinguished Senator from Wisconsin confused me somewhat initially, since the bill before the Senate is a request by Defense for some $20,585,789,000 for procurement and research and development.

As a result of our briefings and hearings, the Armed Services Committee was able to recommend to the full Senate a reduction of the Department of Defense request of $20,585,789,000 to a figure of $19,242,000,000. This recommendation resulted, as I think I can demonstrate, from a great deal of hard work, a great deal of tough questioning, and many hours of study.

I have here this morning the report the R. & D. Subcommittee gave to the full committee on the work it did. We were examining of that $20,585,000,000 request, $7,345,000,000 for research and development, test, and evaluation. We started to take a look at the budget request back on February 3, with the Air Force coming in to discuss with us for an hour and a half the ABRES, or advanced ballistic reentry system, program. On that same day, we took a look at the B–1 bomber. We spent about 3 hours on those two subjects that day.

The next day, February 4, we had the Navy come in to talk about the E–2C. The R. & D. Subcommittee had some misgivings about what we thought was some duplication between the E–2C and the AWACS program. The same day we looked at the Aegis missile for 3 hours. We devoted the entire day to those two subjects.

On February 6, we met for an hour on the AWACS program, the airborne warning and control system.

On February 11, we met for 2 hours and a half with the Air Force on the Minuteman, asking questions and trying to determine whether there was any softness in the request that the Air Force was making for that program.

On February 12, we took up a program called Surface Effect Ships, for 2 hours with the Navy. We ran across something that bothered the subcommittee on R. & D. quite a bit. This is a joint pro-

gram between Commerce and Navy, but we found that Commerce was squealing out from funding its share of the program.

On February 16, we looked at the Army program on advanced helicopter development, which figured strongly later on in our decision affecting the Cheyenne helicopter.

On February 18, 2 hours were spent taking a good look at the Cheyenne itself.

On February 19, we were back with an interesting problem in the research and development field, what is known as Minuteman Rebasing. Two hours were spent on that.

Then moving to March 10, the Air Force was questioned seriously and at length for 2 hours on the supersonic cruise armed decoy, known as SCAD.

On March 11, the Navy was over to talk about ULMS. That is a far-out program of the future dealing with a new submarine and a new missile, a program that last year we were completely dissatisfied with in the R. & D. Subcommittee, resulting in a recommendation that the program be scratched, at least temporarily. Some funds were then put back in conference. This year the ULMS program is beginning to make more sense to the subcommittee. We see it as important to our future security.

On the same day, we spent 2 hours and a half on the Mark 48 torpedo. This is the torpedo that the Research and Development Subcommittee was very much interested in because we had an intuitive feeling that perhaps money could be saved in that area. This hope actually caused me to go to Antec in the Caribbean where the Mark 48 torpedo was being tested. We spent 4 hours on that program.

It will be interesting for the Senator from Wisconsin to note that this torpedo has now reached a final testing stage, so that the subcommittee felt there was no answer but to give the Department of Defense the money it needed to continue with the program. It is a torpedo of great potential for the security of the United States.

On March 16, the Navy discussed with us and we questioned them on the destroyer helicopter program. In this area we felt we found a softness or at least an area where we could save money.

On March 18, for 2 hours and a half, we discussed the undersea surveillance system—SOSUS—which I had the opportunity to visit later at Key West at one of the SOSUS schools.

On March 18, for an hour and a half, the Navy came over to tell us about their acoustics warfare program. Interestingly enough, the ASW, antisubmarine warfare, is deeply involved in the future defense of this country. The research and development subcommittee spent much time on ASW.

On March 23, we took up section 203. Ultimately, many hours were spent by the staff and by members of the subcommittee on this very difficult problem of section 203. We will have an amendment to offer later today on that.

On March 24, the Army's advanced ballistic missile defense was discussed for 2 hours.

On March 25, we reviewed section 409 dealing with the chemical and biological warfare program. Visits were then made to Fort Detrick and Edgewood Arsenal.

On March 25, the Navy discussed the advanced surface ship sonar development, for an hour and a half.

On March 26, the Navy brought in Admiral Caldwell who is a very distinguished naval officer and very well informed. We spent 4 hours discussing antisubmarine warfare. In all the money that will be requested for ASW development, we found very little that we could intelligently and with reason reduce.

On March 31 we spent up to 2 hours discussing defense communications planning.

On April 1, we discussed nuclear weapons effects research programs and testing, for 3 hours.

On April 2, we discussed ARPA programs for 2 hours and a half.

On April 8, we discussed the Federal contract research centers, and we visited one on the outskirts of Washington. Behavioral and social sciences were also given a going over.

On the following day, April 9, we looked at the SAM/D program, on which we recommended a strong reduction last year. That reduction was restored in conference, we recommend a reduction this year of $16 million.

On April 10, the Army's Pershing missile was looked at and discussed, as were the testing programs of the services.

On April 11, the Lance missile program to replace the Sergeant was examined for 2 hours.

On April 16, we took up for 2 hours and a half the highly controversial S3A, which is a plane to fly off carriers in the ASW program. Ours was a tough decision on that one, but we finally decided to go along with the program, at least for another year.

Finally, on April 20, we discussed one of the programs which the Senator from Wisconsin has been questioning—the STANO sensor program.

The important thing to realize is that we looked at many programs and tried to cut back on those programs. They were all discussed and evaluated thoroughly. We cut no more than we did because we found no more to cut.

When the Senator from Wisconsin comes here, therefore, and talks about a $5.2 billion cut, I wonder what he expects from the Subcommittee on Research and Development and Tactical Air Subcommittee, headed by the Senator from Nevada (Mr. CANNON), that have spent many hours trying to find these dollars in an intelligent way that the Senator wants to cut, and to do so with something less than mere intuition.

I expect that if the amendment carries, the judgment of someone else will be superimposed over the judgment of the Subcommittee on Research and Development.

Mr. PROXMIRE. All the amendment contemplates is that the rest of the Defense Department would do exactly what the Senator's subcommittee did. The subcommittee made a cut of 6 or 7 percent in the procurement bill. We want the same kind of cut in the rest of the Defense Department budget.

Mr. McINTYRE. But the amendment does not say that.

Mr. PROXMIRE. Mr. President, we believe there should be a whole series of areas in which the Defense Department budget could be cut. It would not necessarily be research or procurement. I will show that in a moment. That would be at the option of the Defense Department itself.

Mr. McINTYRE. This is proposed after the long hours we spent in subcommittee thus far this year. I think it would have been appropriate if the amendment had exempted research and development.

I am not sure, but I feel that the Senator from Wisconsin must be aware of this. I am not sure how much deeper we can cut on a technological basis. That area is so important.

I feel that I should point out the long hours of work that the subcommittees have spent on this matter since February to the point where it dominated our time. It is almost the first of September now. We have been in executive session time and time again because of the difficulty of getting quorums.

A lot of work has been done by the Armed Services Committee, the Senator from Mississippi, who is an excellent chairman, fair, impartial, and hard nosed.

I think the Senator is aware that the Secretary of Defense has taken a position. The Senator knows that the Secretary has a reputation of being on the line on this matter. This is a rock bottom budget. Yet, somehow or other we found $1.3 billion to cut. That does not seem to be inconsequential.

Mr. PROXMIRE. It is exactly the point. If the Senator's subcommittee can find $1.3 billion or 7 percent in procurement to cut, the Defense Department can find $3.9 billion to cut in the remainder of the operations for a total reduction of 7 percent. They should be hard nosed and disciplined. They should be required to make the hard choices. That is all we are asking for.

Mr. McINTYRE. Then the appropriate time to bring up the amendment would be when the appropriation bill is here.

Mr. PROXMIRE. That will be 2 months later. We will then really have a time problem in making the cut.

Mr. STENNIS. Mr. President, I yield 2 minutes or such time as the Senator from Maine may use.

The PRESIDING OFFICER. The Senator from Maine is recognized for 2 minutes.

Mrs. SMITH of Maine. Mr. President, before us now for consideration is an amendment which would impose a flat percentage reduction on the defense budget. The proponents of this amendment seek to accomplish indirectly that which they failed to do by direct means.

I want to make it very clear that there are items in the bill that I did not want to see included. I also agreed to a number of reductions during the markup which caused me some dismay. While I felt very strongly that certain programs should not be cut, I, too, recognize not only the need but the demand for reducing Federal expenditures.

But, Mr. President, unlike the arbitrary cut as proposed in this amendment,

the committee reductions were made on the basis of sound justification and after a thorough and painstaking analysis of the budget submission.

A $5.2 billion cut on this bill that has been so thoroughly explored and so thoroughly explained by the distinguished chairman, the Senator from Mississippi, is in my opinion a dangerous way of legislating. With the continuing resolutions going on, the prospect of this cut, if it were to go through, would mean not only a $5 billion cut, but could mean a $10 billion cut.

This is a national security matter. I am sure that the distinguished Senator from Wisconsin is as security minded as the rest of us. If he could sit at the table in the Armed Services Committee under the direction of its distinguished chairman, and realize how thoroughly we studied every item and how we examined the expenditures in previous years, he would know that there has already been a sizable cut and I am sure he would better understand how I feel about it.

We see a concerted effort here to nullify the committee system which in the end would lead to the U.S. Senate becoming a legislative quagmire.

An across-the-board percentage reduction does little to enhance public confidence in the legislative process.

In my judgment the issues underlying the thrust of this amendment have already been subjected to very serious consideration. I see no way to justify a reduction of $5.2 billion, and I assure my colleagues that such a cut would have a most serious impact on our national security.

Mr. President, I abhor war as do we all, and I join every citizen in the Nation in begrudging the resources that must be allocated for defense. If we are to give further consideration to the reduction of the Defense budget, I submit that this be done in a more rational and responsible manner. There is no way of justifying the cut as proposed in this amendment. To me it represents a substitute for sound judgment and I shall vote against it.

Mr. President, I know of no one on the floor of the Senate who is more economy minded than the Senator from Maine. I think this is well known.

I am troubled, however, always when an across-the-board cut is proposed.

I will have to vote against the proposal. While I would like to see a $5 billion cut, and I hope this will come to us before very long, I think it is a dangerous way to act as a committee of the whole on the floor rather than to take the committee's recommendations.

Mr. STENNIS. Mr. President, I thank the Senator from Maine for a splendid statement.

ORDER OF BUSINESS

Mr. STENNIS. Mr. President, I ask unanimous consent that we may have a brief quorum call on divided time, and I suggest the absence of a quorum.

The PRESIDING OFFICER. Is there objection? The Chair hears none and it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, I yield 5 minutes to the Senator from Massachusetts.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 5 minutes.

Mr. KENNEDY. Mr. President, I thank the Senator from Wisconsin.

Last February, I called for a new realism in our defense budget. Today, I have the opportunity to begin to implement this recommendation.

The Proxmire-Mathias amendment provides for a sensible ceiling on Pentagon expenditures. It reduces total defense outlays by about the same percentage as the Armed Services Committee has already cut the military authorization bill. It is a major contribution to the fight against inflation and a first step toward reordering our national priorities.

Just a short while ago, the President vetoed significant education and housing bills on the ground that they were too inflationary. But military expenditures are the most inflationary of all Government expenditures because they do not supply Americans with any of the goods and services they desire. In fact, when the military budget gets high enough, as in World War II, we require a sweeping system of controls to keep the prices down. Thus, a reduction in military spending is an effective way to fight inflation.

But there are even more pressing reasons to reduce and reallocate military spending. Every American knows what these reasons are—crime, poverty, pollution; inadequate schools, inadequate housing, inadequate transportation. The $5 billion saved by this amendment could go a long way toward meeting these domestic problems.

Of course, no reduction in defense outlays would be acceptable if it impaired our national security. But this 7 percent reduction does not do so. There are many areas where substantial cuts can be made without jeopardizing our military posture.

The most obvious area is manpower. Twenty-five years after World War II, for example, we continue to deploy 320,000 troops in Europe and 250,000 of their dependents at a yearly cost estimated to run between $12 and $15 billion. I do not suggest that all these troops be withdrawn. Some must remain to demonstrate to both NATO and the Warsaw Pact that any conflict in Western Europe will inevitably involve the military might of the United States. But we should withdraw a substantial number of these troops, and let the increasingly prosperous nations of Western Europe contribute more to their own defense.

I think this would really follow the recommendations made by President Eisenhower 14 years ago. He suggested the United States should consider withdrawing 2½ divisions from Western Europe.

What has happened in the meantime, particularly the improved relationship between the Soviet Union and the Federal Republic of Germany, demonstrates that we should consider reduction of the number of troops we have in Western Europe.

And as the distinguished Senator from Illinois (Mr. PERCY) and other Senators have pointed out, we should secure larger contributions for support of the troops that remain from the West European countries. In this way we could reduce our military budget, but also maintain our responsibility to the countries of Western Europe.

In Korea we have two full divisions totalling 56,000 men. As the administration itself is beginning to recognize, this is a much larger force than necessary for our national security. For almost 20 years we have armed and trained the Army of the Republic of Korea, at a cost of nearly $3 billion. That army should be capable of meeting any threat from the North. We need only deploy a small number of troops—if any at all—to demonstrate our commitment to South Korea's independence.

I was heartened by statements relating to the Vice President's trip to South Korea which indicate that the administration is for a reduction in the number of the American troops in South Korea.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. I yield the Senator 2 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 2 additional minutes.

Mr. KENNEDY. Substantial savings can also be obtained by a closer examination of our naval needs. At present we maintain a fleet of 15 attack carrier task forces, even though the Soviet Union does not have a single attack carrier, and also has far fewer overseas bases than we do. Charles Schultze, the former Director of the Bureau of the Budget, indicated in testimony before the Joint Economic Committee that the size of our carrier fleet was the most questionable item in the military budget. The cost of each task force, which includes the aircraft carrier plus supporting ships is about $400 million per year. This is more than the budget request for the entire legislative branch of the Government, including the Senate, the House, the Capitol, the Library of Congress, the Government Printing Office, the General Accounting Office—all the salaries and other costs. Yet, as Mr. Schultze suggested, the reason we have 15 attack carrier forces may be purely historical.

In the Washington Naval Disarmament Treaty of 1921, the U.S. Navy allotted 15 capitol ships. All during the nineteen-twenties and thirties, the navy had 15 battleships. Since 1941 (with temporary exception of a few years during the Korean War) it has had 15 attack carriers, the "modern" capital ship. Missions and "contingencies" have changed sharply over the last 45 years. But this particular force level has not.

Clearly, when an attack carrier task force costs $400 million each year, it needs more than an historical justification. If, as Secretary Laird recently announced, we are not policemen of the

world, do we really need 15 attack carriers?

Another questionable item in the Navy's budget is the antisubmarine warfare carriers. Former Secretary of Defense McNamara conceded that this is "a relatively high cost system in relation to its effectiveness." It can only be made more effective at great expense, and therefore its deployment should be promptly reexamined.

DOD should also examine whether both the Navy and the Air Force are presently planing to procure tactical aircraft which use far more sophisticated and expensive equipment than is really necessary. There is a danger that both services are paying exorbitant amounts for "gold-plated" new planes which perform only marginally better than their predecessors, At a time when austerity is the watchword, this seems a good place to start being austere.

There are many other items I could point to, ranging from the new manned bomber to the Pentagon's $39 million public relations budget.

That public relations budget is $3 million more than the administration request under the Older Americans Act. Certainly, we should take a hard look at this ordering of priorities.

Obviously we have responsibilities around the world, but in the past we have been willing to accept these responsibilities and continue them without the appropriate review of both our commitments and the weapons needed to meet them. We can no longer afford to be so casual.

I feel the amendment of the Senator from Wisconsin (Mr. PROXMIRE), which is cosponsored by the Senator from Maryland (Mr. MATHIAS) is responsible and thoughtful, and that it fulfills our responsibility to provide for the national security of the United States without ignoring our domestic needs.

Mr. STENNIS. Mr. President, I yield 5 minutes to the Senator from North Dakota.

The PRESIDING OFFICER. The Senator from North Dakota is recognized.

Mr. YOUNG of North Dakota. Mr. President, there are many reasons why the pending amendment should be rejected. Let me name a few:

First, this is not the appropriate legislation for such an amendment. It would have been far better if it had been offered as an amendment to section 501 of the second supplemental appropriation bill, 1970, imposing a limitation of fiscal year 1971 budget outlays. This bill was passed by the Senate on June 22.

Second, it is too late to impose a limitation of this magnitude. We are now nearly 2 months into fiscal year 1971, and the Department of Defense could not establish the necessary administrative and management machinery that would be required for an orderly implementation of such a limitation.

The amendment does not reflect the fact that the fiscal 1971 estimated outlays for military functions of $71.2 billion represents a reduction of $6.7 billion below the fiscal 1969 level and $5.3 billion below the fiscal 1970 level.

The amendment does not reflect the fact that we are still involved in a major war and the tremendous cost of inflation. When stated in fiscal 1969 dollars, the fiscal year 1971 estimate for military functions outlays is $65.3 billion—a reduction of $12.6 billion below the fiscal 1969 level and $6.5 billion below the fiscal year 1970 level.

The sponsors of the amendment have failed to recognize that the fiscal year 1971 estimate of $71.2 billion for military functions outlays includes approximately $26.5 billion to liquidate obligations incurred pursuant to authority granted in previous years and in July and August under the authority of the continuing resolution. I want to discuss this point in detail.

Mr. President, the sponsors of the amendment state:

> It cuts approximately 7 percent below the amount proposed in the budget.

I might add that this alone is sufficient reason for the amendment to be rejected, but, in addition, it must be borne in mind that the amendment, in its application, will force far greater reductions. As I stated, $26.5 billion of the $71.2 billion represents funds that are required to liquidate obligations that have been incurred pursuant to the authority granted in appropriations for prior fiscal years and for the months of July and August under the authority of the continuing resolution.

These are bills the Government owes, and the Department of Defense cannot take any action to make a reduction in these funds. When this $26.5 billion is eliminated from the total of $71.2 billion, we have $44.5 billion left that is subject to some degree of control by the Department of Defense.

The proposed $5.2 billion reduction would have to be made in this remaining $44.5 billion—a reduction of approximately 12 percent. To make reductions of this magnitude would completely wreck our defense posture.

The sponsors of the amendment state further:

> There are numerous precedents for general cuts or limitations on spending for both military and civilian programs.

In my opinion, the instances cited are not a precedent for a limitation on the outlays for specific programs for one department of the executive branch of the Government. However, there is a precedent for an unsuccessful effort to impose such a limitation.

The Department of Defense Appropriations Act for fiscal year 1953, as it passed the other body, included a limitation of $46 billion on the expenditures of the Department of Defense. This amendment was rejected by the Senate and the conference committee accepted the Senate position on the matter. It was not a workable procedure for fiscal year 1953 and it is not a workable procedure for this year.

Mr. President, on May 20, 1970, the Department of Defense Appropriations Subcommittee, of which I am the ranking minority member, concluded 5 weeks of hearings on the Department of Defense appropriation bill for fiscal year 1971. We heard 155 witnesses. The printed hearings will total more than 4,300 pages.

The PRESIDING OFFICER. The 5 minutes of the Senator have expired.

Mr. STENNIS. Mr. President, I yield the Senator 1 additional minute.

Mr. YOUNG of North Dakota. It was on the first day of these hearings, February 20, in joint session with the Committee on Armed Services that Secretary Laird clearly stated the challenge we must consider in enacting appropriations for the Department of Defense. He said:

> As we reduce our defense spending and move further into negotiations, we should have no illusions about the current state of world affairs. I am obliged to report to you, for example, that the Soviet Union is not making similar reductions in its defense budget. In fact, the Soviet Union is pulling abreast of us in many major areas of military strength and ahead of us in others. The Soviets are continuing the rapid deployment of major strategic offensive weapons systems at a rate that could, by the mid-1970's, place us in a second-rate strategic position with regard to the future security of the Free World.

Mr. President, the adoption of the pending amendment would hasten the day when we would find ourselves in this second-rate strategic position. I cannot escape the conclusion that the adoption of this proposed amendment would be the blueprint to making the United States a second-rate power to Russia. I urge the Senate to reject this amendment.

Mr. PROXMIRE. Mr. President, I yield 1 minute to the Senator from New York (Mr. JAVITS).

Mr. JAVITS. Mr. President, I shall support the amendment, without necessarily—and all of us are in the same position—knowing what will finally come out of conference. It would undoubtedly be less than the $5.2 billion now contemplated when it comes out of conference, if it is adopted.

My reason for supporting this amendment is that we must readjust our national priorities if we are not to sacrifice domestic tranquillity to a foreign war. The people had a chance to vote for guns or butter on a tax reform bill, and they decided not to pay the bill for both. We face now a deficit which may run as high as $10 billion. We should not provide such disproportionately large sums for the defense budget.

It seems to me we are faced with no choice except to readjust our priorities on a broad scale, which this amendment requires, because we simply must devote more money to cities, schools, health, ecology, and many other priorities needed at this time. I shall support the amendment.

The PRESIDING OFFICER. Who yields time?

Mr. PROXMIRE. Mr. President, I yield myself 5 minutes.

Mr. President, this vote is the test vote of 1970 on economy in Government. Here is the test vote on Government spending. This amendment, if adopted, would cut spending far more than the combined increases in the President's budgets in all appropriation bills passed by the Congress to date. It would reduce spending far more sharply than the Nixon vetoes would reduce it.

The vote today will really separate the big spenders and those who are fiscally responsible. As the Senator from New York said so eloquently, this is the priorities amendment.

The Wall Street Journal of this morning, on its front page, under "Washington Wire," states:

> Administration insiders now concede the possibility of a deficit lurching to $10 billion or $15 billion this fiscal year—far beyond the official projection of $1.3 billion; the deficit for July was $6.7 billion, against $3.1 billion for July of last year. But further sizable spending cuts are near-impossible; the Administration is locked into spending commitments.

That means two things: It means we cannot have the kind of educational programs, the kind of housing programs, the kind of antipollution programs that we all feel are necessary for our country, and in 1972 the situation is going to be even more difficult. We are told that without military spending cuts the deficit could then be $15 billion to $25 billion.

This amendment is not an amendment which will weaken our security. The fact is—and this has not been disputed; we have checked it and double-checked it—that the Russians are spending 17 billion rubles, roughly the equivalent of $20 billion. Translated into the comparative cost of living between their country and ours, it is going to spend $40 billion American purchasing power dollars on its military. So this amendment would provide that we would still spend $26 billion more than the Russians spend.

Furthermore, there are many areas where this cut can be made. One would think, to listen to the opponents, that there is no fat in the military budget, that the entire cut would have to be taken out of substantive programs. The fact is that we have excessive, redundant bases, over 400 major bases, scattered around the world. We had a documentation by a distinguished Under Secretary of Defense last Thursday night on waste and fat in procurement, which he called a mess, and in which he said we were overspending and in which he indicated the obvious cure would be to have less money available to the Pentagon for procurement.

We have a manpower situation that has become a disgrace with 12 men in supply and support for every one in combat—the worst ratio in the history of warfare.

We have a European commitment, 25 years after the end of World War II, with 320,000 American troops still stationed in Europe, and no convincing case made that we cannot withdraw 50,000 or 100,000 of those troops.

We are still voting in terms of spending for a two-plus war strategy, although the administration accepts, they say, a one-plus war strategy. Analysis by the Brookings Institute shows that we could have some $9 billion a year if we actually followed the one-plus war strategy which the administration says it is following.

It has been pointed out that the Pentagon has been spending some $40 million a year in public relations.

This amendment, if it were entirely concentrated—we are not assuming it should be, but if it were entirely concentrated in the strategic arms area, would mean that we could still beef up our nuclear weapons from 4,200 full nuclear loads to 7,000 within the next 5 years. This would mean that instead of having 10 times the number of such weapons necessary to devastate Russia, kill 75 million Russians and knock out 75 percent of its industry, we would have 15 times as many. The bill itself, unamended, contemplates we should have 20 times as many. We are not saying the entire savings should be in that area, but that option would be left open to the Pentagon.

Still not mentioned are a speedup in the withdrawal from Vietnam, or a slowdown in the rotating of troops and officers, or the adoption of uniform accounting standards, legislation for which we have passed, and which Admiral Rickover says could save us $2 billion a year.

Nor, Mr. President, have we mentioned the $8 to $10 billion a year in surplus supplies sold off at a few cents on the dollar, equal to 20 to 25 percent of all the supplies we buy.

This is the kind of waste we are permitting to continue in the Pentagon, without providing the discipline that Congress could provide—the one real authority and check we have to require efficiency in military operations, and require an end to the redundancy of weapons and the kind of manpower and materiel waste from which we have suffered so much.

Mr. President, that is what this amendment would accomplish. I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. FULBRIGHT. Is the Senator's time exhausted?

Mr. PROXMIRE. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 10 minutes remaining.

Mr. FULBRIGHT. Three minutes?

Mr. PROXMIRE. I yield 3 minutes to the Senator from Arkansas.

Mr. FULBRIGHT. Mr. President, I support the amendment of the Senator from Wisconsin. For several months now, there has been a great deal said on this floor about the state of the finances of this country, and even more has been said by the executive branch and others about the spendthrift Congress.

We have had three vetoes of major bills relating to domestic affairs—very important domestic affairs: education, housing, water and sewers, and so on. The amount by which those bills as passed by Congress exceeded the amount acceptable to the President, as I recall it, was something less than $1.5 billion. Because of that, because we passed bills exceeding the President's requests by approximately $1.5 billion, nearly every day there is published an article inspired by some member of the executive branch to the effect that this is a spendthrift Congress, an irresponsible and wasteful Congress.

I do not know how we can be responsible, in this body, without taking into account the condition of our finances and the needs of our country, without having to make decisions with regard to the priorities. That is what is important, and most important, to our country.

The Senator from Wisconsin has given more attention to this aspect of our affairs than nearly any other Member in this body. His committee on the economic report has had very fine hearings, with the finest minds in this country. He has made efforts, and I have supported them, to cut specific items of various kinds, such as the ABM and others, and we have lost. It may be that there is some valid reason for not cutting the ABM, although I have not yet found one. I have not ever seen a good reason. But the Senate thought otherwise.

Now the Senate is turning to the last resort, which is to say, in effect, "If you will not accept specific cuts, this is a general cut," and leave it up to the discretion of the administration as to where the reductions should be applied; because there are many activities carried on by the Military Establishment where reductions could be effected. With respect to personnel and foreign bases, for example, there are hundreds of foreign bases, and I am quite sure a third of them could be closed without the slightest effect upon our security. They are simply held on and kept in operation through inertia. They were created during a period of tension in the days of Stalin, and in a big bureaucracy, there just is not enough initiative and interest to close them. So they go on, with thousands of people stationed in remote places around the world. Most of those places are rather pleasant places in which to live, so they are hard to give up.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. FULBRIGHT. Two more minutes?

Mr. PROXMIRE. I yield the Senator from Arkansas 2 more minutes.

Mr. FULBRIGHT. So I think the approach of the Senator from Wisconsin is the only way left to meet the President's criticism about a spendthrift Congress. If we could pass the amendment offered by the Senator from Wisconsin, we would certainly bring the amounts which have been voted by this Congress back into line with the President's overall budget requests. I have not figured it out to the dollar, but I know it would make a substantial contribution toward bringing the overall expenditures down to or below the President's requests; and I do not have the slightest doubt that such a cut could be absorbed in the various activities of the military without any substantial effect upon the security of the country.

The President's own policy recently, in the Middle East and in the SALT talks, if I interpret it properly, is an effort to bring about détente, to bring about a lessening of tension and better relations with the Russians. I can think of nothing that would be more impressive as a contribution to that overall effort of bringing about better relations with the Russians than a cut in military expenditures. It would be a signal to the Russians that we are not determined to press the arms race on and on and on, with the

only logical explanation being that we expect to have a confrontation sooner or later, and we are getting prepared for it.

I do not think this would in any serious way weaken us, but it would be a sign to the world and to the Russians that it is now our intention to move toward a relaxation of tensions in international relations.

I thank the Senator.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President——

Mr. FULBRIGHT. Mr. President, if the Senator will yield me just a moment, I ask unanimous consent to be added as a cosponsor of the amendment, No. 862——

Mr. STENNIS. While the Senator is doing that, I yield 2 minutes to the Senator from Michigan.

Mr. JAVITS. Mr. President, would the Senator allow me to do the same?

Mr. STENNIS. I am sorry, I do not have the time, gentlemen.

Mr. GRIFFIN. Mr. President, we hear the cry in this debate for a reordering of priorities. The distinguished Senator from Wisconsin has referred to his proposal as the "priorities" amendment. This would seem to assume and suggest that there has been no reordering of priorities. I want to take just a moment to remind the Senate and those who are following this debate that under the Nixon administration we have already witnessed dramatic reordering of our national priorities.

In 1961, the Federal grant was spending 48 percent of the budget on defense. In 1969, we were spending 44 percent of the Federal budget on defense. But the fiscal 1971 budget, submitted by President Nixon, allocates not 48 percent, not 44 percent, but only 37 percent of the Federal budget for national defense.

This is the first time in over 20 years that any administration has allocated more money in the budget for human needs and resources than for defense. This administration has already cut defense spending nearly $12 billion below the level of the last Johnson administration year. But there is a limit and we must not cut below the minimum absolutely essential for national security.

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. Each side has 5 minutes remaining.

Mr. STENNIS. I yield 3 minutes to the Senator from Washington.

Mr. JACKSON. Mr. President, I know that the distinguished chairman of the Committee on Armed Services has already made it a matter of record that the pending amendment would decimate the defense budget in a most unfortunate and irresponsible way. I wish to take but a moment of the Senate's time to join with him in opposition to this ill-conceived amendment.

I wish to make it clear at the outset that opposition to the pending amendment in no way suggests opposition to the full exercise of congressional responsibility in limiting defense expenditure to the minimum level consistent with the requirements for a sound approach to our national security. It is, Mr. President, foolish in the extreme to believe that the issue before us is one of congressional responsibility or the ordering of our national priorities or the promotion of economy in Government. There is no necessary relationship between these objectives, worthy in themselves and deserving of support, and the amendment before us.

Let me be perfectly clear: The exercize of our responsibilities, the ordering of our priorities and the effort to assure economy must be based on careful, deliberate, and prudent limitation on expenditure of the sort that has been carried out by the Commitee on Armed Services. The committee has, as the Senate knows, examined every line in the Procurement Act and brought to the floor a measure that is $1.3 billion less than the House version of the act. It has acted with care and discretion that contrasts sharply with the careless and heavy-handed approach of the pending amendment. It is not, Mr. President, an exercise of our responsibility to order a budget cut whose impact we cannot even begin to assess, much less support with careful argument. It is, I believe, a derrogation of responsibility. By failing to request specific budget cuts, the wisdom of which could be argued, we are being asked to give to the executive branch the sole authority to spend—wisely or unwisely—whatever arbitrary figure a random guess has placed before us. If a $5 billion cut cannot be defended on a program by program basis, it cannot be defended in the aggregate. Obscuring the effect of our action is no substitute for precise argument.

Moreover, Mr. President, it is naive to believe, as apparently some do, that the answer to waste and inefficiency lies in reducing the funds available to be spent. There is no reason to suppose that waste and inefficiency will not continue at a lower spending level, or even to suppose that the percentage of funds spent unwisely will decline as the budget declines.

It is the responsibility of the Senate to assure that unnecessary programs are not funded, and the first step in achieving this result is to identify which programs are unnecessary or unwise. We have tried to do that in committee. We have considered amendments that identified programs to which some Senators objected and, after careful debate, we have sustained them. The pending amendment is nothing more than a substitute for the failure of its sponsors to convince the Senate that there are programs whose deletion would leave our national security unimpaired.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. I yield 1 additional minute to the Senator.

Mr. JACKSON. I would point out, Mr. President, that many supporters of the pending amendment have participated in an effort to determine which defense programs can be canceled or deferred. Failing to argue that the results of their research have convinced them—and ought to convince the Senate—to enact specific cuts, they have come to the floor with an amendment that casts doubt on the confidence with which they support their own findings. I am referring here to the desultory report of the Members of Congress for Peace Through Law. Had the recommendations of that report been intended seriously to assist Congress in enacting sensible legislation, it is those recommendations—program by program—that would be before us now, and not an ill-considered amendment that would impact on programs covering several fiscal years and affecting at least 10 billion dollars in obligational authority.

I would welcome any effort, Mr. President, to bring before the Committee on Armed Services serious recommendations to limit defense expenditures on which we may exercise our constitutional authority. This is the least we can do in our continuing effort to provide for an adequate level of national security for a minimum defense budget. The pending amendment, far from advancing these objectives, is but an irresponsible caricature of them.

Mr. STENNIS. Mr. President, I yield myself 1 minute.

I will have to leave the Chamber for a short time following the vote on the pending amendment. I wish to announce my support of the amendment worked out by the Senator from New Hampshire which he will offer, and which I think is needed.

Mr. President, in considering a $5.2 billion cut in Defense spending for this fiscal year, as proposed by amendment No. 861, we had better recognize that we may well be talking about well over 2 million jobs by next June 30.

Let us consider a few facts.

Fiscal year 1971 is already well along—we are at the end of the second month, with 10 months remaining. And it will be some time yet before this bill is enacted into law.

Just about half of the Defense budget for this fiscal year is for the military and civilian payroll; the other half is for purchase of goods and contractual services.

Fiscal year 1971 spending for purchases is already largely determined—it will result from contracts already in existence, made in prior years or in July and August of this year. A very small amount of fiscal year 1971 spending will result from purchase contracts to be entered into in the next 10 months. In fact, I am advised that to cut purchase spending by $2 billion for the balance of the year, the Department will have to cut back by about $12 billion on new contracts—and this in turn will cut industry workload by about one-third, the equivalent of about a million jobs, by next June.

This would leave about $3.2 billion in spending cuts to be achieved by reducing the number of military personnel and direct civilian employment of the Department. Once again, we must recognize that there is a significant leadtime involved. Large further personnel cuts cannot be made immediately. It takes several months before a cutback directive can be translated into less personnel on the

rolls. If the Department began promptly, it would be about January before employment reductions would begin to take effect, with further reductions each month thereafter. To save $3.2 billion in the Defense payroll under these circumstances, it would be necessary to cut direct civilian and military manpower by about 30 percent—1.2 million people—below the level planned for June 30, 1971.

In short, Mr. President, to cut Defense spending by $5.2 billion after the year is already well underway, would be cutting over 2 million jobs—about a million in defense industry, and over a million in direct employment.

To appreciate what this means, we have to understand that very large manpower cuts are already reflected in the fiscal year 1971 budgets as submitted. Measured from the wartime peak in 1968, the budget proposed cuts of 639,000 military personnel, 142,000 civilians, and 1.3 million contractor personnel by June 30, 1971—a total manpower reduction of over 2 million.

The cut that is already underway, involving more than 2 million jobs spread over 3 years, has itself created a great many problems. It has certainly added to our unemployment problems, while causing turbulence in Defense programing and in defense-related industry. These problems would be compounded many times over if we had to compress a further 2 million job cut into the short space of 10 months.

And, Mr. President, if we are to cut Defense spending by $5.2 billion in this way—$3.2 billion in direct payroll and $2 billion in purchases—we would end up on June 30, 1971 with a military force under 2 million men, about the same level as we had on June 30, 1941, 6 months before Pearl Harbor. We will face a chaotic situation in defense industry, as contracting volume is cut by $12 billion to achieve $2 billion in current year spending cuts, compounding a situation that is already critical.

A cut of $5.2 billion in Defense spending, it is said, is only about 7 percent of the total. But it quickly becomes a 30-percent problem when it must be effected through progressive cuts in contracting and employment, beginning after the fiscal year is well underway. Under the circumstances, a cut of $5.2 billion in Defense spending would produce chaos in defense manpower, including defense-related employment in industry.

Mr. PROXMIRE. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Wisconsin has 5 minutes.

Mr. PROXMIRE. I yield the remainder of my time to the majority leader.

Mr. MANSFIELD. Mr. President, more than a quarter of a century after the end of the Second World War, approximately 535,000 U.S. troops, dependents, and U.S. workers are still in Europe. It takes $14 billion every year out of the defense budget to maintain that unnecessary force and those unnecessary dependents and those unnecessary U.S. workers.

This country has more than 2,000 bases, large and small, scattered throughout the world. The cost of this, according to the latest figure I received some months ago, is $4.8 billion a year. Why, 25 years after the end of the Second World War, do we have to have so many bases in so many countries, having so much in the way of personnel, and costing so much in the way of Government expenditure? Why, after 25 years, do we have to have this amount of troops, dependents, and U.S. workers in Western Europe, at a cost of $14 billion a year out of the defense budget?

Mr. President, I support the Proxmire-Mathias amendment putting an expenditure limit of $66 billion on the Defense Department for fiscal year 1971. In my judgment the imposition of such a ceiling is the only way that this Nation's fiscal and economic house can be put in order. Talk is easy. It is time to act on the hard choices that must be made.

When the budget was proposed this year for fiscal 1971, the strength of the economy was misjudged. It was estimated that tax revenues would yield sufficient funds to provide a surplus of $1.3 billion. Unfortunately, the estimate was wrong. It was later revised in May of this year to reflect a deficit of over $1.3 billion.

The economic slowdown during past months provides an even more bleak forecast. It is now estimated that the loss in tax revenues—because of the economic recession—will be up to $15 billion. In other words, we may now expect $15 billion less than what the administration projected when the budget was originally proposed in January. That loss will be felt in every department of Government. It will be felt in the health and welfare programs that are so vital; in the fight to preserve the environment and in the education needs. As we have seen, the loss has been dramatically felt already in our vital housing and urban assistance programs.

It was in January that the Defense Department was allocated over $71 billion for fiscal 1971. But now we know that the Government will receive perhaps $15 billion less and all I ask the Senate is: Where will the Government make up this revenue?

Will it be by cutting education?

Will it be still more from housing and urban assistance?

Will it be from hospital construction as was attempted?

Will it be from health research?

Or will it be instead from the Defense Department which has recently learned from its own study that the overall efficiency of its operations and spending is greatly deficient.

The Senators from Wisconsin and Maryland can certainly document precisely those areas where the cuts can be made. Manpower reductions alone could contribute the greatest share of the reduction. Those troops returning from Southeast Asia and those hopefully to be removed from Europe could account for over $3 billion in savings if the levels of the Armed Forces are correspondingly reduced.

The experience of the Senate over the past 2 years should reinforce the approach taken by this amendment. When efforts are made to meet head-on one weapon system after another, the Senate is deluged by Defense Department reports, secret documents, and what not that accomplish the necessary obfuscation. Many of the systems deemed in one year as essential by the Executive in order to defend against the Senate's criticism are dropped the following year by the Pentagon for the very reasons the Senate expressed. What is Congress role in determining the expenditure levels of the various departments? That level of expenditure really decides national priorities.

Giving to the Defense Department the right to eliminate what they consider most expendible faces the question realistically. It is what happens today, anyway. The Defense Department now determines what is necessary and how much it costs. The rest is provided by Congress. Let Congress at least put a ceiling on what they may spend and let the competition for the funds within the Pentagon determine the elimination of the least necessary items.

In short, we can do more today to determine priorities than we have done all year. This is the Senate's opportunity to contribute to balancing the books so loudly heralded when education bills are passed, when hospital construction bills are passed, when housing bills are passed. But those measures contain much, much less compared to what we are here talking about. There is more money to be saved with this amendment than can be saved in all of the rest put together.

For those who cry out to cut spending, for those who say let us be fiscally responsible—this is their opportunity to act with their vote instead of their voice.

Mr. HART. Mr. President, today's vote on this amendment to limit Pentagon spending to $66 billion may be as important a vote as the Senate will have this session on the question of reordering priorities.

The amendment, of which I am a cosponsor, reduces the total Pentagon budget request of $71.2 billion by about $5.2 billion.

In considering this amendment, we must remember that within the last 12 months, the President has vetoed two education appropriation bills and one housing appropriation bill because Congress approved more funds than the President requested.

The President vetoed the education funding bill for fiscal year 1971 because Congress added $453 million to the budget request.

The President vetoed the housing money bill because it exceeded the budget request by $541 million.

The twin ironies of that second veto are: $700 million of the funds contained in the bill would not be spent this year and therefore, are not inflationary;

And, under the President's priorities, the bill contains more funds for the space agency than for the housing department.

Even without consideration of those two ironies, the fact remains that the President vetoed the two bills because together they exceeded the President's funding requests by $994 million.

That means if we pass the amendment

now before the Senate, the President could accept the priorities set in the education and housing bills as passed by Congress and still be more than $4 billion ahead of the game.

And if, indeed, the principal concern is the effect of Federal spending on inflation, a cut in defense spending will do more to cool a heated economy than cuts in education and housing.

As a matter of fact, a convincing case can be made that spending for education and housing are necessary to combat inflation.

Some will argue that a 7-percent cut in Pentagon spending will be detrimental to the Nation's security.

The fact is that the Senate Armed Service's Committee recommends a cut of almost 7 percent in that portion of the Pentagon budget covered by the military procurement authorization bill. Those recommended reductions will be part of any overall cut we may approve today.

The fact is that Pentagon projects are still plagued with costly overruns such as the $2 billion overrun on the C–5A. One effective way to halt, or at least decrease such overruns is to put pressure on Pentagon planners to improve procurement procedures by setting a reduced overall spending limit.

The fact is that the administration is prepared to spend almost $1 billion this year on an ABM system which it will have to tear down if it gets the arms limitations agreement it wants.

The fact is that we still have 3 million men under arms, and according to the New York Times, 429 major bases and almost 3,000 minor bases overseas. One justification for going ahead with the costly C–5A airplane is that deployment of the craft will enable us to bring our troops home from overseas bases. Let us do that and save some money.

The fact is that studies show we can reduce expenditures from $18 billion to $14 billion and still continue to increase our strategic strength.

The fact is that we now have more than 4,000 deliverable nuclear weapons, probably 10 times as many as we need to achieve near total destruction of the U.S.S.R.

And the fact is that according to the London Office of Strategic Studies, Russians are spending the equivalent of less than $45 billion on military activities this year.

These are only some of the reasons why I believe a reduction of 7 percent in a $70 billion budget would not undermine the national security.

There will be those who argue that establishment of a spending limit and leaving the specific cuts to the Pentagon is not the proper way to reduce Pentagon spending.

There is ample precedent for this approach.

In 1951, Congress told President Truman to reduce the Federal budget by a specific amount.

In 1968, the Senate approved a 3-percent reduction in the military procurement authorization bill.

Last February, at the suggestion of the ranking Republican members of the Senate Appropriations Subcommittee on Health, Education, and Welfare, the Senate approved a 2-percent cut in the HEW-Labor funding bill.

As a matter of fact, in 1968, I proposed an unspecified cut of $500 million in military research and development. While that amendment failed by three votes, Congress later determined, thanks to the strenuous efforts of Senator THOMAS MCINTYRE, chairman of the Subcommittee on Research and Development, that my amendment was too modest.

Last year by going over the Pentagon budget for these items with a fine tooth comb, Senator MCINTYRE succeeded in reducing the Pentagon requests for $8.2 billion by about $1 billion. This year, the Senator recommends cutting the budget request of $7.4 billion by more than $400 million.

That comes to a 2-year savings of about $1.5 billion.

If Senator MCINTYRE and his subcommittee can make such savings out of budget requests of $8 billion and $7.4 billion, I suggest the Pentagon can find $5.2 billion worth of fat in a $70 billion budget.

Mr. President, in summing up the case for this amendment, I can find no more eloquent argument than these words of President Eisenhower:

> No matter how much we spend for arms, there is no safety in arms alone. Our security is the total product of our economic, intellectual, moral and military strengths . . .
>
> Let me elaborate on this great truth . . . It happens that defense is a field in which I have had varied experience over a lifetime, and if I have learned anything, it is that there is no way in which a country can satisfy the craving for absolute security—but it easily can bankrupt itself, morally and economically, in attempting to reach that illusory goal through arms alone. The Military Establishment, not productive of itself, necessarily must feed on the energy, productivity and brainpower of the country, and if it takes too much, our total strength declines.

Mr. PROXMIRE. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. Thirty seconds.

Mr. PROXMIRE. Mr. President, I yield back the remainder of my time and ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. HARRIS). All time on the amendment has now been yielded back.

The question is on agreeing to the Mathias-Proxmire amendment, No. 861.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. RIBICOFF (when his name was called). On this vote I have a pair with the Senator from Florida (Mr. GURNEY). If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

Mr. EASTLAND (after having voted in the negative). On this vote I have a pair with the Senator from Maryland (Mr. TYDINGS). If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withdraw my vote.

Mr. MAGNUSON (when his named was called). On this vote I have a pair with the Senator from California (Mr. CRANSTON). If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Connecticut (Mr. DODD), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. Moss), the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I further announce that, if present and voting, the Senator from Louisiana (Mr. LONG) would vote "nay."

On this vote, the Senator from Nevada (Mr. CANNON) is paired with the Senator from Alaska (Mr. GRAVEL). If present and voting, the Senator from Nevada would vote "nay" and the Senator from Alaska would vote "yea."

Mr. GRIFFIN. I announce that the Senator from New Hampshire (Mr. COTTON), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from Hawaii (Mr. FONG), the Senator from Florida (Mr. GURNEY), the Sentor from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), and the Senator from Illinois (Mr. SMITH) are necessarily absent.

The Senator from Oregon (Mr. PACKWOOD) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from Arizona (Mr. FANNIN), the Senator from South Dakota (Mr. MUNDT) and the Senator from California (Mr. MURPHY) would each vote "nay."

The pair of the Senator from Florida (Mr. GURNEY) has been previously announced.

On this vote, the Senator from Ohio (Mr. SAXBE) is paired with the Senator from Illinois (Mr. SMITH). If present and voting, the Senator from Ohio would vote "yea" and the Senator from Illinois would vote "nay."

The result was announced—yeas 31, nays 42, as follows:

[No. 276 Leg.]

YEAS—31

Burdick	Hughes	Pastore
Byrd, W. Va.	Javits	Pearson
Case	Kennedy	Pell
Church	Mansfield	Proxmire
Cooper	Mathias	Randolph
Eagleton	McCarthy	Symington
Fulbright	McGovern	Williams, N.J.
Goodell	Metcalf	Williams, Del.
Harris	Mondale	Young, Ohio
Hart	Muskie	
Hatfield	Nelson	

NAYS—42

Aiken	Bellmon	Brooke
Allen	Bennett	Byrd, Va.
Allott	Bible	Cook
Baker	Boggs	Curtis

PRESENT AND ANNOUNCING LIVE PAIRS AS PREVIOUSLY RECORDED—3

Eastland, against.
Magnuson, against.
Ribicoff, for.

NOT VOTING—24

Anderson	Goldwater	Montoya
Bayh	Gore	Moss
Cannon	Gravel	Mundt
Cotton	Gurney	Murphy
Cranston	Hartke	Packwood
Dodd	Hollings	Saxbe
Fannin	Inouye	Smith, Ill.
Fong	Long	Tydings

So the Mathias-Proxmire amendment (No. 861) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HOLLAND. Mr. President, I move to lay that motion on the table.

Mr. THURMOND. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Pursuant to the previous order, the Senate will now proceed to the consideration of amendment No. 857, with a time limitation of 30 minutes. The clerk will report the amendment.

The assistant legislative clerk proceeded to state the amendment.

Mr. BELLMON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with and that the amendment may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered, and the amendment will be printed in the RECORD.

The amendment, ordered to be printed in the RECORD, is as follows:

At the appropriate place in the bill insert a new section as follows:

SEC. . (a) Notwithstanding any other provision of law, for a period of one year prior to the closing and for a period of three years following the closing of any military installation in any State, the Secretary of Defense shall, to the maximum extent practicable, in awarding any contract for the purchase of any equipment or service, give preference to any contractor who agrees that, in carrying out such contract, he will utilize the facilities at such installation and offer jobs to former employees who are unemployed as a result of the base closing.

(b) In order that the provisions of subsection (a) of this section may be effectively carried out in the case of any military installation which the Secretary of Defense has announced will be closed, he shall cooperate to the maximum extent practicable, consistent with security requirements, in making the facilities of such installation available for inspection by persons interested in utilizing such facilities after the installation has been closed. The Secretary shall make such facilities available for inspection by such persons as far in advance of the final closing of any military installation as possible.

(c) As used in this section (1) the term "State" means the several States and the District of columbia, and (2) the term "equipment or service" includes the repair, overhaul, rebuilding, or modification of any equipment as well as the manufacture of any equipment.

PROGRAM

Mr. MANSFIELD. Mr. President, will the Senator from Oklahoma yield to me so that I may make an announcement?

Mr. BELLMON. I yield to the Senator from Montana.

Mr. BYRD of West Virginia. Mr. President, may we have order?

The PRESIDING OFFICER. Senators will be seated. Those who have business to conduct other than the business of the Senate will please leave the Chamber.

Mr. MANSFIELD. Mr. President, first I extend my personal thanks to the Presiding Officer for his efforts to keep decorum and dignity in this body. I hope the example set by you, sir, will be followed by others who occupy the chair.

Mr. President, for the information of Senators, and with the concurrence of the distinguished manager of the bill, I wish to announce that there will be 30 minutes on the Bellmon amendment, and 1 hour on the McIntyre amendment. I understand the Senator from Arkansas (Mr. FULBRIGHT) will have one or two amendments; and that the Senator from New York (Mr. GOODELL) will have one or two amendments following that. So this is to put the Senate on notice that there will be rollcall votes this afternoon and a number of amendments to be considered.

I call to the attention of Senators that the Senate convenes at 8:30 a.m. Monday and 8:30 a.m. Tuesday; and that on Tuesday we will have four rollcall votes at the very least. I wish Senators would keep that in mind and be prepared to stay in town. Take Saturday off and Sunday, too, but act accordingly.

Mr. SCOTT. The restaurant will be open for breakfast at 8 o'clock. [Laughter.]

CONTROL OF TIME ON BELLMON AMENDMENT

Mr. STENNIS. Mr. President, will the Senator from Oklahoma yield to me?

Mr. BELLMON. I yield.

Mr. STENNIS. Mr. President, on the Bellmon amendment, I ask unanimous consent that the time in opposition thereto be controlled by the Senator from South Carolina.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 857

Mr. BELLMON. Mr. President, this is a brief amendment. The gist of the amendment is contained in the first paragraph which states:

SEC. . (a) Notwithstanding any other provision of law, for a period of one year prior to the closing and for a period of three years following the closing of any military installation in any State, the Secretary of Defense shall, to the maximum extent practicable, in awarding any contract for the purchase of any equipment or service, give preference to any contractor who agrees that, in carrying out such contract, he will utilize the facilities at such installation and offer jobs to former employees who are unemployed as a result of the base closing.

Mr. President, like many other States, Oklahoma has a number of military installations whose operations contribute to the size of the State's work force and to the overall economy of the area. In each instance, the Federal Government has invested large amounts of money establishing, equipping, and staffing these installations. The resulting payrolls have been of major importance to the communities of the area in which they are located.

When new military bases are opened, great stress is placed upon local communities to provide the facilities and services the new influx of population requires. Frequently officials of the Federal Government bring pressure upon local governmental and community leaders to provide lodging, housing, larger schools, entertainment facilities, recreation opportunities, and service industries. These developments are essential to the successful operation of Federal facilities, and local communities which meet such needs provide a genuine service in the national interest.

Because of varying requirements in our Nation's defense needs, it becomes necessary from time to time to make reductions in personnel, or to close down an installation. When such a necessity occurs, the resulting impact on the surrounding area can be calamitous. This is especially true if the installation is in a rural area and one in which there are no major industries to provide employment for a significant number of people who are laid off.

Mr. President, just as local communities and citizens have a responsibility to provide needed services and facilities when new Federal facilities are opened, the Federal Government has a responsibility to take every reasonable step to cushion the economic shock to local communities when the defense needs of the country no longer require use of the base.

In Oklahoma at the present time, we have such a situation at Clinton-Sherman Air Force Base. The Air Force has determined that it no longer has need of this base, and has withdrawn its B–52's along with all military and civilian personnel. The closure of this base has created a vacuum in the economic life of the cities and towns of the area which will be very difficult to fill.

Mr. President, this is a situation that is not in the best interests of this country. In order to provide some means of guarding against future occurrences of this type, I propose an amendment to the military procurement act to require the Secretary of Defense to give preference in the awarding of contracts to contractors who will agree to utilize the facilities at such installations and offer jobs to former employees who are unemployed as a result of a base closure.

Many who have served in the Armed Forces know from firsthand experience the tragic lack of civilian facilities and services to support military base personnel in many instances. One of the reasons for this unfortunate condition is the on-again, off-again nature of military base uses. This amendment is intended to stabilize activity at military bases and encourage development of needed supporting services.

There is another reason for this amendment. The investment by this Government in military bases represents

many, many billions of dollars. At the Clinton-Sherman Airbase alone, the investment by this Government amounts to approximately $57 million. In addition, among the facilities being vacated are 900 Capehart housing units in excellent condition, with a mortgage value of around $12 million, plus a water and sewer system, plus all other necessary facilities for a "new town." The only missing element is jobs, to take the place of the 8,000 military and civilian positions representing an annual payroll of $15.1 million.

This amendment is intended to provide civilian job opportunities so that these homes can be used and so that the present residents will not be forced into our already overcrowded cities. This amendment will help the Federal Government assume its responsibility when military bases are closed in the same way local communities are expected to meet their responsibilities when bases are opened.

With the anticipated decrease in military activity it is not unlikely that a great many communities in all parts of this country will be affected. This amendment can do much to lessen the economic blow to local communities faced with the sudden loss of employment and departure of families from their area. This amendment can help establish "new towns" in areas which need and can support permanent population and can help lessen congestion. This kind of preventive measure, in my opinion, is much preferable to any kind of effort intended to dismantle bases which, with job opportunities, could become viable communities.

Mr. President, I discussed this matter with the distinguished Senator from South Carolina and I believe he has an amendment he would like to suggest.

The PRESIDING OFFICER. Who yields time?

Mr. THURMOND. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from South Carolina is recognized.

Mr. THURMOND. Mr. President, the proposed amendment is entirely inconsistent with the long established procurement principles and policies of the Federal Government. It could result in the award of contracts to less competent and less qualified contractors. It could cause dislocation of contractor employees in one area as the price for hiring Federal employees who are out of work. It could cause the payment of higher prices for goods and services and penalize a low bidder solely on the grounds that he could not afford to abandon his own plant and people.

It would be unfair to any contractors who have their own facilities which are adequate to provide the equipment or services. In effect it could place a contractor with less invested in facilities and people in a favored position and defeat the normal process of competitive procurement.

Incompetency, lack of experience, and marginal financial stability all could be set aside under this amendment. A less qualified contractor, who under normal standards would not win the contract, could wind up with it because he was able and willing to use idle facilities at closed Government installations.

There are well established procedures, already in effect which provide for preferential consideration of displaced Defense civil service employees in filling both vacated and new jobs. This is covered by Department of Defense Instruction No. 1404.5 dated April 22, 1970, and entitled "Nation-Wide Centralized Referral System for Displaced Department of Defense Employees."

This policy is on a national basis so that employees who lose their jobs in one area of the country, and who are unable to be placed in civil service jobs in the same locale, also have preferential rights for employment in other areas of the country.

Mr. President, it is inconceivable that this amendment in its present form would be given serious consideration by the Senate. As I have explained, its terms are undefined. Its provisions and meanings are fraught with vagaries. Though I agree completely with its objectives, to help relocate and rehire Federal employees who have lost their jobs, the method for accomplishing this as proposed in the bill is not acceptable. The impact of lower budgets and reduced Defense spending is even greater on private industry than on Government installations. The job protection and reemployment rights available to civil service employees are not available to workers in industry.

I fully sympathize with the objective that the distinguished Senator from Oklahoma has in mind. I wonder whether he would consider modifying his amendment so that the amendment would read as follows:

At the appropriate place in the bill, insert a new section, as follows:

"SEC.—. (a) The Secretary shall also encourage recipients of defense contracts to use military installations being closed and to offer employment to former employees of military installations who are unemployed as a result of the closing of such installations.

"(b) The Secretary of Defense, in the case of any military installation which he has announced will be closed, shall cooperate to the maximum extent practicable, consistent with security requirements, in making the facilities of such installation available for inspection by persons interested in utilizing such facilities after the installation has been closed. The Secretary shall make such facilities available for inspection by such persons as far in advance of the final closing of any military installation as possible."

Mr. President, if the distinguished Senator from Oklahoma can see his way clear to modify his amendment in that respect, I shall be glad to support it.

Mr. BELLMON. Mr. President, before I respond to the distinguished Senator from South Carolina, I would just like to say that I do not accept some of the objections that the Defense Department has raised to the language I have proposed. There is nothing in this language that would, in my opinion, require the Defese Department to award contracts to either incompetent or high cost bidders. It simply authorizes the Secretary of Defense, to the maximum extent possible, to make use of facilities that are being closed and people who are being put out of work because of the closing of the installations. It was not ever the intent of the Senator from Oklahoma that those contracts be awarded to companies that could not perform or that were asking unusually high prices.

In my judgment, relocating the workers is not the complete answer, because it leaves the communities in a totally impoverished state and causes a huge waste of investment of Federal funds in plants that could be turned into useful and enduring enterprises.

Also, the policy followed by the Defense Department simply means relocation of thousands and thousands of workers from areas where there is plenty of room, clean air, and clean water, into our already crowded cities, where there are already problems of congestion, pollution, and crime.

I believe the original language is in many ways superior, but I believe the language suggested by the Senator from South Carolina will go a long way toward accomplishing the objective I had in mind when the amendment was offered. I believe that if the Defense Department will make use of the language which has been proposed it will go a long way toward accomplishing the objective of using the facilities and providing jobs for people who became unemployed when the facilities were closed.

Therefore, I accept the modification.

Mr. THURMOND. Mr. President, I appreciate the Senator's comments, and I am pleased that he accepts the amendment.

The PRESIDING OFFICER. Will the Senator send to the desk the modification of the amendment of the Senator from Oklahoma in order that it may be stated to the Senate?

The amendment, as modified, was read as follows:

At the appropriate place in the bill, insert a new section, as follows:

"SEC. —. (a) The Secretary shall also encourage recipients of defense contracts to use military installations being closed and to offer employment to former employees of military installations who are unemployed as a result of the closing of such installations.

"(b) The Secretary of Defense, in the case of any military installation which he has announced will be closed, shall cooperate to the maximum extent practicable, consistent with security requirements, in making the facilities of such installation available for inspection by persons interested in utilizing such facilities after the installation has been closed. The Secretary shall make such facilities available for inspection by such persons as far in advance of the final closing of any military installation as possible."

Mr. BELLMON. Mr. President, I yield back my time.

Mr. THURMOND. Mr. President, I yield back my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back. The question is on agreeing to the amendment of the Senator from Oklahoma, as modified.

The amendment, as modified, was agreed to.

The PRESIDING OFFICER. Under the previous order, the Chair recognizes the Senator from New Hampshire.

Mr. McINTYRE. I have an amend-

ment at the desk. I ask that the amendment may be read.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read the amendment, as follows:

On page 14, immediately above line 19, insert the following:

"SEC. 207. It is the sense of the Congress that—

"(1) an increase in Government support of basic scientific research is necessary to preserve and strengthen the sound technological base essential both to protection of the national security and the solution of unmet domestic needs;

"(2) a larger share of such support should be provided hereafter through the National Science Foundation;

"(3) to the extent that funds are not otherwise available to provide for such increased support during the fiscal year beginning July 1, 1971, they should be provided from funds which have been or are programmed for other Federal programs for such fiscal year; and

"(4) in implementation of and in a manner consistent with these precepts the Director of the Office of Management and Budget should, in the preparation of the Federal budget for the fiscal year beginning July 1, 1971, provide for not less than a 20 per centum increase in the amount of funds to be made available to the National Science Foundation over the amount made available to such Foundation for the fiscal year ending June 30, 1971."

Mr. McINTYRE. Mr. President, I ask unanimous consent that section 204 of the committee amendment be considered as part of my amendment so that it and the new section 207 which I now offer as an amendment may be considered en bloc.

The PRESIDING OFFICER (Mr. SPONG). Is there objection?

Mr. DOMINICK. Mr. President, reserving the right to object, what is the Senator doing?

Mr. McINTYRE. I have asked unanimous consent that section 204 of the committee amendment be considered as a part of my amendment so that it and the new section 207 proposed in my amendment may be considered en bloc.

The PRESIDING OFFICER. And to be considered as an amendment to the substitute.

Mr. DOMINICK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOMINICK. Section 204 has already been agreed to by this body.

The PRESIDING OFFICER. The Senator from Colorado is in error.

Mr. DOMINICK. I thought the committee amendments had been agreed to.

The PRESIDING OFFICER. The committee amendment is an amendment in the nature of a substitute for the whole bill.

Is there objection to the request of the Senator from New Hampshire? The Chair hears none, and it is so ordered.

The amendments being considered en bloc are as follows:

On page 11, after line 11 insert the following:

"SEC. 204. None of the funds authorized to be appropriated by this Act may be used to carry out any research project or study unless such project or study has a direct and apparent relationship to a specific military function or operation."

On page 14, immediately above line 19, insert the following:

"SEC. 207. It is the sense of the Congress that—

"(1) an increase in Government support of basic scientific research is necessary to preserve and strengthen the sound technological base essential both to protection of the national security and the solution of unmet domestic needs;

"(2) a larger share of such support should be provided hereafter through the National Science Foundation;

"(3) to the extent that funds are not otherwise available to provide for such increased support during the fiscal year beginning July 1, 1971, they should be provided from funds which have been or are programmed for other Federal programs for such fiscal year; and

"(4) in implementation of and in a manner consistent with these precepts the Director of the Office of Management and Budget should, in the preparation of the Federal budget for the fiscal year beginning July 1, 1971, provide for not less than a 20 per centum increase in the amount of funds to be made available to the National Science Foundation over the amount made available to such Foundation for the fiscal year ending June 30, 1971."

Mr. McINTYRE. Mr. President, the Research and Development Subcommittee has wrestled long and hard this year with the problems posed by section 203 of last year's bill. That section, you will remember, provided that no Department of Defense research funds were to be used during fiscal 1970 for any research projects or studies which lacked "a direct and apparent relationship to a specific military function or operation."

After long deliberation, the Research and Development Subcommittee recommended the reenactment of section 203. That recommendation, as you know, was accepted by the full committee, and what was section 203 of last year's bill is now section 204 of the bill pending before the Senate.

The subcommittee recommended the reenactment of section 203 because it could not rationally quarrel with the section's basic thrust. Ever since the first days of the cold war, Department of Defense requests for funds have been warmly received on the Hill. As a consequence, and as the breadth of its own activities has increased markedly, the Department has often undertaken research of equal or greater relevancy to other mission agencies.

I think all of us could cite a number of instances in which the Defense Department research program exceeded its proper bounds. One prime example is Project Themis, a program to establish centers of excellence at universities previously lacking in first-rate research facilities and personnel. It would be hard to argue against the long term benefits inherent in such a program. But it would be hard to dispute either that such a university-development program bears far greater relevance to the mission of the National Science Foundation than to that of our Defense Establishment.

There is a good example, too, in the fiscal 1971 R.D.T. & E. budget. The surface effects ships program is a joint Navy-Commerce Department venture to develop hydrofoil technology. During the program's early years, the funds required were small, and both participants contributed equal amounts. For fiscal 1971, however, $20 million was required and the Department of Defense requested funds to cover almost the entire amount.

Referring to its recommended reenactment of section 203, the committee coupled a $10 million reduction in the surface effects ships program with the following language in the committee report:

The Bureau of the Budget should recognize that . . . Department of Defense Support of non-defense programs is not viewed with favor. . . . The budget for fiscal year 1972 should be examined carefully . . . to insure that such instances are not repeated.

Surely the time has come for examples of this kind to end. How can we possibly hope to reorder our priorities if the research programs of domestic mission agencies—the source of the new technologies required to solve their problems—are not able to stand on their own two feet?

The mere reenactment of section 203, however, might well be productive of more problems than it solved. Ever since its passage, the section has been subjected to conflicting interpretations. Moreover, its reenactment by itself will not make available additional research funds for domestic-oriented programs.

I would like to come to grips with these problems today. I would like to make clear, first, the committee's understanding of what the section requires. The amendment will insure the allocation of funds to domestic research goals.

Let us be clear, first, what section 203 itself requires. A good deal of misunderstanding has existed on this matter in the past and has contributed, I feel, to the controversy which the section has sparked.

It has been widely assumed, for example, that only research directed to the solution of short-term problems is permissible under section 203, that basic research of a long-range, exploratory nature has been ruled out of bounds.

The committee rejects this interpretation of the section's relevancy test in recommending its reenactment. It is a fundamental truth that any agency heavily dependent on science and technology for the performance of its mission must engage in basic research if it is to perform that mission well. Consider the alternative. If the Defense Department were to cease its support of research on the frontiers of science and technology we might well suffer as a nation the fate of the buggy-whip makers and wagon craftsmen who kept trying to improve their old specialties long after the internal combustion engine had finally arrived on the scene.

It has also been argued that section 203 bars Defense Department participation in any research projects which might be relevant to domestic agencies. This, too, is not quite right. What the section actually requires is a project's relevance to the defense mission. There are clearly projects with this relevance and domestic relevance as well. The application of military radar and computer technology to civilian air traffic control

functions, experimental work on housing on military bases, and selected manpower training programs are only a few examples.

The committee strongly believes that an effort should be made, not to bar Defense Department participation in all programs of dual relevance, but to maximize the domestic fallout of the Department's efforts in this area. This is essential, in my view, if our priorities are to be reordered under current budgetary pressures and if the many skills of our Defense Establishment are to be enlisted in the cause.

The bill reported by the committee makes a small beginning on this large and long-range task. At the suggestion of the distinguished Senator from Massachusetts (Mr. BROOKE), it creates an Interagency Advisory Council on Domestic Applications of Defense Research. This council, composed of members from eight different agencies, will attempt to identify research projects of mutual interest to DOD and the other member agencies and to coordinate work upon them. It is the committee's hope that as nondefense research programs expand in coming years, sponsorship and supervision of work begun under the council's auspices can be shifted to other agencies.

I would like to point out, Mr. President, that the strongest proponents of section 203—such as our distinguished majority leader, for example—have never suggested that it was designed to rule out Defense Department participation in basic academic research or in projects of dual relevance. But misunderstandings have arisen on these points, and I am sure that the Senator from Montana would agree with me that a clarification is in order at the present time.

The Defense Department has also expressed concern about the subjective nature of the relevancy test prescribed by section 203 and the headaches the test has given to defense research managers charged with its application.

Unfortunately, there is no simple solution to this problem. There is no precise, self-applying test which could possibly be devised. Yet some test obviously must be prescribed if the Congress is to give voice to its strong belief that there should be an end to the Department's support of nondefense research and programs.

The idea of relevance is not new. I should think that the Defense Department would be well acquainted with the following statements that support the principle of relevance.

First:

> The foundation shall be increasingly responsible for providing support by the federal government for general-purpose research through contracts and grants. The conduct and support by other federal agencies of basic research in areas which are closely related to their missions is recognizable as important and desirable, especially in response to current national needs, and shall continue.

Second:

> Mission oriented governmental agencies do and should support much long-range basic research, information from which is calculated to have a direct bearing on some aspect of their mission . . . All mission oriented agencies need to be in close contact with the best and most advanced research which can apply to their problems.

The first is from President Eisenhower's Executive Order No. 10521 of March 15, 1954, on scientific research. This order still stands. It was not rescinded by President Kennedy, by President Johnson, or by President Nixon. The second comes from the recent advice to the President by his Task Force on Science Policy.

It is the committee's belief that the overwhelming majority of research projects now in the Defense Department's budget do meet the relevancy test in section 203. The project review necessitated by the section, plus the budget cuts of recent years, have gone a long way toward setting its house in order.

No formal Defense Department review of existing research projects—to determine their compliance with section 203—is contemplated by the committee in conjunction with the section's reenactment. But its continued presence will serve two goals.

First, it will serve as a directive to defense research managers, in considering proposed projects for Department support, to heed the principle of relevancy which section 203 lays down. It is the committee's hope that projects of all but the highest relevancy will be turned down by the Department and directed to alternative sponsors, consistent with the availability of alternative research funds.

Second, the continued presence of section 203 will serve as a warning to defense research managers that the Hill's green light for unrelated defense research has turned red, and that clearly irrelevant proposals will be afforded a hostile reception if included by these managers in the Department's submitted budgets. Naturally, the judgments of these managers, as the men most aware of a given project's ramifications, will be carefully considered if and when the relevancy of future projects becomes an issue.

While some of the controversy which section 203 has sparked has been due to misinterpretations and to the subjective nature of its relevancy test, even more has resulted from there being ascribed to the section by its supporters a far broader function than the one I have just outlined—one broader, in fact, than the words of the section permit.

Judging from remarks on the floor during the past year, it is clear that section 203 was intended by its supporters not merely to weed out nondefense research projects in the Department's budget, but to correct what they regarded as a serious structural imbalance in Government support of basic research in the United States. It was their hope that the new section would produce large-scale reductions in Department of Defense research programs and that these reductions would be offset by corresponding increases in the research budgets of the National Science Foundation and domestic mission agencies.

Such a restructuring was deemed especially important, by the amendment's Senate supporters, within the academic community, where Department of Defense research support has until very recently exceeded that of the National Science Foundation. As our majority leader, the distinguished Senator from Montana (Mr. MANSFIELD) explained on the floor last year:

> A reasonable goal to be obtained through the working of this new provision could be to reduce DOD funding of academic research to no more than 25% of that funded by the National Science Foundation by the end of fiscal 1971.

Things just have not worked out that way.

In the first place, the Defense Department's review of its entire research program resulted in the identification of only $8.2 million worth of projects on which work had to stop because of section 203. This was an amount, needless to say, far less than supporters of section 203 had intended and far less than that required for a structural reallocation. In fact, the $8.2 million cut occasioned by section 203 was itself subsumed in the much larger $64 million reduction imposed directly by the Congress on the Department's research budget.

At the same time, reductions were also imposed last year on the research budgets of most domestic mission agencies. Faced with budgetary restrictions, these agencies responded in time-honored fashion, cutting back on research in deference to ongoing programs.

The academic community was saddled with most of the final burden. Agencies could reduce their in-house research efforts only minimally if efficient utilization of their facilities was to be maintained. And since too few dollars were available at the National Science Foundation to pick up the resulting "dropouts," many academic investigators have found themselves cut off from the research support necessary if their investigations are to go on.

In retrospect, these results are not surprising.

To begin with, section 203 was an improper vehicle for use in effectuating a major reallocation of Government research support. Legislation so imprecise, if given such a function, will inevitably be subjected to conflicting interpretations, with the result a war of words but a stalemate in the sphere of action. In fact, the reallocation function attributed to section 203 only served to heighten the difficulties inherent in application of its relevancy test.

Moreover, the section's supporters have seemed at times little more clear than the section itself as regards the nature and mechanism of the reallocation they hoped it would achieve. How many Department of Defense research dollars were to fall out en route to the new alinement? How were these dollars to be offset with increases elsewhere in a period of dollar shortages when most governmental agencies—and most congressional committees, too—saw research as the place to cut? And how could the institutional base needed to support the new structure possibly be built in 2 short fiscal

years? Not only was the legislative vehicle deficient. With questions like these unanswered—some indeed unanswerable—its route was ill defined.

Similar criticisms cannot be leveled, however, at the basic policy goal of reallocating Government support of research in the United States. For too long a time, too few of our total research as well as operating dollars have been channeled into domestic-oriented areas. How can we hope to end pollution and to meet the whole range of unmet domestic needs unless we develop the kinds of technology requisite to meeting them?

And it is especially important in my view that new patterns of research support be developed for our academic communities all across the country. I think that an excellent goal, not for the coming year but for the relatively short-term future, would be the goal sighted by the distinguished Senator from Montana (Mr. MANSFIELD) in discussing section 203 last year—a level of funding for the National Science Foundation four times as large as the basic research budget of the Defense Department. There are several considerations in favor of such a goal.

One is nothing more than the preservation of a viable relationship between the academic community and the Defense Department itself. At present, many university administrators are under extreme pressure from activist student elements to end all "war-related research" on the campuses. Such pressure faces university administrators—and the Defense Department—with a rather unpleasant choice: They must end their long and mutually beneficial association or otherwise run the risk of growing strife on campus.

A larger National Science Foundation role on campus would help to diffuse the tension. In the short run, it would enable the most sorely pressed university administrators to temporarily sever their relationship with the Defense Department with minimal ill effects for both. These universities and their investigators could turn to the Foundation as an alternate source of funds, while the Department would be insured that the needed work somehow got done. Foundation officials have made it quite clear to me that a large number of any projects dropped by the Defense Department would win Foundation support in open competition with all other projects proposed.

Over the longer term, a larger Foundation role might help to dissipate the present unrest itself. Most students, if pressed, would openly acknowledge the importance of a continuing link between our universities and the Defense Department. On reflection, they would not dispute that traditional research support links are an eminently practical means for bringing the advice and criticism of experts in the academic community to bear on the Defense Establishment.

What stops them from espousing such a view just now is their deep alienation from present national policy—the war in Vietnam, the gigantic military budget, and our unmet needs at home. A larger role for the National Science Foundation would itself be an indication that our policies were changing, that our system was being responsive.

A larger Foundation role would have several other implications.

It would enable the Foundation to bring to academic research some of the central policy coordination so sorely lacking to date. The horizons of individual mission agencies are quite properly limited by their own functions and operations. They have neither the resources nor the responsibility to assess our research needs from a truly national perspective. The Foundation, on the other hand, would be able with increased resources to step up its development of a national science policy, channeling resources and creating new pools of talent in areas neglected for the most part till now.

Moreover, while increased research efforts by domestic mission agencies are also needed, these agencies are not always the best of research sponsors, even within their areas of interest. They quite properly define individual projects so as to maximize the potential for short-term practical solutions, often to the detriment of breakthroughs around the corner. And there is a related consideration also. It is not unheard of for an agency to favor research which extends rather than undermines its ongoing programs, and therefore not to fund a research project calling these programs into question. So even as regards short-term, pragmatic solutions to problems, the Foundation, by encouraging truly free inquiries, would have a vital contribution to make.

A larger Foundation role would be helpful also in times of budget stringency, such as the present. The time-honored tendency, in such periods, is for mission agencies to cut back on their research dollars. The Foundation, as an institution devoted to basic research support, would not be subject to such pressures internally. And it would be better able to resist such cuts on the Hill, by arguing the necessity of support for its program because other research efforts were already being cut back. A larger Foundation role would thus help to insure the academic community of steady, long-term research support.

Indeed, it is the absence on such steady support at present which makes a rather prompt increase in the Foundation's budget imperative. The experience of the past year is instructive in this regard.

Due to budgetary stringency, virtually all mission agencies have been forced to cut back sharply on their own research programs. Some of the reductions have been absorbed in-house, to the extent consistent with efficient utilization of existing facilities. But there have been quite substantial cuts in the funding of outside performers.

As a result, many investigators have found themselves cut off from former funds. Such cuts have in fact been so severe that over $60 million worth of terminated research projects have been or are likely soon to be presented to the National Science Foundation for support. Many of these projects merit support, but the funds are just not available. The Bureau of the Budget was aware of this problem in the preparation of the Foundation's fiscal 1971 budget, but it allocated only $10 million for use in meeting it.

Already recent science graduates are finding it impossible to find employment in either research or education. If the situation continues, the damage could be severe. For while established scientists will win out in any scramble for limited funds, it is on the newcomers in major fields that our long-range future depends.

It is for reasons such as these, Mr. President, that I share the commitment of the distinguished Senator from Montana to an increased role for the National Science Foundation.

The amendment I am introducing today will provide for such an increase. It will explicitly direct the executive branch to do what the Senator from Montana hoped it would do in response to section 203.

My amendment calls upon the Office of Management and Budget, in its preparation of the fiscal 1972 Government budget, to provide for a 20-percent increase over the congressionally approved fiscal 1971 level in the budget of the National Science Foundation.

The Foundation's fiscal 1971 budget is $513 million. My amendment would thus provide for an increase of approximately $100 million.

This increase would constitute an important first step toward the goal of a $1 billion National Science Foundation budget recently endorsed by the President's Task Force on Science Policy. It would greatly alleviate the present "dropout" problem and also permit initiation of important new Foundation programs.

I do not believe that this increased funding for the National Science Foundation should be sought, however, at the expense of the remaining research funds of the Department of Defense or other mission agencies. I believe that the restructuring of research support envisioned by my amendment must be achieved through the channeling of increased funds to the National Science Foundation, not through the shuffling of existing research dollars. I say this for several reasons.

To begin with, such shuffling could be disruptive of existing research projects and would only compound the present "dropout" problem.

More significant is the fundamental importance of research to the solution of our present problems, both defense related and domestic. Many of our problems—in the field of pollution, for example—can be solved by technological breakthroughs, but these breakthroughs will not occur unless sufficient research funds are continually available.

In illustration of this point, the Illinois Institute of Technology's Research Institute not long ago did a series of case studies on products which today are having a major socioeconomic impact on the Nation and the world. The institute found that the last 50 percent of the significant research events that led to development

of magnetic ferrites, now widely used in computer memories, telecommunications, and small electric motors, occurred in a period from 1946–59; those that produced the video tape recorder produced in 1956 started in 1927; the last 50 percent of events leading to "The Pill" in 1960 began in 1936; and those that ended in the electron microscope in 1940 started in 1910.

Indeed it might be dangerous not to provide the steady large-scale research funding needed to insure similar breakthroughs in the future. Unfortunate though it may be, we are in competition today with an economic system which emphasizes the benefits of long-range planning.

I am in fact troubled by the trend which has developed over the past decade as regards Soviet and American research programs. Soviet research and development in all areas has been growing at a rate of about 10 percent a year, while our own research expenditures across the board have essentially leveled off.

I need not remind this body of the fact that three of the most significant scientific and technological developments of the century—nuclear fission, radar, and jet propulsion—were all based upon fundamental work done mainly from abroad. Our security might be jeopardized should future breakthroughs of similar magnitude again occur abroad.

Yet Soviet-American research trends are especially disturbing in the areas of military, atomic energy, and space work. During the 1960's, Soviet military research and development expenditures increased by about 60 percent, while our own expenditures increased by roughly 30 percent. And estimates for 1970 show the Soviets are now leading by more than 20 percent in absolute dollar terms.

Under these circumstances, and in light of the large-scale reductions which the Armed Services Committee has made in the Defense Department's research program during the past 2 years, further broad cuts in this area are not warranted. We would be ill advised not to couple our continuing cutbacks in defense procurement and hardware reduction with the strong research and development program needed to advance our technological base.

I wonder how many of my colleagues perceive how significant a cutback in Department of Defense funding of academic research has already occurred in the past 2 years. Actually, there has been a decline during this period from a level of $247.3 million in fiscal 1969 to $215.6 million in fiscal 1971. Measured in constant dollars—accounting for the impact of inflation and of increasingly costly technology per se—that represents a decrease in research effort of almost 25 percent in a very short time.

But while my amendment does not call for a reduction in other research programs to offset the increase provided by it for the National Science Foundation, it does recognize that some offset may be needed. It calls upon the Office of Management and Budget, should the budgetary requirement exist, to make some corresponding reduction in other projected programs.

This requirement is included, Mr. President, not only to demonstrate a sense of fiscal responsibility. Its purpose is to make clear that the increase called for—a very small amount in relation to our total budget—is not to be rejected on grounds of inadequate funds, that research should not be the target of any adjustments which may be required.

Mr. President, the Research and Development Subcommittee has wrestled long and hard this year with the problems posed by section 203.

The distinguished Senator from Montana deserves our gratitude for introducing that section and for bringing the issues it has raised to our attention. I believe that the section has had a constructive influence during the past year and that it will continue to have such an influence if interpreted along the lines I have outlined.

I also believe, however, that the broader restructuring of Government research support which the Senator envisaged as a result of section 203 can best be achieved through the amendment I am offering today and executive branch action pursuant to that amendment. I sincerely hope that he will join with me today in support of my amendment.

Mr. President, this concludes my remarks on my amendment. I think it might be useful, however, to place in the RECORD at this point a detailed analysis of the Defense Department's 6.1 or basic research budget. I ask unanimous consent to do so.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

6.1 RESEARCH

[In millions of dollars]

By Agency	Fiscal year— 1969	1970	Fiscal year 1971 Requested	Recommended by SASC
Army	88.9	76.4	80.1	76.3
Navy	130.3	117.9	118.9	116.6
Air Force	95.9	85.0	83.3	83.3
ARPA	43.6	43.2	42.7	36.7
DASA	45.5	46.0	44.6	44.6
Total	404.2	368.5	369.6	357.5
By scientific area:				
General physics	39.7	33.6	31.8	
Nuclear physics	34.7	33.4	28.5	
Chemistry	14.7	13.2	13.5	
Mathematical sciences	43.7	42.6	35.9	
Electronics	31.6	27.7	29.5	
Materials research	42.8	38.4	49.2	
Mechanics	31.7	30.3	30.9	
Energy conversion	16.7	14.1	15.5	
Terrestrial sciences	13.7	12.6	14.0	
Atmospheric sciences	31.1	31.1	32.6	
Biological and medical	44.2	38.3	39.2	
Behavioral and social	16.3	12.9	13.1	[1] 12.9
Oceanography	32.1	30.0	28.7	
stronomy and astrophysics	11.1	10.3	7.2	
Total	404.2	368.5	369.6	[1] 357.5

[1] The $12.1 million cut recommended by the committee is to be made at the discretion of DOD, except in the area of social and behavioral sciences, where $200,000 of the cut has been mandated.

R.D.T. & E. AUTHORIZATION BY PERFORMER

[In millions of dollars]

	Fiscal years— 1969	1970	Fiscal year 1971 Requested	Recommended by SASC
1. In-House:				
Government owned, contractor operated	329.5	341.3	337.2	
Government owned, government operated 6.1 research	169.1	154.5	153.2	
Other	1,861.3	1,873.3	1,826.5	
2. Industry:

Other	(7,351.5)	(7,070.4)	(7,032.0)	(6,659.0)

SOURCE OF FINANCING

1. *In-House*—This pays for the cost of operating and maintaining all of the Department of Defense activities engaged in research, development, test and evaluation. The 6.1 Research funds relate specifically to laboratories which are engaged in conducting in-house research and whose people monitor research contracts and grants. This category does not include the funds for research contracts and grants, and these are distributed among the other categories as indicated. This category also includes funds from 6.2, 6.3, 6.4 and 6.5, as well as from the operational development programs.

An example of a contractor-operated installation is the Eastern Test Range in Florida which is operated and maintained by Pan American Airways with Radio Corporation of America as the major subcontractor.

2. *Industry*—This is the largest category and includes contractual effort from all areas and programs under the RDT&E appropriation. The major dollars are for 6.2, 6.3, 6.4, 6.5, and operational developments. The 6.1 effort is primarily for contracts with indus-

trial research laboratories, examples of which are listed separately.

3. *Universities and Colleges*—The preponderance of funds which go to these activities is provided by contract and grant from 6.1 Research funds. The remaining funds largely are provided from 6.2 and some from 6.3.

4. *Federal Contract Research Centers*—Most of the funds are provided from 6.2, 6.3, 6.4, 6.5 and operational developments. A small portion is provided from 6.1 Research.

5. *Other Non-Profit Research Institutions*—A small fraction of these funds comes from 6.1 Research. Most of the money comes from 6.2, 6.3, 6.4, 6.5 and operational developments. Typical institutions are listed separately.

6. *Foreign Performers*—As indicated in the table, 6.1 Research and 6.2 Exploratory Development are the two program sources of funds.

7. *Hospitals, State Institutions, and Others*—This is supported entirely from 6.1 Research. Typical organizations are listed separately.

6.1 Research.
6.2 Exploratory Development.
6.3 Advanced Development.
6.4 Engineering Development.
6.5 Management and Support.

Mr. KENNEDY. Mr. President, I support the amendment of the Senator from New Hampshire.

There is today a crisis in support for basic research. In fiscal 1970, mission-oriented agencies such as DOD, NASA, AEC, and HEW reduced their expenditures for academic research by at least $60 million. The National Science Foundation was given only $10 million to take up the slack. As a result, university science programs are in disarray. Brilliant graduate students do not know if they will ever be able to make use of their excellent education. Undergraduates are turning away from science to other fields of endeavor.

Basic research is crucial to our Nation's future. Our economic leadership depends upon it, as does our ability to overcome the adverse side effects of economic growth. We look to basic research also to improve the health of our citizens—to fight heart disease, cancer, and mental illness.

Scientific research needs to be funded in an orderly manner. It cannot be turned on and off like a faucet. Expensive equipment cannot be purchased one year and left idle the next. First-class research teams cannot be organized and disbanded at will.

When basic research is left in the hands of mission-oriented agencies, constant fluctuations in funding levels are almost inevitable. In times of budgetary belt tightening, the mission agencies will always sacrifice their long-term research projects to more immediate concerns. What is needed therefore is an adequately funded agency whose primary concern is basic research.

The National Science Foundation was supposed to be that agency. It was supposed to insure that academic science was supported in an orderly fashion. But the National Science Foundation has never been given enough funds to perform that task. For many years it lived in the shadow of the mission agencies, particularly DOD.

Senator MCINTYRE's amendment is a first step toward enabling the National Science Foundation to play its proper role in the support for scientific research. I hope that the Senate will accept the amendment and that the administration will heed our voices and begin to formulate an intelligent science policy.

I would like to add that I come from the State bordering on the distinguished Senator's own State of New Hampshire and one of the things that impressed me traveling around my State is that there are so many defense-oriented industries which are interested in trying to utilize their personnel and their technical know-how to address many of the critical domestic and social needs of this country; but they find that there is no institution that could help them to develop alternative products which might be consumer oriented or meet social needs.

I believe that there is a sound movement taking place within Congress which recognizes the responsibility of Congress to try to assist private industry, universities, and technical and scientific personnel to utilize their enormous skills to meet our domestic needs. The Conversion Research and Education Act, which I have introduced, is part of that movement.

The Senator from New Hampshire, as I understand the thrust of his remarks, is trying to jar this body into confronting this problem, and I want to commend him for raising this issue before the Senate, and to thank him. He has chaired the hearings on research of the Armed Services Committee and has a broad understanding of the needs in that area.

Mr. MCINTYRE. Mr. President, I want to thank the distinguished Senator from Massachusetts for his kind statement concerning the work of the subcommittee. He is exactly right. We find solutions to problems of this kind on the R. & D. Subcommittee extremely difficult. We are trying to jar the Senate into thinking about reordering its priorities in the field of basic research. Hopefully, we can begin to get some assistance from the executive branch.

Let me make it clear that the subcommittee's thinking at the present time is that after reducing Defense Department basic research $75 million to $80 million in the past 2 years, that program itself should not go any lower. But the National Science Foundation's own efforts must be increased, for the long series of reasons I cited. Thus, I appreciate very much the support of the Senator from Massachusetts. He has a wide knowledge indeed of this subject.

Mr. KENNEDY. As I said, the National Science Foundation can play an extremely important role here. What we must try to do, particularly as we cut back defense expenditures, and as this results in loss of employment among many scientific and engineering personnel, is to develop within the Commerce Department, the Small Business Administration, and other agencies of the Government, as well as the National Science Foundation, the ability to redirect the energies of the scientific community so that they can come to grips with our domestic needs.

We in this body will have to try to meet the present challenge and find ways to help industry and the scientific and engineering professions to find it worth their while to devote their talents to meeting the social needs which exist in this country.

The Senator from New Hampshire has performed an extremely useful service in helping to crystallize some of the thinking on this matter.

Mr. MCINTYRE. I thank the Senator from Massachusetts and urge his continued interest in what we consider to be a difficult problem. His help will certainly be needed if the goals of my amendment today are to be realized.

Mr. DOMINICK. Mr. President, I was most interested in listening to the colloquy between the Senator from Massachusetts and the Senator from New Hampshire. All too often we in the Senate and the public at large forget the benefits which have accrued to society as a whole by virtue of some of the military defense spending which has gone on in the past.

For example, we had not only the research previously funded before the amendment of the Senator from Arkansas (Mr. FULBRIGHT) was agreed to, that puts us in a bind, to which the Senator from New Hampshire is now addressing himself, but we have the fallout from rapid education developments, language schools, new techniques in medicine and surgery, and a great many other progressive steps of this kind which, generally speaking, have been totally overlooked in the field of public awareness, and often—much too often, it seems to me—in the debates in the Senate.

Mr. President, I have looked at the amendment with some care because of the fact that it operates on an authorizing level for fiscal 1972. Both the Senator from New Hampshire and I serve on the Armed Services Committee. I also serve on the Committee on Labor and Public Welfare. The responsibility for determining the authorizing level for the National Science Foundation comes within the jurisdiction of the Committee on Labor and Public Welfare.

I spoke to the chairman of the committee, the Senator from Texas (Mr. YARBOROUGH), and we read this over again. As I said, the authorizing limits for the National Science Foundation do come within the jurisdiction of the Committee on Labor and Public Welfare, and obviously we have not had any hearings or any evidence as to what it would be, and so forth, for fiscal 1972, because we are simply not on that level.

I notice that the amendment is written as a sense of Congress amendment. In other words, what the Senator is saying here, as I understand it, is that it is the feeling that if this could be done within the budgetary process, we should work towards that end. Is that correct?

Mr. MCINTYRE. That is correct. The amendment states it to be the sense of the Congress that action by the Office of Management and Budget is required soon—in preparing next year's budget—if we are to meet this urgent problem. The Senator realizes that what we are

trying to do is to focus attention on the problem, so that the Office of Management and Budget can act and so that domestic mission will be aware of the fact that they too, should be picking up the cudgels on behalf of their own research and development programs. That is the thrust of the amendment.

Mr. DOMINICK. I am delighted to have the Senator from New Hampshire verify my understanding, and also the understanding of the Senator from Texas (Mr. YARBOROUGH). This eliminates, obviously, any jurisdictional problem we might have had, and is also trying to put back into focus the fact that the amendment of the Senator from Arkansas (Mr. FULBRIGHT), which the Senate has agreed to and is a provision of the bill, has created a substantial cutback in the scientific community through the universities and the ability to proceed with scientific research.

I think it is extremely important. I certainly hope that we can get around the results of that by the initiative taken by the Senator from New Hampshire.

Mr. McINTYRE. Mr. President, I thank my good friend, the Senator from Colorado, who is a member with me of the Armed Services Committee, for his attention to this matter. As the Senator has already pointed out, it is his committee that has jurisdiction of the National Science Foundation. His committee's help could be extremely important as we try to change the whole thrust of Government research support around.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. THURMOND. Mr. President, I yield 1 minute to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I support the McIntyre amendment, section 207, since it specifies the direction in which I believe Federal sponsorship of science should proceed. It elaborates and complements the expressed intention of section 203 of the present law. It specifies the congressional intent to channel more resources through the National Science Foundation, while insisting that the Department of Defense maintain a program of basic research. I support fully this policy.

I believe the enactment last year by the Congress of section 203 has focused much needed attention on the whole issue of this Nation's science policy and the methods through which the Federal Government makes its contribution to the research community. I would hope that the Senate will express overwhelmingly its support for the basic thrust of 203 and back fully the Armed Services Committee in its recommendation of its reenactment.

I was invited by Congressman DADDARIO to testify before his House Subcommittee on Science, Research, and Development with respect to the use of public resources for basic science and the rechanneling of these resources through civilian agencies. I ask unanimous consent that my statement before his subcommittee on August 11 be printed at this point in the RECORD. It fortifies the statement made today by the distinguished Senator from New Hampshire (Mr. McINTYRE), who has done such outstanding work in this field as the chairman of the pertinent subcommittee of the Senate Armed Services Committee. I congratulate him.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RECHANNELING THE PUBLIC RESOURCES FOR BASIC SCIENCE THROUGH THE CIVILIAN AGENCIES: A NEW GOAL FOR NATIONAL SCIENCE POLICY

(Statement of Senator Mike Mansfield)

I have been asked to comment on the government's role regarding the support of research. I appreciate this invitation by the Chairman of the Subcommittee on Science, Research and Development. Specifically, I suppose the question really is whether adequate government support of science can be carried on if there is a permanent shift away from the role of the military in the conduct of research. What must be considered is the relationship of the Department of Defense and other mission agencies to the matter of research; what part research plays in their overall functions and as a related matter, whether strong ties should be continued between the Pentagon and our universities. The answer to these questions by and large will determine this nation's entire science policy for the years ahead.

At the outset I should say that the quality of life on earth tomorrow will be determined in large part by the measure of the scientific research undertaken today. There is thus a significant public responsibility to sponsor research in the various scientific disciplines and to keep the way clear to follow up on new discoveries. Determining the emphasis, however, is a most delicate responsibility. To a great extent the emphasis is determined by the size of the resource devoted to the various disciplines.

Since the end of World War II, the Government's contribution to research, development and the supporting facilities has reached nearly $200 billion. Where and by whom that money was spent has determined not only the science policy of this nation but the entire emphasis in science education and training. During this time well over half of the government's contribution to science has been channeled through the Department of Defense. It must be clearly understood that most of this money purchased research of the highest quality. However, not nearly so clear is the rationale that dictated that the Department of Defense should be the principal sponsoring agency for much of this vital research.

For the past 25 years the Pentagon has sponsored research in almost every scientific discipline imaginable. From the most esoteric examinations of ornithology to the study of broad social movements in foreign countries, the Pentagon has run the gamut in its research endeavors. By necessity, therefore, the Pentagon assumed a significant role in determining the nation's science policy. The desirability of such a large role for this mission agency is the basic issue confronting us.

It is not difficult to understand how we got where we are today. The phenomenon of channeling so much of our research money through the Defense Department developed over the years not only from normal bureaucratic urges to grow but because the science community and the Congress acquiesced in that growth. So the question is not how we got here. It is why. To put it simply: Why should the Defense Department be the principal government agency through which is funded the federal research that has no apparent relationship to the security needs of this nation?

To reply by saying that the research community has found that funds simply were more readily available at the Defense Department rather than at other civilian agencies states a fact. But it is not an answer. Nor is it sufficient to say that Pentagon requests for funds receive less Congressional scrutiny than those requested by non-military agencies. Too often in the past prevailing attitude has been expressed by the question: Are we giving you enough? Perhaps it should have been: Why do you need so much? In part the historical answer lies in the fact that the cloak of national security lined with the international threat of communism simply prevented a close scrutiny of Defense requests including requests for research and development. In part, the answer is that Defense spending requests became so large that even billions for research and development seemed dwarfed. As a result the scientific community came to rely upon the immunity of Defense funding from close scrutiny and occasional budgeting squeezes. For years Defense funding provided a very stable source of research money. It was the easiest path for research community to follow.

It wasn't long before many of the most able members of the science community gravitated to this source of funds. It became apparent, too, that although only a relatively small fraction of the federal research dollar was spent on university campuses, that money was very important to those universities in maintaining their status. The salaries paid by the research grant paid in effect the salary of the faculty member and a good share of the institution's overhead as well. The universities were not prepared to accept direct subsidies for fear of losing their autonomy—but they were apparently prepared to accept such a dependence indirectly with no questions asked.

Two years ago during Senate debate on the Defense appropriations bill for fiscal year 1969, I offered an amendment which would have limited the payment of indirect costs for a research grant or project to 25 percent of the direct costs.[1] From my preparation for this measure and subsequent debate, I saw the grave financial difficulties faced by our universities today and noted the disturbingly heavy dependence of virtually all of our leading universities upon hidden subsidy via indirect costs. A total of 620 academic institutions in fiscal year 1968 received federal support for research and development totaling $1.4 billion. Of this the Department of Defense accounted for $243 million and the National Science Foundation, $212 million. This money largely benefited only a few institutions. The top 100 accounted for 87 percent, or $1.2 billion.[2] Even under the limitation of my amendment, these top 100 would have received $300 million for indirect costs; money that the individual scientists would never see but which would go into general university funds. Of this, in turn, 20 percent would have come from the military appropriations. And since overhead charges by many institutions were higher than the 25 percent limit I proposed, the Defense Department in 1968 was supplying more than $60 million to the indirect cost accounts of leading universities. Under these circumstances, I concluded that the situation was most unhealthy. To better gauge the ramifications of the federal subsidy to universities through overhead payments, I wrote to Philip Handler, then Chairman of the National Science Board and now President of the National Academy of Sciences. In a frank reply, he pointed out that of $1,671 million of federal funds for research at universities for fiscal year 1967, only about $426 million were utilized to

[1] Congressional Record, vol. 114, pt. 22, p. 29322.

[2] "Federal support of research and development at universities and colleges and selected nonprofit institutions, fiscal year 1968." National Science Foundation report NSF 69-33, 1969, pp. 3 & 14.

support research in the most immediate sense. The remainder found its way into institutional funds and departmental funds.[3]

Subsequently the National Science Board proposed to the President that this situation of a hidden and unhealthy subsidy be corrected through grants to the universities so that future proposals for research would need cover only the direct and out-of-pocket costs of the work. I hope that the silence which greeted this recommendation within the Executive Branch will not be permanent and that Congress will assess its practicability as a way to establish more honest relations between the universities and the agencies of the federal government that fund on-campus research and higher education.

A contributing reason for the expansion of defense interests into almost each imaginable field of research in my opinion is the past and present inadequate information about what kind of research is being done by whom and where.

It has often occurred to me, and to other Members of Congress, that because many federal departments and agencies fund so many research projects, there is a real possibility of overlap and duplication simply because "the word" does not pass between federal research administrators. Note that I am not speaking of research that one scientist deliberately carries out to confirm or refute the discovery of another, for this is an essential part of the scientific process. Rather, I have been and am still concerned with the probability that needless and unwitting duplication of work occurs which could be minimized if scientists and administrators had a current, reliable and complete source of information about who is doing what research with federal funds. So I asked the agencies to supply me with a list of current research projects. Having little success with the direct request, I arranged for the Bureau of the Budget to ask the agencies to comply.[4] When all of the replies finally trickled in, it was evident that whatever the agency project information systems may be, they are simply incapable of readily providing summary information on research. Eight departments and agencies finally responded. Five separate replies were sent by Defense and six by the Department of Health, Education and Welfare, bringing the total number of project information readouts to 17. Eight replies appeared to be print-outs of computer systems, with the rest manually prepared. Two defense agencies submitted computer products and three manual ones. Later it was reported to me informally that project information had been taken from the computer-based systems, edited and put back in before being printed out for transmittal. Three of the agencies of HEW and four other agencies used the science classification system specified by the Bureau of the Budget in its Circular A-46. The remainder employed their own systems for identifying fields of science. The system used by the National Science Foundation, presumably the lead agency for federal information on science and technology, was different from that specified by the Bureau of the Budget.

Parenthetically, considering the many computers and elaborate information systems of government agencies, this simple request should not have produced the administrative convulsions that it did. The administrative entanglement indicated to me that each department goes its own way in research with little attention to that funded by others. There simply does not exist a system capable of quickly and easily informing research administrators in one department of what research of potential interest or use to them is currently funded by another federal agency. While coffee-break exchanges among scientists have their value, they are not an adequate substitute. It is well over a years since I inquired into this matter. Yet the Office of Science and Technology has not decided what current information about research projects should be collected, who should do the collecting, how it should be collected and who can have access to it. Perhaps we need some one to tackle this issue with the vigor of past efforts when the related question of cataloging and making available the results of research already done was exhaustively considered. Perhaps the reorganized Office of Management and Budget can give this a priority among its management functions.

My experience in trying to get current information on research confirmed yet again my observation that bureaucracies must often be kept after to obtain improvements in the administration of government-funded research. These improvements are all the more necessary in a time when the dominant question has changed from: "What can we spend our increasing research appropriations on?" to "How can we best spend the available appropriations for research?"

In this connection, to overcome the inertia, to get out of comfortable, well-worn ruts sometime require heroic measures.

It was during the Senate's appropriation hearings in 1968 that I asked Dr. Foster of the Defense Department about duplication of research and about the relation of Defense-sponsored research, particularly its basic research, to that of other agencies. It was abundantly clear in his response that the Pentagon then believed all fields of science and technology were open to it, that it saw no inconsistency in funding basic research in fields already funded by civil agencies, and that *all* research projects it sponsored were somehow relevant to Defense needs. The Defense Department was adamant in its position that it must continue the full spectrum of research then being undertaken, even though by definition the outcome of much such research can neither be predicted nor its possible relevants to military science known. This testimony reinforced the conviction that research funded by the military appropriations had built up an enormous momentum, and that only the most forceful efforts by Congress could effect change in the direction of rechanneling federal responsibility for the funding of basic research. At the time, it seemed clear that there was not a national policy that viewed the nation's long-term interests. What to do about it was another question.

During the floor debate on the military authorization bill (PL 91-121) for fiscal year 1970, I added a rider which appeared as Section 203. It reads as follows:

"None of the funds authorized to be appropriated by this Act may be used to carry out any research project or study unless such project or study has a direct or apparent relationship to a specific military function or operation."

That provision became law and the same provision now appears as Section 204 of the military authorization bill reported to the Senate for fiscal year 1971, but does not appear in the bill reported in the House.

I believe Section 203 is a necessary and practicable step towards the goal of reducing the heavy dependence of American science that has built up since the early 1950's. Properly and imaginatively administered, it can also lead to a strengthening and a rebuilding of the foundation for the future of much of American science.

The intent of the provision is clear. It is a mandate to reduce the research community's dependence on the Defense Department when it appears that the investigation under consideration could be sponsored more reasonably by a civilian agency. After all, the National Science Foundation was created by Congress back in 1950 specifically to channel federal funds into basic research. Since its creation, it has been the orphan child of the federal government's science policy. Since 1955 NSF has been given $2 billion to sponsor basic research. During this same period, Pentagon spending has been $3 billion on this same type of research; it has spent 50% more for the fundamental investigations—in addition to the many billions on advanced research and development of specific military needs—than has the agency set up for this sole purpose.

The addition of Section 203 to the military authorization law thus sought to set in motion a realignment. The language was intentionally imprecise in an effort to afford the Executive Branch an opportunity to start a process that would lead to the transfer of resources from the Defense Department to the civilian agencies—primarily to the National Science Foundation.

Clearly, Congress does not exist to operate the daily workings of the Executive. By law, however, Congress does have a responsibility together, with the President, to establish broad policies. Congress has a right to assume that policies so established will be followed. Much progress has already been made since Section 203 became law in the face of the resistance that has lingered in some quarters. The authorization for NSF funding for this coming fiscal year has been increased by about $75 million over last year. By comparison, this year the Defense Department's share of basic research funds will be $50 million less than that of the National Science Foundation.

By no means, however, does Section 203 intend to cut off the Defense Department from research that it needs. It is neither anti-military nor anti-research. Whether the language chosen is interpreted strictly or loosely, it is hoped that the ultimate result of this whole endeavor will be a continued high level of basic research funding by the federal government. Hopefully, we will see in the near future that the civilian agencies under the leadership of the National Science Foundation will develop as the primary source for these research funds. The responsibility of the civilian agencies to fund an appropriate share of basic research is in no way diminished by Section 203. The Pentagon will continue to have a responsibility for research—even basic research, one that allows those entrusted with military defense to maintain a full and necessary exchange with the researchers at the frontiers of science. The role of the Defense Department in sponsoring basic research, however, is intended to be incidental rather than predominant.

Turning now to the DoD response to Section 203, I believe that the review of research by DoD could have benefited from guidance and criteria issued by its top management. That did not happen. Instead, all that the Defense Department did was to send a memorandum to its constituent agencies informing them of Section 203 and telling them to comply.

When I inquired of DoD about their follow-through on this provision, Deputy Secretary of Defense Packard replied in part that the Department had contacted the National Academy of Sciences and invited them to consider carrying out an examination of all projects which might be affected. I thought this a constructive idea and wrote to Dr. Handler on December 5, 1969, to support this participation by the Academy. To my disappointment, Dr. Handler replied on December 12 that he must decline to involve the National Academy of Sciences directly in the review. He did volunteer to offer the Academy for any follow-up review. More important, he agreed it would be useful for

[3] For the text of Mr. Handler's letter, see the Congressional Record, vol. 114, pt. 22, pp. 29338-9.

[4] c.f. Bureau of the Budget Bulletin No. 69-8, dated December 3, 1968, Subject: Listings of Federal Government contracts and grants for support of research.

the Academy to do two things. First, to formulate principles which might guide the administration of Section 203. Second, to undertake a projection of the implications and consequences of Section 203 with respect to the future of federal research policy and the national welfare. While I did not ask the Academy to do so then, experience with Section 203 indicates that it should do so now.

To date, there have been differences in application within the Department of Defense. On the one hand, for example, the Advanced Projects Research Agency asserts that none of its projects fail the test of Section 203, even though the General Accounting Office has singled out some as questionable in terms of this legislation and as more properly supportable by the State Department than by military appropriations. On the other hand, the Department of the Air Force has seized upon Section 203 to terminate research funded from appropriations prior to fiscal year 1970, with the excuse that they were carrying out the "Mansfield" philosophy.[5]

Of the 6,600 research projects that were reviewed, 220 were found affected by Section 203 which involved fiscal year 1970 funds totalling $8.8 million. This is about 4 percent of the $223 million that DoD obligated during this fiscal year for research at colleges and universities, and less than 1 percent of the $1,295 million of federal funds for university research and development estimated by the Bureau of the Budget for fiscal year 1970.

By comparison, the general tightening of the Defense research budget for fiscal year 1970 caused a reduction of $64 million, notwithstanding Section 203.

Recently, the Secretary of the Air Force testified that approximately 7 percent of the research projects, representing 3 percent of the Air Force research program, failed to pass Section 203. In comparison, tightening funds required a cut of over 10 percent.

Of course, Section 203 goes beyond the 220 projects immediately affected. Research projects funded from prior years' funds that do not meet the test of this legislation will be affected as they come up for renewal. The Comptroller General was unable to provide us with an estimate of the number of projects in this category or their total funding. Nonetheless, in my judgment, such projects should continue to their normal expiration, which will provide time for coordinated review by the Department of Defense with the civil agencies and for leadership and initiatives from the Office of Science and Technology. Despite its limited reaction to date, I still look to the Office of Science and Technology to provide the leadership necessary so that research affected by Section 203 which should be continued in the national interest will have a fair chance at the available basic research funds.

All that is required under Section 203 is relevance, which is not a dirty word as some critics of the Section sometimes seem to suggest. Relevance does not preclude agencies from funding basic research. Section 203 does not forbid the Defense Department from funding any and all research at colleges and universities. Had that been our purpose, we would have so written this legislation. What Section 203 does is to begin to close out a second and a backdoor National Science Foundation which has grown up in the Department of Defense.

It seems to me that the Defense Department can readily identify and justify many fields of fundamental research about which enough is known to judge their relevance to defense needs now and in the foreseeable future. Research funded in such fields as a result of announcement and publication of such DoD interests should produce proposals for research that would permit scientists to explore aspects of science which add to understanding in fields reasonably related to Defense needs.

The idea of relevance is now new. I should think that the Science Adviser to the President would be well acquainted with the following statements that support the principle of relevance.

First:

"The Foundation shall be increasingly responsible for providing support by the federal government for general-purpose research through contracts and grants. The conduct and support by other federal agencies of basic research *in areas which are closely related to their missions* is recognizable as important and desirable, especially in response to current national needs, and shall continue."

Second:

"Mission oriented governmental agencies do and should support much long-range basic research, information from which is calculated *to have a direct bearing on some aspect* of their mission. . . . All mission oriented agencies need to be in close contact with the best and most advanced research which can apply to their problems."

The first is from President Eisenhower's Executive Order No. 10521 of March 15, 1954, on scientific research. This order still stands. It was not rescinded by President Kennedy, by President Johnson or by President Nixon. The second comes from the recent advice to the President by his Task Force on Science Policy.

Section 203 opened to the Administration a unique opportunity to set in motion a rebalancing of the responsibilities of federal agencies for the funding of basic research. The section became law on November 19, 1969. Yet the budget for fiscal year 1971 does not indicate that this opportunity has been taken. There is no indication of a shift of basic research unrelated to defense needs to the National Science Foundation or other agencies and, at the same time, a corresponding reduction in Defense funding.

In short, timely arrangements have not been made for orderly decisions pursuant to Section 203. I wrote last fall to the Director of the Budget Bureau and to the Cabinet officers of Departments and other agencies concerned on that point. The letters have had no appreciable effect. The Research Management Advisory Panel to your Subcommittee recommended that the Section be administered so as to produce an orderly shift in sources of research support. What has happened to that recommendation? In the meantime, where is the contribution of the interdepartmental system for coordination in research to which reference is always made when Congress starts to talk about improving the administration of federal appropriations for research? What has it done?

All that is heard are requests for the abolition of Section 203. Indeed, there seems to be almost a willingness to risk the wreck of the whole DoD basic research program rather than take an innovative and imaginative response to the law. Again, however, what may be involved is the built-in inertia of bureaucracy.

To carry out the intent of Section 203 will require new ventures in interagency coordination. That is the responsibility of the reorganized Bureau of the Budget and the Office of Science and Technology under the President. Thus far, unfortunately, the White House science office apparently sustains the rigid opposition of the agencies to Section 203. That is most unfortunate because if there are to be improvements in coordination and a shift in the emphasis of federal policy with regard to support of basic research, it is going to take a joint effort by the President and the Congress.

To sum it up: We are in dire need of a new national policy on the federal role in science. Whether technological progress depends upon basic research is no longer an issue. That was agreed upon years ago; and I am sure it is the conviction of Congress that maintenance and hopefully growth in scientific activities are essential to the public welfare and the nation's future. But the policies of the 1950's and 1960's are not suitable for the already perplexing 1970's. Too much is at stake to depend upon fortune, upon luck, upon happenstance. Our policies must be soundly and thoughtfully conceived and guided.

If the Executivve Branch is thinking about policy in these terms, no evidence of it has yet appeared in the public press despite recent inputs from the President's Task Force on Science Policy and the National Goals research staff.

I hope we can look to the scientific community for advice. Yet I recall that this community speaking through the National Academy of Sciences in 1965 was unable to answer the questions on how much money should be spent for research and how it should be divided up.

Recognizing the risk of oversimplifying, it would be my judgment that we can no longer rely for guidance upon an uncoordinated, unplanned collection of laws, orders, statements, understandings, and traditions. These all have their place. But we must now bring them together, which is what the inquiry of the Subcommittee is all about. I would hope that the Subcommittee on Science, Research and Development will continue its role of Congressional leadership and stimulate enough interest so that our leaders of government and science will sit down together and work out the principal outline and content of the kind of policy that is needed. It is up to Congress to assert its long-neglected responsibility and set forth a national policy for science. It is long overdue.

The PRESIDING OFFICER. The time yielded to the Senator from Colorado has now expired. The only remaining time in the hands of the Senator from South Carolina.

Mr. THURMOND. Mr. President, how much time remains?

The PRESIDING OFFICER. Twenty-five minutes remain to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from South Carolina is recognized for 5 minutes.

Mr. THURMOND. Mr. President, I support the amendment of the distinguished Senator from New Hampshire. My interpretation of the amendment is that the purpose is not to reduce research and development for critical weapons which are essential to our national security. It is simply to provide more funds to the National Science Foundation for basic research.

Basic research is essential. We should go forward in this field. The developments we have had and the inventions that have come to this country have come from basic research.

It is very important that we not reduce funds. It is important that we continue to go forward in that field.

I want to say, however, that the survival of this country is not only dependent upon that basic research but is also

[5] In his letter to Rep. Daddario of June 5, 1970, Secretary Seamans wrote of Section 203: "We have attempted to meet the intent, as we understood it, rather than merely the letter of Section 203. Accordingly, we made no distinction between fiscal year 1970 or prior year funded research in our review. . . ."

dependent upon the research the Defense Department does with our critical weapons.

In this connection, I want to read from an article by Gen. Thomas Lane, a retired Army general. This article is entitled "Survival Is First Priority."

General Lane says:

Citizens who follow discussion of the federal budget will frequently encounter the cry for new national priorities. The usual ploy is for a Senator or a lobbyist to cite the needs of education, medicine or housing, then mention the cost of new military aircraft, and say, "We must revise our priorities!"

It is revolting to note the frequency with which public officials or prominent intellectuals resort to this tactic. It is revolting because the cry reveals an ignorance and confusion which ill become men bearing public responsibility.

In our society, the increasing mastery of machine technology is reducing the proportion of society engaged in essential work. From top scientists to factory workers we have the producing elements of society. The rest of the people enter occupations reflecting the leisure opportunities of our economic system. On the intellectual side, they used to be called philosophers; but now that the numbers have greatly increased and philosophy is too difficult, they call themselves social scientists.

Although the field includes some social scientists who are soundly trained in philosophy and are broadly educated in related disciplines, the common aspect of the social scientist who gains public attention is that of a narrow-minded zealot absorbed in his craft and oblivious to other values. He is an educator who lacks the most elementary comprehension of sound public policy. He is a doctor with his fist in the public purse. He is a welfare worker who thinks government has an obligation to tax the workers to sustain the drones. In the federal Department of Health, Education and Welfare, his number is legion.

Each of these specialists considers his work essential to the welfare of the United States. As he looks at the federal budget and notes the cost of a new airplane or of an ABM system, he drools to think what he could do with that kind of money. He argues that we are wasting money on weapons of destruction instead of investing it in his constructive service to mankind.

It is dangerous to have such mistaken ideas rampant in our society. Every citizen, whatever his occupation, should understand that national survival must be our first priority. All other activities depend upon the success of our security effort. If it fails, there will be no health, no education and no welfare. There will be only the kind of enslavement we see behind the iron curtain, a slavery which thousands have risked their lives to escape.

Security is worth all our resources, if they are required for success. And it is not due one cent more than the minimum required for success.

This country has always put its security first. We have no problem of priorities. Our problem is to define the security requirement.

Security requirements are determined by the threats which hostile powers and principalities pose to our existence. Our domestic health and morale are indeed vital factors in meeting the hostile threat and are to this extent allies of national security. But health education and welfare have no independent value which takes precedence over national security.

Security requirements are in their nature necessities, not preferences. We must do what must be done and no more. If the threat of Soviet aggression now requires vast expenditures on sophisticated armaments, we must meet that threat until we can disarm it.

Whether we should at the same time achieve a particular level of social services within our society is a question for the citizen to ponder. But we should be clear-headed about the different nature of these programs. In priority, they come after national security.

Mr. President, I feel that we must remember that the weapons and planes and armaments we have today to protect the people of this Nation are the result of research and development that was done 5, 10, or 15 years ago. It is essential that we do go forward and provide the necessary research and development for the Defense Department in order to maintain our national security. Without national security, as I have just stated, we have nothing. Our people, if they are to survive, must be protected by the Defense Department.

I am in favor of the various programs we have today, but if we have to choose between research and development for the Defense Department and other programs, there should be no question in the minds of the people of America which they will choose.

I repeat, national security means our survival.

The PRESIDING OFFICER. Who yields time?

Mr. THURMOND. Mr. President, I yield back my time.

The PRESIDING OFFICER. All time has been yielded back.

Mr. THURMOND. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. The request has been made for the yeas and nays. There is not a sufficient second.

The yeas and nays were not ordered.

Mr. THURMOND. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask for the yeas and nays on the pending amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. All time on the amendments having been yielded back, and the yeas and nays having been ordered, the clerk will call the roll.

The legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Indiana (Mr. BAYH), The Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Connecticut (Mr. DODD), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Minnesota (Mr. MCCARTHY), the Senator from South Dakota, (Mr. MCGOVERN), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. MOSS), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Mississippi (Mr. STENNIS), and the Senator from Maryland (Mr. TYDINGS), are necessarily absent.

I further announce that, if present and voting, the Senator from Connecticut (Mr. RIBICOFF), the Senator from Alaska (Mr. GRAVEL), and the Senator from South Dakota (Mr. MCGOVERN), would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from New Hampshire (Mr. COTTON), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from Hawaii (Mr. FONG), the Senator from Florida (Mr. GURNEY), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), and the Senator from Illinois (Mr. SMITH) are necessarily absent.

The Senator from Oregon (Mr. PACKWOOD) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from New York (Mr. JAVITS), the Senator from Iowa (Mr. MILLER), and the Senator from Texas (Mr. TOWER) are detained on official business.

If present and voting, the Senator from Arizona (Mr. FANNIN), the Senator from Florida (Mr. GURNEY), the Senator from New York (Mr. JAVITS), the Senator from Iowa (Mr. MILLER), the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), the Senator from Iillinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The result was announced—yeas 68, nays 0, as follows:

So Mr. MCINTYRE's amendments were agreed to en bloc.

Mr. PROXMIRE. Mr. President, earlier today, the Senate voted, as I understand it, by a 42-to-31 vote to reject an amend-

ment that Senator MATHIAS and I offered which would have provided a ceiling on the amount the Defense Department could expend in this fiscal year. I think the significance of that vote is very great. We lost that vote. However, I point out that the vote itself represents remarkable progress. A few years ago, on a similar proposal, only two Senators voted to limit defense spending. That was a motion to limit it by 10 percent. Those two Senators were the distinguished Senator from South Dakota (Mr. MCGOVERN) and the distinguised Senator from West Virginia (Mr. RANDOLPH). I voted against that proposal.

I am gratified for the active support of this amendment by the senior Senator from West Virginia (Mr. RANDOLPH). At that time, he stated that we could eliminate billions of dollars from the military budget. He stressed that it was essential to apply these savings to priority domestic programs. This is the reasoning of many today. But in 1963 the Senator from West Virginia was practically alone in the cause at the time—on the roll call only two Members voted for the amendment. So the Senator from West Virginia was one of the earliest advocates of a reasonable defense budget and of the need to reorder our national priorities.

I think many of us have had an awakening in the last 2 years. I say that because there is going to be another opportunity for us to offer similar action when the appropriation bill comes before the Senate.

The principal arguments I have heard against this amendment—and I sat through the entire debate—were these: No. 1, it was the wrong bill. We should have amended the appropriation bill. No. 2, because we limited spending instead of obligational authority, we put the Pentagon in the position where they would actually have to cut back by the full force of expenditures in the next fiscal year without any flexibility. If we act to limit the appropriation bill, on the other hand, we affect obligational authority. We do not directly limit the spending itself. They would be free to expend sums that have been obligated in the past, so the cut would not have as drastic or immediate an effect.

With that in mind, Mr. President, I think there is every likelihood, every real posibility, that we can pick up five, six, or seven votes next month, which is all we apparently need in order to provide an effective reduced limit of defense appropriations.

I might add that the House Appropriations Committee, which last year cut approximately $5 billion from the Defense appropriation proposal made by President Nixon, has yet to act; and after that House action last year, the Senate cut even further below the Nixon requests.

So I do hope that the Members of the Senate and those in various organizations who so enthusiastically and faithfully supported us in talking to Senators on this matter will not lose heart. I think we have every real chance for effective action in this session, within the next few weeks.

Mr. HATFIELD. Mr. President, the Vietnam war continues. That is the one clear, unmistakable fact that we must all recognize. After two decades of American involvement; after 10 years of American men fighting in Southeast Asia; after $140 billion has been spent; after dropping more bombs on North and South Vietnam than the total of all bombs dropped during World War II and the Korean war; after 43,000 Americans have been killed and 285,000 wounded; after more than 122,000 South Vietnamese soldiers have died and more than 295,000 casualties; after an estimated 300,000 civilian deaths; after 1 million civilian casualties; after 4 million have lost their homes; after an estimated 620,000 North Vietnamese and Vietcong soldiers have died, the war continues.

Despite 27 months at the Paris negotiating table; despite halts, resumptions, and halts, in the bombing of the North. Despite programs and plans for Vietnamization—despite all this the Vietnam war continues. And it will continue.

Americans will continue to die there. Vietnamese will continue to die. The country will continue to be torn apart by bombs. Civilians will continue to be maimed and slaughtered. America's resources will continue to be drained. Our young men will continue to be alienated, and our position in the eyes of all the world will continue to erode.

So I ask my colleagues—what is their plan, what is their way, what is the method that they prescribe to bring this conflict to an end? How is it all going to stop? Tell me the way that will bring this unfortunate chapter of our Nation's history to a close.

Vietnamization—that is what we most often hear proposed. Vietnamization is put forth as a plan for ending the war. But it is nothing of the sort. Vietnamization means that South Vietnamese will fight and die in increasing numbers instead of Americans. Eventually Americans will fire the artillery and fly the planes and drop the bombs, but the South Vietnamese will shoot the rifles. Vietnamization is not a plan for ending the war in Vietnam. At best, it is a plan designed to reduce American casualties and to enable fewer American troops to be in Vietnam while still pursuing the same goals that have been guiding our policy over the past decades.

Let us examine what we really mean when we talk about Vietnamization. We constantly hear about the numbers of completed and proposed troop withdrawals from Vietnam. Seldom, however, do we recognize the number of present and projected troops that remain in Vietnam. The President's announced reduction of 150,000 additional troops by April 1971, will leave approximately the same number of Americans in Vietnam as there were in the summer of 1966. It is not clear exactly what will be our policy relating to troop withdrawals beyond that time. Some reports suggest that we will never be able to reduce our forces below about 200,000 men. Other reports have suggested that the intention is to bring American forces eventually down to a lower level—perhaps 20,000 to 50,000 remaining as a residual force.

In any event, the details of our policy beyond this time are not known. But it is clear that we do intend to retain a specific military presence in that country.

The President has announced three criteria which shall guide the progress of our troop withdrawals. The first is the progress of negotiations in Paris. I would speak to this point in further depth later, but now I will only point out that after 27 months and 81 meetings there has been no progress.

The second criterion announced by the President to guide the rate of troop withdrawals is the level of enemy activity. I assume that what is meant by this factor is that as long as the enemy stops fighting, then we can withdraw our troops. That, of course, is perfectly reasonable. But it is true that as long as Americans are present and fighting in Vietnam, the enemy has absolutely no intention of suddenly laying down his arms.

Thus the level of enemy activity offers no hope for troop withdrawals unless one assumes that we can militarily crush the enemy into surrender—a goal which the administration has repudiated in its own statements.

And so, the war continues.

The third factor governing the rate of our withdrawal from Vietnam according to the administration, is the ability of the South Vietnamese to take over the fighting on their own. As Vice President AGNEW Stated on August 20, 1970, "Withdrawal—from Vietnam—will take place only as the capability of the South Vietnamese becomes able to take up the slack." In other words, if the South Vietnamese become better able to fight and to win without our assistance, then we will find it possible to withdraw added numbers of our troops. But the opposite is also clear. If the South Vietnamese are unable to maintain an effective military position against their opponents, then our troops will remain. We never would have sent more than 500,000 Americans to Vietnam if the South Vietnamese could successfully fight their own war.

Nevertheless, assume for a moment that you accept the basic premise of Vietnamization; namely, that the war can continue but that the South Vietnamese should be responsible for the fighting. The question then becomes this: When would be a reasonable time for the South Vietnamese to go it on their own? Vietnamization as such is really nothing new. We have been trying to give them the ability to defend themselves on their own since the time the first American dollar and first American soldier arrived. So the South Vietnamese have had the direct benefit of our presence and equipment and training for more than 10 years and our indirect assistance for a decade before that. We have given them more than $6.6 billion worth of direct military aid since 1950.

All this effort—I suppose—has been successful in some ways. The South Vietnamese now have armed forces numbering more than 1 million men. If you add to this the size of the local police and security forces which provide defense, you then have another 250,000 men. Thus, they now have a strong and for-

midable force. What is the size of the enemy whom they fight against? At present, it is estimated that there are 240,000 North Vietnamese and Vietcong whom they fight against in the South. The Vietnamese have approximately an additional 400,000 soldiers in their total army in the north whom they have never committed to the south. It is doubtful they could ever commit that total number. According to the Defense Department. 620,000 of the enemy troops have died in battle. With enemy forces so reduced, with all the assistance and aid we have given them and would, in the foreseeable future, always hold a very decisive advantage.

And so, what does it really take to enable them to defend themselves on their own? The question is, will they ever be able to? If one accepts the basic premise behind Vietnamization, and if one believes it should at least be given a chance, then let me ask this—is it reasonable to give Vietnamization another year, or even more than a year, another 15 months to see if it will succeed? Now is not that a reasonable approach? Let us say you believe that, for some reason, a force of 1.2 million men cannot now effectively defend themselves against a force of 225,000 of their fellow countrymen. And that, given enough time and preparation and materiel and support this force of more than a million men eventually will be able to effectively defend themselves against their opponent. Well, then, let us see if they are able to do that in the next year or so. Let us say that we will do everything we can—continue to give them all the manpower, all the training, and all the support of our own troops that they require until the end of 1971—let us propose that. And let us see if then they can finally be able to defend themselves on their own. And if they cannot effectively defend themselves by the end of 1971, then I would submit they will never be able to effectively defend themselves.

Vietnamization has currently been defined to mean this: We will continue to fight for the Vietnamese as long as they cannot fight on their own. That may take 2 years, or 4 years, or 8 years, or 10 years—or never. That sort of policy is nothing more than a rationalization for maintaining American military involvement in the Vietnam war. But let us interpret Vietnamization in a different way, in a more reasonable manner. Let us say that we will give them all that they need—give everything that we have—offering the South Vietnamese every opportunity to fight on their own, and devote the next year to that end. We will announce that by the end of that year they will then have to continue the conflict, if they so desire, without the assistance of American military forces.

That is what our amendment proposes. It knows that the South Vietnamese will never be able to fight on their own as long as they are never told that they will have to do so. It knows that the South Vietnamese will never prepare themselves in earnest for fighting without the help of American Armed Forces so long as they are told that Americans will give them help as long as they need it. By linking our withdrawals to the ability of the South Vietnamese to fight on their own, we have a formula for a never-ending American involvement.

If we truly want to give the South Vietnamese the ability and the opportunity to carry on this struggle independently of our military forces—if we truly are seeking that aim—then we must tell them in no uncertain terms that they must become militarily independent of our manpower. And why should that be so startling, so threatening—particularly when they have more than a year to prepare for that circumstance. Why should they feel nervous, or threatened, about having to fight on their own against a force currently only one-fifth the size of their own? Why should they be resisting every American word that mentions increasing the pace of American withdrawal?

The conclusion one is tempted to draw is that they doubt whether they possess what is truly necessary to carry out their aims—that they doubt they have the necessary determination, the necessary commitment, the necessary will to achieve their goals. But if this is the case—if they are lacking in those essential qualities, then no degree of American involvement ever can or ever will achieve those ends for them.

Most serious of all, Vietnamization simply does not provide for a stable political settlement of the conflict; rather, it is a formula for a continuing, protracted war. President Nixon has stated on April 20, 1970, that "a political settlement is the heart of the matter." And yet, if we rely solely upon Vietnamization of the war, there will be no political accommodation between the antagonists in Vietnam. Vietnamization merely changes the nature of the conflict; it does not resolve political differences; it does not halt the loss of life; and it perpetuates the very political instability which dragged us into Vietnam initially.

And so, Vietnamization alone is simply not the way out. It does not provide for the complete withdrawal of American troops; it is a military strategy which fails to deal with the political roots of the war: it does not achieve peace but only changes the identity of some of those who die. And the war continues.

The President's alternative to Vietnamization has been progress at the Paris peace talks. However, those talks have been stalemated since they began. On June 30, 1970, President Nixon stated that when his administration took office:

> The United States had been negotiating at Paris for ten months but nothing had been agreed upon other than the shape of the bargaining table.

And in his Vietnam "up-date" report on April 20, 1970, he candidly admitted—

> I must report with regret that no progress has taken place on the negotiating front.

Some have charged that this amendment would undermine Ambassador Bruce and destroy any chance for a negotiated settlement at Paris. A complete withdrawal, they maintain, would eliminate any incentive for the North Vietnamese and the Vietcong to negotiate because they will have achieved the primary purpose of their negotiations—the withdrawal of American troops.

And yet, it must be pointed out that the real difference here is the pace of withdrawal, not withdrawal itself. The President has already wisely committed us to a withdrawal of some American troops. We seek to speed that withdrawal, to disengage militarily with honor and order and safety.

Apparently even the administration does not believe that withdrawal of American troops would undermine the Paris negotiations. If so, they would appear to be working at cross purposes. Vice President AGNEW himself has defended the withdrawal of troops while we negotiate. On May 3, 1970, on "Face the Nation," Peter Lisagor asked him:

> Why should (the North Vietnamese) come to Paris and negotiate seriously, Mr. Vice President, if we have already proclaimed . . . that we are withdrawing from South Vietnam? What is the inducement for them to negotiate?

Vice President AGNEW responded:

> They are not only negotiating with us, they are negotiating with the South Vietnamese, and the South Vietnamese are going to be there a long time.

This is precisely the point. Any true resolution of differences in South Vietnam, any political accommodation, must come from the South Vietnamese themselves. Our withdrawal will not undermine those negotiations; they will not eliminate the possibilities for a political settlement to what is essentially a political conflict.

In fact, we have every reason to believe that a stated withdrawal of all American troops more than 15 months from now would initiate the first real breakthrough in the stalemated negotiations. Saigon has demonstrated little or no interest in a negotiated settlement of the war, and as the course of Vietnamization, with the continued American presence in South Vietnam, has become more clear, President Thieu has grown increasingly intransigent.

On July 28 Thieu announced confidently that he expected total military victory in 3 years, that he would "never accept a Government coalition with the Communists," and that—

> If the Communists do not want peace, peace will certainly come with our victory. . . . If they wish to continue fighting, we will eliminate them. (Washington Post: July 30, 1970).

Within days the administration unfortunately chose to support such a rigid position, declaring on July 31:

> We are opposed to a coalition government, negotiated or imposed. (Washington Post: August 1, 1970).

As long as Americans remain in Vietnam, as long as we continue to shore up Thieu and his clique in Saigon, he has no reason to take negotiations seriously or to begin to make concessions and compromises necessary to unite the disparate factions in his country. And the war continues.

If, however, for the first time, we announced publicly and openly that American troops would not remain indefinitely in Vietnam, if we declared our intention not to remain there beyond December 31, 1971, then Thieu and the Saigon government would be compelled to confront the political realities of South Vietnam.

We might then be able to achieve the concessions which we need and desire to achieve a stable and durable peace. For the first time, it could be possible to negotiate effectively the release of prisoners-of-war; a cease-fire and deescalation could be instituted to secure the safety of American troops during withdrawal; the level of conflict in Laos and Cambodia could be reduced; and the political impasse in South Vietnam might at last be penetrated.

A fixed withdrawal date at the end of 1971 will not, as Vice President Agnew has charged, deal "a lethal blow" to the Paris talks. Rather, the illusion of real negotiations threaten to provide a rationalization for continuing the war indefinitely, not ending it.

Furthermore, the entire history of our involvement in Vietnam demonstrates that concrete results cannot be achieved by exerting only military leverage. This is the case for the United States; it was true also for the French. The North has shown every indication that it will fight a protracted war or it will seek a political settlement once a definite timetable for the withdrawal of all American forces has been established.

The real "lethal blow" to the Paris peace talks would be an escalation of military activity or another invasion of Cambodia. Secretary of State Rogers stated the candid truth when he said that the chances for a negotiated settlement of the war had deteriorated since the invasion of Cambodia. On July 15, he said that North Vietnam and the Vietcong would "not be inclined to negotiate" after the setbacks they suffered in Cambodia and this meant that the prospect for the negotiations "in the next couple of months are not too bright." He also stated that the Vietnam war might very well end with "no war and no peace."

This amendment is not a desertion of one commitment to the South Vietnamese people or their Government. Our sacrifice of American lives, our provision of arms, and money, our support for more than two decades speak eloquently of our concern for the people of South Vietnam.

We have no desire to abandon the South Vietnamese now or even 15 months from now. The amendment stipulates that military aid, including operations, may continue until December 31, 1971. After that date, if American troops are still needed in South Vietnam, all the President must do is come to the Congress and explain why. By congressional action, South Vietnam could continue to receive the aid of our Armed Forces but the need and necessity must be established.

The destruction of Vietnam during this war has been so great that they will need aid and support for many years to rebuild their shattered society. Part of that aid might mean the supply of additional weapons and materiel to provide security and continued military aid to the South Vietnamese Army; part of that aid might be money and assistance to reform and transform the wreckage of the war. We are not deserting our allies; they have fought with us and died with us, but we cannot send Americans to die for them forever.

There simply comes a time when allies must become true allies and not dependents. Our commitment to South Vietnam has never been unlimited, and a stipulated withdrawal date 15 months in the future would serve notice to Saigon that the time has come for it to confront the conflicts which have destroyed the fabric and quality of Vietnamese life for so long.

And so, unless this amendment is passed, we are confronted with the indefinite commitment and maintenance of American troops in Vietnam, with a constant loss of American lives, and with support for a government which has made little effort to win the allegiance of the people it governs. The war continues now, and unless this amendment is passed, the war will go on with no definite end in sight.

This amendment provides the United States with an honorable and orderly way out. First, it merely stipulates that the present withdrawal rate already announced by the President would be put into legislative form. The administration has already stated that these withdrawals are irreversible, so this provision expresses congressional support for the President's policy. Thus, this provision authorizes a troop level of no more than 280,000 men in Vietnam by April of 1971.

If, of course, the administration found it necessary to change its policy and not meet this withdrawal rate because of some unexpected contingency, Congress would simply be called upon to approve a differing authorization.

The second provision of the amendment concerns itself with those policies beyond April of 1971; it states that funds appropriated after that time for use in Indochina should be used for the following objectives:

First, the orderly termination of military operations there and the safe and systematic withdrawal of remaining armed forces by December 31, 1971;

Second, to secure the release of prisoners of war;

Third, the provision of asylum for Vietnamese who might be physically endangered by withdrawal of American forces; and

Fourth, to provide assistance to the Republic of Vietnam consistent with the foregoing objectives.

We do not know if this is inconsistent with the policies of the administration. They have chosen not to reveal their course of action beyond April of 1971. But we do believe it to be a sound and reasonable approach for the administration to follow. If, however, the President finds that either circumstances or policies prohibit him from withdrawing all armed forces by the end of 1971, and if this poses any danger to our military forces at that time, then he has the option of extending this timetable by 60 days. Further, if the President decides that armed forces should remain in Vietnam beyond this period of time, then he would be required to come to the Congress and set forth his recommendations and deadline for their withdrawal subject to the approval of the Congress.

Therefore, this amendment is an overture to the administration. We are seeking an approach which we believe will be most reasonable to all parties concerned.

We are giving the administration full authority to carry out its withdrawal program, to be completed by the end of 1971. If the administration differs with the course of action, then they need only to justify an alteration of the timetable to the Congress.

I do not know why the administration should find this to be an unreasonable proposal.

In my view, it certainly would be unreasonable to propose that the administration be given full authority for any course of continued military activity in Vietnam without congressional approval beyond 1971.

Therefore, I would hope that the administration will carefully consider this revised amendment with an open mind. In my view this represents a most sensible approach for guiding our future course of action in Vietnam; it is the responsible way for the legislative executive branches to cooperate together in this process.

There is no excuse for men of reasonable minds to reject such an overture.

The primary purpose of all these provisions is the preservation of human lives—South Vietnamese and American. Some have objected that the amendment would tie the hands of the President as Commander in Chief. I categorically deny this.

The President himself stated on July 1, 1970, that

> the right of the President of the United States under the Constitution (is) to protect the lives of American men.

This amendment in no way interferes with the power of the Commander in Chief to protect the lives of American men. It assures the safety of American men and enables the President to protect American troops during an orderly withdrawal.

A withdrawal by December 31, 1971, is the best means of holding down the number of American deaths and casualties in Vietnam. This is the conclusion of studies projecting American casualties in Vietnam prepared by two former staff members of the Office of Systems Analysis in the Department of Defense. We have no assurances that the present rates of withdrawal will continue, but assuming they would continue until all American troops had departed, we would be out of Vietnam by approximately September 1972. Compared with this plan, a December 31, 1971, withdrawal date would mean 1,600 fewer American deaths and 14,000 fewer casualties.

If, however, current withdrawal rates continue leaving a residual force of 50,000 Americans in Vietnam until 1975, a withdrawal by the end of 1971 would mean 3,600 fewer deaths and 31,550 fewer casualties. Some plans call for a residual force of approximately 200,000 in Vietnam until 1975, and compared with this prospect, the amendment withdrawal date would save 10,900 American lives and prevent more than 96,000 casualties.

All this assumes that the present level of fighting would persist, as it gives every indication it will. It also assumes that there will be no cease-fire or reduction

in the level of combat once a fixed withdrawal date of December 31, 1971, is declared. However, once we make it clear that we are withdrawing and will depart by a fixed date Hanoi and the Vietcong would have good reason to negotiate a cease-fire or reduce the level of fighting in order to assure a withdrawal by the end of next year.

In providing a way to reduce American casualties, the amendment can hardly be construed as restricting the President's powers as Commander in Chief only of those forces which have been raised and supported by the Congress. The framers of the Constitution strongly intended that the Commander in Chief should direct our military forces into war with other nations only when war had been declared by the Congress.

The wisdom of the separation of powers, therefore, applies to our Nation's policies of defense and foreign affairs just as clearly as it applies to domestic issues. It is no infringement upon the President's constitutional duties as Commander in Chief for Congress to exercise its own judgment over the support of armies for specific purposes.

For too long the Congress has given the President almost sole responsibility for the war; this must be changed. I want to see the Congress reassume its proper constitutional responsibility. The American people hold us accountable for what this Government does; we must answer to them.

The American public supports a withdrawal from Vietnam by the end of 1971. The Harris poll of August 17, 1970, indicates that 44 percent of the American public favor a withdrawal by the end of 1971 while 35 percent oppose it. This sentiment is further evidenced by an earlier Gallup poll during the last week in May which indicated that 48 percent favored a withdrawal by July 1971, or before, while only 31 percent favored the President's policy of timing withdrawals on the ability of the South Vietnamese to handle the fighting.

As elected representatives of the people, we must listen to them. They favor an orderly and rational withdrawal of American troops by the end of 1971, and the approval of this amendment will testify to the Senate's ability to respond to the will of the American people.

While saving lives, a December 31, 1971, withdrawal would also conserve billions of dollars needed desperately for domestic needs. The amendment would save nearly $5 billion compared with the present withdrawal rate, if it continues. Assuming that a residual force of 50,000 were maintained in Vietnam until 1975, this amendment would save nearly $11 billion. Furthermore, if 200,000 troops are stationed in Vietnam until 1975, more than $46 billion would be saved.

The war continues to be the single greatest source of inflation in the economy. This amendment would be a decisive move in checking the rising prices and soaring interest rates which are victimizing every American.

These are the consequences of the amendment which is before you. It offers us a chance of peace, a responsible withdrawal from a war which has killed our young, alienated our youth, drained our resources, and earned us the disaffection of people across the globe. The war continues, but we have a chance, an opportunity to end it and the tragedy it has brought.

And yet, some have obscured both the intent and consequences of the amendment with insinuations and specters of disaster. Some have charged that a "bloodbath" will follow in the wake of our departure from Vietnam. If this is in fact the case, the amendment states that asylum will be provided "for Indochinese who might be physically endangered by the withdrawal of United States forces."

Some may seek such asylum, but the facts indicate that this bloodbath argument is fallacious. It ignores the loss of life which is continuing in Vietnam today and which will continue until this war is stopped. According to casualty projections, the current withdrawal rate, should it continue, would result in 10,000 more South Vietnamese deaths, compared with the December 31, 1971, withdrawal date. If present withdrawal rates continue, leaving a residual force of 50,000 men in Vietnam, 65,000 more South Vietnamese would lose their lives in battle. And if a force of 200,000 Americans remained in Vietnam until 1975, 135,000 more South Vietnamese soldiers would be killed.

The bloodbath theory simply does not hold. By withdrawing American troops from Vietnam, both American and Vietnamese lives will be spared.

Furthermore, more than 15 months will provide both Americans and South Vietnamese to establish conditions in which repressions could be prevented. According to the Rand Corp. report, any government developing after an American departure would have compelling reasons for not instituting a program of assassination and terror. Such a move would only further alienate and divide a people looking for a government to support.

Today the South Vietnamese Army is four to five times larger than all enemy troops in South Vietnam. Presumably, such a force is capable of preventing the deaths of the citizens whom they protect. If they are not prepared to do so now, 15 months provides ample time to train and equip such troops. If they cannot protect the people 15 months from now, When, may I ask, will they be ready?

At the basis of this issue is the political reality that only a government which wins the allegiance of the people can prevent repression and reprisals. After all the men and money and equipment the United States has provided, Saigon must now provide for the safety and welfare of its citizens.

Critics of this amendment often invoke the well-worn domino theory to explain why this amendment is dangerous and ill advised. Whenever I hear someone defend U.S. policy in Vietnam with the domino theory, I recall the wise words of President Eisenhower, who said:

> I never played dominos, and I never took much stock in short labels to describe a complex situation until I felt that everybody know what the label meant.

Vietnam is a complex situation and one which simply cannot be described in the simplistic terms of the domino theory. It ought to be apparent by now that in Vietnam we are not dealing with a monolithic Communist movement sweeping across border after border. China and Russia are not unified, and Hanoi has consistently and skillfully played one off against the other. Hanoi is an intensely nationalistic regime, though communism is its political philosophy, and its support from the people arises from its appeal to nationalistic fervor. It is little wonder that they are able to lump together the United States, France, and China as the hated invaders of their country.

The real purpose of the domino theory, as Joseph Kraft has written, is "not to describe the situation in Asia but to rationalize the Vietnamese war for American public opinion." The truth is that our continued intervention in Vietnam, and our perpetual military involvement there, are having exactly the same effect which the domino theory describes. We are driving Hanoi into greater and greater dependence upon Russia and China. Most alarming, however, is the growing disaffection among neutral countries throughout Asia who deplore and resent the potential threat of an ever-widening war in Indochina.

President Nixon has told us to talk to the dominos who would be affected by the withdrawal of American troops from Indochina, and yet former Ambassador to Japan Edwin O. Reischauer has maintained that Vietnam is the central issue undermining our critically important relationship with Japan:

> The relationship between the United States and Japan,

He has stated—

> is being eroded by Vietnam strains and stresses.

A withdrawal of American troops from Vietnam and the establishment of political stability in Indochina will do more to check the expansion of communism throughout Asia than anything else we can do at this point in history.

If this domino theory were valid, if the Asian countries were concerned about the threat of communism spreading throughout Asia, then they, too, would have a stake in guaranteeing a non-Communist government in South Vietnam. Presumably their concern would be so great that they, too, would supply men to fight in common cause with the South Vietnamese. However, the only Asians fighting in Vietnam are those paid by the United States as mercenaries. And so, it would appear that it is more important to watch what dominos do than what they say.

The fundamental lesson of Vietnam is simply this: We cannot fight wars, even those involving avowed Communists, unless the people themselves wish to resist the growth of communism in their country. This is as true for all the Southeast Asian countries as it is for South Vietnam. The test of their strength as viable governments is their ability to deal with the forces within their own countries which threaten to disrupt and disturb the government's authority.

President Nixon himself has given explicit recognition to this fact in his Guam

doctrine. American strategic interests are not at stake in Vietnam, and unless the South Vietnamese people have the desire and will to establish a democratic government, we cannot provide it for them.

If we withdraw from Vietnam by the end of next year, if this amendment is passed, and if we declare that our commitment to South Vietnam is not unlimited, our credibility in Southeast Asia and around the world will be improved—not impaired. Today we suffer the scorn, the revulsion, the resentment of people throughout the world who are offended by the immorality and futility of this war. A withdrawal from Vietnam offers the United States the opportunity to reclaim the moral leadership for peace in a divided world.

Some have accused the supporters of this amendment as being isolationist, of seeking to establish a "fortress America." We want no isolation from the harsh realities of the world. With the massive power and influence of the United States comes great responsibility for using that power prudently and humanely. Continuing to fight a war which few wish to defend, maintaining a presence in Vietnam which is resented by many Vietnamese and Americans alike, has drained our resources and sapped our strength. To regain our prestige, influence, and power in international affairs requires a prompt, orderly withdrawal from the conflict.

During recent weeks those who have opposed the amendment have charged that our amendment would represent a surrender to Hanoi. But I ask—is it disloyal to America to vote for the preservation of American lives? Is it wrong to vote for a withdrawal from a war in which victory is not the goal?

The issue, I repeat again, is not one of withdrawal or no withdrawal. Even the President is committed to the extrication of some American troops from Vietnam. The issue is not one of victory or defeat, success or surrender. The administration is pursuing a policy to reduce our stake in the war; this amendment simply withdraws all American troops from participating in the conflict. We cannot win or lose this war; only the South Vietnamese can do that. For years we have provided men and materiel, arms and aid, to the South Vietnamese, and I submit that it is now reasonable to say that 15 months from now we will no longer sacrifice American lives. We have done our best; we have given our best—to suffer and die in Vietnam.

Our policy in Vietnam has never been total victory. Instead, as President Nixon stated on July 1, 1970, a just peace in Vietnam means—

> Simply the right of the people of South Vietnam to determine their own future without having us impose our will upon them, or the North Vietnamese or anybody else outside impose their will upon them.

Then the President asked—

> When we look at that limited objective, I am sure some would say, "Well, is that really worth it? Is that worth the efforts of all these Americans fighting in Vietnam, the lives that have been lost?"

That is a disturbing question; it is agonizing indeed to ask whether the suffering and pain and death of this war have any meaning, purpose, or significance. There are those who have said and will continue to say that those lives were lost in vain. But such a judgment is filled with ambiguities which only history will make more clear for us to understand.

I will not say that the deaths of 43,000 Americans have no meaning. But I do say this. We have tried to strengthen the South Vietnamese Government; we have provided aid to the people; during the next 15 months we will provide more funds and support to create a stable society and open the door to peace. But they must make it on their own. Let us give the South Vietnamese, strengthened by our assistance and support, the freedom to choose their own future, to make their own peace.

Let there be no mistake. This amendment is not peace at any price; it is not cut and run; it is not an immediate, precipitate withdrawal. Rather, this amendment provides for a rational, safe, orderly withdrawal of all American troops more than 1 year from now. It preserves all the constitutional powers of the President as Commander in Chief; it reasserts congressional responsibility for the conduct of the war; it offers a hope for the achievement of our policy objectives; it offers us and the Vietnamese people the possibility of peace.

By passing this amendment the Congress will declare clearly its intention to participate in the judgments which guide the course of the war in Vietnam. Respect for our Constitution and reverence for rule by law and not men demand that the Congress accept this responsibility for the tragic and prolonged conflict in Southeast Asia.

The constitutional balance between Congress and the President for conducting the war must be reestablished. In the wisdom of the framers of the Constitution, the power of the Executive to wage war was checked by the Congress. As Lincoln clearly saw more than a century ago:

> The provision of the Constitution giving the war-making power to Congress was dictated, as I understand it, by the following reasons: Kings had always been involving and imperishing their people in wars, pretending generally, if not always, that the good of the people was the object. This our convention understood to be the most oppressive of all kingly oppressions, and they resolved to so frame the Constitution that no one man should hold the power of bringing oppression upon us.

This is not Nixon's war; it was not Johnson's war; it should be seen as America's war. This is your war—it is mine. We must not shirk our constitutional responsibility; we must not allow these decisions to be borne alone by the President. The responsibility for waging a war is too great a burden for any one man to bear; Congress must make its own judgments, reach its own conclusions, and struggle toward its own decisions. Together, sometimes in concord, sometimes in disagreement, the Congress and the President will express the will of the people and govern our Nation wisely.

This amendment will give us the opportunity to create that constitutional balance and will set the method by which the legislative and executive branches together can exercise their shared responsibilities. We may not be able to withdraw all American troops from Indochina by the end of 1971; then the President has the option of extending this time, in order to insure the safety of the troops, by 60 days. Furthermore, if the President believes it is necessary to maintain troops beyond December 31, 1971, he need only come to the Congress and explain why it is necessary to maintain them there, setting a deadline for their withdrawal for the Congress to approve. South Vietnam and other countries may need additional aid after 1971; such aid would simply require congressional authorization. Through the established legislative procedures, the need and necessity of future involvement in Indochina can be studied and determined under the provisions of this amendment.

This amendment stipulates a constitutionally proper means of sharing responsibility for the conduct of the war with the Executive and for achieving a safe, orderly, rational withdrawal from Vietnam. The time has come for the Congress not only to debate, to discuss, and to agonize with the country over this war, but to use its best wisdom and exercise its inherent responsibility to enable an honorable resolution of our tragic involvement in this conflict.

The conflict in South Vietnam must cease; it has brutalized our people and created strife and enmity between neighbors. More than 50 years ago, during the First World War, Walter Lippmann observed:

> There is in America today the beginning of that very military arrogance which we are being told this war is being fought to abolish. It shows itself in contempt for all efforts toward peace, in programs of armament which are vistas of a nightmare, in denunciation of the virtues that make a free and tolerant people, in a hatred of other points of view, in the attempt to haze and ostracize those who have different opinions, and in the assertion of a brittle, touchy impatience at the thought that anything can be adjusted without slamming the table or rattling the windows.
>
> Which position requires courage and which requires nothing but the willingness to drift with the current . . .? At a dinner table, in a drawing room, on the stump, in the Senate, the easy attitude is to follow the loudest declaration, to go with, and not against, the violence of the tribe. It usually involves no risk, and it is almost a cheap way to approval.
>
> Yet there is no guarantee that the fibre of a people is sound because no one appears who is willing to risk the sneers of the angriest. It may be that the people who are ready to sacrifice popularity, to face ridicule, to stand out for reason and adjustment, are the people who really have the bravery that freedom requires.

Those words might have been written today. We need the bravery that freedom requires, to preserve human life, to make our Government sensitive to a people tired of war, to move our country toward peace. This amendment offers us that opportunity.

The war continues. But it need not continue indefinitely. We are not powerless; we are not without responsibility. Let us take our responsibility and pass this amendment to withdraw our troops orderly and safely.

WASHINGTON POST ENDORSES AMENDMENT TO END THE WAR

Mr. President, it was with a feeling approaching unalloyed pleasure that I read this morning's Washington Post to discover that, at long last, the amendment to end the war, sponsored by 25 U.S. Senators, has found favor in the sight of the editorialists of that fine newspaper.

This demonstrates a laudable openness of mind and a willingness to listen to the reasonableness of the proponents of the amendment, who have argued for setting a definite timetable for the withdrawal of our troops from Vietnam, and a proper regard for the constitutional responsibilities of the Congress.

I ask unanimous consent to have the editorial printed in the RECORD, and should like to express my appreciation to the Washington Post editors for their support. I am hopeful that it will be read and taken into consideration by Members of Congress who are yet to be convinced of the merit of the amendment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NATIONAL POLICY TO END THE WAR

The Senate has an opportunity during the next few days to write a rational and responsible policy for ending the war in Vietnam. For many months the Senate has been itching to reverse its 1964 endorsement of a blank check to President Johnson to initiate and carry on that war. It adopted the Fulbright resolution designed to give Congress a voice in future national commitments, and a few weeks ago it attempted to forbid widening of the war to Cambodia through the Cooper-Church amendment, although the language got pretty muddy before the final action came and the House would have none of it. Now the Senate has a chance to go on record for an orderly and timely liquidation—an objective that is earnestly sought by an overwhelming majority of the American people.

This issue has been distorted in the past by the simplistic manner in which some senators sought to hasten the withdrawal from Vietnam. A scuttle-and-run policy was said to be the only alternative to a declaration of war. Widespread opposition to any action by Congress on the war was aroused by the argument that it could be, and should be, cut off by a snap of the congressional fingers.

As the issue is now being debated in the Senate, however, it assumes a very different posture. No longer is there any effort to say that American troops must be out of Vietnam within six months. In its present form (the text is presented, for the record, elsewhere on this page today) the amendment to the military procurement bill originally offered by Senators McGovern and Hatfield would now require the withdrawal of American armed forces by Dec. 31, 1971—leaving a liquidation period of 16 months. If any emergency should arise, the President would be authorized to extend this period by 60 days, and if that did not allow enough time for safe evacuation of Southeast Asia the President would so report to Congress within 10 days so that Congress could authorize a further extension.

Rigidity has thus given way to flexibility. As reshaped by the Foreign Relations Committee, this is quite a different proposition, which would have the great virtue of enacting a national policy for termination of the war without putting the President into a straitjacket. In effect Congress would enact the President's withdrawal formula as a sound national objective, without saying that it would have to be carried out in any and all circumstances. This achievement of firmness in the statement of a national policy, along with elbow room in actually carrying it out, is a tribute to the good judgment of all those who have contributed to it.

Up to now, the administration has remained in opposition to any congressional action in this sphere. In part this may be attribute to the sound objections raised against earlier versions of the McGovern-Hatfield amendment. No doubt it also reflects an automatic White House preference for a free hand. In this case, however, the White House as well as the country has an enormous interest in having the Congress on record for termination of the war in an orderly and responsible fashion. If the outcome should turn sour—by no means a remote possibility—it would be much better to have the President and Congress jointly responsible.

In our view, the White House could well regard this proposal before the Senate as a fortuitous opportunity to put Congress on record in favor of the Nixon withdrawal policy or something close to it. The requirement that our Vietnam troop-level be reduced to 280,000 men by next April 30 and that the remaining forces be brought home by the end of next year is specifically recognized in the language of the amendment as a reflection of the President's own statements. Unless the President wishes to deviate from this withdrawal policy, there are compelling reasons why he should welcome a congressional reaffirmation of it.

The President has, to be sure, opposed past efforts to set a date for the windup of the Vietnamese affair. He has feared that the fixing of a date would take pressure off the North Vietnamese to negotiate an end of the war. But if Congress fixes a date which the President could postpone or even eliminate with the consent of Congress, when the time came, the North Vietnamese would, as the Foreign Relations staff memorandum notes, have no assurance that mere stalling would redound to their advantage.

In any event, it seems to us that the advantages of having a congressional withdrawal policy on the books greatly outweigh any disadvantages that might be encountered at the negotiating table. Such legislation would put the President under pressure to carry out the evacuation at the earliest feasible date. It would put our military leaders—and our diplomats, as well—on notice that the national policy is irreversible. Saigon also would have a clearer understanding of what the score is and would be able to adjust its policies accordingly. So long as there is hope that the President may change his mind under pressure the Thieu government is more likely to avoid the hard decisions that are essential to a future for South Vietnam without American manpower for its defense.

Behind all the arguments for and against this amendment is the even more vital fact that the Senate is making a bid to get back into the policy-making arena in regard to war and peace. We think the President should welcome that effort as a bed-rock imperative of American democracy. If the present amendment is not satisfactory to the administration in all particulars, amendments can always be suggested. But it would be tragically shortsighted for the administration to take an arbitrary stand against congressional action designed to underscore and give congressional support for the President's own policy. Orderly termination of the war as soon as feasible ought to be the joint policy of the two political branches, and it is doubtful that there will be a better opportunity than the present to make it so.

Mr. MONDALE. Mr. President, the debate we begin today marks a singular moment in the history of the Senate.

As so often when decisions in this Chamber are most grave, the issue itself is most clear. The Hatfield-McGovern amendment represents, as many of my distinguished colleagues have pointed out, a reassertion of congressional authority in the fateful choices of war and peace—a reassertion so plainly required by the Constitution and so long overdue.

But beyond the momentous question of the balance of powers in our Government, the purpose of this amendment is still more simple and fundamental.

My colleagues and I rise today to stop at last the killing and maiming of Americans in Vietnam.

The historic merit of this amendment, Mr. President, is the unmistakable message it would carry from the Congress to the Nation and the world.

To the American people, unanimous in their yearning for peace, it would affirm that the years of illusion and misdirection and terrible sacrifice in this war are finally coming to an end.

It would express that large measure of the public will, particularly among our young, for a rapid and total withdrawal of U.S. forces.

Moreover, it is a special strength of the present amendment that it has been expanded to meet also the deep and legitimate concern of many Americans that withdrawal could mean the exposure of our dwindling forces to enemy attack. There can be no real argument that this legislation somehow ties the President's hands in defending our men in Vietnam. On the contrary, by providing the President explicit authority to defend our forces as he judges necessary to secure our withdrawal, this amendment would bring our men home safely and honorably as well as soon.

I should point out in particular, Mr. President, that the amendment also provides full authority to the President to do all he can to secure the release of our prisoners of war in North and South Vietnam. The barbaric treatment of those men and the anguish of their loved ones here at home is an enormous tragedy of this war. The Hatfield-McGovern amendment recognizes the constant obligation of the Congress as well as the Executive to work toward the liberation of our men as rapidly as possible.

Yet this act of Congress would speak not only to the hopes of America. Its message would be equally clear to friend and foe in Vietnam.

To South Vietnam, whose responsibilities we have borne too long, we would be serving fair notice that finally—after the hollow rhetoric of two administrations—Asian boys are indeed going to have to fight Asian wars.

The lessons of the last 16 years are vivid. Nations—much as men—are stifled by patronage and strengthened by challenge. If the Army of Vietnam is to be truly effective, if the democratic elements of the country are ever to pull themselves together, if an independent nation is in fact to be built in South Vietnam, the best incentive we can provide is the sure knowledge that the time has

come for them to shoulder the primary responsibility of their own defense.

To Hanoi, this amendment also conveys a challenge and an incentive which might well be decisive in reaching a negotiated settlement.

For months, the North Vietnamese and their supporters have been telling us that the first imperative of successful negotiations, and the key to departure of their own troops from South Vietnam, would be a specific commitment to the withdrawal of U.S. forces. This amendment calls that hand for all the world to see.

Nor can Hanoi find ready advantage in this amendment for their own position on the ground. To lie and wait insures them nothing when the President, with consent of the Congress, can adjust our withdrawal to meet any contingency. And how confidently can Hanoi ignore a settlement now when the notice of our withdrawal is likely to galvanize the non-Communist forces of South Vietnam as never before? The shrewd men in Hanoi could well conclude that the price of a settlement today would be less than what they might pay for the risky months of waiting.

The administration has often argued that uncertainty is the greatest strength of its policy—and that this amendment will eliminate that tactic.

Indeed it will, Mr. President, and that is perhaps the ultimate virtue of the amendment. For the cost of calculated obscurity in our Vietnam policy has been far too high.

A Hanoi uncertain of our objectives has been intransigent at the conference table and unremitting on the battlefields.

A Saigon uncertain of our policy has been slow to gather the strength, as it must, to stand on its own feet.

And most important, an America uncertain of our course has been as tragically and dangerously divided as at any moment since the Civil War.

President Nixon has told us again and again that the heart of the matter is not whether we end this war, but how we end it.

And that is true. We have a clear choice of paths to follow.

We can continue the equivocation which passes for diplomacy, the improvisation which passes for a plan, the bluff and lashing out—as in Cambodia—which passes for strength and manly purpose.

Or we can make good on the pledge for peace we all avow. We can undertake a truly national policy to end this war.

That alone will speed the return of our men held prisoners.

That alone will flush out an elusive enemy.

That alone will insure our accomplishments in Vietnam.

That alone will redeem the pledge made by President Nixon in his campaign to bring America together.

So what we are about in this legislation, Mr. President is nothing less than a test of the long-professed commitment of the Congress and Executive alike.

We face the choice squarely. The Senate can share with the President the awesome burden of making peace with Vietnam and ourselves. Or we can spurn once more our constitutional obligation.

No more fateful choice has confronted the Members of this body.

AMENDMENT NO. 814

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to call up my amendment No. 814.

The PRESIDING OFFICER. Without objection, the amendment will be stated.

The assistant legislative clerk read the proposed amendment, as follows:

On page 14, between lines 18 and 19, insert the following:

SEC. 206. (a) Notwithstanding any other provision of law, beginning with the fiscal year beginning July 1, 1971, no funds appropriated to or for the use of the Department of Defense for any fiscal year may be expended for carrying out research or study projects involving foreign affairs, foreign areas, or related matters except to the extent that the total amount expended for such purposes in such fiscal year does not exceed an amount equal to the total amount expended by the Department of State in the immediately preceding fiscal year for research and study projects (involving foreign affairs, foreign areas, or related matters) which were conducted for the Department of State by persons or organizations outside such Department. The total amount expended by the Department of State in any fiscal year for such projects shall include amounts transferred to the Department of State from other departments and agencies for the purpose of having such projects carried out under the direction of the Department of State.

(b) The head of any department or agency of the Federal Government shall, in response to any request made to him in writing by a committee of the Congress, promptly submit to such committee a copy of any report, study, or investigation requested by such committee if the report, study, or investigation was financed in whole or in part with Federal funds and was made by a person outside the Federal Government, except that this requirement shall not apply in the case of any report, study, or investigation with respect to which the President exercises the right of executive privilege.

Mr. FULBRIGHT. Mr. President, it is a simple amendment and I hope that the managers of the bill will accept it. The amendment would:

First. Limit the Defense Department's spending for research by outside organizations on foreign affairs matters to not more than the amount appropriated, or transferred by other agencies, to the Department of State in the preceding fiscal year for such research; and

Second. Insure that congressional committees are given access to Government-financed research studies carried out by private individuals or organizations unless "executive privilege" is invoked.

In the last fiscal year the Department of Defense spent $9 million for outside research on foreign affairs matters, 72 times the $125,000 appropriated to the Department of State for its entire external research program, including contracts, consultants, and conferences.

In its report on the Defense authorization bill last year, the Senate Armed Services Committee wisely urged that $4 million of Defense funds for research on foreign affairs matters be transferred to other Government agencies, particularly the Department of State. In doing so the committee stated that:

Defense Department activities in these two categories ("foreign military security environments" and "policy planning studies") have grown up to fill a void caused by lack of information in this area available from agencies which may be more directly responsible.

But the Defense Department's response to the committee's directive was to transfer only $483,000 of its $9 million budget to the State Department in fiscal 1970. And that came about only last June, as the fiscal year was ending, in an obvious attempt to show that it had not ignored the Committee's request entirely.

The situation is little better this fiscal year. The Defense Department's budget request for foreign affairs research is $9.9 million. And the State Department's request for external research is $350,000—of which only $241,000 is slated for contract research. The Armed Services Committee is to be commended for recommending a 30-percent reduction in the Defense request—to $6.8 million. But this cut will still leave a situation where the military is spending nearly 20 times as much on foreign affairs research as the agency assigned the primary responsibility for conduct of the Nation's foreign policy.

For the information of the Senate let me list a few of the titles of foreign affairs research projects carried out by the Defense Department in fiscal year 1970 which are proposed for continued funding in fiscal year 1971. Unfortunately the amounts planned for fiscal year 1971 are classified but I can assure the Senate that they are substantial:

FISCAL YEAR 1970—TITLE AND AMOUNTS

Strategic Analysis of North Africa, Middle East, and South Asia, $139,000.

U.S., U.S.S.R., CPR Strategic Interactions and Response Patterns, $325,000.

Soviet Military Policy, $255,000.

European Security Issues, $76,000.

Asian Security Issues, $312,000.

Dimensions of International Conflict for Long Term Prediction, $200,000.

World Event/Interaction Survey for Short Term Conflict Prediction, $112,000.

Forecasting International Defense Alliances and Alinements, $100,000.

Asian Regional Arrangements, and so forth, $325,000.

Base Studies, and so forth, $400,000.

My amendment would limit the Department of Defense's spending for foreign affairs research, such as these projects, to not more than that spent by the Department of State in the last fiscal year for external research of this nature, including its own funds and any funds transferred to State by the Department of Defense or other Government agencies. It would not only encourage Defense to transfer additional research funds to the State Department, as the committee has urged, but it would also give the State Department leverage for obtaining additional allocations during the budgetmaking process. In explaining the committee's 30-percent reduction in this activity to the Senate, Senator MCINTYRE stressed the need for transferring responsibility for this research to State. He said:

It is the Committee's expectation that its action this year will underscore the need

for additional such steps both within the State and Defense Department themselves and at the Bureau of the Budget.

My amendment will help to carry out the committee's intent.

Although the amount of money involved here is dwarfed by the size of other authorizations in this bill, the principle involved is important. Over the years the Department of Defense has moved into this and many other areas which are the proper responsibility of the State Department solely because it, and not the State Department, could get the money from the Congress. This amendment will help restore the proper relationship between the responsibilities of the two Departments and insure that requests for financing this type of research will be given closer scrutiny than has been the case in the past.

The second part of the amendment would require Government agencies to make available to congressional committees, upon request, any study or report prepared outside the Government which was financed in whole or in part by the sponsoring agency. The purpose is to insure that the Congress is given access to research studies performed by the so-called think tanks, the universities, or individuals whose work is paid for by the taxpayers. The amendment recognizes the right of the President to withhold "privileged" information from the Congress, and it also specifies that the mandate applies only to work performed outside the Government.

This amendment is the outgrowth of many efforts by the Committee on Foreign Relations to obtain a study prepared by the Institute for Defense Analysis relating to the 1964 Gulf of Tonkin incident. It is my understanding that the study contains a review of what happened in the Gulf of Tonkin, how communications were handled, and in general how decisions were made. The purpose of the study, I was informed, was to determine what lessons could be learned for future crisis situations. I think that my colleagues will agree that there is much that all of us can learn from that incident and its aftermath. The committee has attempted a number of times to obtain this study from the Department of Defense, but has been refused each time.

The Institute for Defense Analysis receives virtually all its funds from the Department of Defense. In the 1970 fiscal year this organization received $10,130,000 from the Department of Defense and the Department proposes to give them $10,650,000 in 1971.

I believe that the Congress, which imposes the taxes on the public to finance this organization, and which authorizes and appropriates the money for it, should have the right to see how that money is being spent. The issue here is far more important than this one study—it is a question of whether the Congress has the power to obtain information, prepared outside the Government with tax money, for which no claim of executive privilege has been made.

The Senate is beginning to reassert its Constitutional prerogatives and to restore the proper balance to our political system. Passage of this amendment will be one small, but positive, step in that direction.

Mr. President, I recognize that these practices have grown up over the past several years during a period of wartime. I sincerely hope that we are beginning to wind down the war and that before too long we will return to a period of more normal civilian control and participation—especially participation by Congress—in decisions involving our national security.

I hope that this amendment will be accepted by the distinguished Senator from New Hampshire. He has been very cooperative on this matter, last year, and this year.

Mr. McINTYRE. Mr. President, in discussing the amendment offered by my good friend, the Senator from Arkansas, I would like first to address myself to that part of amendment No. 814 which is labeled section 206(a).

Mr. President, I have listened with interest to the remarks of my distinguished colleague from Arkansas (Mr. FULBRIGHT). I must admit in all candor that I share his commitment to an increased role for the State Department in foreign area research, an endeavor in which it has lagged almost to the point of delinquency.

Let me review briefly the action which the Armed Services Committee has taken in the past 2 years in this foreign research area to reduce DOD's role and increase State's.

The Defense Department's foreign area research program has always represented only a small part of its work on the behavioral and social sciences. The great bulk of its effort has been expended in the areas of: First, human performance—studies of the performance of men under stress; second, manpower selection and training—studies of the best methods for training men for various positions in the Armed Forces; and third, human factors engineering—studies to insure that military hardware is designed for safe, efficient, and effective use under battlefield conditions. The foreign area research budget of the Department is itself divided into two components—foreign military security environments and policy planning studies. Mr. President, as background to my discussion, I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a table of Department of Defense funding of social and behavioral science research for fiscal years 1969–71.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. McINTYRE. Mr. President, last year the Department's foreign area research budget request was $13.3 million. The committee recommended a reduction of $1.5 million and coupled this reduction with the following language in the committee report:

> The Committee believes measures should be taken to transfer a number of these efforts to other agencies for future fiscal years and that during the coming fiscal year the management of certain projects of interest to the Department of State, the Arms Control and Disarmament Agency, the National Science Foundation, and other agencies should be taken over by those agencies, particularly the Department of State. This should be with the understanding that any subsequent requests for funding authority will be made by these other agencies in their future budget presentations which Congress should be prepared to consider carefully in light of this suggested change. The Department of Defense should actively seek agreements for transferring approximately $4 million of . . . fiscal 1970 funds (earmarked for foreign area research) to other agencies.

It should be clear to my colleague that the Armed Services Committee intended that the shift from Defense Department support to other agency support be accomplished in an expeditious but orderly manner.

However, as the result of a successful floor amendment introduced by the Senator from Arkansas last year, the Department's program was subsequently reduced another $2.8 million, from $11.8 million to $9.0 million. One effect of this additional reduction was to wipe out almost 70 percent of the funds earmarked by the committee for transfer to other agencies.

Despite this loss of funds, efforts were made by the Defense Department to initiate not a transfer of additional funds to the State Department directly, but the allocation of some funds to a collaborative State-DOD research program. Less than 2 months ago an agreement was finally reached whereby $483,000 of fiscal 1970 funds were made available for such work.

The fiscal 1971 Defense Department budget included a request of $9.9 million for foreign area research. In light of the Department's reluctance to approve outright transfers of funds to the State Department and in light of the policy expressed in section 203 of last year's bill, the committee subjected this request to a thorough, almost painstaking examination. As a result of this examination, it recommended a reduction of $3.1 million—over 30 percent—from the Department's proposed budget, bringing it to a level of $6.8 million. This reduction was directed primarily to work in counterinsurgency operations and work proposed by the military services but deemed more appropriate either to the State Department or the International Security Affairs Office of the Department of Defense. The remaining funds are earmarked for projects which, while of interest to the State Department, bear a clear relationship to the Defense Department's own mission. Plans for a jointly-staffed State-DOD foreign area research coordinating committee under National Security Council auspices are well underway. The committee should be established soon, after which funds for those remaining foreign area research projects in DOD's budget which are of interest to State also will be made available to the committee and the projects conducted on a collaborative basis.

I submit that the committee has done all it can in the past 2 years both to eliminate Defense Department involvement in foreign area research not relevant to its own mission and to increase the State Department's participation in this work. I agree that the latter goal

has not yet been realized to an appropriate extent, but I feel that future pressures toward this end should be applied not to the Defense Department but to State itself and to the Bureau of the Budget as the agency with overseeing responsibility as regards the composition of State's budget. As for the Defense Department itself, its foreign area research budget has now declined from $16.1 million in fiscal 1968 to a committee-recommended fiscal 1971 budget of $6.8 million, an overall reduction of 58 percent.

I would like to ask my colleague, as chairman of the Foreign Relations Committee, what actions he has taken to increase State's own foreign area research budget in recent years, and just what he feels has to be done by the Congress to get State moving in this area?

EXHIBIT NO. 1

BEHAVIORAL AND SOCIAL SCIENCE

[In thousands of dollars]

	1969	Budget 1970	Actual 1970	Fiscal year 1971 Requested	Change	Recommended
Human performance:						
Army	400	600	500	1,000	−300	700
Navy	2,400	2,500	1,000	1,000		1,000
Air Force	500	700	300	200		200
Defense agencies	3,600	2,500	2,700	2,700	−200	2,500
Total	6,900	6,300	4,500	4,900	−500	4,400
Manpower selection and training:

Mr. FULBRIGHT. Mr. President, the only concrete action was the action that the Senator from New Hampshire cooperated in. That was the principal effective agent.

This was one of the reasons I liked that approach. I do not know how to inspire the State Department to assert its responsibility in this area. The State Department has not in recent years had very much influence in the budget process. Matters that are clearly within the State Department, such as the exchange program, have been restrained very severely through the budget and by action of the Appropriations Committee.

As a matter of fact, the Senator knows that all agencies other than the Department of Defense have great difficulty when it comes to getting money.

Mr. McINTYRE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. The State Department has had other pressing budget problems and they have not tried very hard, apparently, to get more money for research. I have counseled that they do so but there have been no effective results.

Mr. McINTYRE. The Senator just supported the amendment I offered, which is an outgrowth of section 203, which is the application of the relevancy test, which has given us quite a few problems in connection with the defense budget. This amendment is an attempt to bring the National Science Foundation into this picture more clearly as an institution solely devoted to research. When there is budget stringency and a need to cut, the cut is too often at the research end. This amendment points one direction in which we have to go. But there have to be increases, too, in the research budgets of other mission agencies. The State Department is one of these.

It is said the Department of Defense is doing too much in research. The Department of Defense will meet that argument by saying, "Those areas where we are carrying on research may well go to the National Science Foundation and to the State Department, but we think these areas of research are important and should be done, and no one else is now doing them. So we will need the Senator's cooperation, as chairman of the Committee on Foreign Relations, to bring about this reordering of research within the Government today.

Mr. FULBRIGHT. I appreciate what the Senator has said, and I congratulate him on what he has accomplished. Without his efforts it could not have been done.

I do not profess to set myself up as a final judge on what is necessary for the defense of our country in the way of research involving foreign matters, but many of the research activities of the Defense Department, it seems to me, were related to a particular view of the world situation and our role in the world.

To put it another way, much of the research was based on a false assumption as to the need for such studies, for example there were the research projects or counterinsurgencies in countries like Chile.

I thought Project Camelot and other research of this nature, should not have been financed for two reasons. First, that it should not have been done by the Department of Defense, and second, that it should not have been done by any agency. It was a frill. If a private institution having nothing to do with its money wanted to do that kind of work, it would be all right, but we should not be paying for this kind of thing with the taxpayers money.

What we are now talking about is transferring research which I, and the Senator from New Hampshire agree should be done, but not by the Department of Defense.

Mr. McINTYRE. What I am trying to say to the Senator is that it is not enough for the Senator from Arkansas to take the position that some of the foreign area research by the Department of Defense should not have been done by that Department. That is not enough. The Senator deserves a great deal of credit for his alertness in focusing light on this matter. The Committee on Armed Services has focused attention on this matter.

Mr. FULBRIGHT. The Senator is correct.

Mr. McINTYRE. But this is not enough. We must also get the work done elsewhere, when it should be done.

With respect to the State Department, it seems to me that there are many foreign area research projects which should be looked into by some of their best minds, projects that would be of interest to the Senator as chairman of the Committee on Foreign Relations. All I am saying is that the Defense Department's research program in this area has been cut back properly and that in the future we must work together to increase State Department Foreign area research efforts.

I am saying we need the Senator's help, whether it is an on-going study on the Soviet Union, or the Red Chinese, or something else. The Senator should be pushing for these studies.

Mr. FULBRIGHT. When the Senator referred to on-going studies of the Red Chinese and Russia, that is an area I agree should be pursued.

Mr. McINTYRE. Can the Senator tell

me if the State Department is actually conducting such a study?

Mr. FULBRIGHT. I do not know. They have a policy planning staff and they have a research bureau, but both are quite small. The funds for outside research are very limited, as I have stated. If the operation were given more attention by the head of the State Department they could do a better job.

The Senator also knows the State Department has suffered a considerable decrease in responsibility with the development of the White House National Security Council staff. I think it has suffered a decrease in its own assurance capacity to exert itself. It is not a new development. In the preceding administration there developed the idea that the State Department is not as effective as it should be. I think many people over there felt they were being bypassed.

If one reads the press today it is common gossip among many journalists that Mr. Kissinger is really the Secretary of State and that he and his staff are the ones who are really consulted and who play a major role and that the State Department really survives by sending ambassadors abroad and giving receptions, and so on. I do not subscribe to that theory.

I have great respect for the Secretary of State, although I do not know how his influence compares to that of Dr. Kissinger. I do not wish to go off on a tangent.

But there is a research agency in the State Department and it is the office which should have the responsibility and the funds for carrying out this type of research. It is the agency that is responsible to Congress, contrary to Mr. Kissinger's operation at the White House, which takes the position that they are immune to coming before Congress and talking about or discussing foreign policy.

So we have a situation that is very serious. I would like to rebuild the prestige and the functions of the State Department. I think what the Senator suggested goes in that direction. His attitude has been highly sympathetic to that in the past. I think it is very important that the civilian aspect of our foreign policy be emphasized. That is what this amendment is all about.

I appreciate what the Senator has done and his openminded attitude about the problem.

I would hope that as a result of this discussion and what has happened, the State Department would reemphasize the position of the research operation and the policy planning staff, and give them more money, as the Senator suggests.

The Senator and I are in complete agreement. I, too, hope that the State Department will begin to expand its activities in this area.

I see the Senator from Mississippi is here. I would like to turn to section (b) of the amendment. It was my understanding that the chairman of the full committee was agreeable to accepting this part of the amendment provided some minor modifications were made.

Mr. President, I yield at this time to the Senator from Mississippi (Mr. STENNIS) on section (b) of the amendment with which he is familiar.

Mr. STENNIS. Mr. President, if the Senator from Arkansas will yield to me; is this his modified amendment No. 814?

Mr. FULBRIGHT. That is correct.

Mr. STENNIS. This is the amendment we discussed a few weeks ago?

Mr. FULBRIGHT. That is correct. I confined it to the two committees that the Senator referred to.

Mr. STENNIS. Yes. As I understand it, the Senator has plainly excepted from the requirement anything about the President's exercising the right of executive privilege. That is what the Senator intended to do?

Mr. FULBRIGHT. Yes; that is explicit in the language.

Mr. President, while the Senator is considering that, I wanted to add a few words about the second section. It has become almost impossible to obtain the result of much of the research for which, as I have said, the taxpayers have paid Just recently I received a letter from a man in Thailand who said:

> I am writing to suggest that the work of the Committee on Foreign Relations might be assisted by reading a study prepared for OSD/ARPA by the Research Analysis Corporation of McLean, Virginia, titled "A History of Insurgency and Counterinsurgency in Thailand." The report is classified Secret. It is my strong belief that more informed policy-makers make more informed policies, and therefore I feel it would be very much in the national interest of the United States for your committee to study this report. I mention this only because of the possibility that through some oversight members of the Executive Branch may have failed to bring this very detailed and extensive study to your attention.

He goes on to say:

> May I in return ask for one small accommodation, namely that my name not be used in connection with your request for this document (assuming you have not seen it). The title of this document is unclassified, so there is no reason why I should not mention it to you in an open letter. However I have noted a certain sensitivity in Washington, Saigon and Bangkok when your name comes up.

I think two things are to be said about the letter. First, this man, obviously an honest man, no longer feels free to speak openly, because of possible retaliation that he may suffer. So I feel constrained not to give the man's name in public, although the Senator from New Hampshire is free to see the letter. I just do not want to prejudice the writer in any way.

We made a request to the Defense Department for the study, which was paid 100 percent by the taxpayers' money. In response to that request we received a letter from Dr. Foster saying "no" which was classified "confidential." I do not know how absurd one can get. They have gone so far as to classify a letter that says, "No, we will not give you the report." That is what it says here. It says, "This is a report which is limited to internal distribution," and then they mark that letter "confidential."

I do not know how much more absurd one can get in abusing the power of classification than to classify a letter saying "No, you cannot have the document," but which I think, under any democratic processes, ought to be made available to my committee.

That is what the second part of the amendment which the Senator from Mississippi is considering deals with. I think they have carried this matter to an absolute absurdity. I do not see how the committees of the Congress can be expected to function effectively if all these papers that are considered research papers are unavailable for the consideration of the Senate or the committees.

Mr. McINTYRE. Mr. President, the chairman of the Committee on Armed Services and I find ourselves in sympathy with that portion of the amendment offered by the distinguished Senator from Arkansas provided that it can be restricted so as to apply to the Armed Services Committee and the Committee on Foreign Relations of the Senate and the Armed Services Committee and the Committee on Foreign Affairs of the House. If the Senator from Arkansas is willing to modify the amendment to that extent, it is my understanding that we are willing to accept the amendment as modified.

Mr. FULBRIGHT. Mr. President, I send to the desk a modfication of my amendment No. 814 and ask to have it stated.

The PRESIDING OFFICER. The amendment, as modified, will be stated.

The assistant legislative clerk read the modified amendment as follows:

> Strike out subsections (a) and (b) of the amendment and insert a new subsection (a) as follows:
>
> "SEC. 206 (a) The head of any department or agency of the Federal Government shall, in response to any request made to him in writing by the Senate Committee on Armed Services, the Senate Committee on Foreign Relations, the House Committee on Armed Services, or the House Committee on Foreign Affairs, promptly submit to such committee a copy of any report, study, or investigation requested by such committee if the report, study, or investigation was financed in whole or in part with Federal funds and was made by a person outside the Federal Government, except that this requirement shall not apply in the case of any report, study, or investigation with respect to which the President exercises the right of executive privilege."

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. FULBRIGHT. I yield.

Mr. STENNIS. Mr. President, I have always thought it was our duty to protect the right of executive privilege. I think it is the duty of the Executive to respect our privileges. I think that privilege is spelled out in the amendment for the committees that have direct jurisdiction.

We discussed this matter last year with the Senator from Arkansas and worked on it somewhat then. I think we ought to accept the amendment and take it to conference and see what we can work out on it with our conferees from the House. I am delighted to do that. That is my studied opinion of it.

Mr. McINTYRE. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield.

Mr. McINTYRE. It is also my understanding that the modification would delete that section marked (a) in the original amendment. Is that correct?

Mr. FULBRIGHT. It does.

I want to thank the Senator from Mississippi and the Senator from New Hampshire. I think this may be a small part of the overall effort of Congress to play a more significant, and I would think more constructive, role in the formulation of our national policies, especially in the field of foreign affairs.

We are subject to criticism in the press all the time to the effect that "Congress does not do this" and "Congress does not do that," but I assure Senators that Congress cannot perform its functions when we are not allowed to get the basic research—and it is about the only basic research that is being conducted, as the Senator has already said—but are met with a classification of documents which I do not think have the slightest thing to do with military affairs. I refer, for example, to the study that Dr. Foster just refused to let us have. Apparently we were turned down on the pretext of protecting the sensitivities of some people with whom we have relations. But, after all, Congress has some responsibilities.

So I appreciate the attitude of the Senator from Mississippi, and I hope he will insist upon this amendment in conference.

Mr. President, I am ready for the vote. I move the adoption of the amendment, as modified.

The PRESIDING OFFICER. The question is on agreeing to the amendment, as modified.

The amendment, as modified, was agreed to.

Mr. FULBRIGHT. Mr. President, I have another amendment which I did intend to offer today, but, by agreement with the various people concerned, the Senator from Mississippi and others, I shall not offer it until next Tuesday, at which time the Senator from West Virginia has informed me that he has reserved the time for a vote on it, with a 40-minute limitation. Is that correct?

Mr. BYRD of West Virginia. If the Senator will yield, let me get that request in right now.

Mr. FULBRIGHT. I do wish, very briefly, to explain what it is, after the Senator——

Mr. BYRD of West Virginia. I will make the request later, then.

Mr. FULBRIGHT. All right. I will just make the statement now, and the Senator can make his arrangement a little later.

This is a very brief amendment, and I wanted to explain at this time what it is intended to do. The amendment concerns section 501 of the bill.

I ask unanimous consent that I may yield to the Senator from West Virginia without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I have cleared this request with the principal parties involved—the author of the amendment, the manager of the bill, the assistant minority leader, the majority leader—and other interested Senators.

I ask unanimous consent that, on Tuesday next, the controlled time on the Muskie amendment be limited and reduced from 3 hours to 2½ hours, beginning immediately following the vote on the Proxmire amendment with regard to draftees; and that, at the conclusion of the vote on the Muskie amendment, the amendment to be offered by the able Senator from Arkansas (Mr. FULBRIGHT) be laid before the Senate and made the pending business, and that there be a time limitation on the Fulbright amendment of 40 minutes, to be equally divided between and controlled by the author of the amendment and the manager of the bill; and that, at the conclusion of the 40 minutes, a vote occur on the amendment to be offered by the Senator from Arkansas (Mr. FULBRIGHT).

That, immediately following the vote on the amendment by the Senator from Arkansas (Mr. FULBRIGHT) the vote occur on the committee amendment, as amended, after which the bill be read a third time and there be one-half hour of controlled time on the bill, at the conclusion of which the vote on passage of the bill occur.

Mr. JAVITS. Mr. President, reserving the right to object—and I shall not object unless I have to—may we know from the Senator from West Virginia whether the door is not left open to anyone else who might have an amendment? You never know, until the end of the road, whether someone does or not. Would this arrangement cut off any right to offer an amendment?

Mr. BYRD of West Virginia. It would not cut off any right to offer an amendment to the amendment. An amendment could be offered at the expiration of the 40 minutes, but there would be no time on an amendment to the amendment. The vote would occur immediately.

Mr. JAVITS. Mr. President, I do not think that is fair. In other words, the Senator, without any notice to the Senate, is foreclosing debate even on amendments which are at the desk.

I think it would be better if the Senator would make some modest provision, such as 10 minutes on the side, for anything else that might come up, just to protect Senators against that contingency.

Mr. GRIFFIN. Mr. President, will the Senator yield for an observation?

Mr. BYRD of West Virginia. I yield.

Mr. GRIFFIN. I think the Senator from New York makes an important point. It is a fact, however, that during the remainder of the afternoon today and on Monday, I think any Senator does have an opportunity to offer an amendment. It would probably have to be by unanimous consent if it were taken out of time already allotted, but it could come at the end of the day, and there is no particular problem, nor does there have to be, in my experience, in having other amendments brought up.

One of the problems we have is that we have already set a final time for voting, and there would have to be a modification of that agreement; is that correct?

Mr. JAVITS. What is the final time for voting, if I may ask the Senator?

Mr. BYRD of West Virginia. Well, it is a little uncertain. There can be no specific time stated for the final vote under the order previously agreed to.

Mr. JAVITS. The Senator from Michigan said we have already set a final time.

Mr. BYRD of West Virginia. We have set a limitation on time, but we have not said the vote will occur at X hour.

Mr. GRIFFIN. Mr. President, I stand corrected. The Senator from West Virginia is correct.

Mr. JAVITS. I understand the force of the problem. I know Senators are anxious to get away, and I am, myself. I am not pleading otherwise.

But I do think that to lock up this bill with third reading, without giving any Senator who may decide he wishes to offer an amendment the opportunity to do so, is just not right.

I would therefore respectfully suggest that either on Monday or Tuesday—let us say on Monday, at the conclusion of Senator McGOVERN's time; or, what would even be fairer, because we do not know what is going to happen on these various elements of the bill, it really ought to come at the end of the vote on the Muskie amendment on Tuesday. At that time, if any other Senator has an amendment, he ought to have 10 minutes on each side.

Mr. BYRD of West Virginia. Does the Senator have reference to an amendment to the amendment?

Mr. JAVITS. I mean any amendment. Do not have third reading until any Senator who wishes to propose anything can do it, with 10 minutes on the side. Then lock it up.

Mr. FULBRIGHT. Mr. President——

Mr. BYRD of West Virginia. Mr. President, I have the floor. An order respecting third reading has already been locked up. It was agreed to on yesterday. May I say to the Senator from New York that I am very sympathetic to his request with regard to an amendment to the amendment offered by the Senator from Arkansas. But believe me, many hours of effort have been expended, bases have been touched and retouched in attempting to conclude these various agreements. Now, if we are to open this up to any amendment which might be brought in here on Tuesday next by any Senator, I shall be forced to withdraw this request and object to any other. But I am perfectly willing to revise my request to include the provision that there be a limitation of 20 minutes on any amendment to the Fulbright amendment, to be equally divided.

Mr. JAVITS. Or substitute therefor?

Mr. BYRD of West Virginia. Well, that is also considered as an amendment.

Mr. JAVITS. Could the Senator, then, provide that on Monday, after the time has expired on the McGovern amendment, if any Senator wishes to propose an amendment, there will be 20 minutes, equally divided? Then other Senators will be protected.

Mr. BYRD of West Virginia. Mr. President, I revise my request in this manner, with respect to the amendment to be offered by the Senator from Arkansas (Mr. FULBRIGHT):

That time on any amendment to the Fulbright amendment be limited to 20 minutes, to be equally divided between the author of the amendment and the Senator from Arkansas (Mr. FULBRIGHT), or, if Mr. FULBRIGHT is not opposed thereto, then the time in opposition to be under the control of the able manager of the bill (Mr. STENNIS).

Mr. JAVITS. And any amendment means a substitute as well.

Mr. BYRD of West Virginia. Yes.

Mr. GRIFFIN. Mr. President, reserving the right to object—and I shall not—can this amendment be further identified?

Mr. FULBRIGHT. Mr. President, if the Senator will yield—and I wish to make an observation, too——

Mr. BYRD of West Virginia. Mr. President, I yield for that purpose.

Mr. FULBRIGHT. This amendment is intended to preserve the legal and proper jurisdiction of the Committee on Foreign Relations, over the foreign military sales matters. I was going to explain it in a few minutes. Its effect is——

Mr. GRIFFIN. It is not printed, I take it, at this point?

Mr. FULBRIGHT. I have a copy here. It has not been——

Mr. GRIFFIN. Numbered?

Mr. FULBRIGHT. Printed. A copy is available. I had intended to bring it up this afternoon, debate it, and have a vote on it. I was requested to follow this procedure of putting it off until next week because, I understood, the Senator from Montana and others did not wish to deal with it this afternoon.

The effect of it would be that the so-called Jackson amendment would be effective only if the military sales bill or similar legislation does not become law. If that bill, which is now in conference, does become the law, of course, it would authorize funds for the same purpose covered by the Jackson amendment.

If for any reason it fails to become the law, then this provision in the bill would go into effect.

In other words, I am trying, actually, to protect what I believe to be the legitimate jurisdiction of the Committee on Foreign Relations. As everyone knows, certain committees, the Committee on Government Operations and others, including the Armed Services Committee, have become involved in matters properly under the jurisdiction of the Foreign Relations Committee. I feel that it is my duty to resist such moves. I do not think that I should voluntarily allow the Foreign Relations Committee to be deprived of its basic jurisdiction. That is the only purpose of the amendment. It has no other purpose.

Mr. GRIFFIN. I thank the Senator for giving us a description of the amendment.

Mr. FULBRIGHT. That is all it is about. It does not deal with amounts. It does not try to cut down or enlarge or change the amounts involved.

Mr. JAVITS. Mr. President, if the Senator will yield, the amendment will be directed to section 501, at page 18, lines 7 to 21, inclusive.

Mr. FULBRIGHT. That is correct.

Mr. JAVITS. And the thrust of it will be to retain this provision in this bill only if the Military Sales Act does not become law.

Mr. FULBRIGHT. That is correct.

Mr. JAVITS. And the operation of this section would be suspended until that question is determined.

Mr. FULBRIGHT. If it does not become law, then this is operative.

Mr. JAVITS. In other words, this would not be operative on that basis until December 31, 1970, if operative at all.

Mr. FULBRIGHT. It would be 15 days after the adjournment of Congress. If Congress adjourns, say, October 15, it would be effective November 1, approximately.

Mr. JAVITS. I thank the Senator.

Mr. FULBRIGHT. The President must be given time to sign a sales bill, of course.

Mr. STENNIS. Mr. President, if the Senator will yield, I am not going to object to any reasonable request for time; but if we could get to it——

Mr. FULBRIGHT. I have to object. For example, if the Senator wishes to offer the Military Sales Act devoid of some of the amendments as an amendment to this, I could not accept an agreement that would make the Senate vote on that kind of amendment in 10 minutes. We spent weeks on the Military Sales Act; it is in conference. If it means that, I could not accept that kind of agreement.

Mr. JAVITS. Frankly, I might say to the Senator, speaking only for myself, that I have no idea what I would do on even the Senator's amendment. After all, I am a member of the Foreign Relations Committee, and I am also deeply interested in the Jackson amendment, and I would like to retain it. So I have to worry about it. I cannot tell the Senator what I would move. I think the Senator knows me personally well enough to know that I will move heaven and earth to respect the time problems and the feelings of the Senator as to this issue; and, probably, if I am against him, I will just challenge him on his amendment.

Mr. FULBRIGHT. Of course, the amendment might be rejected. I cannot have any protection about the adoption of an amendment. I want protection against bringing in that kind of amendment—for example, if Senator X offers the text of the Military Sales Act as an amendment.

Mr. JAVITS. To shut off amendments of substitutes is really impossible in situations such as that.

Mr. FULBRIGHT. I was going to call up the amendment this afternoon. It was not my request that it go over.

Mr. JAVITS. That will not shut off amendments to it, and if you shut it off this afternoon, Senators could talk as long as they wish.

Mr. FULBRIGHT. That is correct.

Mr. BYRD of West Virginia. Mr. President, may I have the Chair propound the unanimous-consent request as revised? Or would the Chair like me to repeat the request?

The PRESIDING OFFICER. If the Senator from West Virginia would repeat the request as revised, the Chair would be very grateful.

Mr. BYRD of West Virginia. Mr. President, I restate my request as follows: I ask unanimous consent that on Tuesday next, the time which will begin running on the Muskie amendment, at approximately 12 o'clock noon, be limited to 2½ hours instead of 3 hours, as originally proposed; that at the expiration of the time allotted, a vote occur on the Muskie amendment, following which vote, the amendment to be offered by the able Senator from Arkansas (Mr. FULBRIGHT) be laid before the Senate and made the pending business.

Mr. STENNIS. After the vote.

Mr. BYRD of West Virginia. Following the vote on the Muskie amendment, the amendment to be offered by the Senator from Arkansas (Mr. FULBRIGHT) be laid before the Senate and made the pending business, the time thereon to be limited to 40 minutes, to be equally divided and controlled between the author of the amendment, Mr. FULBRIGHT, and the manager of the bill, Mr. STENNIS; that any amendments thereto be limited to 20 minutes, the time to be equally divided and controlled between the author of the amendment to the amendment and the author of the basic amendment, or, if Mr. FULBRIGHT is not opposed thereto, the Senator from Mississippi, the manager of the bill, or, if he is not opposed thereto, the minority leader or his designee; that following the vote on the amendment to be offered by the Senator from Arkansas (Mr. FULBRIGHT), the vote occur on the committee amendment as amended, after which the bill be read a third time; that time on final passage be limited to 30 minutes, to be equally divided between and controlled by the manager of the bill and the able minority leader or his designee.

Mr. GRIFFIN. Mr. President, reserving the right to object, may it be understood that the request of the Senator from West Virginia does not preclude the possibility of motions being made which are not debatable, prior to the vote on the Fulbright amendment, such as a motion to table?

Mr. BYRD of West Virginia. In other words, the Senator does not wish to exclude a motion to lay on the table the amendment to be offered by the Senator from Arkansas?

Mr. FULBRIGHT. That is at the end——

Mr. GRIFFIN. At the expiration of the time.

Mr. JAVITS. Mr. President, if the Senator will yield, is it the understanding now with the leadership—this is not part of the unanimous-consent request—that on Monday, after the debate on the McGovern amendment, which has 5 hours, they will go as long as necessary to accommodate Senators who wish to introduce other amendments, on a basis of 20 minutes total, 10 minutes to a side?

Mr. BYRD of West Virginia. Mr. President, I would want the able manager of the bill to be agreeable to this request, the request being that at the expiration of the time which has been allotted on the McGovern amendment on Monday next, which is 5 hours, any amendments offered by any Senator be limited each to 20 minutes, the time to be equally

divided and controlled between the author of the amendment and the manager of the bill.

Mr. STENNIS. For how long? For just Monday?

Mr. JAVITS. Monday.

Mr. STENNIS. I have no objection.

Mr. President, if the Senator will yield, I feel that gives everybody a chance, without locking anyone in—it does lock up the bill—and I hope that will be the end.

The PRESIDING OFFICER. The Chair wishes to inquire of the Senator from West Virginia, to be perfectly clear, whether the last suggestion was a suggestion only and not a part of the agreement.

Mr. JAVITS. Mr. President, if the Senator will yield, as I understand it, if the Senate stays in session after the 5 hours have expired, any business can be handled. Therefore, whether or not the Senator makes it a unanimous-consent request is entirely in the discretion of the leadership. I am satisfied to trust the good faith of the leadership. If it commits itself, it will do it.

I will say to the Senator that if he wants me to limit the debate on such amendments to 20 minutes, it would have to be included in the unanimous-consent request.

Mr. BYRD of West Virginia. I intended to do that, but I wanted to be sure that the manager of the bill was agreeable.

There is now another complicating factor which has been called to my attention, Mr. President. I think we are about to reach an agreement on the second phase, which has to do with Monday. May we have the first part of my request, dealing with Tuesday, agreed to, with the understanding that if something happens to the second part of the request, we can vacate the first?

The PRESIDING OFFICER (Mr. MATHIAS). Is there objection to the initial request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. BYRD of West Virginia. Mr. President, that was with respect to Tuesday next.

Now, I ask unanimous consent that immediately following the expiration of the 5 hours allotted on the McGovern amendment on Monday next, the Senator from Illinois (Mr. PERCY) be recognized for not to exceed 30 minutes, following which Senators may offer amendments with time on any amendment to be limited to 20 minutes, the time to be equally divided between the mover of the amendment and the manager of the bill.

Mr. FULBRIGHT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Arkansas will state it.

Mr. FULBRIGHT. Does this mean that the amendments have to be germane to the bill? Can we bring in nongermane matters?

Mr. BYRD of West Virginia. No, there is no rule requiring germaneness in this context.

The PRESIDING OFFICER. The Chair would advise the Senator from Arkansas that there are no germane requirements.

Mr. FULBRIGHT. So, an amendment on any subject, civil rights, pollution, nutrition, anything, is in order with 20 minutes debate. Is that right?

Mr. BYRD of West Virginia. That is right, but I do not see any problem there.

Mr. FULBRIGHT. There used to be those who saw problems. Perhaps there is not. I am not raising any. I was just inquiring.

Mr. BYRD of West Virginia. I think that any Senator would exercise——

Mr. STENNIS. Mr. President——

Mr. BYRD of West Virginia. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from West Virginia has the floor.

Mr. BYRD of West Virginia. I am sure that any Senator would reserve his right to move to table such an amendment. I feel confident that the leadership could be relied upon to support a tabling motion on any dilatory amendment.

Mr. FULBRIGHT. I was merely inquiring as to what the intention was.

The PRESIDING OFFICER. Is there objection to the second unanimous consent request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. BYRD of West Virginia. I thank all Senators concerned.

The unanimous-consent agreement, later reduced to writing, is as follows:

Ordered, That during the further consideration of H.R. 17123, military procurement bill, debate on various amendments thereto be limited as follows:

Debate on the amendment by the Senator from South Dakota (Mr. McGOVERN) and others, the so-called "end-the-war" amendment, numbered 862, to be limited to 6 hours of controlled time, with a vote coming at 10 o'clock a.m. on Tuesday, September 1. Five hours of the controlled time will begin at 12 o'clock noon on Monday, August 31, and the other hour will occur on Tuesday, September 1 between 9 o'clock a.m. and 10 o'clock a.m., with all of the controlled time to be equally divided and controlled by Mr. McGOVERN and the manager of the bill, Mr. STENNIS. Any amendments to the amendment or motions or appeals relative to the amendment (except a motion to table, if offered) shall be limited to 30 minutes, to be equally divided and controlled between the proponents and Mr. McGOVERN; if Mr. McGOVERN is not opposed to any such amendments, motions, or appeals, the time in opposition will be controlled by Mr. STENNIS or the Majority Leader or his designee.

Debate on an amendment by the Senator from Wisconsin (Mr. PROXMIRE) on draftees, numbered 754, will become the pending business on Tuesday, September 1, following the disposition of the so-called "end-the-war" amendment numbered 862, by Mr. McGOVERN, with the time to be limited to 1 hour, to be equally divided and controlled by Mr. PROXMIRE and Mr. STENNIS; debate on any amendment to the amendment shall be limited to 20 minutes to be equally divided and controlled by the mover of the amendment (Mr. PROXMIRE) or Mr. STENNIS if Mr. PROXMIRE is not opposed to the amendment.

Debate on an amendment to be offered by the Senator from Maine (Mr. MUSKIE) numbered 811, will be limited to 4½ hours of controlled time. The first two hours of controlled time will be from 10 o'clock a.m. to 12 o'clock noon on Monday, August 31. The other 2½ hours of debate wil be on Tuesday, September 1 following the vote on the amendment by Mr. PROXMIRE on draftees numbered 754, with all the controlled time on the Muskie amendment (No. 811) to be equally divided and controlled by Mr. MUSKIE and the manager of the bill, Mr. STENNIS. Any amendments to the Muskie amendment or motions or appeals relative thereto shall be limited to 30 minutes, to be equally divided and controlled by the mover of the motion or amendment and Mr. MUSKIE, and such amendments or motions shall be in order at any time during the consideration of the Muskie amendment, which, if offered, will be taken from the 4½ hours allotted to the amendment, numbered 811.

On Monday, August 31 following debate on the McGovern amendment numbered 862, the Senator from Illinois (Mr. PERCY) will be recognized for 30 minutes, after which debate on any amendment offered will be limited to 20 minutes to be equally divided and controlled by the mover of such amendment and the manager of the bill, Mr. STENNIS.

Debate on an amendment to be offered by the Senator from Arkansas (Mr. FULBRIGHT) immediately after the vote on the Muskie amendment will be limited to 40 minutes, to be equally divided and controlled by Mr. FULBRIGHT and the manager of the bill, Mr. STENNIS, with debate on any amendment to the amendment limited to 20 minutes to be equally divided by the mover and Mr. FULBRIGHT, or Mr. STENNIS if Mr. FULBRIGHT is not opposed to the amendment.

Immediately following the vote on the Fulbright amendment, the vote will occur on the committee amendment, as amended, after which the bill be read a third time, after which will be ½ hour of general debate on the final passage of the bill, as amended, to be equally divided between the manager of the bill (Mr. STENNIS) and the Minority Leader or his designee, and that a vote occur on the final passage of the bill at the expiration of that time.

AMENDMENT NO. 868

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that there be printed and lie on the table the amendment to which I have already referred.

The PRESIDING OFFICER. The amendment will be received and printed and will lie on the table, as requested.

Mr. FULBRIGHT. Mr. President, this is a simple amendment concerning section 501 of the bill.

Section 501 would do two things. It would have the Congress go on record with a policy statement concerning the dangerous and delicate situation in the Middle East. And it would give an open-ended authorization for the sale to Israel, on credit, of any amount of arms that "may be necessary to counteract any past, present, or future increased military assistance provided to other countries in the Middle East." The provision clearly deals with policy and substantive matters wihin the jurisdiction of the Foreign Relations Committee. If this section were introduced as a bill, there is no question but that it would be referred to the Foreign Relations Committee for consideration.

I am well aware of the strong sentiment in this body that the United States provide additional arms to Israel. The foreign military sales bill, H.R. 15628, which was the subject of nearly 8 weeks debate in this Chamber, contains ample funds for that purpose, if the President decides that it is in our national interest to do so. The program that would be extended by that bill is the traditional

method for financing arms sales on credit to Israel and other foreign countries.

That bill is still in conference and is very much alive. I have no doubt that the conferees will meet again shortly after the House returns from its recess. For the Senate to approve section 501 as written under these circumstances would be both premature and a direct invasion of the jurisdiction of the Foreign Relations Committee. It would also be most untimely in view of the long sought cease-fire and the negotiations now underway.

The amendment I have offered would not strike section 501 from the bill nor would it diminish the authority it contains. It would merely make the authority conditional on the Congress failure to pass a military sales bill before adjournment. And it would insure that the inclusion of a military sales item in this bill will not be considered as a precedent for the handling of future military sales legislation, so that the traditional jurisdiction of the Foreign Relations Committee over this subject will be preserved.

The 90-day cease-fire in the Middle East will not expire until November 5, long after the Congress has adjourned sine die. Hopefully, there will be an extension of the agreement, if a settlement has not been reached by then. Certainly the President will not decided to ship additional arms to Israel as long as the cease-fire is in effect. So as a practical matter, there is no need for arms sales authority until well after the time when it will be known definitely whether the conferees on the military sales bill can reach agreement.

In summary, this amendment does not affect the basic authority in section 501. It only holds that authority in abeyance and makes it conditional on Congress failure to pass a military sales bill. And it specifically states that the enactment of the provision shall not be a precedent for future congressional consideration of such matters.

I hope that the amendment will be adopted.

Mr. President, just by way of comment, I want to assure the Senator from New York that the purpose of the amendment is in no way to deal with the merits of the subject matter, which is dealt with in the amendment. It is intended to protect what I believe to be the legal and proper jurisdiction of the Committee on Foreign Relations. That is why I am offering it. It is not to try to pass judgment upon the substance of the problem which is involved here.

Mr. President, I thank the Senator from Mississippi.

Mr. STENNIS. Mr. President, I ask for recognition.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, I ask unanimous consent that I be authorized to yield to the Senator from Kansas (Mr. DOLE) for 10 minutes without losing my right to the floor.

The PRESIDING OFFICER. Without objection, the Senator from Kansas is recognized for 10 minutes.

THE FIFTH VERSION OF THE SO-CALLED "END THE WAR AMENDMENT"

Mr. DOLE. Mr. President, I have read the original so-called "end the war amendment"—more appropriately, the "lose the peace amendment"—all the intermediate changes and versions, and now the latest, the fifth edition, of the proposal sponsored by the Senators from Oregon and South Dakota.

It is interesting to note that through this series of alterations the sponsors have changed their amendment from a declaration of capitulation in Vietnam to a recognition and acceptance of what President Nixon has been saying and doing in Vietnam for 19 months.

With a few more changes, now, it would correspond closely with the President's expressed policy in South Vietnam, and his program for Southeast Asia.

Until we reach that point, there is only one question to decide—should the President, as Commander in Chief, continue to direct this country's disengagement from a war the previous two administrations got us into, or should that job be delegated to a committee of 535—the Congress?

Mr. President, I recognize that we will debate whatever remains of the "end the war amendment" next week, but before then we should discuss—if only briefly—the amendment as it is now and ask: What was the purpose of the original amendment which has now gone through a complete metamorphosis?

Tomorrow's so-called "end the war amendment" may be different than today's, so it should be clearly understood that I am discussing only the fifth version of the amendment—the one before us today. I do not know the future intentions of the principal sponsors and whether additional changes are planned.

What today's amendment says, as I read it, says the President must have the troop level in Vietnam down to 280,000 by next April 30. This comes so close to the plan President Nixon announced on April 30 that one wonders if the drafters had their source material switched.

Regardless of the surface similarity to the President's program, we now come to the meat of the fourth amended amendment, or the fifth amended amendment, which declares:

> After April 30, 1971, funds herein authorized or hereafter appropriated may be expended in connection with activities of American armed forces in and over Indochina only to accomplish the following objectives:

Those objectives are stated to be:

First. Withdrawal of all American forces by December 31, 1971.

Second. Release of prisoners of war.

Third. Provision of asylum for endangered Vietnamese.

Fourth. The supply of aid to South Vietnam.

This statement of objectives with its December 31, 1971 deadline is followed by a proviso that in the face of a "clear and present danger" to American Armed Forces the President may suspend the withdrawal deadline by up to 60 days, or until March 1, 1972.

SUBSTANTIAL QUESTIONS RAISED

All of the objectives are worthwhile and commendable but the cited leaves unanswered questions.

For example: What happens under this fifth version if the North Vietnamese attack in such a way and at such a time as to make impossible either the orderly termination of military operations or the safe and systematic withdrawal of remaining forces by December 31, 1971 or by March 1, 1972? And what precisely would constitute a clear and present danger to American forces?

Another question: Where do we provide asylum for thousands and perhaps millions of South Vietnamese refugees, how do we know whose lives will be endangered until it is too late?

Another question: What assurances do we have that the enemy will release their American prisoners under any circumstances?

Yet another question: What assistance could we provide South Vietnam if our precipitate withdrawal turned that country over to the Viet Cong and the North Vietnamese?

WHY SO MANY CHANGES

Mr. President, I am hopeful that answers to these and other questions will be forthcoming and I trust we will get into another matter of critical importance which underlies and surrounds the McGovern-Hatfield amendment.

It is a question that has not been satisfactorily answered. It is the question of propriety, custom, and precedent surrounding the campaign to raise money and conduct a lobbying effort on behalf of the amendment.

Certainly those who donated money—I might add that this amounted to some $600,000—in response to the May 12 NBC television solicitation, newspaper advertisements, and spot commercials on radio and television did so in the belief that there was a plan to end the war.

Now, however, many contributors must have discovered that the plan they thought they were supporting keeps changing. So far, it has changed at least four or five times.

The original intent and representation was to end the war June 30, 1971, by ending our fighting on December 31, 1970, and withdrawing our troops 6 months later. This was the so-called fund-raising amendment, the amendment discussed on May 12, at which time the sponsors were able to raise some $600,000 based on the emotions and anxieties of the American people.

What has happened to change the plan to 280,000 troops by April 30, 1971, and withdrawal of all forces by December 31, 1971, or March 1, 1972?

If the amendment's sponsors did not intend to press for an end of the war by June 30, 1971, why did they draft their amendment to promise that date? And why did they raise half a million dollars on the strength of the date included in their first amendment? If they did not mean June 30, 1971, do they mean December 31, 1971, or do they now mean March 1, 1972, or do they mean some other date in 1972, or 1973, or 1974, or 1975?

CREDIBILITY COMPARED

Credibilty has become a prominent catchword in Washington over the past several years, and I believe it is important to recognize that President Nixon's credibility on ending the war and winning the peace is unimpeachable.

Just look at the record. He took office in January 1969, with 542,000 American fighting a war commenced and expanded by two previous administrations. In June, September, and December of that year he announced withdrawals of 25,000, 35,000, and 50,000 troops, and by April 15 of this year those 115,000 men had been withdrawn.

When he announced the initiation of the Cambodia operations on April 30, he said that all American forces would be withdrawn from that country by June 30. And on June 30, American forces were out of Cambodia.

President Nixon has not equivocated over dates or numbers. He has made clear, reasonable commitments, and he has kept them. When the President speaks of numbers and dates, there is no question of those numbers or those dates.

I believe the Presidents' record offers a marked contrast to that of the so-called "end the war amendment," which I believe should be designated, "the lose-the-peace amendment." This amendment started out having all American forces out of Vietnam on December 1, 1970. Then it said December 31. Then it said June 30, 1971. Now it says we will have 280,000 men in Vietnam on April 30, 1971 and have them all out by December 31, 1971—or is it March 1, 1972, or 1973, or 1974, or when?

I cannot believe that the "lose-the-peace amendment" was introduced with the expectation that it would ever become law. Any observer of Washington knows that the Senate and the House will never pass it and no President, Democrat or Republican, would ever sign it. But, since it has been advocated so vigorously and at such expense and with such considerable efforts to lobby and pressure Members of the Senate, we are entitled to know why it was introduced and why it has been subjected to such fundamental, continuing, and substantial alteration.

Mr. President, perhaps it is expecting too much to expect answers to these questions, but I do believe they are questions most Americans are asking.

I am looking forward to next week's debate, regardless of what form the "lose-the-peace amendment" may take at that time.

Mr. President, so that my colleagues in the Senate may know, I ask unanimous consent to have printed in the RECORD what I believe to be the pioneer version, the bill introduced by the Senator from New York (Mr. GOODELL), on October 7, 1969. That is what I refer to as the first version of "the lose-the-peace amendment."

That was followed on October 8, 1969, by what I refer to as the second version "the lose-the-peace amendment," introduced by the junior Senator from South Dakota and others.

That was followed on April 30, 1970, by what I consider to be the third version, introduced by the junior Senator from South Dakota and the senior Senator from Oregon.

That was followed by the fourth version on May 5, 1970, introduced by the Senator from South Dakota and others.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield the Senator from Kansas 2 additional minutes.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 2 additional minutes.

Mr. DOLE. Mr. President, that was followed by the fifth version which was never printed as an amendment. However, it did appear in the RECORD, and it was indicated that it would perhaps be the final version. That appeared in the RECORD sometime last week.

That was followed by the sixth and the latest version of "the lose-the-peace amendment," which was introduced on August 26, 1970, by the junior Senator from South Dakota and the senior Senator from Oregon.

I ask unanimous consent that all of these different versions of the so-called "amendment-to-end-the war" be printed in the RECORD at the conclusion of my remarks so that Members of the Senate will understand that we are not considering the amendment discussed on national television on May 12, 1970. We are considering one of the half dozen versions. I am not certain what we may be considering next week.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

EXHIBIT 1

S. 3000

A bill to amend the Foreign Assistance Act of 1961

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Vietnam Disengagement Act of 1969."

SEC. 2. (a) Congress finds that the broad foreign policy interests of the United States require that the American military presence in Vietnam be removed at the earliest possible time, and that such action will promote the social and political well-being of the people of South Vietnam; that the prosecution of the war in Vietnam with American troops must be ended, not merely reduced; that the loss of American lives in Vietnam can be halted only by establishing a clear timetable for terminating American combat operations and withdrawing American troop commitments in the near future; and that the responsibility for ending the American involvement in Vietnam is not the President's alone, but must be shared by the Congress under its constitutional authority to "raise and support armies" and to "declare war."

(b) It is the purpose of this Act—

(1) to reassert the responsibility of Congress, under its constitutional authority to "raise and support armies' and "declare war," to share with the President the task of extricating this Nation from the Vietnam war; and to involve Congress in setting a clear and unequivocal timetable for the withdrawal of American troops from Vietnam;

(2) to express the clear intent of Congress that all American military personnel be withdrawn from Vietnam on or before December 1, 1970; so that the retention even of noncombat military training personnel in Vietnam after that date would not be permitted without the enactment by Congress of further legislation specifically approving such retention; and

(3) to give clear notice to the Government of South Vietnam that following December 1, 1970, it must assume the burden of fighting; and to permit the withdrawal of American military personnel and the assumption of their combat functions in an orderly fashion on a schedule set by the President with a required termination date of December 1, 1970.

SEC. 3. Chapter 1 of part III of the Foreign Assistance Act of 1961 is amended by adding at the end thereof the following new section:

"SEC. 620A. PRESENCE IN VIETNAM.—No part of any amount authorized to be appropriated under any Act shall be used after December 1, 1970, to maintain military personnel of the United States in Vietnam."

S. CON. RES. 39

A concurrent resolution relating to withdrawal of United States forces from Vietnam

Whereas the war in Vietnam has resulted in the loss of more than forty thousand American lives, in some two hundred and fifty thousand American casualties, in the depletion of American resources to the extent of over $100,000,000,000, and in inestimable destruction of Vietnamese life and property; and

Whereas the war stands today as the greatest single obstacle to efforts to focus the country's financial, human, and spiritual resources upon urgent domestic needs; and

Whereas spokesmen for the present administration have recognized that military victory cannot be achieved in Vietnam and have specifically defined United States policy to exclude that unattainable goal; and

Whereas the painful history of United States involvement in Vietnam exposes the futility of external attempts to create and sustain a viable, indigenous government, particularly when its leaders resist political and social reforms aimed at inspiring popular confidence and support; and

Whereas the leaders of South Vietnam have indicated, by action and deed, that their ambitions conflict with the interests of the United States in a prompt settlement of the conflict, and that they are unlikely to adopt a negotiating posture which might end the war so long as they are assured of all the United States support they need to prosecute it; and

Whereas the dominant result of policies relating the level of American presence to the capability or willingness of the South Vietnamese to fight the war themselves can only be the continued daily loss of life and limb by American servicemen, with no foreseeable conclusion: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress of the United States that all United States forces should now be withdrawn from Vietnam, the pace of the withdrawal to be limited only by steps to insure the safety of our forces, the mutual release of prisoners of war, and the provision of safety, through arrangement for amnesty or asylum in friendly countries, for those Vietnamese who might be endangered by our disengagement.

AMENDMENT NO. 605

On page , line , insert the following:

"SEC. . (a) Unless there has been a declaration of war by the Congress with respect to any conflict in Vietnam, no part of any funds appropriated pursuant to this Act or any other law shall be expended in connection with such conflict after December 31, 1970, for any purpose other than to pay costs relating to the withdrawal of all United States forces, to the termination of United States military operations in that country, to the arrangement for exchange of prisoners of war with the Government of North Viet-

nam, to the provision of food and other non-military supplies and services for the welfare of the Vietnamese people, and to arrangements for asylum in friendly countries for Vietnamese who might be physically endangered by the withdrawal of United States forces.

"(b) Unless there has been a declaration of war by the Congress with respect to any conflict in Laos, no part of any funds appropriated pursuant to this Act or any other law shall be expended to furnish, after December 31, 1970, to Laos or to personnel of Laos any defense article or any military assistance or advice.

"(c) Unless there has been a declaration of war by the Congress with respect to any conflict in Cambodia, no part of any funds appropriated pursuant to this Act or any other law shall be expended to furnish to Cambodia or personnel of Cambodia any defense article or any military assistance or advice.

"(d) For purposes of this section, the term 'defense article' shall have the same meaning given such term under section 644 of the Foreign Assistance Act of 1961."

AMENDMENT NO. 609

On page —, line —, insert the following:

"SEC. (a) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended in Vietnam after December 31, 1970, for any purpose arising from military conflict: *Provided*, That funds may be expended as required for the safe and systematic withdrawal of all United States military personnel, the termination of United States military operations, the provision of assistance to South Vietnam in amounts and for purposes specifically authorized by the Congress, the exchange of prisoners, and the arrangement of asylums for Vietnamese who might be physically endangered by the withdrawal of United States forces: *And provided further*, That the withdrawal of all United States military personnel from Vietnam shall be completed no later than June 30, 1971, unless the Congress, by joint resolution, approves a finding by the President that an additional stated period of time is required to insure the safety of such personnel during the withdrawal process.

"(b) Unless Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended after December 31, 1970, to furnish to Laos any military advisers, or to support military operations by the forces of the United States or any other country in or over Laos.

"(c) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to the Act or any other law shall be expended, after thirty days after the date of enactment of this Act, to furnish to Cambodia any defense article or any military assistance or military advisers, or to support military operations by the forces of the United States or any other country in or over Cambodia.

"(d) For the purposes of this section, the term 'defense article' shall have the same meaning given such term under section 644 of the Foreign Assistance Act of 1961."

AMENDMENT NO. 609—NEW LANGUAGE

Sec. (a) No part of any funds appropriated pursuant to this Act or any other law shall be used after December 31, 1971, to maintain or introduce any military personnel of the United States in or over Indochina, unless the Congress (after examination of the recommendations to be submitted under subsection (c) of this section) shall by joint resolution specifically otherwise provide.

(b) Nothing in this section shall preclude the otherwise authorized use of funds in connection with Indochina for provision of assistance in amounts and for purposes specifically authorized by the Congress, for the release of prisoners, and for the arrangement of asylum for Indochinese who might be physically endangered by the withdrawal of United States forces.

(c) Within sixty days after the date of enactment of this Act, the President shall submit to the Congress his recommendations of United States policy in Indochina, including his assessments of both the military and political consequences of the withdrawal required pursuant to subsection (a) of this section, his recommendations on steps to secure the release of United States prisoners of war, and his evaluation of the ability of United States forces to conduct a safe and orderly withdrawal from Indochina by December 31, 1971. It is the sense of Congress that such recommendations (and such supplementary recommendations as the President may elect to submit at a later time) should be examined in the Senate by the Committees on Armed Services and Foreign Relations and in the House by the Committees on Armed Services and Foreign Affairs and that such committees should report their recommendations to the Senate and House respectively.

(d) For purposes of this section, the term "Indochina" shall mean North and South Vietnam, Laos, and Cambodia.

AMENDMENT NO. 862

At the end of the bill add a new section as follows:

"SEC. —. (a) In accordance with public statements of policy by the President, no funds authorized by this or any other Act may be obligated or expended to maintain a troop level of more than two hundred and eighty thousand armed forces of the United States after April 30, 1971.

"(b) After April 30, 1971, funds herein authorized or hereafter appropriated may be expended in connection with activities of American armed forces in and over Indochina only to accomplish the following objectives:

"(1) the orderly termination of military operations there and the safe and systematic withdrawal of remaining Armed Forces by December 31, 1971;

"(2) to secure the release of prisoners of war;

"(3) the provision of asylum for Vietnamese who might be physically endangered by withdrawal of American forces; and

"(4) to provide assistance to the Republic of Vietnam consistent with the foregoing objectives.

Provided, however, That if the President, while giving effect to the foregoing paragraphs of this section, finds in meeting the termination date that members of the American Armed Forces are exposed to unanticipated clear and present danger, he may suspend the application of paragraph b(1) for a period of not to exceed sixty days and shall inform the Congress forthwith of his findings; and within ten days following application of the suspension the President may submit recommendations, including (if necessary) a new date applicable to subsection (b) (1) for congressional approval."

Mr. McGOVERN. Mr. President, will the Senator yield to me for a couple of brief questions?

Mr. DOLE. I yield.

Mr. McGOVERN. Mr. President, I did not hear all of the Senator's remarks, but I do want to thank him for having printed in the RECORD the various modifications that have been made in the amendment to end the war, because I think it will give us a helpful illustration of how the legislative process works.

I cannot believe that the Senator from Kansas is suggesting that the best way to produce sound legislation is to automatically accept the first version of any bill or amendment that is introduced.

I well remember, as the Senator from Kansas may remember, that the last time we passed major agricultural legislation in 1965, it went through the process of repeated amendment. I can recall at least a dozen different amendments in which members of the committee and Senators on the floor participated that, I think, improved the bill.

I ask the Senator if he is trying to propound a new legislative doctrine here that a piece of legislation which is modified after its original introduction thereby loses any merit that it might have.

Mr. DOLE. Mr. President, I do not believe this amendment ever had any merit. But if it did, the point is that on May 12, 1970, on national television the Senator from South Dakota and others asked the American people to send in their money to end the war. That amendment has been changed two or three times since that time, including the timetable.

If I had donated any money on one premise and the premise was changed, I might request my money be returned.

That is the point that I make.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I ask unanimous consent, without losing my right to the floor, that I may yield 5 additional minutes to the Senator from Kansas.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 5 additional minutes.

Mr. DOLE. Mr. President, I yield to the Senator from South Dakota.

Mr. McGOVERN. Mr. President, with reference to that point, the President of the United States, in my opinion, is now sitting in the White House to a great extent because of the unpopularity of the Vietnam war and the fact that, during the 1968 campaign, then candidate Nixon told the American people that he had a plan to end the war, that he did not feel it ought to be revealed during the campaign, but that once the campaign pressures were out of the way, he would reveal the plan for ending the war. Perhaps partly on those prospects, some $22 million was contributed by people all over the country to Mr. Nixon's campaign.

Would the Senator say that in view of the fact that a year and a half has passed and we still have some 400,000 forces in Vietnam and suffer casualties every week, that the President ought to refund that money?

Mr. DOLE. Mr. President, I do not recall that, and I observed the election rather closely, even the efforts of the junior Senator from South Dakota with reference to the Presidency.

I do not recall the President making a plea on the television, "Send in your money and I will end the war in Southeast Asia."

Mr. McGOVERN. He asked for our votes on that basis.

Mr. DOLE. On that basis and many others.

The action of the Senator from South Dakota and others set the precedent

that it is proper for the Members of the Senate to buy national TV time and raise money for radio and TV spots in my State and others to lobby their colleagues.

That creates the impression that it is proper procedure. It is precedent breaking. If someone now wants to raise money for the Black Panthers or the White Citizens Council there would be the precedent established by the Senator from South Dakota and others on the May 12 program.

Mr. McGOVERN. Mr. President, there were some 70,000 people who contributed following that broadcast. The changes in the amendment have been widely discussed in the press. To the best of my knowledge, not one single contributor has asked that his money be returned.

I am sure there would be no question about it if anyone wrote in and said, "Your original amendment called for the withdrawal of American forces by June 30, 1971. Now you have changed the date."

Mr. DOLE. You have really changed it to March 1972.

Mr. McGOVERN. Mr. President, at the time we made our broadcast, we had a June 30, 1971 deadline for the withdrawal of the forces. However, as the Senator knows, a number of months have passed since that amendment was first introduced.

What the sponsors had in mind was providing a good, solid year's time following action on that amendment to terminate American involvement. Now several months have passed. In keeping with that, we have set back our withdrawal deadline to December 31, 1971. But there is nothing in there to prevent the President from arranging an earlier withdrawal if he felt the situation so dictated.

Mr. DOLE. I do not quarrel with the Senator's wish to end the war in South Vietnam; and trust he does not quarrel with my wish to end the war. I believe that everyone would like to see a quick end of the war in Southeast Asia, or wherever war occurs.

I do not say this in defense of the President because he needs no defense. However, he has a plan for peace and he is extricating us from the situation he inherited.

As I recall some of the Senator's speeches in 1968, he was advocating a withdrawal of 250,000 American troops. President Nixon will exceed that figure by next May 1.

As I have said, President Nixon does have a plan. His plan might not be as rapid as we like, but it is a very complex problem and some one person must speak for our Government and it must be the President.

I recognize, having voted for the Church-Cooper resolution, the responsibility of Congress, but since we are on the road to disengagement, it would be the better part of wisdom to leave it to the President.

Mr. McGOVERN. Mr. President, will the Senator yield briefly?

Mr. STENNIS. Mr. President, I shall speak for about 30 minutes, but I yield 1 minute to the Senator from South Dakota.

Mr. McGOVERN. Mr. President, I wish to call the attention of the Senate to a telegram received from former Vice President Humphrey, in which he endorses the McGovern-Hatfield amendment and urges the Senate to pass it. I think it is significant that the Vice President, who supported American policy in Vietnam during all the years he was the Vice President, has now called for passage of the so-called McGovern-Hatfield amendment.

Mr. President, I ask unanimous consent to have the telegram printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

DEAR GEORGE: I consider the forthcoming vote on the McGovern-Hatfield Amendment to End the War as a test of our determination to disengage from a costly and tragic struggle.

Unfortunately the Paris negotiations have yielded no results. Clearly a new initiative for peace is needed. The McGovern-Hatfield Amendment, together with a standstill ceasefire and the conduct of new free elections in South Vietnam, provide our best hope for peace.

This Amendment provides the opportunity for reasserting an American initiative to encourage a political settlement of this cruel war. With this Amendment our own policy for Southeast Asia will be subject neither to the veto of Saigon nor to the provocative and sporadic incursions emanating from Hanoi. It will afford us an opportunity to regard from a new perspective our own domestic needs and other international obligations.

I endorse the McGovern-Hatfield Amendment as a firm statement of official policy stating a clear commitment by our government to make an orderly and systematic withdrawal. It offers every possible protection for American military manpower and will bring our men safely home. It reasserts the responsibility of Congress in the conduct of foreign affairs while leaving the President with necessary flexibility to fulfill his constitutional obligations.

I fully endorse the McGovern-Hatfield Amendment and urge your colleagues to support it.

Sincerely,

HUBERT H. HUMPHREY.

Mr. McGOVERN. Mr. President, I thank the Senator from Mississippi for yielding to me.

Mr. STENNIS. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. McGOVERN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McGOVERN. Mr. President, I intend to yield the floor back to the Senator from Mississippi but first I wish to call attention, not only to the telegram from the former Vice President, but also what seems to me to be a very significant editorial endorsement of the amendment which was published in the Washington Post.

I say it is a very significant endorsement not only because the Washington Post is a major newspaper that is frequently quoted on the floor of the Senate and in other public forums, but also because it represents the first time that this newspaper has endorsed the amendment. Reflecting, perhaps, the point that the Senator from Kansas made here a while ago that there have been changes in the amendment, the Washington Post editorial now comes out with strong support of the revised version of the amendment.

Mr. President, there might be some quarrel on the part of cosponsors as to whether we have fundamentally altered the substance of the amendment, but be that as it may, we did make certain changes in the amendment that would give the President somewhat greater flexibility in terms of handling our withdrawal from Vietnam and from Indochina. We did provide that as he approaches the deadline, or at any time after the passage of the amendment, until the deadline of December 31, 1971, the President could, without further consultation with Congress, extend that deadline for not to exceed 60 days. If he chooses that course he would have to come to Congress within the first 10 days after announcing the extension and ask Congress to set a new deadline if he wanted to go beyond the 60-day grace period.

Perhaps because of that proviso with respect to the deadline of December 31, the Washington Post has now endorsed the amendment.

I might say, in a rather remarkable turn for him, the Vice President some 2 weeks ago in his speech at Miami Beach cited a previous editorial in the Washington Post as an indication that this amendment was reckless. So in view of the high regard the Vice President has for the editorial opinion of the Washington Post I am now very hopeful that he will have it in mind and say that this amendment has the kind of responsible proposal the editor of the Washington Post believes it to be.

Mr. President, I ask unanimous consent to have printed in the RECORD the editorial entitled "A National Policy To End the War," published in the Washington Post today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NATIONAL POLICY TO END THE WAR

The Senate has an opportunity during the next few days to write a rational and responsible policy for ending the war in Vietnam. For many months the Senate has been itching to reverse its 1964 endorsement of a blank check to President Johnson to initiate and carry on that war. It adopted the Fulbright resolution designed to give Congress a voice in future national commitments, and a few weeks ago it attempted to forbid widening of the war to Cambodia through the Cooper-Church amendment, although the language got pretty muddy before the final action came and the House would have none of it. Now the Senate has a chance to go on record for an orderly and timely liquidation—an objective that is earnestly sought by an overwhelming majority of the American people.

This issue has been distorted in the past by the simplistic manner in which some senators sought to hasten the withdrawal from Vietnam. A scuttle-and-run policy was

said to be the only alternative to a declaration of war. Widespread opposition to any action by Congress on the war was aroused by the argument that it could be, and should be, cut off by a snap of the congressional fingers.

As the issue is now being debated in the Senate, however, it assumes a very different posture. No longer is there any effort to say that American troops must be out of Vietnam within six months. In its present form the amendment to the military procurement bill originally offered by Senators McGovern and Hatfield would now require the withdrawal of American armed forces by Dec. 31, 1971—leaving a liquidation period of 16 months. If any emergency should arise, the President would be authorized to extend this period by 60 days, and if that did not allow enough time for safe evacuation of Southeast Asia the President would so report to Congress within 10 days so that Congress could authorize a further extension.

Rigidity has thus given way to flexibility. As reshaped by the Foreign Relations Committee, this is quite a different proposition, which would have the great virtue of enacting a national policy for termination of the war without putting the President into a straitjacket. In effect Congress would enact the President's withdrawal formula as a sound national objective, without saying that it would have to be carried out in any and all circumstances. This achievement of firmness in the statement of a national policy, along with elbow room in actually carrying it out, is a tribute to the good judgment of all those who have contributed to it.

Up to now, the administration has remained in opposition to any congressional action in this sphere. In part this may be attributed to the sound objections raised against earlier versions of the McGovern-Hatfield amendment. No doubt it also reflects an automatic White House preference for a free hand. In this case, however, the White House as well as the country has an enormous interest in having the Congress on record for termination of the war in an orderly and responsible fashion. If the outcome should turn sour—by no means a remote possibility—it would be much better to have the President and Congress jointly responsible.

In our view, the White House could well regard this proposal before the Senate as a fortuitous opportunity to put Congress on record in favor of the Nixon withdrawal policy or something close to it. The requirement that our Vietnam troop-level be reduced to 280,000 men by next April 30 and that the remaining forces be brought home by the end of next year is specifically recognized in the language of the amendment as a reflection of the President's own statements. Unless the President wishes to deviate from this withdrawal policy, there are compelling reasons why he should welcome a congressional reaffirmation of it.

The President has, to be sure, opposed past efforts to set a date for the windup of the Vietnamese affair. He has feared that the fixing of a date would take the pressure off the North Vietnamese to negotiate an end of the war. But if Congress fixes a date which the President coud postpone or even eliminate with the consent of Congress, when the time came, the North Vietnamese would, as the Foreign Relations staff memorandum notes, have no assurance that mere stalling would redound to their advantage.

In any event, it seems to us that the advantages of having a congressional withdrawal policy on the books greatly outweigh any disadvantages that might be encountered at the negotiating table. Such legislation would put the President under pressure to carry out the evacuation at the earliest feasible date. It would put our military leaders—and our diplomats, as well—on notice that the national policy is irreversible. Saigon also would have a clearer understanding of what the score is and would be able to adjust its policies accordingly. So long as there is hope that the President may change his mind under pressure the Thieu government is more likely to avoid the hard decisions that are essential to a future for South Vietnam without American manpower for its defense.

Behind all the arguments for and against this amendment is the even more vital fact that the Senate is making a bid to get back into the policymaking arena in regard to war and peace. We think the President should welcome that effort as a bedrock imperative of American democracy. If the present amendment is not satisfactory to the administration in all particulars, amendments can always be suggested. But it would be tragically shortsighted for the administration to take an arbitrary stand against congressional action designed to underscore and give congressional support for the President's own policy. Orderly termination of the war as soon as feasible ought to be the joint policy of the two political branches, and it is doubtful that there will be a better opportunity than the present to make it so.

CORRECTION OF THE RECORD

Mr. McGOVERN. Mr. President, yesterday I had printed in the RECORD an article from the Boston University Law Review, written by Francis L. Coolidge, Jr. and Joel David Sharrow. The article, as published in the CONGRESSIONAL RECORD today, lists the wrong authors, or at least with a terrible spelling of their names. I would like to have those names corrected in the RECORD as they appear at the conclusion of the article: Francis L. Coolidge, Jr., and Joel David Sharrow.

The PRESIDING OFFICER. The correction will be made.

Mr. McGOVERN. I ask unanimous consent that the name of the author of the second article I inserted from the Boston University Law Review, Henry P. Monaghan, appear following that article.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. McGOVERN. I yield.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that I may be made cosponsor of amendment No. 862, commonly referred to as the McGovern-Hatfield amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FULBRIGHT. Mr. President, I wish to congratulate the distinguished Senator from South Dakota for the work he has done on the amendment and to endorse the editorial which has just been referred to. The editorial contains an interpretation of the purpose of the amendment and the effect it would have.

I believe it would be of help to the administration, the country, and Congress if this amendment were agreed to. It would tend to bring Congress and the administration back together on the same track. I hope the amendment is agreed to.

Mr. McGOVERN. Mr. President, I appreciate the Senator's words. The revision in the amendment was worked out at the suggestion of respective members of the Committee on Foreign Relations, with the graciousness of the chairman.

Mr. FULBRIGHT. I do not wish to take away any credit that is due the Senator from South Dakota. The revision here is a matter of detail. It simply deals with one of the problems, in particular, and that is the capacity for flexibility in case of unforeseen developments. The thrust of the amendment is exactly the same, and that is, to express the policy of Congress and the Senate to end the war. I think from that point of view there is no substantial change.

AMENDMENT NO. 862—ADDITIONAL COSPONSOR

Mr. JAVITS. Mr. President, I ask unanimous consent that I may be made a cosponsor of amendment No. 862, the so-called McGovern-Hatfield amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE DD–963 DESTROYER PROGRAM

Mr. STENNIS. Mr. President, I have not previously discussed on the floor of the Senate the issues involved in the DD–963 destroyer program and the award of the contract for the 30 ships involved to the Ingalls Shipbuilding Division of Litton Systems, Inc., because I was awaiting the completion and delivery of the report from the General Accounting Office directed to the suggestion of a "buy-in" by Litton on the final bid. This report has now been completed and, as I will show, it refutes the "buy-in" suggestion entirely and vindicates the award completely as far as this issue is concerned.

I should mention at the outset, Mr. President, that the distinguished Senator from Maine (Mr. MUSKIE) has an amendment which would require contracts for the construction of these destroyers with two domestic shipbuilders, with the total number of destroyers to be constructed to be divided substantially equally between such shipbuilders. While I strongly oppose the Muskie amendment and think that every sense of justice and equity calls for its defeat, it is not my purpose to address it in detail at this time, although I shall do so later. What I propose to do today is to discuss, and hopefully throw light upon and bring understanding about, a number of issues which have been raised with respect to this program and the award of the contract to Ingalls.

HISTORY OF THE PROGRAM

Industry competition was initiated on the DD–963 program in 1967—more than 3 years ago.

Proposals for the development and construction of the DD–963 were initially received from six shipbuilders: Todd Shipbuilding, Inc.; Avondale Shipyards, Inc.; Newport News Shipbuilding and Drydock Co.; Bath Iron Works Corp.; General Dynamics Quincy Division; and Litton Systems, Inc., Ingalls Shipbuilding Division.

The request for proposals was released to industry on February 15, 1968, covering competition for contract definition. I will come back to this point later.

By October 1969, consideration had been narrowed to Bath Iron Works and Ingalls, and these two were requested to make certain refinements to their proposal and contractual documents prior

to final evaluation and source selection. Subsequently, in February 1970, additional proposals—the third—were received from the two companies still left in the competition.

Shortly thereafter the Navy asked the competing companies for their "best and final" offers. These were submitted on March 26, 1970. The proposal by Ingalls was adjudged to be lowest and best. The price breakdown per ship for Litton was $71.3 million while that of Bath was more than $8 million higher—$79.7 million. The total value of the contract based on the ceiling price is about $2.14 billion.

NO CHANGE IN GROUND RULES

In the request for proposal of February 15, 1968, a set of ground rules was established for the DD–963. Among the ground rules was the stipulation that the development and production contract for all of the 30 ships would be awarded to a single successful contract definition contractor. At no time were changes made in these ground rules during the industry competitive contract definition which began with the release of the request for proposal on February 15, 1968, and terminated with the award of the contract on June 23, 1970.

That date of February 15, 1968, is important, because it was then that the ground rules were announced and were understood, and all procedures were conducted with those ground rules in view.

This is a very significant fact. For more than 2 years prior to the contract award the stipulation that the award would be made on a "winner take all" basis was known and accepted. This was the program recommended by the Navy. This was the program approved by the Secretary of Defense, Bureau of the Budget, and the President. Congress knew of the procurement program and this stipulation and acquiesced in it. Industry found it entirely acceptable and made no objection prior to the contract award.

Let me remind the Senate that the Navy spent more than 3 years in planning for the DD–963 destroyer program and going through the source selection process and the industry competition. Industry competition itself started more than 2 years before the contract award. After this intense competition, and after literally thousands of man-hours spent by the source selection experts, objection is now made to a ground rule established in February 1968. We are now asked to change the ground rules even though no one has alleged that all of the competitors were not given equal opportunity in the competition and negotiations for the award. As a matter of fact, it has not been brought to my attention that Bath Iron Works itself is raising any question whatsoever with respect to the fairness of its treatment in the competition.

Mr. President, I want to say with great completeness and clarity that I have no complaint with the Senator from Maine (Mr. MUSKIE), who filed the amendment and prompted it. I fully understand his viewpoint, his obligation to have matters gone into and fully considered from the viewpoint of his own constituents, from the viewpoint of his own obligation to them, from the viewpoint of his obligation to his fellow Senators, and from the viewpoint of his obligation to the rest of the country. I have the highest respect for him and also for other Senators who have presented amendments. This is not a personal matter.

DD–963 SOURCE SELECTION PROCESS

It should be understood that source selection for the DD–963 destroyer was not based on cost alone, although price was, of course, an important consideration. It was based on full consideration of five distinct categories: Life cycle cost, ship system, management plans for conducting the detailed design and production effort, military effectiveness of the ship, and corporate qualifications of the competitors.

The team which conducted the evaluation was composed of experts drawn from 27 different Navy commands and Government agencies throughout the United States, approximately 350 full-time evaluators, augmented by about 250 part-time consultants, were used.

All these were used. Mr. President, that sounds like a great deal of attention and consideration was given to this matter, and it was and should have been. This involves 30 destroyers, long since overdue in our U.S. Navy. Most of our destroyers are World War II vintage, far behind the art of achievement in this field now, far behind the modernity that is needed and required, especially in view of the new potential with reference to Soviet attack submarines and their other types of submarines.

I know, as a matter of fact, that for years destroyer needs have been pushed aside to a lower priority among the many demands of the Navy. It should be noted that when it was finally decided to launch in on this program, it was recognized that it would be a 6- or 7-year program. It is not a fly-by-night proposition. It has had the utmost consideration of the different Navy commands, experts, and part-time consultants.

It is very significant, I think, that in all five categories the Ingalls proposal was adjudged superior. The degree of superiority varied depending on the category, but at no time was there a reversal of relative positions. These categories were known to the contractors from the day they entered the competition. The evaluation within the categories was based on comparison with predetermined standards which were established prior to the receipt of the proposals and prior to the start of the evaluation. And finally, as I have said, in each of the five categories, Litton demonstrated a measurable advantage and no reversal of position occurred as a result of the extensive reviews of the source selection conducted by the Secretary of the Navy or the Secretary of Defense prior to receipt of approval to proceed with award of the production contract.

It is interesting to note here, Mr. President, that these 3 years of activity, planning, and ground rules extend over the period of two administrations, two Secretaries of Defense, two Secretaries of the Navy, and two Chiefs of Naval Operations, besides the military officers in the Navy.

"BEST AND FINAL" OFFERS

As I have mentioned, negotiations on the DD–963 program were completed by a request for a "best and final" offer from both final competitors. The basis for this request is the Armed Services Procurement Regulations, which requires a formal close to the negotiation. The Comptroller General has frequently ruled on this question and has stated that offerors should be advised, first, that negotiations are being conducted; second, that offerors are being asked for their "best and final" offer, not merely to confirm or reconfirm prior offers; and, finally, third, that any revision must be submitted by the date specified.

As recently as July 2, 1970, the Comptroller reiterated his position. In the case of NASA's proposed award to General Electric, he recommended that Fairchild protest be sustained. The full text of his opinion appears in the CONGRESSIONAL RECORD for July 9, 1970, pages 23477–23479.

In short, not only was there no irregularity in the request for the "best and final" offer from the final competitors, but the fact is that the award would have been subject to a successful protest under the rulings of the Comptroller General if this procedure had not been followed.

"RESET" PROVISION

Some question has been raised with the contract pricing "reset" provision that was established during the final negotiations for this contract. There is no merit in this. The "reset" provision is an accepted and standard part of the fixed price incentive—successive target type of contract which is provided for and fully explained in the Armed Services Procurement Regulations.

There is nothing unique in this so-called "reset" provision and use of it is not limited to the DD–963. It has been used on many other programs, and both by the present and preceding administrations. These include the Army's one and one-quarter ton truck program; the Army's Vulcan weapon system—antiaircraft gun; the Navy's A–7D/E attack aircraft; the Navy's *Phoenix* air-to-air weapons control system; the contract for Pratt and Whitney engines for the Navy's F–14 and the Air Force's F–15 aircraft; the Navy's general purpose amphibious assault ship—LHA; the Air Force's F–15 aircraft; and the Air Force's airborne warning and control system—AWACS.

In the DD–963 contract the "reset" of target price will occur in the 39th month of the contract. At this point the contractor must submit to the Navy either a proposal for a firm target price or a firm fixed price for the 30-ship program. In no event—and I stress this point—can the contractor's proposed prices exceed the ceiling price as now established under the contract. Further, in negotiating the "reset" price the contractor is motivated to control the established target cost and get below it if possible since he will share, through increased profits, a percentage of the proposed costs below the established costs.

The contract also provides some protection to the contractor for unanticipated

costs which cause an increase above the established target costs. However, the contractor's profit is narrowed as the costs approach ceiling, and when they reach ceiling there is zero profit.

In this issue of "reset" target prices, and increases and decreases in profits based on cost presentation, it should be realized that the same contract was offered to both of the final competitors after an analysis of their third proposals indicated excessive contingencies in significant cost areas. Both competitors had the opportunity to change, and did change, their proposals when the "best and final" offer was requested. I have looked at the final figures of both competitors, Mr. President, and it is clear that both contractors reduced their target costs and profits, and also their proposed ceiling price. Ingall's ceiling price, as well as its target price, was substantially below its competitor's prices. Since the ceiling price cannot be exceeded under the "reset" provision, neither competitor could benefit from a large cost overrun on the program.

The contract in this case is in no way similar to the contract involved in the C–5A procurement. There is no so-called golden handshake in this contract, and there is no manner by which the contractor can increase his profits except by a reduction in the established target cost which will, of course, also save the Government money. In addition, this is a fixed price incentive—successive target contract and is not to be confused with the total package procurement concept utilized in the case of the C–5A.

Mr. President, I refer to the C–5A contract. I frankly stated here on the floor of the Senate that I thought it was a bad contract for the contractor and for the Air Force. We had very substantial consideration of that contract in our committee and here on the floor, and the Senate has acted on it. I wanted to make that clear because of some who had referred to this as similar to the C–5A, when in fact, on analysis, it is not similar, but is dissimilar in major particulars.

ALLEGED "BUY-IN"

There have been allegations that Litton made a "buy-in" on its "best and final" offer on the DD–963 program. There is no merit to this whatsoever and no evidence to support it.

Invariably in any procurement the bidder, in developing his own estimate, will include contingencies for unknown factors in his quotation, depending on the type of contract arrangement contemplated. The decision to change the type of pricing arrangement in requesting the "best and final" offer was in recognition of the contingencies in Bath and Litton's third proposal, as indicated by the detailed technical and audit analyses which the Navy had conducted.

These contingencies existed primarily in the area of major subcontracting wherein there was a lack of firmness in the subcontract quotations which resulted in pricing data being based on budgeting estimates rather than on firm quotes or on quotes containing a significant amount of unsupportable costs. It was expected that there would be substantial reductions in the responses to the request for the "best and final" offers which were based upon a high share of initial risk being accepted by the Navy and a postponement of the establishment of firm pricing arrangements until after resolution of the major uncertainties which created the need for the contingencies in the prices.

I will go into some detail to explain the reason for the substantial reduction in Litton's proposal in the "best and final" offer as compared with the third proposal. But before I do, let me point out again that Litton's "best and final" offer was more than $8 million lower than that of Bath. This represents a savings to the Government on the 30-ship program of about a quarter of a billion dollars.

The difference in prices between the Bath and Litton final offers are readily explainable by differences in the labor rates, overhead rates, general administrative costs and profit rates, each of which was audited and found valid. Any attempt at a "buy-in" in the Litton "best and final" offer would have required unreasonable manipulation of labor manhours and/or material cost estimates which would have been readily identified in the course of the analyses.

Now let me explain to you the basis for reduction in Litton's price from the third to the fourth proposal. The reduction in the target price amounted to $12.2 million per ship. Of this reduction, $2.4 million was in target profit and $9.8 million was in target cost. The new target profit represents an 8.8 percent profit which is a reasonably good rate in comparison with that achieved in the shipbuilding industry.

The major reduction in the target cost estimates category was in net material—adjusted for overhead—and amounted to $8.4 million per ship. In their February 2 proposal, Litton had given an estimate that $49.9 million per ship would be required for material. In their "best and final" offer submitted on March 26, 1970, the direct material estimate was $41.5 million per ship.

No audit of that reduction was performed at the time—although it has been since—since it was in the area of material costs that the Navy felt that most of the contingencies in the February 2, 1970, offer existed. In their audit of the February 2 proposal, the Defense Contract Audit Agency indicated that a material figure of $40.5 million per ship could be justified and that the difference between that figure and the $49.9 million per ship included in the price offer was unsupportable. This, and the fact that a similar situation existed in the Bath offer, was one of the primary reasons why the Navy chose to request the "best and final" offer on the basis of a successive target contract. Thus, when Litton's reduction to $41.5 million per ship for material was received in the "best and final" offer, it was in reasonably close agreement with the recommendation of the Defense Contract Audit Agency.

Mr. President, these are facts in detail, but they are very significant. I was determined that all the facts be brought here to have bearing on any challenge that might be made since this amendment was offered.

In any event, the Defense Contract Audit Agency has now conducted an audit of the material content of Litton's best and final offer. The amounts of the reduction in the material costs offered by Litton has been found to be reasonable by this audit as has also the rationale for the reductions in other categories.

This is a situation which is tinged with some irony. The Navy had expected a reduction in the costs on the best and final offer and this is what it got. By this reduction the Government is going to save about a quarter of a billion dollars. However, based on this savings, we see an effort here in the Senate to take half the contract away from Litton and give it to a competitor whose quoted cost per ship was more than $8 million higher.

I make nothing but favorable references to that competitor. They are reputable and reliable people, with know-how. Their design was good and passed the qualifications. But this was a point of two competitors pitted against each other and the Government trying to get the most for its money in ships. And that is exactly what happened. The Government got a better bid from one of them.

If we truly want to save money, we will not disturb this contract award and impair the obligation of this contract. If we do disturb it, then we will be faced with the proposition that the Navy will either have to reduce the ship construction program or we shall have to authorize and appropriate additional amounts for it.

CAPABILITY OF INGALLS FACILITY TO HANDLE THE AWARD

Another question raised with respect to this award relates to the merits of awarding a major contract to a company with a large new ship construction backlog and a new and untested facility with no experience in handling this backlog.

The matters of the adequacy of the contractors' facilities to handle the award were treated in two separate categories of the source selection. In the management plans for the development and production category, the processes to be used by the contractors in achieving their ship product were evaluated. This evaluation treated the adequacy of their plan for managing and supporting their work effort, for conducting their detailed engineering, for the procurement of materials, for the production of the ship, and finally for the test and evaluation by which they would demonstrate that the ship actually met all performance requirements. Both contractors were judged to be satisfactory in this area, but Litton was superior by about 10 percent.

In the category of corporate qualifications, the Source Selection Advisory Council examined the degree to which the contractors' past performance and the resources available to them provided confidence in their ability to carry out successfully what they had proposed to do. Included in this category was the technical competence of the contractors' organization, and manpower resources and capabilities, and the financial resources required to perform the contract. In this category also both contractors were judged to be satisfactory, but In-

galls held the advantage in all factors considered, especially in the financial resources for performance of the contract.

In short, during the selection process the detailed management plans, production plans, schedules and man loading charts of both competitors were thoroughly examined and deemed feasible of accomplishment. Although a sizable backlog is shown for the Ingalls facility, it does not differentiate between work to be accomplished at Pascagoula and that which is subcontracted. In the case of the DD–963, it is estimated that approximately 60 percent of the dollars involved in the contract will be spent outside of the Pascagoula area and distributed over about 45 States. As a matter of fact, I understand that the pacing factor in the delivery of the ships will be the capability of the subcontractors to provide the components needed rather than by Ingalls' own capability and the backlog at this plant.

When we address the capability of Ingalls to handle this award, we should be aware of its outstanding record for quality ship construction over a period of many years. Since 1958 Ingalls has delivered or received contracts for 66 Navy ships with a total contract value of $3.96 billion. Since 1959 it had delivered or received contracts for 43 commercial ships with a contract value of $592 million. This record itself inspires confidence. I have tables showing the details of Ingalls' commercial and Navy ship construction program.

With respect to the newness of the Ingalls facility, let me point out that it has been under construction for 2 years and is scheduled for completion later this year. Production has already been started on eight commercial ships at this facility. In fact, the commercial shipping lines had sufficient confidence in this new yard to award contracts amounting to over $170 million before the yard is completed. This "new and untested" facility will not constitute an abnormal production risk. Certainly, it will not be as great a risk than would be the planned facility of the other finalist—Bath Iron Works—which is not even yet under construction.

ENTIRE AWARD TO ONE CONTRACTOR

Another and somewhat related issue raises a strawman—the dangers of contracting such a large portion of our new shipbuilding programs to one corporate entity, particularly in view of the problems now faced in the C–5A case.

The DD–963 program is distinguishable from other large programs which have been the subject of criticism because it is a development program based primarily on known engineering state-of-the-art and is not dependent on a large-scale research effort. This is why no prototype is required or justified in this case. The risks associated with production based on state-of-the-art engineering effort are considered minimal. Problems that have occurred on prior ship programs from the contractor's interpretation and implementation of Navy developed specifications will be avoided on the DD–963 program because the ship's specifications and design and the program plans required to produce these ships were developed in great detail by the contractor. Under previous programs the Navy developed specifications and they had to be interpreted and implemented by the builder. Problems arising from the alleged impossibility of achieving Navy specifications will be avoided in this program.

Finally, the contract performance risk in terms of schedule, technical performance, and cost control has also been minimized by an extensive definition of the management plans which form a part of the contract. These management plans provide an excellent means for the contractor to control his efforts and for the Government to detect problems as they are developing so that prompt and effective corrective action can be taken.

MULTIYEAR CONTRACT AND CANCELLATION CHARGES

Another issue concerns the use of the multiyear contract and the suggestion that this type of procurement would require that the Congress pay tremendous cancellation charges should it decide in future years to discontinue the programs. The implication is also made, Mr. President, that this concept transfers control for all practical purposes out of the hands of the Congress and virtually precludes an effective review on an annual basis. Neither of these suggestions are factually accurate or justified.

The Navy believes that the most economical approach to acquisition of the number of identical ships is through a multiyear contract. This type of contract provides the advantages of economic procurement of material and efficient utilization of facilities and manpower.

The shipbuilding industry in its own privately financed study concluded that multiyear procurement of standardized ships was necessary for industry vitality. The Maritime Administration has also concluded that the multiyear approach was most economical.

In essence, Mr. President, the multiyear procurement is certainly most appropriate where there are a number of ships which are to be funded in increments over a period of years. Congress continues to control the expenditures through the authorization and appropriation process. Each multiyear increment is subject to review in the consideration of the budget. The Congress retains the power to cancel authorization of the program in any year. In the event the Congress decides to discontinue the program a normal cancellation clause in the contract affords protection to the Government and to the contractor.

Since the contract is based on a level unit price over a period of years, the contractor is given limited protection for reasonable preproduction and other nonrecurring costs that should be amortized over the entire program. In a similar manner the Government reserves maximum contractual limitations on cancellation payments subject to negotiations and consideration for the effort performed prior to cancellation.

Mr. President, the alleged "tremendous" cancellation charges imputed to this program simply do not exist. Under the multiyear type procurement no more is paid in the event of cancellation than would be paid if the ships had been bought on an individual basis. The Navy estimates that if the contract for 30 ships was stopped after the first 16 ships were authorized and maximum cancellation costs are paid, the average cost of the first 16 ships, including these cancellation costs, would be lower than the cost of 16 ships bought under an annual procurement plan. These maximum contractual cancellation costs amount to $279 million if the program is stopped after 16 ships. I think it is clear and is recognized by all knowledgeable persons that in the case of the construction of a number of standard and identical ships multiyear contracting is the most efficient and economical manner in which to proceed.

IMPACT OF AWARD ON FUTURE COMPETITION

It has also been asserted that there would be a dangerous impact on future competition from the award of the Navy's entire destroyer program for the 1970's to a shipbuilding company that has just constructed a new facility. It is asserted that this award would enable this shipyard to drive out proven destroyer building capability and would adversely affect our mobilization base and result in higher costs in the long run.

This ignores the facts. The Navy's entire destroyer program for the 1970's as reported in their quarterly reports to the Armed Services Committee is an inventory requirement of 50 new ships and, therefore, this contract for 30 ships does not necessarily represent the Navy's entire destroyer program for the 1970's. Fifty ships are considered by the Navy to be its minimum requirement to replace the aging World War II destroyers, although requests for approval of additional destroyer procurement are not contemplated until the DD–963 program is well underway.

It is my understanding that there are at least five qualified private shipyards, including the Bath facility, which can be competitive in any follow-on destroyer procurement. Any of these shipyards certainly have the option to modernize and improve their competitive position for future destroyer programs by participating in other shipbuilding programs that will be forthcoming. The recently announced Maritime Administration 10-year program to build 300 new American-flag cargo ships is, of course, a prime example of potential future programs. To penalize a shipyard which has already modernized its facility by denying it a contract on the basis that such modernization would give it a competitive advantage which would prevent further modernization of industry could in reality be a deterrent against modernization.

INDUSTRIAL ESPIONAGE

Another issue that I want to discuss is the allegation that there were leaks of vital information, including prices, during the DD–963 procurement. I have inquired into this matter since I am also concerned about a matter of this nature in any competitive procurement. The Navy Investigative Service advises me that it is continuing its investigation into

information provided to the Navy on April 15, 1970, by Bath shipyard officials of specific pricing information they had received from an unidentified source. I am told that no evidence of any leakage of information from Navy personnel has been uncovered.

The Navy states that as far as they can now determine the information that the Bath shipyard price was more than $8 million higher per ship than Litton became available after the "best and final" offers were submitted by the contractors on March 26, 1970. The Navy conducted no negotiations with respect to prices with either Bath or Litton after that date. I will continue to follow this and advise the Senate further of any significant disclosures that may be found since I view this as a very serious matter.

However, the fact that Litton's bid was so much lower than Bath's on the "best and final" offer—about $8 million per ship—would seem to rule out any so-called industrial espionage in this case. Certainly, if Litton had actually known the amount of Bath's offer before it submitted its bid, it would be only reasonable it would have bid moderately lower than Bath. As it is, the difference of $8 million a ship means that Litton has left about a quarter of a billion dollars on the table.

BLUE RIBBON PANEL STAFF STUDY

In previous discussion on the floor of the Senate reference has been made to a blue ribbon defense panel staff study on Navy ship procurement which generally recommends a distribution of major ship construction of a series of ships to two or more yards. I do not intend to discuss this staff study in any detail, but do want to make a few comments with respect to it.

The first and most obvious observation with respect to this question is that the staff report is not part of the Blue Ribbon Defense Panel report. As a matter of fact, the report of the Blue Ribbon Defense Panel contains an express disclaimer with respect to such staff studies and reports. The Blue Ribbon Defense Panel report contains this statement:

> Selected staff reports have been identified as Appendices to this Report. The Panel's recommendations are in no case based exclusively on these staff reports, as its studies were broader and more extensive than the staff report alone. Some of the appended staff reports contain detailed facts and evaluations bearing on specific recommendations of the Panel, while others address subjects, draw conclusions and suggest changes in areas which the Panel as a whole did not choose to address. In some such instances, there was a question as to whether the studies covered all of the particular subject or subjects sufficiently to enable the Panel confidently to make a recommendation.

In a letter dated August 4, 1970, the Honorable J. Fred Buzhardt, then staff assistant to the Chairman of the Blue Ribbon Defense Panel, and now General Counsel of the Department of Defense, said with reference to the staff study on Navy ship procurement:

> This staff study does not, of course, constitute a part of the report of the Blue Ribbon Defense Panel, and the findings and recommendations included in this staff report were not adopted by the Panel except to the extent they appear in the Panel's report.

I want to make one or two observations about the staff report itself. At one point it asserts that concentration of work in a few yards will reduce competition and offset the advantages of series production. This statement apparently was made prior to completion of the competition in the DD–963 program because the final competition in this case resulted in a reduction in price of about $270 million.

Continuing, the staff report asserts:

> This is particularly true since high production rates of complex ships (six or more a year) is not probable. Again this statement was apparently written before the completion of the competition in the DD–963 program since the contract delivery schedule for these destroyers calls for delivery of up to 11 ships in a single year, or about one per month.

Another statement in the staff report was:

> In the case of the DX (DD–963) the Navy could by now have a prototype ship, virtually ready to sail and less money would have been spent than has by now been spent for paper only.

The staff report stated that:

> In excess of $100 million has already been spent on the program for the paper preliminaries.

This is inaccurate. The records do not show any amount such as this as having been spent on the program prior to the contract award. The records show that the cost of the "paper studies" for this program for all contractors was only $36 million. Funding documents as of December 31, 1969, showed only about $30 million expended for the program. Neither of these amounts would be enough to construct a prototype of the DD–963 under any circumstances. The staff possibly thought that, because the Congress had appropriated funds for the DD–963, it was being expended by the Navy for paper studies. I am unable to find any justification for the assertion that $100 million has been spent on such paper studies.

COST INCREASES IF TWO DIFFERENT SHIPBUILDING FACILITIES ARE REQUIRED

Mr. President, I do not intend at this time to discuss in detail the question of the increased cost to the DD–963 program which would result if the Muskie amendment is adopted. However, since it is obvious that there has been some confusion about this question, I do want to say a few words with reference to it.

On May 18, 1970, the Navy, in a memorandum classified "confidential," did inform me that, if it was required that this ship be built at "two different U.S. shipbuilding facilities," the cost would be increased "up to $225 million if as many as 10 ships should be built in a second shipyard under a subcontract to the selected prime contractor." This memorandum was properly classified because the award had not been made at that time. With the selection of the winning offeror and the signing of the contract, details of cost information which were classified during contract negotiations became unclassified, and subsequent memoranda on this subject reflected this.

It is important for us to remember that the May 18 memorandum was directed to the amendment by Representative WYMAN, Republican, of New Hampshire, which permitted a subcontract by the winning contractor, and that the memorandum assumed that only one design would be used and that procurement would be centralized in the prime contractor.

Mr. President, the reason, and the only reason, that I called for information about some kind of an estimate for the possible added cost to the Government of the two shipyard proposals was because there was an amendment in the bill we were considering at the time and we needed this information as part of the record for the consideration of the committee on the question of whether they would include that amendment in the Senate bill.

I say that is the only reason that I had any knowledge of it. And it was used, of course, for that purpose, and for that purpose alone.

Subsequently, the Navy spokesman said that if the contract was split evenly between two yards, that is, 15 ships each, the increased cost could be as high as $600 million. It is important to note that this $600 million was based in part on learning curve information obtained from both finalists at the Navy's request in conjunction with the Navy's assessment of the impact of a split procurement.

On July 27, 1970, in an unclassified memorandum to me, the Navy stated that the cost increase associated with the proposed amendment by Senator MUSKIE could not be determined accurately until after the negotiations which would implement it; but that the costs involved would be substantial—"somewhere between $225 million and $685 million for the 30-ship program."

It should be noted that the Muskie amendment is substantially different from the Wyman amendment because it calls for "contracts for the construction of such destroyers with two domestic shipbuilders," and also requires that the "total number of such destroyers to be constructed" be divided substantially equally between such shipbuilders.

I am going to discuss the Muskie amendment in some detail later and that discussion will include an explanation of the cost increase which will be involved in splitting the program as contemplated by the Senator's amendment. It is my purpose at this time simply to point out why the May 18 memorandum was "confidential" while the later information was not, and also to point out that the cost impact under the Wyman amendment would be substantially different from the cost impact under the Muskie amendment. I do not have to tell you that it is dangerous for us to attempt to compare apples with oranges.

CONCLUSION

Mr. President, since I am always concerned whenever questions are raised about the propriety of procurement awards of weapon systems, I hope that I

have been of some assistance to the Senate today in clarifying the issues and giving the facts on the contract award for the DD–963.

As I have said, Mr. President, it is not my purpose at this time to specifically rebut the amendment proposed by the Senator from Maine. However, I must comment that not only is his amendment without merit, it would—if adopted—set a precedent which would be very dangerous. As a matter of fact, if we follow the procedure recommended by the amendment the end result would be to make a farce of and undermine the integrity of the competitive processes laid down for source selection and awards of this type of contract.

All of us who have any industries located in our States that do business with the Government should pause and consider very carefully what the result will be if we establish the precedent of legislating contract awards on the floor of the Senate, because this will simply mean that any contractor who is successful in obtaining a Government contract because his bid is lowest and best could have all or part of the contract taken away from him by legislative action by the Congress. This would, in essence, make the Congress the final and supreme contracting agency and I am sure that no one desires this.

Ingalls Shipbuilding was selected as the winner of this contract after careful examination of both proposals by a source selection board of highly trained and qualified people. There is no question that Ingalls had the superior design. No issue has been raised with respect to this. There is also no issue about the fact that Ingalls had the lowest bid. As a matter of fact, as I have mentioned several times, it was lower than Bath's by about $8 million per ship—or over a quarter of a billion dollars on the 30-ship program.

There is no question whatsoever that both the law and the Armed Service Procurement Regulations were followed scrupulously in connection with this award. No question whatsoever has been raised about this.

I shall reserve detailed discussion of the Muskie amendment until later, but I must warn now that its adoption would establish a very bad precedent which would plague us for years to come. It would be very dangerous for the Congress to repudiate a contract made and entered into in good faith with the lowest and best bidder after 3 years of working and planning. The substitution of a majority of the Congress for the source selection process would have very serious repercussions in defense procurement for many years to come.

It is a healthy thing for any Member of Congress to pursue in detail the very fine quality of work done by a Government agency, and to pursue in detail the high quality of work done especially by the Navy, which has an abundance of some of the finest talent in the country with long years of experience in ship contracts, ship supervision, construction of ships and, of course, navigation and all the requirements of all special kinds of ships they have and that they must have. I have pursued this matter vigorously.

I have come into contact with some of the finest talent I have ever known. I already knew they were doing a good job. They know their lessons well when they come to Capitol Hill. They have many men. All these negotiations with respect to contracts are so that they can get the most for their money; they need more ships for their money. They have been relegated to a low priority for the military dollar. The demand has been so great for missiles, highly expensive planes, and many other things that the destroyer program has waited and waited, and now it is far behind the times.

This contract needs to move forward, but of all those people I have come in contact with, one of the finest is the gentleman who was the Chief of Naval Operations during all these negotiations, Admiral Moorer. Chief of Naval Operations is the highest office in the Navy. He recently completed 4 or 6 years as Chief of Naval Operations and was selected by President Nixon to be his principal military adviser. He was nominated to be Chairman of the Joint Chiefs of Staff and was unanimously approved by the committee and unanimously approved by the Senate. He is now serving in the highest military position in our Government.

If there are any flies in the contract, he would know about it, and he would not have allowed it for one single minute. I am not putting him on the spot. I am speaking of the outstanding work and faith he inspired in the Navy—and I do not make any exceptions—and in those who have come into contact with him. It is the Navy that has done these things.

Finally Secretary Chafee has been doing a fine job there, as has Mr. Packard, the Deputy Secretary of Defense.

This contract does not have to lean on them or be propped up. But at the same time they are part of the negotiations and the hard decisions, and there were many hard decisions to make. They were part of the decisions with respect to what was best for the Navy and what would get the most ships for the taxpayers' dollar. For that reason I defer to them.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. STENNIS. I am glad to yield to the distinguished Senator from Alabama.

Mr. SPARKMAN. Mr. President, I have enjoyed listening to the Senator's presentation. The Senator mentioned Admiral Moorer. We all know the splendid job he did as Chief of Naval Operations and we are confident of the good job he is going to do as Chairman of the Joint Chiefs of Staff.

About 3 or 4 days ago he was interviewed by a reporter for the Birmingham News. I read the article and his interview was one of the most forceful and refreshing articles I have read on military policy in general and on the relationship between South Vietnam, and military participation in our defense program.

I have been very much impressed with what the Senator said here, and the fact that this contract went through regular channels that Congress over the years has provided for the letting of contracts.

Mr. STENNIS. The Senator is correct.

Mr. SPARKMAN. In addition, it received the careful scrutiny of people who are experts in that line. It was responsive to our requirement in competitive bidding with respect to the lowest bid of a qualified bidder who meets all requirements and that requirement was followed in this case.

Mr. STENNIS. The Senator is correct.

Mr. SPARKMAN. There is no question about the qualification of this company to do the work, is there?

Mr. STENNIS. There is no question about that. The Senator is correct.

Mr. SPARKMAN. They have been building ships for a long, long time down there.

Mr. STENNIS. Yes.

Mr. SPARKMAN. Formerly it was the Ingall Shipbuilding Corp. I knew the Ingall family and I still know some of them. They are from Birmingham and they are still involved in the operation. I know how heavily we have depended on the shipbuilding facility over the years.

There is one other thing I was impressed with by what the Senator said and that is the fact that we have been waiting a long time to get this destroyer program going.

A matter that disturbs me, and I have discussed this privately with the Senator at other times, has been the apparent loss in ship strength, comparatively speaking, over the past few years. I have seen some other reports that have been printed that to me are distressing. The Navy is still one of our great defensive forces, and I think we need to check more carefully on our maintaining its level of strength, even in peacetime.

We cannot wait until we are in trouble and then get our Navy. Can we?

Mr. STENNIS. It takes years of previous preparation and building.

Mr. SPARKMAN. Does the Senator know of any previous contract in which it was required that there be a split between different shipyards?

Mr. STENNIS. Will the Senator repeat that question?

Mr. SPARKMAN. Has there been any precedent for a proposal such as this, after it has gone through all the channels, to split it up?

Mr. STENNIS. No.

Mr. SPARKMAN. Regardless of great additional expense?

Mr. STENNIS. No.

Mr. SPARKMAN. Mr. President, for my part I want to thank the Senator for the great exposition he has given us.

Mr. STENNIS. I thank the Senator from Alabama. I appreciate his interest and support. I was merely trying to bring out the facts in this rather long and somewhat complicated set of procedures.

Mr. SPARKMAN. I think the Senator from Mississippi has done that admirably, and I hope all Senators will read his presentation.

Mr. STENNIS. I thank the Senator. I hope it will largely get to them, because the Senate will vote on this matter next Tuesday.

Mr. President, let me add that since the war has been in progress, this matter has been gone through by the General Accounting Office. In its fine way that office has gotten into the basis for the bids and the differentials and the prices of the two ship contractors. It went back into the materiel on all those items, and it found no complaint. The General Accounting Office made no complaint on that score. There was, in effect, no "buy-in," as that term is used, and I shall go into that in more detail before the debate is over.

Mr. SPARKMAN. I thank the Senator. I am in accord with his reference to the excellent job the General Accounting Office does. Also, we should keep in mind that the General Accounting Office is an arm of the Congress of the United States.

Mr. STENNIS. I certainly share the Senator's view. I knew Mr. Elmer Staats before he became Comptroller General. His record was splendid, and his performance since then has been outstanding. So we have the General Accounting Office, and we will take that matter up. It recognizes the question that if the award was made for multiple ships, there was a question of not dividing it up between additional sources, but it was determined that it was a matter of a judgment to be made. The judgment has already been made, and the Navy made it, as to which was the best course to follow. The contract was accepted. They all had their day in court. The low bidder got the contract. That is just about the story, and a brief way to put it.

Mr. SPARKMAN. I think the Senator has put it well.

Mr. STENNIS. We will go into this matter more in detail later. I thank the Senator again.

DD–963 AMENDMENT BY SENATOR MUSKIE

Mr. President, I strongly oppose the amendment offered by the distinguished Senator from Maine (Mr. MUSKIE). This amendment would prohibit the expenditures of funds for the procurement of DD–963 class destroyers unless separate contracts for the construction of such destroyers are entered into with two domestic shipbuilders and the total of such destroyers to be constructed is divided substantially equally between such shipbuilders.

That was the very question before the Navy during all those years of decision. The Navy decided to go the other route. That was the question before Congress. We knew all about this all through the years, and it came into sharp issue a short time ago on the military procurement bill. An amendment providing certain requirements passed the House, did not pass the Senate, but came right on the conference table and was considered by the joint conferees. The amendment did not survive. The conference accepted what the Navy had in progress, to go all the way with the successful bidder. The money was then appropriated for that purpose. So we have here what I have already referred to.

You already know that, in accordance with the Navy's plan which has existed for 3 years, and as a result of industry competition, a contract for 30 of the DD–963 destroyers has been awarded to Litton Systems, Inc., Ingalls Shipbuilding Division. I suggest to you that it is very late in the game—as a matter of fact, after the game is over—to change the rules and require that the contract be torn up and that new proceedings be started. I am confident that the Senate will not approve this amendment if it understands exactly what is involved and what the impact of the amendment would be.

However, before I discuss specifically the impact of this amendment on the Navy's shipbuilding program, I would like to discuss the history which resulted in the award to Ingalls. The Navy spent more than 3 years in planning for the DD–963 destroyer program. It considered all approaches to the best procurement methods. The industry competition on this program was started in 1967—over 2 years before the contract award. The ground rules for the competition were published to industry by the release of the request for proposal on February 15, 1968. Among these ground rules were that the development and production contract would be awarded to a single successful contract definition contractor. These ground rules made it clear that a substantial multiyear buy was planned. There were no changes in these ground rules at any time during the industry competitive contract definition which began with the release of the request for proposal on February 15, 1968, and terminated with the award of the contract on June 23, 1970.

In other words, Mr. President, it was known from the beginning that it was contemplated that the award would be made to a single successful contract definition contractor. This was the recommendation of the Navy. It was approved by the Secretary of Defense, the Bureau of the Budget, and the President. Congress acquiesced in it for 2 years. The shipbuilding industry raised no objection to it. Then after the award has been made to Ingalls, the Senator from Maine proposes an amendment which is apparently designed to give Bath Iron Works, Inc., of Maine another opportunity to get a portion of this award.

Let me say here, Mr. President, that the two final contractors—that is, Ingalls Shipbuilding Division and Bath Iron Works—were given equal opportunity in all competition and negotiations for this program award. The competitors are not, to my knowledge, raising any question with respect to the fairness of treatment in this competition. There is no question but that Ingalls had both the superior technical design and the lowest costs in its proposal. In fact, Ingalls proposal was more than $8 million per ship lower than that of Bath Iron Works. These are facts which are not questioned by anyone.

I reemphasize that this contract was awarded after 2 years of very intensive competition. Are we in Congress now to reopen this issue and decide how and to whom the contract should be awarded and divided? Why was not this done 2 years ago? Why is this question being raised only with respect to the DD–963 program? It just does not make sense for the Congress to sit back for 2 years and let the Navy go through the proper and prescribed procurement processes, make the award on the basis of the best and lowest bid, and then have the Senator from the State representing the losing finalist introduce an amendment to negate all this effort and impair the obligation of the contract entered into by the Government with a private shipbuilder.

Are we going to establish a prceedent for every losing contractor to try to reverse the action of the source selection authority on the Senate floor with an amendment to the authorization bill? Mr. President, if this precedent is established by the adoption of the Senator's amendment, then the Senate should be prepared to assume the responsibility for awarding contracts in all major Government procurements.

Mr. President, I will now say a few words about the impact of this amendment on the Navy shipbuilding program and on the economy of our Government.

The DD–963 program was, by design, a major departure from past ship procurement programs in recognition of the rising cost of ships and as a specific effort to minimize ship-operating costs. Continuing studies over the years have established that significant savings could be realized by designing the destroyers for low production cost, building the ships in large production lots, and perfecting the design for ease of production at the designer's shipyard.

In arriving at this conclusion, the Navy studied our domestic shipbuilding operations, foreign operations—both in Europe and in Japan—and the procurement practices which encourage improved efficency. As I say, the Navy has concluded that the use of stable programs, using the techniques of series production of standardized ships, modularized construction, and other available methods of production control, significant savings can be made. The same conclusions have been reached by independent studies sponsored by the shipbuilding industry, the academic community at Webb Institute of Naval Architecture, and by the Maritime Administration in their planning for the rebuilding of the U.S. merchant fleet.

The actual savings will vary depending on the size of the program and the type and complexity of the ships being built. For the DD–963 program, the contract costs for the production of 30 ships of this class are about 15 percent less than could have been realized using multiple shipyards as builders and annual lot procurement techniques which we used until recently for the acquisition of most Navy ships.

All of these factors, including the basic ground-rule that production responsibility would be limited to a single contractor, were fully considered in the industry competition for this program. They were all well known to the shipbuilders who competed, specifically including Bath Iron Works. Based on an in-depth analysis of contractors' proposals received on this program, under the consideration which I haved mentioned, the Navy estimates that each DD–963 destroyer pur-

chased under an "all in one builder" program would cost between $8 million to $20 million less than the cost of acquiring the same destroyer in a split buy of the program, depending on the manner of the program split.

I think the results of the competition and the money savings resulting from the award in this case clearly vindicate the Navy's wisdom in going to series construction and "all in one builder" program.

Now let us look at the impact of the Muskie amendment on the Government's position with respect to this program. As I stated, the Muskie amendment would require that the Navy enter into two separate contracts. Use of a single design would be highly desirable to the Navy in view of the major reductions in training and logistics support which would result. However, to use the single design, it would be necessary to delay procurement of ships from a second source until a bid package is available from Litton. This would involve a 2-year delay in contract awards for the second 15 ships. With respect to standardization, it is probable that the use of a second source would result in some loss of standardization, even with tight control and supervision.

In addition, the Senator's amendment would increase the cost of the program substantially. The Navy estimates that any significant split of the DD–963 program would increase costs anywhere from $225 million to $685 million, depending on the number of ships involved, the method of contracting, and other factors. If, for example, the Navy was required to award contracts to two builders—and this seems to be required by the Muskie amendment—the estimate is that the cost increase for the complete 30-ship program would be about $600 million. If two different ships are required the cost increase is estimated at about $685 million.

Both the Department of Defense and the Navy is opposed to split of the program because of the substantial increased costs that would result. The "one builder" approach being used for the DD–963 program will provide the Navy with destroyers at the least cost to the Government. I think we all agree that this is an important issue.

The Navy has been falling behind year after year in keeping up with its requirements for new construction to fulfill urgent fleet needs. This is true in all types of ships. If additional money is available, I feel very strongly that it would be best used to acquire additional ships, be they support ships, submarines, or any of the other types we need so badly. Such additional purchases would, of course, be in competition, open to all builders and would thus be of benefit and value to the U.S. shipbuilding industry.

As I have already noted, the language of the Muskie amendment would require the Navy to enter into two separate contracts with two different shipbuilders. It is readily apparent that this would create a significant delay since the procurement of ships from the second source would cause the entire proceedings to be held up awaiting the preparation of a bid package by Ingalls. It is estimated that this would involve about a 2-year delay in the contract award for the second 15 ships. It should also be noted that under the language of the proposed amendment the Government would be exposed to cancellation costs on the Litton contract which was bid on the basis of 30 ships rather than the 15 ships contemplated under the Muskie amendment.

In addition, Mr. President, the Senator's proposal would not significantly increase the assurance of uninterrupted delivery against strike or disaster at the prime shipyard. Most of the large components of these ships will be bought from single vendors after competition for purposes of economy and standardization. The threat of a strike or national disaster at the vendor plant is equally present as at the shipyard. There are factors which are lived with in any production cycle over a period of years. Since a single contractor would utilize the vendor production to capacity or near capacity, a second contractor would only delay the progress of production and reduce the economies that could be achieved.

I think it is apparent, Mr. President, that the cost increases and delay in ship deliveries associated with the Muskie amendment would do nothing to assist the Navy shipbuilding program or the Nation's economy. The estimated increased cost of between $225 million and $685 million would have to be taken from the Navy's program for new construction of ships. This would appear to be in direct conflict with the Senator's expressed desire to carry out a substantial modification program at other shipyards. Obviously taking these funds from the Navy's new construction program would reduce the future awards that could result in a modernization program.

Of course, the alternate course of action is to increase the budget for Navy shipbuilding to offset this amount. In this time of austerity, the Senate Armed Services Committee has sought to get the most out of a substantially reduced budget. I am sure that Senator MUSKIE does not want to take the opposite tack and increase the defense budget, but the fact is that his amendment would have precisely that effect. My understanding has been that the distinguished Senator has been strongly in favor of reduced military spending.

In summary, Mr. President, on the point of the impact on the Navy's shipbuilding program, I hope that the Senate fully understands that the adoption of the amendment proposed by the distinguished Senator from Maine would seriously cripple the Navy's DD–963 construction program. The amendment would cause considerable delay and would substantially inflate the cost of the program. It is, indeed, very late in the day after the competition has been completed and the award has been made to come forward with a proposal which would interrupt and disrupt a very sound program which the Navy has worked on for 3 years.

In addition, Mr. President, I certainly do not believe that the Senate wants to take on the responsibility of source selection and convert itself into an agency to make contract awards for the Government. We certainly do not want to do this when the result would be to set aside a contract award already made and thus impair the obligation of that contract. I think we should all understand that if we do this in the case of this Navy program, then we must be prepared in the future to do it with respect to other Government contract awards.

The fact is, Mr. President, if this amendment should become law it would set an extremely bad precedent and throw the entire Government contracting procedures into chaos and make a mockery of the source selection machinery. More important, however, it would introduce politics and political considerations directly into Government procurement. For that and other reasons, it is not only without merit but it is actually a dangerous amendment which should not be seriously considered.

Let me remind the Senate that at the outset of this bill we had before us an amendment by the distinguished Senator from Delaware (Mr. WILLIAMS), who is justly noted for his rugged honesty and integrity. The purpose of that amendment was to preclude the making of announcements of defense contract awards by Members of Congress, and the primary reason advanced in support of the amendment was that it raised the suggestion of political influence if Members of the Congress were permitted to make such announcements. We all agreed that this was a bad practice and the amendment was unanimously adopted.

Now we have before us an amendment which would cancel and disrupt the award of the DD–963 destroyer contract which has been made on its merits by the Navy. While I can understand that the Senator from Maine (Mr. MUSKIE) wants some of the business to go to his State, the procedure which he would follow does far more than suggest political influence. His amendment, if adopted, would be political influence of the most direct, flagrant, and blatant type because the Senate, or a majority of it—and we are all politicians—would have passed final judgment on a military contract award.

I hope that we will all look to the future and realize that if we establish the precedent that we are going to interfere with and set aside contract awards in such cases, we are inviting more trouble than can possibly be imagined. Government contracts will no longer be awarded on the merits of the proposals and on the basis of the lowest and best bid. They will finally be determined by who have the most votes or most political influence in the Congress. This will inevitably result in political logrolling of the worst type and could open the door for all types of undesirable practices.

If we adopt this amendment, Mr. President, we might as well add another amendment to the bill to the effect that no contract award by the Defense Department or any other governmental agency shall be final or binding until it has been submitted to and approved by

the Congress. If we interfere with one Government contract award, certainly we are taking upon ourselves the responsibility to look at the others. There is certainly no reason to single out this contract which, as the record shows, is entirely free of any suspicion of irregularity whatsoever.

In conclusion, Mr. President, I state emphatically that we simply should not intervene directly in these procurement matters and abrogate a source selection made by the Defense Department and a contract entered into by it. Not only does this destroy the integrity of the procurement practices and source selection procedures, it actually would in this case impair the obligation of a contract since it would take at least a part of the award away from the successful competitor.

In concluding, Mr. President, let me say again that the DD–963 program originated 3 years ago. From its very inception the Navy intended to award the entire contract to a single shipyard. The published ground rules so stated. Not until this year has the Senate been asked to legislate or mandate a division of the contract. It is very late in the day to do this after the award has been made to the shipyard which won the competition on the merit because it had the lowest and best bid. If a division of the contract is so meritorious and so necessary now, why did not the Senator attempt to compel this prior to the selection of the winning contractor? Until this year—until the shipyard in Maine lost the contract—the Senate was entirely content to proceed on the Navy's prescribed "winner take all" basis. Repudiation of the source selection process in this case would have very serious repercussions, indeed.

With all deference, Mr. President, I say that the Senator's amendment has nothing whatsoever to recommend it. Its impact on the entire procurement process can only be harmful and mischievous and I hope and expect that it will be defeated.

I point out with emphasis again that I have nothing but the highest commendation for the Senator from Maine and other cosponsors who have worked on this matter with diligence and earnestness and great sincerity.

I yield the floor.

RESTORING CONSTITUTIONAL GOVERNMENT

Mr. McGOVERN. Mr. President, I rise today to speak about a deepening constitutional crisis in the United States. That crisis centers around the crucial issues of war and peace and the proper role of the Congress in relationship to the Chief Executive. As I have studied the growing tendency of the Congress to surrender its war powers to the President, I have been increasingly convinced that we are in danger of falling into one-man rule in the United States. The pending amendment not only seeks to terminate U.S. military involvement in the affairs of the people of Indochina, but it seeks to reassert the congressional powers which our constitutional fathers intended us to shoulder.

The debate on Indochina policy over the past several months has been underscored by growing concern over the constitutional balance between the executive and legislative branches. The long-range implications of this issue are no less significant than our policy choices on Vietnam.

A deepening constitutional crisis in the all-important areas of war and peace is not unique with this administration, nor with its predecessor. The confused relationship between executive and legislative war powers that bedevils us today began at the turn of the century, with President Theodore Roosevelt's dispatch of troops into Panama in 1903. In a characteristic boast, President Roosevelt said: "I took the canal and let Congress debate." Also without congressional action, President Wilson sent troops into Mexico in 1916, in pursuit of Pancho Villa. But these and most otner military actions ordered by American Presidents acting on their own initiative were small in size and brief in duration.

Before Vietnam, Laos, and Cambodia, the most extensive use of Armed Forces by unilateral executive action was in Korea, where several hundred thousand Americans fought, and where 33,000 died—a loss long ago exceeded in Vietnam. President Eisenhower acted without congressional authority in the Formosan Strait in 1955 and in Lebanon in 1958, although resolutions of support were obtained.

Secretary of State Dean Acheson bluntly asserted the premise of Executive war powers to the Senate Armed Services and Foreign Relations Committees nearly 20 years ago. Said Mr. Acheson:

> Not only has the President the authority to use the Armed Forces in carrying out the broad foreign policy of the United States and implementing treaties, but it is equally clear that this authority may not be interfered with by the Congress in the exercise of powers which it has under the Constitution.

The position taken by the Nixon administration is strikingly similar. In comments of March 10, 1969, on the National Commitments Resolution the Department of State outlined its views thus:

> As Commander in Chief, the President has the sole authority to command our Armed Forces, whether they are within or outside the United States. And, although reasonable men may differ as to the circumstances in which he should do so, the President has the constitutional power to send U.S. military forces abroad without specific congressional approval.

Mr. President, I submit that this thesis stands the Constitution on its head. It facilitates what that document seeks to impede. It brands as congressional "interference" the very powers which the Founding Fathers urgently intended the Congress to exercise.

EXECUTIVE AND LEGISLATIVE WAR POWERS

The Constitution does, to be sure, grant specific foreign policy and defense powers to the President. Under article II, section 2, he is authorized to make treaties, by and with the advice and consent of the Senate, and to appoint ambassadors. In this realm there is a presidential monopoly. According to Justice Sutherland's opinion in a 1936 case, U.S. against Curtiss-Wright Corp.:

> He alone negotiates. Into the field of negotiation, the Senate cannot intrude; and the Congress itself is powerless to invade it.

It is clear, therefore, that no Member of the Congress, no committee of the Congress, not even the Congress acting as a unified branch of Government can purport to negotiate officially with other nations. We can do no more than offer advice, which the President can accept or reject.

Beyond this, the President is designated as Commander in Chief of the Army and Navy of the United States. It is this office, along with the constitutional vesting of general executive power, which some see as authorizing the unilateral executive military actions taken during this century, including Vietnam. Though that interpretation seems to me to go far beyond the Constitution. And such an interpretation was clearly not contemplated by the founders. Alexander Hamilton, a strong advocate of executive power, interpreted the office of Commander in Chief as amounting to "nothing more than the supreme command and direction of the military forces, as first General and Admiral of the Confederacy."

The Constitution places a civilian at the top of the military command structure. Each man in uniform is answerable to him. It says nothing about the purposes he can pursue with the armed forces under his command.

Madison's notes of the debates at the Constitutional Convention do, however, indicate a desire to give the President some unilateral authority. An early draft provided that the Congress should have the power to "make" war. The record says, for example:

> Mr. Sharman thought it stood very well. The Executive should be able to repeal and not to commence war. "Make" better than "declare" the latter narrowing the power too much.

But Mr. Madison and Mr. Gerry moved:

> . . . to insert "declare," striking out "make" war; leaving to the Executive the power to repel sudden attacks.

The substitution was approved, giving the President authority to meet an emergency attack in the absence of congressional action. But here also arises the first very substantial reason to suppose that unilateral executive power is quite limited. The framers expressed themselves clearly on one instance in which an Executive decision could stand alone, and they mentioned no others. The scope of this single power is not precisely defined, and it is a matter of some dispute. Certainly, the President can use all of the forces at his command to defend the Nation's shores against an attack. Doubtless, he needs no permission to direct the protection of American military forces wherever deployed, if they are in immediate, perceivable danger. An act of Congress purporting to prohibit such action would be a nullity.

It is much less clear whether he can order offensive operations based on the fear that an enemy is about to attack. The terms used in the motion—"repel" and "sudden"—seem to imply that congressional approval should be sought in

any case where the threat is not immediate, and they also suggest that the amount of force used should be as much as is sufficient to remove the threat. But more substantial questions are raised by the logical consequences of a broader power. While a Member of Congress, Abraham Lincoln provided a compelling analysis on this point in a letter to Herndon:

> Allow the President to invade a neighboring nation whenever he shall deem it necessary to repel an invasion, and you allow him to do so whenever he may choose to say he deems it necessary for such a purpose, and you allow him to make war at his pleasure. Study to see if you can fix any limit to his power in this respect, after having given him so much power as you propose.

But executive prerogatives on issues of war and peace do not stand alone. Against them are arrayed an extensive listing of legislative powers and duties. Under article I, section 8, it falls to the Congress to "declare War," to "make Rules for the Government and Regulation of the land and naval Forces," to "provide and maintain a Navy," and to "provide for the common Defence and general Welfare of the United States." The Constitution further provides that "no money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law." And, in the case of appropriations to support armies and only in that case, it limits those appropriations to a duration of 2 years.

The letter from Lincoln just cited also supplied an accurate description of the reasons why Congress was so explicitly designated:

> The provision of the Constitution giving the war-making power to Congress was dictated, as I understand it, by the following reasons: Kings had always been involving and impoverishing their people in wars, pretending generally, if not always, that the good of the people was the object. This our convention understood to be the most oppressive of all kingly oppressions, and they resolved to so frame the Constitution that no one man should hold the power of bringing oppression upon us.

The framers wrote with the benefit of sharp hindsight upon two centuries of contest between English kings and Parliament. What is most relevant here is that Parliament had successfully employed its power of the purse to prevent and halt royal adventures abroad. In fact, a legislative forerunner to the pending amendment to end the war was passed in 1678, when Parliament specified that the Army of Charles in Flanders be disbanded by a date certain. The framers clearly intended that the Congress should have at least that much power, and they added more by requiring congressional action to initiate war as well as allowing congressional action to stop it.

Hence, the conclusion drawn by Mr. Ellsworth in the Constitutional Convention, again from Madison's notes, is significant:

> Mr. ELLSWORTH. There is a material difference between the cases of making *war* and making *peace*. It should be more easy to get out of a war than into it.

Mr. Madison also expressed support for:

> Clogging rather than facilitating war, but for facilitating peace.

If any ambiguity can still be asserted, we have only to look to early authoritative opinions. In 1801, Chief Justice John Marshall wrote:

> The whole powers of war being, by the Constitution, vested in Congress, the acts of that body alone can be resorted to as our guides in this inquiry.

As a member of the executive branch, Secretary of State Daniel Webster wrote in 1851:

> I have to say that the war-making power in this Government rests entirely with the Congress; and that the President can authorize belligerent operations only in the cases expressly provided by the Constitution and the laws. But no power is given to the Executive to oppose an attack by one independent nation on the possessions of another.

Or consider James Buchanan's precise description in a December 1858 message to Congress:

> The executive government of this country in its intercourse with foreign nations is limited to the employment of diplomacy alone. When this fails it can proceed no further. It cannot legitimately resort to force without the direct authority of Congress, except in resisting and repelling hostile attacks. . .

The legislative history, the historical setting, and the language itself, it seems to me, are unmistakable.

No one can read the record of the debates leading up to the establishment of the Constitution without being aware of the very strong convictions of the delegates to that convention that the war power should reside in Congress when it comes to the question of whether we go to war or whether we end it. The war power that the President has relates entirely to his function in commanding the troops once they are committed by the act of Congress or once committed to meet an emergency situation or to repel an attack. But they do not justify the kind of authority that some critics would give to the President in terms of the war and the long, drawn-out struggle in Indochina. All the constitutional debates point to the conclusion that the power to determine the purposes for which American military forces will be used resides in the legislative branch, whose laws must be faithfully executed by the President. The Commander in Chief clause merely entitles the President to the supreme command and tactical control of those forces when they are engaged in activities authorized either by enacted laws or by the Constitution itself. It can be read no other way.

Those who contend now for inflated Presidential powers can cite no textural support for their thesis. They make but one assertion—that the President holds full control over the use of the Armed Forces in pursuit of American security interests by reason of "practice" or "tradition," most of that tradition in the last few decades.

I fail to see how such foggy precepts can allow us to alter, without amendment, the terms of the Constitution itself. The truth is that Congress has acquiesced in Executive action either because it supported them or lacked the will to assert its opposition. In most instances in which the President has acted alone, he probably could have obtained congressional authority had he asked for it. The trend which has concerned us has developed because Congress has not really disagreed with the Executive and has thus felt no need to assert its own views. It is a serious perversion of the Constitution to suggest that congressional inaction signals the loss of congressional power and the gross expansion of Executive authority.

The logical import of the Presidential powers claimed would be to destroy the constitutional scheme so painstakingly constructed by the framers of that document. It would establish virtual one-man rule over the most momentous decisions any government is ever called upon to make—the decisions of war and peace. Considering the breadth of security interests claimed or potentially claimed by the Executive, it would leave the President free to engage in any conflict, large or small, short or indefinite, anywhere in the world. Under the new assumption of Executive power, it is hard to envision a conflict for which congressional authority would be required.

During the debate on the Church-Cooper amendment earlier this year, and also in the discussions that have taken place on the pending proposal, the administration's advocates have pleaded strenuously that we would interfere with the Commander in Chief. I find it intriguing that this argument has been raised with such fervor by some Senators who supported a provision in the Defense Appropriations Act of 1970 which barred the use of funds for the introduction of combat troops into Laos or Thailand.

I have often thought, Mr. President, since the incursion into Cambodia, that if we had had the foresight to realize that such a thing might happen, Cambodia would doubtless have been added to the restriction in 1970 that barred the use of funds for the introduction of combat troops into Laos and Thailand. I am confident that the only reason we did not include Cambodia under that restriction in 1970 is that it never occurred to anyone in the Senate that the President might order forces into Cambodia.

I suggest that we would do well to avoid the grave error of confusing our support for the President's Vietnam policy with an imaginary constitutional mandate for Congress to abandon duties imposed upon it by the Constitution. Every Senator is and should remain free to make his own choices on matters of policy, relying upon knowledge, wisdom, and conscience. But we are bound, by our oath of office, to uphold the Constitution.

Let us not forget that the Constitution binds us to review all funds for military operations at least once every 2 years. That is not put there for our convenience but for the protection of the country against the indefinite commitment of American forces or American military operations without systematic congressional review at least once every 2 years.

THE CONGRESSIONAL DUTY TO REVIEW

The points I have discussed may appear to have only an indirect relevance

to the pending amendment, since they relate primarily to the question whether the war in Vietnam was properly initiated. The pending amendment does not contest that issue; it does not seek to declare illegal the past actions of any President. It applies only to the future.

But it is clear that our constitutional system contemplates severe limitations on the President's flexibility in the use of the Armed Forces when he acts without specific congressional approval. Certainly, these influences on the initiation of war bear greatly on the question of how it might be terminated once begun.

The authorities are precise on this score, as well. They tell us two essential things:

First, that Congress very clearly does have the power to limit the purposes for which the Nation's Armed Forces shall be used, even after those forces have been engaged; and

Second, that we have a positive obligation to review these decisions at regular intervals.

The first point is a proper and logical consequence of the exclusive congressional power of the purse. It means, according to Justice Story's Commentaries on the Constitution of the United States, that:

> Congress can alone raise armies; and may put them down whenever they choose.

The second power flows from the 2-year time limitation on military appropriations, to which I have referred previously. Although it is our practice to appropriate every year for all Government activities, there is nothing in the Constitution to require that procedure except in the case of funding for the Armed Forces.

Alexander Hamilton described the meaning of that limitation in Federalist No. 26:

> The legislature of the United States will be obliged, by this provision, once at least in every two years, to deliberate upon the propriety of keeping a military force on foot; to come to a new resolution on the point; and to declare their sense on the matter, by a formal vote in the face of their constituencies.

The reason was explained by Mr. Dawes to the Massachusetts Ratification Convention:

> When we consider that this branch [the House] is to be elected every two years, there is great propriety in its being restrained from making any grants in support of the army for a longer space than that of their existence. If the election of this popular branch were for seven years, as in England, the men who would make the first grant, might also be the second and third, for the continuance of the army, and such an acquaintance might exist between the representatives in Congress and the leaders of the army as might be unfavorable for liberty.

The framers avoided this difficulty, Mr. Dawes pointed out, by providing the following result:

> The army must expire of itself in two years after it shall be raised, unless renewed by representatives, who, at that time, will have just come fresh from the body of the people. It will share the same fate as that of a temporary law, which dies at the time mentioned in the act itself, unless revived by some future legislature!

In the case of the very existence of the Armed Forces, therefore, and certainly on the narrower question of any portion of those forces engaged in conflict, Congress has an express duty to provide review and control, and there is no way in which we can surrender that power without violating the Constitution. The framers intended that no part of our Military Establishment should be maintained without continuing surveillance by the legislature.

Hence, I do not see how any Member of this body can find the comfort of neutrality on the war in Indochina by saying it is all a matter for the President to decide. We cannot withhold our judgments. The Constitution requires an "aye" or "nay" on this transcendent issue.

Those of us who oppose the war have, I believe, a moral obligation to use the power of our office to end it, or at least to try. That belief has been the central motivation for this amendment.

But it is a decision we cannot avoid in any case, amendment or not. We have voted upon it every year since the war began, through our annual votes on military appropriations bills. While we may have intended otherwise, our effect has been to ratify Executive action.

I must say it is a difficult thing, once troops are committed, for a Member of Congress to stand up and vote on appropriations that would terminate that action, but there is no other way under the Constitution, once American forces are committed abroad by the executive branch of the Government, for that action to be terminated except by the power of the purse which the Founding Fathers intended Congress to exercise with special care on matters relating to military operations.

Thus it is not correct to say that this tragic war belongs to Mr. Nixon, or to Mr. Johnson. It is not the property of their predecessors. It belongs just as much to the Congress which has supplied the Army, Navy and Air Forces with the necessary appropriations to fight it.

Our amendment does no more than confront the issue directly. When Senators vote next Tuesday morning at 10 a.m., they will be voting their individual judgments on whether or not they wish to use their constitutional powers to set a limit on our military involvement in Indochina, or would instead place the entire burden for that decision on the President alone.

AUTHORITY FOR INDOCHINA WAR

Beyond the broad powers it claims for the President, the executive branch has relied primarily upon a collective security theory to justify our involvement in Indochina. It has been asserted that our membership in the Southeast Asia Treaty Organization has demanded U.S. military action. While South Vietnam is not a signatory, it is within the protocol areas which the signatories consider vital to their security interests. It is argued that we are thus committed to other SEATO members to respond to aggression in Vietnam. As I shall show in a minute, I do not hold that interpretation of the SEATO Treaty, but if one were to push that argument, we would be obligated to go into Cambodia, which bears exactly the same relationship to the SEATO Treaty as South Vietnam does.

But, for two very good reasons, this cannot serve as an adequate response to a constitutional challenge. First, the treaty was ratified only by the Senate, whereas the Constitution requires that the Congress—both Houses—shall exercise war powers. Surely, the Senate cannot provide advance authority for military action that must wait for approval by the House as well.

Second, and more significantly, the terms of the Treaty itself provide that a response will be made only after a decision based on the "constitutional processes" of the signatory. A document which incorporates "constitutional processes" certainly cannot be construed to allow their avoidance.

Some have also urged that the Gulf of Tonkin resolution provides authority for the war, although neither the Johnson nor the Nixon administration has relied upon it. As a matter of fact, Under Secretary of State Katzenbach said years ago that they did not really need any authority from Congress to carry on military operations in South Vietnam. This administration has repeated that it does not need the Gulf of Tonkin resolution to justify what it is doing. But again, the response has fatal disabilities.

The resolution was not a grant of authority; it was an expression of approval of presidential "determination" to resist attack and prevent further aggression. Nowhere within its terms are such critical operative words as "empower" or "authorize." Moreover, where the Senate is concerned, it is obviously relevant to point out that we have twice voted by large margins to repeal the Gulf of Tonkin resolution. Surely, those in this body who thought it conferred authority must now look elsewhere for the executive power under which the war goes on.

I do not dispute that the President, as Commander in Chief, has the authority to withdraw American forces and to take all steps necessary to defend them during that process. Having found them deployed when he assumed office, he surely has those powers.

But Mr. Nixon assumes more than that. While removing some troops, he is leaving others. American forces are engaged in offensive operations, including heavy aerial bombardment. On next May first, at least 280,000 will remain in Vietnam, with no plan to bring them home. They will be there in pursuit of broad goals which have been set without the official authorization of Congress.

Of even deeper significance in a constitutional sense is the limitless scope of authority the President still claims in connection with Vietnam. The vastly-inflated Commander in Chief concept literally places no limit on what he might do. That concept could take us anywhere. No wonder there is such anxiety in the land, with such enormous power concentrated in one man's hands.

AMENDMENT TO RESTORE CONSTITUTIONAL GOVERNMENT

Apart from the policy of definite withdrawal it seeks to establish, our amendment responds directly to doubts about

whether the President does have authority in Indochina and, if so, its extent.

We can safely predict that one of two results will flow from its passage.

First, the President may abide by the timetable and remove all American armed forces by December 31 of next year. I personally hope he would move ahead on that timetable. If that is done, Congress will have rightly shared any political risks involved in the unsatisfactory conclusion of the war to which there is no satisfactory conclusion possible, that is, one that would satisfy all our citizens. I believe it is the obligation of Congress to share with the President the political hazards involved in terminating the war without victory. The President said that we are not going to go for a military victory. I think that is clear, because he would not withdraw forces if he intended to push for a military victory in Vietnam.

There is no victory in this futile and tragic war. Let us face that fact as men sworn to uphold the Constitution, rather than hiding behind the cloak of presidential power, and say that it is entirely up to the President as to the time the troops are committed and the conditions under which they are brought home. We can do a great deal to eliminate the kind of scapegoating that may otherwise follow withdrawal of our forces from Vietnam, if that decision is brought about by both the executive and the duly elected representatives of the people in Congress.

Second, the President may return to the Congress and seek explicit authority for his own policy, through carefully worded legislation designed to support his aims while perhaps limiting the time or the numbers of troops to be involved. The terms of the amendment suggest that he might do that during the 60-day period in which he is authorized to suspend the deadline for withdrawal in the event of an emergency. But he could obviously do it at any time, and any subsequent legislative act would, of course, supplant the terms of this proposal.

During the period after passage of the amendment, until the withdrawal deadline on December 31, he could come to Congress at any time during that period of time, and ask for a revision in the terms of the amendment, including the withdrawal deadline. He does not have to wait until the closing weeks of the withdrawal deadline.

If he were successful, he would have renewed credibility both at home and abroad. He would move with a clear mandate. The nagging doubts about new enlargements of the war could be laid to rest.

In any event, American involvement would be terminated by joint action of the legislative and executive branches, as the Constitution intended.

The President does not come before us now asking for authorization of his Indochina policy. He did not come to us to ask us for approval before American forces were sent to Cambodia. We are instead told that Congress has no business in such matters. Thus, if we are to participate at all, it must be on our own initiative.

For reasons which I have repeated throughout the discussion of this amendment, I am convinced that its terms offer the most hopeful and responsible route out of Indochina, out of a war that I believe the overwhelming majority of the American people want to see ended. Establishment of an orderly timetable for withdrawal can stimulate stagnating negotiations, release our policy from the grip of dictators in Hanoi and Saigon, and end the slaughter of Americans and Asians.

The Senator from Kansas earlier today talked about his view that this amendment is an amendment to lose the peace. There is not any peace to lose. There is a bloody war in progress that is killing young Americans every day and continues to slaughter people in South Vietnam at the rate of about 200,000 a year. That is the bloody conflict, the so-called bloodbath that exists.

We do not know what will happen if we end the war and withdraw the massive firepower of the United States. But we do know that hundreds of thousands of people are being killed as long as the war goes on. We know about this bloodbath. It is a historic fact which we read about in the news bulletins day after day.

We have no peace to lose, but only a war to end. That is why this amendment is properly named an amendment to end the war and why it is improper to talk about losing something which we do not have, which is peace. We are trying to establish peace, and this amendment has that as its purpose.

But Senators who disagree or have doubts about our policy in Indochina have equally strong reasons for supporting this proposal. It is a means to restore the constitutional principles from which we have strayed. Congress ought to share with the President in these decisions affecting war and peace.

Thousands of Americans have sacrificed their lives to secure liberty and create the Constitution that documents that liberty. And that is the only document to which every Senator swears his loyalty and which he swears to uphold when he becomes a Member of the Senate.

I hope that we will now have the simple fortitude to use that constitutional power that this great document invests in this body.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time on any amendment, order, or appeal relative to amendment No. 811 by the Senator from Maine (Mr. MUSKIE) be taken out of the 4½ hours allotted to that amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM TUESDAY NEXT TO 9 A.M. WEDNESDAY, SEPTEMBER 2, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business on Tuesday next, it stand in adjournment until 9 a.m. on Wednesday, September 2, 1970.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

THE BLOODBATH HOAX

Mr. McGOVERN. Mr. President, in recent weeks we have heard time and again that the orderly withdrawal of U.S. Armed Forces from Vietnam will result in a "bloodbath" of political reprisals against the South Vietnamese.

The President suggested in one of his recent telecasts, for example, that millions of South Vietnamese have placed their trust in us and that—

> To abandon them now would risk a massacre that would shock and dismay everyone in the world who values human life.

The Vice President easily transformed that "risk" to reality in his August 17 speech in Florida. He said:

> The result of our proposal would be . . . the collapse of the government, chaos in the country—and ultimately the kind of Communism that literally decimated the civilian population of Hue in the Tet offensive.

The clear implication of both statements is that the Vietnamese population is protected by our presence. And that proposition is a mean, cruel hoax. It would justify the indefinite slaughter of thousands of innocent South Vietnamese on the pretext that a few—primarily Messrs. Thieu and Ky and their narrow band of henchmen—might be saved.

It must first be noted that the "bloodbath" theory itself is open to serious question. I wonder, for example, why it is that an enemy takeover must result from our withdrawal, when it is a fact that the South Vietnamese have some 1,352,000 men under arms with some degree of combat training, including 1 million full-time soldiers. Estimates of enemy strength at the end of 1969 numbered at 240,000, including 100,000 North Vietnamese, 40,000 main force, and 100,000 irregulars and guerrillas. And it is estimated that only about 90,000 are combat troops, with the rest engaged in support activities. I simply cannot see how it is that 1,352,000 men are to be slaughtered by 90,000. If they cannot defend themselves on that basis then the entire Vietnamization strategy surely must fall.

If Vietnamization is as barren as it appears, and if the Communists are therefore destined to a share of the power in South Vietnam regardless of which policy alternative we choose, there are still reasons to doubt that a bloodbath would occur.

The most likely targets of political reprisals will have long since departed. According to a Swiss newspaper account, more than 10,000 of the Saigon elite have left the country since the negotiations began, and between $1.5 and $2 billion has left Vietnam by deposits in foreign banks. As for General Thieu, he has found a home for his children in Rome and his wife has a house in Europe.

With the vast bulk of the remaining civilian population the interest of the new government will be in accommodation, to consolidate its own power rather

than undermining confidence in the power of someone else.

But the most compelling response to this issue lies in the bloodbath that goes on now.

The Vice President's reference to events at Hue during the Tet offensive is more helpful on this score than he knows.

The Vietcong executed some civilians. We can only react with shock and dismay at this barbaric action.

Yet of the 3,600 civilians who died, the enemy killed only 1,000. The rest, more than two times as many, were attributed to the enormous indiscriminate firepower used by the allies to recapture the city.

There could be no more precise illustration of the fallacy in the administration's argument. What happened at Hue is happening throughout the Vietnamese countryside. It will last as long as the war goes on.

Mr. President, I have just recently received a paper on this subject by a Villanova Law School student, Stanley Shulman, and I believe it deserves the careful attention of every Senator. He employs and expands the excellent studies previously compiled by Senator Kennedy's Senate Subcommittee on Refugees.

Mr. Shulman points out that—

Nearly one-third of the population of South Vietnam has already become either a war casualty or a refugee.

He sets total non-Communist fatalities at 90,000 each year, a figure that is not declining. In fact the total number of casualties has increased since the 1968 Tet offensive, in large part because of more heavy aerial bombardment which cannot distinguish between enemy and innocent.

As to the future, Mr. Shulman makes a careful comparison of civilian casualties we can expect from continued war, as opposed to even the most hysterical predictions in the event of a Communist takeover. He says:

Between now and election time, 1972, civilian deaths alone will be over 100,000.

Non-communist Vietnamese deaths (combatant and civilian combined) will be twice that number.

Total war deaths will be almost five times that number.

Non-communist Vietnamese dead and wounded will be over 700,000.

Total Vietnamese dead and wounded will be 1,400,000.

Clearly we are faced with the prospect of a bloodbath. It is one we can virtually guarantee unless the war is ended.

Mr. President, I ask unanimous consent that the paper to which I have referred be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE TRAGIC IRONY OF THE BLOODBATH THEORY

(By Stanley Shulman [1])

"When we assumed the burden of helping defend South Vietnam, millions of South Vietnamese men, women, and children placed their trust in us. To abandon them now would risk a massacre that would shock and dismay everyone in the world who values human life." President Nixon, May, 1969

Nearly one third of the population of South Vietnam has already become either a war casualty or a refugee.[2] This staggering amount of war misery will only grow under Nixon's Vietnamization Program. The strategy of more military aid for the present narrowly based, right-wing Saigon government, by removing the pressure on the Saigon regime for a negotiated settlement of the war and exacerbating divisions within Vietnamese society, both increases the chances for a future bloodbath and allows the everyday bloodbath to continue. Although American deaths are admittedly now declining, the total number of South Vietnamese casualties remains the same. The extension of the war into Cambodia, coupled with the Administration's apparent unwillingness to press for a negotiated compromise settlement, suggest anything but consideration for the value of human life.

If Americans were made aware of the extent of the daily toll of South Vietnamese civilian and military dead and wounded, the hollowness of the bloodbath theory would be immediately apparent to them. But the public has had little exposure to these facts. We constantly hear precise statistics on the numbers of weapons captured, tons of rice destroyed, and enemy killed, but a serious listing of civilian war casualties—the crucial component of the daily bloodbath—has always somehow been beyond the capabilities of the U.S. and Saigon governments.

Official civilian war casualty statistics are filled with glaring omissions. As far back as December, 1967, the head of AID medical programs in South Vietnam estimated that the number of civilian casualties were running at a rate of approximately 100,000 a year: 76,000 injured and approximately 24,000 civilians killed outright or dying before they could reach medical facilities. This in itself was a more than 100% increase over official estimates.[3]

But sadly the story does not end there. The Senate Subcommittee on Refugees subsequently visited approximately 32 of the 43 South Vietnamese provinces and discovered that even the AID statistics for the number of civilian casualties, based on civilians treated as inpatients at provincial hospitals, was underestimated because several hospitals were not reporting and those who did report often understated the figures from 10 to 50 percent. Further, the number of outpatients and those treated at village or hamlet facilities added an additional 100,000 casualties per year (although some are not of a serious nature). Using the AID chief medical officer's estimate of 24,000 civilians killed outright or dying before they could reach medical facilities, the total estimate of civilian casualties was approximately 175,000 for 1967.[4]

Within the last twelve months the total number of officially reported casualties, civilian and combatant, has been 40 percent higher than the 1967 pre-Tet offensive statistics. Unless reporting methods have improved enormously since 1967, we must conclude that the intensity of the war during President Nixon's Vietnamization Program has been greater than the pre-Tet levels, producing within the past year well over 200,000 killed or wounded civilians.

The official United States military casualty rate is one killed for every 6 or 7 wounded. The civilian ratio must be much greater, since death is far more probable for the innocent noncombatant who has minimal access to surgical and anesthesia capability, an adequate blood bank, or rapid transport to medical facilities.

Thus after careful study, the Senate Subcommittee on Refugees recently concluded that approximately 60,000 Vietnamese civilians had died from May, 1969–April 1970 alone.[5] Add to this United States, South Vietnamese, and other allied combat deaths and *total non-communist fatalities equal at least 90,000 for one year.* (May, 1969–April 1970). This figure provides an illuminating comparison with the Administration's oftenquoted Rand Corporation study, which predicted that approximately 100,000 might be executed after a Communist takeover in the South.

The Rand prediction is difficult to accept, in light of the fact that that study:

(1) Assumed that the Communists could win total victory in the South when the South Vietnamese Army's strength is placed at 1,250,000. (To admit such a possibility is to admit the failure of the Vietnamization Program.)

(2) Was in general agreement with the Administration's view of the events following the Communist takeover in the North and the Hue occupation, which have been subject to serious dispute by many critics;

(3) Did not consider the impact of strong third-country or international controls on a peace settlement; and

(4) Did not account for our moral obligation to provide a political evacuee program.

However, even if one does accept this figure, if the war continues at its present rate, during the period between now and election time 1972:

Civilian deaths alone will be over 100,000.

Non-communist Vietnamese deaths (combatant and civilian combined) will be twice that number.

Total war deaths will be almost five times that number.

Non-communist Vietnamese dead and wounded will be over 700,000.

Total Vietnamese dead and wounded will be 1,400,000.

These figures take no account of the 400,000 who will become refugees and the substantial but difficult to estimate Cambodian and Laotian casualties.

There is no reason to expect a significant change in this death and casualty rate. The decline in American casualties has led us to believe that the war has been "winding down," when in fact there has been no such turn of events. Excepting the abnormally high death rate during the year of the Tet offensive, South Vietnamese casualties reached their high mark under the Vietnamization Program in 1969. The first half of 1970 indicates a similar trend.

The President's bloodbath theory is therefore a tragically ironic justification for continuing the war. We are presently destroying the Vietnamese people in order to save them, at a cost of 40 million dollars a day. No speculation about a future "bloodbath," even if the Rand figures were to be accepted at face value, should obscure the fact that a far more massive bloodbath is presently occurring in Vietnam. Contrary to the President's statement quoted at the beginning of this paper, the value of human life seems

[1] 1970 graduate, Dickinson College. First-year student, Villanova Law School. This paper is a portion of a larger study, not yet completed, questioning the entire theoretical basis of the "bloodbath" argument.

clearly one of the last priorities of this Administration's Vietnam policy.

STATE DEMOCRATIC PARTIES SUPPORT AMENDMENT TO END THE WAR AND EARLY WITHDRAWAL OF AMERICAN FORCES FROM SOUTHEAST ASIA

Mr. McGOVERN. Mr. President, the Democratic Parties in at least eight States have, in the past few months, declared their support for the amendment to end the war and an early withdrawal of American forces which I sponsor with 23 other Senators. Other State Democratic Parties may also have taken positions on the amendment of which I am not aware.

The eight States are: Maine, Massachusetts, Nebraska, North Carolina, New York, South Dakota, Utah, and Washington. In South Dakota, the party specifically commended efforts of members of both political parties who seek to reassert the constitutional responsibility of the Congress while affirming the need for presidential flexibility, and it endorsed the February 1970 position of the National Democratic Policy Council. The New York statement issued from a special party convocation.

The amendment and the withdrawal of all American forces by a fixed deadline are not a partisan matter. Senators on both sides of the aisle support the amendment; citizens across the country in both political parties have spoken out for it. But it is indicative of the importance and urgency of the issue that State Democratic Parties, in the midst of their own organizational activities, have taken the time to put their position on the record.

I applaud the action of those State Democratic Parties which have spoken out. I urge that all Americans who feel that the time has come to set a fixed deadline for the safe and secure withdrawal of American forces from Indochina act now to let their Senators know how they feel as we approach the vote on this important amendment.

Mr. President, I ask unanimous consent that the resolutions of those parties which I have received be placed in the RECORD at this point.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

MAINE DEMOCRATIC PARTY PLATFORM, MAY 16, 1970

FOREIGN POLICY

* * * * *

2. The most important immediate objective of American foreign policy must be to terminate our nation's military involvement in Southeast Asia, and the first priority during the process of withdrawal of our forces is to secure a complete exchange of all prisoners of war in Indochina.

We endorse the peace plan contained in the resolution offered by Senator Ed Muskie in the United States Senate on May 11, 1970, and entitled "Declaring a Policy for Peace in Indochina". The resolution follows:

"Whereas de-escalation of the fighting, withdrawal of United States troops from Indochina, and intensive efforts at negotiations are the only routes to peace in Southeast Asia: Now, therefore, be it

Resolved, that the United States of America seeks a peaceful resolution of its differences with North Vietnam, and that United States policy encourage peace among all the peoples of Indochina and be it further

Resolved, that to achieve the objectives of this Resolution: (a) the United States immediately withdraw all its military forces from and cease military operations in Cambodia; (b) United States bombing of targets in North Vietnam be stopped henceforth; (c) the United States seek an immediate, standstill cease fire in Vietnam and other areas in Indochina; (d) the United States government declare that all its forces and military personnel will be withdrawn from Indochina in a specified time, not to exceed eighteen months from the date of adoption of this Resolution; (e) the United States delegation to the Paris Vietnam Peace talks be strengthened with negotiators empowered and directed to seek an agreement to facilitate the formulation of a political settlement in South Vietnam; (f) the United States encourage a conference under the auspices of the governments of East Asia or other appropriate international sponsorship to provide for discussions among all the various governments and political groups in South Vietnam and in Indochina for the purpose of resolving their political differences; and (g) the United States pledge technical and economic assistance for the reconstruction and economic development of the war-ravaged regions of Indochina and be it further

Resolved, that (a) the Senate express its support, and urge the President to develop a plan, for the complete withdrawal of United States military personnel from Indochina, such withdrawal to be completed in not more than eighteen months from the date of adoption of this Resolution; and (b) the Committees on Appropriations, Armed Services and Foreign Relations submit to the Senate by July 15, 1970, appropriate legislative recommendations, including but not limited to restrictions on military expenditures in Indochina, to implement the objectives of this Resolution.

We also endorse the amendment offered in the United States Senate on May 2, 1970 by Senators Goodell, Hatfield, Hughes, McGovern and Cranston, as embodying an approach designed to implement that Declaration.

The Amendment is as follows:

Section A: Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended in Vietnam after December 1970, for any other purpose arising from military conflict provided that funds may be expended as required for the safe and systematic withdrawal of all United States military operations, the provision of assistance to South Vietnam in amounts and for purposes specifically authorized by the Congress, the exchange of prisoners, and the arrangement of asylum for Vietnamese who might be physically endangered by the withdrawal of United States military personnel from Vietnam shall be completed no later than June 30, 1971, unless the Congress, by joint resolution, approves a finding by the President that additional stated period of time is required to insure the safety of such personnel during the withdrawal process.

Section B: Unless Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended after December 31, 1970, to furnish to Laos any military advisors, or to support military operations by the forces of the United States or any other country in or over Laos.

Section C: Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended, after 30 days after the date of enactment of this Act, to furnish to Cambodia any defense articles of any military assistance of military advisors, or to support military operations by the forces of the United States or any other country in or over Cambodia.

RESOLUTION TO END THE WAR APPROVED BY THE NORTH CAROLINA STATE DEMOCRATIC PARTY IN CONVENTION, RALEIGH, JULY 14, 1970

Whereas, we believe that the withdrawal of American forces from Southeast Asia is more essential to the best interests of this country, this state, and this nation than a military victory in Vietnam or the support of the present government in South Vietnam:

Be is resolved that we, the delegates to the Democratic Convention of the State of North Carolina, support the Amendment to End the War, U.S. Senate #609, sponsored by Senators McGovern, Hatfield, Goodell, Cranston, Hughes, and others; and be it further resolved that we, the delegates of the State Democratic Convention convey our concern about the war to the Governor of the State of North Carolina and to the Congressional delegation from North Carolina. The Amendment reads as follows:

(a) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended in Vietnam after December, 1970, for any purpose arising from military conflict; Provided that funds may be expended as required for the safe and systematic withdrawal of all United States military personnel, the termination of United States military operations, the provision of assistance to South Vietnam in amounts and for purposes specifically authorized by the Congress, the exchange of prisoners, and the arrangement of asylum for Vietnamese who might be physically endangered by the withdrawal of United States forces, and Further Provided, that the withdrawal of all United States military personnel from Vietnam shall be completed no later than June 30, 1971, unless the Congress, by joint resolution, approves a finding by the President that an additional stated period of time is required to insure the safety of such personnel during the withdrawal process.

(b) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended after December 31, 1970, to furnish Laos any military advisors, or to support any military operations by the forces of the United States or any other country in or over Laos.

(c) Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this Act or any other law shall be expended, after 30 days after the date of the enactment of this Act, to furnish Cambodia any defense article or any military assistance or military advisors, or to support military operations by the forces of the United States or any other country in or over Cambodia.

(d) For the purposes of this section, the term "defense article" shall have the same meaning given such term under section 644 of the Foreign Assistance Act of 1961.

RESOLUTIONS FOR THE NEW YORK DEMOCRATIC CONVOCATION, MAY 20, 1970

We Democrats, assembled in this special convocation to consider the crisis of expanded American involvement in Southeast Asia, proclaim our determination to make the American system work successfully, to make our government and the Democratic Party responsive to our people's needs, to restore the dialogue essential to democracy's well-being, to move by every legal and effective means to end the violence at home and abroad, and to make the Democratic Party of New York a powerful instrument to restore domestic tranquility and to end the war in Indochina now.

To accomplish these objectives:

1. We unequivocally denounce the invasion of Cambodia, the under-cover war in Laos, and the resumption of bombing in North Viet-Nam. We call upon the President and the Congress to announce that all United States forces will be removed immediately from any combat role anywhere in Indochina, and that all United States military personnel will be out of Indochina by the end of 1971, appropriate provision having been made for their safe withdrawal and the release of prisoners of war.

2. We pledge our full support to the enactment of the Church-Cooper and McGovern-Hatfield amendments in the Senate and the adoption of their counterpart, H.R. 1000, in the House of Representatives; we ask that the Democratic members of the New York Congressional Delegation publicly commit themselves to the support of H.R. 1000 and other appropriate legislative efforts to end the war; and we call upon the Congress to reassert its constitutional mandate to control American involvement in foreign wars.

3. We call upon the Government of the United States to demand the release of and offer immediate sanctuary to the hundreds of prisoners now languishing in the dungeons of South Viet-Nam whose only crime has been support of a negotiated settlement of the Vietnamese war.

4. We call for the appointment of a Chief United States negotiator at the Paris Peace Conference who will have the confidence of the Congressional Foreign Relations Committees so that Americans may be assured that their view of an honorable agreement is being explored to end the war.

5. We welcome the young, both as members and critics of our Party. We welcome their creative dissent, the honesty of their dissatisfaction, and their commitment of personal energy to the election of candidates who reflect their hopes and ideals. We endorse The National Petition Drive organized by student groups throughout the State and urge all Democratic candidates, leaders, and organizations, to support actively this effort.

6. We ask for an honest effort by all citizens and groups to hear the opinions and arguments that divide us, to avoid violence against person and property, and to avoid the use of the flag as a partisan symbol representing the superior patriotism of either side.

7. We recognize the heroic valor of the Armed Forces of the United States in the Indochina war, and we call upon the Federal and State governments to provide generously for the support of the bereaved families of the dead, and for the medical care of the wounded and disabled; and we further ask that the elected representatives of the Democratic Party make regular periodic visits to veterans' installations where the American wounded are cared for to make certain that the Nation's obligation to these victims of the war is fulfilled.

8. We believe that international commitments that directly affect the security and national interests of the United States are seriously undermined by our involvement in Indochina. In calling for the immediate end to American military involvement in Indochina, we reject the counsel of isolationism and reaffirm our legitimate international commitments.

9. We call upon government on every level to recognize the increasing despair of millions of Americans as their pleas for social justice are met with attitudes of benign neglect and violent repression; and in demand that the Democratic Party of New York, in the voice and action of its office holders, candidates, and leaders place the imperative of social justice at the top of the American agenda.

The Democratic Party and its national leadership have a major responsibility for the tragic American involvement in Viet-Nam. We will not fulfill our responsibility to the future of our Nation, to our Party or to ourselves by rationalizing past mistakes or tolerating their repetition. We speak today as Democrats to make our political institutions respond to the urgent need for peace in our land. We speak today as Americans in calling for the end—NOW—to a war that has no national purpose and that is morally, politically, economically and militarily wrong.

THE 1970 UTAH DEMOCRATIC PLATFORM: GOVERNMENT IN A CHANGING AMERICA

INDOCHINA AND MILITARY SPENDING

The expanding war in Southeast Asia is of deep concern to the Democratic Party. It has torn the social and economic fabric of both the United States and the involved Asian nations. With a nation in economic and social turmoil, military might does not guarantee security, either within or without. We urge: The immediate withdrawal of all military personnel from Southeast Asia, in such a way that it does not endanger their security. We should not forget nor abandon our servicemen who are prisoners of war. We should endeavor to secure international supervision to insure the safety of the Asian people.

We urge that the military budget be reduced drastically. Although not opposed to continued research, we urge a suspension in deployment of A.B.M. and M.I.R.V. systems; a further cutback in military assistance and troop commitments to other nations, and a planned conversion of defense industries to civilian needs. There should be simultaneous emphasis on arms limitations talks and diplomatic negotiations for peace.

RESOLUTION NO. 12 OF SOUTH DAKOTA STATE DEMOCRATIC CONVENTION, MITCHELL, S. DAK., JULY 17, 1970

Whereas, the South Dakota Democratic Party takes notice of the reasons which prompted this nation's active military involvement in substantial force in Viet Nam and Southeast Asia,

Whereas, the war in Southeast Asia has cost thousands of American lives, billions in tax dollars, and has eroded our national spirit and divided our people in a way not seen in this country since the Civil War,

Whereas, without commenting directly on the validity and rationale of those decisions it is now clear that the war has been unnecessarily prolonged, and

Whereas, we acknowledge the effort to reassert the constitutional responsibility of the Congress in policy matters of this kind and affirm the need for presidential flexibility within this constitutional responsibility to defend our nation. We commend those thoughtful members of both political parties who have directed and inspired these meaningful Congressional efforts.

Now, therefore be it resolved, that the South Dakota Democratic Party endorses and supports the position of the National Democratic Policy Council. Text of position statement:

II. INTERNATIONAL AFFAIRS

Despite the Administration's claims of progress, Vietnam remains our most urgent overseas problem and our most divisive and bitter domestic one. Our national interests require that the war in Vietnam be brought to a close at the earliest practical moment. The loss of life, the division of resources from critical domestic needs, and the disunity of our country must be ended.

The withdrawal of some U.S. troops is a desirable first step and we support this decision. But future U.S. decisions, affecting American lives and resources, should not be dependent upon either North Vietnamese or South Vietnamese actions. Our schedule of withdrawal should not be dependent upon the progress of the Paris peace talks, the level of violence, or the progress of so-called Vietnamization. It should depend primarily upon the interests and policy of the United States. That interest and that policy require a firm and unequivocal commitment to the American people that all U.S. forces will be withdrawn from Vietnam in accordance with a definite schedule. We see no reason why this withdrawal should not be completed within eighteen months. Such a withdrawal can be accelerated by efforts to create the conditions necessary for a peaceful political settlement.

THE 1970 WASHINGTON STATE DEMOCRATIC PLATFORM

I. BUILDING FOR WORLD PEACE

1. We urge removal of all U.S. Troops—combat, support and advisory—from Vietnam and elsewhere in Indochina in keeping with the terms of the McGovern-Hatfield Senate Amendment #609, which says, among other things, that unless the Congress shall have declared war, no funds shall be expended in Vietnam after December 31, 1970, except as required for the safe and systematic withdrawal of all U.S. military personnel, and that the withdrawal of personnel shall be completed no later than June 30, 1971, unless Congress approves an additional period of time to insure the safety of personnel during the withdrawal process.

AMENDMENT TO END THE WAR—ASYLUM

Mr. McGOVERN. Mr. President, the amendment to end the war deals specifically with whatever fears remain about the possibility that there might be political reprisals in Vietnam following the withdrawal of U.S. forces.

Where this single issue is concerned, we propose a serious search, in combination with other nations, for asylum for South Vietnamese who might be endangered. The amendment leaves ample time for such efforts.

Some may find this plan unsatisfactory. I emphasize that it is no more than a suggestion, and an assurance that whatever funds are required will be available both before and after withdrawal. It supports any initiatives the President might want to make. He could pursue other means as well.

We cannot fail to note that this approach stands against a policy under which we are literally guaranteed that thousands of innocent South Vietnamese will be slaughtered. Hundreds of thousands will suffer grievous injury. The decimation of the Vietnamese countryside by bombs and defoliants will continue. Still more will be added to the millions of Vietnamese refugees whose homes and villages have been wiped out.

If we are concerned about a bloodbath, the choice between our amendment and the President's program could not be more obvious.

Mr. President, two Washington attorneys, Charles Hill and Frank Lloyd, have prepared for the benefit of the Congress a two-part study which carefully examines the so-called bloodbath theory and then amplifies on the steps which might be taken to arrange asylum. I commend this study to the attention of my colleagues, and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the material

was ordered to be printed in the RECORD, as follows:

THE ADMINISTRATION'S "BLOODBATH" SPECTER: A REBUTTAL AND PROGRAM FOR PREVENTION

(By Charles E. Hill [1] and Frank W. Lloyd, III [2])

Over the past year, the Nixon Administration has constructed and evaluated to the forefront of its arguments in support of the existing Vietnam policy the contention that withdrawal of United States forces under a specified timetable would result in a "bloodbath" of Vietnamese citizens, both officials and civilians, by Viet Cong and North Vietnamese forces. Most recently, Vice President Agnew raised the "bloodbath" spectre in an August 17 speech to the Veterans of Foreign Wars Convention in Miami Beach, stating that withdrawal of United States forces would result in the "collapse of the Government, chaos in the country—ultimately the kind of Communism that literally decimated the civilian population of Hue in the Tet offensive".

In support of its predictions, the Administration has consistently cited two recent studies—one by a government employee, the other by a consultant under government contract—dealing with the subject of Viet Cong "repression". These are "The Viet Cong Strategy of Terror" (1970), by Douglas Pike, a USIA employee, and "Viet Cong Repression and its Implications for the Future" (1970), a report prepared for the Advanced Research Projects Agency by Stephen T. Hosmer of the Rand Corporation.

The purpose of this paper is twofold: first, to detail arguments in rebuttal to the Administration's contention that a "bloodbath" is inevitable, and, secondly, to set forth in detail those measures and relevant past experiences which might be drawn upon, to the extent necessary, to prevent a "bloodbath" if the Administration truly believes that this spectre can become a reality. Since many authors have dealt at length with the first point, the primary focus of this paper will be on the issue the Administration has as yet refused to deal with—the nature of those provisions and institutions relevant and necessary to insure Vietnamese asylum and resettlement, in this country or abroad.

I. REBUTTAL TO THE "BLOODBATH" ARGUMENT

Detailed rebuttal to the Administration's "bloodbath" argument and a critique of the basic studies on which it is founded is contained in D. Gareth Porter and Len E. Ackland's "Viet Nam: The Bloodbath Argument", *Christian Century* (November 5, 1969), and Charles P. Shirkey's "Vietnamese War Casualties and Implications for U.S. Policy", published by the Congress of Young Professionals for Political Action, as well as several other articles cited below. Rather than reconstruct in detail the arguments made in these articles, this part will only provide a brief summary and citations to those resources. This section will first analyze the historical events and sources relied upon by the Administration to support its thesis; it will then summarize the positive arguments that have been advanced by various commentators to rebut this position.

Analogy to Events in North Vietnam from 1954 to 1957. The Administration has relied heavily upon the alleged assassination of 50,000 persons in North Vietnam, as well as the imprisonment and later death of "hundreds of thousands" of others, in retaliation for their pre-1954 activities and in the course of Hanoi's consolidation of power, to support its argument. To the contrary, however, it appears that it was the Diem regime that in fact indulged most heavily in acts of political reprisal in the post-1954 era, while the Hanoi Government acted with great restraint in this regard. As pointed out in articles by George McT. Kahin [3] and Thomas Wicker,[4] only 19 complaints were lodged with the International Control Commission against North Vietnam during the period 1954–56, while more than 200 complaints were filed against the Diem regime. Furthermore, while the ICC found no difficulty in investigating complaints in the North, it was consistently obstructed in the South. In early 1957 it was barred by Diem from further efforts to pursue allegations, involving over 1000 incidents, against his regime. In addition, it is well documented that between 1954 and 1960 over 48,000 alleged Communists were arrested in South Vietnam, many of whom doubtless perished during their imprisonment.[5]

The Administration also has made constant reference to the large number of Catholics in the South, many of whom left the North in 1954, and has clearly inferred that Catholics would be placed in particular jeopardy by a United States military withdrawal. As has been pointed out by Clark Clifford [6] and Tran Van Dinh,[7] only about half the Catholics in North Vietnam moved south and those remaining experienced no particular discriminatory treatment, much less reprisals, at the hands of the Hanoi Government. There are presently approximately an equal number of Catholics in the North and the South, and Catholics hold prominent positions in the National Liberation Front.[8]

Deaths in Connection With the Land Reform Program and Consequent Peasant Revolt. The deaths in North Vietnam during the period from 1954 to 1957, to which the Administration has alluded, actually took place in connection with Hanoi's efforts to mobilize the local peasantry and redistribute to peasants land held by landowners, not as planned reprisal for pre-1954 activities nor to eliminate potential opposition and consolidate control. Most reliable sources place the number killed at 10,000 to 15,000, although some sources claim as high as 50,000 deaths. There is no reliable source that supports President Nixon's contention that, in addition to some 50,000 individuals killed directly, hundreds of thousands" of persons died in work camps.[9] More importantly, many of the excesses committed appear to have resulted from the free reign given to peasants and local cadres during the period and, by mid-1956, Ho Chi Minh apparently recognized the mistake that was being made, halted the program and took corrective action.[10] Richard Barnet reports that officials in Hanoi seem fully cognizant of the damage that was done and are resolved not to repeat this experience in the South.[11] Finally, D. Gareth Porter maintains that the North Vietnamese land reform program was in large part a response to the pressure on the land posed by a sizable landless population and that this underlying pressure does not exist in the South.[12]

Col. Tran Van Dac's Estimate. Pike refers to the assessment by Col. Tran Van Dac, the highest-ranking Communist defector, that three million South Vietnamese are on the Communist "blood-debt list." As has been pointed out by numerous commentators, this comment was made after the "blood-bath" argument was elevated to a prominent position by the Administration and is completely inconsistent with Col. Dac's detailed statement made a year earlier that individuals on such lists would be imprisoned, sent to concentration camps for re-education, or simply "carefully watched." [13]

Analogy to Hue. Pike's prediction that a major "bloodbath" would follow a "decisive" Communist takeover in South Vietnam is based upon his assessment of events at Hue during the Tet offensive. Initially, it should be pointed out that Pike's reconstruction of events (*i.e.*, that a small percentage of the blacklist killings took place during the initial occupation stage, that roughly 2,000 individuals were killed during the second phase of the occupation when Communists embarked upon an effort at consolidation and "social reconstruction", and that the bulk of the individuals—over 3,000—were killed during the withdrawal stage in an effort to eliminate witnesses who could prevent the Viet Cong structure from again going underground) [14] is directly refuted by Stephen Hosmer, author of the RAND study. Hosmer not only found the Communist activity at Hue (which he estimated resulted in roughly 3,000 deaths as opposed to Pike's more than 5,000) inconsistent with the normal application of terror by the Viet Cong, but estimated that the bulk of the deaths probably resulted from action taken by Communist soldiers, rather than political cadres. He assumes the likelihood of a general breakdown in discipline under the strain of battle and also relies upon a document that indicates that many of the deaths may have resulted from the difficulty in handling POW's in the intensified fighting and under the pressures of gradual withdrawal.[15] In addition to the general objection that Pike's reconstruction is lacking in essential documentation (as opposed to the generally high level of documentation in the Hosmer report), if not also in reasoned analysis, it has been argued by many commentators that the bulk of the deaths appear to have taken place during the midst of the intense fighting after the assault on the Citadel and that most of the bodies identified are those of soldiers and police.[16]

Pike and Hosmer Reports in General.[17] Several additional points should be made in regard to these two reports. Pike states, as a qualification to his prediction of a post-withdrawal "bloodbath", that it applies if the Communists "win *decisively* (and the key word is decisively) . . ." As has been pointed out by Charles Shirkey (*supra* at 8) a United States withdrawal would leave a South Vietnamese military force of over 1,250,000 men to face a combined North Vietnamese and Viet Cong force of little more than 200,000. Unless the Administration's Vietnamization program is a clear hoax, bearing no hope of success, it would appear that a "decisive" Communist victory should not come about. Furthermore, Pike maintains that the largest number of deaths at Hue were brought about during the Communist efforts to eliminate potential witnesses to the Viet Cong underground network. There would, of course, be no such incentive in the event of a Communist takeover, thus extrapolation based upon Pike's 5,000 death figure is wholly inappropriate.

The Hosmer study itself provides compelling arguments undercutting the Administration's "bloodbath" spectre. Hosmer (p. 36) stresses the restraint which the Communists have heretofore exercised in the use of physical "repression", stating:

"It may be said, then that the Communists have tended to view repression as a flexible instrument to be applied in accordance with the political requirements of a particular area at a particular time. They have also been sensitive to the political dangers inherent in the misuse of this instrument, particularly to the possible loss of popular support, and have therefore attempted to keep it under firm control."

And in assessing the likelihood of "repression" following a Communist takeover, Hosmer (p. 176) is careful to point out that "any discussion of possible Communist behavior under such circumstances *must obviously be considered highly speculative. . . .*"

Furthermore, Hosmer recognizes that the manner in which the Communists come to power will have a very real effect upon the extent of "repression". He reserves his gloomiest prediction for the situation in which a Communist takeover is the result of a long series of general offensives and uprisings. But this really says little more than that a con-

Footnotes at end of article.

tinuation and intensification of the existing struggle in South Vietnam will be accompanied by a large number of deaths, in part through continued Communist tactics of repression.

Hosmer does, however, recognize that a Communist assumption of control through political arrangements such as the gradual subversion of a coalition government, would entail a greatly reduced likelihood of widespread violence. He thus recognizes that, under such circumstances, there would be considerable incentive to restrict the use of terror and to increase reliance upon persuasion. Hosmer further details reasons why the Communists might show particular restraint in the use of "repression" upon assuming power, in light of the "important change of context" which would have occurred.[18] He thus details the need to forge a degree of unity and to mobilize support in a divided society, as well as the need to draw upon the technical skills of former servants to the old regime. Hosmer further stresses the significant impact which international scrutiny of post-takeover events might have.

Despite such compelling arguments to the contrary, however, Hosmer ends by simply citing the possible temptation to purge "hard core" supporters of the present regime, the quest for consolidation of control and the possible need to "warn" potential reactionaries and then moves inexplicably to an estimate of the likely extent of an ensuing bloodbath: "one can only guess at what the *minimum* would be, but, given the size of the target categories involved, this author finds it difficult that the number would be much less than 100,000." [19]

Unlikelihood of a Precipitous Communist Takeover. As indicated above, Pike himself premises his pessimistic assessment upon the existence of a "decisive" takeover and Hosmer specifically recognizes the likelihood that a Communist takeover evolving from political maneuvers within the country would reduce the likelihood of extensive "repression." The overwhelming numerical superiority of the South Vietnamese forces has been detailed above. Senator Kennedy has stressed the fact that the non-Communist groups in South Vietnam are well-organized and well-armed.[20] It is assumed that the Administration's "Vietnamization" program will continue to the final withdrawal of American troops, and that military assistance to the Saigon regime will continue even after withdrawal.

If the Administration's recent statements about the success of Vietnamization are to be believed, there would appear to be no significant danger of an immediate Communist victory. Conditions thus appear ripe for those evolutionary developments which even Administration-cited commentators admit would lead to a greatly reduced likelihood of Communist repression.[21] If anything, our failure to withdraw troops from Vietnam is impeding the evolutionary process toward a negotiated settlement with compromise on both sides, while maintaining the high level of the existing "bloodbath."

Nature of Vietnamese Society and the Need for Reconciliation and Accommodation. Many commentators have noted the highly complex and multi-faceted nature of Vietnamese society, which includes such religious factions as the Cao Dai and Hoa Hao and the various Catholic and Buddhist sects, as well as numerous other political parties, clan associations, ethnic groupings and secret societies.[22] The Viet Cong itself essentially reflects or at least contains representatives of South Vietnam's diverse elements.[23] Even Pike, in suggesting that postwar Vietnam could resemble a federation of regional groupings like Switzerland, appears to recognize the pluralistic nature of Vietnamese society.

These factors represent compelling reasons for the Communists to utilize restraint, both in the process of seeking power after a United States withdrawal and in the process of consolidating that power in the event of a takeover. Hosmer, as noted above, recognizes the pressure upon a Communist regime to take positive steps to forge a sense of national unity in so highly fragmented a society and to bind the societal wounds inflicted through over 25 years of constant warfare. Several commentators have argued in detail that the Viet Cong and North Vietnamese leadership realize that the need for national reconciliation will dictate strict limits on the use of repression and a gradual approach to alteration of Vietnamese society.[24] These points alone indicate that a major bloodbath in Vietnam is unlikely, even if specific efforts are not made to safeguard against such an eventuality.

Treaty Guaranties and International Surveillance. Asylum, resettlement, and related programs to eliminate the possibility of a bloodbath are the subject of detailed analysis in Part II of this paper. There are also, however, detailed provisions that can be included in a negotiated settlement to provide guaranties against political reprisals. Both the 1954 Geneva Agreements on Vietnam and the Evian Ceasefire Accords that concluded the Algerian War provided for freedom of movement out of the territory touched by the war and guaranties against reprisals for political acts committed prior to the cessation of hostilities. Such settlements can serve as valid precedents for a negotiated agreement between the Viet Cong and this or a less intractable Saigon government.

Further, the official Viet Cong program specifically disavows postwar reprisals and endorses the concept of amnesty provided for in the 1954 Geneva Agreements. Several commentators have reported indications from Viet Cong officials that they will accept external safeguards, such as a continued international presence and investigation of alleged reprisals on the lines of the former International Control Commission, to insure that reprisals will not take place.[25]

Continuation of the Present Bloodbath. Any discussion of a potential bloodbath in Vietnam at some future date is meaningless unless seen in the context of the existing bloodbath occurring in Vietnam today. It is difficult to distinguish between death at the hands of a Viet Cong assassin or a People's Court and death resulting from napalm burns or fragments of anti-personnel weapons. As pointed out in a recent column by Frank Mankiewicz and Tom Braden, American weaponry is killing more Vietnamese civilians in one year than the Administration claims the Viet Cong have assassinated since the war began.[26]

Official United States and South Vietnamese Government figures conservatively estimate civilian deaths at about 300,000 up to December 31, 1969, or a minimum of 50,000 to 60,000 per year. Only about 10% of this figure appears to be the result of Communist assassination and executions.[27] These figures do not include the countless Vietnamese civilians maimed during the course of this war, who will carry its scars throughout their lives. Nor do these figures include civilian deaths in Laos from United States saturation bombings, nor in Cambodia which has only recently been the scene of extensive U.S. artillery and bombing. And, of course, these figures make no note of the fatalities among combatants, estimated at over 600,000 to date.

This fact alone, even without the clear evidence that the "bloodbath" spectre may well be without substance, should lead us to the choice of withdrawal. This is even more the case since, as outlined in the following section, adequate provision can be made, even without negotiations with the Viet Cong or North Vietnamese, for sanctuary and resettlement for all those who might be threatened by reprisals.

II. DEALING WITH A POTENTIAL BLOODBATH—ASYLUM AND RESETTLEMENT OF THREATENED SOUTH VIETNAMESE

Even should the Administration's position—that programmed withdrawal within the guidelines of the End the War Amendment would offer significant potential for a "bloodbath"—contain some element of truth (or should the Administration's actions create a self-fulfilling prophecy), there is no reason for these fears to become a reality.

There are numerous measures, drawing upon existing legislation and institutional facilities as well as upon past actions under analogous situations, that can readily be taken to avoid realization of the Administration's predictions. Part II of this paper will detail procedures and institutions which might be used to assure asylum and resettlement, both inside and outside the United States, for any potential victims of Vietcong or North Vietnamese reprisals.

A. The legislative framework for providing asylum to political refugees in the United States

1. *Basic Immigration Legislation.* In 1965, the long-standing system under the Immigration and Nationality Act of allocating specific immigration quotas to individual countries was replaced by a scheme providing for an overall limit upon annual immigration to the United States, with preference accorded to individuals meeting certain relationship and skill qualifications. (8 U.S.C. §§ 1151–1156). Thus, Sections 1151(a) and 1152(a) provide that the number of aliens who may be issued immigrant visas or otherwise lawfully admitted to the United States under a permanent resident or "conditional entry" (as defined in subpart 2 below) status shall not, in any fiscal year, exceed a total of 170,000,[28] and no more than 20,000 individuals from any single foreign state may enter in any fiscal year.

Subparts (1)–(5) of Section 1153(a) establish priority, with numerical limits, for specified categories of individuals related by blood or marriage to United States citizens or individuals already admitted for permanent residence in the United States, and to immigrants who are members of the professions or whose exceptional ability in the sciences or the arts may offer substantial benefit to the United States economy, cultural interests or welfare. Subpart (6), the sixth preference category, provides that up to 10 percent of the annual quota may consist of individuals capable of performing specified skilled or unskilled labor "for which a shortage of employable and willing persons exists in the United States."

The blood and marriage relationship categories will not offer an immediate avenue for any significant number of individuals who might be threatened by Communist retaliation in South Vietnam. Upon entry of a South Vietnamese citizen under one of the other categories, however, his spouse and unmarried children would qualify under subpart (2) for preferential immigration status.

A significant number of Vietnamese refugees, however, might be accorded preferential treatment under subpart (3), providing entry for individuals skilled in the professions, science or the arts. The term "profession" is defined in Section 1101(a)(32) to "include but not be limited to architects, engineers, lawyers, physicians, surgeons, and teachers in elementary or secondary schools, colleges, academies or seminaries", and has been extended to include such activities as accounting and business administration. A caveat apparently requires all such applicants to display educational qualifications, or a combination of education and work experience, essentially equivalent to that obtained by United States residents entering

Footnotes at end of article.

the same profession.[29] While no detailed skill breakdown has so far been supplied regarding individuals deemed to be on a Communist "blacklist", Hosmer, in the RAND study (pp. 184–186), lists the following categories of South Vietnamese as most in danger of Communist retaliation in the event of a takeover: (a) Viet Cong defectors (particularly persons actively cooperating with the Government of South Vietnam); (b) intelligence and counter-intelligence personnel (from top level personnel to hamlet level officials); (c) national police and other security personnel; (d) government officials (particularly senior officials in the central government and middle level province and district officials); (e) military commissioned and non-commissioned officers; and (f) leading members of political organizations actively opposed to the Viet Cong program.

These groups should contain a relatively large number of persons qualifying as "professionals" under subpart (3). Under the Administration's more pessimistic estimate, their numbers would be augmented by strictly private professionals who, it would be argued, are endangered simply because of their economic class. Furthermore, past experience with Hungarian and Cuban refugee indicates that refugees fleeing a Communist regime contain a significant percentage of professionals. (See Section B below). A major shortcoming of subpart (3), however, is its annual numerical limit of 17,000 immigrants.[30] This has resulted in a waiting list covering roughly two years, although the list apparently contains many applicants from countries which readily fulfill their annual 20,000 person limit, thus the interim period during which a professional seeking to immigrate would have to remain in South Vietnam or in another asylum country would not extend for this entire period.[31]

Subpart (6), which provides for the entry of immigrants capable of performing "skilled" or "unskilled" labor, offers another significant potential route for Vietnamese refugees. Many of those individuals within the Rand study categories should exhibit varied skills allowing entry under this subpart.

Section 1182(a)(14) provides, as a prerequisite for granting a visa under this category, that the Secretary of Labor must certify to the Secretary of State and the Attorney General that there are insufficient workers in the United States "able, willing, qualified, and available" at the time of application and at the applicant's destination to perform the skilled or unskilled labor in question and that the applicant's employment would not "adversely affect the wages and working conditions" of similarly employed United States workers. The certification procedure itself is apparently not a major roadblock, since the full 17,000 visas under this section are allocated each year. There is, however, a waiting list under this category, presently extending back to November, 1969 applicants.[32] Again, this would at most necessitate a waiting period in an initial asylum country of up to ten months abroad, in the absence of special remedial measures.

Subpart (8) of Section 1153 provides that, to the extent that the annual quota is not filled through applications under preference categories (including the specific refugee category mentioned below), visas shall be made available to qualified immigrants "strictly in the chronological order in which they qualify." Due to regular failure to fulfill the allotments for relatives, about 30,000 visas are annually available to non-preference applicants. The waiting list for this group extends from September 1969[33] and, while applicants must also meet the labor certification requirements mentioned above, these appear to be applied less rigorously to non-preference applicants.

In summary, although there are difficulties in assessing the availability of visas under the first six preference categories without more specific information on skill levels of potential refugees, the benefit potential refugees can derive from such categories might be substantial. Particularly in light of the annual availability of roughly 30,000 non-preference visas (waiting list problems aside), these categories might well provide visas for up to half of the annual maximum quota of 20,000 Vietnamese admissible under the basic immigration legislation. And, of course, these categories could be drawn upon year after year to bring in refugees from a country of first asylum.

2. *Special Provision for Political Refugees.* The immigration laws provide two specific entry routes for the political refugee: (1) as a "conditional entrant" through the preference system described above and (2) as a "parolee" pursuant to discretionary powers granted to the Attorney General.

Conditional entry. As the seventh preference category, Section 1153(a)(7) provides that "conditional entry" may be granted to refugees not exceeding 6% of the annual maximum figure (i.e., 10,200 persons). "Refugees" are defined as individuals who, because of persecution or fear of persecution because of race, religion, or political opinion, have filed from a Communist or Communist-dominated country or area (or from the general area of the Middle East) and who are "unable or unwilling to return to such country or area on account of race, religion, or political opinion. . . ." Also included within this category are individuals uprooted by national calamities and unable to return to their prior homes.[34]

The regulations (8 CFR § 235.9(a)) set forth countries from which application for conditional entry status may be made. Lebanon is the listed country closest to Vietnam, but an appropriate amendment could quickly remedy this situation. The regulations (§ 235.9(c)) also require assurances of employment and housing, as well as transportation to the new residence, as prerequisites to granting conditional entry status. Appropriate government programs would surely make adequate provision for these assurances but, to the extent necessary, exceptions to these requirements could be provided through amended regulations.

The annual 10,200 quota was apparently exhausted by the mid-point of the fiscal year ending in June, due to the large number of refugees fleeing Czechoslovakia in the last two years. From 1966 to 1969, however, roughly 3,000 places under this category were left vacant annually. The camps from which Czech refugees have been immigrating are now relatively empty, indicating the likely return to pre-1969 conditions for conditional entry applicants.[35] The requirement imposed by Section 1153(c), that applicants within each category be taken in the order of their application, applies only to the first six preference categories, thus authorizing granting of conditional entry to areas of greatest need or impact upon national interest.

Parole. While the 1965 amendments to the immigration laws added for the first time *specific* provision for the admission of refugees, the Attorney General has since at least 1952 had the power to grant special dispensation to individuals in emergency situations. Section 1182(d)(5) provides that the Attorney General may, in his discretion, "parole into the United States temporarily under such conditions as he may prescribe for *emergent reasons or for reasons deemed strictly in the public interest* any alien applying for admission to the United States. . . ." (Emphasis added).[36] The "bloodbath" that the Administration fears may occur in Vietnam certainly constitutes an emergency and providing specific dispensation to endangered South Vietnamese citizens must be deemed action "in the public interest."

The power to parole refugees under Section 1182(d)(5) has been exercised on numerous occasions. Following the 1956–57 Hungarian Revolution over 30,000 Hungarian refugees were admitted into the United States, 15,000 of whom were paroled by the Attorney General upon request of the President.[37] Between 1962 and 1965, over 15,000 Chinese refugees were paroled into the United States.[38] And a significant percentage of the half million Cuban refugees admitted to this country since 1959 likewise came through the parole process.[39] Finally, the Attorney General has apparently made recent use of this power to allow the entry of 1,500 Polish and Czechoslovakian refugees per month during the first six months of 1970. Such action was apparently taken, at least in part, because of the exhaustion of the conditional entry quota for the fiscal year ending in June, 1970.[40]

Thus, even without reference to the six preference categories mentioned above, existing provision for annual admission of over 10,000 refugees and purovides an additional mechanism whereby the Attorney General may authorize admission of whatever number he deems necessary under emergency conditions or in light of his assessment of the public interest. While the conditional entry provisions apply to political refugees from all Communist-controlled areas and the Middle East, as well as refugees from natural calamities, surely priority (if necessary), in light of our past commitment to South Vietnam, would be granted to individuals fleeing Communist persecution there. Further the 10,200 conditional entrant quota is an annually recurring means for bringing refugees into this country, thus allowing gradual assimilation of refugees from various countries of first asylum.

3. *Ad Hoc Legislative Solutions.* Should the need arise for more decisive and immediate action than can be provided under existing legislation, or should the Administration be reluctant to utilize existing procedures without a further Congressional mandate, an *ad hoc* legislative solution could be sought. At an earlier point in the history of our immigration laws, before the development of the specific refugee provisions, such *ad hoc* solutions were utilized to deal with all refugee emergencies. These should provide valid precedents for any future legislative steps. The Displaced Persons Act of 1948 (62 Stat. 1009) authorized granting political refugees up to 202,000 visas, without regard to national quotas then in effect. This Act was apparently amended two years later to allow an additional 39,000 political refugee visas. In 1953, Congress passed the Refugee Relief Act of 1953 (71 Stat. 639) which provided for 205,000 visas, again without regard to existing quotas. These two Acts, as well as the Refugee-Escapee Act of 1957 (71 Stat. 639), also made special provision for the adjustment of status to that of permanent resident for a specified percentage of refugees admitted under their terms or pursuant to other provisions.

4. *Summary.* In conclusion, in the event of threatened Communist retaliation in the wake of United States withdrawal from South Vietnam, specific provisions in our immigration laws covering political refugees would allow admission of roughly 10,000 immigrants annually. In conjunction with those individuals qualifying under the profession, skill and relationship preference categories, any likely flow of political refugees from South Vietnam should be able to fill that country's 20,000 annual limit.

To the extent that this figure, which is available each year, is inadequate, the Attorney General has the power to authorize temporary "parole" into this country of additional South Vietnamese that he deems to be under threat of political reprisal. Ample precedent also exists for the development of a legislative solution specifically tailored to meet any extraordinary refugee problems, be-

Footnotes at end of article.

yond the scope of the above provisions, that might arise.

B. Past U.S. refugee asylum and resettlement efforts

Humanitarian assistance to refugees has been a basic tenet of United States policy throughout its history. The United States is, in fact, in large measure a "nation of refugees" from various European persecutions and conflicts during the 17th, 18th and 19th Centuries. Likewise, in this century, particularly in the post-World War II period, the United States has made major efforts to resettle refugees arriving in this country, and has provided substantial assistance to many more who have fled to other nations.

At the outset, it should be noted that many of our recent refugee assistance efforts, particularly for Asian refugees, have not had as a primary component a substantial refugee influx into the United States. For instance, our aid program for the 60,000 Tibetans who left their country after the 1960 Chinese takeover consisted principally of more than $2 million in aid for emergency relief and resettlement in India and Nepal, in addition to substantial quantities of surplus food commodities provided under Public Law 480. Few Tibetans came to the United States, most remaining in the Asian countries of first asylum.

Likewise, our on-going Far East Refugee Program, begun in 1954, which assists Chinese refugees in Hong Kong and Macao, emphasizes resettlement efforts in the country of first asylum or other Asian countries rather than emigration to the United States. While 15,000 Chinese refugees were brought to this country from 1962–65 under a special parole program, this represents only a tiny portion of the Chinese refugees assisted under this program. Nearly $15 million has been expended on this program, primarily through contracts with voluntary agencies, plus vast quantities of surplus foods valued at over $50 million.

The general statutory authority for United States assistance to refugee groups in other asylum countries is contained in the Migration and Refugee Assistance Act of 1962, 22 U.S.C. § 2601–05. Section 2601(b)(2) authorizes appropriations as necessary "for assistance to or in behalf of refugees designated by the President . . . when the President determines that such assistance will contribute to the defense, or to the security, or to the foreign policy interests of the United States." Besides regular appropriations under this Section, Section 2601(c) provides for up to $10 million to be transferred from annual foreign aid appropriations for this or other refugee assistance purposes specified under the Act when the President "determines it to be important to the national interest . . . in order to meet unexpected urgent refugee and emigration needs." A large-scale aid program to Vietnamese refugees who had gained asylum in other countries would certainly "contribute . . . to the foreign policy interests of the United States," and the $10 million contingency fund could be tapped under presidential order for this effort.

Means of insuring the existence of other willing asylum nations and of coordinating international humanitarian resources to assist in handling a potential Vietnamese refugee problem will be discussed in the next section. Since the majority of educated Vietnamese have a French-oriented background, it is unlikely that most would choose the United States if they were allowed to emigrate to France, where a substantial colony (10–15,000) of Vietnamese already live. Others might well prefer to live in other European or Asian countries. Even assuming, however, that all Vietnamese refugees would choose or would be forced, because of lack of international cooperation, to utilize the United States as their asylum country, the resources and capability to accomplish this are not lacking. On two occasions in recent history—the Hungarian and Cuban crises—the United States has shown that it can absorb a large number of refugees during a short period of time, and can use present legislation or enact special legislation to facilitate this.

When Hungarians left their country in large numbers during the winter of 1956/57, President Eisenhower instituted an emergency parole program that called for transporting 21,500 refugees to the United States within a few weeks' time. Within five months over 32,000 refugees had reached the United States, virtually all penniless and few of whom could speak our language. At Camp Kilmer, New Jersey, a reception center was instituted where more than 20 voluntary and government agencies, coordinated by a special Presidential Committee, served these refugees. Job skills were ascertained, and matching job offers solicited throughout the United States.

Resettlement of virtually all the initial refugee wave of 32,000 was accomplished by May 1957, little more than five months after the crisis began. Resettlement was facilitated by the fact that over one-half of the employable refugees were professionals and skilled or semi-skilled workers. To insure satisfactory permanent assimilation of these refugees into American society, governors' and mayors' committees were instituted in resettlement states and communities to continue assistance efforts after the federal government's task was over.

Even in the Hungarian crisis, however, the United States was not the country of first asylum, since most Hungarian refugees had first migrated to Austria. The first occasion in recent history when we became the country of first asylum for a large refugee population came in 1959, when Cubans began to flee the Castro regime. By late 1960 the refugee flow had so increased that the federal government established a Cuban Refugee Emergency Center in Miami. In February 1961 a full-scale Cuban Refugee Program was formally instituted within the Department of HEW. The Migration and Refugee Assistance Act of 1962, referred to above, was largely a response to the Cuban refugee problem. Special provisions were included in this Act (Sections 2601(b) (3)–(6)) for assistance to Western Hemisphere refugees, including aid to state and local agencies providing welfare services, special health, education, and vocational (including professional) training programs, and payment of transportation and resettlement expenses.

By 1969 over a half million Cuban refugees had reached the United States, the vast majority of whom had been served in some form by this federal program. The total cost of the Cuban Refugee Program to this point was slightly over $400 million. Resettlement was handled primarily by four national voluntary agencies working under HEW contract—Catholic Relief Services, Church World Service, United HIAS Service and the International Rescue Committee—all experienced in resettling refugees in the United States.

Within the first three years of the program, over 70,000 of the approximately 169,000 refugees registered in Miami were resettled. Resettlement was accomplished in every state and several U.S. territories, and a few refugees were resettled in Latin America and European countries. These efforts are still continuing. Resettlement in other parts of the United States has apparently been quite successful, primarily because, like the Hungarians, the Cuban refugees were a fairly skilled group. About half of the employable refugees were professional, technical and managerial personnel, and only about 25 percent were unskilled and semiskilled workers.

In the highly unlikely event that (a) more than 100,000 South Vietnamese wish to seek asylum in the event of United States withdrawal and (b) the United States will not be able to make, through international diplomatic negotiations, provision for resettlement in other nations of a significant percentage of whatever number desire asylum, these experiences indicate that even a large-scale influx of destitute, non-English speaking refugees into the United States can be dealt with on a rational, humanitarian basis. In such a contingency, specific health, education, training, and resettlement programs on the model of those in the Cuban program could be authorized through amendment to the 1962 Migration and Refugee Assistance Act.

Although it is extremely unlikely that the potential Vietnamese refugee influx would ever reach the level of the half million Cubans already assimilated, the cost of the Cuban relief and resettlement program in its first seven years, even for this number of persons—$400,000,000—represents only an insignificant portion of our yearly Vietnam War expenditures. Using a highly conservative $12 billion estimate of the cost of the Vietnam War for the current fiscal year,[41] even a refugee program of this magnitude would cost less than two weeks of continuing the war. Our experience with accepting 32,000 Hungarians—possibly a more reasonable estimate of Vietnamese the United States might be called upon to take within our borders, even if the total seeking asylum were over 100,000—shows that a refugee population of this size, given substantial and concerted action from volunteer and government agencies, can be assimilated in far less time at a far smaller cost.

One unknown factor is whether the percentage of skilled refugees would be significantly smaller than the high percentage of skilled persons who emigrated from Hungary and Cuba. As previously noted, even according to the Rand Study quoted by the Vice-President as setting the potential "bloodbath" figure at over 100,000, those South Vietnamese most in danger of death or long imprisonment at the hands of a Communist regime are principally civilian government officials, military officers, national police, intelligence and counter-intelligence personnel, and officials and party members of South Vietnam's right-wing political parties.[42] (See Section A above.)

All of these groups tend to be among the better educated and skilled elements of Vietnamese society. Many from this strata of Vietnamese society, because they have been required to deal with United States military and civilian personnel during the long American presence in their country, have learned basic communication in our language. The list does not include the large rural peasant or unskilled or semiskilled urban worker Vietnamese classes of Vietnamese society, who would create the most difficult education, training and resettlement problems in the United States or other foreign countries. This is consistent with the experience in most Communist takeovers, where it is the upper classes—the beneficiaries of the supposed inequalities of the old order—who feel most threatened and thus leave the country.

The fact that these potential refugees are Asian should not be a deterrent to United States resettlement. Although there has never been a substantial Vietnamese community in this country, we have had substantial immigrations from other Asian countries in the past. Large Chinese, Japanese and Filipino populations, particularly in the far West, exist in this country at the present time. The 1960 Census found over 464,000 Japanese, 237,000 Chinese and 176,000 Filipinos living in the United States, as well as sizeable numbers of Koreans, Indonesians and Asian Indians. It is reasonable to as-

Footnotes at end of article.

sume that, on the basis of past increases, the 1970 Census will show well over a million persons of Asian descent in the United States.

One of the principal justifications for entering the Vietnam War was that we are an "Asian nation" as well as a Europe-oriented nation. If we sincerely believe this, we should not hesitate to accept a new Asian population influx that we are, at least technically, clearly capable of absorbing. The recent admission of 15,000 Chinese parolees—refugees from Hong Kong—illustrates that resettlement for new groups of Asian refugees in this country is feasible. The existence of a substantial Vietnamese colony in France shows that Vietnamese are equally capable of integrating into a Western culture.

Thus there is nothing in past history to indicate that the United States could not, utilizing existing and special legislation, deal unilaterally with a Vietnamese refugee problem of the magnitude envisioned by those who hypothesize a "bloodbath" in the event of United States withdrawal from South Vietnam. To the contrary, our experience indicates that such a refugee population could be absorbed at a cost insignificant in proportion to expenditures for continuing the war, if our resources and will are mobilized in the same manner in which we met the Hungarian and Cuban crises.[43]

C. The potential for multilateral assistance to Vietnamese refugees through international governmental and private agencies

In attempting to accommodate those South Vietnamese wishing to emigrate in the event of United States withdrawal or a Communist takeover, however, the United States is not limited to its own resources. Nor is it clearly necessary for the United States to resettle all or even the majority of these refugees within its own boundaries. Many international organizations whose resources are devoted exclusively or in part to assisting refugees throughout the world have the status to mobilize world-wide cooperation and multilateral aid for the emigration and resettlement of South Vietnamese refugees.

The principal coordinator of international refugee assistance is the United Nations High Commissioner for Refugees (UNHCR). This office, established by the UN General Assembly in 1950, succeeded the United Nations Relief and Rehabilitation Administration, which dealt with refugees and displaced persons during the Second World War, and the International Refugee Organization, which continued these efforts in the immediate postwar period. The High Commissioner's initial task was to promote international cooperation for the protection of refugees throughout the world and to attempt to obtain generous asylum policies on the part of present and potential host countries for refugees. In 1954, however, the General Assembly authorized the High Commissioner to go beyond this purely diplomatic role and to carry out direct assistance programs that tried to bring about permanent solutions—through repatriation or resettlement—to refugee problems.

The High Commissioner's program is administered by a 30-member committee that meets twice a year at Geneva, Switzerland, the High Commissioner's headquarters. A representative of the United States is a member of this committee. The United States has been a substantial annual contributor to the High Commissioner's activities, under the authority for such contributions contained in the 1962 Migration and Refugee Assistance Act (Section 2601(b)(1)).[44]

The High Commissioner's role is basically a coordinating rather than an operational one. His Office implements a specific area refugee program in close cooperation with other intergovernmental or voluntary service organizations as operational partners. These have included the Intergovernmental Committee for European Migration, the League of Red Cross Societies, religious voluntary agencies such as the Catholic Relief Services, World Council of Churches, Lutheran World Relief, and the American Friends Service Committee. The High Commissioner's Office also draws heavily upon the resources of other United Nations bodies such as the International Labor Organization (ILO), World Health Organization (WHO), Food and Agriculture Organization (FAO), and United Nations Development Program (UNDP).

The most important international organization that deals with refugee transportation, as opposed to the many organizations, such as the Red Cross and religious-based groups, that provide assistance once refugees have reached an asylum or resettlement country, is the Intergovernmental Committee for European Migration (ICEM). ICEM was established in Brussels in 1951 at a conference convened at the initiative of the United States. Its initial aim was to help solve European postwar population pressure and refugee problems by assisting emigration to less developed nations or other willing host countries. ICEM now has 31 member governments. Its Director is a United States citizen, John F. Thomas, the former Director of our Cuban Refugee Program. Contributions to its budget are voluntary, with the United States generally contributing approximately one-third of the total.[45]

From its inception until May, 1970, ICEM has moved over 1,700,000 persons, approximately half of them refugees.[46] The largest number of refugees have been accepted by the United States, with Australia and Latin America following. Although ICEM, as its name indicates, originally focused principally upon European emigration, in recent years it has begun assisting refugees in other parts of the world, including the Middle East, North Africa, and the Far East. Thus there seems no reason why it could not, if requested, undertake logistical planning for a possible large-scale Vietnamese emigration.

The High Commissioner's Office, with the aid of ICEM, the Red Cross, and other operational partners, has shown that it can deal effectively with refugee and asylum problems of the magnitude represented by the maximal projections of Vietnamese who would be threatened by a Communist takeover. It has also shown that its resources and those of its operational partners can be mobilized quickly to handle emergency situations.

The first major refugee crisis during which the Office acted as the general coordinator of relief operations came in the winter of 1956–57 when more than 200,000 Hungarian refugees crossed into Austria and Yugoslavia. Actual relief operations were carried out principally by UNHCR's operating partners, the League of Red Cross Societies and ICEM. The High Commissioner's Office collected $11.6 million from worldwide fund appeals, the League provided services and supplies worth approximately $30 million, and ICEM moved nearly 206,000 refugees during the oeration.[47] The United States cooperated fully in these relief efforts, as noted in the previous section. But this operation was not a unilateral but a worldwide resettlement effort, coordinated by international agencies. The United States accepted less than one-sixth of the total number of refugees.

The High Commissioner's Office also played a major role in solving the Algerian refugee crisis. Beginning in 1957, more than 200,000 Algerians crossed into Morocco and Tunisia. With the League of Red Cross Societies as its operational partner, the High Commissioner saw that food, shelter, and clothing were provided to these refugees. Following the Evian Ceasefire Accords of 1962, which specifically provided for refugee amnesty, the High Commissioner participated, along with the Algerian and French governments, in the tripartite commission that carried out their successful repatriation. Contributions from governmental and private sources to UNHCR and the League for this joint operation totaled over $22 million.

The majority of the High Commissioner's present resources are devoted to the substantial refugee problem in Africa, where, even prior to the Nigerian Civil War, the Office was providing some form of assistance to an estimated half million refugees created by national and tribal disputes.[48] The High Commissioner's activities in Africa have ranged from purely diplomatic efforts to encourage African nations to grant voluntary asylum and full civil rights to refugees to large-scale medical, shelter and other emergency relief efforts (with the Red Cross and other volunteer agencies) and long-range resettlement and development programs (with the United Nations Development Program).

The High Commissioner's Office also has a continuing concern with Asian refugee problems. One of its first direct assistance programs was undertaken to aid Chinese refugees in Hong Kong and Macao, a program which is still continuing. It also coordinates large-scale assistance efforts to aid the Tibetan refugees currently in India and Nepal. The United States, as previously noted, assists and supplements both these efforts.[49]

The High Commissioner's Office therefore seems uniquely suited to assist the United States in diplomatic negotiations with potential host nations for South Vietnamese refugees, and to coordinate international assistance, resettlement and redevelopment efforts in the event that a refugee emigration does occur. Although the High Commissioner's mandate would not technically extend to Vietnamese until they had actually left their country[50] his Office should legitimately be able to initiate planning for a potential future refugee problem. If objections were raised to these activities, the United States could seek a General Assembly resolution to cover this situation. Such special resolutions, calling on the High Commissioner to extend his "good offices" to assist governments in dealing with situations outside his technical mandate, have been given in the past. Although the initial responsibility for moving refugees out of Vietnam, to bring them within the High Commissioner's specific mandate, would lie primarily with the United States, it could call upon the ICEM, Red Cross, and other international agencies besides the High Commissioner to assist in providing transportation and initial aid until full United Nations cooperation could be activated.

The United States has cooperated fully in the past with the High Commissioner, ICEM, Red Cross and other voluntary agencies in dealing with the Hungarian, Tibetan, Algerian and other refugee situations on an international basis.

It recently did so again in the Czechoslovakian crisis. To date, however, the United States and South Vietnamese governments have apparently been unwilling to seriously attempt to marshal active international concern for the needs of Vietnamese already refugees within their own country or those who might become refugees in the event of a Communist takeover. Both governments apparently fear that requesting international planning for Vietnamese refugee efforts would allow opportunity for international debate of the justice of United States involvement in the war and the tactics used by both governments to carry it out that contribute to the high civilian mortality and displacement rate. Thus they have so far

Footnotes at end of article.

attempted to "go it alone" on refugee assistance.

If a large-scale "bloodbath" is seriously considered a probability, the United States and Saigon governments should immediately begin to mobilize the resources of the international community to meet this contingency, utilizing the same pattern of coordination between United Nations bodies, voluntary agencies, and UN member governments successfully used to deal with the Hungarian, Algerian, Tibetan, and other recent large-scale refugee emigrations. Efforts should begin immediately to encourage the High Commissioner's Office, ICEM, the League of Red Cross Societies, and other voluntary organizations to plan for such a Vietnamese emigration, with the assurance that if a bloodbath is actually threatened, they will be given a full partnership role in the effort to remove all who might be in danger. The French were willing to enter into such an international partnership with the High Commissioner to solve the Algerian refugee problem after a ceasefire was reached. We should be no less willing to commit ourselves to the solution of such problems through international means.

Even if the United States were unwilling to seek or unable to obtain broad-based international cooperation in planning for Vietnamese asylum and resettlement, it should at least seek to assure asylum in other nations through bilateral or multilateral discussions and treaty agreements. The first source of such agreements should be our "allies" in the Vietnam War—Thailand, the Phillipines, South Korea, Australia and New Zealand. Since we have been forced to underwrite the cost of troops from the first three nations, it is difficult to believe that they will offer asylum to Vietnamese without similar financial assistance from us. Supporting refugee asylum in these countries should, however, be far less expensive than the cost of continuing our support of their troops in Vietnam. Our other allies should be asked to support Vietnamese asylum without United States assistance. Australia, like the United States, has accepted large refugee emigrations—although predominantly European—in the past, and still has substantial underpopulated areas that could be used for resettlement and redevelopment. The United States should likewise begin immediate diplomatic discussions with France, which has already accepted a significant number of Vietnamese refugees, on its willingness to accept greater Vietnamese immigration in the future.

Those who sincerely believe that a "bloodbath" might occur should be the strongest supporters of immediate and serious diplomatic efforts to assure that no one nation will have to take upon itself the total burden of refugee asylum and resettlement. By emphasizing that the Vietnamese situation, whatever its causes and current political state, is now a worldwide humanitarian problem and by seeking international assistance to meet it, the United States can only realize long run gains. In the short term, the United States may by such actions open the war to greater international debate and criticism. But if it can effectively mobilize world opinion to accept the view that there is international responsibility for relocation of any South Vietnamese that might be threatened by a Communist takeover, the results will be worth the short-term risks.

The alternatives are less palatable. Leaving within South Vietnam those who believe their lives would be in danger after our withdrawal would cause much greater international criticism of the United States. Accepting all Vietnamese emigrants into the United States, although technically feasible, still is not the optimum solution. Many Vietnamese may prefer to live in an Asian or European environment, and that choice should be open to them. The final alternative, ignoring the problem and letting the war drag on, with its continuing "bloodbath" and substantial internal refugee problem, is the most unacceptable of all.[51]

D. Conclusion

We have attempted to show, in this section, that there is no lack of avenues through which any "bloodbath" possibility can be effectively foreclosed. In the final analysis, however, the solution to any potential bloodbath situation depends essentially upon the political will of this country's leaders. Devising and implementing appropriate mechanisms for asylum and resettlement, here and abroad, presents no insurmountable challenge. It surely calls for no more creativity and expenditure of time and energy than has so far been spent in the development of the "bloodbath" spectre by the Administration. To the extent that this Administration is truly concerned with the lives of the inhabitants of South Vietnam, it should direct its energies both to developing solutions along the lines advanced in this paper and to assuring the political commitment on the part of the American people necessary for their implementation. Indulging in speculative "bloodbath" rhetoric, while the actual bloodbath in Vietnam continues unbated, will only delay this process and make it more difficult to carry out effectively.

[27] Mankiewicz and Braden, *supra;* Shirkey, *supra* at 5. Note particularly Charles Shirkey's projections of civilian casualties and deaths under certain factual assumptions.

[28] Immigrants from Western Hemisphere countries are not included in this overall quota, but are dealt with under a separate provision of the Immigration and Nationality Act.

[29] *Factora* v. *District Director of U.S. Immigration and Naturalization Service*, 292 F. Supp. 518 (C.D. Cal. 1968); *Guinto* v. *District Director of U.S. Immigration and Naturalization Service*, 303 F. Supp. 1094 (C.D. Cal. 1969).

[30] The certification requirements specified below in regard to skilled and unskilled labor apply equally to individuals seeking entry under the professional category, but should raise no difficulties for the latter group.

[31] Telephone conversation with Immigration Service officials, August 21, 1970. Of course, professionals could also seek entry through the other avenues detailed below.

[32] Telephone conversation with officials of the Immigration Service, August 21, 1970.

[33] Telephone conversation with Immigration Service officials, August 21, 1970.

[34] Persons entering the United States as "conditional entrants" are deemed "excludable" aliens, rather than permanent residents subject to deportation, and their status is thus not surrounded with as many due process safeguards as are accorded under a deportation hearing. A proviso in subpart (7), however, allows immigration visas not exceeding one-half of the 10,200 annual allotment of conditional entries to be granted to refugees who have been continuously present in the United States for two years. Visas granted under this proviso result in an equivalent decrease in the number of "conditional entries" available during the year in which they are made available. Section 1153(g) and the regulations in 8 CFR § 235.9(3) otherwise provide for inspection of conditional entrants two years after entry and authorize application for resident visa under conditions applicable to applicants outside the United States.

[35] Telephone conversation with Immigration Service officials, August 25, 1970, and 9 HCR Bull. 7 (Jan.–March, 1970).

[36] Admission through parole also leaves an immigrant in "excludable alien" status, explained above, and when the Attorney General determines that the purpose of parole has been served, he may be returned abroad for treatment in accordance with normal immigration procedures. Entry as a parolee is apparently not conditioned upon the job, housing, and transportation qualifications detailed above.

[37] See 103 Cong. Rec. 1355 (1957) and *Report by the President's Committee for Hungarian Refugee Relief*, May 14, 1957, 36 Dept. State Bull. 984–85 (1957).

[38] See Presidential Directive, May 23, 1962, 46 Dept. State Bull. 993 (1962) and A. E. Evans, "The Political Refugee in U.S. Immigration Law and Practice," 3 *The International Lawyer*, 204, 219 (1969). Parole of

Chinese refugees was apparently conducted under the provisions of the Fair Share Act of 1960 (74 Stat. 504) which specifically authorized the parole of political refugees. This specific coverage of political refugee parole was not carried over to the amended immigration scheme in 1965. While it might be argued that the elimination of this specific provision, in conjunction with the inclusion of a particular preference category for political refugees, constitutes a Congressional intent to restrict the Attorney General's powers to non-refugee parolees, it must be noted that this power had been used by the Attorney General to parole refugees prior to the passage of the Fair Share Act and, as indicated below, Attorney General Mitchell has resorted to this power during the first six months of 1970.

[39] Evans, *supra* at 219–220.

[40] Interview with staff members of the Senate Subcommittee to Investigate Problems Connected with Refugees and Escapees on July 13, 1970, and 9 HCR Bull. 7 (Jan.–March 1970).

[41] See testimony by former Budget Director Charles L. Schultze before the Senate Committee on Foreign Relations (April 29, 1970); press conference, Secretary of Defense Melvin Laird, July 27, 1970.

[42] The other category mentioned in the RAND Study—Viet Cong defectors—might range from highly skilled to unskilled, but this group should not comprise the largest percentage of refugees.

[43] Much of the information used in this section is contained in publications of the Senate Subcommittee to Investigate Problems Connected with Refugees and Escapees including *U.S. Assistance to Refugees Throughout the World*, 91st Cong., 1st Sess. (1969) and *Resettlement of Cuban Refugees*, 88th Cong., 2nd Sess. (1963), both committee prints. See also *Report of the President's Committee for Hungarian Relief* (May 14, 1957), 36 Dept. State Bull. 984–85 (1957).

[44] The High Commissioner's administrative budget is financed through the overall United Nations budget, but annual budgets for direct refugee assistance programs are separately financed through voluntary contributions from UN member governments at annual pledging conferences. Emergency programs are funded by specific appeals from the High Commissioner's Office. Seventy governments pledged contributions to the $5.8 million 1970 budget for direct assistance programs.

[45] These contributions, like those to the High Commissioner's work, are authorized by the 1962 Migration and Refugee Assistance Act (Section 2601(a)).

[46] The remainder were national migrants who wished to move from overpopulated Western European areas to underdeveloped and sparsely populated countries.

[47] Of the over 32,000 refugees accepted by the United States, approximately two-thirds came to this country by the United States Military Transport Services and one-third by ICEM.

[48] This figure includes sizeable groups of refugees from the Portugese African colonies, Rwanda, Sudan, Ethiopia, and the Congo.

[49] One of the world's most pressing refugee problems—that of the Palestinians—is omitted from the list of the High Commissioner's programs because it is handled exclusively by a separate UN body, the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). This important agency, established prior to the High Commissioner's Office, in 1949, continues to provide aid, education and vocational training to the 1,500,000 refugees created by two Arab-Israeli wars.

[50] Because the High Commissioner's mandate speaks of persons "outside their country of origin," it does not extend to persons displaced within their country by a civil war, such as the hundreds of thousands of refugees presently in Vietnam.

(1970).

ADJOURNMENT TO 8:30 A.M., MONDAY, AUGUST 31, 1970

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 8:30 a.m. Monday next.

The motion was agreed to; and (at 5 o'clock and 19 minutes p.m.) the Senate adjourned until Monday, August 31, 1970, at 8:30 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 28, 1970:

CORPORATION FOR PUBLIC BROADCASTING

The following-named persons to be members of the Board of Directors of the Corporation of Public Broadcasting for terms expiring March 26, 1976:

Frank E. Schooley, of Illinois.
John Hay Whitney, of New York.
Jack Wrather, of California.
Saul Haas, of Washington.
Thomas W. Moore, of Connecticut.

COMMUNICATIONS SATELLITE CORPORATION

Ralph A. Peterson, of California, to be a member of the board of directors of the Communications Satellite Corp. until the date of the annual meeting of the corporation in 1973.

EXTENSIONS OF REMARKS

THE FASTEST, CLEANEST FORM OF MASS TRANSPORTATION

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. PELLY. Mr. Speaker, argument over the Federal Government's financial participation in the development of two prototypes of the supersonic transport is reaching hysterical proportions by those opposed to this project. And, as is generally the case when emotion is so prevalent, all too often little regard is given to the truth.

Continually, emotional arguments regarding effects the SST will have on our environment have been answered by scientists of the Boeing Co., the builder of the U.S. SST and from Federal officials, not the least of whom is the Secretary of Transportation. Yet, the same discredited distortions are offered under the apparent theory that if they are repeated often enough they will become fact.

Yet, the fact is that the SST will provide all Americans with the fastest, cleanest form of mass transportation ever developed. There is absolutely no proof that the SST will have an appreciable effect on the atmosphere. Its sonic boom will not be heard by those living in populated areas. It will present no radiation hazard to the average traveler.

As I said, Mr. Speaker, there is no proof that these detrimental effects to our environment will occur, but, of course, the total picture will be studied as prototype development continues. Certainly, no environmental harm can come from the production of two prototypes.

And, opponents force the issue to be raised again and again, but the contract with the manufacturer clearly states that the Federal money will be returned with the sales of the SST.

There have appeared three noteworthy articles in recent days on the subject of the SST. Two of them are columns from the Machinist newspaper, and the other appeared in Parade magazine. Lest it be forgotten that America is in competition with the British-French Concorde and the Russian TU–144, the clipping from Parade, and the aforementioned two from the Machinist, will appear at this point in the RECORD:

(NOTE.—Here is the text of the AFL–CIO Executive Council's statement on the need for a U.S. supersonic transport aircraft. The statement was adopted at the Executive Council's recent midsummer meeting in Chicago:)

The constantly increasing desire of the American people to travel by air requires the constant development of new and more productive aircraft. In the last seven years, airline travel has doubled. It is expected to triple again by 1980.

To accommodate more air travelers without adding to the congestion of the airlanes and airports, the aerospace industry must develop larger and faster airplanes.

Today, the USSR and the French and British are developing airliners that will fly at supersonic speeds on trans-oceanic flights. These nations, using government funds, have produced prototypes and are now well along in their testing programs.

READY TO PRODUCE

The American aerospace industry is ready to begin the production of two prototypes of its own supersonic transport. To make that production possible, government funds have been budgeted. The House of Representatives has voted $290,000,000; the Senate is scheduled to vote later this month.

Without an SST, the American aerospace industry will be unable to maintain its leadership in world aviation, losing most of the market for transoceanic airliners. That would mean a loss for the United States of its

principal manufactured export with an attendant loss of some twenty-two billion dollars in the U.S. balance of payments.

American aerospace workers will also lose sorely needed employment. Production of the two prototypes will provide work for 20,000 employees of the contractor—the Boeing Company—and its subcontractors.

In full production, the SST would provide directly an estimated 50,000 jobs in 40 states and indirectly at least 100,000 more in supporting activities.

EFFECT ON ENVIRONMENT

We recognize some of the reservations about the possible effect supersonic flight might have on the quality of the earth's environment. However, no environmental harm can come from the production of two prototypes. Two government councils have stated that on the basis of knowledge available today in the free world, there is no reason to believe that a fleet of supersonic airliners will degrade the atmosphere.

Nevertheless, the Department of Transportation has stimulated further research on the effects from supersonic flight of military aircraft. This information will be augmented in 1973 when the Russian TU-144 begins commercial service and again in 1974 when the French-British Concorde goes into commercial service. This research will provide further assurance that there will be no degradation of the atmosphere from the American SST.

Per passenger mile, jet aircraft pollute the earth's atmosphere less than any other form of mechanical transportation.

We urge the United States Senate to vote funds for the development of an American SST. The age of supersonic travel over water will soon be here. The United States cannot afford to be left in the lurch.

NECESSARY

Horace Sutton, associate editor of the Saturday Review, examined the arguments for and against the Supersonic Transport (SST) in the cover article of the magazine's Aug. 15 issue. Here are excerpts from his conclusions:

Secor Browne, head of the Civil Aeronautics Board . . . finds the Russians highly pragmatic, possessed of an infinite power to allocate men and resources. Skills are the one element they know to be in short supply.

To the Russians, the SST is primarily an internal machine. It's a long crummy ride from Moscow to Vladivostok or Novosibirsk, and if you can get your skilled people there in half or a third of the time, you get more out of them. To move people who have the skills faster and get more productivity out of them—that's why they are interested.

ADVANTAGES TO MAN

The capability of moving skilled people around the world faster is a far different theory than calling the SST a fast plane for the jet set. Instead of seven hours to Europe it will fly in two-and-a-half, instead of 14 hours to Asia, it will be five. These are the advantages to man.

The continuity of an aircraft industry that provided thirty billion dollars to the economy is among the advantages to the nation. Somehow along the way, the building of an SST became, in the minds of its detractors, a product of the military-industrial complex, a bogeyman of the Seventies. As Senator Jackson has said, "If the Ford foundation were building this plane, I don't think there would be this opposition." Nor, had it surfaced in some other season, would the possible environmental dangers have provided such a fat target.

NATIONAL PRIDE

Those who ask now whether we need the SST might well have asked similar questions at the onset of the steam-powered locomotive, of the electric trolley car, of the horseless carriage, and of the airplane itself.

No nation that has placed a man on the moon needs to worry about national pride, and surely the American SST must not be built for reasons of national honor. But national economics is a vital issue, and employment is a vital issue, especially if we are to improve the lot of twenty-six million citizens who exist below the poverty level. If we are capable of producing a functional technology that will not despoil the planet, then the SST should be considered with favor.

Given today's concern for the environment and the authority which the President holds in the National Environment Policy Act, the time to seek international and reciprocal research and development is now.

Whether we build one or not, the age of supersonic transport has arrived.

SECRET FLIGHTS

Without fanfare of any sort the Soviet Union has secretly been testing its TU-144 supersonic airliner for the past four months.

On May 11th, the 120-seat airliner, captained by test pilot Eduard Yelyan, took off from an airfield near Moscow, flew at a speed of 1256 miles per hour. On May 26th Yelyan again tested the TU-144, this time at an altitude of 50,000 feet, flew at 1344 mph, more than twice the speed of sound.

The Soviet airliner has a top speed of 1560 miles an hour, will probably carry its first load of passengers later in the year.

It is for sale to the West.

In conclusion, Mr. Speaker, it should be pointed out that the emotional outcries being heard today in opposition to the SST are very similar to those of the past to other advanced modes of transportation.

It was New York Gov. Martin Van Buren who wrote President Andrew Jackson in 1829 that the Government "should create an Interstate Commerce Commission to protect the American people from the evils of railroads and to preserve the canals for posterity." Governor Van Buren's concern, as he stated it, was "railroad carriages are pulled at the enormous speed of 15 miles per hour by engines which in addition to endangering life and limb of passengers, roar and snort their way through the countryside, setting fire to the crops, scaring the livestock and frightening women and children." He concluded, "The Almighty certainly never intended that people should travel at such breakneck speed."

Also, in light of the discussions relating to the SST and the weather, the Armed Forces Journal is quoted in the June 4, 1870, edition as stating:

It is said that the iron rails of the Pacific Road have so affected the electrical conditions of the atmosphere of the American Desert as to increase the fall of rain.

And, the summary reached by our distinguished colleague from Ohio (Mr. BROWN) to the adverse Joint Economic Committee in the Senate is very timely. He said:

If the Joint Economic Committee had been advising Queen Isabella, we would still be in Barcelona waiting to prove the world round before daring the Atlantic.

Mr. Speaker, I certainly hope the Senate will look to the facts, not the illogical emotion, and that it will soon act favorably on the orderly continuation of America's supersonic transport development program.

URBAN RENEWAL IN ATCHISON, KANS.

HON. ROBERT DOLE

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, August 28, 1970

Mr. DOLE. Mr. President, by popular notion, urban renewal is often associated with rebuilding large deteriorated sectors of major cities, but the program is having a significant impact in smaller towns and cities. One such city, Atchison, Kans., has been conducting a substantial urban renewal program for more than 10 years, and the results have been impressive. A modern, attractive, and revitalized center for life in northeast Kansas has been established through the foresight and cooperation of local citizens and the financial aid of the Federal Government.

One of my primary contentions in recent years has been that rural and small-town America holds the ready-made answer to the crisis of pollution and overcrowding and the nearly unbearable strain of daily life which afflicts our giant urban areas. Fresh air, elbow room, and a chance for a life that is really worth living are the great resources of places such as Atchison.

President Nixon has given high priority to stimulating development of urbanized America and to encouraging local leadership for solving local problems. The Atchison example should provide encouragement for such programs in other towns and cities as well as for the concept of President Nixon's new federalism.

Mr. President, an article about urban renewal in Atchison, written by John Herbers, was published in the New York Times of August 21. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

URBAN RENEWAL COMES TO ATCHISON, KANS., WHERE FEDERAL AID IS SCORNED (AND ACCEPTED)

(By John Herbers)

ATCHISON, KANS., August 13.—Frank Todd is 79 years old, a retired Atchison banker and a former chairman of the Kansas Republican party, which champions self-help and a minimum of Federal spending. Yet he boasts openly that urban renewal, one of the most controversial of the big Federal domestic programs, "took this old river town that was rundown at the heels and made something of it." Urban renewal, known chiefly as a means of rejuvenating the core of big cities, is spreading to small communities across the country.

More than half of the renewal money that has been distributed from Washington in recent years has gone into cities of less than 25,000. The Department of Housing and Urban Development is besieged with new applications for aid.

Among the backlog of applications are those from about 150 small cities that have never received renewal funds. The Nixon Administration, with its strong rural and suburban orientation and a policy aimed at stemming migration of people to overcrowded urban centers, is allocating a larger share of the limited funds to the smaller communities than had the previous Administration.

In cities like Atchison, population 12,300

the results of urban renewal are faster and more dramatic than in large cities where the decay is so vast that it swallows Federal dollars for years before change is visible.

Here the central business district has been transformed. Plans for building shopping centers in the outlying areas, a trend even in small towns, have been abandoned. And the city is currently upgrading residential districts that have ruddy, unpaved streets, ramshackle houses and no sewers or street lights.

Further, urban renewal has primed the flow of other Federal funds into this basically conservative community where some of the town leaders still scorn money from Washington as a despoiler of local initiative.

Built on the bluffs of the Missouri River, 50 miles northwest of Kansas City, the community is best known, perhaps, for supplying one-third of the same of the Atchison, Topeka & Sante Fe Railway.

It has overdistinctive qualities. The other evening two citizens with nothing to do—but with an intimate knowledge of the townspeople—sat down and figured out that there were at least 31 millionaires in the city.

"And that's not counting the doubtful ones," one of them said.

The millionaires live for the most part in fine old Victorian mansions with ornate chimneys, towers and carriage houses. Half a hill away there may be the small home of a factory worker.

Atchison has St. Benedict's College, foundries, grain mills, and a public hospital that has no financial worries because it owns a profitable distillery. Some persons commute to work in Kansas City so they can live here.

In 1958 a flash flood that washed out most of the business district was, according to one resident, "the best thing that ever happened to Atchison." That was the beginning of urban renewal.

In subsequent years, with a $2.5-million renewal grant and an $800,000 publicly voted bond issue as matching funds, the city built a three-and-a-half-block mall—trees, grass, concrete canopies, fountains and rides for children—down the center of Commercial Street, the main artery.

Stores on either side were rebuilt and entire blocks of the buildings behind them cleared for parking lots. Children play on the mall while their parents shop, and it is used as well for square dances, art shows, fairs and other events.

"At first there was considerable opposition," recalled Mr. Todd, who served on the local renewal commission from the beginning. "People said to me, 'why, you will never close Commercial Street to automobile traffic.' But we did."

There is still opposition, Mr. Todd said, but it is more philosophical—antipathy to dependence on Washington—than practical.

C. V. O'Neill, editor of The Atchison Daily Globe, said that while some merchants had prospered greatly because of the project others not able to compete for the mall space had been hurt.

Nevertheless, when the downtown project was closed out, the city commission approved plans to open new projects in residential areas, with $40,000 left over from the downtown project as a starter for matching funds.

Three projects are planned. One is now under way in a destitute section of the South Side. It is a wilderness of weed-covered hills and substandard housing. The city has not made improvements there, it is explained, because the homeowners could not pay the assessments and the property would revert to the city.

With an initial $750,000 grant from Washington and local matching funds, sewer lines and water and lighting facilities will be constructed. With these improvements certain, new construction and rehabilitation of housing has begun. The array of Federal housing subsidies and relocation grants are being utilized. The plan is to make the neighborhood attractive to both the poor and nonpoor.

"We had citizen participation in renewal here long before Washington made it mandatory," said James A. Schroer, director of the renewal agency, a big friendly man who seems to know everyone in town.

The spirit of it all is peculiar to small-town America.

Hugo Siebermorgen, an insurance agent of some means, lives in a big house in the renewal area. He is said to cook the finest steaks in town in his backyard, which is crowded with tomato vines, beer coolers, grills and a huge American flag flying over it all.

Only a few steps away is a just-completed public housing project on land that Mr. Siebermorgen sold to the city housing authority. When a visitor asked his feeling about living next to public housing, Mr. Siebermorgen just smiled and said he would welcome his new neighbors.

The last project still under consideration—but virtually certain to go through if funds from Washington last—is to rehabilitate a less-rundown area on the North Side of the city. Most of the black population, which comprises 10 per cent of the city, live there in a neighborhood that is in the shadow of the homes of millionaires.

"For a town that is so conservative," said one of the civil leaders, somewhat apologetically, "we certainly got deeply involved in Federal aid."

SENATOR PROUTY'S WORK TOWARD A BALANCED TRANSPORTATION SYSTEM

HON. HOWARD H. BAKER, JR.

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 28, 1970

Mr. BAKER. Mr. President, our Nation has the technology to develop a truly balanced transportation system. I believe to properly apply this technology we need innovative and imaginative approaches to transportation. During his service on the Commerce Committee my good friend from Vermont, Mr. PROUTY, has demonstrated great innovation and imagination in his approach to transportation. He has provided bold leadership in this field.

I ask unanimous consent that a summary of his record be printed in the Extensions of Remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SENATOR PROUTY'S WORK TOWARD A BALANCED TRANSPORTATION SYSTEM

The transportation of people and goods in the United States accounts for more than 20 percent of our Gross National Product each year, and the way things are going, by the end of the seventies, we will be spending a total of $320 million every year, just to move freight and people in normal everyday commerce.

In fact, the demand for transportation services of all kinds is far outstripping population growth and most other forms of economic activity in this country. In the next twenty years we must double the transportation capacity we have developed since the founding of the Republic.

We must increase our capacity in a responsible way with full consideration given the environmental impact of alternative modes of transportation.

Our transportation system must be balanced ecologically and economically.

As a member of the Senate Commerce Committee, Senator Prouty has sought to provide for balanced, yet sustained, growth in our transportation capacity.

Senator Prouty is the ranking Republican on the Surface Transportation Subcommittee and serves on the Aviation and Merchant Marine Subcommittees. He also is the ranking Republican on the Special Freight Car Shortage Subcommittee. He is, therefore, in a position to act to insure our nation moves in new directions in transportation.

RAILROAD

During the 1960's the Executive Branch was reluctant to face up to the nation's deteriorating national rail system. Primarily through Senator Prouty's leadership both Congress and the Administration have moved on several fronts in the 91st Congress.

In 1969, Senator Prouty pressed for a solution to the crisis in intercity rail passenger service. By 1969 there were fewer than 480 intercity rail passenger trains in operation and those trains were creating an annual economic loss of over $250,000,000 for the rail industry .

In the fall of 1969 the Surface Transportation Subcommittee held extensive hearings on the decline in intercity rail passenger service and the Committee began considering possible solutions to the problem.

At that time Senator Prouty proposed a quasi-public corporation to take over the operation of intercity passenger trains. The Subcommittee did not adopt his proposal and on April 9, 1970 the Committee reported a bill authorizing $405 million direct operating subsidies to railroads.

Undaunted, Prouty filed individual views setting forth his comprehensive plan for the establishment of a National Rail Passenger Corporation. Prouty continued to meet with representatives of the National Rail Passenger Association, rail labor, rail management, the Interstate Commerce Commission, and the Department of Transportation in order to gain support for his proposal. Prouty maintained that direct operating subsidies had never solved any transportation problem and that it was the time to face this particular transportation problem with his new and pragmatic proposal.

Prouty succeeded in gaining unanimous support for his proposal, and by May 6, 1970 when the bill came to the Senate floor, Prouty had convinced the Committee leadership to join with him and, in an unprecedented move, an amendment was offered striking the complete text of the bill reported by the Committee and substituting the Prouty alternative. The Prouty alternative passed the Senate on May 6th by a vote of 78 to 3.

Senator Prouty's long struggle was successful and his colleagues noted his efforts. Majority leader Mike Mansfield praised the Senator for this "remarkable success." The Chairman of the Surface Transportation Subcommittee, Vance Hartke, a Democrat from Indiana, joined in commending Senator Prouty and Minority leader Hugh Scott noted "If there is one man to whom credit should go for the favorable action that this body has taken today, it is to the junior Senator from Vermont (Mr. Prouty)."

The Prouty bill would establish a new quasi-public corporation to take over the operation of intercity rail passenger service.

The new corporation would have 15 directors with 8 appointed by the President and 7 by the stockholders. Common stockholders, who initially would be railroads which bought into the corporation, would elect 3 directors. Preferred stockholders, who would be those buying stock issued for public subscription would elect 4 directors.

The corporation would be financed by a one-time Federal grant of $40 million, and would have upto a $60 million line of credit

guaranteed by the Federal government. Rail carriers would be relieved of their obligation to provide intercity rail passenger service by buying common stock in the corporation in an amount equal to the avoidable losses they incurred during 1969 because of passenger train operators. The corporation would also raise capital through the sale of preferred stocks to the public. The preferred stocks would carry a guaranteed 6 percent annual dividend and could be converted into common stock.

Prouty's amendment also contained the most liberal labor protection provisions of any legislation ever passed by the Senate. These provisions stem from Senator Prouty's service on the Labor and Public Welfare Committee, which considers legislation vital to railroad workers.

Because of his close working knowledge of railroad management and labor relations, Prouty persuaded the Commerce Committee to give prompt consideration to amendments to the 1907 Hours of Service Act, which had been locked in Congress since 1962.

Prouty, however, recognized that far more constructive legislation was needed if a framework for producing a truly efficient and effective rail industry were to be obtained. Specifically, Prouty led the way on the Hours of Service Act Amendments. Senator Prouty pushed for prompt Senate action on a bill which had passed the House. In Subcommittee he had several of his amendments adopted which insured passage of the bill in the Senate and which insured that the amendments would be workable. Among his amendments adopted were ones which exempt wreck relief crews from the limitations of the Act and one which made clear that hours of service for non-operating personnel could be no more than 9, rather than the 12 hour limit for operating personnel. (Under the 1907 Act, operating personnel had been limited to 16 hours work at any one time.)

This legislation was signed into law by the President on December 26, 1969 (P.L. 91–169) and was a significant updating of Federal law relating to working conditions for railroad employees. Prouty's active support for the measure assured its passage, although at the same time Prouty stressed that the matters covered by the law are best handled through the collective bargaining process. One of his amendments to the bill specifies that nothing should be inferred from the Hours of Service Act to prevent labor and management from developing more favorable hours of service for employees through the collective bargaining process.

Senator Prouty viewed with alarm the increasing number of railroad train derailments and accidents. Since well-maintained railroad tracks are essential to efficient rail transportation, Prouty viewed the ever-increasing number of derailments as a serious indicator of the deterioration of the rail industry. More importantly, the Vermonter viewed the rail accidents as a direct threat to human life and communities. The need for transporting highly hazardous substances made the matter of safety even more serious.

During the first session of this Congress, Prouty was primarily responsible for putting together the Federal Railroad Safety Act and the Hazardous Materials Transportation Control Act.

Finding the absence of any comprehensive Federal law in this area, Prouty moved to solve the problem.

In April 1969 Prouty was instrumental in getting the Department of Transportation to establish a Railroad Safety Task Force, made up of representatives of rail labor, rail management, and State Public Utility Commissions. The Task Force was committed to filing a report by June 30, 1969. With considerable prodding from Prouty, they met their deadline and Prouty introduced with Senator Norris Cotton S. 3061, embodying the recommendations of the Task Force.

Prouty then held a series of meetings with representatives of the State Public Utility Commissions, rail labor and rail management and drafted the first comprehensive National Railroad Safety Act and the Hazardous Materials Transportation Control Act.

Prouty's bill was accepted as a substitute amendment to S. 1933, a less comprehensive rail safety bill pending before the Committee. On December 21, 1969, the Senate passed this historic measure.

Once again Senator Prouty was commended for his ability to reconcile various groups and get solid support for his proposals. Senator Hartke noted that "Senator Prouty brought many of the parties together in his office and personally worked to thrash out agreement upon some of the most bitterly contested issues." Senator Scott said "Senator Prouty has again demonstrated his characteristic abilities as a fine legislator."

The bill reflects Prouty's aversion to piecemeal legislation and his belief that in a Federal system of government there needs to be both horizontal and vertical coordination and cooperation. For example, the Secretary of Transportation is given comprehensive power to establish nation-wide rail safety regulations. The regulations can cover railroad operations, maintenance and employee qualifications. To insure proper surveillance and enforcement of safety standards, Prouty's proposal provides Federal matching funds to State employees engaged in railroad safety inspection.

Senator Prouty's bill also directs the Department of Transportation to study the problem of grade crossing elimination and to report their recommendations to Congress within one year. Grade crossing accidents continue to cause over 2,000 deaths a year.

Senator Prouty viewed the problem of transporting hazardous materials as one that affected all modes of transportation. Therefore, his proposal to have a separate "Hazardous Materials Transportation Control Act" was adopted by the Committee and passed by the Senate.

Under Senator Prouty's "Hazardous Materials Transportation Control Act" the Secretary of Transportation is directed to establish within the Federal Government facilities and staff to scientifically evaluate the hazards connected with the transportation of dangerous materials. Recent military shipments of nerve gas and mustard gas dramatized the present lack of information in this area.

His proposal also directs the Secretary to establish a central information source which will enable local authorities in communities where accidents occur to quickly find out the best way to prevent harm from hazardous materials.

Both the "Federal Railroad Act" and the "Hazardous Materials Transportation Control Act" are needed to insure the safe transportation of goods and people.

In designing the comprehensive "Hazardous Materials Transportation Control Act", Senator Prouty discovered a weakness in existing law which he felt needed immediate correction. The weakness was that a motor carrier could be convicted of a violation of the explosives act, but that the Interstate Commerce Commission had no existing authority for suspending or revoking the operating rights of a convicted carrier. Therefore, Prouty encouraged the Committee to promptly enact legislation giving the ICC authority to suspend or revoke operating rights for motor carriers convicted of violations of the explosives act.

On December 15, 1969 this bill passed the Senate.

FAIR FREIGHT RATES

The Surface Transportation Subcommittee conducted hearings on S. 2355, a bill to establish a special commission to study freight rates. During the hearings, Prouty questioned the need for another Commission to be established and expressed concern that the bill did not include a study of all freight rates.

Prouty introduced his own bill (S. J. Res. 186), and all of his Republican colleagues on the Committee joined him as co-sponsors.

Prouty's resolution would direct the Secretary of Transportation to conduct a study of freight rates for all modes of transportation and report to Congress within one year. Prouty's move is significant in that the nation's freight rate structure has not been studied since 1944.

The enactment of Senator Prouty's bill could lead to a complete revamping of the nation's freight rate structure. Prouty is also anxious for the passage of legislation permitting carriers to establish joint rates and through routes, which would be of particular benefit to small manufacturers in areas such as Vermont. In addition, he has asked the Committee to conduct hearings on a bill he sponsored (S. 3875) with Senator James B. Pearson of Kansas which would establish a national freight car pool so as to alleviate the persistent freight car shortage problems.

On June 23, 1970 during an oversight hearing on the I.C.C. Prouty obtained a commitment from the Commission that it would give the problem of coal car shortages top priority so that electric utilities would be assured an adequate coal supply.

Specifically, Senator Prouty worked this year to head off a power shortage in Burlington. In July it looked as though the Burlington Electric Light Department would not be able to obtain a large enough coal supply to get Burlington through the winter.

Prouty met with the Interstate Commerce Commission, the railroad industry and the National Coal Association and urged action. Within a month Burlington Electric had received the coal supplies it needed for the coming winter.

AVIATION

As a member of the Aviation Subcommittee Senator Prouty has been deeply concerned with the problems stemming from the rapid growth of air transportation.

He has been particularly concerned in three areas: (1) the development of a safe and adequate airport and airway system; (2) the adequacy of air service in non-urban areas of the country; and (3) regulations to require complete disclosure of airline ownership.

In the 90th Congress Senator Prouty explored the difficult problem of obtaining enough money to insure safe and adequate airport and airway development. Prouty was one of the first to recognize the need for airport and airways trust funds. Senator Prouty prepared legislation which would have utilized an air passenger head tax for building a trust fund. The Vermonter later became convinced that a broader based tax was needed in order to better reflect the actual airport/airway users. Late in the 90th Congress the Senate enacted a bill supported by Prouty which would have established an aviation trust fund. However, the bill never became law because it was not fully supported by the Johnson Administration.

In the 91st Congress Prouty supported a comprehensive proposal by the Nixon Administration which established an airport/airway trust fund.

In the Commerce Committee and on the Senate floor Prouty fought to insure that monies in the trust fund would not be siphoned off into terminal buildings in big cities and that programs within states should be coordinated through the state aviation agency.

On the matter of funds for terminals, the

final bill made certain that funds from the trust fund could not be used for terminal building. The bill also preserved the right for states to coordinate airport development in the 28 states which have laws requiring such coordination. Believing that "vertical coordination" in airport planning was as important as "horizontal coordination" Prouty was disappointed that coordination of airport development at the State level was not more vigorously encouraged.

As one of the prime architects of the bill, Prouty was present at the White House on May 21, 1970 when the airport/airway legislation was signed into law (P.L. 91–258).

The ten-year airport/airway development legislation represents the most significant aviation legislation since the Airport Development Act of 1946. For the first time in the Nation's history, Federal funds will be insured for developing airports and developing new technology for making airways safe.

With the passage of the Airport and Airways Development Act of 1970, a major problem reaching crisis proportions was met. Prouty then turned his attention to the problem of providing adequate and efficient air carrier service in non-urban areas.

In Vermont, Prouty has seen the transfer of air carrier service from major airlines, such as Northeast, to smaller so-called third level carriers. Prouty encouraged the Committee to conduct field hearings to determine the actual condition of air service in non-urban areas. Thus far, hearings have been held in Utah, Kansas, Nevada, and Washington, D.C. Senator Prouty has been assured that hearings will be held in New England on this matter within the near future.

In the 91st Congress Prouty strongly supported S. 1373, which revised regulations of the Civil Aeronautics Board (C.A.B.) so that air carrier mergers through stock acquisition would be brought to the knowledge of that agency. This bill became law on August 10, 1969. (P.L. 91–62).

Senator Prouty had amendments adopted which created regulations for acquisition of air carriers which were identical to Securities and Exchange Commission regulations. In the future, the C.A.B. will be able to determine "who" owns air carriers in order to be able to effectively regulate air carrier service in the public interest.

THE U.S. MERCHANT FLEET

Senator Prouty is disturbed by the condition of the U.S. Merchant Fleet. During the 1960's the number of U.S. flag ships continued to decline. Today less than 6 percent of our national exports are carried on American ships. This fact not only means fewer jobs for American seamen, but also presents a serious risk for United States national security.

As a member of the Merchant Marine Subcommittee, Senator Prouty tried to get the last Administration to support a new maritime program. Unfortunately the then Secretary of Transportation, Alan Boyd, insisted on tying foreign ship building to any maritime program. Neither Prouty nor other members of the Committee were able to support foreign shipbuilding because of the devastating effect such a program would have on both the long range ability of the United States to build ships and the immediate unfavorable balance of payments.

Prouty and other Committee members were particularly pleased that this Administration submitted legislation to revitalize our antiquated merchant fleet. The President's program envisions the construction of 30 ships a year for the next 10 years and relies on American ship building.

As of this date, the Merchant Marine Subcommittee has reported the bill favorably to the Full Committee. Prouty supported amendments restoring the "Buy American" provisions of the 1936 act (which was adopted) and amendments calling for a pre-audit report before operating subsidies could be given to operators of both foreign and American flag vessels.

It is anticipated that Congress will enact the Nixon maritime proposal, which will represent the strongest effort at re-building the American merchant fleet since World War II.

Prouty supported the enactments of the Motor Vehicle and Highway Safety Act of 1966. During this 91st Congress this Act was extended and considerably expanded. Prouty served as a conferee for the Senate (April 15, 1970), and the bill was signed into law by the President May 22, 1970 (P.L. 91–265).

Among other amendments to the 1966 Act supported by Prouty were authority for the Secretary of Transportation to institute procedures for automobile tire recall, if necessary; a special study on farm tractor safety; and the establishment of a Federal research and compliance facilty.

In a matter related to motor vehicle safety, Prouty encouraged the Secretary of Transportation to upgrade the position for the Director of Highway and Motor Vehicle Safety so as to give that office greater effectiveness within the Department of Transportation.

HIGHWAYS

The federal highway program is under the jurisdiction of the Senate Public Works Committee; however, Senator Prouty has long worked to redirect the use of highway trust funds.

Senator Prouty believes that states should have increased flexibility in their use of the funds. For some time Senator Prouty has advocated the use of the trust fund for highway maintenance. In Vermont, particularly, the cost of maintaining roads is a great burden. Senator Prouty also would expand the use of the states' highway trust fund share to include public transportation, housing where necessary to home those displaced by highways. He also co-sponsored the two bills which include provisions for public transportation and replacement housing. Senator Prouty believes these bills move in the right direction but that even more flexibility should be provided for the states.

CONCLUSION

To build a balanced transportation system requires a total view of our transportation needs. Senator Prouty insists that we must stop viewing the various modes as independent and see how they interlock.

He supports Secretary of Transportation John Volpe's work on a master plan for national transportation.

Senator Prouty stresses the need for full consideration of the environment in the plan. We must design and place our highways and airports so as to conserve land, pressure parks, and ensure healthy, balanced development of surrounding areas.

Senator Prouty believes we have the technological skills needed to achieve a balanced transportation system. He has used his legislative skills to bring us closer to the goal.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

MAX BRYDENTHAL

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. JACOBS. Mr. Speaker, Elmer Davis wrote:

This country was not created by cowards. And it will not be maintained by them either.

Max Brydenthal, of Indianapolis, a man of many activities—all good—has been taken from us by a heart attack.

Max was certainly no coward. But it would not be entirely accurate to say that he was just a fighter for causes. He was a worker for causes. And, therefore, he was the very best that America is.

No American has ever read this CONGRESSIONAL RECORD with greater scholarship or consistency than Max Brydenthal who at times literally leaned against a lathe during rest breaks to scrutinize this RECORD at his production work job in the Chevrolet body plant at Indianapolis.

So now you know the answer to the question, Does anyone ever read the CONGRESSIONAL RECORD? Max Brydenthal did regularly. And he read a great deal else also. And in so doing, he became one of the best informed public servants; whether in his capacity of president of the Marion County, Indiana, AFL–CIO Council, as a member of the Indianapolis City Council, or as a member of the Indiana General Assembly, or as an officer in his own UAW local union.

Max Brydenthal was one of the closest and most devoted friends I have had. He literally worked himself to death.

His wife, Dorothy, and his three excellent children, Nancy, Kurt and Karen deserve the kindness, respect, and gratitude all America owes to Max Brydenthal because they gave up so much of his time in order that he might spend it for us.

Mr. Speaker, I insert two newspaper, one television, and one radio editorial:

[From the Indianapolis News]

MAX E. BRYDENTHAL

Organized labor in Marion County has lost a wise and vigorous leader in the death of Max E. Brydenthal.

Brydenthal, 59, was president of the Marion County Central Labor Council, AFL–CIO. He had served five terms as president of United Auto Workers Local 23 and 10 years on its bargaining committee. He was president of its credit union, which he had organized.

Labor was not the only beneficiary of his talents and dedication. In public life he had served effectively as city councilman from 1964 to '68 and was a member of the Legislature, serving as representative from Marion County in 1959–60. He was a Democratic candidate for election this fall as state senator from Marion County.

In yet another public post he was the first chairman of the Mass Transportation Authority, but his contribuiton to his community exended far beyond elective, or appointive offices. He has been on the board of directors of many organizations, including the United Fund.

Brydenthal was willing to give his time and effort to any organization which he felt was helpful to the public. Both the ranks of organized labor and the community at large regret his passing.

[From the Indianapolis Star]

MAX E. BRYDENTHAL

A man of many concerns, Max Brydenthal believed deeply in personal involvement in community service and the search for solutions to community problems.

His face was familiar in the quarters of the United Fund and other volunteer agencies, in the chambers of the City Council and the Indiana General Assembly, as well as in the halls of the United Auto Workers and the AFL–CIO Central Labor Council, of which he was president. He spurred other labor union leaders to extend their participation in civic affairs.

Beneath his quiet manner were a keen mind and a tough will. He was a bargainer, and an effective one. He expended his energies and talents not only on behalf of union members when it was his job to represent them but also on behalf of the poor, of minorities and of others whom he perceived to be in need of a champion.

His death leaves a gap in the life of the community.

[From a WISH–TV editorial]

MAX BRYDENTHAL

To those who knew him, Max Brydenthal was both a leader and a friend.

His unexpected death yesterday at the age of 59 has saddened those friends he made in all areas of his life's work.

That work for Mr. Brydenthal centered around those most basic ingredients of our society, government and labor. At the time of his death, Mr. Brydenthal was president of the Marion County Central Labor Council, AFL–CIO, a post he had held for the past three years.

He was an Indianapolis City Councilman from 1964–68, the first chairman of the Mass Transportation Authority, a former state representative, and was currently running as a Democratic nominee for the State Senate.

In all of these activities, Mr. Brydenthal emerged as a leader, a man who was both respected for his convictions and admired by those who may have been on the other side of the issue.

Exemplifying that non-partisan respect for Mr. Brydenthal was the tribute from Mayor Lugar, who said, "His counsel was important to me in trying to build a greater Indianapolis. . . . He was a wonderful friend and I will miss him greatly."

Max Brydenthal attained his stature in the minds and hearts of others because of his sincere belief in his country, his community and his fellowman. And he showed that belief not just with words, but with actions. . . personal, interested, dedicated involvement.

There are too few Max Brydenthals around whose lives enrich both the community and its people. The impact they leave on the lives of others is deep and meaningful.

[From a WFBM editorial]

ON THE DEATH OF MAX BRYDENTHAL

Max Brydenthal had been president of the Marion County Central Labor Council for six years. He was also an ardent Democrat and an excellent politician, having served in both the State Legislature and the Indianapolis City Council. But he'll probably be remembered most in this community as a man who cared about people in need.

Max often said, "My business is people." And he seemed to devote almost every waking moment to that business.

At the time of his death, he was serving on the boards of such people-helping agencies as the United Fund, Community Service Council, Community Action Against Poverty, Senior Citizens Center, Marion County Mental Health Association, Community Credit Counseling Service, and the United Southside Community Organization, where he also served as vice president.

Max Brydenthal helped organize the first blood bank in Marion County. He was the first chairman of the Marion County Mass Transportation Authority. And he was a leader in the successful effort to reactivate the Indianapolis Housing Authority.

Though he was a Democrat—and currently a candidate for the State Senate, his advice was frequently sought by Mayor Lugar, who only recently named Max to the planning committee for the up-coming NATO mayor's conference, to be held in this city.

It's difficult to see how one man could do more for his community than Max Brydenthal did. And we believe his loss will be felt deeply throughout the Indianapolis area.

SELF-DETERMINATION FOR FORMOSA

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FRASER. Mr. Speaker, on July 29, 1970, I presented a paper at a Members of Congress for Peace Through Law—MCPL—luncheon. The subject of my paper was "Political Repression in 'Free China.' " In it I stated:

If the U.S. wants a resolution of the political impasse now existing in (the Formosa Straits area), the U.S. cannot continue its extensive support of the Nationalist regime simply because it is the lesser of two evils.

Mr. Speaker, I feel this very strongly. My paper amply documents the suppression of basic political liberties by the Nationalist Chinese regime. At the same time I recognize that the mainland Communist regime represents the greater evil. A recent New York Times Magazine article by Richard Hughes provides current evidence that this is the case.

It is clear that just as we must cease our support, moral and material, of the Nationalist regime on Formosa, we must not surrender the fate of Formosa to the Chinese.

It is my hope that the Congress will look closely at the China issue and seek new initiatives. Hoping to contribute to a rational debate of the subject, I place in the RECORD my MCPL paper and Mr. Hughes' New York Times article with a compilation of revolting statements concerning "Law and Order, Peking Style":

POLITICAL REPRESSION IN "FREE CHINA"

(By Donald M. Fraser)

INTRODUCTION

This paper details the authoritarian nature of the regime controlling Formosa (Taiwan). The suppression of basic political liberties is amply documented.

What are the implications for the United States' China policy? A fresh start on U.S. policy must take the country as it is, not as it might have been. The U.S. undoubtedly bears responsibility for helping establish on Formosa and continue in office the existing Nationalist Chinese government. And most Taiwanese (Formosans), as well as the transplanted mainlanders, if faced with the choice would prefer the present regime, coercive as it is, to the mainland Communist regime. But if the U.S. wants a resolution of the political impasse now existing in that part of the world, the U.S. cannot continue its extensive support of the Nationalist regime simply because it is the lesser of two evils. The people living on Formosa want to and must become masters of their own destiny.

For all practical purposes, the State Department no longer recognizes any claim by the Nationalist government to mainland China. Inevitably the fiction that the Nationalist regime represents all of China must be abandoned. This, in turn, will force the Nationalist government to receive a mandate from the people living on Formosa or lose the legitimacy it now claims.

When these changes will occur is uncertain. Members who serve in the three national congressional bodies now based in Taiwan (Formosa) were elected in the late 1940's before the flight from the mainland. Now, as National Assembly members die, quorum requirements are lowered. The passage of time alone will force some change in the present system and outlook. But the abandonment of the current Nationalist fictions of legitimacy will be fiercely resisted as long as possible by the present regime.

Our present Ambassador to Taiwan recently said: "The established policy of our Government is to prevent the renewal of hostilities in the Taiwan Strait area which could easily imperil the peace of Asia." I agree that this should be a part of our policy. But this is not enough. Although we have no vital security interest in Formosa, we have a great humanitarian interest in and concern for the people who live on Formosa.

Thus, we should neither explicitly nor tacitly encourage incursions by the Nationalists onto the mainland or the expansion of Formosan military airfields to accommodate U.S. military aircraft as large as B–52 bombers. We should encourage more realistic military defense levels. And until a process begins that will result in the destiny of Formosa being placed in the hands of all those who live there, we should scale down or discontinue military and other support to the Nationalist regime. We should strongly assert our belief that the people living on Taiwan be given full political rights including self-determination.

Beyond reducing our support for the regime, it is unclear how the U.S. can directly aid the growth of political freedom on Formosa. Were we better equipped, we might find other ways to contribute to the growth of freedom there. But it is clear that the most important contribution the U.S. can make is its support of the morally right position—self-determination. The people of Taiwan are capable of directing their own affairs.

In any event, a more realistic appraisal of the facts about Formosa must underlie new U.S. policies toward the regime, and the American public must become aware of the realities.

BRIEF HISTORY OF FORMOSA

Chinese, primarily from Fukien Province, began to migrate in substantial numbers to the island of Formosa in the late 15th and early 16th centuries. During the 17th century, various colonial powers (the Portuguese, the Spanish, the Dutch) and dissident Chinese vied for the island. In 1683 the Ching Dynasty formally annexed Formosa. For the next two centuries, Formosa was very loosely controlled by China. After being defeated in the Sino-Japanese War of 1894–1895, China ceded Formosa to Japan and agreed to Korea's "independence." Although Korea was not annexed by Japan until 15 years later, Formosa was annexed immediately. For the next 50 years, Formosa was ruled by Japan.

In 1943, at a meeting in Cairo, President Franklin D. Roosevelt, Prime Minister Winston Churchill, and President Chiang Kai-shek issued a declaration which read in part: "All territories Japan had stolen from the Chinese, such as . . . Formosa, and the Pescadores, shall be restored to the Republic of China". The terms of this declaration were repeated two years later at the Potsdam Conference. When Japan surrendered, General MacArthur authorized the Chinese Nationalists to accept

the surrender of Formosa from the Japanese and to occupy the island in behalf of the allied powers. Peace treaties subsequently signed with Japan ended that nation's "right, title and claim" to Formosa. But the island's status was left in limbo. The official position of the U.S. is that the status of Formosa remains unresolved.

When the Chinese came to Taiwan in 1945 and 1946, they found a highly literate (80%) and modern state. Chinese troops took advantage of the relative prosperity of Formosa and numerous incidents of pillage, rape, and murder occurred. A former resident of Formosa, Albert Axelbank, wrote in *Harper's:* "Formosan rage (at the conduct of the occupation forces) exploded February 28, 1947, after police beat to death a woman who allegedly sold untaxed cigarettes." Blood literally flowed in the streets of Taipei. A recent State Department paper summarized a memorandum submitted by Ambassador J. Leighton Stuart to President Chiang on April 18, 1947: "The memorandum recounts numerous incidents of widespread and indiscriminate killings by government police and troops, particularly after reinforcements began to arrive from the mainland on March 8. Some of these incidents which occurred in Taipei were observed by American consular officials; others were reported by foreign residents there and elsewhere. U.S. official documents, written well after the event, generally have accepted the figure of 10,000 persons as the approximate number killed during the period which extended until the end of March, 1947." The Formosans have not forgotten.

This tragedy received little foreign attention because even as the Nationalists were occupying Formosa in 1947, they were engaged in a bloody civil war on the mainland. In 1949, Chiang and the remnants of his government and armies were driven out of China and sought refuge on Formosa. Chiang arrived on the island on December 10, 1949.

The area controlled by the Nationalist Government was reduced from 3,700,000 square miles and a population of 500,000,000 on the Chinese mainland to Taiwan proper, the Pescadores, and the tiny islands of Quemoy and Matsu, with a combined area of 13,890 square miles and a population of 8,000,000. Today there are 14,000,000 people on Formosa. Of that number, 85% are native 'Taiwanese.

PERMANENT "STATE OF SIEGE"

The Nationalist Government now had control over a relatively small territory and it had taken steps to ensure that its rule over Taiwan would be virtually complete. On May 19, 1949, the Nationalist Chinese Garrison Command in Formosa had proclaimed a general "state of siege" or martial law over Formosa and the other islands. The effect of the civil liberties of the people was devastating. Illustrative of its severity were the large number of offenses carrying the death penalty including: (1) circulating rumors and beguiling the public, (2) disrupting the money market, (3) striking by workers or traders, (4) encouraging students to strike, and (5) disrupting water supplies or electric and gas services.

Examination of these martial law regulations is essential to an understanding of the internal situation in Taiwan, because the "state of siege" still exists.[1] Since 1949, a major portion of community life in Formosa has been under the control and surveillance of military authority. Most guarantees and protections of individual rights and freedoms written into the 1947 Chinese Constitution have been suspended, and the judicial system has become a pawn of the military.

Political offenses are defined generally as "crimes which are incidental to and form a part of political disturbances, including offenses consisting in an attack upon the political order of things established in the country . . . as well as offenses committed to obtain *any* political object." Several laws were added to ensure complete control over the local population. The Statute for Punishment of Rebellion (June 21, 1949), the Statute for Denouncement and Suppression of Rebels (instituted in 1940 and amended in 1954), the Military Trial Law (instituted in 1956 and amended in 1959), and the Judicial Interpretation of the Council of Grand Justices (1956) have formed the basis for the militarization of the judicial system. Since 1949, political offenses have been under the control of a military court.

Special practices abrogate important provisions of the judicial system: (1) In practice, the statute of limitations is not applicable for political offenses. Individuals have been tried for political crimes allegedly committed nearly two decades ago.

(2) The principle prohibiting *ex post facto* laws is not applicable to political offenses. This results in trials and convictions of "offenders" for political acts committed before laws prohibited the acts.

(3) Immunities and privileges of legislators are not recognized for political offenses. A member of the Legislative Yuan is "permanently responsible for opinions expressed in it if the opinion constitutes a political offense," even though the Constitution provides immunity for "an opinion expressed or a vote cast in the Yuan."

(4) Persons are not given remission of punishment for political offenses committed when they were underage. Recently, several persons were convicted of offenses committed over 24 years ago when they were less than 14 years old.

(5) Leniencies given to an offender's family who shielded him are not applicable for political offenses. Everyone is obligated to renounce the "rebel." No one is safe from being reported by members of his family. Imprisonment of from one to seven years is meted out to those who knowingly fail to denounce "rebels."

(6) There is no parole for political offenders.

If you are not caught in the web of these laws, you can be politically detained under the Statute for the Denouncement and Suppression of Rebels. This law stipulates that "those who commit (political) offenses and need reform shall be sent for reform." There are two supplements to the fundamental laws already mentioned. They are "Measures for Control of Hooligans during the Enforcement of Martial Law in Formosa" and "Measures for the Reform of Rebels during the Period of Communist Rebellion." If the government cannot imprison you on a specific charge, it can intern you for suspected thoughts or behavior. The first term is three years and it is indefinitely renewable. Political internment can, without trial, amount to life imprisonment.

The state of siege was instituted before the Nationalist Government was evicted from the mainland and is to last as long as the "period of Communist rebellion" exists on the Chinese mainland—that is, until the forces of Chiang Kai-Shek return to and occupy the mainland. Since the move to Taipei, the "temporary" capital of China, the laws have been enacted by a legislature elected on the mainland over 20 years ago and composed of representatives of all of China.

According to the election laws governing the elections held in 1947–1948—it was at these elections that the existing government was, in effect, selected—Formosa's quota of representatives was 19 of 3045 members of the National Assembly, 8 of 773 members of the Legislative *Yuan,* and 5 of 223 members of the Control *Yuan.* These three bodies functionally constitute the "Congress," as the term is commonly understood in other political systems. Formosa's representation today in the National "Congress" remains proportionately about the same as it was in 1948.

Formosans have less than 3% representation. Yet, in practice, these laws apply only to Formosa. To suggest that the *status quo* should be changed and self-determination given the people of Taiwan is regarded by the Nationalist regime as sedition and dealt with harshly.

These laws, produced by a system in which Formosans have almost no role, are executed by an equally undemocratic court system. Political prisoners are tried in a military court. That court is controlled by the Garrison Command of Formosa, responsible for the general security of the island. And a political prisoner can be held incommunicado for months or years without even being charged. His trial is virtually always secret.

The permanent state of siege, instituted in Taiwan 21 years ago, has eliminated political life in Formosa.

Conservative United Nations sources estimate at least 1500 political prisoners are now being held by the Nationalist Government. Other sources, largely Formosan, place the figure at from 10,000 to 20,000. The March 1968 issue of *The Independent Formosa,* published in Tokyo, Paris, and Philadelphia, reported: "It has been estimated that there are approximately two hundred executions and 1,500 arrests of political offenders each year out of a total population of only twelve million." Since the Nationalist Government considers guilt established by association with "rebels" and such association is punishable under the law, the families of these detainees live under a constant threat of arrest.

A few illustrations of the Formosan political climate, provided to me by sources I believe to be very reliable, follow:

Prisoner A was arrested in 1960 for distributing pamphlets which discussed the possibility of Formosa being ruled some day by Formosans. Given a life sentence. Prisoner is 43 years old. Before arrest he was a photographer by profession. He maintained a middle-class family of wife and five children. Soon after he was put into prison, the prisoner was tortured. Torture included being suspended upside down from a rafter and having gasoline put into his nose drop by drop. He was beaten severely. Torture was intermittent. When after several months he became very weak, he was taken out of the solitary confinement section and put into a common cell with sick prisoners. Some had tuberculosis, and soon A developed tuberculosis. Later A developed a bleeding ulcer. Soon after the prisoner's arrest, his father became very ill and required extensive medical care and hospitalization. The prisoner's wife attempted to pay the medical bills of her father-in-law and went deeply into debt. The family now has a debt equivalent of $1,000 on which it pays 3% a month. The family is very poor. The wife and all five children (now ages 16-23) work. All of them firmly believe that A was right to do what he did.

B was arrested at the same time and for the same offense as A. He was sentenced to 12 years instead of life. The prisoner is 36 years old. Before his arrest he was a camera operator at a Taipei movie house. He is married and has one child, a girl, who is now 12 years old. After B's arrest, his parents and his brothers and sisters severed all relations with B, his wife, and his child for fear of themselves coming under suspicion. B's wife became a prostitute to support herself and her daughter and her aged mother.

C was arrested in 1960 when he was a

[1] The material for this section has been obtained from a study of the laws and problems surrounding political offenses in Formosa. The study is by a lawyer with great experience in Taiwan affairs.

freshman in law school. He was charged with organizing a group planning to overthrow the government. He was sentenced to 12 years in prison. C is the only member of the family to go to college. The others are illiterate. The family are fishermen, and they make very little money. Since C's arrest, the family has been constantly harassed by the police. The father, mother, two younger sisters, and a younger brother live in a single room and are very poor. Mother is in very bad health and frequently has fainting spells.

D was arrested in 1963 and sentenced to 10 years in prison for allegedly being involved in a plot to overthrow the government. He talked about the unlikeliness of the government ever recovering the mainland. His family only learned about his arrest six months after the arrest when the police came to the home to tell the family not to tell anyone of his arrest. At the time of the arrest, he was a student at a military academy. His mother and father are illiterate and very poor. They live in a one-room mud house in the country. He has five sisters who are in school.

E was arrested in 1960 and charged with having participated in the February 28, 1947, revolt on Taiwan. He was sentenced to 10 years in prison. E's wife and two sons have been taken in by his wife's brother.

F was a factory foreman. He is Taiwanese. Some of the men working for him were Chinese. Three Chinese who worked for him denounced him for listening to broadcasts from the mainland and for having "contempt for mainlanders in Taiwan." He was sentenced to five years in prison.

G is about 38 years old. He is now on trial for having distributed pamphlets which were critical of the government. If convicted, the only punishment can be death. He was arrested in March 1967. In 1968 his family received a letter from him saying that he was on a bus trip and that he was well. He was forced by the police to write that letter. He is held incommunicado. He is imprisoned at Chin Nei in a suburb of Taipei.

H was arrested in 1967 and charged with failing to denounce men who hoped to overthrow the government. H's only connection with the group is that he was hired for $2.50 to make a name stamp which read "Action Group of the Taiwan Independence Center" for the group. He has not been tried, but if he is convicted, he will receive seven years in prison. He has been in prison since 1967 awaiting trial.

Before his arrest, I was a primary school teacher. He was sentenced to seven years in prison for having written a personal letter to a friend in which he discussed the future of Taiwan after the death of Chiang Kai-shek. I was then on reserve duty for the summer with the Navy.

THE KUOMINTANG PARTY AND EDUCATION

A dictatorial regime must, if it is to have any future, thoroughly control the educational process of the country. This lesson has been learned by the Kuomintang (KMT) leadership, and they are now implementing that control.[2] In 1951, two years after the flight to Formosa, Chiang Kai-shek addressed a joint meeting of the Revolutionary Academy and Officers' Training School. He said: ". . . the greatest cause of our failure on the mainland was the failure in education and culture. *Only because we failed in the field of education did we fail in so many other fields as well.*" Chiang went on to explain that the Kuomintang (KMT) Party had formulated, since 1928, resolutions on educational policy, but they had not been implemented throughout China. He said: "They did not actively incorporate our party's policy into their teaching. They disregarded party policy on education. They thought that party policy on education had nothing to do with actual education. As a result we have never realized our party's ideals in education."

On August 11, 1952, Chiang Ching-kuo, the head of his father's secret police, delivered a "Top Secret" address to cadets at a training class for party workers in which he related the goals of the KMT party in education:

"We must start a large scale youth movement to elevate and strengthen the political education of youths. Every school must have a systematic plan for strengthening political education and elevating the political knowledge of its students. In both youth movements and in political education we must carry out thought indoctrination and win the struggle for the minds of youths and make the youths accept our correct thoughts and abandon all incorrect thoughts. This course will lead to the unification of the political motives and political directions of youths and make them love our party, believe in our party, have hope in our party, support our party and make them voluntarily join our party and aid it in accomplishing its mission."

A year later, Chiang Kai-shek, in a secret address, related the control of education to the consolidation and enhancement of the powers and position of the leader of the KMT party:

"In brief, if there is no party ideology then there can be no revolution. If there is no fuhrer-type leader there can be no fatherland and no revolution can be successful. When we examine our painful experience on the mainland we must recognize that our failure on the mainland was due to our failure to believe in the Three Peoples Principles and especially on the loss of confidence in our leader. That was the cause of our tragedy. Now, today, for the sake of our revolution, for the sake of the fatherland and for the sake of our anti-communist and anti-Russian mission we have to restore confidence in the Three Peoples Principles and especially restore confidence in our leader. We cannot emphasize too much the importance of the central leadership of the revolution. Our slogan will be 'Party Ideology, Leader, Fatherland, Responsibility, and Honor.'"

To implement the goal, enunciated by Chiang Ching-kuo in 1952, the "Chinese Youth Corps for Anti-Communism and the Salvation of the Fatherland," known as the Youth Corps, was established largely to study KMT literature and the thoughts of President Chiang. All students above 12 wanting high school certificates must "voluntarily" become members. Non-Youth Corps members are not allowed to graduate from high school. In addition to the Youth Corps, the Party Headquarters for Intellectual Youth has a branch in every college in Taiwan. It generally has monthly meetings in small cells of 10 members, and leaders report directly to the party hierarchy.

The Ministry of Education naturally is controlled by the KMT Party. The Minister is usually a trusted aide of either the President or his son. In local colleges, the dean of students and the chief military instructor are either directly or indirectly appointed by the KMT. The security officer, required in each school by a 1959 statute, is directly responsible for reporting to the secret police on the activities occurring in the school. He is required to know what happens in each classroom. Consequently, at least one pupil in each class reports to the security officer. In one university these "professional students" are often veterans of the armed forces. "Student, faculty, and staff members who apply for either a passport or a job must be approved by the security officer of their school." Many faculty and student arrests are believed to result from reports by the security officer.

The most odious aspect of the totalitarian educational system in Formosa is that each faculty member in every school must persuade some person other than a member of his immediate family to sign the following statement: "I guarantee that Mr. ——— will abide by the law and government orders. I guarantee that he is not a Communist, or a member of any other subversive element. If he fails to do so, or is any of the above, then I have the obligation to denounce him. If I do not denounce him, then I am willing to receive punishment according to Article V. of the Statute for the Denouncement of Rebels." The result of this system is that "if the guarantor even has the slightest suspicion that the thoughts or actions of the guaranteed are not acceptable to the government, then he is moved by fear to denounce the guaranteed immediately." A similar system is used for every college student.

Dr. Marilyn Young, of the Center for Chinese Studies at the University of Michigan, wrote in a recent letter that:

"Few American students can be unaware of the fact that the system of informal spies which permeates Taiwan has overseas branches throughout the United States. It is a safe assumption that no student from Taiwan, particularly if he is Taiwanese, can comfortably engage in public discussion of political issues unless he has permanently abandoned any intention of returning to the island."

She gave two specific examples. In August 1968, Chen Yu-hsi was "tried and sentenced for apparently having read 'The Thoughts of Mao' . . . in the Oriental Section of the U. of Hawaii's East-West Center Library and for having written articles for a journal deemed left-wing by the Nationalist Government." And in 1966, "Huang Ch'i-ming, a graduate student at the University of Wisconsin, home on a brief filial visit, was arrested and convicted on the charge of having attended meetings in Madison where 'the problem of Formosa' was discussed."

Professor Young draws certain conclusions from these two cases and others and asks hard questions:

"Suppose both Huang and Chen were guilty as charged. What does that mean about Chinese centers across the country? It means that we study with and among students who are under direct threat of imprisonment, afraid to discuss subjects of vital mutual concern. It means that we tolerate in our midst a disgusting atmosphere of fear and repression. It means that China centers have double standards for academic freedom—if you are Chinese keep your mouth shut, for we cannot help you if you get into trouble. Should American universities continue to accept students who cannot openly engage in the kind of intellectual exchange we pride ourselves in encouraging? Should we allow a foreign government to infringe upon the right of free speech on our campuses?"

The paper on education in Taiwan mentioned previously concludes:

"Many young people in Taiwan have never developed their abilities to engage in independent thought, objective analysis, and critical observation. In the Taiwan educational system there is an atmosphere, even at institutions of higher learning, in which unconventional, unorthodox, or nonconformist thinking or behavior is not only frowned upon but is severely punished. This has resulted in a complete lack of creative intellectual activity on the Taiwan campuses."

Another result of the educational system indicated in this paper is that it has produced generations of citizens who have learned that they can express themselves in public only in strict accord with govern-

[2] Material for this section is taken from a confidential paper on the government's influence on education in Formosa today written by a foreigner who has taught there for nearly two years.

ment policy. Even among young people, there is an inconsistency between what they say in public and what they say in private.

CHRISTIAN CHURCHES ON FORMOSA

No organization escapes the ever watchful eye of the government. The Christian churches on Formosa do not claim more than 10 or 15% of the population. But because President Chiang is a professed Christian, the size of their membership does not accurately reflect the churches' influence.[3] President Chiang has little day-to-day control over the administrative bureaucracy of the country. Yet in one fairly prominent Protestant denomination, it is freely admitted that middle-range party functionaries (who are all mainlanders) have the veto power over the important activities of that church in Taiwan.

The general trend of religious action has been toward ecumenical cooperation. National (U.S.) and worldwide bodies, such as the World Council of Churches, have been concerned with social and political progress. Among other matters, the National Council of Churches in the United States and the World Council of Churches have advocated normalization of relations with the Peoples Republic of China. Naturally this is contrary to the views of those in power in Formosa. Several tactics have been used by a relatively small group of middle-level party and government functionaries to control the denominations in Taiwan. Anything that is ecumenical or connected with the worldwide Christian movement is considered "leftist" and is closely watched.

This small group of functionaries operating within religious organizations uses "terrorist tactics to intimidate others." A Christian leader received a visit from the secret police after his return from an East Asia Christian Conference (the Asian affiliate of the World Council of Churches). The secret police investigated him "on the grounds that the East Asia Christian Conference was subversive, due to its World Council connection . . . even his being a party member has not saved him inconvenience in this matter." Another minister was tipped off that he was to be put in prison; through his connections, he was able to leave the island rather than face indefinite imprisonment.

At the present time, the International Council of Christian Churches, led by an insurgent American Presbyterian minister, Dr. Carl McIntire, has established the Republic of China Council of Christian Churches in Taiwan. Dr. McIntire is connected with many right-wing causes in the U.S. under the guise of anti-communism Christianity. (He recently said that the July 4th Honor America celebration in Washington, D.C., was not sufficiently patriotic to suit him.) He is making alliances with the various party functionaries within Protestant denominations in Formosa. This combination has the ultimate objective of severing all connections between Formosa Protestant denominations and outside organizations.

As Protestant groups withdraw from Taiwan, as one important one already has, the Christians on Formosa will be at the mercy of the extremists who have strong political connections. Chinese pastors indicate that these extremist government functionaries are not representative of the feeling of the majority, but the majority is intimidated into silence.

CONCLUSION

From the facts uncovered, it seems abundantly clear that we support an unrepresentative and repressive government in Formosa as we have been doing for some time in South Vietnam. Over the long run, however, the stakes in Formosa are much larger. U.S. policy toward Taiwan directly affects our relations with the Peoples Republic of China.

As we have seen, the government of Chiang Kai-shek claims to be the sole legitimate government of China, even though it has actual physical control over only the population on Taiwan. His government doesn't represent China and it doesn't represent Formosa. Chiang's government does not tolerate political discussion which raises the legitimacy of the present system or suggests changes in it. For 20 years the U.S. government has gone along with Chiang Kai-shek, helping to perpetuate the myth that he on Formosa represents the entire nation of China and Formosa.

In one sense, we are faced not with a China problem, because it is quite clear who governs the 750,000,000 people of China and they do not receive our support, either material or moral, for their efforts. But we *are* faced with the problem of the future status of Formosa, because we have long been involved in the present Nationalist government's affairs.

The Nationalist Government of China does not represent the people of Formosa. The Formosans have not been given any voice in determining their future. They have been subjected to government by martial law and to government by a system that includes only a handful of Formosans.

Finally, the Nationalist Government does not represent China except in the tortured reasoning of its ideology. It deludes itself that it will return to reconquer and govern China. It is time for all parties to this complex political problem to face the realities of this situation. "Free China" is neither "Free" nor "China."

[From the New York Times Magazine, Aug. 23, 1970]

MAO MAKES THE TRIALS RUN ON TIME

(By Richard Hughes)

HONG KONG.—The public trials of 1951—when, according to reliable estimates, as many as two million "enemies of the people" were executed—have been revived throughout China. On the hard evidence of provincial radio news, monitored here, the trials were resumed at the beginning of this year, although early reports suggested that they first began in mid-December in Harbin, Shanghai and Sinkiang. Since January, there have been factual reports of similar trials in Kwangtung, Heilungkiang, Inner Mongolia, Fukien, Peking, Tientsin, Wuhan, Kwangsi and Honan. In the month of March, in Canton alone, according to the Kwangtung Province radio, more than 100 male civilians were found guilty at three mass trials and were shot on the spot. In addition, some 300 to 350 were sentenced to long terms of imprisonment in "corrective labor establishments." The "jury" at each of these public trials, by official count, averaged 10,000—attendance compulsory.

The Kwantung trials were prudently suspended during the Canton Spring Trade Fair, attended by 3,000 foreign businessmen, but they have since resumed. The absence of regular news services from Yunnan and Szechwan probably conceals the staging of similar trials in those turbulent provinces. In conservative judgment here, more than 5,000 "major criminals" have been tried and at least 1,000 executed in the first six months of this year.

The 1951 trials represented in large part belated vengeance by tortured workers and peasants against pre-1949 tyrants and persecutors. "Blood calls for blood," as the writer Han Suyin, who survived the revolution, said recently, explaining those mass executions. The present trials are designed to suppress the turmoil which has arisen within China, in the wake of the great "cultural revolution" that began in 1967. That upheaval largely destroyed the administrative machinery of the Chinese Communist party, leaving the army to try to fill the power vacuum on a local, piecemeal basis. One accompaniment has been a crime wave—both of "crimes" as Westerners understand the word and of "political crimes."

The crisis is called, with bland Oriental understatement, "the New Trend"—*hsin-ssu-ch'ao*. The term goes back to 1932, when Mao Tse-tung was temporarily a party outcast, and it then meant a "new trend" in confused and divided party policy and morale. In 1968, the initial lawlessness following the cultural revolution was attributed to the New Trend; in 1969, the "trend," still "new," was dubbed "antiproletarian." This year, the prefix has become "anarchist." But, let it be noted, the adjective "new" still attempts to disguise an old and mounting "trend."

The peasants are sullen and uncooperative, following the removal of the "incentives" which they had regained in the early days of the "cultural" reverse: family marketing and selling, private plots of land, pigs and poultry for one's own table. Young people in the cities are resentful of the suspension of education, and their mass transfers to the remote countryside. The local "Revolutionary Committees" which have replaced the old centralized party bureaucracy lend themselves to petty power struggles and corruption.

"This antiproletarian New Trend," a joint editorial in The People's Daily, Red Flag and Liberation Army Daily warned last year, "finds channels to representation in the very heart of the Revolutionary Committees, and jams the process of the strategy laid down by Chairman Mao. This is the political program of the enemy—capitalist tendencies, crime and intrigue."

The scale of the purge in both the party and army commands, which destroyed discipline and morale, is sometimes forgotten. The "casualty" lists have now been confirmed by China specialists here. Never in the history of any other dictatorship has there been such a purge of top, trusted officials, the majority of whom had apparently served the cause faithfully down the hard years and into the years of normal reward.

Twelve of the 30 members of the Politburo were purged. The Central Committee secretariat, charged with policy administration, has vanished; six of its 10 officials were disgraced; the remaining four were absorbed in the now shrinking and doomed Cultural Revolutionary group.

Of the Central Committee's 93 full members, 48 were purged and nine censured, leaving an uneasy rump of only 36 survivors (who include six doddering figureheads). Of the committee's 79 alternate members, 45 were purged and 15 suspended. In the party's six regional bureaus, there were 67 secretaries and alternate secretaries. Of these, 37 were driven into outer darkness, and 17 were suspended for self-criticism and possible rehabilitation. Finally, of the party's 28 provincial secretaries, 20 were purged, two were told to meditate upon their sins, and one committed suicide.

In the military command, it has now been definitely established that more than 100 high-ranking leaders were dismissed from Peking headquarters alone during the "cultural" purge. Another 200, at least, were purged from provincial regions of the People's Liberation Army. These totals, patiently and authoritatively documented from Chinese records of promotion, are more than double earlier estimates. They are probably still inconclusive.

The chief of staff of the navy, two deputy chiefs of staff of the army, and the deputy chief of staff of the air force were dismissed. The deputy directors of the following key military organs have all been replaced: Public Security, Military Affairs Academy, Scientific and Technological Com-

[3] The material for this section is based upon confidential communications from a foreigner well acquainted with the religious life of Formosa.

mission, Political Ministry of the Peking Military Region, Higher Military Institute, Department of Military Operations, General Political Department.

Gen. Shou Shih-ti, commander of the Chinese paratroops (and member of the party's Central Control Committee), was sunk without a trace. So were both the commanders and deputy commanders of the armored corps, the antichemical warfare corps, and the Peking garrison; the commander of the artillery corps, and the deputy commanders of the air force and the navy.

The personal fates of all these casualties are, of course, not known, and the effect on morale among their ranking officers and friends can only be surmised. Some may be in labor camps, some under "house arrest," others merely demoted and transferred.

Not surprisingly, young people in China are increasingly opposed to authority, especially now that Peking's once-proud "authority" is so diffused and weakened by the purges of the cultural revolution. Not only university students have resented the massive compulsory evacuations from the cities to "glorious productive work in the countryside" (some estimates run as high as evacuation of 20 million youths). In Canton, the center of the traditionally "rebellious south," the police, the militia and the army have been harassed by the return of rebellious youths from the farms, seeking their homes once more, embarrassing their parents, resorting to theft and robbery, lies and misrepresentation—because their work permits and ration cards are inoperative.

No one in Hong Kong can attempt to estimate the number of recalcitrant students and young urban workers who flexed their muscles under Chairman Mao's divine instructions a couple of years ago, and who—now disillusioned—are quitting their rural work. No one in Peking, either, could attempt a proper estimate. But public trials are needed to handle them.

The invocation of a public trial for juvenile delinquency—whether in a commune or a city—is now a matter for local decision by the provincial authorities—which is to say, by the army. Public trials of ordinary, minor, nonpolitical offenders indicate that juvenile delinquency is waxing. Clearly the decadent, capitalist West is not unique in its subversion by juvenile delinquency and independence.

"In reasoning," Mao Tsetung wrote a long time before the current revival of *hsin-ssuch'ao*, "we must begin by administering a shock and shouting at the patient, 'You are ill,' so that he is frightened into a sweat, and then we tell him *gently* that he needs treatment."

That was the theory of punishment—or correction—of heretical crime in China when the mass-accusation meetings, public trials and executions of 1951 became blood-stained history. The Mao formula was primarily concerned with ideological offenses and deviations, but as a lofty principle of reform it was supposed to govern ordinary crime also. There is still neither a criminal nor a civil legal code in China. Sentences, imposed openly by a people's court—as distinct from a public trial—or privately by a national security commissar, are influenced by the personal and political background of the offender rather than by the gravity of his offense. A robber or a rapist will escape lightly if he has a "reliable" background, while a minor transgressor can cop a long stretch if, say, he has been unwise enough to have had a landlord for a father.

There are three categories of prison camps in China, known officially as Corrective Labor Establishments. My information on them is an amalgam of independent reports by former prisoners, screened in Hong Kong, Macao (before the Communists forced the Portuguese to return all Chinese escapees) and Taipei.

First, there are the Labor Reform camps, reserved customarily for long-sentence offenders who are engaged in hard labor, heavy construction, basic agriculture, railway and road building, and the like. Secondly, there are Education Through Labor camps for lesser offenders. Up to the mid-sixities, the maximum sentence in these No. 2 camps was supposed to be three years, but, as with affairs generally in China today, no one has any idea now what the rules are, or who makes them. The third category constitutes Forced Labor camps, where petty criminals, migrants and the unemployed are put to work. Many of the prisoners in these camps have not been charged with an offense, and indeed are classified as "volunteers."

Prisoners in the Education Through Labor camps may be paid a monthly wage of up to 30 yuan ($12), and, in theory, retain their "voting rights"—a harmless enough indulgence. "Volunteers" in the Forced Labor camps can earn from 20 to 60 yuan ($24) a month—and, if their work, behavior, self-criticism and political studies are satisfactory, may be permitted a brief visit to family, relatives or friends once a year. Semiskilled workers in these two categories of prison camps are often employed in the manufacture of plastics, textiles, clothing, socks, electric fans, footwear and other light-industry goods for low-priced export and sale in the Communist supermarkets of Hong Kong.

On all the available evidence, political offenders who have escaped the firing squad at public trials during the "New Trend" are being thrust into the top-security Labor Reform camps, among the hardened and dangerous criminals, revisionists, landlords' progeny and other "bad elements." Restive students and juvenile delinquents, now being tried at mass public trials for moral effect and warning, are probably placed in Education Through Labor camps, or else dispersed to more remote and primitive communes.

All prison escapees with whom I have talked accepted a cynical, party-line approach to crime and punishment as the *hsin-ssuch'ao* way of life in Mao's China. One party cadre in Canton was found guilty of corruption involving commune funds, but escaped with a reprimand because his superior (who was known to have shared in the offense) testified to his devotion to the party and to "the importance of his work for the state." Conversely, an elderly professor in Chungking, who had been under fire during the 1957 period of letting a hundred flowers bloom (when imprudent intellectuals were persuaded to criticize the regime's faults), was sentenced to eight years—in a Tsinghai prison camp, where he would have no friends—for "spreading rumors of an anti-Government nature and attacking Government policy." The evidence had shown that he had casually asked someone how long he thought Chairman Mao would live. He died in the Tsinghai camp, but "only from loneliness," my antiparty informers told me with frightening objectivity—not from ill-treatment or heavy labor. "He was a kind old man," they said, "and all the army guards in Tsinghai loved and helped him."

One bright young Cantonese student, with a good party record and the "reliable" background of a "revolutionary-peasant" father, was sentenced to two years, making chamberpots in a No. 2 labor camp, because he had contested the right of his commune production leader to transfer him from university studies to urgent river-dike construction. Examples have to be made.

Conditions inside the Labor Reform camps vary, one gathers, from area to area, and from political crisis to crisis. But certain conditions, rewards and penalties seem to be consistent. Food is carefully rationed according to the physical labor of the prisoners. During the nationwide food shortage of the early sixties, after the "Great Leap" had become the "Great Retreat," there were thousands of prison deaths from malnutrition or plain starvation. Tuberculosis, on the testimony of a former national security cadre now living anonymously in Macao, is maintaining a death toll of around 40 per cent among old workers in most Labor Reform camps in mining areas—a legacy of those hard days, which admittedly were hard for all Chinese.

All prisoners attend self-criticism meetings of from two to three hours every night. A section leader, himself a prisoner struggling for early parole, supervises a group unit of from 12 to 20 prisoners, each of whom in turn each night must stand up and denounce himself and other prisoners. Failure to cooperate "sincerely" can mean harder work, a reduced food ration, or sometimes deferment of technically overdue parole.

Bed spaces in dormitories are changed regularly to prevent friendships developing among prisoners. Right or wrong, most of the ex-prisoners with whom I talked believed the camp legend that "criticism"—i.e., betrayal—of a minimum of six other prisoners was a necessary condition for parole. The camp authorities might not always accept the "criticism" officially, but they appreciated the "sincerity" which prompted it. Normally, army and security guards do not personally maltreat prisoners. But they look the other way, or only murmur gentle remonstrances, when bully-boy "activists" seek to hasten remission of their own sentences by beating up uncooperative fellow prisoners.

As a general rule, the regime has sought to appoint northern guards to prison camps in the south, and southern guards to camps in the north. Prisoners in Kwangtung Province count themselves lucky if they are sent to a camp controlled by locally born guards. The historic enmity between northern and southern Chinese has been widened and deepened by the cultural revolution and the New Trend.

Parole, when won, is indefinite. The ex-prisoner, wherever he ends up, must visit the resident national security representatives at least once a week and provide evidence of his enduring reform, penitence and continuing self-criticism. His family and neighbors must assume personal responsibility for his rehabilitation, and are themselves harassed by spot-check interrogations by local officials on his progress and behavior. Paroled prisoners, consequently, are seldom welcomed by neighbors or—after a lengthy absence—even by their families.

Attempts are made in hardship areas, where the prison camps naturally flourish, to "persuade" released prisoners to remain on developmental work by bringing, sometimes unannounced and unexpected, their families to join them. Early releases are then offered on condition that the offenders remain in the area, technically "free." Wages are also offered, ranging up to 60 yuan a month, which is above the average income in the commune to which the "released" prisoner would otherwise return.

Here is the officially promulgated scale of punishment for crimes in Kwangtung Province—as of the "cultural" revolution. Since then, many sentences have been increased—especially as examples at the pubilc trials.

Theft and burglary: 1 to 8 years.

Sabotage of the national economy: 1 to 15 years (or life).

Vagrancy: 2 to 5 years.

Rape: 2 to 5 years.

Corruption: 3 to 10 years.

"Living like a playboy, and being obsessed with lascivious thoughts": 5 to 10 years.

Carnal knowledge of minors: 10 to 12 years.

Murder, a rare crime, draws death. The sentence for attempted escape from the mainland to Hong Kong has recently been raised from an average of six months to three years. The gunboat patrols of Hong Kong waters

have been doubled, and the army is cooperating by sending units to coastal villages to arrest friends and relatives of refugees, charging them with complicity.

As a general rule, the larger the "jury" at a public trial, the heavier the penalty. Peking's Current Affairs Journal has formally blessed the technique: "The enthusiasm of active elements in making accusations and passing sentences can be prepared amongst selected groups beforehand. It is desirable to regulate the degree of tension. . . . The masses can be stimulated right from the beginning; then pressure can be slackened to allow time for ideological precept and discussion; finally tension must be again strengthened so that the feeling of mass indignation can last until the end of the trial."

There has been one modification in protocol for these revived mass trials. In the past, formal approval by the Supreme Court was mandatory before the firing squad took over. That bourgeois regulation has now been repealed—or forgotten.

LAW AND ORDER, PEKING STYLE

(Compiled by Richard Hughes.)

I

Radio Peking (Jan. 20): "Six prisoners were found guilty this week at a People's Court of political crimes, counter-revolutionary plotting against the masses and the state, and conspiring with the archrenegade, archrevisionist, ugly scab and traitor Liu Shao-chi. They were found guilty of corruption, bribery and embezzlement. After a public hearing of evidence, all pleaded guilty and—amid shouts of 'Long Live Chairman Mao!'—they were executed on the spot."

Eyewitness report (from neutral Asian diplomat): "Probably 20,000 members of the 'jury,' dominated by a huge billboard portrait of Chairman Mao, were assembled in the sportsground near Peking's West Gate when the six prisoners, with shaven heads, were dragged into the arena. All rose and shouted: 'Guilty! Death!'

"It was 9 o'clock on a bitterly cold January morning this Year of the Dog, with a pitiless wind cutting high over the Great Wall and the Western Hills from the Gobi Desert.

"Three guards handled each prisoner; two grasped his arms, the other forced down his head. On each man's chest was a placard proclaiming his crimes. Five 'judges' marched into the arena; two women, two men in uniform, and a senior in civilian clothes from the secret police. A band blared 'The East Is Red,' and the execution squad, with submachine guns, stood at attention and then relaxed for the trial, bored, chatting, smoking.

"Charges were read against each prisoner in turn. Witnesses were called and bawled their evidence through loudspeakers, brandishing the little red book of Chairman Mao's 'Thoughts.' No defense was allowed or plea taken. Following a lead from the claque in the front seats of the bleachers, the whole 'jury' rose once more, shouting: 'Guilty! Death!'

"The first prisoner was dragged before the firing squad, tied to a post in front of a high screen, and shot immediately and efficiently. The body was dragged to one side and turned over on its back. Justice had taken 20 minutes.

"The same procedure was followed with the remaining five prisoners, except that proceedings were hastened. and only 10 minutes were needed to try and shoot the last man. By 11:30, the 'jury' was marching out to the tune of 'Sailing the Sea Depends Upon the Helmsman.' Some crossed the arena to file triumphantly past and spit, and even urinate, upon the six bodies. By noon, the crowd had been cleared by waiting trucks or had dispersed on foot to neighboring factories. But the bodies lay there all day."

II

Radio Canton (*May 12*): *"A young woman was yesterday tried and found guilty at a People's Court in Lu Chueh of the theft of a bicycle. Her father was also found guilty of having failed as head of the family to hold regular family classes to study Chairman Mao's 'Thoughts.' Both admitted their guilt. The People's Court shouted approval when the comrade judge referred the prisoners to the Public Security Bureau in Namhoi for sentence. The trial opened at 7 A.M. and closed at 11:30 A.M."*

Eyewitness Report (from a Hong Kong resident who was visiting relatives at the Lu Chueh commune): "A teen-aged girl was charged with the theft of a bicycle—a curious offense, because she could only have ridden it around secretly at night. However, her crime assumed new dimensions when it was alleged, improbably, that she was planning to escape to Hong Kong by bicycle—a difficult venture even for an invisible cyclist. Several neighbors bore witness against her, as she sat, weeping silently, head bowed, on a stool between two militiamen; two of the witnesses struck her on the head with their copies of Chairman Moa's 'Thoughts.'

"The girl's father was charged with having been an accessory to the theft—which was not legally proved, because the bicycle was not produced and no one could suggest what the girl had done with it. Other witnesses, also striking him on the head as he squatted silently, accused the father of contempt for Chairman Mao's teachings and neglect of family study of the 'Thoughts,' and demanded that he submit to reform through hard labor.

"This trial lasted for more than four hours, and it appears that the 'jury' became restive toward the close, although none dared leave. Finally, the pair were led away, separately, for sentencing. The forecast in the commune is that they will be sent to different labor camps for terms of 'reform' ranging from two to four years."

III

Radio Canton (*May 28*): *"Six enemies of the people, who had been convicted at a Canton People's Court of having been supporters of Liu Shao-chi, of having started factional fighting during the cultural revolution, of having helped people to escape, of having listened to reactionary radio stations and of having been employes of a foreign state, were publicly executed yesterday at Shumchün [on the Hong Kong border]. All admitted their guilt before execution."*

Eyewitness report (from a Hong Kong resident who was in Shumchün after visiting relatives in Canton): "The shootings started at 9 A.M., after villagers had come to the hillside outside the village. This execution center cannot be surveyed by Hong Kong police from their lookout at Lowu [on the Hong Kong side of the border]. The six men were dragged, in turn, to the execution spot and killed by a firing squad with submachine guns.

"The first man kept shouting, 'I am innocent,' and was crying and wailing as the army men tied him to a pole. The other five offered no resistance. One was shot sitting on a box; three were shot standing up; the last man refused to stand up and was shot kneeling. There was an interval of 10 minutes between executions. Soldiers photographed each execution.

"During the executions, there were heavy showers of rain, but this did not delay the performance. Afterward, many of the audience, men, women and children, filed past the corpses, which had been kicked over onto their backs in a row by the armed men. The bodies lay there all day and night. I did not return. But I am told that they remained there until the next noon, and were frequently defiled by passing groups, organized by the army."

Another eyewitness report (from a child of Hong Kong parents, also returning home): "My No. 1 uncle and aunty took me up on the roof to see the men shot. I did not like to see. One man was shouting out before he was shot dead. I started to cry and hid my eyes. My aunty was very angry with me and took me off the roof, while people laughed at us, saying she had lost face."

CPL. DAVID L. SMITH

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. GAYDOS. Mr. Speaker, it is with deep regret that I announce the death of another of our brave fighting men, Cpl. David L. Smith, of Clairton, Pa., who was killed in Southeast Asia.

We owe a profound debt of gratitude and appreciation to our dedicated servicemen who sacrificed their lives for this great country. In tribute to Corporal Smith for his heroic action, I wish to honor his memory and commend his courage and valor, by placing in the RECORD the following article:

CITY MARINE DIES IN SOUTHEAST ASIA

Marine Cpl. David L. Smith, son of Mr. and Mrs. Lawrence W. Smith of 31–D Miles Ave., has been reported killed in combat in Southeast Asia by the U.S. Defense Department.

Cpl. Smith, 22, a 1966 graduate of Clairton High School, entered the Marines May 23, 1968. He had been in the war theater, notably Vietnam, approximately seven and a half months, according to members of his family.

The young Marine is survived by his parents, two brothers and a sister.

SENATE—*Monday, August 31, 1970*

The Senate met at 8:30 a.m. and was called to order by the Acting President pro tempore (Mr. METCALF).

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou who art from everlasting to everlasting, yet the light of each new day, make known Thy presence to us not only in the moment of prayer, but also in the doing of each task. Take us as we are, O Lord, and reinforce our human endowments with divine energy. Sharpen our intellects. Refine our perceptions. Regulate our emotions. Direct our wills. Make sound our judgments. Grant that in all we do this Nation may be well served, mankind uplifted, and Thy kingdom extended.

Through Jesus Christ our Lord. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of

the Journal of the proceedings of Friday, August 28, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States submitting a nomination was communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGE REFERRED

As in executive session, the Acting President pro tempore (Mr. METCALF) laid before the Senate a message from the President of the United States submitting the nomination of John N. Irwin II, of New York, to be Under Secretary of State, which was referred to the Committee on Foreign Relations.

MESSAGE FROM THE HOUSE— ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H.R. 17133) to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Alabama (Mr. ALLEN) is recognized for 1½ hours.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield briefly?

Mr. ALLEN. Mr. President, I am glad to yield to the Senator from West Virginia.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at 10 o'clock this morning the able Senator from New York (Mr. JAVITS) be recognized for not to exceed 10 minutes, the time to come out of the time on the Muskie amendment, to be equally divided, and that at 10 minutes past 10 o'clock this morning the Muskie amendment be laid before the Senate and made the pending business.

The ACTING PRESIDENT pro tempore. Without objection, the several requests are granted.

FORCED IMMEDIATE DESEGREGATION POLICIES

Mr. ALLEN. Mr. President, I appreciate the opportunity that has been afforded me, through unanimous consent of the Senate, to speak on a subject that is near and dear to the hearts of the people of Alabama and of the South, and that is our public school system and our boys and girls who go to those schools.

Mr. President, some of the schools in Alabama opened before this week, many opened today, others will open next week. Many school systems are in a state of chaos as a result of the forced immediate desegregation policies of Washington bureaucracy and the Federal courts.

Mr. President, what I have to say today is said in the interest of public school education.

Public school education in the South and in the Nation cannot survive in the absence of strong public support. Public support is diminishing. The institution of public education is in danger.

The interest and welfare of the Nation are involved and the interest and welfare of countless millions of schoolchildren lie in the balance, waiting decisions which this Congress and the Supreme Court must make on fundamental principles of our constitutional system of government, as they relate to our children and to public education. This then is the motive of my remarks and the cause for which I speak.

SITUATION IN ALABAMA PUBLIC SCHOOLS

Mr. President, let me begin with an account of the current chaotic public school situation in the public schools of Alabama.

Letters from concerned parents pour into my office in a continuous stream. They describe factual situations which are well nigh incredible.

These letters speak of community schools being closed on court order and children scattered and bused all over cities and counties.

The cost of construction of many of these schools was financed from proceeds from the sale of bonds on which outstanding indebtedness remains. Payments of these obligations are made from proceeds of taxes voluntarily assumed by citizens of separate communities in some instances and by the people of Alabama in other instances. The proceeds are dedicated by law to payment, and payment is further guaranteed by obligations of contract. The effect is that the people of these communities must continue to pay taxes for public school facilities which have been odered closed and abandoned by Federal authorities.

I have a letter from a county school superintendent indicating that school facilities constructed at a cost of over $1 million in his county alone have been ordered abandoned by Federal court decree, despite the fact that about three-fourths of the outstanding bonded indebtedness remains and must yet be paid.

Throughout the State of Alabama public school facilities with a value in excess of $100 million have been ordered abandoned and closed to public use, on orders of Federal officials.

Concerned parents write and properly object to the uprooting of their children from their communities and neighborhoods. They object to their children being compelled to travel long distances by public or private transportation to and from school. In many instances an undue amount of time is required to travel to and from schools, and parents on farms are deprived of services of their children in the performance of useful chores. Others point out that as parents they are denied the opportunity of adequate parental supervision. In other instances parents point out that schoolbus transportation is not provided and that their children must walk long distances to and from school and that their children are deprived of the opportunity to participate in extracurricular school activities, and also the opportunity for recreation in their neighborhoods.

Some parents complain that their children are arbitrarily assigned to schools which do not offer college preparatory courses—that their children are denied opportunities to continue study in foreign languages and courses in higher mathematics. Others say that their children have no opportunity to continue instruction in music, glee clubs, and school bands, and still others complain that their children can no longer participate in high school athletics because of the lack of transportation and the time involved in going to and from school.

Thousands of concerned parents complain of arbitrary assignments of their children to overcrowded schools while school buildings and classrooms nearer their homes have been abandoned. They cannot understand, nor can I, why thousands of Alabama schoolchildren must be bused or compelled to walk to schools which are overcrowded, inadequately staffed, poorly equipped, and without reasonable sanitary facilities when perfectly good schools are available in their communities or neighborhoods.

So it would seem to the junior Senator from Alabama, Mr. President, that the Federal bureaucracy, the HEW, the Justice Department, and the Federal courts, are more interested in the sociological experiment regarding the desegregation of the public schools than they are in the education of our children. But the people of Alabama are not interested in sociological experiments. They are interested in the welfare, the education, the health, and the safety of their children.

We resent, Mr. President, the fact that the Federal school policy with respect to desegregation of public schools demands the immediate, the forced desegregation of public schools in Alabama and the South, and at the same time, in sections outside the South, segregation continues to be protected and fostered, and even encouraged.

Mr. President, the administration boasts that by September—and September will be here tomorrow—97 percent of the public school districts in the South will have been desegregated. Contrast that with the report of the board of regents of the University of the State of New York, in which they point out—and this report was dated in late 1969—that segregation in the public schools of New York State is increasing rapidly.

The people of Alabama and the people of the South resent this type of policy, and we feel that a uniform policy should be adopted. But we find that the very people who are insisting on the immediate forced desegregation of the public schools of the South are the very ones

who fight the hardest to continue segregation in the public schools of the North.

Mr. President, schoolchildren in Alabama are being compelled to attend schools so overcrowded that classes must be held in auditoriums, libraries, and cafeterias or in temporary, makeshift, portable buildings.

Teachers point out that vested tenure rights are being abrogated and that hundreds of teachers are being uprooted from their communities and assigned willy-nilly on the basis of the single consideration—racial balance criterion.

School superintendents, principals, and members of local school boards justifiably protest that the Department of Health, Education, and Welfare, the Department of Justice, or the U.S. district courts have imposed school plans and conditions which are impossible of implementation. By impossible, they mean that they have neither the power nor the funds to comply with the plans imposed upon them.

Mr. President, I have a letter from a concerned parent which points out that her child is forbidden to attend a public school almost across the street from her home. I have another letter that indicates that an emotionally disturbed child is not permitted to attend a neighborhood school but has been arbitrarily reassigned to a school across the city which requires transportation by public conveyance, a transfer downtown, and an additional trip across the city, all this despite the fact that the emotionally disturbed condition of the child has been verified by certification of a doctor.

Mr. President, I have previously addressed the Senate on most of these problems. Hundreds of additional examples could be cited. I believe, however, that it is clear that a human tragedy is taking place in Alabama. But the problem is not limited to Alabama. Nor is it limited to southern States.

The problem is nationwide in scope. It will help to provide perspective if we briefly examine the problem from a national viewpoint

Material illustrative of the national scope of the problem is nearly inexhaustible. However, I will cite and quote from only a few sources which make the point.

First let me refer to an article which appeared in the New York Times Magazine, May 2, 1965, entitled "Close to Midnight for New York Schools." That title is significant. Here are a few observations excerpted from the article:

> Not long ago many of us felt that a large share of the Negro failure in the schools was itself the product of segregation, but almost nobody whose opinion is worth considering believes it today. Personally, I think that open enrollment did make some positive difference in the accomplishment of the Negro children who rode the buses—but I can't prove it and neither can anyone else.
>
> The American tradition of the common school—

This is important because it reflects my view and, I believe, that of the majority of the people of the United States—

> rests on the willingness of parents who have a choice to send their children to the public school. They do so because they believe the public schools adequate to what they regard as the needs of their children; when they lose faith in the serviceability of public education, they send their children to private schools or to suburban schools, once described by U.S. Commissioner of Education Francis Kepple as "private school systems run on public funds."
>
> And though ministers and rabbis whose own children go or have gone to private schools are now making the matter a moral issue, the parents who withdraw their children from the city public schools are not to be criticized for it. *There is nothing admirable or truly humanitarian about people who are prepared deliberately and consciously to sacrifice their children for the sake of their political principles.* (Emphasis supplied).

To illustrate further the national scope of the problem, let me quote from another source to illustrate the geographic distribution of the problem. An article appeared in the August 1969 issue of Nation's Business, from which the following observations have been excerpted.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. ALLEN. Yes; I am delighted to yield to the distinguished Senator from Wyoming.

Mr. HANSEN. Mr. President, I am impressed with what the distinguished Senator from Alabama is saying. I hold the feeling, and I think it is shared by a great number of people, that, traditionally, with residence has gone the choice of a school. I think that there is strong historical proof of this fact.

As the pioneers first settled this great land of ours and then as they began their migration westward, without exception, schools and churches were two of the first public institutions that were built.

Mr. ALLEN. Yes; I think that is certainly true.

Mr. HANSEN. A great many people, in choosing a home, are interested in knowing how far their children will have to go in order to get to a school. I am certain that most young people with children, or those whose children are yet to be born, probably look at a community in its total aspect and consider proximity to schools and the type of education offered in choosing the place where they may live.

Conversely, I think it is true that there is much to be said for the confidence, the assurance that a youngster has when he first begins school, when he is able to be with youngsters that he has known in preschool days. I happen to believe that one of the most objectionable side effects of busing of children, particularly young children, is that when a child in the first grade is loaded onto a bus and moved out of the neighborhood, away from his friends, many tensions can easily develop in that young person.

So there are two situations: First, those persons who deliberately choose a locality because of many considerations, including that of schools; second, the situation that evolves in which people find themselves in a particular community and because their children have reached the first grade in that area, they, too, would hope that their children would not have to be removed from that area when they begin school.

Does the junior Senator from Alabama share my feeling in this regard?

Mr. ALLEN. Yes, I certainly do. I appreciate very much the contribution that the distinguished Senator from Wyoming is making to this discussion.

I recall most pleasantly that all through the some 20 months of this Congress, as the problems of the public schools of the Nation have been under discussion in the Senate, the distinguished Senator from Wyoming has shown an all too rare perception of the problem involved, an all too rare sympathy with the South in our problem of trying to save our public school systems.

I want to commend and express my appreciation to the distinguished Senator from Wyoming for his stand on the issues that have been presented to the Senate in this area. I recall his votes for freedom of choice, for neighborhood schools, for the Stennis amendment, and for uniform application of the desegregation rules and guidelines of the Federal Government.

I hope that the distinguished Senator from Wyoming would feel that this would be a compliment; I intend it in that fashion. It is the opinion of the junior Senator from Alabama that the distinguished Senator from Wyoming would make a most able southern U.S. Senator, that he would feel very much at home in Alabama, and that he would feel very much at home in some of the seats on this side of the aisle.

Again I express my appreciation to the distinguished Senator.

Mr. HANSEN. Mr. President, if the Senator will yield further, let me say that I am indeed grateful to him for his very generous observation. I should like to make a couple of further observations, if I may.

No. 1, without going into the historical situation from which arose the argument over de jure and de facto segregation, I think few people can deny that today most of those persons who are caught up in so-called de jure segregation, to which one set of laws apply, as well as those involved in a de facto segregation situation, to which a different set of laws apply, cannot be held responsible for either situation. That may have been true in the past; I do not deny that at all. But although there were conscious, deliberate, legislative, and administrative efforts to segregate races in the schools in the past, I think that today, if we are fair with ourselves, we will have to say that the overwhelming majority of people, whether they live in the South or in the North, had not had all that much to do with it. As a consequence, I take a dim view of some legislators and some members of the courts and others who, while publicly inveighing against segregation in the Halls of Congress and in the courts throughout the land, do everything they can to put on the record the condemnation that they would like to be a part of insofar as de jure segregation goes; yet they will turn around, by their actions, and perpetuate de facto segregation.

To me, it is interesting. But I could not take the position that is taken by some legislators, saying the things that have been said by them and then doing what a good many of them have done.

If they believe that this system is as good for the country as they proclaim it is, all I can say is that they ought to be in the Chamber today, helping to introduce legislation and seeing to it that it is enacted, which would desegregate, whether it be de facto or de jure segregation, and seeing to it that there is a uniform blend of the races throughout the United States, insofar as that can be accomplished.

When it came to that point, I think a great many legislators would have to admit that the very points that are being made by the distinguished Senator from Alabama have a great deal of validity, that it just might be more important to a young schoolchild, attending school for the first time, to have the advantage of going to school near at home, to have the advantage of being with friends he has known and has played with, and not to be subjected to the trauma, which surely will follow, of being picked up and hauled by bus to some distant school, to be placed with youngsters none of whom he has ever seen before. All the advantages that are recognized that go with matriculating in a school near home, to which the Senator has alluded, for the most part are denied this youngster, plus the fact that he is subjected to the emotional strain of being removed far from home, far from friends, far from anyone he knows.

I would hope that the Members of this body and of the other body and some members of the court would be honest enough with themselves to say that they would be perfectly willing to have their children treated in precisely the same manner as they now contend must be accorded a great many children in the South and a great many children in some other parts of the country. I will think that they are sincere when they take the leadership in such a movement.

If children can be bused across school district lines and across county lines, I see no reason why they cannot be bused across State lines, if the practice of busing is considered so desirable. It is not too far to bring them across the Potomac River; but I think that to start bringing youngsters from Maryland and Virginia into the District and taking youngsters from the District into Maryland and Virginia, some of those who now find so much merit in the course they have helped to chart for the schools of this country would be the first to cry "Stop!"

I thank the distinguished Senator for letting me take so much of his time.

Mr. ALLEN. I thank the distinguished Senator from Wyoming for his penetrating analysis of this problem and this situation. He has certainly touched on a most sensitive area in pointing out that if segregation is bad in the South, if it results in unequal educational opportunities in the South, if desegregation should be forced on the South, then these same rules, these same principles should be applied as well in sections outside the South, and that the very people who are insisting on forced, immediate desegregation in the South should adopt the same attitude with respect to segregation in the public schools of the North.

I should like to suggest also that some day we are going to have a uniform policy with respect to racial balance in the public schools, North and South, and whatever Congress in its wisdom, whatever the HEW, whatever the Federal courts mete out to the South today will some day be meted out in equal measure to sections outside the South. We cannot continue indefinitely to have one system for the South and another system for the North.

Abraham Lincoln said:

A house divided against itself cannot stand.

He was quoting from the Bible, of course. Thus, we cannot forever have a dual system, one for the North and one for the South, in this most important area affecting the boys and girls of the entire Nation.

Mr. HANSEN. Mr. President, will the Senator yield for one further moment?

Mr. ALLEN. I yield.

Mr. HANSEN. I should like to observe that there are a great many of us who, while not denying that at some level there may be small advantage toward broadening the opportunity for competition among school students, it has certainly not been proved—to my satisfaction, at least—that we are making the best use of our educational dollars when we spend tremendous sums busing children back and forth, having buses cross midway on their routes, hauling some children east and others west across town, and north and south across town, when we know that there is much that could be done for the schools by spending money for better facilities, for more adequate equipment, for more and better qualified teachers than they have had in the past.

I cannot believe that what has come out of the legislative and judicial actions which have brought us to the point at which we now find ourselves as we confront the fall of 1970 proves that we are making the best use of our education dollars.

I hope that we might spend more money on all the schools, but particularly on those which are the weakest in equipment, in teaching staff, and in facilities. If we could do that, if we could provide better education in each of the schools and save the money we are spending trying to achieve a sociological goal, I would think we would be serving our Nation better at this particular time.

I thank the distinguished Senator from Alabama.

Mr. ALLEN. I thank the Senator from Wyoming. I should like another moment or two to propound a question to the Senator from Wyoming. If every child were given the opportunity to go to any school in the system that he chose to go to, would not that give everyone the same opportunity? Would it not be fair and equal treatment if we were to support the principle of freedom to choose and attend the school of one's choice? Would that not impress the Senator from Wyoming as being a fair and equal application of the law?

Mr. HANSEN. As the distinguished Senator knows, I am not a lawyer. And there are many school systems I have not seen, but on its face, I can see nothing wrong with the so-called freedom of choice. It seems to me to have much merit. I think that those who inveigh against it, as nearly as I know, always try to say it really is not true freedom of choice; but I feel certain that the junior Senator from Alabama is speaking of true freedom of choice.

Mr. ALLEN. Yes, indeed.

Mr. HANSEN. With that in mind, I have no argument at all.

Mr. ALLEN. The people of Alabama ask for freedom of choice—a bona fide freedom of choice, a freedom of choice that is fairly and impartially enforced, where the school doors are open to any child.

They say that the Supreme Court has never defined the term "unitary school."

The Chief Justice takes exception to that statement and states that the Supreme Court has defined "unitary school"; that it has been defined in an opinion of the Supreme Court as a school where no child is effectively excluded by reason of his race or color. Thus, that would seem to imply to the junior Senator from Alabama that freedom of choice should comply with that type of definition of a unitary school, where no child is effectively excluded from attendance by reason of his race or color. Thus, it works both ways. It works with respect to a white child and a black child. It would enable the white child to go to a school of his choice. If he were excluded from that school by reason of his race or color, then that would not be a unitary school. The same way with a black child. If he were effectively excluded from attending that school by reason of his race or color, then that would not be a unitary school.

However, under the Supreme Court's orders, and the plans of the HEW, a white child is told where he has to go, and he must go there because of his race. The black child is told where he has to go, and he is told to go there because of his race. Thus, it occurs to met that the very plans which are being forced on the school systems of the South violate definition of a unitary school.

Mr. HANSEN. At this point, Mr. President, let me say that I can see need for the holding by school boards of authority sufficient to regulate attendance so as to make good use of all facilities within a particular school district.

Mr. ALLEN. Very definitely.

Mr. HANSEN. However, I would say that if, beyond that, freedom of choice were to be more widely extended and recognized than is the case in the situation today, then it certainly would follow that we would not find the anomalous situation to which the distinguished Senator from Alabama has referred. He speaks of children being forced to travel beyond empty schools, schools that are closed now, and are being taken much farther away from their homes in order to comply with the decisions of the Supreme Court and with the decisions of the law of the land as passed by Congress.

Most certainly this sort of situation, I should think, under a full freedom-of-choice plan would not obtain. I cannot think of very many people who would be willing to have their youngsters bused beyond one school and taken much far-

ther away to another school in order to achieve a racial balance.

Mr. President, if that does help to clear my response to the question of the distinguished Senator from Alabama, I am happy to submit it.

Mr. ALLEN. Mr. President, I appreciate the extremely valuable contribution of the Senator from Wyoming to this all-important subject.

I return now to the article published in the Nation's Business magazine, and quote District of Columbia officials further:

District of Columbia officials in a report on what has been happening in their jurisdiction: "No evidence was found that any major changes in aptitude or achievement test scores were associated with any of the . . . school programs.

In general, there was failure to recognize the intent and philosophy of the legislation.

And a harsh indictment has come in the resulting reports by the cities and states which have poured into the Office of Education. There have been comments such as:

From Nebraska officials, "Reading achievement levels of disadvantaged readers were no higher after one or two years of participating in Title I programs than achievement levels that would have been expected for the same grade levels without them."

And Florida's latest evaluation report showed the relative performance of thousands of children on language, reading and arithmetic achievement tests declined after exposure to the "benefits" of Title I."

A Parsons, Kansas, school official wrote: "Probably there has been as much good accidentally as there has been on purpose."

Minnesota education authorities said: "The most serious criticism of the projects may well be that they continue, even if in a more concentrated form or on a more individual basis, the same type of educational programs and activities that produced the educationally disadvantaged child.

And a Kansas educator said: "Projects in some schools are doing irreparable damage to the ongoing regular programs."

Said Florida officials: "The frustrations involved in this interagency planning approach were so disquieting at times that there was much question as to whether the benefits gained would offset the problems created."

And from Maine: "It appears to us that there is no necessity for legislation relating community action programs to Title I programs, since the CAP committee is not staffed to intelligently review a Title I project."

One New Jersey official: "We have just about completed approval for projects for fiscal year 1967 and yet we received, in the past week, a draft of revised rules and regulations to be used for fiscal year 1967."

Ohio officials complained: "Inadequate planning was apparent in that the evaluation format, neither in the initial stages nor in its final form, embodied a meaningful basis for evaluation."

Alaska officials blew up on 1968 evaluation procedures.

Kentucky plaintively noted it has received a copy of "Questions to be Answered by State Elementary and Secondary Education Act Title I Evaluations" in April, 1968. Then it received a second, slightly different copy. And then a third, with more variations. Which was the final copy?

"A mad rush and poor use of funds throughout projects" (Arizona). "Much duplication of time and effort at both state and local levels." (Vermont).

Mr. President, I ask unanimous consent that the entire article be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ALLEN. Mr. President, most of the above complaints relate to title I programs and expenditures, but they speak most eloquently to the point of bureaucratic ineptitude, inefficiency and incompetence of many so-called education experts in the Department of Health, Education, and Welfare. These share a responsibility for some of the near incredible school plans imposed on the South.

Mr. President, let me refer now to an article which appeared in the U.S. News & World Report in its October 13, 1969, issue. The article is entitled "Why School Busing Is In Trouble." The article is a report on a nationwide survey. It concludes that the nationwide trend is against busing as a way of integrating city schools in the North. The reasons are many and compelling. Situations are described in Chicago, Minneapolis, Los Angeles, Boston, and other areas of the Nation.

Mr. President, I ask unanimous consent that this article be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without ojection, it is so ordered.

(See exhibit 2.)

Mr. ALLEN. Mr. President, I could continue citing similar material to further illustrate the costly failure of efforts throughout the Nation. We have cited this material merely to illustrate the nationwide scope of the problem and to suggest the incompetency of those in whose hands the problem has been placed.

ORIGIN AND CHRONOLOGICAL DEVELOPMENT OF PROBLEM

Mr. President, I should now like to discuss the origin and the chronological development of this problem with respect to the desegregation of public schools in the South and, if there is to be any in the North, then in the North, too.

The chaotic public school situation in the South and throughout the Nation did not just happen. It has its origin in departures from fundamental principles of constitutional government. The problems have been compounded by nearly unbelievable incompetence of Federal bureaucrats in trying to implement what Francis Keppel expressed in the title of his book "The Necessary Revolution in American Education."

Mr. President, I think it is extremely important to explore the origin and development of these problems. Let us get to the root of it. We will skip over the original 1954 Brown decision. Few, if any, believe that this decision could be reversed without a constitutional amendment, and I know of no one who believes that such an amendment could be adopted at this time. In the South, the original Brown decision was reluctantly accepted.

All States with statutory laws requiring segregation in schools repealed them. In some Southern States segregation was provided for in State constitutions. These also were stricken by constitutional amendments freely and voluntarily approved by the people.

So, de jure segregation, segregation said to be imposed by law, came to an end in the South within a reasonable time after the original Brown decision.

But the second Brown decision did more than strike down segregation de jure. The second Brown decision said that previously segregated school systems, although constitutional and proper prior to Brown I—I refer to the 1954 Brown case as "Brown I" and to the subsequent Brown case as "Brown II"—would have to be reformed and altered. The Supreme Court imposed an affirmative duty on local school authorities to do the job.

Herein, Mr. President, lies the root of the problem. Here is the original departure from law and reason which has proven the source of many problems. First, the idea that the nonrepresentative, nonelected branch of the Federal Government could properly employ judicial powers to enforce monumental social reforms affecting the lives and welfare of millions of parents, schoolchildren, and elected school officials is nothing short of revolutionary.

It is difficult to imagine a more revolutionary or a more tyrannical idea. It has corrupted the Constitution and along with it fundamental concepts of equity and justice. This we will demonstrate in just a moment. But, first, let us examine the method by which the Supreme Court sought to implement its idea of social reform by judicial decree. That is what this is—social reform rather than educational reform. The method of implementation has compounded the problem a hundredfold.

Justice Black has given a fair summary of the method of implementation adopted by the Court. He said:

After careful consideration of the many viewpoints . . . we announced our decision in Brown II, 349 U.S. 294 (1955).

That was the year after the original Brown case.

At this point, Mr. President, I will list in numerical sequence precisely what the Court held—in the words of Justice Black:

1. We—

The Supreme Court—

held that the primary responsibility for abolishing the system of segregated schools would rest with the local school authorities.

Justice Black continued:

We were not content, however, to leave this task in the unsupervised hands of local school authorities. . . .

2. The problem of delays by local school authorities . . . was therefore to be the responsibility of courts, local courts so far as practical . . .

3. Those courts to be guided by traditional equitable flexibility to shape remedies . . .

Mr. President, it staggers the imagination to consider that that Court devoted 4 days to the argument on this single problem of implementation and yet came up with something so impractical. For example, an undisputed fact is that local school authorities did not have and never had the power to carry out the court imposed responsibility to dismantle the institutional structure of public education incorporating segregated schools.

Local school authorities cannot alone establish a "unitary school system"—whatever that term may mean. The school system was imposed by State legislatures—by the law of the Constitution, and by State statutes.

It is simply incredible that the Court should have felt no responsibility to better inform itself as to powers of local school authorities. They should have known that schools are operated under voluminous school codes enacted by State legislatures. Local school authorities are not autonomous sovereign bodies with power to enact their own laws. Their powers are derived from State legislatures. The powers so conferred are executive in nature and not legislative. Local boards of education are not empowered to spend school funds as they see fit. School revenues are appropriated and are budgeted. State support is earmarked by legislature by object and by purpose. In most school districts in the South a far larger portion of school operating revenues are provided by State legislatures than by local governmental bodies.

School boards cannot levy taxes—they cannot use proceeds of taxation which are earmarked for retirement of bond issues or for payment of teachers salaries or to purchase buses. In most States, procedures for school closings, consolidations, and resulting transfer of pupils and teachers are prescribed by State statute. State enacted teacher tenure laws strictly govern assignment and transfer of teachers.

Under the circumstances, Mr. President, how in the name of commonsense could the Supreme Court have imagined that local school authorities could reform the public schools? Is it to be imagined that these things could be done without money? Is it imagined that local school authorities can levy taxes?

I doubt that members of the Supreme Court or anybody else for that matter had a clear idea of the extent to which the Court would eventually go in pushing its reforms. Nevertheless, State legislators at the time, and I was one of them, reasoned that law does not require the impossible and that all that local school authorities could do within the realm of possibility was to administer fairly and impartially a system of pupil placement which permitted parents an opportunity to choose the school their child should attend.

Certainly, this reasonable appraisal of the possible was supported by the first definitive interpretation of the Supreme Court Brown decision, one of the original suits on remand to the district court.

In *Briggs* v. *Elliott* (132 F. Supp. 776) the Court said, and this is no longer the law of the land but I am pointing it out as part of the evolution or transition from one position to another by the Federal courts:

1. "It (the Supreme Court) has not decided that the federal courts are to take over the regulation of the public schools of the state.

2. "It has not decided that the states must mix persons of different races in the schools or must require them to attend schools, or must deprive them of the right of choosing the schools they attend.

3. "What it has decided, and all that it has decided, is that a state may not deny to any person on account of race the right to attend any school that it maintains—but, if the schools which it maintains are open to children of all races, no violation of the constitution is involved *even though the children of different races voluntarily attend different schools,* as they attend churches. (Emhasis supplied.)

4. "Nothing in the constitution or in the decision of the Supreme Court takes away from the people *freedom to choose* the schools they attend. *The constitution in other words does not require integration. It merely forbids discrimination.* It does not forbid such segregation as occurs as the result of *voluntary* action. It merely forbids the use of governmental power to enforce segregation." (Emphasis supplied.)

Mr. President, the Supreme Court denied certiorari and consequently the above interpretation was widely accepted by constitutional authorities as guidelines for State legislatures. Nine Southern States adopted the principle of freedom of choice and pupil placement laws as logical steps toward compliance with Supreme Court decisions in the Brown case, showing an attitude on the part of the Southern States to comply with what the Supreme Court said the law was. As I will point out later the Supreme Court has not decided many of the questions that are causing so much of the chaos. They need to come back from their 3-month recess, which they take every year, and decide some of these questions. There has been a time when the junior Senator from Alabama would have felt that possibly a 12-month-per-year recess for the Supreme Court would have been in the best interests of this country, but with so many questions before the Court on appeal to the Court, so many questions to be decided, it seems that it is the duty of the members of the Supreme Court to come back from their recess and decide these questions and set in order the public school system of the Nation, to the chaos in which they have had such a part.

Mr. President, as late as 1963 Federal courts upheld freedom of choice and pupil placement laws, and Federal courts have avoided holding that State constitutional provisions which protect the right of parents to freedom of choice are outlawed by the 14th amendment.

On the other hand, Federal courts, including the Supreme Court, have taken the position that freedom of choice, while not unconstitutional, is permissible only if parents choose schools so as to meet an unspecified racial mix as may be prescribed by various Federal courts.

They have not ruled that freedom of choice is unconstitutional. They have held that since the application of the freedom-of-choice rule and policy did not result in the required but unspecified racial mix, the freedom of choice plan would be stricken down—not because it was freedom of choice, but because it did not provide the type and degree of racial mix that the Supreme Court seemed to think it should have. But at that time they should have taken the opportunity to point out what is the racial mix that is required to meet their views as to what is necessary to desegregate the public schools.

The Supreme Court allows the district courts and the courts of appeal all over the country to come up with different interpretations, different rules, and does nothing to advise the lower courts of what the law is. I hazard the opinion that the Supreme Court has the law with respect to desegregation of public schools in such a state of confusion that not only does a school board official or a teacher or school administrator, and not only do the district courts and the courts of appeal, not know what the law is, but that the Supreme Court itself does not know what the law is. If it does know, it is high time it is imparting that information to the people of this country, because it has been 16 years since the Brown decision.

Chief Justice Burger points out three areas in which the Supreme Court has not ruled. I hope I get to that point before my time is up.

Mr. President, I submit that the Brown II decision was a grave and almost incomprehensible mistake. The method of implementation prescribed was divorced from practical, down-to-earth realities. It had no relation to the factual situation as it existed then or as it exists today. Reason and rationality are the essence of law. Without these attributes a statute or decree can be put into effect only by resort to force—sheer, brutal, naked force.

That, Mr. President, is precisely what the Supreme Court authorized when it invited district courts to preside over local boards of education and to fashion remedies under equitable powers of Federal courts.

For 5 years U.S. district courts and State and local school authorities wrestled with the problem of trying to find out what the Supreme Court would require. The Supreme Court satisfied itself with a case-by-case process and expounded on the meaning of "deliberate speed"; it considered State pupil placement laws; it passed on pupil transfer provisions; it considered questions concerning administrative remedies, freedom of choice, and similar questions. Throughout this time the Supreme Court permitted conflicting and contradictory U.S. district court opinions to stand and refused to address itself to the resolution of these conflicts. Then in 1960, United Nations Educational, Scientific, and Cultural Organization entered the picture. In December 1960 it adopted a "Convention on Discrimination in Education," and an almost identical document entitled "Recommendation on Discrimination in Education." Congress would have had to approve a "convention" but the Executive could agree to implement the "recommendation," the provisions of which differ only slightly from the provisions in the formal "convention."

Mr. President, I request unanimous consent that the texts of these documents be printed in the RECORD in the Extensions of Remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibits 3 and 4.)

Mr. ALLEN. These agreements and conventions are interesting as an indication of how far their provisions have been implemented in the United States by executive and judicial decrees and to

what extent they have been implemented by actions of Congress. The texts are also interesting because they raise very profound constitutional questions extraneous to immediate problems in public school education.

Mr. President, from the time of the acceptance by the United States of "Recommendations on Discrimination in Education," our Nation has undergone a continuous revolution in public school education dimly outlined in "The Necessary Revolution of American Education" by Francis Keppel, who was Commissioner of Education in 1962 under President Kennedy, and primarily responsible for implementing the "Agreement."

As the Keppel revolution gathered steam some of the major foundations in our Nation helped finance a gigantic propaganda program aimed at the enactment of the Civil Rights Act of 1964. This act ushered in a new era of litigation. It opened new legal questions and it provided the opportunity for the U.S. Supreme Court to demonstrate once again an incapability to face up to necessary constitutional questions which had to be determined and which remain to be determined.

The failures of the U.S. Supreme Court from the enactment of the 1964 Civil Rights Act can be traced to refusal to decide whether or not the Constitution of the United States requires racial balance in public schools.

Mr. President, this is the issue central to and controlling all others. Those nine men, sitting in the marbled mausoleum across the way, are primarily responsible for the disastrous and tragic school plans imposed upon the public schools in the South by reason of their failure to decide this vital issue.

Innumerable U.S. district court judges have complained, and rightfully so, of the inability to determine what the Supreme Court means in the use of a multitude of new and vague terms employed by the Court dating from enactment of the Civil Rights Act of 1964.

For example, as late as December 30, 1969, the U.S. district court judge who presided in the important case entitled "Beckett and Others Against the School Board of the City of Norfolk," decided December 30, 1969, complained that such terms as "desegregation," "intergration," "unitary system," nondiscriminatory," and others have not been defined by the Supreme Court. Neither have such terms as "discrimination," "racial ratios," "root and branch"—where they said segregation has to be destroyed root and branch—and "racial balance." But the most important of these is racial balance.

When the Supreme Court decides the question of racial balance in public schools, the importance of other definitions will disappear. If racial balance is required by the Constitution of the United States then the entire issue can be consigned to computers and the means of achieving racial balance are of secondary importance.

But if the Supreme Court decides that racial balance is required it will also have decided that parents no longer have a right superior to that of the State to decide the type of education their children shall receive and that parents shall no longer have a voice in the choice of schools their children shall attend.

If the Constitution requires racial balance in public schools, than parents will have been denied the human rights of parental supervision and control of their own children in matters affecting their health, safety, welfare, and moral training.

On the other hand, if racial balance in public schools is not required by the Constitution, then and only then are definitions of "desegregation," "unitary school" and similar words and phrases of importance.

On the problems of definitions, it is worthy of note that the Supreme Court and the Department of Justice and the Department of Health, Education, and Welfare refuse to accept definitions already provided by Congress.

In addition, the U.S. Supreme Court, the Department of Health, Education, and Welfare, and the Department of Justice have failed to accept the definition and judgments respecting racial balance provided by the United Nation's agencies and instrumentalities.

For example, the International Commission of Jurists in a special 1965 report based on a study of racial discrimination in British New Guinea, defined the terms "racial discrimination" and "racial imbalance." No one will question the liberal credentials of the International Commission of Jurists whose study of the problem was undertaken at the request of the Government of New Guinea.

Mr. President, I want to call attention to the following definitions and discussion excerpted from the above report.

> The term "imbalance" implies some departure from a standard or norm and presumably, . . . its obverse, "balance" should imply conformity with such a standard or norm. Part of the difficulty surrounding an inquiry of this nature will inevitably center around the determination of such norms.

Let me call special attention to the following excerpts:

> The term "imbalance" implies the existence or possible existence of a balance which amounts to a fixed criterion of participation of the different racial groups in the fields concerned . . . such criterion is proportional to the numerical strength of the various racial groups.
>
> *We are of the opinion that it is neither possible nor desirable to fix such an absolute standard of racial participation. It is not required by the existing constitution of British Guiana or by international law.* (emphasis added)
>
> We are convinced that any attempt to fix an absolute standard of racial participation in the public services would lead to arbitrary procedures which would, in the long run, retard racial harmony in the community. . . .
>
> We do not consider that such disproportionate participation is in itself undesirable; but it is necessary to give full weight to the existence or non-existence of such a fact in determining whether or not racial discrimination exists.

Mr. President, despite the laws of Congress on this subject and despite the authoritative opinion of international authority, the Supreme Court of the United States has taken precisely the opposite view as it relates to teachers. This, too, has contributed to the present mess and uncertainties in the public school system.

On June 2, 1969, the Supreme Court handed down a ruling in a Montgomery, Ala., school case relating to assignment of public school teachers. The Supreme Court rejected a "substantial or approximate" participation in favor of an arbitrary ratio.

However, in what has become a characteristic of the Supreme Court opinions, the Court did not rule that "racial balance" is required by the U.S. Constitution. Instead, the opinion held, in its necessary effect, that any deviation from racial balance is unconstitutional.

The implications of the principle extend to all public services and could eventually affect all public employees in every aspect of public service without regard to qualifications, merit, tenure, and other valid standards. It is a landmark decision. For if it is a valid principle as applied to teacher assignments, it is also valid as applied to pupil assignments.

Mr. President, I have previously commented on this decision in greater detail, and I request unanimous consent that my remarks which appeared in the CONGRESSIONAL RECORD of June 17, 1969, be printed in the appendix to these remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 5.)

Mr. ALLEN. Let it be said to the credit of Chief Justice Burger, however, that he does not consider the racial balance question decided. The following statement by Chief Justice Burger seems to indicate that he recognizes that the racial balance question must be decided before other related questions can be answered. This is what he says in his opinion:

> As soon as possible, however, we ought to resolve some of the basic practical problems when they are appropriately presented including whether, as a *constitutional matter, any particular racial balance must be achieved in the schools;* to what extent school districts and zones may or must be altered as a constitutional matter; and to what extent transportation——

In other words, busing—

> may or must be provided to achieve the ends sought by prior holdings of the Court. (Emphasis supplied).

These are the three things that he says have not been decided and ought to be decided. In other words, the Chief Justice of the United States is saying that the Supreme Court, after 16 years of fumbling with this most important question, still has not decided these three most important questions: Whether any particular racial balance must be achieved in the schools, to what extent school districts and zones may or must be altered as a constitutional matter, and to what extent transportation may or must be provided to achieve the ends sought by prior holdings of the court.

Yet we find the district courts and circuit courts of appeals approving and implementing plans of HEW, or devising plans of their own, putting into effect all three of these procedures, not one of which has been ruled on by the Su-

preme Court, according to the Chief Justice himself. So these matters need clarification.

Mr. President, the distinguished national columnist, David Lawrence, in an article appearing in the U.S. News & World Report, August 31, 1970, has presented a compelling argument why U.S. Supreme Court clarifications are needed. I request unanimous consent that his article entitled "Clarification Needed" be printed in the appendix to these remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 6.)

Mr. ALLEN. In the interest of further illustration of the point of clarification, I request unanimous consent that my remarks on the subject which appeared in the CONGRESSIONAL RECORD of August 25, 1970, be printed at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 7.)

Mr. ALLEN. I further request unanimous consent that an article entitled "Do Most Americans Secretly Want Segregation?" by the distinguished Senator from Connecticut (Mr. RIBICOFF) which appeared in Look magazine dated September 8, 1970; and the Washington Post, August 29, 1970, editorial entitled "Desegregation: Waiting on the Court" be printed in the appendix to my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibits 8 and 9.)

Mr. ALLEN. I also ask unanimous consent that a résumé dated August 6, 1970, prepared by me entitled "The Fight To Return Public Schools to State and Local Control" be printed in the RECORD as an appendix to my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 10.)

Mr. ALLEN. Mr. President, the Fourth Circuit Court of Appeals has announced a "rule of reasonableness" in carrying into effect the desegregation policies required by the Supreme Court. The case in which that rule was announced is before the Supreme Court. If that "rule of reasonableness" is adopted, it could be the answer to this problem.

We find the Justices on vacation until October, and schools opening all over the country. Some schools are opening in Alabama today, and others are opening next week, some already having opened.

The Supreme Court has it within its power to announce rules of law that would help clear up and clean up the mess and confusion that have been caused in the public schools of the South by their own decisions and their failure to clarify those decisions.

Supreme Court Justices are appointed for life. I might say parenthetically that I believe the district court judges ought to be elected. The courts of appeals judges ought to be appointed for stated terms. The Justices receive compensation of $60,000 per year. They are able to retire at $60,000 per year after not having paid 1 cent into any retirement fund. Yet, they take each year a 3-month vacation, regardless of the chaos in which our public schools find themselves. I believe it is the responsibility of the Supreme Court to come back into session and decide these matters, these cases, these principles that are pending before them.

EXECUTIVE DEPARTMENT

All the blame for the present school situation does not rest upon the Supreme Court. The executive branch of the Government shares a large measure of responsibility for existing chaos in our public schools. In speaking of the executive department, I refer more specifically to the Department of Health, Education, and Welfare and to the Department of Justice. These agencies of the executive branch have simply taken the bit in their teeth and are beyond control of Congress as expressed in existing statutes and restraints.

In this connection, the laws of Congress are treated with contempt. The following is a partial list of specific statutory provisions of law which these agencies have consistently and persistently violated:

Sec. 401 (b) "Desegregation" means the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but "desegregation" shall not mean the assignment of students to public schools in order to overcome racial imbalance.

Congress said further:

Sec. 407 (a) (2) . . . nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance, or otherwise enlarge the existing power of the court to assure compliance with constitutional standards.

Even later, Congress said in Public Law 89–750, section 181—1966:

Nothing contained in this Act shall be construed to authorize any department, agency, officer or employee of the United States . . . to require the assignment or transportation of students or teachers in order to overcome racial imbalance.

And still later, in 1969, Congress said:

No part of the funds contained in this act may be used to force busing of students, abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent in order to overcome racial imbalance.

In addition, I could cite provisions of various statutes authorizing Federal assistance to public education which specifically deny the Executive the power to prescribe employment practices of any educational institution. In addition, such a provision is contained in the 1964 Civil Rights Act. We could also refer to the provision of the 1964 Civil Rights Act relating to the authority of the Department of Health, Education, and Welfare to withhold or cut off funds authorized by Congress for the benefit of school children. This provision of the law has been and continues to be flagrantly violated by the Department of Health, Education, and Welfare.

To further illustrate the damage done by these merchants of rule or ruin, I want to cite two examples of their work. I refer specifically to the school plans prepared by so-called experts of the Department of Health, Education, and Welfare in Choctaw County, Ala., and Mobile County, Ala.

The Choctaw County school plan is celebrated in Alabama as the "Case of a Confused Education Expert." This individual was employed by the Department of Health, Education, and Welfare to prepare a comprehensive school plan for the Choctaw County, Ala., school system. The plan was prepared for submission to a U.S. district court judge as the work of an expert.

The individual was so confused that he referred to Choctaw County, Ala., in one place in the plan, as being located in Louisiana and at another place in the plan Choctaw County, Ala., was located in Mississippi. He spent all of a single day in preparation of an in-depth study of education needs and problems in Choctaw County. However, he failed to contact any school official in the county and made whirlwind, windshield inspection of public school facilities in the county.

The school plan submitted to the court was as disoriented as the education "expert" who prepared it. The plan proposed what amounted to destruction of the public school system in Choctaw County. I have commented on this case previously in greater detail in remarks which appeared in the RECORD of October 14, 1969. To further illustrate the point of bureaucratic incompetency and inefficiency, I request unanimous consent that my previous remarks on the Choctaw County case be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 11.)

Mr. ALLEN. Many of the same criticisms can be applied to the Mobile, Ala., school system plan prepared by so-called experts in the employ of the Department of Health, Education, and Welfare. An editorial in the highly respected Mobile Register makes the point better than I can. The editorial expresses the judgment that:

HEW's "plan" for the public school system of Mobile County is in reality a formula for the destruction of the system of public education in this county. It is a brutal bureaucratic atrocity of which no responsible agency of government would be guilty.

For the first time in American history, an instrumentality of government in Washington, D.C., has gone so stark wild that it openly calls for violation of federal law to destroy a public school system.

Its ruthless, reckless, destructive, law-defying scheme would virtually reduce the system of public education in this county to a daily clutter of pupil-hauling buses operated as one segment of the bankruptcy-producing expenditures to which the school system would be subjected as an inevitable necessity to compliance.

What travesty, what mockery, what hypocrisy, what outrage perpetrated against the public intelligence . . . (by the action of) HEW.

I have since learned that the above two examples are not isolated or exceptional cases. It is common practice for HEW educational experts to draw up school plans based on the single criterion of

racial balance. In view of the fact that the cases I have described are typical, I request unanimous consent that my remarks on the Mobile County school situation which appeared in the RECORD of July 22, 1969, be printed at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 12.)

Mr. ALLEN. I continue to level criticisms at the Department of Justice and the Department of Health, Education, and Welfare, but this does not improve the qualifications of their experts or alter their built-in preconceptions of law. I have previously mentioned that these departments willfully and wantonly disregard the law, so criticism is not likely to accomplish what must be done. Congress has permitted these agencies to get by with their lawless action. Federal courts have condoned and encouraged them.

It has reached the point where the people of this Nation will have to assert the ultimate sovereignty which is theirs and demand corrective actions. The people are already aroused. They need only to be informed of the extent to which their constitutional liberties are being trammeled on by the executive branch of Federal Government. In the interest of informing the people, I want to devote the next few minutes to outline some of the constitutional liberties which are being sacrificed on the alter of disciplines of rule or ruin in the public schools of this Nation.

CONSTITUTIONAL QUESTIONS

A legislative solution to the problems presented to this point cannot be provided until we fully understand the magnitude of the departures from constitutional law reflected in current problems created by the Federal judiciary and by the Federal executive.

Most, if not all, of the departures relate to the traditional protections of our liberties provided by the due process clause of article V of our Constitution.

It is unquestioned that due process of law is a limitation on the powers and on the means employed by the Congress, the executive and the U.S. courts in the creation of statutes and in their administration.

The violations of which I shall speak are both procedural and substantive. Both have the effect of curbing liberties granted and guaranteed by the Constitution. Executive department agreements with international agencies designed to reform domestic institutions in our Nation are not consistent with constitutional procedures demanded by due process of law.

Delegation of legislative powers of Congress to the executive without precise limitations on the power delegated violate procedural due process of law. In this regard the 1964 Civil Rights Act violates due process of law and has become the source of limitless evils and innumerable problems. For one thing, it has permitted the executive department to become judge of its own powers in matters vitally affecting the health, safety, morals, welfare, and cultural training of schoolchildren.

For another thing, it has permitted the executive department to create "dual standards" in the administration of laws so that provisions of the Civil Rights Act can be utterly disregarded in one section of the Nation and enforced by arbitrary and unreasonable means in another section of the Nation.

It establishes the proposition that provisions of the Constitution of the United States mean one thing as applied to one section of the Nation and something entirely different as applied in other sections of the Nation. The de facto-de jure distinctions are the result of special pleaders in the Department of Health, Education, and Welfare. The distinction is mythical, fictitious, and invidious. The distinctions violate procedural and substantive due process of law.

The asserted power in the executive department to close and order the abandonment of school buildings and other facilities violates due process of law. These facilities were constructed from the proceeds of the sale of bonds. Taxes are earmarked for payment of these bonds. Payment is guaranteed by statute and by contract. Outstanding bonded indebtedness remains. Closing of such schools on order of the Federal courts or the Federal executive is equivalent to condemnation of this property. It is equivalent to taking property of citizens represented by payment of taxes earmarked for payment of bonded indebtedness without a scintilla of due process of law. More specifically, such procedures are contrary to due process provisions of article V of the Constitution.

Teacher tenure rights which have become vested by law are abrogated by procedures which compel transfer and assignment of teachers contrary to their vested right of tenure. This, too, violates article V of the Constitution.

The arbitrary compulsion of teachers to teach only in certain schools and localities abridges the constitutionally protected right of freedom to contract. This procedure also violates property rights traditionally recognized and protected by article V of the Constitution.

The administrative regulations by which private schools are denied a tax exempt status has the effect of amending, modifying, and in some respects repealing laws of Congress. This violates procedural due process of law.

The administrative regulation to deny deductibility of contributions to private schools for income tax purposes violates procedural due process of law. In addition, it abrogates the right of an individual to choose the object of his benevolence, and in this respect violates the first amendment right of freedom of association.

Any effort by Congress or the executive to impede by tax penalty the right of freedom of association has profound implications for church related schools.

Church related schools no less than segregated schools involve first amendment rights and any principle established by the executive for one has implications for the others.

Administrative and judicial enforcement procedures which rely on rule by mandatory injunction and enforcement by means of contempt of court proceedings and the threat of confiscatory fines and imprisonment of elected public officials violate due process of law.

In this instance, the rights abrogated are rights originating in the Magna Carta and continued in precedent dating from A.D. 1215.

The departure from this due process protection has profound implications for organized labor.

Organized labor has fought this battle before, and it is doubtful that they will accept the proposition embraced in rule by injunction as it is applied to their children and to their public schools.

Enforcement procedures which involve the deprivation of innocent children of goods and services authorized and funded by Congress violate substantive and procedural due process of law. It is worth observing that when the Department of HEW requests funding, they speak of the needs of children. When they speak of depriving children of these funds, they speak of school districts and administrators. In other words, the funds are requested for children, but procedures for deprivation involve administrators of the funds. There is no semblance of due process of law where the persons involved who suffer deprivation are provided no opportunity for a hearing even to plead for mercy. School administrators and school districts do not eat school lunches nor use the services Congress has provided for schoolchildren.

Administration procedures to combine legislative, executive, and judicial powers in a single agency of Government constitute depotism by the accepted definition of the term. Congress cannot authorize such procedures because it has no power to do so. The Supreme Court cannot legislate such procedures because it, too, is limited by the constitutional protection of the people provided for in the due process clause of article V of the Constitution.

These are but a few of many additional violations of the Constitution which have resulted primarily from accepting international agreements and obligations as law superior to the law of our Constitution, and they result from the enactment of the 1964 Civil Rights Act, which conforms in almost every particular to provisions of UNESCO's "Recommendation on Discrimination in Education."

If problems have arisen as a result of the 1964 Civil Rights Act, enacted under authority of the 14th amendment, it necessarily follows that Congress has the power and the responsibility to correct the problems so created.

Let us next consider the possibilities for legislative redress.

CONGRESSIONAL REDRESS

The question arises as to the legal and moral responsibility of Congress to help resolve some of the major problems which I have previously mentioned. Will Congress realistically accept the responsibility in this matter or will it continue to pass the buck to the executive and to the Federal judiciary?

I think Congress has a duty to help resolve these problems.

No one can seriously question the power of Congress to correct inequities and injustices and departures from the law which stem directly from enactment of the 1964 Civil Rights Act.

Section 5 of the 14th amendment provides:

> The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

If this provision authorizes Congress to enact the Civil Rights Act, it likewise authorizes Congress to enact legislation more clearly and definitely defining the rights to be protected under the 14th amendment. Particular attention should be given to rights supposed to be protected by the equal protection and due process clauses of the 14th amendment.

It is true that Congress has defined the term "desegregation." It is also true that Congress has time and again made clear its intention with respect to the issue of racial balance. Time and again, Congress has expressed itself on this last point.

Nevertheless, the executive branch of Government and Federal courts have disregarded the law and the often repeated expression of legislative intent on the subject of racial balance.

Under the circumstances, it seems clear to me that Congress must establish a national policy with respect to the concept of racial balance.

I have previously proposed legislation by means of an amendment to the appropriations bill for the Department of HEW that we establish "freedom of choice" of parents to choose the schools their children shall attend as an inviolate right protected by the Constitution of the United States. The amendment provides:

> It is hereby declared to be the sense of Congress that the freedom of choice of parents to choose the public primary and secondary schools to which they shall send their children (subject to age, academic, and residence requirements) is an inviolate right, the protection and maintenance of which is part of the public policy of the United States.

Because of the past record of deliberate disregard of limitations placed upon the Department of HEW, it would seem necessary that Congress provide for penal sanctions applicable to officers and administrators in the Department of Justice and in the Department of HEW, and others who act under color of law in clear violation of specific limitations on their powers.

If members of the executive department and other branches of the Federal Government refuse to be bound by the laws enacted by Congress, it would seem clear to me that penal sanction should be imposed on the one hand, and that members of the Federal judiciary should be reminded of the power in the House of Representatives to impeach and the power in the Senate to try the issue raised by impeachment.

It is extremely hard for me to reconcile palpable abridgements of constitutionally protected rights with "good behavior" on the part of Federal judges.

Let me conclude my remarks with these observations. We have reached a point when the very legitimacy of the Supreme Court and the Federal judicial system is seriously questioned by a majority of the people in the United States.

There is a parallel here from the standpoint of judicial authority with the situation following the Dred Scott decision. Let me quote from a recent issue of the Boston University Law Review:

> Dred Scott was seen to rest ultimately upon the authority of the Court's decision. It would appear that Professor Bickel is correct in asserting that authority is, in the final analysis, the basis of the Court's competence, although force and power may serve to provide the short-term acceptance of the decision.

There is also a parallel between present trends in constitutional law with trends in the development of German law which led to the tyranny of the National Socialist State under dictatorship of the Nazi Party. On this point let me quote from the same source, the Boston University Law Review:

> This conception of law and its validity (we call it the positivist theory) made the (German) lawyers as well as the people defenseless against the most arbitrary, the most horrible, the most criminal laws. It places in the last analysis law equal to power; only where power is, is there law.

I am deeply concerned—and every Member of the Senate should be deeply concerned—by trends manifested in the proposition that the end justifies the means. In this regard, let me quote the observation of the Honorable Bryce Baggett, a State senator in Oklahoma, published by the Educational Commission of the States in the October 1969, issue containing an article entitled "Confrontation on Campus." Senator Baggett said:

> I deplore the concept that the end justifies the means. It is not so important where we are going, but how we are getting there. The processes of democracy are shaped on this premise. Goals are not as important as the means by which these goals are attained. Perfect justice does not exist, but due process of law does exist.

Let me also commend to the consideration of my colleagues, the observations of Robert A. Nisbet on the subject of limitations of the power.

In an article published in the Washington Post May 18, 1969, Nisbet had this to say:

> The most striking fact in the present period of revolutionary change is the quickened erosion of the traditional institutional authorities that for nearly a millennium have been Western man's principal sources of order and liberty. I am referring to the manifest decline of influence of the legal system, the church, family, local community and, most recently and perhaps most ominously, of school and the university. . . . Throughout human history, when the traditional authorities have been in dissolution, or have seemed to be, it is power—in the sense of naked coercion—that has sprung up.

Our Nation is involved in a crisis. The people are fed up with arbitrary government. Millions of schoolchildren, white and black, are seriously affected by the lawless irresponsibility of the Federal and judicial branches of Federal Government, and they are completely fed up with the failure of Congress to face up to its responsibilities to help correct the problems in our public school system.

Time and again we hear the charge that the ultraliberal coalition in Congress has permitted the cause of political expediency to rule over the dictates of reason and justice. The people are fed up with those who play politics with their children. The time of reckoning is at hand. The people have been forced against the wall. They have but two alternatives. They may bow to the superior power of Government, or they can rebel and "throw the rascals out."

On our part, we can and we should call upon the Supreme Court to come back from its vacation and address itself to the problems affecting millions of schoolchildren throughout this Nation.

In the words of John Donne:

> Never seek to know for whom the bell tolls; it tolls for thee.

These procedures and practices, if continued to be applied in the South today, are the same procedures and practices which will be applied in States outside of the South tomorrow.

The school bell that tolls throughout the South today, tolls for thee.

EXHIBIT 1

THE CURSE OF CRASH EDUCATION

(By R. C. Orem)

If reports from states and cities are a bench mark, the federal government's multi-billion dollar campaign to sharply improve education for the children of the city ghetto and the rural poverty pocket needs vast overhauling.

It's a noble idea that has bogged down in a mass of waste and haste.

"Programs have been piecemeal fragmentary and ill-planned," complained Texas education officials in reviewing the spending of $200 million for the educationally deprived in their state from 1966 to 1968.

"Objectives have been piecemeal, fragmentary and ill-planned . . . duplications of effort are being exerted by local, state and federal funding agencies without attempt at coordination."

Commented District of Columbia officials in a report on what has been happening in their jurisdiction: "No evidence was found that any major changes in aptitude or achievement test scores were associated with any of the . . . school programs."

And New York officials said: "In general, there was failure to recognize the intent and philosophy of the legislation."

Authorization to meet "the special educational needs of educationally deprived children" under Title I of the Elementary and Secondary Education Act is the cornerstone of the vast project they were talking about.

Lyndon Johnson, who signed the Act in a one-room Texas schoolhouse on April 11, 1965, hailed it as the "most creative legislation passed by Congress since I came to Washington."

A former teacher himself, President Johnson hoped schools would become institutions for social change in his Great Society, helping to eliminate poverty and aiding the disadvantaged.

Zipped through Congress in three months the Act was the first great federal foray into public and private elementary education.

THREE BILLION DOLLARS SO FAR

Few people question the wisdom of investing more money in aid of American education, especially for programs aimed at the disadvantaged. But many now are questioning the quality of the job being done with a vast sum—nearly $3 billion so far.

Educators have complained bitterly about going ahead with a crash program, ill-thought out and patchwork-implemented.

With extension of the Act now before

Congress, many cry for a hard look at what has or has not been accomplished, and for some better administration.

What really has been accomplished is hard to pinpoint.

The Act called for unprecedented evaluation of poverty education programs by states, cities, the Office of Education and the National Advisory Council on Education.

And a harsh indictment has come in the resulting reports by the cities and states which have poured into the Office of Education. There have been comments such as:

"Reading achievement levels of disadvantaged readers were no higher after one or two years of participating in Title I programs than achievement levels that would have been expected for the same grade levels without them." (From Nebraska officials.)

"Generally speaking, the results were not what had been anticipated. . . . In isolated cases significant gains were obtained but in the large majority, changes were not significant. In some cases post-test results were even found to be significant in the wrong direction." (From Pontiac, Mich.)

"One problem is that Title I programs have created a 'brain drain' from the classroom. Too often one of the most capable teachers is named project coordinator or cultural coordinator. Thus, when an excellent teacher is removed from the classroom, the good that he does in Title I is offset by the less effective work then being done in the classroom he left." (From Newark, N.J.)

AIDING THE WRONG STUDENTS

The National Advisory Council criticized the program for failure "to identify and attract the most seriously disadvantaged children" while in the continuing confusion huge numbers of nondeprived students have been enrolled.

In one school system alone, it reported, "almost seven and a half times more children (over 300,000) were enrolled in Title I activities than were listed as eligible."

More than half of all Title I funds are spent for instructional activities, largely remedial reading. But these reading efforts, costing an estimated $1 billion over three years, often have been a parody of sound educational practice and may have had as much negative as positive effect.

Nebraska officials reported: "Most schools used an elementary teacher with no special remedial training as their remedial reading teacher."

And Florida's latest evaluation report showed the relative performance of thousands of children on language, reading and arithmetic achievement tests declined after exposure to the "benefits" of Title I.

Of approximately 15,000 Florida third graders who took the Stanford Achievement Test, those scoring in the lowest quartile in reading increased from 44 per cent to 67 per cent, while those scoring in the highest quartile decreased from 18 per cent to 6 per cent.

These funds for the educationally deprived also finance schools for unwed mothers, welfare services, recreation and a potpourri of other regular and summer term projects.

A FAR-AFIELD TRIP

Field trips have ranged from a visit at the New York Giants professional football camp to a 28-day tour of the United States by a group of students from Idaho. "Consultants" have been hired from as far away as Leicestershire, England.

During the first year of the Act alone, more than $200 million was spent for equipment and materials, much of which could not be delivered by swamped producers until after programs had ended. Reported Kansas officials:

"Without materials and specialized equipment the programs could not function as planned. . . . Some programs were practically unrecognizable when the state agency consultant made site visitations. Teachers had to improvise until the material arrived and in many instances the arrival was after the close of school."

A shortage of space and facilities has further crippled Title I programs. And despite critical construction needs of local school systems, the Office of Education has discouraged construction with these funds. Consequently, as Illinois authorities reported, "Title I activities . . . often forced . . . other classes into makeshift spaces such as Quonset huts, closets, engineering rooms."

The negative effects of Title I, tragically, have probably nullified whatever desirable results did occur. A Parsons, Kans., school official wrote: "Probably there has been as much good accidentally as there has been on purpose."

Minnesota education authorities said: "The most serious criticism of the projects may well be that they continue, even if in a more concentrated form or on a more individual basis, the same type of educational programs and activities that produced the educationally disadvantaged child."

And a Kansas educator said: "Projects in some schools are doing irreparable damage to the ongoing regular programs."

A Title I provision that is causing consternation—and in some states, legal suits—has local educational agencies provide opportunities for participation of parochial and other nonpublic school children "to the extent consistent with the number of educationally deprived children who are enrolled in private elementary and secondary schools."

WOBBLY GUIDELINES

Both public and nonpublic educators have been confused by regulations and guidelines on this section.

But this confusion is negligible when compared to that caused by the provision which requires development of Title I programs in cooperation with Office of Economic Opportunity-sponsored Community Action Program agencies.

Educators generally listed in their reports these problems with the OEO agencies: Poor communications, overlapping and duplication of responsibilities, power struggles, red tape.

There has been widespread opposition among educators to community action agency development in education. The National Advisory Council reported: "This relationship has, in some cities, handicapped or delayed program initiative by local schools and given excessive authority to CAP agencies."

Said Florida officials: "The frustrations involved in this interagency planning approach were so disquieting at times that there was much question as to whether the benefits gained would offset the problems created."

And from Maine: "It appears to us that there is no necessity for legislation relating community action programs to Title I programs, since the CAP committee is not staffed to intelligently review a Title I project."

State after state bluntly blamed the U.S. Office of Education for chaotic administration of Title I programs, citing a shopping list of complaints on late and inadequate information, fuzzy guidelines, policy conflicts and poor communications in general.

BETTER THAN NEVER

Complained one New Jersey official: "We have just about completed approval of projects for fiscal year 1967 and yet we received, in the past week, a draft of revised rules and regulations to be used for fiscal year 1967."

"The information on the forms is not adequate for providing the reality of project operation," reported Wisconsin officials, "and yet an offer of state assistance in application revision and coordination for the coming year was not well-received at the federal level."

Ohio officials complained: "Inadequate planning was apparent in that the evaluation format, neither in the initial stages nor in its final form, embodied a meaningful basis for evaluation."

Alaska officials blew up on 1968 evaluation procedures. "The administrative absurdity of asking new questions six weeks before the due date of a report should have been apparent . . . Any first year busines student could point out the administrative impossibility of ex-post facto questions."

Kentucky plaintively noted it had received a copy of "Questions to be Answered by State Elementary and Secondary Education Act Title I Evaluations" in April, 1968. Then it received a second, slightly different copy. And then a third, with more variations. Which was the final copy?

The matter of timing for receiving funds under the Act has been an area for particularly tart comment by state officials, whose reports bristled with frustrations: "A mad rush and poor use of funds throughout projects" (Arizona). "Much duplication of time and effort at both state and local levels" (Vermont). "Lack of efficient planning and effective use of money" (Lubbock, Texas).

Poverty education funds are allocated on a formula between urban and rural. Project cost in California, for example, ranges from $252.67 for a single disadvantaged child in a one-room mountain school to over $15 million for 50,000 children in the Los Angeles school district.

Yet, states such as Illinois have noted that in rural districts "time . . . is squandered" attempting to meet guideline technicalities "which are meaningful only in large metropolitan areas."

Large city programs typically have been disorganized and diffuse. With an acute shortage of facilities, stair landings and corridors have become teaching areas. New Orleans reported that employing such heavily-traveled space for speech development "borders on the ridiculous."

Birmingham, Ala., cited problems of "insufficient supervisory staff" and Chicago noted a "critical" shortage of administrative personnel.

Without adequate leadership, project efforts are thinly spread, their effects frittered away. Destruction and theft of record players and other equipment plagues the programs.

Failure to properly diagnose student needs is almost universal. Attendance is irregular, with many dropping out altogether after the first few days.

ANOTHER $1.2 BILLION

In spite of all the criticism, the House Committee on Education and Labor has recommended extension of the Elementary and Secondary Education Act, with $1.2 billion to be spent for fiscal year 1970. The Committee contended Title I has been doing a successful job, reaching more than nine million students in 16,000 school districts. It did recommend strengthening evaluation reports at the state and local level, and establishment of state advisory councils.

By law, the Office of Education is supposed to give Congress an annual evaluation report on Title I programs. It hasn't yet delivered all of these reports and, in fact, it's still groping for a sensible evaluation format. The reports it has made have tended to be self-serving.

From studies of state reports, nearly 200 sources of trouble and tension within Title I have been identified. With the need so great to provide better education for the disadvantaged, it is essential that a critical look be taken at how these programs are working, and that some meaningful way of evaluating them be found.

If not, there will continue to be waste and haste, to the tragic detriment of those who most need help.

EXHIBIT 2

WHY SCHOOL BUSING IS IN TROUBLE

The school bus is running into trouble as a vehicle for racial integration.

Once, only a few years ago, busing was being hailed by civil-rights leaders as the answer to Northern-style segregation—the so-called de facto segregation that occurs when children living in all-black or all-white neighborhoods attend neighborhood schools.

The idea was to bring about racial mixing in the classroom by busing children back and forth—bus Negro youngsters out of their black areas.

There was opposition, often bitter. Battles over busing split many communities. But opponents, frequently denounced as racists, lost in city after city. And the idea spread. Busing has been adopted as an integration method in scores of cities around the U.S.

Now, however, attitudes are changing. The tide of the battle appears to have turned—against busing.

The new trend shows up in a nationwide survey by members of the staff of U.S. News & World Report." According to that survey:

Among civil-rights leaders, educators and Negroes themselves, doubts are growing about the value of busing, either as a method of integration or as a method of improving education.

Interest is growing in a different idea—that Negroes may benefit more from an improvement of schools in their own neighborhoods than they do from being bused into white schools.

"A DEFINITE CHANGE"

In Baltimore, Associate Superintendent of Schools William Tinderhughes told "U.S. News & Report":

"There has been a very definitie change in thinking about busing for integration in recent years. A few years ago, there was demand for busing. But not now.

"Parents now are more concerned with the quality of the education that their children are getting. The same group that at one time was speaking for integration now is speaking about curriculum, about teachers and about the quality of that educational program."

In Chicago, Assistant School Superintendent David J. Heffernan said this:

"The integration battle now has taken a different turn. Busing, as such, is almost completely out of the picture. It has proved effective neither for integration nor for better education."

In Minneapolis, this comment came from Floyd Amundson, school-board consultant in community relations:

"The trend here is away from busing because it doesn't solve anything. The blacks themselves apparently would prefer to have their own schools improved rather than have their children bused to mostly white schools."

On the West Coast, a school official in Los Angeles reported:

"Fewer blacks have been showing up at board meetings to demand integrated schools this year. The 'Black Power' movement, with its emphasis on the isolation of black people, may have something to do with it."

"CLIMATE HAS CHANGED"

The trend toward racial "separatism" shows up in several places. In Pittsburgh, John March, director of public relations for the board of education, said this:

"The climate has changed. The most militant outspoken blacks are not interested in integration. They want separation. You wonder how you can justify busing under these conditions.

"This puts the school boards right in the middle. We are under pressure from the State Human Relations Commission to desegregate. But the militants don't want it. The children even segregate themselves in our high-school cafeterias. We have separate black and white areas that the blacks are mostly responsible for creating. The old rules just don't seem to work any more."

Black separatists, however, are far from being the chief causes for the diminishing popularity of busing.

Civil-rights leaders with long and strong commitments to the cause of integration are questioning the value of the bus. One is James Farmer, former head of the Congress of Racial Equality (CORE) who now, as Assistant Secretary of Health, Education and Welfare, is the highest-ranking Negro in the Nixon Administration. Mr. Farmer announced last March that he had changed his mind on integration by bus. He said:

"Our objective should be to provide a high-quality education. The real problem is not integration or segregation. It is the quality of education. Busing is not relevant to high-quality education. It works severe hardships on the people it affects. In the South, I found blacks complaining of being bused to school."

WHERE BUSING WORKS

All this does not mean that busing is being abandoned as a way of integration.

In a number of smaller cities, where black pupils are a minority, busing has worked with considerable success in improving what educators call "racial balance." It has been accepted without serious protest in many such cities.

One city which advocates of busing cite as an example is Berkeley, Calif. There, in a city of 121,000 population, 3,500 pupils—whites and blacks—are "cross-bused" 'to achieve in each school a racial mix that is almost in exact proportion to the city's school-age population: 49.6 per cent white, 42.8 per cent black and 7.6 per cent Oriental or American Indian. Complaints are mostly over the cost: $530,000 a year for the total integration program, with $204,000 for the actual busing.

Another success story is told in Elmira, N.Y., a city of approximately 50,000 population, with 1,000 Negroes among 14,000 school students. There some 300 white and 200 black pupils are bused outside their home areas to balance enrollments racially. Elmira's Superintendent of Schools Charles E. Davis reported:

"Our troubles have been few. Our over-all conclusion is that no one has suffered and many people are gaining.

"I think that in any moderate-sized city with a relatively small black population, some plan similar to ours could be made to work."

THE NEW YORK STORY

It is in larger cities or in cities with big proportions of Negroes in the schools that busing encounters its greatest problems.

New York City, where the whole busing experiment started a dozen years ago, has had more turmoil than success.

That city has tried almost every integration device known—busing, school "pairing," "open enrollment," redrawing of school-attendance districts, even elimination of junior high schools and substitution of new "intermediate" schools to draw youngsters from wider areas of the city at an earlier age.

Busing alone costs New York City some 3 million dollars a year.

After all this effort there is more segregation, not less. There are more all-black or nearly all-black schools in New York today than there were before. And tests have shown no clear academic gains among children who are bused.

New York's integration attempts have stirred massive protests, have been the targets of numerous lawsuits. Many thousands of white parents have moved out of the city to suburbs.

Now Negroes and Puerto Ricans outnumber whites in the city's schools.

New York, however, is still trying. About 14,500 pupils are riding chartered buses under "free choice—open enrollment" programs designed to improve "racial balance."

In New York State, outside of New York City, the State education department reports that 30 to 35 school districts have systems for correcting "racial imbalance." Most involve busing.

Much of New York State's integration effort is made under pressure of a policy laid down by former State Commissioner of Education James E. Allen, who now is U.S. Commissioner of Education in the Nixon Administration. For New York, he defined any school more than 50 percent Negro as "racially imbalanced," and ruled "there must be corrective action in each community where such imbalance exists."

New York State's general assembly, however, put restrictions on forced integration with a so-called "antibusing" law which was passed last spring and went into effect September 1.

That law forbids appointed school officials or boards to change district boundaries or pupil-assignment plans for the purpose of changing racial balance without consent of parents. This requires programs to be voluntary in many cities, including New York City.

Massachusetts is another State that requires local action against "racial imbalance." State aid can be cut off from schools over half Negro.

Boston, with a number of predominantly Negro schools, is busing about 2,000 pupils at public expense to comply with this law. About 5,000 other pupils are riding buses at their parents' expense in a program of "open enrollment."

Boston also has a new "magnet" school in a Negro area that draws 340 white children—by bus—to take advantage of the special facilities it offers.

All of Boston's bus riders for integration are volunteers. Parents have protested angrily against busing in the past. Mrs. Louise Day Hicks, a leading opponent of busing while head of the school board, recently led all candidates in a preliminary election for the city council.

CITIES THAT BALK

Several large cities with districts that are heavily Negro have refused to follow New York's example of massive busing.

Despite years of heated demands by civil-rights groups, the Chicago school board has insisted on maintaining the "neighborhood school" concept, which results in dozens of schools being nearly all-white or all-black.

The sole busing program there is a small one to relieve overcrowding.

Instead of busing, the school board plans to erect a series of "magnet" schools where specially trained teachers will use the latest methods and equipment to teach a cross-section of children of all races and economic levels.

In Philadelphia, this report came from Oliver Lancaster, assistant director of the board of education's office of community affairs:

"We have no pressure—from either whites or blacks—for massive desegregation. It is not possible to make the massive shifts it would take to accomplish that quickly. Our trend is toward quality schools."

At present, Philadelphia's only busing is to relieve overcrowding in some black schools. A proposed program for integration would involve some busing. But it stresses improved schools—and some specialized schools, in Negro areas to attract white pupils.

Pittsburgh and Baltimore also bus primarily to relieve overcrowding. But the result usually is the mixing of more Negroes into white schools.

CALIFORNIA OPPOSITION

In California, opposition to compulsory busing for integration is mounting steadily. A statewide campaign is under way to place on the November, 1970, ballot a proposal to prohibit such busing.

San Francisco may win the right to elect its school board, mainly as a result of opposition to an integration plan recently adopted by the city's appointive board. That plan calls for busing 4,500 pupils next year.

The Concerned Parents Association has succeeded in putting the proposal for a school-board election on the November 4 ballot. Its hope is to elect enough advocates of "neighborhood schools" to block the busing program.

San Francisco's Mayor Joseph Alioto is on record against the busing plan, saying:

"I don't believe the black community wants it. I don't believe the white community wants it."

In nearby Richmond, voters last April elected three school-board members who campaigned against a forced-busing plan. The new board has replaced the force plan with one which calls for voluntary busing on a smaller scale.

In Pittsburgh, Calif., five Negro families have sued to block busing of their children to white schools. They say they prefer an integration plan that does not put "the entire burden on the Negro pupils."

Sausalito has integrated its schools by a program of busing both white and Negro pupils. School costs have skyrocketed, and some families have sought to transfer out of the district.

Los Angeles has a voluntary busing program which some hail as a success, others as a failure. It affects fewer than 1,000 pupils and was adopted under pressure of a threatened suit.

California's State board of education has ruled that any school is "imbalanced" if its minority enrollment varies more than 15 per cent from the percentage of minority students in the school district.

In Los Angeles, school authorities estimate that 160,000 students would have to be bused at an initial cost of 100 million dollars, followed by a yearly cost of 20 million, to comply with the letter of that ruling. Most school officials take the position that the State board's ruling has no force at law.

COLORADO CONTROVERSY

Denver has been torn by a controversy over busing. The school board adopted an integration program calling for transfers of several thousand children—both black and white. Voters then elected two new board members who swung a vote to rescind the program. But advocates of busing sued and won the program's temporary reinstatement. Now the busing is being done despite continued protests.

MICHIGAN'S PROBLEMS

In Michigan, there may be as many as 70 school districts that bus for racial balance.

One city that does is Grand Rapids. There, about 1,500 black students ride buses from their black-neighborhood homes to schools that are mostly white. And busing has become a focal point of discontent with the school system.

White parents helped elect three opponents of busing in a bitter school-board election last spring.

When classes opened this autumn, a group called Blacks United for Survival (BUS) organized a temporary boycott of the schools. Busing was not the only issue. Some Negroes demand a complete return to neighborhood schools. Some object to "one-way busing" and want whites bused, too. Others complain that the plan does not provide enough integration. Still others demand more emphasis on quality of education.

Here, in a single community, you find most of the problems and controversies that beset busing as a means of integrating Northern schools.

VIEWS IN WASHINGTON

It is not only in cities that busing is losing favor. It has acquired some powerful opponents in the Federal Government, too.

President Nixon recently said, "It's never been the policy of the Administration to impose busing as a way to achieve racial balance." In his 1968 election campaign he criticized busing as "forced integration rather than putting emphasis on education."

Congress has forbidden the Department of Health, Education and Welfare to require busing in order to overcome "racial imbalance."

Representative Edith Green (Dem.), of Oregon, a member of the House Education and Labor Committee, is known as a civil-rights supporter. In an interview in "The Urban Review," she said:

"I seriously question busing for social reform—taking a youngster from a disadvantaged home in a ghetto area . . . transporting him to another school where he spends five or six hours of the day and then is picked up and taken back to the same disadvantaged home, the same tenement area. I have serious questions of how much we're really helping that child."

What Negro parents "are entitled to," Representative Green suggested, is "quality education for their children in the area in which they live."

[From texts approved by the UNESCO General Conference at its 11th session, 1960]

I. CONVENTION AGAINST DISCRIMINATION IN EDUCATION [1]

The General Conference of the United Nations Educational, Scientific and Cultural Organization, meeting in Paris from 14 November to 15 December 1960, at its eleventh session,

Recalling that the Universal Declaration of Human Rights asserts the principle of non-discrimination and proclaims that every person has the right to education,

Considering that discrimination in education is a violation of rights enunciated in that Declaration,

Considering that, under the terms of its Constitution, the United Nations Educational, Scientific and Cultural Organization has the purpose of instituting collaboration among the nations with a view to furthering for all universal respect for human rights and equality of educational opportunity,

Recognizing that, consequently, the United Nations Educational, Scientific and Cultural Organization, while respecting the diversity of national educational systems, has the duty not only to prescribe any form of discrimination in education but also to promote equality of opportunity and treatment for all in education,

Having before it proposals concerning the different aspects of discrimination in education, constituting item 17.1.4 of the agenda of the session,

Having decided at its tenth session that this question should be made the subject of an international convention as well as of recommendations to Member States,

Adopts this convention on the fourteenth day of December 1960.

ARTICLE 1

1. For the purposes of this Convention, the term "discrimination" includes any distinction, exclusion, limitation or preference which, being based on race, colour, sex, language, religion, political or other opinion, national or social origin, economic condition or birth, has the purpose or effect of nullifying or impairing equality of treatment in education and in particular:

(a) Of depriving any person or group of persons of access to education of any type or at any level;

(b) Of limiting any person or group of persons to education of an inferior standard;

(c) Subject to the provisions of Article 2 of this Convention, of establishing or maintaining separate educational systems or institutions for persons or groups of persons; or

(d) Of inflicting on any person or group of persons conditions which are incompatible with the dignity of man.

2. For the purposes of this Convention, the term "education" refers to all types and levels of education, and includes access to education, the standard and quality of education, and the conditions under which it is given.

ARTICLE 2

When permitted in a State, the following situations shall not be deemed to constitute discrimination, within the meaning of Article 1 of this Convention:

(a) The establishment or maintenance of separate educational systems or institutions for pupils of the two sexes, if these systems or institutions offer equivalent access to education, provide a teaching staff with qualifications of the same standard as well as school premises and equipment of the same quality, and afford the opportunity to take the same or equivalent courses of study;

(b) The establishment or maintenance, for religious or linguistic reasons, of separate educational systems or institutions offering an education which is in keeping with the wishes of the pupil's parents or legal guardians, if participation in such systems or attendance at such institutions is optional and if the education provided conforms to such standards as may be laid down or approved by the competent authorities, in particular for education of the same level;

(c) The establishment or maintenance of private educational institutions, if the object of the institutions is not to secure the exclusion of any group but to provide educational facilities in addition to those provided by the public authorities, if the institutions are conducted in accordance with that object, and if the education provided conforms with such standards as may be laid down or approved by the competent authorities, in particular for education of the same level.

ARTICLE 3

In order to eliminate and prevent discrimination within the meaning of this Convention, the States Parties thereto undertake:

(a) To abrogate any statutory provisions and any administrative instructions and to discontinue any administrative practices which involve discrimination in education;

(b) To ensure, by legislation where necessary, that there is no discrimination in the admission of pupils to educational institutions;

(c) Not to allow any differences of treatment by the public authorities between nationals, except on the basis of merit or need, in the matter of school fees and the grant of scholarships or other forms of assistance to pupils and necessary permits and facilities for the pursuit of studies in foreign countries;

(d) Not to allow, in any form of assistance granted by the public authorities to educational institutions, any restrictions or preference based solely on the ground that pupils belong to a particular group;

(e) To give foreign nationals resident within their territory the same access to education as that given to their own nationals.

ARTICLE 4

The States Parties to this Convention undertake furthermore to formulate, develop

[1] As adopted at the thirtieth plenary meeting, 14 December 1960.

and apply a national policy which, by methods appropriate to the circumstances and to national usage, will tend to promote equality of opportunity and of treatment in the matter of education and in particular:

(a) To make primary education free and compulsory; make secondary education in its different forms generally available and accessible to all; make higher education equally accessible to all on the basis of individual capacity; assure compliance by all with the obligation to attend school prescribed by law;

(b) To ensure that the standards of education are equivalent in all public educational institutions of the same level, and that the conditions relating to the quality of the education provided are also equivalent;

(c) To encourage and intensify by appropriate methods the education of persons who have not received any primary education or who have not completed the entire primary education course and the continuation of their education on the basis of individual capacity;

(d) To provide training for the teaching profession without discrimination.

ARTICLE 5

1. The States Parties to this Convention agree that:

(a) Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms: it shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace;

(b) It is essential to respect the liberty of parents and, where applicable, of legal guardians, firstly to choose for their children institutions other than those maintained by the public authorities but conforming to such minimum educational standards as may be laid down or approved by the competent authorities and, secondly, to ensure in a manner consistent with the procedures followed in the State for the application of its legislation, the religious and moral education of the children in conformity with their own convictions; and no person or group of persons should be compelled to receive religious instruction inconsistent with his or their convictions;

(c) It is essential to recognize the right of members of national minorities to carry on their own educational activities, including the maintenance of schools and, depending on the educational policy of each State, the use or the teaching of their own language, provided however:

(i) That this right is not exercised in a manner which prevents the members of these minorities from understanding the culture and language of the community as a whole and from participating in its activities, or which prejudices national sovereignty;

(ii) That the standard of education is not lower than the general standard laid down or approved by the competent authorities; and

(iii) That attendance at such schools is optional.

2. The States Parties to this Convention undertake to take all necessary measures to ensure the application of the principles enunciated in paragraph 1 of this Article.

ARTICLE 6

In the application of this Convention, the State Parties to it undertake to pay the greatest attention to any recommendations hereafter adopted by the General Conference of the United Nations Educational, Scientific and Cultural Organization defining the measures to be taken against the different forms of discrimination in education and for the purpose of ensuring quality of opportunity and treatment in education.

ARTICLE 7

The States Parties to this Convention shall in their periodic reports submitted to the General Conference of the United Nations Educational, Scientific and Cultural Organization on dates and in a manner to be determined by it, give information on the legislative and administrative provisions which they have adopted and other action which they have taken for the application of this Convention, including that taken for the formulation and the development of the national policy defined in Article 4 as well as the results achieved and the obstacles encountered in the application of that policy.

ARTICLE 8

Any dispute which may arise between any two or more States Parties to this Convention concerning the interpretation or application of this Convention, which is not settled by negotiation shall at the request of the parties to the dispute be referred, failing other means of settling the dispute, to the International Court of Justice for decision.

ARTICLE 9

Reservations to this Convention shall not be permitted.

ARTICLE 10

This Convention shall not have the effect of diminishing the rights which individuals or groups may enjoy by virtue of agreements concluded between two or more States, where such rights are not contrary to the letter or spirit of this Convention.

ARTICLE 11

This Convention is drawn up in English, French, Russian and Spanish, the four texts being equally authoritative.

ARTICLE 12

1. This Convention shall be subject to ratification or acceptance by States Members of the United Nations Educational, Scientific and Cultural Organization in accordance with their respective constitutional procedures.

2. The instruments of ratification or acceptance shall be deposited with the Director-General of the United Nations Educational, Scientific and Cultural Organization.

ARTICLE 13

1. This Convention shall be open to accession by all States not Members of the United Nations Educational, Scientific and Cultural Organization which are invited to do so by the Executive Board of the Organization.

2. Accession shall be affected by the deposit of an instrument of accession with the Director-General of the United Nations Educational, Scientific and Cultural Organization.

ARTICLE 14

This Convention shall enter into force three months after the date of the deposit of the third instrument of ratification, acceptance or accession, but only with respect to those States which have deposited their respective instruments on or before that date. It shall enter into force with respect to any other State three months after the deposit of its instrument of ratification, acceptance or accession.

ARTICLE 15

The States Parties to this Convention recognize that the Convention is applicable not only to their metropolitan territory but also to all non-self-governing, trust, colonial and other territories for the international relations of which they are responsible; they understake to consult, if necessary, the governments or other competent authorities of these territories on or before ratification, acceptance or accession with a view to securing the application of the Convention to those territories, and to notify the Director-General of the United Nations Educational, Scientific and Cultural Organization of the territories to which it is accordingly applied, the notification to take effect three months after the date of its receipt.

ARTICLE 16

1. Each State Party to this Convention may denounce the Convention on its own behalf or on behalf of any territory for whose international relations it is responsible.

2. The denunciation shall be notified by an instrument in writing, deposited with the Director-General of the United Nations Educational, Scientific and Cultural Organization.

3. The denunciation shall take effect twelve months after the receipt of the instrument of denunication.

ARTICLE 17

The Director-General of the United Nations Educational, Scientific and Cultural Organization shall inform the States Members of the Organization, the States not members of the Organization which are referred to in Article 13, as well as the United Nations, of the deposit of all the instruments of ratification, acceptance and accession provided for in Articles 12 and 13, and of the notifications and denunciations provided for in Articles 15 and 16 respectively.

ARTICLE 18

1. This Convention may be revised by the General Conference of the United Nations Educational, Scientific and Cultural Organization. Any such revision shall, however, bind only the States which shall become Parties to the revising convention.

2. If the General Conference should adopt a new convention revising this Convention in whole or in part, then, unless the new convention otherwise provides, this Convention shall cease to be open to ratification, acceptance or accession as from the date on which the new revising convention enters into force.

ARTICLE 19

In conformity with Article 1–2 of the Charter of the United Nations this Convention shall be registered with the Secretariat of the United Nations at the request of the Director-General of the United Nations Educational, Scientific and Cultural Organization.

Done in Paris, this fifteenth day of December 1960, in two authentic copies bearing the signatures of the President of the eleventh session of the General Conference and of the Director-General of the United Nations Educational, Scientific and Cultural Organization, which shall be deposited in the archives of the United Nations Educational, Scientific and Cultural Organization, and certified true copies of which shall be delivered to all the States referred to in Articles 12 and 13 as well as to the United Nations.

EXHIBIT 4

[From texts approved by the UNESCO General Conference, at its 11th session, 1960]

II. RECOMMENDATION AGAINST DISCRIMINATION IN EDUCATION [1]

The General Conference of the United Nations Educational, Scientific and Cultural Organization, meeting in Paris from 14 November to 15 December 1960, at its eleventh session,

Recalling that the Universal Declaration of Human Rights asserts the principle of nondiscrimination and proclaims that every person has the right to education.

Considering that discrimination in education is a violation of rights enunciated in that Declaration.

Considering that, under the terms of its Constitution, the United Nations Educational, Scientific and Cultural Organization has the purpose of instituting collaboration among the nations with a view to furthering

---

[1] As adopted at the thirteenth plenary meeting, 14 December 1960.

for all universal respect for human rights and equality of educational opportunity.

Recognizing that, consequently, the United Nations Educational, Scientific and Cultural Organization, while respecting the diversity of the national educational systems, has the duty not only to prescribe any form of discrimination in education but also to promote equality of opportunity and treatment for all in education.

Having before it proposals concerning the different aspects of discrimination in education, constituting item 17.1.4 of the agenda of the session,

Having decided at its tenth session that this question should be made the subject of an international convention as well as of recommendations to Member States,

Adopts this Recommendation on the fourteenth day of December 1960.

The General Conference recommends that Member States should apply the following provisions by taking whatever legislative or other steps may be required to give effect, within their respective territories, to the principles set forth in this Recommendation.

I

1. For the purpose of this Recommendation, the term "discrimination" includes any distinction, exclusion, limitation or preference which, being based on race, colour, sex, language, religion, political or other opinion, national or social origin, economic conditions or birth, has the purpose or effect of nullifying or impairing equality of treatment in education and in particular:

(a) Of depriving any person or group of persons of access to education of any type or at any level;

(b) Of limiting any person or group of persons to education of an inferior standard;

(c) Subject to the provisions of section II of this Recommendation, of establishing or maintaining separate educational systems or institutions for persons or groups of persons; or

(d) Of inflicting on any person or group of persons conditions which are incompatible with the dignity of man.

2. For the purposes of this Recommendation, the term "education" refers to all types and levels of education, and includes access to education, the standard and quality of education, and the conditions under which it is given.

II

When permitted in a State, the following situations shall not be deemed to constitute discrimination, within the meaning of section I of this Recommendation:

(a) The establishment or maintenance of separate educational systems or institutions for pupils of the two sexes, if these systems or institutions offer equivalent access to education, provide a teaching staff with qualifications of the same standard as well as school premises and equipment of the same quality, and afford the opportunity to take the same or equivalent courses of study;

(b) The establishment or maintenance, for religious or linguistic reasons, of separate educational systems of institutions offering an education which is in keeping with the wishes of the pupil's parents or legal guardians, if participation in such systems or attendance at such institutions is optional and if the education provided conforms to such standards as may be laid down or approved by the competent authorities, in particular for education of the same level;

(c) The establishment or maintenance of private educational institutions, if the object of the institutions is not to secure the exclusion of any group but to provide educational facilities in addition to those provided by the public authorities, if the institutions are conducted in accordance with that object, and if the education provided conforms with such standards as may be laid down or approved by the competent authorities, in particular for education of the same level.

In order to eliminate and prevent discrimination within the meaning of this Recommendation, Member States should:

(a) Abrogate any statutory provisions and any administrative instructions and discontinue any administrative practices which involve discrimination in education;

(b) Ensure, by legislation where necessary, that there is no discrimination in the admission of pupils to educational institutions;

(c) Not allow any differences of treatment by the public authorities between nationals, except on the basis of merit or need, in the matter of school fees and the grant of scholarships or other forms of assistance to pupils and necessary permits and facilities for the pursuit of studies in foreign countries;

(d) Not allow, in any form of assistance granted by the public authorities to educational institutions, any restriction or preference based solely on the ground that pupils belong to a particular group;

(e) Give foreign nationals resident within their territory the same access to education as that given to their own nationals.

IV

Member States should furthermore formulate, develop and apply a national policy which, by methods appropriate to the circumstances and to national usage, will tend to promote equality of opportunity and of treatment in the matter of education and in particular:

(a) To make primary education free and compulsory; make secondary education in its different forms generally available and accessible to all; make higher education equally accessible to all on the basis of individual capacity; assure compliance by all with the obligation to attend school prescribed by law;

(b) To ensure that the standards of education are equivalent in all public educational institutions of the same level, and that the conditions relating to the quality of the education provided are also equivalent;

(c) To encourage and intensify by appropriate methods the education of persons who have not received any primary education or who have not completed the entire primary education course and the continuation of their education on the basis of individual capacity;

(d) To provide training for the teaching profession without discrimination.

V

Member States should take all necessary measures to ensure the application of the following principles:

(a) Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms; it shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace;

(b) It is essential to respect the liberty of parents and, where applicable, of legal guardians firstly to choose for their children institutions other than those maintained by the public authorities but conforming to such minimum educational standards as may be laid down or approved by the competent authorities and, secondly, to ensure, in a manner consistent with the procedures followed in the State for the application of its legislation, the religious and moral education of the children in conformity with their own convictions; and no person or group of persons should be compelled to receive religious instruction inconsistent with his or their convictions;

(c) It is essential to recognize the right of members of national minorities to carry on their own educational activities, including the maintenance of schools and, depending on the educational policy of each State, the use or the teaching of their own language, provided however:

(i) That this right is not exercised in a manner which prevents the members of these minorities from understanding the culture and language of the community as a whole and from participating in its activities, or which prejudices national sovereignty;

(ii) That the standard of education is not lower than the general standard laid down or approved by the competent authorities; and

(iii) That attendance at such schools is optional.

VI

In the application of this Recommendation, Member States should pay the greatest attention to any recommendations hereafter adopted by the General Conference of the United Nations Educational, Scientific and Cultural Organization defining the measures to be taken against the different forms of discrimination in education and for the purpose of ensuring equality of opportunity and of treatment in education.

VII

Member States should be in their periodic reports submitted to the General Conference of the United Nations Educational, Scientific and Cultural Organization, on dates and in a manner to be determined by it, give information on the legislative and administrative provisions which they have adopted and other action which they have taken for the application of this Recommendation, including that taken for the formulation and the development of the national policy defined in section IV as well as the results achieved and the obstacles encountered in the application of that policy.

The foregoing is the authentic text of the Recommendation duly adopted by the General Conference of the United Nations Educational, Scientific and Cultural Organization during its eleventh session, which was held in Paris and declared closed the fifteenth day of December 1960.

EXHIBIT 5

[From the CONGRESSIONAL RECORD, June 17, 1969]

THE RACIAL BALANCE DECISION OF THE SUPREME COURT

Mr. ALLEN. Mr. President, on June 2, 1969, the Supreme Court of the United States handed down what we believe will become one of the most controversial decisions in the history of the Court. This conclusion is arrived at by reason of the truly revolutionary principle of "racial balance" announced by the Court, and on a consideration of the almost unlimited field for application and dangerous potential for mischief inherent in the principle.

Mr. President, I refer to the decision in United States against Montgomery County, Ala., School Board. The factual background in a nutshell is this: The Federal District Court in Montgomery, Ala., established an absolute standard for employment and assignment of schoolteachers in the Montgomery County school system in the following language:

"In each school the ratio of white to Negro faculty members (must be) substantially the same as it is throughout the school system."

This particular ruling was taken on appeal to the U.S. Court of Appeals for the Fifth Judicial Circuit, where the racial ratio standards for assignment of teachers to separate schools was rejected and the lower court order was modified to provide for "substantial or approximate" attainment of racial ratio as a future goal. The Supreme Court overruled the circuit court of appeals and reinstated the racial ratio standard as controlling criteria in future teacher assignments.

Mr. President, I submit that the principle established by this decision is that of "racial balance" and that it is of such importance as to call for much more critical attention than it has yet received.

In this connection, the problem of critical analysis is made somewhat difficult by reason of the devious approach employed by the Supreme Court in laying down the principle and by reason of the refusal of the Court even to mention the far-reaching implications of the principle. In short, the Court affirmed the obverse of the principle of racial balance without mentioning the necessary proposition from which the obverse is inferred. Let me illustrate.

A proposition stating that the Constitution requires racial participation in employment in public services proportionate to the numerical strength of the separate races in a community is precisely the same as declaring that the Constitution requires racial balance in the employment of races in public services. The obverse of this proposition is that any deviation from racial balance is unconstitutional.

It will be recalled that the Supreme Court approved the order of a Federal district court which assigned racial ratios to separate schools as a means of correcting racial imbalance reflected in employment and assignment of teachers. In doing so, the Supreme Court necessarily established the principle that proportionate racial participation or racial balance in the employment and assignment of teachers is an affirmative requirement of the Constitution.

The fact that the Supreme Court incorporated the requirement of racial balance into the Constitution by upholding the obverse of the above proposition rather than by directly affirming the principle cannot alter the fact that the principle of racial balance is clearly and unavoidably laid down as an affirmative requirement of the Constitution. The only question left open by the Court is to what degree the standard is to be achieved.

The term "racial balance" implies the existence of an ideal degree of racial participation in public services. This ideal is considered to reflect racial participation in employment or services proportionate to the numerical strength of the races in the population of a community. When such proportion is expressed as a ratio, as was done in the case under consideration, the effect is to prescribe racial balance as the goal.

In the instant case the Federal district court judge directed the assignment of teachers to achieve racial balance in this language:

"In each school the ratio of white to Negro faculty members (must be) substantially the same as it is throughout the school system."

We do not imply that the Supreme Court has said that henceforth every Federal district court judge in the United States must order assignment of teachers to schools in a manner to achieve immediate and precise racial balance. On the contrary, the Supreme Court in establishing the principle of racial balance expressed the opinion that it did not believe the district court judge intended to apply the principle inflexibly as to time and presumably as to mathematical exactitude.

On the other hand, the Supreme Court went out of its way to make clear that "substantial and approximate" attainment of the ideal racial participation would not meet the Supreme Court concept of constitutionally required racial balance. In fact the Supreme Court specifically rejected the "substantial or approximate" criteria, suggested by the U.S. Court of Appeals, in favor of the mathematical ratio imposed by the Federal district court.

So while "racial balance" has been established as an affirmative requirement of the Constitution, the precise degree of conformity required remains hanging. However, we do know that something less than exact proportionate racial participation may be acceptable to the Supreme Court but that something more than "substantial or approximate" balance is required.

Previous Supreme Court attitudes regarding a constitutional mandate of mathematical preciseness in allocating legislative powers of State and Federal Governments leaves little room to doubt that the Court intends in this case to impose near precise racial balance as the constitutional requirement for employment in public services.

In any event, no one can seriously question the fact that under the Constitution, as revised and edited by the Warren Court, racial participation in public employment must be proportionate to the numerical strength of the races in the population and that such standard is in essence the standard of racial balance. Neither can it be doubted that this essentially social concept of racial balance has been dressed out by the Court and armed with the coercive powers of Federal Government under the guise of a principle of constitutional law.

One result of this decision is that Federal district courts throughout the United States are now vested with near unlimited discretionary powers over public school systems. Such courts can compel employment and assignment of teachers until racial balance is achieved in each school in the separate school systems throughout the Nation. Additional discretionary powers vested in Federal district court judges include the power to veto over location of new schools, a power of supervision over recruitment, hiring, firing, promotion, and transfer of teachers and administrative personnel, as may be necessary to achieve the new constitutional mandate of racial balance.

And, while the decision was rendered in a case involving employment and assignment of public school teachers, it cannot seriously be questioned that the principle applies with equal force to assignment of schoolchildren. Consequently, Federal district courts are now vested with power to redraw school attendance boundaries, to close schools and compel transfer and busing of pupils, and otherwise to supervise the public school systems in a manner to reach what is now said to be a constitutional mandate of racial balance in public schools.

In addition, the principle has application to employment in all public services of which teaching is but one. It has application to employment in the civil services and to firemen and policemen on all levels of government.

The principle has application also to all private employment in firms doing business with any branch of Federal, State, and local governments.

Another inevitable result of the decision is that every racial minority in the United States may now allege deviation from racial balance in employment as a basis for legal action to compel racially proportionate employment. In addition, the Federal executive is authorized and empowered by this decision to send its agents throughout the land armed with authority of the Supreme Court decision to further dictate employment practices in private employment.

Consequently, we can reasonably expect to see ushered in a new era of litigation which may extend from now to eternity or until the Supreme Court holds that the "racial balance" mandate of the Constitution prohibits an employee from exercising the right to quit, change jobs, or move when to do so would result in creating a now constitutionally prohibited racial imbalance in employment.

We recognize that this last projection may seem to be unreasonable but we most sincerely submit that it does not strike us as more unreasonable as a possibility than the ruling that the Constitution requires hiring and assignment of employees by racial quotas in order to achieve a racial balance in employment.

And I do maintain that the Supreme Court decision is unreasonable in the extreme. It is irrational, arbitrary, and invidious. It utterly disregards the public interest; it disregards individual merit and experience and qualifications; it disregards educational criteria such as the availability of qualified and experienced teachers as may be required by education considerations. Furthermore, it disregards the will and wishes of the teachers and pupils involved and it disregards the will and wishes of the people of the communities involved and thus disregards the necessity for public support of the education system. Finally, the racial balance mandate disregards what parents may believe to be the best interest of their children in a most intimate matter affecting the health, safety, and moral welfare of their children.

The Supreme Court decision goes even further than this. It specifically defies the will of Congress. For example, in the appropriation bill for the Department of Health, Education, and Welfare, passed in October 1968, it was specifically provided:

"No part of the funds contained in this act may be used to force busing of students, abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent in order to overcome racial imbalance."

In addition the Civil Rights Act of 1964 states:

" 'Desegregation' shall not mean the assignment of students to public schools in order to overcome racial imbalance . . .

"Nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance."

Innumerable expressions of legislative intent of a similar nature have been incorporated in Federal aid to education statutes—but aside from misleading the people, what avail are these expressions of congressional intent in the face of this last Supreme Court decision?

The Supreme Court has declared a new ball game. Congressional intent no longer matters, nor the will and wishes of State legislatures, nor of elected local school officials, nor that of teachers or even parents of the children. Racial balance is the new and controlling constitutional criteria for determining the location of new schools, in decisions related to closing and consolidating schools, in transferring and busing children, and in the assignment of pupils and teachers. Consequently all decisions on these questions are now supposed to be within the purview of discretionary powers of a single Federal district court judge.

Mr. President, tyrannical powers are thus vested in Federal district court judges. This is a situation unparalleled in the history of our Nation or in the history of any nation of free people. For in truth, such powers are absolutely incompatible with a government of a society of free people.

Let me cite an example of tyrannical control. The U.S. Court of Appeals for the Fifth Judicial Circuit decided to turn control of the Mobile County, Ala., school system over to the Department of Health, Education, and Welfare. This is the judicially assigned responsibility of the Department of Health, Education, and Welfare as laid down by the Court:

"The District Court shall forthwith request the Office of Education of the United States Department of Health, Education, and Welfare to collaborate with the Board of School Commissioners of Mobile County in the preparation of a plan to fully and affirmatively desegregate all public schools in Mobile

County, urban and rural, together with comprehensive recommendations for locating and designing new schools, and expanding and consolidating existing schools to assist in eradicating past discrimination and effecting desegregation."

Mr. President, the above language is an order to the Federal district court judge to request the Department of Health, Education, and Welfare to restructure the public school system of an entire county having a population of approximately 300,000 people, despite the specific language of an act of Congress which prohibits expenditure of HEW funds for achieving racial balance in public schools.

Yet, under authority of the racial balance decision of the Supreme Court, the Department of Health, Education, and Welfare can do nothing but reorganize the public school system to achieve racial balance.

The above approach can reasonably be expected to be followed throughout the United States.

After years of judicial doubletalk we now know that the ends to be achieved by Federal courts is not "desegregation" nor "nondiscrimination" but rather "racial balance" defined by the Court as racial participation in the public services proportionate to the numerical strength of the races in a particular unit of employment. And this theoretical social ideal imposed by the Superme Court as law of the land must be achieved to a degree that is more than substantial or approximate even though less than mathematically precise.

Mr. President, I predict that the people of our Nation are not going to accept tyrannical control over the lives of their children affecting, as it does, the safety, and moral welfare of their children. This can mean but one thing. Federal district courts have to continue to resort to processes of the inquisition to enforce its school orders. They can gain compliance only by threatening elected local school officials with confiscation of their property by imposition of heavy fines and threats of imprisonment or both without benefit of trial by jury. This fact expresses a judgment on the whole sorry system.

On the part of the Federal executive, it must continue the vicious practice of depriving innocent children of food, money, and other benefits authorized by Congress. In areas other than public education the executive must continue to deprive and threaten to deprive the aged, sick, poor, handicapped of necessities of life as a means of compelling compliance with its dictatorial orders. In still other areas the Federal executive must continue to threaten abrogation of contracts and thus financial ruin of private business as a means of enforcement.

Mr. President, I submit that the enforcement techniques adopted by the Federal judiciary and the Federal executive are alone enough to condemn the policies and decisions which gave them birth. These techniques reveal an underlying callousness and even viciousness on the part of disciples of force and violence some of whom currently wield this hideous power in our Republic.

Mr. President, there is but one solution to this corruption—it is to amend the Constitution of the United States to return control of public schools to the States and to the people. I have submitted a proposed constitutional amendment for submission to the States to do just that.

EXHIBIT 6

[From U.S. News & World Report, Aug. 31, 1970]

CLARIFICATION NEEDED

(By David Lawrence)

If ever there was a time when it was necessary for the Supreme Court of the United States to come forth with a decision clarifying the many ambiguous opinions, rulings and orders hitherto handed down by the appellate and lower courts, it is right now.

Ever since the historic decision of 1954 outlawing segregation in the public schools, there has been uncertainty as to how far school authorities must go to accomplish "desegregation." The High Court itself has never said that it necessarily requires compulsory integregation. Congress in the Civil Rights Act of 1964 declared that "desegregation" shall not mean "the assignment of students to public schools in order to overcome racial imbalance."

Again and again, however, some of the lower courts have ordered school boards to adopt plans which specify a certain percentage of blacks and whites in the student body and faculties of each school within their district. The theory behind many of the decisions has been that wherever State authority has created school systems which permitted or encouraged segregation, the results were what is called "de jure" segregation, as distinguished from "de facto" segregation in schools in other parts of the country where neighborhood patterns were followed.

But to all intents and purposes school authorities everywhere are confronted with the fact that in their areas some schools are predominantly white and some are predominantly black. The pressure on school boards has been to bring about a gradual lessening of such racial imbalance. The lower courts have from time to time gone along with the idea that the school systems could rearrange their districting and assignment patterns so as to conform to a concept of less and less segregation.

The Supreme Court originally said that desegregation should be carried out with "all deliberate speed," but last year it explicitly declared that "the obligation of every school district is to terminate dual school systems at once and to operate hereafter only unitary schools." Unfortunately the Court did not define what constitutes "unitary schools," and lower courts have varied in their interpretation of what is required. Some have ordered desegregation plans that virtually call for "racial balance" and have set specific dates on which they must be put into effect—often within a few months. Several schools have been given notice that this will have to be done by September 1970.

The only way that some of these programs can be carried out is by extensive busing of students. This requires the purchase and operation of a large number of buses, which is, of course, expensive and involves either more taxes or less money for other school programs. More complications have arisen as parents object to having their children transported long distances from their own neighborhoods, and teachers are dissatisfied with being compelled to travel to schools far away from their homes. Confusion has resulted.

Now the school authorities in the South want to get from the Supreme Court a final determination of what must be done to achieve the purposes of its desegregation decrees. They also want to see the Court apply its rulings to schools outside the South, too, even though the segregation in them is described as "de facto." Many members of Congress are saying that "the law of the land" should be the same everywhere.

So the whole problem comes back to the Supreme Court of the United States, and in the last few days officials of the Administration, including the Attorney General, have been urging the High Court to render a decision which will enable school authorities in the South to know exactly what they have to do to conform to the objective of desegregation. Some lower court judges have been recognizing the realities of the situation and have not been compelling racial balance. Others are imposing plans which, in effect, set racial quotas for all schools, irrespective of whether the predominance of one race or the other results naturally from residential patterns. Only the Supreme Court can resolve the differences between these lower court rulings and set the standards of what is or is not required to accomplish desegregation.

Notwithstanding all of the controversy, the South has made a great deal of progress in eliminating segregated schools. Many school districts have desegregated voluntarily and without friction. In seven Southern States committees have been appointed, consisting of white and black leaders. They have been working with Administration officials to carry forward the desegregation effort.

The occasion now is at hand when all the parties concerned believe that the Supreme Court can be of help in solving the most complex problems ever faced in the field of education. But prompt action is needed with clear definitions to guide everybody—school authorities the judiciary and the executive departments. For the nation's highest court still holds the answer to the riddles of "desegregation."

EXHIBIT 7

[From the CONGRESSIONAL RECORD, Aug. 25, 1970]

S. 4287—INTRODUCTION OF A BILL RELATING TO PLANS OR RECOMMENDATIONS IN THE MATTER OF SCHOOL DESEGREGATION

Mr. ALLEN. Mr. President, I introduce for appropriate reference a very short bill to which few can take exception. I ask unanimous consent that the bill be printed at this point in the RECORD for purpose of comment thereon.

The PRESIDING OFFICER (Mr. FANNIN). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4237), to provide that the U.S. Senators and the Members of the House of Representatives concerned with any plan or other recommendation relating to school desegregation prepared by any officer or employee or agent of the Department of Health, Education, and Welfare for submission to any U.S. court or any public agency of a State be furnished a copy of such plan or other recommendation, and for other purposes, introduced by Mr. ALLEN, was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

"S. 4287

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no plan or recommendation or modification of an existing plan or recommendation prepared by any officer or employee or agent of the Department of Health, Education, and Welfare concerning the desegregation of the schools of any local educational agency within any State shall be furnished to any Court of the United States, any public agency of a State, or any political subdivision of such State, unless a copy of such plan, recommendation or modification has been submitted to the United States Senators of that State and to the Members of the House of Representatives from the Congressional Districts in which the schools of such local educational agency are located. Any such copy shall contain a statement that the plan, recommendation or modification does not effectively exclude any student or teacher from any school of the local educational agency because of race, or color, and shall be attested to under oath or affirmation by the Secretary of Health, Education and Welfare or his designee."

Mr. ALLEN. Mr. President, it will be seen that the bill merely requires the Department of Health, Education, and Welfare to submit

a copy of desegregation plans, recommendations or modification of existing plans or recommendations prepared under auspices of the Department to the Senators and Representatives of the respective States and congressional districts in which the schools affected by such plans are located.

Ordinarily, Mr. President, it would seem that Senators and Representatives are entitled to copies of such plans as a matter of courtesy. Instead, experience has demonstrated that the Department of Health, Education, and Welfare is reluctant to disclose such plans, recommendations or modification prior to submission for consideration and implementation by Federal judges or by local school boards.

Yet, Mr. President, the citizens of the State and congressional districts involved looks to us for relief from what appears to them to be grossly unreasonable and sometimes unlawful plans imposed upon the schools and schoolchildren affected by those plans.

The primary purpose for reviewing such plans before they are submitted for implementation is to determine whether or not the actions contemplated are consistent with laws of Congress and decisions of the U.S. Supreme Court.

It is my sincere judgment that many plans prepared by the Department of Health, Education, and Welfare and submitted for implementation by Federal district courts are unreasonable, irrational, contrary to laws of Congress, and without authority under any specific ruling of the U.S. Supreme Court.

For this reason the bill provides that copies of such plans or recommendations contain a statement affirming that such plans or recommendations do not go beyond what is required by the U.S. Supreme Court.

It is a fact, Mr. President, that school plans and recommendations have been prepared by agents of the Department of Health, Education, and Welfare and submitted to Federal district courts for implementation which are without authority of statutory law and which so beyond anything which the Supreme Court of the United States has required.

Mr. President, we recall extended debates on the merits of the Whitten amendments, the provisions of which limited the Department of Health, Education, and Welfare in the matter of requiring busing. We recall that liberal forces in the Senate were successful in attaching an amendment to the Whitten amendment expressed in the term "except as required by the Constitution."

The implication in the exception was that the Department of Health, Education, and Welfare should be limited in its plans and actions unless such plans and actions were authorized by Supreme Court decisions.

In this connection, Mr. President, in Northcross and others against Board of Education of the Memphis, Tenn., City Schools and others, decided March 9, 1970, Chief Justice Burger made this special point, he said:

"As soon as possible, however, we ought to resolve some of the basic practical problems when they are appropriately presented including *whether, as a constitutional matter any particular racial balance must be achieved in the schools;* to what extent school districts and zones may or must be altered as a constitutional matter; and to what extent transportation may or must be provided to achieve the ends sought by prior holdings of the Court." (Emphasis supplied.)

Mr. President, some of the school plans prepared by the Department of Health, Education, and Welfare and submitted for implementation by Federal district courts in Alabama treat all of these questions as having been already decided by the Supreme Court. For practical purposes of desegregation of schools the Department of Health, Education, and Welfare and the U.S. Attorney General have constituted themselves a Supreme Court in all matters affecting desegregation of public schools.

They have decided as a matter of constitutional law that racial balance must be achieved in certain schools in the South although the Supreme Court has not said so and the administrative rulings in this regard are not uniformly applied.

Then, too, the Department has decided on its own initiative to what extent school districts and zones must be altered as a constitutional matter. Yet, the Supreme Court has not so decided.

Furthermore, the Department of Health, Education, and Welfare has determined to what extent transportation may or must be provided by the separate local school boards.

Surely, Mr. President, those Senators who were so insistent on compliance with constitutional standards in opposing limitations on the Department of Health, Education, and Welfare will recognize that the Department has acted not as required by the Constitution but as dictated by its own notions.

On the other hand, where the Supreme Court has spoken authoritatively on a particular subject, the Department of Health, Education, and Welfare and the U.S. Attorney General utterly disregard the mandate of the Court.

Let me quote further from Chief Justice Burger who said:

"The suggestion that the Court has not defined a unitary school system is not supportable. In Alexander v. Holmes County Board of Education, 396 U.S. 19 (1969), we stated, albeit perhaps too cryptically, that a unitary system was one 'within which no person is to be effectively excluded from any school because of race or color.' "

In the fact of this definition, the Department of Health, Education, and Welfare continues to submit desegregation plans which violate this rule in that such plans are designed to effectively exclude literally thousands of schoolchildren from public schools for no other reason than that of race or color.

In some instances the Department of HEW excludes both white and black children from public schools in their neighborhoods in order to achieve racial balance and without regard to the will or wishes of the parents and without regard to the health, safety, morals, and general welfare of the children, and without regard to the will, wishes, and authoritative opinion of local school authorities and without regard to the Supreme Court definition of a unitary school system.

In addition, the Department willfully and wantonly redraws school district boundaries and school attendance zones and recommends transportation of children long distances from their homes for no other reason than the race and color of the children involved.

Mr. President, U.S. Senators and U.S. Representatives elected by the people have a right to know beforehand whether school plans prepared by Federal agents and agencies of the Federal Government conform to the law of the land. The evidence is conclusive that the law is being violated.

Mr. President, it is my judgment that every U.S. Senator has a vital interest in the passage of this bill. The plans, the processes, and the procedures now being applied in the Southern States are precisely the plans, processes, and procedures which will be soon applied in all sections of the Nation.

The de facto-de jure distinction is a fabrication of special pleaders in the Department of Health, Education, and Welfare. It will not hold up.

Let me assure Senators that arbitrary and unlawful procedures if permitted to go unchallenged in the South will be the same arbitrary procedures applied in your States. The people of your State will demand explanations and relief no less than the people of Alabama and the South demand explanations and relief.

We ask only that as elected representatives of the people we be informed of the plans, recommendations, and modifications of such which the Department of Health, Education, and Welfare intends to ask Federal courts to implement.

Who can reasonably object to such a request?

EXHIBIT 8

[From Look magazine Sept. 8, 1970]

DO MOST AMERICANS SECRETLY WANT SEGREGATION?

(By Senator ABRAHAM A. RIBICOFF)

Last February 9, in a speech on the floor of the United States Senate, I accused my own part of the country, the North, of "monumental hypocrisy" in its treatment of the black man. My speech occurred during debate on an amendment calling for a uniform national policy on school desegregation. Sen. John Stennis of Mississippi sponsored the amendment. I said I would support Senator Stennis.

In the speech, I argued that what is evil in Mississippi does not become a virtue when it is practiced in Connecticut. We Northerners have been too eager to point out the horrors of Southern segregation originally based on law (*de jure*), while moving to the suburbs and segregating our schools according to our housing patterns (*de facto*).

Of course, Presidents, senators, sociologists and boards of education can debate the relative evils of *de jure* and *de facto* segregation all they want. But for the black child who is forced to suffer segregated education, there is no difference.

Whether you call it *de jure* or *de facto*, it is segregation—pure and plain. For the black child, it means white people don't think his life is as important as a white child's or that he is good enough to associate with their children.

How the message comes, whether by *de jure* or *de facto*, is irrelevant. What counts is the damage. That is the same in both cases. It often is permanent, jeopardizing the black child's entire adult life. No legal phrase can soften the blow or end the pain. The phrase *de facto* has only one purpose. It provides a "respectable" screen behind which white Americans can discriminate against black children.

Without question, many Southerners hoped the Stennis amendment would slow down integration in the South. Though the states that had dual school systems are desegregating under constitutionally based Supreme Court orders that nobody can change, some hard-core resisters are still trying to circumvent those orders by such methods as segregated classrooms in "integrated" schools or with private schools for whites. Clearly, any kind of slowdown in the South is unacceptable.

But it is time for us to stop looking only at the motives of the South. What about the motives of the rest of us? How committed are we to integration in our own backyards?

Those of us in the North should begin to look honestly at ourselves and see that our contribution to integration has been to refine the art of making sure blacks can ride in the front of buses we never ride, can live in someone else's neighborhoods and can work in the lower reaches of our organizations.

The fundamental problem is the increase in *de facto* segregation in both the North and the South. As long as this nation avoids facing the issue of *de facto* segregration squarely, many will insist that such segregation is accidental and therefore not illegal. This does more than absolve the North of responsibility for the unequal education afforded black children in their own communities. It also is an open invitation to the South to emulate the North.

In time, the South can argue that it has

ended *de jure* segregation and replaced it with the *de facto* kind. As proof, the South will soon be able to say its cities and suburbs are just like the North's—black cities, white suburbs. Then what will our tolerance of *de facto* segregation have achieved? I argued seven months ago that we needed a national policy to end segregation in the North as well as the South. The needs seems even more urgent now. If anything, recent actions by the President and the Congress have strengthened my conviction that America is heading down the road to apartheid, a strict separation of the races, based on *de facto* segregation, and that nobody who has the power to alter this course appears willing to do so.

The Senate did pass the Stennis amendment. But the Senate-House conference committee watered it down to the point where it marked a giant step backward. For the first time, Congress wrote into law the distinction between *de facto* and *de jure* and singled out only *de jure* for government action.

On March 24, President Nixon told the nation that while *de facto* segregation was "undesirable," his Administration would require no steps to end it, in either the North or the South.

Then, on May 21, the President introduced his Emergency School Aid Act of 1970, a two-year, $1.5 billion package designed to promote desegregation. This legislation provides financial assistance for *de jure* school systems that must desegregate.

But the President's program also builds on the shortcomings of the earlier desegregation message with regard to *de facto* segregation. It doesn't require anything of anyone. It is purely voluntary. If you want to desegregate, fine. There will be money available to help you over the hurdles. If you don't, that's OK, too. It's not illegal. The decision is yours. The Federal Government will stay neutral.

In short, *de facto* segregation is still a "U.S. Government Approved" product. The President's program allows us all to continue to talk a good game of integration while serenely practicing segregation. The message to the South is unmistakable: If you segregate your society as well as your schools, as we do in the North, we can all segregate together.

What bitter irony that the model for American apartheid should come from the North. Most of us always believed apartheid would come exclusively from the South, whose legacy of slavery and legalized segregation was fundamentally responsible for most of the racial tension in this nation. There is little doubt that if life had been better in the South, the black man would have stayed. He would not have embarked upon one of the greatest and swiftest migrations of the single people in our history.

But the South, no matter what happens with this month's school-desegregation drive, has no monopoly on being brutal to the black man. When he moved North, our welcome was a ghetto, an unemployment line, a substandard tenement, a poor school and no medical care. And all our criticism of the South, no matter how justified, cannot excuse or erase these facts. The North has been just as successful in denying to the black man and his family the opportunities we insist upon for ourselves and our families Only we tell ourselves it isn't our fault. The institutions are responsible. There is nothing we can do. It's a terrible "accident," a fact all of us may decry, but for which few of us will accept responsibility.

An almost classic example of this kind of thinking occurred recently in Pontiac, Mich., when the Board of Education told a Federal court that the city's schools were segregated because its neighborhoods were segregated. The Board agreed with the black parents who had brought suit that a black child's segregated education was inferior and harmful and that the resulting damage was irreparable. But the Board argued that, since it had not created the segregation, it had no responsibility to correct this admittedly harmful and devastating condition.

The U.S. District Court Judge, Damon J. Keith, ruled otherwise. He found that despite its frequent pronouncements in support of integrated education, the Board had used its powers to perpetuate segregation and prevent integration.

The segregation in Pontiac is no accident. Nor is it in many American communities. Unlike its Southern counterpart, Northern segregation may not be traceable to one official action. But the thousands of individual decisions—by school boards, real estate brokers, businessmen, politicians, and private citizens—that created *de facto* segregation were all based on the same objective as the official *de jure* action: to keep blacks and whites separate.

Furthermore, a segregated education is harmful to white children as well. White students having no contact with blacks during their school years receive a distorted view of American society. Many of them acknowledge this fact and complain about it.

How can we reverse this trend?

We can begin by recognizing that we don't have to wait for the Supreme Court to rule on *de facto* segregation. The President and the Congress have all the power they need. The longer we wait, the worse the problems will be.

The Supreme Court originally acted against segregation in 1954 largely because every other political institution refused to act. If the President and the Congress continue to abdicate their constitutional responsibilities, they will only succeed in paralyzing the courts, which cannot carry the entire burden by themselves. Or, taking their cues from a reluctant Washington, courts may begin to give legal sanction to *de facto* segregation.

We must also recognize that focusing only on integration in our central cities will simply drive many of the remaining whites to the sanctuary of the surrounding suburbs.

A recent opinion poll reported that most Americans support integration and are willing to send their children to integrated schools. Substantial opposition to integration generally occurs when schools and neighborhoods cease to reflect the society at large. But this need not be an insurmountable problem if we view the entire metropolitan area—including the suburbs—as a whole. The percentage of blacks in most of these areas is less than 20 percent. In fact, in the major metropolitan areas in 1969, blacks made up only 12 percent of the population.

Our goal then should be a national policy to end segregation in all our schools, no matter what we call that segregation or how it occurred. We can't expect this to happen overnight. But we can require that all school districts in a metropolitan area formulate plans now to end segregation in all our schools within ten years. Every area's plan must provide for uniform progress each year, with the result being an end to all racial segregation in the final year.

Only when we require school integration throughout our metropolitan areas can we guarantee sufficient stability to avoid the white flight that has characterized large-scale integration thus far. Variations should be allowed, but only those that occur within the context of obtaining general racial balance.

Our policy, and the methods of achieving it, must be compulsory, all-inclusive and based on a timetable. We have had enough halfway houses for human rights in this country. They don't work. Left to our own devices, we will behave just as the South did for so many years—long on deliberations and short on speed.

Many argue that the suburbs never will go along with this. My answer is to end all Federal educational assistance to any individual school district that refuses to participate in its area's plan. Federal assistance also should be denied any state that gives aid to a school district that does not participate in such a plan.

Those communities that are hard-pressed to finance integration will need whatever help we can give them. Therefore, as the President has suggested in part, the Federal Government should provide school districts with funds to cover the additional expenses involved in desegregation. Cost is not a valid reason for the continued denial of human rights.

Talk of integrating suburban schools often results in frantic discussions about busing. Much of this issue is a "red herring." Millions of American children already are bused to school. Suburban parents often insist upon the opportunity for their children to ride on a school bus as a matter of right.

Moreover, busing is only one technique for integrating schools. Many school districts have successfully integrated their schools by redrawing district lines, pairing neighborhood schools, and locating new schools in areas that make integration easier. These techniques have actually reduced the amount of busing in some areas.

Many who object to busing don't really object to the bus ride. Their concern is the school at the end of the ride. As long as broad disparities exist in the caliber of students, teachers, atmosphere and equipment in our schools, I can understand a parent's concern over proposals that would take his child from a school he knows to one that is unknown.

America cannot allow these disparities in its schools to continue. But the solution is not continued opposition to integration. Nor is it a call limited only to improving ghetto schools. Integration and the improvement of all schools must go forward together.

In the long run, though, lasting school integration cannot occur in a segregated society. It is a fantasy to think that integration can be achieved by letting black children attend our schools when we won't let their parents live in our neighborhoods. That was the basic point I sought to make last February. It is of critical importance.

Some 80 percent of all the new jobs developed in the past 20 years are in the suburbs. Blacks must have access to those jobs and to homes near them. We should encourage the suburbs to provide low-income housing. Private industry should hire more blacks and refuse to move into a suburb until housing for their low-income workers is provided. The Federal Government should refuse to locate its facilities or allow its contractors to locate in areas that do not provide low-income housing.

At the same time, the Federal Government must recognize the severe financial problems confronting suburban communities throughout the country. We therefore should supply additional funds to those suburbs that provide housing, employment and education for blacks in order to cover the additional expenses they have as a result of these activities.

I realize that this is a tall order, one that causes many supporters of integration to despair of the likelihood that we ever will take these steps. Some liberals even oppose a uniform national policy on desegregation on the grounds that spreading the skimpy Federal resources for implementing desegregation across the country will totally destroy their usefulness; that *de facto* segregation is a complex process against which we must move very carefully and slowly; and that moving in the North will generate such opposition that progress will stop everywhere.

But to me, these arguments are unpersuasive as they were last February. The Congress has said it would provide the men

and the money to implement desegregation on a national scale. Tripling Federal school-desegregation-enforcement activities would cost only $10 million more a year. This country presently spends less than $5 million a year in this area.

The "go slow" argument is based on the same reasoning that sent many Northern liberals into hysterics when it came from south of the Mason-Dixon line. Except we don't even have a policy of "go slow" in the North. We have a policy of "no go."

On the third point, that moving in the North would create enormous opposition. I have always assumed that we sought integration—and still seek it—not because we think it is popular but because we prize certain basic human rights. Nobody ever argued that integration was popular. But that doesn't justify a double standard for black children that says what's bad for you in the South is good for you in the North.

There is another question that we ought to settle once and for all: Why should we fight for integration when many blacks themselves call for separatism?

It is true that some blacks don't want integration. This is an understandable paradox. White tokenism in both the North and South has made these blacks frustrated, bitter and angry. They want only to be left alone.

But it's a curious kind of morality that drives blacks to such despair over the possibilities of achieving integration and then uses this despair to justify doing—or not doing—what we have always done or not done.

The most important fact is this: Most blacks still want integration. They cling to the same hopes and goals America has held out to every other group. Denying them their rightful opportunity because a minority of blacks has become impatient, and with good reason, is a shabby betrayal of the ideals this country is supposed to represent.

Making integration a national goal should not make it an impossible goal. I fervently hope that our commitment to integration is not so fragile that we shall discard it when we are asked to meet it. There are more constructive things for us to do than write obituaries for the cause of human rights in America.

EXHIBIT 9

[From the Washington Post, Aug. 29, 1970]

DESEGREGATION: WAITING ON THE COURT

It is hard to see how the Supreme Court could have done otherwise than refuse—as it did this week—to set aside school desegregation orders affecting Charlotte, N.C., and three other Southern cities. Or perhaps it is more accurate to say that it is hard to imagine the confusion that would have followed. The court had earlier agreed to hear the Charlotte case and will do so this fall. It will be an important case, since it will mark the first time the high Court has waded into the growing controversy over the meaning of desegregation in the context of the large urban centers of the South. U.S. District Judge James B. McMillan has ordered the schools of Charlotte and Mecklenburg County to do away with all black schools, to reproduce the district's 70-30 percent proportion of white to black schoolchildren in it individual schools, and to do so by means of busing an additional 13,000 children to school. There has been a complex history to this case, but—pending the Supreme Court's hearing and decision—Judge McMillan's order is in force. And since school is about to reopen not just in Charlotte but in cities across the South under any number of conflicting lower court orders, the setting aside of the Charlotte order could only have produced disruptive last minute attempts to reverse course in district after district.

The Southern (and to some extent Northern) landscape is strewn with these controversial, semi-settled, and often contradictory court orders, and that is why the Charlotte-Mecklenburg hearing by the Supreme Court could prove so important. Though a big city is involved, the issue here is not one of de facto versus de jure segregation. Rather the lower courts have concluded that Charlotte's schools are racially segregated as a consequence of racialy segregated housing patterns for which the state has its degree of responsibility. What is at issue is not this fact so much as the remedy that can be ordered under law—which is to say, under the Fourteenth Amendment, the Supreme Court's 1954 and subsequent decisions, and the civil rights statutes on the books. The Charlotte-Mecklenberg school board has claimed that it is not within the realm of physical or economic practicality to reproduce the racial pattern Judge McMillan has in mind, and last May the Fourth Circuit described Judge McMillan's order as unreasonable. There is clearly, then, a considerable body of legal opinion which holds that the creation af a unitary school system does not require the uniform creation of racially integrated schools or presuppose the dissolution of every all-black school in a district. Unless it should rule very narrowly, that is the question the Supreme Court is likely to reach in the Charlotte-Mecklenburg case.

Whatever its ruling, of course, there is every reason to expect that litigation on this question will go on. But you need only look at the state of perplexity in which the South now finds itself—the resignation of the Jackson, Miss., school superintendent yesterday is a case in point—to realize how sorely some guidance is needed from the high Court in the matter. For years—until last October's nonsense decision, in fact—the Court was waiting on the South. Now, in another sense, it is the other way around.

EXHIBIT 10

THE FIGHT TO RETURN PUBLIC SCHOOLS TO STATE AND LOCAL CONTROL

As your United States Senator, I have continually fought to return the control of the public schools of Alabama and the South to State and local governments and to resist federal domination and control.

These goals have been sought through:

1. Support of positive legislation such as that providing for Freedom of Choice, Neighborhood Schools, and by Constitutional amendment returning schools to state and local governments; and by support of such measures as the Stennis Amendment and the Whitten Amendments.

2. Dozens of speeches on the Senate floor pointing out views of people of Alabama on school problems.

3. Dozens of meetings with Alabama parents groups and school officials.

4. Intercession with and protest to President Nixon, HEW and Justice Department officials regarding forced immediate desegregation.

5. Opposition to all legislation discriminating against Alabama and the South.

6. Support of all legislation that would help provide a good education to all citizens.

Listed below in chronological order is a brief résumé to date of some of these actions to which I have referred:

Congressional Record Dated:

February 24, 1969.—A letter to HEW Secretary Robert H. Finch requesting information on the total number of school children deprived of funds and services under orders of the Department of HEW, and the total dollar value of lunches, services, and other benefits withheld from school children in the South. This letter expressed my concern over the actions of HEW that were depriving school children of funds and services provided by taxpayers' dollars.

March 17, 1969.—Introduction of proposed Constitutional amendment to return control of local schools to the states and to the people—Senate speech in support of the proposed amendment.

March 24, 1969.—Remarks on insertion of an editorial from the *Dothan Eagle* critical of the President's nomination of liberal New York school Superintendent, Dr. James E. Allen, Jr., known as "Mr. Busing," as U.S. Commissioner of Education.

May 1, 1969.—Co-sponsored with Senator Dirksen a bill to authorize the Committee on the Judiciary to investigate the impairment of the internal security of the U.S. arising from disorders at educational institutions.

May 5, 1969.—Senate speech in opposition to the confirmation of Dr. James E. Allen, Jr., as U.S. Commissioner of Education and Assistant Secretary of HEW.

June 17, 1969.—Senate speech critical of U.S. Supreme Court decision which approved "racial balance" in the assignment of teachers as a requirement of the U.S. Constitution.

July 14, 1969.—Telegram to HEW Secretary Robert H. Finch condemning disregard by his Department of provisions of the 1964 Civil Rights Act and violation of an act of Congress which *denied* the Department power to spend Federal funds to compel transportation of pupils to achieve racial balance in public schools.

July 14, 1969.—Telegram addressed to President Nixon pointing out contradictions between his campaign statements relating to desegregation of public schools and the actions of his Administration in conflict with laws of Congress and with his statements as a candidate for the Office of President.

July 25, 1969.—Attended meeting at the White House along with other members of the Alabama Congressional Delegation for conference with Secretary Finch and Attorney General Mitchell to protest unfair and unreasonable public school policies promoted by the Administration in Alabama.

July 27, 1969.—Senate speech attacking Department of HEW actions and school plans in Alabama.

August 4, 1969.—Participated in Senate debate in support of the "Whitten Amendment" to deny use of public funds by the Department of HEW for compulsory busing to achieve racial balance in the schools.

September 3, 1969.—Introduction of an amendment to the Department of HEW Appropriations Bill which amendment declared "Freedom of Choice" as a public policy established by Congress—Senate speech in support of the amendment.

September 16, 1969.—Remarks in the Senate on the *Congressional Record* of a nationally syndicated column by James Kilpatrick, entitled "Let's Stop Kicking the South Around."

September 16, 1969.—Remarks in the Senate on insertion in the *Congressional Record* of an editorial from the *Washington Evening Star* which stated in part, "Public officials no doubt can be whipped into line. But whether the same will prove true of large numbers of parents is, we think, doubtful to say the least."

September 22, 1969.—Remarks in the Senate on insertion in the *Congressional Record* of an editorial from the *Montgomery Advertiser* entitled "With Malice and Misinformation," criticizing the U.S. Civil Rights Commission report on desegregation in the South.

September 26, 1969.—Sent a detailed letter to HEW Secretary Robert H. Finch condemning the application by his Department of dual standards in the interpretation and administration of the laws of Congress. Under dual standards in the Department treated racial imbalance in public schools of the South as unconstitutional while even greater racial imbalance in schools outside the South was considered of no concern to the Department of HEW.

September 29, 1969.—Senate speech condemning dual standards as applied to southern schools. The speech is documented with correspondence from me directed to Presi-

dent Nixon and HEW Secretary Robert H. Finch, demanding compliance with the laws of Congress which prohibits the use of HEW funds for compulsory busing to achieve racial balance in public schools.

September 30, 1969.—Remarks on insertion in the *Congressional Record* of a letter from a concerned parent in Montgomery, Alabama. This letter was an eloquent appeal for common sense approaches and simple justice for school children in the desegregation process.

October 14, 1969.—Senate speech condemning the almost unbelievable chaos and ruin of the public schools of Choctaw County, Alabama under a fantastic desegregation plan prepared by a hired agent of the Department of HEW and submitted as the plan of an "education expert" on the basis of a one day visit to Choctaw County, Alabama.

October 16, 1969.—Participated in Senate debate in support of the "Fair Play" Stennis Amendment demanding an end to dual standards and discrimination against the South in applying desegregation plans throughout the nation.

October 30, 1969.—Speech in the Senate criticizing the U.S. Supreme Court "Instant Integration" decision in the Mississippi school cases.

November 5, 1969.—Co-sponsored with North Carolina Senator Sam Ervin a bill to amend the Civil Rights Act of 1964 by adding a new title, which restores to local school boards their constitutional power to administer the public schools committed to their charge.

December 2, 1969.—Remarks in the Senate on insertion in the *Congressional Record* of an article published in the official publication of Mobile Jaycees entitled "A Jaycee Speaks Out on Federal Interference in Public Education."

December 17, 1969.—Senate debate on my "Freedom of Choice" Amendment. The Amendment was attached to the Appropriations Bill for the Department of HEW and declared, among other things, that the freedom of parents to choose the school to which they shall send their children is an inviolate right, the protection and maintenance of which is part of the public policy of the United States.

January 26, 1970.—Jointly sponsored with Mississippi Senator James Eastland a bill to compensate local school boards for cost of schools ordered closed or abandoned as a result of coercive actions of Federal Courts and agencies—In a Senate speech in support of this bill it is pointed out that schools valued in excess of $100 million have been closed in Alabama alone.

January 26, 1970.—Jointly sponsored with Senator Eastland a bill to preserve the tax exempt status of, and the deductibility of contributions to private schools.

January 26, 1970.—Senate speech and debate criticizing U.S. Supreme Court for misuse of equity powers in desegregation cases.

January 27, 1970.—Co-sponsored Mississippi Senator John Stennis' "Fair Play" Amendment requiring the Department of HEW to deal uniformly in all regions of the U.S. with respect to desegregation of public schools.

January 30, 1970.—Co-sponsored with Senator Ervin an amendment to the Civil Rights Act of 1964 to permit "Freedom of Choice" in student assignments.

February 2, 1970.—Co-sponsored with Senator Ervin an amendment to the 1964 Civil Rights Act to prohibit the Department of HEW from withholding or threatening to withhold federal financial assistance to public schools operating under the principle of freedom of choice.

February 2, 1970.—Co-sponsored with Senator Ervin a bill to prohibit the use of public funds for busing pupils to alter the racial composition of schools.

February 2, 1970.—Co-sponsored with Senator Ervin an amendment to permit local school boards to bring civil actions against agents and agencies of the U.S. for violating certain laws relating to operation, management, and control of local public schools.

February 2, 1970.—Co-sponsored with Senator Ervin an amendment to the 1964 Civil Rights Act to deny Federal Courts jurisdiction and power to make changes in the racial composition of the student body of any public school.

February 3, 1970.—Co-sponsored with Senator Stennis an amendment to permit assignment of children to public schools in the manner requested or authorized by their parents or guardian.

February 8, 1970.—Participated in a Concerned Parents rally of some 15,000 parents in Birmingham. Governor Wallace, Representative John Rarick of Louisiana, Representative Bill Nichols, and Representative Walter Flowers of Alabama and I spoke and pledged our full support in an effort to obtain equal treatment and simple justice for the public school children of Alabama and the South.

February 9, 1970.—Senate speech in support of the above amendments.

February 9, 1970.—Senate speech pledging full support of principles announced by Southern Governors at a Mobile, Alabama meeting held to plan cooperative efforts in resisting ruinous public school policies enforced by Federal Courts and the Nixon Administration.

February 10, 1970.—Participation in Senate debate in support of Freedom of Choice Amendment.

February 16, 1970.—Co-sponsored with Senator Ervin a bill denying power to any Court, Department, agency, officer or employer of the United States to refuse any child the right to attend the public school nearest his home.

February 16, 1970.—Co-sponsored with Senator Ervin an amendment to prohibit transportation of school children to achieve racial balance in schools.

February 16, 1970.—Co-sponsored with Senator Ervin an Amendment to prohibit compulsory assignment of school teachers to schools other than the school in which any such teacher contracts to serve.

February 17, 1970.—Participation in Senate debate on Stennis Amendment.

February 17, 1970.—Participation in Senate debate in opposition to the "Scott Amendment" to perpetuate dual constitutional standards for desegregation on a sectional basis.

February 18, 1970.—Participation in Senate debate in support of the Stennis and Ervin Amendments.

February 19, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of a letter from a concerned mother published in the *Alabama Farmer* and entitled "God Help Our Court-Conducted Schools."

February 19, 1970.—Senate speech severely criticizing the role of Federal Courts in exercising control of local public schools.

February 25, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of a letter from a concerned parent from Tuscaloosa, Alabama.

February 28, 1970.—Participation in Senate debate in opposition to the "Scott Amendment" to destroy freedom of choice.

February 28, 1970.—Participation in Senate debate in opposition to the "Mathias Amendment" which would destroy freedom of choice.

March 13, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of an editorial written by Father Daniel Lyons published in the *Twin Circle*, entitled "The Big Yellow School Bus."

March 18, 1970.—Senate speech pointing out new efforts by the Department of HEW to control institutions of higher education and junior colleges in Alabama, and my opposition to these policies.

March 24, 1970.—Participation in Senate debate in support of the Stennis Amendment.

March 25, 1970.—Participation in Senate debate in support of the Stennis Amendment.

April 1, 1970.—Senate speech and debate in support of the Stennis Amendment.

April 8, 1970.—Co-sponsored a proposed Constitutional amendment to permit voluntary prayers or meditation in public schools and other public buildings.

April 30, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of a letter from Hon. Virgil Nolan Price, Superintendent of Tallapoosa County schools, relating to $1 million worth of school buildings closed and abandoned in the county pursuant to Federal Court orders.

May 4, 1970.—Conference held in Washington with superintendents of public school systems of Autauga County, and Ozark, Huntsville and Enterprise on important education problems.

May 7, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of a *Readers Digest* article entitled, "Our Troubled Schools."

June 4, 1970. Remarks on insertion in the *Congressional Record* of an editorial from Camilla, Georgia entitled "More Money Not Complete Answer."

June 15, 1970.—Remarks in the Senate on announcement of resignation of Dr. James E. Allen, Jr. including insertion in the *Record* of my original reasons for opposing the confirmation of Dr. James E. Allen as U.S. Commissioner of Education and Assistant Secretary of the Department of HEW.

June 24, 1970.—Participation in debate on the HEW Appropriations Bill in support of the Stennis Amendment.

June 25, 1970.—Participation in Senate debate in support of the Stennis Amendment.

July 14, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of a David Lawrence column relating to discriminatory treatment of private schools in the South.

July 15, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of the legal brief prepared by the Department of Justice in support of the tax exempt status of private segregated schools and the deductibility of contributions made to such schools. This brief was filed prior to the reversal of policy by the Nixon Administration.

July 16, 1970.—Remarks in the Senate on insertion in the *Congressional Record* of a letter from Hon. J. C. Davis, Mayor of the City of Chickasaw, Alabama and article written by Dixie Wright and published in the Mobile, Alabama *Press Register*. Both the letter and the article deal with recent Federal Court school plan imposed on Mobile County schools.

July 23, 1970.—Remarks made in the Senate on insertion in the *Congressional Record* of an editorial published in the Montgomery Alabama *Advertiser-Journal* relating to the tax exempt status of private schools. In these remarks I give required notice to the Senate that when an appropriate revenue measure comes. before the Senate from the House of Representatives I will offer amendments authorizing the continuation of the tax exempt status of all private schools and the continued deductibility of contributions to such schools.

July 28, 1970.—Senate speech in support of the Senate-House Conference Report which upheld provisions of the Whitten Amendment as enacted originally by the House of Representatives.

August 3, 1970.—Participation in Senate debate on a bill to clarify and help resolve conflicts in decisions of various U.S. Federal District Courts and U.S. Circuit Courts of Appeal as they relate to provisions of the Whitten Amendment and to uniform application of desegregation standards throughout the nation.

August 4, 1970.—Senate speech relating to

visit of Senator Mondale to Alabama in apparent conflict with duties assigned to his Select Committee on Equal Educational Opportunity. The Committee was authorized by Congress to study the problem of desegregating schools outside of the South. Instead, Senator Mondale conducted one-day whirlwind surveys in Prattville, Alabama; Homer, Louisiana; and Uvalde, Texas. Senator Mondale's conclusions based on his supposed investigation is commented on and illustrated with editorial opinion from Alabama newspapers.

August 6, 1970.—Conference with Assistant Attorney General Jerris Leonard at U.S. Justice Department concerning chaotic school conditions in Alabama.

EXHIBIT 11

[From the CONGRESSIONAL RECORD, Oct. 14, 1969]

HEW THREATENS DESTRUCTION OF CHOCTAW COUNTY, ALA., SCHOOL SYSTEM

Mr. ALLEN. Mr. President, the public school system in Choctaw County, Ala., has a responsibility for educating close to 5000 children and it is threatened with destruction. This tragic situation is one wholly contrived by Federal Courts and the U.S. Department of Health, Education, and Welfare.

The Congress of the United States has an interest in and a responsibility in this matter because many of the unbelievably wierd things which have taken place in Choctaw County are supposedly authorized by legislation enacted by Congress and are being financed from funds provided by Congress. Let me briefly state the background.

Mr. President, most Federal courts in the south have washed their hands of responsibility for destructive effects of their racial edicts and decrees relating to public school education in the Southern States. This washing of hands is typified in the language used by the Court of Appeals for the Fifth Judicial Circuit in absolving the court of blame for consequences:

"The Department of Health, Education, and Welfare, with its staff of trained educational experts with their day to day experience with thousands of school systems is far better qualified to deal with such operational and administrative problems than the court presided over by judges who do not have sufficient competence—they are not educators or school administrators—to know the right questions much less the right answers."

This is from the Court of Appeals for the Fifth Judicial Circuit—the court that has passed on many of these questions in the Southern States.

Mr. President, Federal courts now request the Department of Health, Education, and Welfare to accept responsibility for working out plans to overcome racial imbalance in particular school jurisdictions which are already desegregated but which fail to produce the racial balance demanded by Federal courts.

Mr. President, this procedure might appear at first glance to be reasonable and one suggested by consideration of the education of the children involved. However, experience demonstrates that agents of the Department of Health, Education, and Welfare who undertake this role for Federal courts are neither education experts nor are they experienced in planning sound education programs. As a matter of fact, it has been made abundantly clear by now that these people are concerned only with devising plans to achieve racial balance in the schools.

Mr. President, one of these so-called experts was sent by HEW into Choctaw County, Ala., to prepare a plan on request of the Federal district court. Let us take a look at the procedures used by the HEW experts and examine the plan to see if it can be justified in terms of education standards or criteria.

This expert spent all of one single day riding over the county viewing schoolbuildings and collecting enrollment figures for the prior school year. None of his valuable time was spent in consultation with any member of the local board of education. No time was wasted with such mundane things as inquiring about the sources of school revenue and school budgets or determining whether or not funds were available to the local board to implement any sort of plan. Transportation facilities were not inspected or even considered. Neither parents, pupils, nor teachers were consulted or even interveiwed. No thought or effort was given to determining whether or not the public might support the plan.

The plan was presented to the Federal district court as one prepared by an education expert paid for and approved by the U.S. Department of Health, Education, and Welfare, and it was panned off on the public as the work of an education expert and one that presented a sound plan from the standpoint of educational considerations. In doing so, the people were deceived, and it is my judgment they were defrauded. In support of this judgment, I submit the following facts for consideration by the Senate and the public.

First of all a question concerning the qualifications of the expert must be disposed of. There is reason to believe that his education might have been deficient in geography if nothing else because in the plan presented to the court he referred to Choctaw County, Ala., as being a Louisiana parish and to a Louisiana university as the source of assistance to local boards of education in implementing the plan. At another place in the plan, Choctaw County, Ala., is referred to as being located in Mississippi. Of course, this is not conclusive evidence of a deficiency in the expert's knowledge of geography, it could be evidence of a disorientation as to time and place. This last conclusion is supported by a substantial amount of additional evidence throughout the plan.

On the other hand, I have been assured by the Department of Health, Education, and Welfare that this particular expert is not deficient in his knowledge of geography and that he is in touch with reality. If we accept these assurances, there is but one remaining conclusion assessable from the facts. That is that the plan presented by this expert as being one designed to meet the local education requirements of the schoolchildren of Choctaw County, Ala., was not that at all but rather a plan drawn up by somebody for Louisiana and Mississippi schools and panned off on the Federal district court and the public in Alabama as the result of an in depth study of local conditions by an education expert.

I think this last explanation to be most likely. It demonstrates conclusively that the plan was not designed on the basis of education considerations in Choctaw County, Ala., but only as a sham to meet the single racial balance criteria.

This is the point I want to emphasize. The so-called plans submitted by so-called education experts of the Department of Health, Education, and Welfare in Alabama and in the South are not even remotely concerned with improving educational opportunities for anyone but have the sole objective of overcoming racial imbalance in the public schools. Yet, Mr. President, Federal statutes forbid such activities by the Department. Even a disoriented education expert in the Department of Health, Education, and Welfare can understand the plain language of the statute which states that the Department shall not spend funds appropriated to it by Congress for the purpose of seeking to overcome racial imbalance in schools.

Mr. President, if the Department were merely violating the law, a remedy would be readily available. But the Department is doing more than that. It is also rejecting education standards in formulating plans it submits to Federal courts and because of that the Department is systematically destroying public school education in the South.

Mr. President, let me demonstrate just how completely these disoriented education experts disregard sound education criteria in formulation of plans to be enforced by Federal courts.

Two high schools in Choctaw County, Ala., are—or were—accredited by the Southern Association of Secondary Schools and Colleges. The association is the highest accreditation agency in the South. Four additional high schools in the county were accredited by the State of Alabama. One school was not accredited by either of these agencies.

Now, the expert submitted his plan, supposedly the result of an in depth study and evaluation, and proposed abandonment of the two high schools enjoying the highest accreditation and recommended to the court that the one school with no accreditation should be retained. Such idiocy can be understood only when it is realized that these people are not concerned about educating the children but only with plans to achieve racial balance in the schools.

Mr. President, this is a type of plan which no Senator would tolerate in his own State. It is the type of plan which no Federal judge and no education expert in the Department of Health, Education, and Welfare would recommend for a school system for their own children. This is the type of plan which the U.S. Attorney General sends so-called civil rights lawyers into Federal courts to defend as educationally sound and in the best interest of all the children of the school district.

This is the type of plan which the Department of Health, Education, and Welfare brags about as representing "the services of professional educators at the Office of Education in the Department of Health, Education, and Welfare." And this is the disgraceful sham of a plan which is being imposed upon the schoolchildren throughout the Southern States. The injustice and stupidity of it makes the blood boil.

Mr. President, that is not all. The evidence of willful, reckless, and wanton disregard for the education and welfare of children in the South continues to unfold in one sorry episode after another. These demented experts from the Department of Health, Education, and Welfare come up with plans which are physically impossible of implementation. How are school boards supposed to bus pupils all over the county without school buses? How are they to buy school buses without the money to pay for them? How are they to borrow money without authority to borrow it? Who is going to lend a school board money when anyone can see that the board is being driven to bankruptcy and ruin? Where is a school board to get the money to tear down and rebuild and convert schools as recommended by HEW incompetents posing as education experts?

The truth is that these helpless school systems are dealing with people who do not care enough about education or the welfare of the children involved to consult with local school officials, or even inquire about the financial resources of the county. They slap down a fantastic plan as a temporary expedient without a second thought about the future of public education in the areas.

Consider this. To implement the plan submitted for Choctaw County, Ala., would unconditionally bankrupt the school system. Let me show why this is so.

In Alabama, the major portion of the public school funds for rural schools comes from the State. State funds are allocated under an equalization formula which takes into account a number of factors, but the amount received is largely determined by the number of pupils in average daily at-

tendance. In round figures Alabama provides close to $400 per pupil in average daily attendance. Consequently, if a school system loses half of its enrollment, it will lose half of its support from the State. Fixed operating expenses of the system remain fairly constant so any loss of operating funds must be absorbed by reduced operating expenses. That means fewer teachers and less equipment, supplies, and less money for transportation. It means no more capital expenditures which would add fixed costs.

Since September of this year, the Choctaw County school system has already lost close to 1,000 pupils. As a result, it stands to lose approximately one-fifth of its operating funds. As the cutback is applied more and more will drop out because of the inability of the system to maintain an adequate education program.

Under these circumstances, the idea of trying to compel local boards to buy more buses and to assume the added cost of the fantastically expensive business of busing pupils hither, thither, and yon over the country—is the epitome of absurdity.

Mind you—all of this for the sole purpose of overcoming racial imbalance in the schools. These people are not talking about desegregation, a term which after 15 years the Supreme Court has never gotten around to defining and which Congress has not defined except to say that whatever it means, it does not mean that Congress delegated to the Department of Health, Education, and Welfare the power to overcome racial imbalance in public schools. These people are not talking about a unitary school system. Alabama has a unitary school system and it has desegregated schools. These racial experts in the Department of Health, Education, and Welfare and sociologists in the Federal courts are concerned with but one thing and one thing only, and that is racial imbalance in schools and both have demonstrated that they do not care about alienation of public support of education or the ruin and wreck they leave behind.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. ALLEN. Mr. President, I ask unanimous consent that I be permitted to continue for an additional 5 minutes.

The ACTING PRESIDENT pro tempore. Without objection, the Senator from Alabama is recognized for an additional 5 minutes.

Mr. ALLEN. Mr. President, unless the Department of Health, Education, and Welfare gets rid of its quacks and disoriented experts and unless some evidence of commonsense and human compassion can be demonstrated by these people—the public schools of the South are on the way out. It is only a question of time. It is difficult to convey in words a sense of the depth of the feeling of the people on this subject, dealing as it does with matters relating to the health, safety, and welfare of their children. In most rural areas of the South the public schools are community schools. Most contain the first through the 12th grades in a single school building. In most, the parent-teacher associations and civic clubs and other organizations contribute substantial funds and services to provide improvements in school programs and facilities.

Children in the same family naturally attend the same school from the first grade through the 12th grades. Under the irrational racist plan submitted by the befuddled HEW expert, some children in the same family would have to be bused to four separate schools before they finish the ninth grade. Some children would be compelled to ride buses for distances up to 90 miles and spend up to 4 hours a day riding a school bus. Under the bankruptcy producing plan sponsored by and recommended by the Department of Health, Education, and Welfare, school libraries, science laboratory facilities and fixtures, improved playing fields would be abandoned and converted to other uses. School bands, glee clubs, and honorary societies would be disbanned. High school seniors who have already purchased their class rings would be scattered and bused into different high schools. Many teachers who have invested life savings in homes in local communities would be displaced and ordered to accept dictation as to where they will teach or else quit teaching. Cherished teacher tenure rights secured by law are ordered sacrificed.

Local school board members are ordered to abandon their sworn duty and moral obligation to children and the communities and to implement plans and decrees imposed by total strangers and which are contrary to reason and commonsense and contrary to their best judgment under pain of confiscatory fines and imprisonment. In short, the will and wishes of parents and teachers are overridden and conscientious public servants are compelled to preside over the liquidation of the public school system to which they have dedicated their lives. That an agency of Federal Government is the author of this ruin is a tragic fact.

Yes, Mr. President, it is a tragedy. It is an appalling tragedy. That a situation such as this could have developed in our Nation is cause for grave concern.

One cause for concern lies in the fact that Federal officeholders claim a power to impose racial solutions and another concern is the readiness to use calloused means to impose and enforce those solutions in local public schools.

Consider the weapon of deprivation used against innocent children by Federal officials. Federal funds used to provide hot breakfasts and lunches and education benefits for children of the poor are ruthlessly withheld by the Department as a means of enforcing its racial solutions. These HEW brutalitarians have become immune to the use of this hideous weapon and like a vice in the words of Pope, "We first endure, then pity, then embrace," it. The weapon of deprivation is embraced by the Department and its use is stoutly defended by the Department. Just a week or two ago, Secretary Finch announced his intention to oppose efforts of Congress to deprive him of this weapon.

Yes, Mr. President, this is a matter of deep concern, and the role Federal courts play in this experiment in racism is cause for concern, and resort by Federal district courts to injunctions to enforce racial decrees is a cause for concern. And it is cause for concern when Federal district courts threaten elected public officials with confiscatory fines and imprisonment without benefit of trial by jury to compel unwilling public officials to execute racial decrees handed down by the courts.

Of course, some will say that there is a vast difference between compulsory integration of races and compulsory extermination of races. Indeed, there is a vast difference. But there are also similarities. In both instances the decrees are racial and the end is rationalized by a social collectivist theory. In both instances the decrees are enforced by the coercive powers of Government. In both instances there is an attempted evasion of moral responsibility for the consequence by washing of hands by courts and shifting the responsibility to the collective will of the State. In both instances there is a ruthless disregard for the custom, tradition, and belief of a minority. In both instances the methods of implementation—deprivation of innocent children, confiscatory fines, imprisonment of public officials—are inhumane and barbaric. Furthermore, one might reasonably ask if the principal difference between State enforced extermination and State enforced integration is not in the long run but a difference in the time it takes to achieve the same end.

Yes, Mr. President, these are causes for concern. We had better back up and take a hard look at these sad, tragic, and dangerous trends.

American people are beginning to ask once again, where do we draw the line on Federal powers? When do we draw the line? Are we prepared to accept as a principle of constitutional law the right of Federal agencies to withhold necessities of life from citizens of this Nation as a legitimate means to any end? Are 12 million more Americans to be placed under the mercy of HEW brutalitarians who withhold food from the mouths of children as a means of enforcing regulations? Are we prepared to accept the principle of rule by injunction over the lives of our children?

Mr. President, much more could be said on this subject and much more should be said. Doubtless, much more will be said. I am going to close these remarks by saying that the Department of Health, Educatiton, and Welfare has demonstrated incompetence and stupidity in its performance in Choctaw County, Ala., and throughout the South.

It is clear to me that Federal courts and these HEW incompetents are hung up on the silly absurdity of the racial balance as some kind of panacea that will instantly equalize educational opportunities.

Mr. President, the people of no civilized nation on the face of this earth believe it. And there is no evidence or other reason to believe it. Other nations considered racial balance and the idea has been rejected as both irrational and impractical. More and more black citizens are also beginning to realize that racial balance is not worth a row of beans from the standpoint of improving education opportunities. In fact, there is no responsible evidence from any source to indicate that racial balance contributes anything constructive in the way of equalizing educational opportunities. On the other hand, there is overwhelming evidence from throughout the United States that arbitrary actions to achieve racial balance in schools are dismal flops and costly failures.

Mr. President, the U.S. News & World Report, in its issue of October 13, 1969, has published the results of a nationwide survey on the subject of busing to achieve racial balance. The survey shows conclusively that this arbitrary and artificial device is being rejected throughout the United States as too costly, impractical, and devoid of education benefits.

Mr. President, I ask unanimous consent that the article from the U.S. News & World Report be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD.

[From U.S. News & World Report, Oct. 13, 1969]

WHY SCHOOL BUSING IS IN TROUBLE

Once, only a few years ago, busing was being hailed by civil-rights leaders as the answer to Northern-style segregation—the so-called *de facto* segregation that occurs when children living in all-black or all-white neighborhoods attend neighborhood schools.

The idea was to bring about racial mixture in the classroom by busing children back and forth—bus Negro youngsters out of their black neighborhoods to schools in white areas, and bus white youngsters to schools in black areas.

There was opposition, often bitter. Battles over busing split many communities. But opponents, frequently denounced as racists, lost in city after city. And the idea spread. Busing has been adopted as an integration method in scores of cities around the U.S.

Now, however, attitudes are changing. The tide of the battle appears to have turned—against busing.

This new trend shows up in a nationwide survey by members of the staff of "U.S. News & World Report." According to that survey:

Among civil-rights leaders, educators and

Negroes themselves, doubts are growing about the value of busing, either as method of integration or as a method of improving education.

Interest is growing in a different idea—that Negroes may benefit more from an improvement of schools in their own neighborhoods than they do from being bused into white schools.

You find this change in many cities.

"A definite change." In Baltimore, Associate Superintendent of Schools William Tinderhughes told "U.S. News & World Report":

"There has been a very definite change in thinking about busing for integration in recent years. A few years ago, there was demand for busing. But not now.

"Parents now are more concerned with the quality of the education that their children are getting. The same group that at one time was speaking for integration now is speaking about curriculum, about teachers and about the quality of the educational program."

In Chicago, Assistant Schools Superintendent David J. Heffernan said this:

"The integration battle now has taken a different turn. Busing, as such, is almost completely out of the picture. It has proved effective neither for integration nor for better education."

In Minneapolis, this comment came from Floyd Amundson, school-board consultant in community relations:

"The trend here is away from busing because it doesn't solve anything. The blacks themselves apparently would prefer to have their own schools improved rather than have their children bused to mostly white schools."

On the West Coast, a school official in Los Angeles reported:

"Fewer blacks have been showing up at board meetings to demand integrated schools this year. The 'Black Power' movement, with its emphasis on the isolation of black people, may have something to do with it."

"Climate has changed." The trend toward racial "separatism" shows up in several places. In Pittsburgh, John March, director of public relations for the board of education, said this:

"The climate has changed. The most militant, outspoken blacks are not interested in integration. They want separation. You wonder how you can justify busing under these conditions.

"This puts the school boards right in the middle. We are under pressure from the State Human Relations Commission to desegregate. But the militants don't want it. The children even segregate themselves in our high-school cafeterias. We have separate black and white areas that the blacks are mostly responsible for creating. The old rules just don't seem to work any more."

Black separatists, however, are far from being the chief causes for the diminishing popularity of busing.

Civil-rights leaders with long and strong commitments to the cause of integration are questioning the value of the bus. One is James Farmer, former head of the Congress of Racial Equality (CORE) who now, as Assistant Secretary of Health, Education and Welfare, is the highest-ranking Negro in the Nixon Administration. Mr. Farmer announced last March that he had changed his mind on integration by bus. He said:

"Our objective should be to provide a high-quality education. The real problem is not integration or segregation. It is the quality of education. Busing is not relevant to high-quality education. It works severe hardships on the people it affects. In the South, I found blacks complaining of being bused to school."

Where busing works. All this does not mean that busing is being abandoned as a way of integration.

In a number of smaller cities, where black pupils are a minority, busing has worked with considerable success in improving what educators call "racial balance." It has been accepted without serious protest in many such cities.

One city which advocates of busing cite as an example is Berkeley, Calif. There, in a city of 121,000 population, 3,500 pupils—whites and blacks—are "cross-bused" to achieve in each school a racial mix that is almost in exact proportion to the city's school-age population: 49.6 per cent white, 42.8 per cent black and 7.6 per cent Oriental or American Indian. Complaints are mostly over the cost: $530,000 a year for the total integration program, with $204,000 for the actual busing.

Another success story is told in Elmira, N.Y., a city of approximately 50,000 population, with 1,000 Negroes among 14,000 school students. There some 300 white and 200 black pupils are bused outside their home areas to balance enrollments racially. Elmira's Superintendent of Schools Charles E. Davis reported:

"Our troubles have been few. Our over-all conclusion is that no one has suffered and many people are gaining.

"I think that in any moderate-sized city with a relatively small black population, some plan similar to ours could be made to work."

The New York story. It is in larger cities or in cities with big proportions of Negroes in the schools that busing encounters its greatest problems.

New York City, where the whole busing experiment started a dozen years ago, has had more turmoil than success.

That city has tried almost every integration device known—busing, school "pairing," "open enrollment," redrawing of school-attendance districts, even elimination of junior high schools and substitution of new "intermediate" schools to draw youngsters from wider areas of the city at an earlier age.

Busing alone costs New York City some 3 million dollars a year.

After all this effort there is more segregation, not less. There are more all-black or nearly all-black schools in New York today than there were before. And tests have shown no clear academic gains among children who are bused.

New York's integration attempts have stirred massive protests, have been the targets of numerous lawsuits. Many thousands of white parents have moved out of the city to suburbs.

Now Negroes and Puerto Ricans outnumber white in the city's schools.

New York, however, is still trying. About 14,500 pupils are riding chartered buses under "free choice—open enrollment" programs designed to improve "racial balance."

In New York State, outside New York City, the State education department reports that 30 to 35 school districts have systems for correcting "racial imbalance." Most involve busing.

Much of New York State's integration effort is made under pressure of a policy laid down by former State Commissioner of Education James E. Allen, who now is U.S. Commissioner of Education in the Nixon Administration. For New York, he defined any school more than 50 per cent Negro as "racially imbalanced," and ruled "there must be corrective action in each community where such imbalance exists."

New York State's general assembly, however, put restrictions on forced integration with a so-called "antibusing" law which was passed last spring and went into effect September 1.

That law forbids appointed school officials or boards to change district boundaries or pupil-assignment plans for the purpose of changing racial balance without consent of parents. This requires programs to be voluntary in many cities, including New York City.

Massachusetts is another State that requires local action against "racial imbalance." State aid can be cut off from schools over half Negro.

Boston, with a number of predominantly Negro schools, is busing about 2,000 pupils at public expense to comply with this law. About 5,000 other pupils are riding buses at their parents' expense in a program of "open enrollment."

Boston also has a new "magnet" school in a Negro area that draws 340 white children—by bus—to take advantage of the special facilities it offers.

All of Boston's bus riders for integration are volunters. Parents have protested angrily against busing in the past. Mrs. Louise Day Hicks, a leading opponent of busing while head of the school board, recently led all candidates in a preliminary election for the city council.

Cities that balk. Several large cities with districts that are heavily Negro have refused to follow New York's example of massive busing.

Despite years of heated demands by civil-rights groups, the Chicago school board has insisted on maintaining the "neighborhood school" concept, which results in dozens of schools being nearly all-white or all-black.

The sole busing program there is a small one to relieve overcrowding.

Instead of busing, the school board plans to erect a series of "magnet" schools where specially trained teachers will use the latest methods and equipment to teach a cross-section of children of all races and economic levels.

In Philadelphia, this report came from Oliver Lancaster, assistant director of the board of education's office of community affairs:

"We have no pressure—from either whites or blacks—for massive desegregation. It isn't possible to make the massive shifts it would take to accomplish that quickly. Our trend is toward quality schools."

At present, Philadelphia's only busing is to relieve overcrowding in some black schools. A proposed program for integration would involve some busing. But it stresses improved schools—and some specialized schools—in Negro areas to attract white pupils.

Pittsburgh and Baltimore also bus primarily to relieve overcrowding. But the result usually is the mixing of more Negroes into white schools.

California opposition. In California opposition to compulsory busing for integration is mounting steadily. A Statewide campaign is under way to place on the November, 1970, ballot a proposal to prohibit such busing.

San Francisco may win the right to elect its school board, mainly as a result of opposition to an integration plan recently adopted by the city's appointive board. That plan calls for busing 4,500 pupils next year.

The Concerned Parents Association has succeeded in putting the proposal for a school-board election on the November 4 ballot. Its hope is to elect enough advocates of "neighborhood schools" to block the busing program.

San Francisco's Mayor Joseph Alioto is on record against the busing plan, saying:

"I don't believe the black community wants it. I don't believe the white community wants it."

In nearby Richmond, voters last April elected three school-board members who campaigned against a forced-busing plan. The new board has replaced the force plan with one which calls for voluntary busing on a smaller scale.

In Pittsburg, Calif., five Negro families have sued to block busing of their children to white schools. They say they prefer an integration plan that does not put "the entire burden on the Negro pupils."

Sausalito has integrated its schools by a program of busing both white and Negro pupils. Schools costs have skyrocketed, and

some families have sought to transfer out of the district.

Los Angeles has a voluntary busing program which some hail as a success, others as a failure. It affects fewer than 1,000 pupils and was adopted under pressure of threatened suit.

California's State board of education has ruled that any school is "imbalanced" if its minority enrollment varies more than 15 per cent from the percentage of minority students in the school district.

In Los Angeles, school authorities estimate that 160,000 students would have to be bused at an initial cost of 100 million dollars, followed by a yearly cost of 20 million, to comply with the letter of that ruling. Most school officials take the position that the State board's ruling has no force as law.

Colorado controversy. Denver has been torn by a controversy over busing. The school board adopted an integration program calling for transfers of several thousand children—both black and white. Voters then elected two new board members who swung a vote to rescind the prorgam. But advocates of busing sued and won the program's temporary reinstatement. Now the busing is being done despite continued protests.

Michigan's problems. In Michigan, there may be as many as 70 school districts that bus for racial balance.

One city that does is Grand Rapids. There, about 1,500 black students ride buses from their black-neighborhood homes to schools that are mostly white. And busing has become a focal point of discontent with the school system.

White parents helped elect three opponents of busing in a bitter school-board election last spring.

When classes opened this autumn, a group called Blacks United for Survival (BUS) organized a temporary boycott of the schools. Busing was not the only issue. Some Negroes demand a complete return to neighborhood schools. Some object to "one-way busing" and want whites bused, too. Others complain that the plan does not provide enough integration. Still others demand more emphasis on quality of education.

Here, in a single community, you find most of the problems and controversies that beset busing as a means of integrating Northern schools.

Views in Washington. It is not only in cities that busing is losing favor. It has acquired some powerful opponents in the Federal Government, too.

President Nixon recently said, "It's never been the policy of the Administration to impose busing as a way to achieve racial balance." In his 1968 election campaign he criticized busing as "forced integration rather than putting emphasis on education."

Congress has forbidden the Department of Health, Education and Welfare to require busing in order to overcome "racial imbalance."

Representative Edith Green (Dem.), of Oregon, a member of the House Education and Labor Committee, is known as a civil-rights supporter. In an interview in "The Urban Review," she said:

"I seriously question busing for social reform—taking a youngster from a disadvantaged home in a ghetto area . . . transporting him to another school where he spends five or six hours of the day and then is picked up and taken back to the same disadvantaged home, the same tenement area. I have serious questions of how much we're really helping that child."

What Negro parents "are entitled to," Representative Green suggested, is "quality education for their children in the area in which they live."

EXHIBIT 12

DEPARTMENT OF HEW PLANS IN MOBILE, ALA.

Mr. ALLEN. Mr. President, I speak today for the people of Mobile and for the people of Alabama. The Department of Health, Education, and Welfare, through its actions in Mobile, Ala., is violating laws of Congress, and we demand that the executive branch of the Federal Government, and every department in it, be compelled to obey the law.

I have just returned from a visit to Mobile, where I opened a fourth office in Alabama; the purpose of these offices being to serve more effectively the people of Alabama and to keep informed of issues uppermost in the minds of the people.

Mobile is a thriving port city with a metropolitan area population of about 300,000 people. While in Mobile, I had the honor and pleasure of addressing the Alabama Bar Association at its annual meeting in Mobile. Accordingly, I had the opportunity to talk with hundreds of Alabama citizens and responsible leadership of the city of Mobile and of the State of Alabama.

Mr. President, the people of Mobile and of the State of Alabama are outraged by actions of the Department of Health, Education, and Welfare in Mobile which are in clear violation of the law and which defy the expressed will of Congress. We have a right to be outraged. The public schools and public education are at stake. The welfare of their children is at stake. We have a right to demand action by Congress.

Mr. President, storm clouds are on the horizon—a storm is brewing in this country. The eye of that storm may turn out to be Mobile, Ala., where the Department of Health, Education, and Welfare has submitted detailed school plans which call for closing of some schools, for building others, for mass conversion of schools for purposes other than those they were constructed to serve—such as changing elementary schools into junior and senior high schools and vice versa, necessitating expensive renovations. These plans require gerrymandering of attendance zones in order to achieve racial balance at the expense of sound educational and practical considerations. The plan calls for busing at least 15,000 more students than are presently bused in the public school system in Mobile County, Ala. In addition, the plan calls for assignment of faculty and administrative personnel on the basis of race and an implied threat of dismissal of teachers who refuse such assignment.

Mr. President, not less than three provisions of the statutes under which the Department operates have been utterly disregarded in the formulation and implementation of an unprecedented 26-page plan for Federal takeover of public schools of Mobile County, Ala., by the Department of Health, Education, and Welfare. Consider these provisions of the Civil Rights Act of 1964:

"Nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school district to another in order to achieve such racial balance.

"Nothing contained in this Title shall be construed to authorize action under this Title by any department or agency with respect to any employment practice of any employer . . . except when a primary objective of the federal financial assistance is to provide employment."

In addition, Mr. President, the 1968 appropriations bill for the Department of Health, Education, and Welfare specifically provides:

"No part of the funds contained in this Act may be used to force busing of students, abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent in order to overcome racial imbalance."

Mr. President, is it any wonder that the highly respected Mobile Register should have editorially declared in this connection:

"HEW's 'plan' for the public school system of Mobile County is in reality a formula for the destruction of the system of public education in this county. It is a brutal bureaucratic atrocity of which no responsible agency of government would be guilty.

"For the first time in American history, an instrumentality of government in Washington, D.C., has gone so stark wild that it openly calls for violation of federal law to destroy a public school system.

"Its ruthless, reckless, destructive, law-defying scheme would virtually reduce the system of public education in this county to a daily clutter of pupil-hauling buses operated as one segment of the bankruptcy-producing expenditures to which the school system would be subjected as an inevitable necessity to compliance.

"What travesty, what mockery, what hypocrisy, what outrage perpetrated against the public intelligence . . . (by the action of) HEW."

Mr. President, I concur in these sentiments. The vast majority of the people of Mobile and of the State of Alabama concur in them, and they are convinced that the Department of Health, Education, and Welfare, if not checked, will destroy the public school system of Alabama. This conviction is not without substance.

Imagine, if you will, Mr. President, a Federal agency issuing 126 pages of rules and regulations governing the administration of local public schools of a county. This despite the 1968 declaration by Congress that the Department should not use funds appropriated by Congress to force busing of students, to abolish any schools, or to force any student attending an elementary or secondary school to attend another school against the choice of his parents in order to overcome racial imbalance. Is the Department of Health, Education, and Welfare bound by this law or is it not?

And what about the law that says that no department or agency of government shall be authorized to interfere with employment practices unless the primary objective of Federal assistance is to provide employment? Is the Department of Health, Education, and Welfare bound by this law or is it not?

Another truly shocking aspect of this and other arrogant and defiant HEW school plans is the absence of education standards. There is not a word, not a line, not a thought given to educational criteria.

There is not a word, not a line, not a thought given to a consideration of convenience and safety of schoolchildren affected.

There is not a word, not a line, not a thought given to the wishes and best judgment of pupils, parents, teachers, and local education authorities in Mobile County. All valid considerations of this nature are subordinated or utterly disregarded to the overriding consideration of compulsory race mixing to the detriment of all children and the education system which serves all children.

But, Mr. President, the plans were not silent on one point. Where are the people to get the money to build new schools, to remodel and alter others, and to pay the increased cost of busing 15,000 additional children?

In this regard, the Department has the audacity to suggest that local public officials levy additional taxes. This part of the HEW plan reveals the cold-blooded, calculating potential for tyranny that constantly lurks in bureaucratic administration of power. For how can the Department require the levy of taxes? The answer is that it threatens to withhold funds and services provided by Congress for the benefit of schoolchildren. The Department uses food, money, necessities of life as a weapon for enforcement of its regulations. Or else it can resort to Federal courts which continue to threaten elected public officials with confiscatory fines

and imprisonment without benefit of trial by jury as a means of effecting obedience to dictatorial social reforms. Will the people of this Nation submit to such tyranny?

Mr. President, when an agency of the Federal Government willfully violates the law of the land and the expressed will of Congress, there must be an extraordinary reason for it. When public officials flip and flop in their public statements, and when their actions contradict their words—there must be a reason for it.

Mr. President, I would like to call to the attention of my colleagues the statement made by Richard M. Nixon while a candidate for President. Mr. Nixon stated in a television broadcast, and I quote:

"I believe that the Supreme Court decision was a correct decision, Brown versus the Board of Education. But, on the other hand, while that decision dealt with segregation and said that we would not have segregation, when you go beyond that and say that it is the responsibility of the Federal Government and the Federal Courts to, in effect, act as local school districts in determining how we carry that out, and then to use the power of the Federal Treasury to withhold funds or give funds in order to carry it out, then I think we are going too far."

Mr. President, there is good reason to believe the people of this Nation agreed with candidate Nixon. They had a right to believe him. They have a right to believe public statements of candidates and the right to believe the statements of the Secretary of the Department of Health, Education, and Welfare, Robert H. Finch, who said at his confirmation hearing, as reported by the Washington Post, that publication of renowned truth and veracity:

"Mr. Finch said that he did not agree with withholding federal funds, the weapon used by the Johnson Administration."

Mr. President, the people believed that statement. They had a right to believe it. It seemed to be consistent with the statement of candidate Nixon that he did not believe that Federal courts and Federal agencies of Government should act as local school districts or withhold Federal funds.

Yet, Mr. President, one of the first official acts of Mr. Finch upon assuming the office of Secretary of the Department of Health, Education, and Welfare was to order withholding funds, benefits and services from innocent schoolchildren. Since then, the Department has continued to use the "weapon" of withholding funds—funds provided by Congress for the benefit of schoolchildren and not for the benefit of school board members and public school administrators.

And, Mr. President, these funds and services and other benefits have been withheld without due process of law, without an opportunity for parents to be heard or to object or to plead not to be deprived through no fault of their own.

It is my judgment that several of the major political issues of the next congressional and presidential election are being shaped in the context of Federal education policy.

The people want to know whether or not the Constitution will continue to be the law that governs government;

Whether or not the executive branch of the Federal Government will be compelled to obey the law;

Whether or not political actions shall be subordinated to morality, ethics, and humanitarian principles in this Nation;

Whether or not innocent persons shall be deprived of food and benefits as a political weapon to effect social reforms.

Mr. President, these issues as they relate to public education involve considerations of the health, safety, moral welfare of children, and the right of a free people to self-government in matters affecting the vital interests of their children.

These are issues that must be decided. There is no way for any elected public official to avoid a stand on the moral and ethical issues raised in Mobile County, Ala.

Yes, Mr. President, the people of Mobile, the people of Alabama, the people of the South, and the people of this Nation have a right to be outraged.

Mr. President, let us put this problem in perspective. We are not dealing with an isolated action by the Department of Health, Education, and Welfare. The lawless action of the Department is not limited to the public school system of Mobile County, Ala. The hideous plans given birth by unlawful actions of the Department extend to over 25 separate school systems in Alabama. Nor will such lawlessness stop in Alabama, nor will it stop in the South, they will eventualy be extended to cover every pubic school system in the United States—and do not discount that as the intention of the Department. For the forces of rule or ruin in the Department of Health, Education, and Welfare who now exercise life or death powers over the public schools of the South are already reaching out to impose that power over the public schools in other regions of the Nation. This lawlessness must be stopped. It must be stopped now.

Mr. President, how do we explain the actions of public officials who say one thing and do another, and departments of Federal Government which violate laws of Congress with impunity?

The people of this Nation are getting fed up with this business of playing politics with their children and their schools. They are not going to let arrogant and callous politicians endanger the health, safety, and morals of their children and destroy their public school in pursuit of self-centered political ambitions.

The people are fed up with power politics devoid of moral, humanitarian, and ethical considerations, and with politicians who can justify withholding funds, services and benefits from innocent schoolchildren, as a "weapon" to be used for political gain. I say as sincerely and solemnly as I know how that ruthless politicians had better stop playing politics with our children.

The people are downright revolted by pious pretentions about democracy and constitutional law by those who deprive the innocent and also deliberately flout the laws of Congress. They are fed up with deceptions, double talk, and double standards.

But politics is one thing and obeying the law is another. Mr. Finch in Mobile County is executing the will of Congress or he is not. He is, or he is not above the law. The Supreme Court has not declared any of these statutes invalid. They are binding upon every public official, the Department of Health, Education, and Welfare and Federal judges. Yet, Mr. President, these laws are violated by the Department of Health, Education, and Welfare. The people demand that something be done about it. They have a right to demand redress. They will have redress in one way or the other. I say as sincerely as I know how that the people are mad. They have a right to be. A storm is brewing. Something is going to give. Something has to give, and I do not believe it is going to be the will of the people of Alabama and the will of the people of our Nation to resist usurpation of powers and tyrannical use of powers by the Federal executive as so glaringly manifest in HEW actions in Mobile County public schools.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from New York (Mr. JAVITS) is recognized for 10 minutes.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. JAVITS. I yield.

WAIVER OF CALL OF THE CALENDAR

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the call of the legislative calendar, under rule VIII, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE CORPORATE LIQUIDITY CRISIS

Mr. JAVITS. Mr. President, I have taken the time this morning to discuss a serious problem of an economic character in the country, and that is the illiquidity, in my judgment, of a serious number of employers of labor and corporations in the country so as to require our attention.

Neither the administration nor the Congress has yet moved to solve one of the pressing problems of our economy: the continuing and ominous squeeze on corporate liquidity.

In the midst of optimistic statements about the economy, it is critical to remember the abyss which may be at our feet, the abyss of illiquidity.

It is not an overstatement to say that the economic cardiogram was flashing the danger signal in the wake of the Penn Central bankruptcy. The commercial paper market weathered this immediate storm and the administration has been reassuring the Nation that all is now well. However, a nationwide survey I have just made has convinced me that all is not well and that the underlying conditions that lead to the first crisis are still very much with us. Now is the time to take out the "life insurance" to guarantee that if another principal member of the Nation's economic family fails, the overall health of the economy will remain intact. Another major corporation could fail without the bankruptcy procedures being able to insure continuance of operations over a crisis period.

It is conventional wisdom to state that the behavior of the commercial paper market in the wake of the Penn Central bankruptcy indicates the strength of our financial markets. However, it is the truth to state that if there is another failure like Penn Central, a major crisis would develop since the underlying condition of illiquidity has not been relieved.

It also is clear that when Penn Central went bankrupt, a clear and present danger existed that the commercial paper market would cease orderly functioning and that the Federal Government lacked the necessary emergency powers to shore it up. We must insure that this possibility does not arise again.

In recent letters to me, Gaylord A. Freeman, chairman of the board of the First National Bank of Chicago and Frederick L. Deming, a former Undersecretary of the Treasury and now a partner in Lazard Freres and Co., graphically spelled out the details of the liquidity problem.

Mr. Freeman who gave me his kind permission to use sections of his letter of August 19 stated:

I feel that the immediate crises of fear of commercial paper, which was generated by

the Penn Central failure, has passed. However, the liquidity problem remains. Corporations are quite illiquid. Inventories have been rising (particularly in this part of the country where we have more manufacturers of durable goods than non-durables), and accounts are not being paid as promptly. Thus, liquidity is impaired, and borrowing needs increase. (Our loans have been running about $4-billion—some $437-million and 12 percent ahead of a year ago.) Municipalities are also less liquid than before, and I am afraid that even the federal government has been a little short of cash.

Thus, though the crisis has passed, the problem is still with us. And one, or possible two, failures of large companies (and I don't see any immediate prospect of this) could cause a further loss of confidence and a real crisis. Thus, it seems to me it would be wise for the federal government to have some standby authority.

Mr. Deming wrote that:

The high degree of uncertainty which characterizes our economy reflects concern about the corporate liquidity situation and some fear of a liquidity crisis. By almost any measure corporate liquidity has deteriorated considerably in the past several years, particularly in the last 18 months. Some significant ratios for all non-financial corporations are listed below; were data available for mid-1970 they would show further deterioration.

	1964	1968	1969
(1) Cash plus Government securities as percent of corporate gross product (end of year)	18.6	14.2	12.5
(2) Liquid assets as percent of current liabilities (end of year)	42.3	34.4	30.0
(3) Internal sources of funds as percent of total finance required for increase in assets (full year)	70.3	57.1	52.8
(4) Net interest paid as percent of of corporate profits before tax (full year)	9.1	14.2	16.8

Mr. Deming continued:

The odds against a liquidity crisis still seem fairly favorable but they undoubtedly have shortened over the past six months. In this kind of situation it would be well to establish some safeguards to prevent any real crisis, or if one occurs to ensure against any serious chain reaction.

One month ago, I introduced legislation which would provide the administration with the economic war power needed in times of economic difficulty. Basically, my bill would authorize the Secretary of the Treasury to guarantee loans made to certain businesses which are in necessitious circumstances, the continuance of whose operations are vital to the national interest. The Secretary would also be required to certify that the purposes of the loan to be guaranteed must further the economic health and welfare of the Nation or a region thereof, and that the business of the enterprise to be assisted is of a nature which makes assistance appropriate in furtherance of the purposes of this bill. What these two conditions mean is that the business must be one imbued with the public interest, and one whose failure would seriously affect the economy of our country or the well-being of a particular area such as a city or a populous county; it could conceivably be a business undergoing reorganization under the Bankruptcy Act, so long as the necessary conditions are met. They further mean that the purposes to which the guaranteed loan would be put must be carefully scrutinized before any guarantee is made; that these purposes must be productive and must be such as to help restore or maintain the economy of the nation or the region.

I am pleased that Dr. Arthur Burns of the Federal Reserve System feels so strongly that such a loan guarantee power is needed that he would be willing to see this power lodged in the FED if the Treasury did not wish to administer it.

It is my understanding that my proposal has been actively considered at very high levels of this administration and that apparently the decision has been made not to support this bill at this time. Reportedly, the administration fears that its support of such a bill would have an adverse effect on business confidence rather than buoy it up. In my view this judgment is faulty, since the American business community and the American banking community full well know their state of illiquidity. I would venture that almost every major bank in this Nation is aware that at least some of its important corporate customers have a cash-flow problem. The banking community also is aware that it is carrying more potentially troublesome loans now than it was a year ago, with the result that the domino theory of business failures still cannot be ruled out. Banks also are noticing a strong loan demand from companies that have never borrowed before, and a loan demand from companies lacking in liquidity.

Many, even the larger companies, have about exhausted their borrowing authority and many cannot pay bills on time. This is about the surest indicator that the crisis danger is by no means past.

Many small companies that have been issuing commercial paper have withdrawn from the market and have returned to the banks for their financial needs—again swelling loan demand. Finally, the budgetary position of the Federal Government—which puts it further in deficit—guarantees that the Treasury will become a more active borrower in the financial markets, thus placing pressure on these loan markets.

These facts are drawn from discussions I have held with financial leaders in New York, San Francisco, Chicago, Dallas, Atlanta, and Winston-Salem.

In citing these facts, I wish merely to point out that optimistic administration statements are not kidding anyone. The American business community and the banking community are fully aware of the liquidity problems they are facing and they would be relieved, indeed, to have the Government and the Congress do something to alleviate them.

It would buttress business confidence if the administration would support measures such as an emergency loan guarantee authority to help insure that another major crisis does not develop. The administration should do so now.

The actions of the Congress in the economic area cannot escape criticism, either. Legislation which addresses itself to the real economic problems of today languishes.

While I and others feel that the emergency loan guarantee authority falls into this category, the Penn Central problem is an even more pressing specific example. In the very near future, banks throughout the Nation will be asked to lend funds to Penn Central for operating costs which would be backed by trustee certificates. I have been informed that such trustee certificates will not be viewed as adequate collateral by some of the banks, and that without a Government guarantee, the banking community probably will not lend Penn Central the required funds. Thus, in the very near future, the administration and the Congress may be faced with three specific choices. That they can either enact a loan guarantee bill; allow Penn Central to suspend operations with the macroeconomic implications such a failure would cause; or nationalize the railroad. In my view it is the course of wisdom to opt for the first choice.

But, the bill providing such loan guarantee authority languishes in the Congress. A bill to provide brokerage insurance also faces an uncertain fate partially because of the administration's uncertain position in support of this bill.

On the broader question of emergency loan guarantee powers, hearings have not been held by the key committees. This suggests that the two-way flow of information between the business and banking community and the Members of the Congress on the importance of such an emergency guarantee power could be faulted. I previously suggested that all Members of the Congress consult with the administration and the Federal Reserve on the need for an emergency loan guarantee bill. I now urge that the banking and business community make their wishes known to the Congress to acquaint the Members of the Congress with the status of the liquidity problems in their districts and States.

I ask unanimous consent to have the memo Frederick Deming sent me on the liquidity situation printed in the RECORD.

There being no objection, the memo was ordered to be printed in the RECORD, as follows:

THE CORPORATE LIQUIDITY PROBLEM—WHAT CAN BE DONE ABOUT IT

I. The current economic situation continues to be characterized by a high degree of uncertainty. That uncertainty reflects four fundamental factors:

A. Differing appraisals of the basic strengths and weaknesses of the economy and consequent fairly sharp differences as to its immediate future course. The spectrum of expectation ranges from real recession through continued stagnation to slow resumption of sustainable growth and up to continued or resurgent inflation.

B. Fears about the two major trouble spots in the world—the Middle East and Southeast Asia. The lessening of tension in the Middle East should have eased these fears, but that development seems to have been approximately offset by the events in Cambodia.

C. Doubts about the efficacy of Government economic policies. These are heightened by recognition of the fact that the American economy is so big that it generates great momentum on its own and can be for some time relatively insensitive to policy changes.

The doubts also are compounded by the feeling that in an election year economics tends to be subordinated to politics. When, far more than usual, the problem of current policy is to follow a path that guards against the dangers of the extremes—recession or continued inflation—the doubts also are greater than usual.

D. Concern about the corporate liquidity situation and some fear of a liquidity crisis. By almost any measure corporate liquidity has deteriorated considerably in the past several years, particularly in the last 18 months. Some significant ratios for all non-financial corporations are listed below; were data available for mid-1970 they would show further deterioration.

	1964	1968	1969
(1) Cash plus Government securities as percent of corporate gross product (end of year)	18.6	14.2	12.5
(2) Liquid assets as percent of current liabilities (end of year)	42.3	34.3	30.0
(3) Internal sources of funds as percent of total finance required for increase in assets (full year)	70.3	57.1	52.8
(4) Net interest paid as percent of corporate profits before tax (full year)	9.1	14.2	16.8

II. This memorandum is addressed to the fourth factor, the liquidity problem. That problem itself reflects four factors which can be best presented in the chronological order of their emergence:

A. Corporate liquidity, as the above cited figures indicate, had been run down to relatively low levels over the past several years. Thus when the liquidity problem became evident early in 1970, the corporate liquidity base was already low. In part this rundown of liquidity reflected more efficient use of funds and in that respect was not a harmful development. In part it reflected the buoyant economic situation which increased requirements for funds to finance additional plant and equipment and inventory and to carry on an increased volume of business. In part it reflected the higher cost of keeping "idle funds" as interest rates rose.

B. A restrictive monetary policy begun in late 1968 became increasingly tight in 1969. Policy has been eased in 1970 but it has remained relatively restrictive even after the easing. The restrictive policy resulted in curtailed bank lending and thus forced more borrowing into other channels, particularly the capital and commercial paper markets. In the former, corporate demand completed with heavy Government agency and state and municipal finance. This growing demand in the face of monetary restraint drove up interest rates to unprecedented levels. And as demand increased lenders became more selective and somewhat less willing to give up their own liquidity for long-term obligations.

C. Hopes for lower interest rates in the near future coupled with difficulties in borrowing at long-term caused a number of corporations to meet their needs for funds by short-term finance—some by commercial paper, some by short-term notes sold in the capital markets. Some corporations deferred capital market borrowings and ran down their own liquidity still more. When interest rates not only failed to fall but actually rose substantially the market climate became even less favorable and the liquidity problem was intensified. Lenders became even more selective and the rate differential between excellent and merely good credits widened appreciably.

D. The conjuncture of high rates, lender selectivity, economic slowdown and reduced profits and cash flow has made corporate debt service significantly more difficult and more costly. A weak and falling stock market practically has precluded equity finance. By mid-1970 the liquidity squeeze was quite evident. The question was whether it would become a crisis rather than just a problem.

III. The figures cited earlier are averages for all non-financial corporations. Some corporations are below average; some few may be actually at dangerously low levels of liquidity. Whether the liquidity problem becomes a liquidity crisis depends upon (1) what happens to those relatively few large corporations which may be in a vulnerable position and (2) the repercussions which might stem from one or more failures. The basic danger to the economy lies in a possible chain reaction both in the real economy and in the financial markets. The following points are pertinent in weighing that danger.

A. The fact that some cases of vulnerability are the product of improvidence, lack of foresight or bad management is not particularly relevant. Whether a bankrupt corporation has been "good" or "bad," the effects on the real economy are roughly the same—loss of production, loss of jobs, loss of markets for other companies. The real question to be faced is whether there would be a significant chain reaction in the real economy and, perhaps even more important, whether there would result a psychological reaction which would intensify the chain reaction in the real economy and lead to significantly adverse effects in the financial markets.

B. The Penn Central case is a dramatic illustration of a liquidity crisis for one important company. On the whole the reactions to the Penn Central bankruptcy give some cause for optimism but there were some very unsettling—fortunately, temporary—results. So far there has been little impact on the real economy and what the delayed impact may be cannot be ascertained as yet. Obviously a railroad in receivership is not likely to be as good a customer as one that is operating outside receivership and at a profit. Some layoffs of workers are foreseen also, but that impact seems likely to be relatively small. Some other railroads are being directly affected. Neither the stock nor bond markets were shaken badly by the case but the commercial paper market was hit hard for a time and some perfectly sound credits—finance companies—went through considerable discomfort and had to undertake a real scramble for funds. Here there was potential chain reaction; it was halted by prompt Federal Reserve and big commercial bank action.

C. Other smaller failures seem to have had little impact on either the real economy or the financial markets but they undoubtedly have contributed to the growing selectivity of lenders. The well-publicized troubles of some of the conglomerates obviously have affected the price of their stocks and probably have affected the general level of stock prices. They also have had impact on lender selectivity. On the whole, however, none of these developments has carried the seeds of potential chain reaction.

D. The potential danger of chain reaction thus would seem to stem mainly from adverse developments, especially failure, of one or more companies with two or more of the following characteristics ranked in rough order of importance: (1) substantial size in sales, purchases and employment; (2) national prominence (almost automatic for concerns of the first characteristic; (3) reputation for sound financial management and position; (4) government regulated; (5) major sales to government or government regulated companies. The more vulnerable companies are those with characteristics (4) or (5) and (1). There probably would be greater chain reaction potential from companies with characteristics (1), (2) and (3).

IV. The odds against a liquidity crisis still seem fairly favorable but they undoubtedly have shortened over the past six months. In this kind of situation it would be well to establish some safeguards designed to prevent any real crisis, or if one occurs to ensure against any serious chain reaction. Two major safeguards seem indicated:

A. The first and more important is largely already in place and requires no legislation. The Federal Reserve already has relaxed monetary policy and could relax more should that seem the appropriate course of policy. Perhaps even more importantly, the Federal Reserve has assured the banks that they will have adequate liquidity to ensure that their customers can keep or get needed credits to ameliorate any liquidity squeeze. Specifically, the Federal Reserve seems to have assured the banks ready access to the discount window should they need it as a result of picking up some of the demand that had focussed on the commrecial paper market. The Federal Reserve also has suspended ceiling on large short-term certificates of deposit, which enables the banks to obtain funds more freely. The one additional step which the Federal Reserve might undertake is to give the banks a bit more "guidance" as to how they should employ their funds—e.g., emphasis on "productive" loans and suggestions that banks roll over credits rather than force borrowers out into the capital markets.

B. The second safeguard would reinforce the first and help insure against a chain reaction by providing finance for a company faced with a liquidity crisis that could lead to bankruptcy. In effect, the second safeguard would be a new Reconstruction Finance Corporation but with primary emphasis on Government guarantee of credits. It would be highly useful to get such a safeguard in place quickly.

V. The establishment of the second safeguard would require legislation. The form and character of the safeguard should reflect certain criteria which would ensure its acceptance and effectiveness. Such criteria would include:

A. *Relative simplicity in establishment and administration.* This would argue for a simple Federal program of loan guarantees (plus, perhaps, a relatively small direct loan program) with its administration placed in an existing institution. This would minimize new staff requirements and should almost eliminate start-up time problems. It also should ensure efficient and prompt action in cases where the program would be used. There should be no need for Government capitalization (although, if a direct loan program were included some appropriations probably would be necessary).

B. *Sufficient size to make the safeguard authoritative and credible.* A loan guarantee program of $5 billion (plus, perhaps, a direct loan program of $500 million) should meet this criterion.

C. *Assurance of maximum cooperation from the financial community.* A loan guarantee program probably would be preferred to a direct loan program by the financial community both because it would be bigger and because it would not be directly competitive. Lodgment of the administration of the program in a known existing institution and efficient, expert and prompt decision-making by that institution also would be important in assuring maximum financial community cooperation.

D. *Adequate controls to prevent misuse or unnecessary use.* In essence the adequacy of such controls would depend primarily upon the strength of the administration of the program. Certain guidelines can be set forth in the legislation and more specific guidelines can be developed by the administrator. What would need to be controlled would be the temptation on the part of the financial community to seek government guarantee not merely in cases of real need, but simply to make the prospective credit better and/or to permit it to carry a relatively low interest

rate. What also would need to be controlled would be the temptation to bring either hopeless cases in for guarantee or direct loan or cases which would be unlikely to have serious national or regional repercussions and hence unlikely to set off a chain reaction and lead to a liquidity crisis.

E. *Minimal drain on the Federal budget.* A guarantee loan program administered by an existing Federal institution could be structured so as to cost virtually nothing in direct budget terms. With no Federal capital and minor (reimbursable or direct) administrative costs, the only real drain on the budget would come from losses requiring the Government guarantee to be taken up. (Some minor, non-determinable budget costs might result from the market impact of additional Government guaranteed securities on interest rates paid on direct Treasury securities.) A direct loan program probably would involve appropriations and budget costs. (These, however, might be made acceptable by following the suggestions noted in Section VI, A.)

F. *Political acceptance and palatability.* There are three factors which could be involved here: the amount of direct budget costs, the lodgment of the administration of the program and the fact that it is designed primarily for big business. Particularly the latter factor might be extremely sensitive. This would argue for earmarking a portion of the guarantee authority (and a portion of the direct loan fund, if it were included) for small business. It probably also argues for a direct loan program even though that would raise another political problem—direct budget costs.

VI. Following the criteria laid down in the preceding section, the second safeguard—an emergency lending authority—could take the following form:

A. A loan guarantee authority of $5 billion and a direct loan program of $500 million to provide emergency financial assistance to business enterprises to meet temporary and urgent financial requirements which, if not met, might seriously impair the ability of such enterprises to produce goods and services, might seriously affect the economy of the Nation or a region thereof, and might seriously disrupt the financial markets.

(One method of financing the $500 million direct loan program which merits exploration would be the earmarking of a portion of the payment made annually by the Federal Reserve to the Treasury. This payment, which has been much larger than $500 million, represents virtually all of the net profits of the System and is covered into the general revenues. In general, the Treasury opposes earmarking such funds and has valid reasons for its position. In this particular case, however, such earmarking might make sense. Obviously it would provide no direct budget saving but it might make the appropriation process easier. Should this approach be used, it should take the form of straight earmarking and appropriation rather than having the Federal Reserve pay the funds directly into the direct loan fund.)

B. The guarantee authority and the direct loan program to be administered by the Federal Reserve Board with the Federal Reserve Banks acting as fiscal agents and in such other capacities as the Board may require.

C. No guarantee of a loan and no direct loan should be made unless the Federal Reserve Board finds that:

(1) The loan is necessary to carry out the purposes of the Act;

(2) The loan is not otherwise available on reasonable terms and conditions;

(3) There is reasonable assurance of repayment;

(4) The loan will be applied to productive purposes necessary to the economic health and welfare of the Nation or a region thereof.

D. The Federal Reserve Board should have authority to require such security for guarantee or loan and such agreements regarding management as it regards as necessary. The Board also should have the authority to consult with and review with management any matter which may bear on the company's ability to repay the loan.

E. Limitations on any guarantees or direct loans to one enterprise should be set at 2 per cent of the total guarantee authority or direct loan fund ($100 million guarantee, $10 million direct loan) except that in unusual cases that seem certain to affect adversely the national economy, and after consultation with the Secretary of the Treasury, the Chairman of the Council of Economic Advisors and the Director of the Office of Management and Budget the guarantee limit could be extended to 5 per cent of the total guarantee authority.

F. Five per cent of the guarantee authority ($250 million) and ten per cent of the direct loan fund ($50 million) should be earmarked for smaller business enterprises—those that without emergency finance would affect adversely the economy of a smaller region such as a town or a country. Limitations on guarantees or direct loans to any one enterprise in this category should be fixed at 2 per cent of the earmarked guarantee authority or direct loan fund ($5 million guarantee or $1 million direct loan).

G. The Federal Reserve Board would be required to make quarterly reports to the Congress with respect to its administration of the guarantee authority or the direct loan fund.

VII. There are strong arguments for putting the administration of the guarantee and direct loan programs in the Federal Reserve Board:

The Federal Reserve has administered programs of this kind in the past and did them well. It has the expertise and staff. Expenses of administration should be small;

The Federal Reserve has the respect of the financial community and could be expected to get maximum cooperation from that group;

The Federal Reserve is an independent agency that would be little susceptible to outside pressures;

The Chairman of the Federal Reserve Board has suggested that Congress give attention to the feasibility of a Federal loan guarantee program to necessitous borrowers but at the same time has expressed the opinion that any such program should be administered with care. As noted earlier, the question of adequate control of an emergency loan program rests basically on strong administration.

VIII. Senator Javits has already introduced a bill, S. 4127, which would establish an emergency guarantee of loans up to $5 billion. A copy of that bill is attached to this memorandum. The Javits bill differs from the proposal set forth in this memorandum in six major aspects:

There is no direct loan program.

The administrative authority is lodged in the Secretary of the Treasury.

He is required to consult with the chairman and ranking minority members of the Senate and House Banking Committees before making any guarantee commitment of less than $20 million and submit for full Congressional action any commitment of more than $20 million.

A loan Guarantee Policy Board is created with the Chairman appointed by the President (and confirmed by the Senate) and the Chairman of the Federal Reserve Board and the Secretary of the Treasury as members. Such Board is to establish general policies.

The authority is temporary (for one year) but the establishment of a permanent Emergency Loan Guarantee Corporation may be considered after one year and the receipt of a report from the Secretary of the Treasury.

There is no specific provision for smaller business.

The major weakness in the Javits bill is the provision for Congressional consultation. After the Penn Central case this is perfectly understandable but probably is not workable. The Congress simply is not organized to be a operating executive committee for emergency lending. It would be much better for Congress to delegate the loan guarantee (and/or direct loan) authority to an operating institution that it can trust and which has expertise in this field. The provision (in Section VI of this memorandum) for quarterly reports should provide ample opportunity for close Congressional review.

Aside from this provision for Congressional consultation the Javits bill has much to commend it; in fact, much of the language of Section VI of this memorandum is taken directly from it. This memorandum argues that there is no need for a new institution—and hence by implication no need for a Loan Guarantee Policy Board—and that the Federal Reserve should administer the program. It also argues for a direct loan program and for specific provision for small business. The Federal Reserve point is important; the direct loan program and the small business provision are not crucial except, perhaps, politically. Neither is the memorandum's implication that the authority should be longer than one year.

It would be quite easy to amend the Javits bill to make it conform to the outline in Section VI of this memorandum. At a minimum it should be amended to eliminate the Congressional consultation or Congressional action provisions.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER (Mr. SPARKMAN). Under the previous order, the Chair now lays before the Senate the unfinished business which the clerk will state.

The assistant legislative clerk read the following:

H.R. 17123, to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evalution for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

The PRESIDING OFFICER. The Senator from Maine is recognized. How much time does he yield himself?

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I yield myself 15 minutes.

The PRESIDING OFFICER. The Senator from Maine is recognized for 15 minutes.

AMENDMENT NO. 811—MODIFICATION

Mr. MUSKIE. Mr. President, I send to the desk a modification of the pending

amendment, 811, and ask that it be stated.

The PRESIDING OFFICER. The modification will be stated.

The assistant legislative clerk read as follows:

AMENDMENT No. 811

H.R. 17123, An Act to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and viz: On page 7, line 6, strike out the period and insert for other purposes, in lieu thereof a colon and the following:

"*Provided*, that none of the funds authorized by this Act may be expended for the procurement of DD-963 class destroyers unless (1) the prime contractor with whom the United States contracts for the construction of such destroyers is required under the terms of such contract to subcontract to another United States shipyard and (2) the total number of such destroyers set forth under the terms of the prime contract is divided substantially equally between the prime contractor and subcontractor."

Mr. MUSKIE. Mr. President, in the course of my remarks I shall undertake to explain the amendment and the difference between the substitute and the amendment which has just been stated.

Mr. President, during recent months a series of events have occurred which taken together prove conclusively that an award of the entire DD–963 destroyer procurement by the Department of Defense to one contractor was ill advised and certainly not in the national interest. And that decision must be modified by the Congress in a prompt and responsible manner.

I am proposing an amendment to the military procurement bill which, in essence, would require the division of that contract by way of a subcontractor for substantially half of the ships to a second American shipbuilder which won as a result of competitive bidding. Thus, Litton would remain as the prime contractor with 15 ships exceeding $1 billion in value and the second corporation would be responsible for the construction of the balance of the ships.

This position is supported by findings of Mr. Fitzhugh's blue ribbon defense panel in a report to the President and Secretary of Defense on July 1, 1970, only one week after the Navy awarded its entire nonnuclear destroyer program to Litton Industries. The report says in part:

The Navy, while procuring fewer ships in recent years, is the source of an increasingly higher percentage of the total funds spent for ship construction in this country.

As a consequence, the procurement process for Navy ships, even more than in other procurements, must reflect a concern for the existence of a sufficiently broad industrial base to provide competition for such procurements.

Moreover, a subcommittee of the blue ribbon defense panel, headed by Wilfred J. McNeil, first Comptroller of the Department of Defense, used even stronger language when they said:

If the Navy goes ahead with its announced intentions to seek series type production contracts for major ship programs in a single yard, there will be almost total concentration of major Navy work in three . . . yards . . . over a significant period of time. During this hiatus for the remainder of the yards, they may well lose their capability to respond to Navy shipbuilding requirements or go out of business altogether. Although the Navy cannot and should not attempt to keep all its former suppliers of ships in business the maintaining of a responsive production base and a healthy, competitive environment . . . is certainly as important as experimentation with new procurement techniques.

If recent history on moderately large Navy ship orders is any indication, large package ship procurements constitute a serious risk to the contracting shipyards' corporate survival. The DD963 destroyer program currently planned for 30 ships represents about $3 Billion. A ten percent loss in performing on this contract ($300 Million) would exceed the net worth of either of the shipyards competing for that program by at least a factor of two.

As concentration of work in a few yards progresses with a high degree of specialization in each, there will be serious reduction in competition for Naval ships. In addition, there could also be a substantial reduction in the nation's total shipbuilding capability. This loss of a competitive environment in itself could offset the economic advantages of series production. . . . The Navy . . . with respect to its combat vessels, must be concerned not only with the maintenance of an adequate production base but also with the continuation of a healthy competition within that base.

In order to (a) insure an adequate production for combat ships and (b) Continue to generate competition between shipyards for most classes of ships—The Navy should take such action as is appropriate to distribute major multi-ship prime contract awards among two or more yards.

In order to (a) maintain a healthy competitive environment and (b) Insure a viable production base for Navy combat ships and auxiliaries—Prime contracts for series production of a single class of Navy ships should be awarded to more than one yard whenever the total order exceeds ten ships.

Mr. President, this recommendation is the latest recommendation of a panel specifically organized a year ago by President Nixon to review Defense Department organization and policies. In the light of the nature of that panel and its significance in this administration, its recommendation as based upon this procurement award is significant.

I agree with the McNeil report in the main; however, my amendment does not provide for separate prime contracts because I feel there are cost and standardization advantages in a single design produced at two locations.

The General Accounting Office has given us its views on this subject in its report of August 26, 1970. The report was issued in response to a request by my distinguished colleague, the senior Senator from Maine (Mrs. SMITH), earlier this year. The report was put in the RECORD in its entirety on August 28 of this year. I would like to read these excerpts from that report:

By contracting with one company the risk is present that the company may not be able to complete the contract at the agreed price. It is possible that the company at some point could come to the Navy and say it is unable to build the ship for the contract price. Under these circumstances, the Navy would find itself with few options. The Navy says it does not expect that this is a real possibility, but it has occurred under other long-range production programs.

We believe also that there is some danger to future competition. Given the Navy's premise of a single ship design (presumably Litton's) at the lowest price, it is difficult to see how another company will be able to compete pricewise with Litton on future orders. Start-up and early learning costs in such a program are substantial and, assuming the same ground rules are applied in the future, it seems questionable as to whether anyone will be able to compete with the successful contractor in this award, no matter how many additional ships the Navy plans to buy. We are told that the differences in commercial and military ships, even if the Maritime program should become a reality, would not make the winner of these awards competitive for military ships.

These are significant views, expressed by highly qualified sources. To date they have apparently been discounted by the Department of Defense in their rush to award a contract and get started with the destroyer program—even though we are over 4 years from the first ship delivery in a program scheduled to run into 1979. Unless we act to correct the situation now, our destroyer program—the very heart of our Navy—could suffer over the next decade.

The DD–963 class destroyer program had its origin in late 1966 when officials of the Department of Defense, in recognition of the approaching obsolescence of segments of the Navy's surface fleet, initiated a new shipbuilding program. The primary mission of the DD–963 class destroyer are to: First, provide protection to attack carrier forces against the surface/submarine threat, second, escort amphibious assault-preassault forces, and third, conduct shore bombardment in support of amphibious assault or land warfare forces. The Navy inventory objective for destroyers of this type is 50 ships. A procurement program of 30 ships has been approved by the Secretary of Defense subject to congressional authorization.

The Navy's original intention was to procure from 30 to 50 destroyers, using the total package/multiyear procurement technique with a plan to award a single fixed-price contract to the winning competitor. Early competition included six American shipyards: Avondale of Louisiana, Newport News of Virginia, Todd of California, General Dynamics of Massachusetts, Bath Iron Works of Maine, and Litton of Mississippi.

Prior to the award of a contract definition contract, the competition was reduced to half, with General Dynamics, Bath, and Litton remaining.

Proposals were submitted by the three in April of 1969 which included a recommended ship design, management plan, and price.

The Navy reviewed the three proposals extensively and in September of 1969 announced that General Dynamics shipyard would be eliminated from the competition.

Shortly thereafter the Navy requested the first supplementary proposals from Bath and Litton, which were submitted in November of 1969. This request included major changes of a technical na-

ture to the ship designs which, in effect, altered the scope of the work to be performed under the contract. It is important to note that Bath and Litton were each developing their own destroyer design, similar only with respect to performance characteristics. These proposals submitted in response to this request included the second round of price quotations.

The Navy, apparently still dissatisfied with the second supplementary proposals offered in November, requested a third set in February 1970 from both competitors. Again, technical changes were requested and a third round of prices quoted. The Navy has verified that target costs per ship after the third round were virtually the same, with Bath $64.9 million and Litton $64.7 million. Since there were no technical changes after the third round of prices, it is critical to bear in mind that both finalists' costs were essentially the same before the fourth and final bids were submitted.

Then in March the Navy changed the type of contract from a fixed price incentive to a fixed price incentive successive targets contract and asked for "best and final" prices. The successive targets feature gave the winning contractor the right to renegotiate prices 39 months into the contract. Bath's target cost in the final round came down to $61.3 million and Litton's dropped drastically to $54.9 million per ship. This change created a final difference in price of approximately $276 million on the total 30-ship program, with Litton the low bidder, and again, Mr. President, I want to emphasize that there were no changes in the technical requirements before the final bid.

On June 23, 1970, the Navy announced an award of the entire 30 ships to Litton Industries but conceded that each of the finalists had offered an excellent ship and a fully acceptable proposal.

The Navy awarded the contract to one shipyard in the very face of prior action taken in the House of Representatives, with the concurrence and full support of the chairman of the House Armed Services Committee, to force a division of the contract between at least two American shipbuilding companies.

It has been argued that a division of the contract now would be unfair because a contract has already been awarded, because it would allegedly increase the cost to the Government and because it would allegedly establish a bad precedent for the Congress. In my opinion, these arguments for awarding to a single builder all of our new destroyers are unsound and misleading.

On the first point, certainly the Navy and Litton were aware of the House action, to which I have referred, before the contract was awarded. Second, there has been wide speculation from the time that the third contract was eliminated that the contract might well be divided between the two remaining competitors. I doubt if either of the two contractors would have been surprised if the Navy decided to award the contract to two rather than one shipyard.

On the question of surprise, Mr. President, the Navy, prior to contract award, took appropriate steps to amend the contractual language in the Bath and Litton proposals to include the mechanics for dividing the contract in the event the Senate supports the earlier House vote.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUSKIE. Mr. President, I yield myself another 10 minutes.

The PRESIDING OFFICER. The Senator from Maine is recognized for an additional 10 minutes.

Mr. MUSKIE. Mr. President, I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks as an exhibit, article XXVI from the Litton contract on the subject I have just referred to.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MUSKIE. Mr. President, I would like to read this language from that article. I repeat, this is in the Litton contract:

(a) The Government shall have the right to require the Contractor to subcontract the construction of a quantity of complete vessels as may be necessary to comply with the legislation referred to in the premises hereof. The Contracting Officer may require the Contractor to solicit all shipbuilders on the Naval Ship Systems Command's bidders list for destroyers for one or more subcontracts.

How can it be argued, Mr. President, that with this provision in the contract, which Litton signed, that the amendment I propose would constitute a surprise to Litton industries?

My amendment proposes to do what the Litton contract permits the Navy to do.

Thus the Navy very properly anticipated such action and is fully prepared to implement the desires of Congress without delay or disruption to the program.

Likewise, the entire argument is addressed only to costs directly connected with the procurement of the initial 30 ships in this program and completely fails to acknowledge the lasting cost advantages of maintaining competition in our shipbuilding industry.

Let me just cite for the RECORD the intent of my amendment:

First. Retention of one prime contract by Litton Industries.

Second. Require that approximately half the ships be subcontracted to a second American shipyard, after a round of competitive bids from any shipyards approved by the Department of Defense.

Third. Utilization of a single design, presumably Litton's.

Fourth. Utilization of centralized procurement of machinery and equipment for purchases of 30 shipsets of like components to assure standard ships at lowest possible price.

Fifth. Provide the economies of series ship production derived from construction of at least 15 ships of the same design within a single facility.

The principal reason for any increased cost to the Government would result from the need for two 15-ship learning curves in lieu of one 30-ship learning curve. And even this is mitigated by the fact that there will be a single design, and machinery and equipment will be purchased in lots of 30.

Any figures reflecting an estimate of the increased cost of dividing the contract are based conjecture alone. Since it is my clear understanding that neither Bath nor Litton was ever requested to estimate the cost of building in quantities of fewer than 30 ships, I cannot understand the various additional cost estimates of the Navy as brought forward by my esteemed colleague from Mississippi. My sources indicate that with a single prime contract the costs would not be increased more than 4 to 5 percent. The advantages to be gained from the competition on follow-on contracts and the retention of multiple-destroyer building capabilities far outweigh these increased costs. That conclusion is justified by the record.

It is worthy of note that ongoing and fierce competition between six shipyards in the procurement of 30 DDG's between 1957 and 1965 tended to drive the Government's cost down, even in a period of inflation. For example, three DDG's were purchased from one shipyard in 1957 for approximately $16.5 million per ship. And in 1965, the last three ships in this class were purchased from another shipbuilder for approximately $14.5 million per ship—a $2.5 million reduction over an 8-year period which was inflationary. Competition does have a favorable effect on cost to the Government as this example proves.

It is appropriate to consider the spread in prices of the two final DD–963 competitors, Bath and Litton. As noted, each submitted virtually the same prices on the third round proposals; yet with no change in technical requirements, Litton's winning price on the fourth round was $276 million less than Bath's. This has created the false impression that the Government's cost of doing business with Litton would be hundreds of millions less than the next best offer. This conclusion is completely false and should be clarified lest Members of Congress be misled into believing that Litton's costs are far lower than others in the industry.

Let me explain that in the final pricing proposals, each of the two competitors made assumptions concerning the effect on costs of projected economic changes over the 8-year contract. It must be understood that the type of contract used requires that the Government pay the contractor escalation payments for cost variances compared to a base month, in this case January 1969. The payments vary with the changes in a national labor index and a national material index. The amounts that the Government is contractually obligated to pay may have little relation to the actual cost experience of the contractor. And the payments are in addition to and separate from the contract price.

In competition for defense awards, bidders are permitted to estimate that their own actual cost changes will be greater or less than the fluctuations experienced in the national averages. Bidders include the difference between their own expected inflationary cost changes and the anticipated Government payments in their bids.

Under the reset terms of the fixed price incentive successive target contract the contractor can recover his increased

costs due to inflation and in essence "get well" for any errors in projecting the economic trends. In fact, Litton's costs under the contract can increase $387 million, while still providing a profit of $107 million. In the words of the GAO, "this seems rather substantial."

Bath and Litton made vastly different projections relative to the inflationary growth and the amount of payments by the Government under the escalation payments clause. The difference in the projections amounts to $290 million, an amount which is greater than the price spread of the competitors. In actuality, Bath's best and final proposal contained cost estimates which in current dollars were less than Litton's comparable cost estimates. Thus the entire $276 million difference in the final prices is a result of the assumptions made relative to the economic conditions over the next 8 years.

It is important to reemphasize that the increases in costs due to economic conditions and the payments under the escalation clause are virtually independent of the contractor and his present projections. The escalation payments to either Bath or Litton will be similar because they are based on national indices. The contractor's actual cost increases, whether Bath's or Litton's, would be similar because of the commonality of subcontractors and the pattern settlements of labor negotiations.

Regardless of which competitor projected the economy more accurately, when the two competitors use the same set of assumptions regarding the future course of the economy, the price differential of $276 million disappears. I, therefore, cannot concur with the Navy assessment that a $276 million difference existed between the two proposals, when looked at in terms of the final costs to the Government.

Given the fact that Bath was cost competitive with Litton and that there exists the potential for strong competition from shipyards in Maine, Massachusetts, Virginia, Louisiana, California, and Washington State for any subcontracted ships, we would estimate that the cost increase by dividing this initial 30-ship purchase will not exceed 4 to 5 percent. This is a small premium indeed for reducing the risks to the Government and retaining a competitive shipbuilding environment which will ultimately create far greater cost savings on future procurements. And I would repeat that absent strong follow-on competition for the other 20 destroyers, Litton will be in a good position to name its own price for future destroyer awards.

To lose our proven destroyer-building capability could prove disastrous for the country. Bath, from my State, alone has built nearly 160 destroyer-type ships—19 within the 1960's—and their record for cost and delivery performance is enviable in this day of overruns and poor contractor performance. I am attaching a copy of Bath's destroyer-building history to this statement. There are other shipyards building destroyers with nearly comparable records. All of this stands to be lost by awarding the entire DD–963 contract, the major destroyer program for the 1970's, to a single, relatively inexperienced destroyer-building shipyard.

Furthermore, the country will lose this golden opportunity to encourage a second shipyard to modernize unless we act to insure that a 15-ship subcontract is awarded.

It is argued, third, that the proposed division of the contract would be establishing a dangerous precedent. This whole matter is a precedent of serious concern. The issue is really not whether or not we set a precedent, but what kind of precedent we set. I do not believe we should continue on one course simply because the Departments of Defense and the Navy believed it correct 3 years ago and apparently still feel committed to decisions made in 1967. In my opinion, the weight of evidence has swung to such a degree that a change must be made now before our Government is irrevocably committed for 8 years to a posture in this program that we will live to regret.

That, Mr. President, could be the "dangerous precedent."

The PRESIDING OFFICER. The time of the Senator has again expired.

Mr. MUSKIE. How much have I used, Mr. President?

The PRESIDING OFFICER. The Senuator has used 25 of his 55 minutes.

Mr. MUSKIE. I yield myself another 10 minutes.

As early as 1964 many naval officers and shipbuilders, including the top management of Bath Iron Works Corp., were questioning the wisdom of awarding entire ship procurements to a single company. In that year Bath bid on eight of 17 LST's and its price for each of eight was more than $500,000 per ship under the next lowest offer. But the award was made for all 17 ships to one other shipbuilding company.

I then questioned Mr. McNamara, the Secretary of Defense, as to the prudence of this type of concentration of ship awards. He told me and Bath's management that this would be the policy for ship procurement and left no alternative—either compete for the large contracts or get out of the business of building ships for the Navy.

History has recorded the tremendous problems inherent in this procurement policy and we all now recognize the schedule slippages, quality problems and staggering overruns which have plagued the Navy in recent years. We are now hundreds of ship-years late and overruns exceed a billion dollars.

There may be benefits to be gained by ship purchases using multiyear funding but there is clear evidence that award of multiple numbers of ships to a company with a large and diverse backlog presents overwhelming managerial problems which come home to roost for the Navy and Congress.

The problem is not isolated but has hit every shipyard which has taken on more work than it could digest, including Avondale, Lockheed, General Dynamics, and even Litton.

Litton, for example, with its present backlog of over $1.5 billion, exclusive of this contract, is today experiencing severe delivery problems which have been well publicized. The Baltimore Sun of August 25 this year speaks of a known 8-month delay per ship in an eight-ship maritime contract and the owners of the steamship lines for whom the ships are intended speculate on probable delays of a year or more per ship. These ships will come ahead of the Navy's billion-dollar-plus LHA program already under contract for that same facility, let alone the DD–963 program.

Litton excuses the delays based on labor difficulties and an act of God, Hurricane Camille. But it is for these very reasons that we cannot permit our entire destroyer program to be tied up in one plant along with submarines, LHA's, and other types of naval ships.

Another hurricane hit Avondale's shipyard in the 1960's and reputedly damaged 18 ships under construction, sinking several and blowing others aground.

Acts of God, Mr. President, can disrupt any single operation as could a national emergency, but, at the risk of using a trite phrase, I feel compelled to ask why we knowingly place all of our eggs in one basket, when with advance planning these problems can be softened by geographical distribution.

We are also well aware of manpower difficulties tied to defense contracts in certain areas and the numerous problems inherent in dealing with an unskilled work force built up virtually overnight. Litton's labor and recruiting problems are well known in the South under their present backlog, let alone the added requirement for 4,000 new employees needed to take on the DD–963 contract.

Litton's backlog, in effect worth over $1.5 billion, even without the inclusion of any destroyers, extends well into 1975. Beyond this, Litton, is one of three qualified submarine builders, is today competing for part of a 10-ship submarine program expected to be awarded within weeks.

The record shows that Litton's management and work force are now stretched beyond their ability to perform, even without the addition of a prime contract for 15 destroyers, let alone 30.

For the above reasons, I have introduced an amendment to the military procurement bill which would provide:

That none of the funds authorized by this Act may be expended for the procurement of DD 963 class destroyers unless (1) the prime contractor with whom the United States contracts for the construction of such destroyers is required under the terms of such contract to subcontract to another United States shipyard and (2) the total number of such destroyers set forth under the terms of the prime contract is divided substantially equally between the prime contractor and subcontractor.

My amendment would support:

The concept of a single design for all 30 ships;

The utilization of a central procurement group to purchase 30 shipsets of machinery and equipment;

The standardization of ships within a single class;

The economies of production which

can be derived from construction of 15 ships of the same class in a single facility;

The modernization of more than one shipyard;

A broader and less risky distribution of this defense contract;

The maintenance of a competitive shipbuilding environment;

Lowest long range ship procurement costs to the Government.

Even on the 30-ship procurement at issue, I cannot accept the unsupported estimates that costs would increase by hundreds of millions if the contract is divided. Costs may increase modestly because of shorter learning curves, but this is a small price to pay for the many other benefits of a split buy—and even this increase will be minimized by a tough competition, including perhaps six or more potential destroyer builders, and there will be lasting long term advantages.

All qualified bidders would have a fair opportunity to compete for the subcontracted ships in open competitive bidding supervised by the prime contractor and the Navy. Clearly, the long term interests of the Government, the economy, industrial growth, and national security are best served by such a reasonable division.

And so I submit that the approach I have offered is reasonable. It is prudent. It is fair. And it should be enacted into law.

I reserve the remainder of my time.

EXHIBIT 1

ARTICLE XXVI. LEGISLATION REQUIRING SUBCONTRACTING COMPLETE VESSELS

(a) The Government shall have the right to require the Contractor to subcontract the construction of a quantity of complete vessels as may be necessary to comply with the legislation referred to in the premises hereof. The Contracting Officer may require the Contractor to solicit all shipbuilders on the Naval Ship Systems Command's bidders list for destroyers for one or more subcontracts. It is contemplated that such request will not be made until after enactment of the Department of Defense Appropriation Act, 1971. The Contracting Officer shall exercise the right to require subcontracting of complete vessels by notifying the Contractor in writing not later than 15 July 1971, unless said date is extended by mutual agreement. Such notification shall (i) designate the quantity of vessels and fiscal year increments to be subcontracted and (ii) specify the number of shipbuilders among whom the quantity is to be devided and the number of vessels to be subcontracted to each such shipbuilder.

(b) The subcontract(s) for construction of complete vessels shall be subject to Clause 59 of the General Provisions entitled "Subcontracts," and advance consent to the subcontract(s) by the Procuring Contracting Officer must be obtained. Any such subcontract shall contain a provision for upward and downward escalation on account of labor and material which shall be similiar to the Article of this contract entitled "Compensation Adjustments (Labor and Material)." Said provision must be specifically consented to by the Procuring Contracting Officer.

(c) Notwithstanding the exercise of the right to require subcontracting of complete vessels, all provisions of this contract shall remain in full force and effect, as between the Contractor and the Government, including, but not limited to, the Articles of this contract entitled 'Performance, Maintainability, and Reliability Guarantee,' 'Warranty Period,' 'Total System Responsibility,' and 'Contractor Personnel (Warranty Engineers).'

(d) If the right to require subcontracting of complete vessels is exercised, the delivery schedule set forth in paragraph (b) of the Article entitled 'Delivery' shall remain unchanged unless the parties otherwise mutually agree, but the two lines in said paragraph reading:

'shall be delivered to the Government at the Contractor's shipyard in accordance with the following schedule.'

shall be revised to read as follows:

'shall be delivered in accordance with the following schedule to the Government at the shipyard of the Contractor or, for subcontracted vessels, at the shipyard(s) of the vessel subcontractor(s) except that any vessel subcontracted to a shipbuilder located on the Great Lakes, shall be delivered at the U.S. Naval Shipyard, Boston, Massachusetts.'

(e) If the right to require subcontracting of complete vessels is exercised, the parties hereby mutually agree that equitable adjustments for the contractor's increased costs shall be established in accordance with the procedures provided for in the clause of the General Provisions entitled 'Changes.' Said adjustments shall include, but not be limited to, adjustments in initial target cost, target profit, target price and ceiling price and cancellation ceilings. Failure to agree on any such equitable adjustment shall be subject to the "dispute" clause of the General Provisions.

(f) If the right to require subcontracting of complete vessels is exercised, additional revisions, changes or modifications to said Articles or to other Articles and clauses of this contract may be made without further consideration, as the parties may mutually agree.

(g) The Contracting Officer may require the Contractor to submit proposed revisions to the DD Program Plans referenced in Article I(b) of this contract which would be necessary or desirable in the event of the exercise of the right to require subcontracting of complete vessels. It is anticipated that the Contracting Officer will not so require until after enactment of the Department of Defense Appropriation Act, 1971.

(h) If the Contracting Officer requires the Contractor to solicit shipbuilders as provided in paragraph (a) of this Article, or to revise the DD Program Plans, as provided for in paragraph (g), or both, and if the Contracting Officer does not exercise the right to require the subcontracting of complete vessels or approve the proposed shipbuilding subcontract(s), then the Contractor shall be compensated for the work involved in complying with such requirement(s) in the same manner and to the same extent as if such requirement(s) were Class I ECP(s) requested by the Contracting Officer but not incorporated into the contract (see paragraph (e) of article XXX entitled "Configuration Control").

In witness whereof, the parties have executed this amendment as of the date of this contract and the Contracting Officer has executed this amendment contemporaneously with his execution of the contract.

Mr. STENNIS. Mr. President, I yield 15 minutes to the Senator from Mississippi (Mr. EASTLAND).

Mr. EASTLAND. Mr. President, the announcement of the Navy's award of the 30-ship DD–963 destroyer contract to the Litton-Ingalls "Shipyard of the Future" at Pascagoula has precipitated a number of conditions.

It represents to the winners the fruition of a great endeavor launched in 1967 by a trail-blazing partnership between Mississippi and the Litton-Ingalls organization. This State-private enterprise venture was aimed at building the vessels of tomorrow and rebuilding the shining tradition of seafaring America.

It represents to the losers the disappointment that always accompanies the end of a long and arduous—and unsuccessful effort.

I can understand the delight of the one and the dismay of the other—but—I must oppose any move to deny to the Pascagoula yard its earned and deserved victory.

Let us trace—very briefly—the course of this procurement and, hopefully, clear up some possible misunderstandings along the way.

Six qualified participants started out together more than 2 years ago in quest of this contract. The intense competition finally narrowed down to Litton and Bath of Maine. The long, established and recognized route toward evaluating and selecting an ultimate builder of the destroyers culminated in the submission—by both parties—of sealed bids which were styled "best and final offer."

What followed is a matter of fact and of record. Litton underbid its competitor by the amazing figure of $9 million per ship, thus affording a saving to this Government in these days of the defense cutback of $270 million.

Now—how is it possible for one shipyard to beat another so badly on this destroyer construction venture?

It is possible and clearly understandable when the facility on our gulf coast is recognized for what it is.

The "Shipyard of the Future" is exactly what its name implies—the wave of the future in the field of ship construction—both military and commercial.

It is the most modern yard in the United States—in the Western Hemisphere—and, possibly—in the world. A matter of vital importance to the timely launching of these versatile destroyers and a significant factor in the Navy's decision in favor of Litton is the fact that the Pascagoula plant is producing ships now.

Mr. President, competition for this assembly line shipyard can come only from a major rebuilding of any yard in being or from a new facility designed around the Litton-Ingalls concept.

A Russian admiral recently made the chilling announcement that the U.S.S.R. possesses "a four-ocean, blue-water navy." If we are to meet the Soviet challenge on the seas—in the military and commercial sectors—and, if we propose to recapture our rightful position in the forefront of maritime nations—then we must adopt modern, low-cost methods. The technology of today—the advances in the art of shipbuilding in Europe and in the Far East—make it imperative for us to utilize entirely new ship construction techniques.

What of the quality of the work in Pascagoula? I have heard our nuclear submarines described as "the most intricate piece of machinery in the world." I am proud to report to the Senate that many nuclear subs have left the Litton yard and serve in our fleet at this hour. Those who launch these great undersea vessels are certainly capable of constructing the finest of destroyers.

Litton-Ingalls entered—with others—a fair and wide open competition for this contract. Their engineers produced a design which earned the Navy's approval. The company submitted the lowest bid and its employees have demonstrated—over the years—their capabilities as builders of the highest quality ocean vessels for the naval and merchant services.

The U.S. Navy—charged by this Congress with the responsibility for the defense at sea of this Nation and of the free world—selected from among the competitors the organization they believed to be best equipped to build the backbone of our destroyer forces at the lowest cost.

Finally, we answer the complaint that this award is too much business to go to one firm with the information that 60 percent of the cost of these destroyers will be spent for material from suppliers outside the shipbuilder's plant. The subcontracts flowing from this procurement will reach into 45 of our States.

Mr. President, here we are, after the fact, after 2 years of evaluation and selection and competition, being asked to take away from Litton-Ingalls that which they earned. The Senate is requested now to negate the competition, to disregard the "best and final offers," and to vacate a contract which was planned for—worked for—and won.

Americans are believers in clean and open competition. I am convinced that one of our principles would be violated if we said, "We want you to enter this long and tough competition, but keep in mind—even if you win on your merits, we may take your victory away from you through legislative action."

A contract, legally, and morally binding, has been awarded on the basis of sealed best and final offers. No sound or valid reason has been offered to cause the Senate to vacate the contract.

In our tradition of equity and in what I firmly believe to be the best interest of our Navy—as well as for the future of our country on the oceans—I urge the rejection of this amendment.

Mr. President, the Navy has furnished some information with respect to questions which were asked of it. One question is as follows:

Recent experience indicates that it is simply not prudent to follow a policy of single source procurement when it can be avoided.

These questions were asked by some of those who object to this procurement.

The Navy's answer is as follows:

The fact that contracts have been issued to single sources for procurement of aircraft and weapon systems is not necessarily the reason for cost growth and performance problems. The problem has been the commitment to production while significant research and development remains unfinished. This is not the case in the destroyer contract which is more suitably termed "a detail design and production" contract. To avoid concurrency, where any technical or schedule risk is involved, preproduction shore site testing has been required or fallback positions have been predetermined. The DD 963 contract also contains milestones which must be met by the contractor before the government becomes committed to fund out-year increments of the contract. Incidentally, a distinction should be made between single source and sole source procurement. The DD 963 contract was the result of an intensive industry-wide competition held under pre-established and published rules. It was not a sole source procurement.

Another question:

By adopting (the) amendment . . . the Navy . . . (can) still realize the benefits sought in current policies, namely:

(4) The economies of production which can be derived from the construction of 15 ships of the same class within a single facility.

(6) The possibility that a second shipyard can proceed with a modernization program based on a 15 ship contract.

That is the big argument made here.

Now here is what the Navy says about that:

NAVY COMMENTS

a. The economies of production in a 15 ship buy cannot equal that obtained in a 30 ship buy from one production source.

b. A 15 ship buy spread over five years, as the Navy now has planned the 30 ship buy, would at best provide one shipyard with three ships a year. This is exactly the case made against shipyard modernization cited in Senator Muskie's remarks on the DDG program. Economies of series production are sensitive to rate of production as well as number of units produced.

Here is another question and objection:

The risks are greater by proceeding with the present plan which calls for the construction of all thirty ships in a single shipyard.

NAVY COMMENT

The risk of placing a large program in a single building facility is no higher than the risk associated with procuring components, such as gears and turbines, from single sources in what is termed "the heavy equipment industries." Sixty percent of the cost of these destroyers will be spent for material from suppliers outside the shipbuilder's plant. We must accept "acts of God" and accommodate to them. That applies to all the industries that will support the destroyer program, including the assembly yard. A program split among several assembly yards will have little impact on minimizing the effects of catastrophies. The suppliers of large components for the destroyers will be the same whether the number of shipyards is one or two or more.

Here is another question:

It certainly appears imprudent to reduce our destroyer building capability to virtually a single source.

That argument is used.

Here is the Navy's reply:

NAVY COMMENT

Awarding a single contract to Litton does not require that all future destroyer contracts must be awarded to Litton. While a destroyer is a complex ship, it does not represent a unique shipbuilding problem. Many yards have built destroyers in the past and many could be available to do so in the future. It must be recognized that the DD 963 contract award is the culmination of an intense competition which started over two years ago with six qualified participants. The remaining five participants are still active today and bidding on other ship programs.

Here is another question:

My discussion with one of the competitors in the DD 963 program . . . indicate that a substantial modernization effort could be carried out based on the award of fifteen ships in this program. This, incidentally, is consistent with the Maritime Administration's rationale that award of contracts for as many as ten to twenty ships at a time is sufficient to encourage the shipbuilding industry to proceed with major facility improvement programs.

Here is the Navy's reply:

NAVY COMMENT

The Maritime Administration Approach to contract awards which encourage facilities modernization is no different from that that has been used by the Navy for the past several years. The Maritime program envisions 300 ships in 10 years. An award of 10 to 20 ships a year then means funding 10 to 20 ships each year. The destroyer program funds ships in increments over a five year period. Splitting the program, therefore, only provides funds for two or three ships a year to any one facility. That is probably not sufficient to encourage significant facilities modernization.

Now, Mr. President, here are bids made by the two companies which they said was the best and final offer, that the Litton bid would save the Government $270 million, $9 million a destroyer.

Under the bid from Bath in Maine, the Navy estimates, if we adopt the amendment, that the costs to the Government would be $225 million to $685 million.

Mr. MUSKIE. Mr. President, will the Senator from Mississippi yield?

Mr. EASTLAND. I yield.

Mr. MUSKIE. I am not aware of any estimate submitted by any of the two final bidders upon which the Navy could base such an estimated increase in costs. I know that the Senator from Mississippi and his colleague (Mr. STENNIS) have used these figures. Would the Senator provide the basis for this estimate of the increased costs so that we may understand it? It seems to be speculation on the basis of anything that I can understand.

Mr. EASTLAND. It is not general speculation. It is based upon the judgment of the U.S. Navy who are in charge of the program and who are doing, in my judgment, a wonderful job and are better qualified than any of us to pass upon it.

Yes, I will attempt to get the basis of that. My colleague (Mr. STENNIS) is in a much better position than I am.

Mr. MUSKIE. May I put my question in a more precise form for the benefit of the Senator. Does the Navy say that it has——

The PRESIDING OFFICER (Mr. BAYH). The time of the Senator has expired. Does he wish to request additional time?

Mr. STENNIS. Mr. President, I yield 2 additional minutes for the Senator's question.

The PRESIDING OFFICER. The Senator from Maine is recognized for 2 minutes.

Mr. MUSKIE. Does the Navy say that it received the information from the other bidders upon which the Navy could make an evaluation as to what each might require in terms of cost per ship, if a lesser number than 30 ships were involved?

Mr. EASTLAND. They say that the bid from the shipyard in Bath, Maine, which was submitted as its best and final offer on the 30 ships, would be $9 million a destroyer, or $270 million.

Mr. MUSKIE. What I am asking is

whether the Navy contends that it had a bid from Bath or Litton, or elsewhere, on 30 ships——

Mr. EASTLAND. No, no——

Mr. MUSKIE. Or in an even split, as my amendment proposes?

Mr. EASTLAND. They have said that an even split was unworkable. I have given the reasons the Navy said it was unworkable.

Mr. MUSKIE. Then why did Litton sign a contract to provide for a split if it contends that a split is unworkable?

Mr. EASTLAND. I cannot tell the Senator that. I am telling the Senator what the Navy thinks.

Mr. STENNIS. Mr. President, if I may answer that question right there, as I understand it, the House amendment put it at $10 million. The Navy put that clause in there. But whatever actually it will cost, that would be at the expense of the Federal Government. It would not be at the expense of the contractor, naturally. If the contract requires this additional clause, why Congress has to pay the bill.

Mr. MUSKIE. I understand that, of course.

The PRESIDING OFFICER. The time of the Senator has expired. Is additional time requested?

Mr. MUSKIE. Mr. President, I will take 2 minutes from my own time to answer that.

I understand, of course, that is the case. I discussed that in the prepared remarks I made this morning. But I made two points in response to what the Senator is making:

First, to the best of my knowledge neither of the bidders submitted information to the Navy upon which the Navy could estimate what either bidder would charge per ship for a lesser number of ships than the 30 involved in the contract. If that is the case, the estimate of the increased cost must be based upon speculation.

Second, in response to the Senator from Mississippi (Mr. STENNIS), I have argued in my original remarks this morning that the minimal increase of cost that this kind of bid would involve would be more than offset by the long-range savings through the competitive situation in the shipyards.

Mr. EASTLAND. We cannot do that by building 15 ships a year.

Mr. MUSKIE. I am talking about a 15–15 split. The Fitzhugh committee said that it would not award more than 10 ships in a multiple award to a single shipyard.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. EASTLAND. Mr. President, as I recall, some of the staff members said that. However, the panel did not pass upon it. The only thing involved here is 30 destroyers.

Mr. MUSKIE. Mr. President, the full report of the panel does not include the subcommitte report. But what is contained in the full report is fully consistent with and reflects the subcommittee report from which I have read. It does not deny or challenge it or raise a question about it. It reflects and reaches the same general conclusions.

Mr. EASTLAND. Mr. President, the Navy is the best judge of this whole matter. They know more about it than my friend, the Senator from Maine. They know more about it than I do.

Mr. MUSKIE. Does that mean that we should abdicate our duty here today?

Mr. EASTLAND. After bids are let and a company submits its best and final offer and loses, then I think that should be the end of it.

To conclude my prepared statement:

QUESTION

The award of the thirty ship DD 963 contract to Litton will drive that company to recruit approximately 4,000 new employees in an area already stretched to supply the skilled personnel needed to accomplish their present backlog.

NAVY COMMENT

The availability of manpower was carefully considered in the source selection process. It is noted that peak personnel needs occur four years from now and a buildup of 4,000 people in that time is eminently practicable. The work of the State of Mississippi and the contractor's planning approved by the U.S. Department of Commerce provide Congress with the assurance needed that the social and economic aspects of this contract award have been fully taken into account.

QUESTION

For these reasons, it makes real sense to divide the contract, and the national interest can be served by acting before the fact rather than waiting one or more years before inevitable problems to arise. Then we will all wonder why Congress lacked the initiative to act at a time when something meaningful could have been done to improve the prospects of success in this destroyer construction program.

NAVY COMMENT

It should be noted that in a peacetime environment it is most important that the necessary defense capability be developed at minimum cost. The series production approach of standardized ships is the most significant factor in achieving that objective. One of the critical paths in the shipbuilding process is the furnishing of material by subcontractors and vendors. In shipbuilding, the governing factor is the production rate of the heavy equipment industry, the manufacturers of special gears, turbines, etc. The suppliers rates of delivery actually governs the rate of ship deliveries. This is true for government furnished weapons as well as for contractor furnished equipment. Therefore, if the destroyer program were divided among a number of builders with the goal of standardized ships still a requirement, it would be necessary to restrict construction in any one facility to an inefficient, sub-optimal rate because of the heavy equipment industry's inability to meet the production requirements. It has further been shown that in a wartime environment, under mobilization conditions, shipbuilding facilities can be activated faster than the pipeline of critical components can be filled. There are, therefore, no compelling defense reasons for using forced or uneconomical contract award practices in order to maintain warship construction facilities in a nonmobilization situation.

Finally, it must be pointed out that the proposed Muskie amendment would increase the cost of the 30 ship program by somewhat between $225M and $685M, depending on the number of ships involved in the split and other factors. The national interests, including that of the shipbuilding industry as a whole, would be better served by using the dollars which would be required to implement split construction of the DD 963 class, for new ship programs, open to competition of all builders, rather than requiring our new destroyers to cost more than now contracted for.

Mr. MUSKIE. Mr. President, I yield myself an additional minute.

The PRESIDING OFFICER. The Senator from Maine is recognized for 1 additional minute.

Mr. MUSKIE. Mr. President, I do not accept the thesis of infallibility of the Navy in this area or the Defense Department, for that matter, may I say to the distinguished Senator from Mississippi, and I doubt that he does.

Mr. President, I ask unanimous consent that my amendment, as modified, be printed for the availability of Senators tomorrow.

The PRESIDING OFFICER (Mr. BAYH). Without objection, it is so ordered. Who yields time?

Mr. STENNIS. Mr. President, I yield myself 15 minutes in opposition to the amendment.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 15 minutes.

Mr. STENNIS. Mr. President, I want to make it very clear indeed at the very beginning that anything I say or do or think is not in derogation of the fine shipyard in Bath, Maine. They have a fine record. They are key people in the industry. They are well represented on the floor. The Senator from Maine (Mrs. SMITH) is one of the most valuable members of the minority on our Armed Services Committee. We greatly appreciate her fine services.

The junior Senator from Maine and I work on various matters together. We disagree on this. However, anything that I say is not meant to cast any reflection upon him in any way. I am sure that each of the Senators from Maine understands that. And I want all other Senators to be sure to understand it also.

Mr. President, the Senator from Maine (Mr. MUSKIE) told me on Thursday when we agreed on a time limitation, that he expected to submit a modified amendment. That is exactly what he has done today. It is an amendment that he was courteous enough to give me a copy of before we agreed on the time limitation. We had to know what we were going to pass on. I want to personally thank him for that courtesy.

If the Senator will permit me, on my time, to ask him some questions about this modified amendment that he is standing on today, I would be glad to do so.

Mr. President, in the beginning of his remarks, the Senator from Maine (Mr. MUSKIE) referred to the prime contractor and indicated, as I understood, that Litton would be the prime contractor. Presently Litton is the one that has the contract.

Would the Senator explain a little further what he had in mind under the revised amendment?

Mr. MUSKIE. Mr. President, the Senator is correct that this was not left on doubt by the original amendment. The original amendment provided two prime subcontractors. However, I was persuaded as I studied the question further to modify the amendment in this way to provide for one prime contractor, one design, Litton being that prime con-

tractor and Litton's design being that design. It offered a savings that we ought not to ignore.

Mr. STENNIS. Mr. President, does the Senator's amendment leave Litton Ingalls with the contract they have now, but reducing the number of destroyers or ships to be built to 15?

Mr. MUSKIE. Mr. President, I am not too familiar with the Litton contract. It is conceivable, of course, that this amendment in its impact upon the contract would require some modifications. I would have no judgment on that. But essentially I would think that the contract would govern the modifications bearing upon the costs, and so on. I would expect that there would be modifications.

Mr. STENNIS. Mr. President, what guarantee or what assurance would this amendment give that Litton Ingalls Industries would be left in with a contract of any kind and would not have to start all over to compete again on the new terms?

Mr. MUSKIE. The Senator has asked my intention. I stated my intention and understanding. The language is as follows:

Provided, That none of the funds authorized by this Act may be expended for the procurement of DD 963 class destroyers unless (1) the prime contractor with whom the United States contracts for the construction of such destroyers is required under the terms of such contract to subcontract to another United States shipyard . . .

This amendment does not by its terms void the existing contract. I would think that the reference contained in the language that I have just read indicates quite clearly that the prime contractor intended is Litton Industries. At least, that is my intention. And I would be surprised if the Navy were to interpret it otherwise.

Mr. STENNIS. Mr. President, I think that is a vital point that we must know about for certain. I am certain about the Senator's intentions here. But the language says: "unless (1) the prime contractor with whom the United States contracts for the construction of such destroyers."

That certainly permits reasonable interpretation, it seems to me, that that refers to a future contract, a future prime contract, rather than the contract that is in being.

If the Senator means, though, that he is going to keep the Litton and Ingalls contract and they will be the prime contractors for at least half of the contracts, why we ought to know that, or will this totally set aside the contract, and everybody would start over again?

Mr. MUSKIE. My intention is it should not set aside the contract. It is not my purpose that the ambiguity to which the Senator refers would have that effect. I would be glad to consider any clarification of the language which would reassure the Senator on that point.

I do not personally conceive that the contract would be set aside and the process started over. That would not be in the national interest. That is not my intention and I do not think that should be done.

Since Litton is not specifically mentioned in the amendment, I can see the ambiguity to which the Senator refers.

Mr. STENNIS. The Senator made his position clear and I thank him for that.

Second, if Litton is to continue as the prime contractor but required to subcontract out one-half of it, would the Senator expect Litton's price to be the same per ship under the new arrangement as it is under the contract as made?

Mr. MUSKIE. I would expect not.

Mr. STENNIS. The Senator would expect Litton to receive more money per ship than under the contract they have now?

Mr. MUSKIE. I would expect with the shorter learning curve that result would follow.

Mr. STENNIS. That would involve negotiating with Litton on a new price basis; the Navy and Litton would negotiate on a new price basis?

Mr. MUSKIE. Precisely, and I would say on that point there is already, as a result of four pricing rounds, sufficient information available to the Navy and the contractors so that it could not be said Litton would have a blank check in that respect. I think there is a basis for negotiations that would adequately protect Government interests.

Mr. STENNIS. Who would negotiate with this subcontractor? Would that be Litton or the Navy?

Mr. MUSKIE. As the amendment is worded, as I understand it, the other 15 ships would be subject to competitive bidding.

Mr. STENNIS. But who would conduct this competitive bidding and the negotiations and make the contract? Would that be Litton or the Navy?

Mr. MUSKIE. I would expect, as I fully understand the language in the Litton contract, to which I referred in my remarks, that the Navy would be in the driver's seat in working out the arrangements.

Mr. STENNIS. Who would pay the bill with respect to different costs or additional costs that might be incurred due to this subcontractor being brought in?

Mr. MUSKIE. If there were additional costs, of course, the Navy would.

Mr. STENNIS. Does the Senator estimate there would not be additional costs if the contractor was brought in, or how much does he estimate those costs to be?

Mr. MUSKIE. I do not think there is any basis for making those estimates, any more than the Senator or I could answer his earlier question with respect to the increase in price per ship Litton might get with a split in the contract. These learning curves produce different results and, as the distinguished Senator from Mississippi (Mr. EASTLAND) noted, I am not an expert in this field and I would not make that projection.

But in the price proposals of both contracts, in the event Bath should prove to be the contractor, there is sufficient information to protect the public interest in that respect.

As I said in my statement, splitting the contract with the two, with shorter learning periods, would indicate there would be some increase in cost per ship. In my judgment, that would be offset by the value of retaining a competitive situation in the industry; and second, the long-range procurement savings when there are follow-on contracts. This is the balance.

Mr. STENNIS. At the same time, as I understand the Senator, and he has been very frank about it, under his amendment the Navy would owe some additional money, the amount unknown, to Litton-Ingalls, the prime contractor, because of things which would cost more and also it probably would cost more for the subcontractor per ship than the present bid.

Mr. MUSKIE. We do not know the result of the competitive bidding for those 15 ships. It is conceivable, with the price picture that is now a public record, as it emerged from this competition, that bidding on the other 15 ships could produce a lower price. I am not in a position to project that.

The important point is to retain competitive bidding and that would occur in the competitive bidding for the other 15 ships.

Mr. STENNIS. What would be the responsibility of the prime contractor to the Navy, to the Government, for the production of the ships that are subcontracted out to the subcontractor?

Mr. MUSKIE. To the extent that subject is covered by the provision in the contract to which both of us have already referred, that contract would be the best guide. To the extent to which the details are not provided in the amendment, I would assume it would have to be worked out.

Mr. STENNIS. Under the Senator's amendment, the prime contractor would carry a responsibility for the production as produced by the subcontractor. Is that correct?

Mr. MUSKIE. I am not sure what the contract states on that point.

Mr. STENNIS. I am talking about the Senator's amendment.

Mr. MUSKIE. The amendment anticipates this possibility of legislation, and works out in some detail, which cover two very closely printed pages, the mechanics of adjusting to such legislation that the Navy and Litton envisaged when they entered into the contract. I am not sure of those details sufficiently to act as an expert in response to such detailed questioning. I have had the provision printed in the RECORD for the Senate to study.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield myself 10 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 10 additional minutes.

Mr. STENNIS. I thank the Senator. My questions were directed as to the impact on the situation, the contracts, and so forth, under the Senator's amendment, and not under any existing contract that is now going to be abrogated this month. I will have some evidence on the cost matter that will be accurate.

Mr. MUSKIE. It might be helpful to Senators if I repeated this provision in the contract:

The government shall have the right to require the contractor to subcontract the construction of a quantity of complete vessels as may be necessary to comply with the legislation referred to in the premises hereof.

That is a direct reference to the kind of legislation we are discussing. It was in anticipation of this legislation that the two pages of details were included in the contract. If legislation of this kind is enacted by Congress, and Litton remains the prime contractor in accordance with the intention of both of us, this provision of the contract would come into play.

Mr. STENNIS. I thank the Senator. I wish to review briefly what has happened. There is nothing new about this matter. As early as 1966 the Navy made the decision that ships which are not unusually complicated but which are greatly needed in a modern version, would be let out under one contract. They announced that in their original statements. They wanted prospective bidders to come in and submit a design and compete, and it was in writing from the very beginning. All parties understood it because they all read those proposals that the whole matter would be based on the idea that if there was an award it would go to one shipyard. Everyone knew that.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. STENNIS. I yield briefly. My time is running away.

Mr. MUSKIE. It was my understanding over the 3 to 4 years that I have been close to this matter that there has been speculation in the industry almost constantly as to what might result in a split between two or three possible contractors?

Is the Senator saying Litton was unaware of that possibility?

Mr. STENNIS. I am just citing the facts from the record. The speculation was that Bath was going to get the contract. I noticed that in many newspapers. But it proved to be speculation, and the price difference was what caused the difference.

These six contractors came in, under that condition, from the very beginning, the competition was later reduced to three, as is customary, and later two, Bath and Litton, both capable designs were approved, everything about it was approved, and finally, as the Senator said, they called for the best and final bid. That was, I believe, in March of this year.

There never was any change in the ground rules. There never was anything to the contrary. I have never heard it disputed that there was any kind of understanding but that that rule prevailed and the contract was awarded when those lower bids came in.

During the course of that, Congress passed on the question of whether it would be a sole contract three or four times, I know. In appropriating money these questions would come up. Last year, it came up in the conference between the House and the Senate on the authorization bill, and I have a copy here of what was before us in the form of a House amendment. That was considered by the Congress, and was dropped, and they stayed with the sole contractor concept as to those ships.

There is no doubt about that. It is reflected in the report of the House conferees. I think it is covered here in the statement in the conference report. Bath knew that. Everyone knew it who was familiar with the subject matter.

Now, after the contract is finally let, we have the situation as is presented here today.

I want to thank the Senator again for advising me, before we agreed on the time limitation, about his new amendment. I sent it over to the ones who are most familiar with the entire subject, the Navy. We were going to start debate this morning at 10 o'clock; I had to know what the facts are.

Let me point out that this matter has been handled from the very beginning in two different administrations. It has been handled by two Secretaries of Defense. It has been handled by two Secretaries of the Navy. It was handled under Admiral Moorer, who was Chief of Naval Operations, until just before this contract was actually made. He was selected by the President of the United States to be Chairman of the Joint Chiefs of Staff. His nomination was confirmed unanimously by the Armed Services Committee and here on the floor of the Senate, amidst many compliments. I know, too, that Mr. Packard, who has proven to be a man of exceptional ability in this field, concerned himself with the contract. So the judgment of all these people was involved.

It was reported to the General Accounting Office on the idea that the low bid might be a "buy-in." That is a term that has been thrown around here. It means a deliberate buying in, bidding too low, in order to get the foot in the door and make up for it later in some way.

The General Accounting Office is made up of rather competent people, led by a fine and capable man. They went into it fully. They dug back into it. Their report says, in effect, that there is justification for this lower bid. They say, in effect, it was not a "buy-in." That is about as strong evidence as one could find quickly.

So this case comes before the Senate on what are proven, essential facts. It boils down to the fact that we would be setting a precedent here which would affect all contractors, whether the contracts are for airplanes, tanks, ships, missiles, or whatever they are; that if they compete and do not get the contract, they can, nevertheless, come to the floor of the Senate and get an amendment adopted that will set the contract aside and they will have another chance. Where is that going to leave the Members of this body? They will be approached all the time by disappointed contractors in their States saying, "You want to get this set aside." Where does that leave the contractors as a whole in the field of military construction? So a new precedent would be established here, a new rule of the game, under which Boeing, McDonnell, and the rest of them, trying to get contracts for missiles, submarines, and everything else, would think they were immune. They are all involved here. If this contract is set aside on these facts, they will not know where they are, and they will not know where the Navy or any other branch of the service is, when they bid. No Secretary of Defense will know where he is when he is trying to negotiate to get a good price for the Government. He would know that he would be subject to being overruled and having his decision set aside. That is what we are plowing into right now. I am not referring to Maine, Mississippi, or any other State. We have to represent the Nation and decide what is best for the Government. There is nothing that would so blow up the whole concept than for us to come along now on these facts and set a precedent like this.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. STENNIS. May I proceed? A good part of my time has been used up.

The PRESIDING OFFICER. The time of the Senator has expired. Does the Senator yield himself additional time?

Mrs. SMITH of Maine. Mr. President, will the Senator yield?

Mr. STENNIS. Mr. President, I will yield to either Senator from Maine for a brief question. I did not know my time was up. I will yield the floor, unless the Senator from Maine wants to ask a question.

Mrs. SMITH of Maine. Mr. President, I would like to ask the Senator from Mississippi if he will cite or read from the GAO report that part that he referred to which said this was not a "buy-in."

Mr. STENNIS. Mr. President, I yield myself 5 minutes.

I said the general substance of it, the general meaning of it, as I understood, was that it was not a "buy-in," because the facts justify it, as they found it. The part of the bid that was based on cost of materials—and they were figuring a lower interest for one thing—they could not attack. I refer to materials and supplies, and not firm contracts, but propositions they had with subcontractors. I have an itemized list of those amounts. I cannot put my hand on it right now, but I will come back to that and speak more in detail on that, as I did the other day.

Mrs. SMITH of Maine. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator.

Mrs. SMITH of Maine. Then the distinguished Senator would say that that was his interpretation of the GAO report, that it states it was not a buy-in? That is rather a convenient interpretation; we will leave it at that.

Mr. STENNIS. Yes. I will put it this way: My interpretation, as well as that of my advisers and the others I have to help me pass on this issue, and also a conference I had with those men after that report was in as to what it meant, with particular reference to the buy-in.

As I understand them, they give this contract a clean bill of health on that score. Certainly there are no findings against it, and I do not believe that their report is unfair, although the Senator from Maine doubtless has another interpretation.

Mrs. SMITH of Maine. Mr. President, I would only say that I, too, had a conference with the same gentlemen, and my interpretation was entirely different from that of the distinguished Senator from Mississippi.

Mr. STENNIS. I thank the Senator very much.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has a minute and a half.

Mr. STENNIS. How much?

The PRESIDING OFFICER. A minute and a half remain of the last 5 minutes the Senator yielded himself.

Mr. STENNIS. Excuse me; how much time in all do I have remaining?

The PRESIDING OFFICER. Three and one-half minutes.

Mr. STENNIS. Mr. President, I have a letter here, that I have referred to heretofore, from Mr. Warner, the Acting Secretary of the Navy, with reference to the amendment in its present form, that is, the revised form as put in by the Senator. I ask unanimous consent that the letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE NAVY,
Washington, D.C., August 29, 1970.

Hon. JOHN C. STENNIS,
Chairman, Committee on Armed Services,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: The Secretary of the Navy, John H. Chafee, recently submitted the Department of Defense position on Amendment No. 811 to HR 17123. You have advised that there may be a change to Amendment No. 811 wherein the prime contractor would be directed to subcontract half of the procurement of the DD 963 ships to another builder. The DOD position on this proposed change is forwarded herewith as you requested.

There is general agreement in industry that a shipbuilder requires a sizable production commitment if he is to be able to produce ships in the most economical manner. This fact is borne out by studies by Webb Institute and the Maritime Administration, as well as by Navy and the shipbuilding industry itself. From the beginning of the DX (DD 963) program in 1966, the Secretary of Defense stated repeatedly that the approach to this program acquisition would centralize the design and production of the total program in one prime contractor. The Navy advised Congress of this intent during hearings in 1967 and 1968, and Congress strongly supported the program. Also, in its consideration of the Military Authorization Bill, the first session of the 91st Congress in Joint Conference eliminated a provision from the House Bill which would have required the DD 963 ships to be built in three shipyards.

Thus, the Congress has been fully informed of the Navy's procurement plan since 1967. It supported the Navy's position of awarding the full contract to one builder when it authorized and appropriated long-lead funds for the program in FY 69, and again when it authorized and appropriated full funding for the first three ships in FY 70, and at the same time eliminated the principle of split procurement referred to above.

A change to the present procurement plan, as proposed by the revised Amendment, would result in serious program disruption and essentially nullifying most of the benefits of competition and series production. Splitting the program between two yards would reduce learning benefits, including start-up and tooling in two yards vice one, and production efficiency. Also, reducing the production quantity and rate of the prime contractor to less than now planned would result in a less economical production. All of the above would significantly increase program costs.

Subcontracting half of the ships would involve a 9–10 year commitment of the prime contractor's ultimate responsibility for the performance, schedule and cost control of a large number of ships built by another shipbuilder. Realistically, to assume this responsibility would involve committing large numbers of top professional managers, supervisors and technicians with no productive return to the prime contractor. The result would be a dilution of management effectiveness and an increase in program costs.

The actual cost impact of the proposed Amendment would not be known until the Government negotiates with the prime contractor—but it is clear that the costs could be substantially higher than even the $225 million increase which has been estimated for up to a 20/10 split of the program. Without a significant increase in program funding, the use of a second shipbuilder will substantially decrease the number of ships the Navy will be able to procure.

The Navy has been falling behind year after year in keeping up with its requirements for new construction to fulfill urgent Fleet needs. In the judgment of the Department of Defense the additional funds required to implement the split procurement would better be used to provide additional ships so badly needed by the Navy. Such procurement would, of course, be in competition open to all builders and would thus help the U.S. shipbuilding industry.

For these reasons, the Department of Defense is opposed to the proposed change requiring that the procurement of the DD 963 class ships be split between two shipyards.

Sincerely yours,

JOHN W. WARNER,
Acting Secretary of the Navy.

Mr. STENNIS. Mr. President, reading some of the pertinent sentences here, the letter says:

There is general agreement in industry that a shipbuilder requires a sizable production commitment if he is to be able to produce ships in the most economical manner. This fact is borne out by studies by Webb Institute and the Maritime Administration, as well as by Navy and the shipbuilding industry itself. From the beginning of the DX (DD 963) program in 1966, the Secretary of Defense stated repeatedly that the approach to this program acquisition would centralize the design and production of the total program in one prime contractor. The Navy advised Congress of this intent during hearings in 1967 and 1968, and Congress strongly supported the program. Also, in its consideration of the Military Authorization Bill, the first session of the 91st Congress in Joint Conference eliminated a provision from the House Bill which would have required the DD 963 ships to be built in three shipyards.

Thus, the Congress has been fully informed of the Navy's procurement plan since 1967.

The rest of these facts will speak for themselves, Mr. President.

The PRESIDING OFFICER. The Chair advises the Senator from Mississippi, relative to the time situation, since he requested that information a moment ago, that his 5 minutes have expired, and he now has 2 minutes remaining in his allotment of time between now and 4 o'clock.

Mr. STENNIS. I thank the Chair. I reserve those 2 minutes.

Mr. MUSKIE. Mr. President, I may have some time for the Senator from Mississippi before 12 o'clock.

Mr. STENNIS. I thank the Senator.

Mr. MUSKIE. First of all, I yield myself 5 minutes on the question of the rules of the game which the distinguished Senator from Mississippi has raised.

The fact is that over the past 3 or 4 years, as competition has moved along from the time when there were six shipyards involved to the time when there were three, down to the time when there were only two, there was speculation all the time, well known to the industry and to all parties who were in competition, that this contract might eventually be divided. Because of its magnitude, because of the importance of spreading our destroyer-building capacity geographically, and for many other reasons I have stated here this morning, that speculation has been underway. It was very strong in the weeks just preceding the final award.

I think there was some element of surprise in the reaction to the decision finally to seize on one shipyard. The fact is, as reflected by the GAO report, that the Navy apparently never did consider splitting this contract among two or more yards.

That is all the more reason, Mr. President, why Congress should consider the implications of the failure to split.

In my judgment, for the reasons stated in the Fitzhugh report and the McNeil subcommittee report, the Navy should have considered, in a way that it apparently did not, the factors which I have undertaken to spell out here this morning, and which those two reports spell out in such detail.

It is important to preserve competition in this shipbuilding field in the United States. The McNeil report and the Fitzhugh report indicate that clearly.

The Senator speaks of surprise, and the fact that the award has been given, and poor losers should not now come forward with proposals of this kind.

Let me remind the Senator from Mississippi that the House of Representatives had acted on a similar proposal before the contract award. The Navy was on notice and Litton was on notice that at least one House of Congress was concerned about the policy implications of a single shipyard award. The award should not have been made at that time, if the Navy really wanted to focus on the considerations which were troubling Congress. To plead surprise now, at this point, when Litton and the Navy were already on notice that these questions were being raised, I do not think reflects any better faith or good will than the attitude of the Senators who are sponsoring this amendment.

This is an important policy change that is being made with respect to the construction of our destroyers, and it ought not to become frozen in concrete until all of the inputs possible have been made.

The Senator says that Congress has already approved this single ship procurement policy for destroyers; but not in any deliberate, considered way, insofar as the total membership of the House of Representatives and the Senate is concerned.

I do not know what discussion there was of these factors in the conference committee to which the Senator has referred, but the Senate has not deliberated

in any such way on this question. The House of Representatives did, and the House as a whole adopted the amendment dictating the splitting of this contract between the two shipyards. So if there has been any liberation, the deliberation is all on the other side of the position taken by the Senator from Mississippi.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. MUSKIE. I yield myself 3 more minutes.

Let me cover one or two points that have been raised by the distinguished Senators from Mississippi. First of all, Senator EASTLAND has said Litton's costs were lower because it has the best U.S. facilities for building these ships.

Let the RECORD show, Mr. President, that both proposals, Bath and Litton, included completely new facilities, designed specifically to build destroyers. Both shipyards would have had modern, up-to-date shipyards. There is nothing to choose between them.

Second, I point to Bath's record in building destroyers. If there is a shipyard in this country identified as a destroyer building yard, it is the Bath Iron Works. Everyone who has ever served in the Navy on a destroyer knows that. Earlier today, I put into the RECORD the fact that Bath has built more than 160 destroyers during its existence. In 1 month during World War II it sent down its ways more destroyers than were built by the entire Japanese Empire in World War II. Bath is a destroyer building shipyard.

So if we talk about which yard can build a better destroyer, if we are to rely on the record, it leads to only one conclusion: Bath. Litton has never designed a destroyer before. Litton has built, at most, two small destroyers. Gibbs and Cox, which designed the Bath ship in this competition, has designed almost all if not all the destroyers that have been built for the U.S. Navy since the 1930's.

If we are talking about quality, record, and performance, Bath has that record of performance, far beyond that of any other shipyard in this country, let alone Litton, which is not a destroyer-building yard and has no record in this respect.

So what we are talking about, Mr. President, is this: The Navy has found that both yards proposed good, acceptable ships. What we are talking about now is not the competition between the two, but whether or not these 30 destroyers are to be built in one yard or in two yards, in the national interest. It is no longer a question of competition between Bath and Litton. There may be questions emerging out of that competition yet to be answered, as my distinguished colleague from Maine has suggested. But now what we are considering, and conceivably for the last time, with the last opportunity to act, is the question of whether or not the Nation's interests are best served by a split in this contract.

I submit that for the reasons I have given earlier, those interests are better served in that respect.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator's 3 minutes have expired. The Senator has 8 minutes remaining.

Mr. MUSKIE. May I ask the distinguished Senator from Mississippi whether he would like more time than remains to him?

Mr. STENNIS. Mr. President, how much time do I have?

Mr. MUSKIE. I have 8 minutes, and the Senator from Mississippi has 10. I would be glad to split the time.

The PRESIDING OFFICER. The Senator from Maine has 8 minutes, and the Senator from Mississippi has 2 minutes.

Mr. STENNIS. Does the Senator from Maine want to use more time?

Mr. MUSKIE. I reserve the remainder of my time. I have a few more remarks to make, but they will not consume 8 minutes.

Mr. STENNIS. Does the Senator wish to proceed now?

Mr. MUSKIE. No. I yield at this time.

Mr. STENNIS. Mr. President, I understand that this does not cut off debate on this subject, that tomorrow we will have controlled time.

Referring again to the letter I have just put in the RECORD, Mr. Warner, Acting Secretary of the Navy, says:

> The actual cost impact of the proposed Amendment would not be known until the Government negotiates with the prime contractor—but it is clear that the costs could be substantially higher than even the $225 million increase which has been estimated for up to a 20/10 split of the program. Without a significant increase in program funding the use of a second shipbuilder will substantially decrease the number of ships the Navy will be able to procure.

Now we are getting down to the hard part of this matter. He says a minimum, substantially higher than $225 million. That is a cost increase of a quarter of a billion dollars, we might say. We have been working 5 weeks here in an attempt to reduce this bill. The Senator from Maine voted just the other day for a $5.2 billion decrease, which was all right. But now let us not get the facts mixed up.

This amendment would add hard dollars, at least a quarter of a billion dollars, for this shipbuilding program alone; and I will refer to that again.

I do not think it would be fair to the Senator to ask him if he would have offered this amendment had Bath gotten the contract. I am not asking him that question. He speaks in behalf of a fine company. Nevertheless, they went to bat, they played the game according to the rules, and they lost; and now they want to turn around and say that not only do they want to change the rules but also the score and the result of the game. I do not believe we can do that. We should not set such a precedent, and I do not believe we will.

Mr. President, the distinguished Senator from Maine (Mr. MUSKIE) has now revised his amendment so as to require a subcontract procedure with respect to the DD–963 rather than two separate contracts. This revision has some very significant implications because, by calling for subcontracts, the Senator from Maine must be held to have admitted that the contract with Litton is valid and binding and that there were no irregularities in the industry competition source selection procedure and the award of the contract. This also admits, at least by implication, that there was no "buy-in" on the part of Litton and, additionally, that Ingalls Shipbuilding Division has the capabilities and facilities to carry out the contract and construct ships required by it. These things are implicit in the Senator's amendment because the proposal for a subcontract presumes the existence of a valid prime contract.

Nevertheless, Mr. President, I strongly believe that it would be a very serious mistake for the Senate to adopt the Muskie amendment. If it should become law it would set an extremely bad precedent and throw the entire military contracting procedure into chaos and make a mockery of the defense source selection machinery. I think we should all be aware of this situation.

If we establish the precedent that we can by legislation interfere with contract awards and require subcontracts by the prime contractor, then all defense industries and other Government contractors had better beware.

If we can do this to the DD–963 program, we can also do it to the Air Force's F–15 fighter aircraft program, the contract for which has been awarded to McDonnell Douglas Aircraft Co. of St. Louis, Mo. We can also do it to the Grumman Aircraft Co. at Bethpage, N.Y., which holds the contract for the Navy's F–14 aircraft. We can also do it with respect to the Poseidon missile, the contract for which has peen awarded to Lockheed Aircraft at Sunnyvale, Calif. We can also do it to the B–1 aircraft—the follow-on strategic bomber—the contract for which has been awarded to North American Rockwell at Los Angeles, Calif.

We can also do it with respect to the Navy's S–3A aircraft, the contract for which has been awarded to Lockheed Aircraft Co. at Burbank, Calif. Similar action can be taken with respect to the Airborne Warning and Control System (AWACS), the contract for which has been awarded to the Boeing Co. at Seattle, Wash. It can also be done to the SAM–D ground-to-air missile, the contract for which has been awarded to the Raytheon Co. at Medford, Mass. We can also do it with respect to the Main Battle Tank—MBT–70—the contract for which has been awarded to General Motors Corp. at Cleveland, Ohio.

I think we would all be concerned by a precedent such as this. The point that I am making is that what we are asked to do to the award of the DD–963 destroyer contract today can be done to any other weapon system tomorrow if we establish this precedent. The precedent, in my opinion, would bear bitter fruit which we would live to regret. There is no reasonable rationale or logic whatsoever for the Senate to undertake to pass on contract awards and change the obligations of contracts already entered into by the Government.

Mr. President, although many issues have been raised with respect to the DD–963 contract to Ingalls Shipbuilding Division, the basic and central issue in

question is very clear and simple. That is, that after more than 2 years of intense industry competition, under ground rules established in advance and known to all competitors, Ingalls was awarded the contract. Bath Iron Works of Maine was the losing finalist. What we are really being asked to pass upon is the question of whether or not Bath, after having lost the competition because its bid was not lowest and best, should now by legislative action be awarded a part of the contract it was unable to win in regularly and legally conducted competition. This is what the whole thing boils down to, regardless of any other issues that might be raised.

I think it is far too late in the day for us to adopt an amendment of this nature. As you will recall, last year the House bill contained a provision requiring the construction of the DD–963 in at least three shipyards. This provision was removed in the conference and the House conference report dated November 4, 1969, contains this statement:

> Because of the advanced state of the contracting procedures for this class of destroyers, the conferees agreed to remove this requirement on this class of destroyers at this time.

If the contracting procedures were in an "advanced state" last year, they are certainly far more advanced at this time. As a matter of fact, they are certainly far more advanced at this time. As a matter of fact, the contract has been awarded and the competition has been concluded. While I can understand the desire of the Senator from Maine to obtain a portion of this business for the shipyard located in his State, I think that it would be disruptive in effect, would increase the cost of the program, and would delay ship delivery. Certainly, Litton could not be expected to build 15 ships at the same unit price as it offered to build 30. I am compelled to wonder whether Bath or any other shipbuilder would accept a subcontract for 15 ships at the same unit price bid by Litton for 30 ships.

The Acting Secretary of the Navy has advised me that the actual cost impact of the proposed amendment would not be known until the Government negotiated with the prime contractor. However, he stated that it is clear that the costs could be substantially higher than even the $225 million increase which has been estimated for up to a 20/10 split of the program. Therefore, without a significant increase in program funding, the use of the second shipbuilder will substantially decrease the number of ships the Navy will be able to procure.

We have been hearing a lot of arguments for reducing military spending on the floor of the Senate during the last several weeks while this bill was being considered. Many Members of the Senate have consistently voted for amendments proposing reductions in spending. If these Members are really in favor of economy in defense procurement and reduced spending, then certainly if they are to be consistent, and if they are to vote in accordance to the principles which they have so repeatedly expressed, they cannot and will not support the Muskie amendment.

Within the past few days the Government Accounting Office has submitted a letter report on the investigation which it made of the DD–963 contract. One of the points which it inquired into was the question of the credibility of the "best and final" offer of Litton and the possibility that there was a "buy-in" action on the part of Litton. As a part of the General Accounting Office's investigation into this matter, the Defense Contract Audit Agency made an audit of the difference between the third and the "best and final" offers of Litton on this matter. In general, it found that the "best and final" offer was reasonable, justified, and supportable. The General Accounting Office took no exception to this and, therefore, it appears that the question of a "buy-in" has now been completely laid to rest.

The issue now being urged is with respect to the advisability of the Navy's procurement plan and its potential influence on future competition in the shipbuilding industry. Having been unable to get the contract award by the established and recognized competitive procurement practices, it would appear that Bath now wants the Senate to intervene, upset the award, and give it a share of it. However, I do want to discuss briefly the questions which this issue raises. Let me emphasize, I have only the highest regard for both.

The question of the effects which the procurement approach may have in future competition within the shipbuilding industry is much more a question of judgment and opinion than was the "buy-in" issue. This is reflected by the GAO letter report. Most of the concern voiced by the GAO have been considered by the Navy since the inception of the DD–963 program. The major difference in opinion lies in the evaluation of the extent of risk involved. As was properly stated in the report, the Navy's opinion is that this risk is low, and that the procedures involved in the contract will result in the surfacing of incipient problems in time to solve the problems before the contractor's ability to perform has been jeopardized. It would appear that the Navy was in the best position to make a judgment on this point.

There is general agreement in industry that a shipbuilder requires a sizable production commitment if he is to be able to produce ships in the most economical manner. This fact is borne out by studies by Webb Institute and the Maritime Administration, as well as by the Navy and the shipbuilding industry itself.

From the beginning of the DD–963 program in 1966, the Secretary of Defense stated repeatedly that the approach to this program acquisition would centralize the design and production of the total program in one prime contractor. The Navy advised Congress of this intent during hearings in 1967 and 1968, and Congress strongly supported the program. Congress has been fully informed of the Navy's procurement plans since 1967. In addition, this ground rule, that is, the "all to one builder," was published to industry when the Navy went out with the request for proposals for the DD–963 on February 15, 1968. This ground rule has never changed. It was known to all of the competitors. It was accepted by all of the competitors just as it has been accepted by the Navy, the two Secretaries of Defense, and by the Congress. The Senator from Maine raised no question to his ground rule until after his shipyard lost the award. To adopt his amendment would be a clear case of changing the ground rules after the game is over. I do not believe that the Senate wants to do this.

The fact is, Mr. President, that the procedure used on this program was deliberately intended by the Navy and the Defense Department to be a major departure from prior ship procurement programs. This procedure was followed in recognition of the rising costs of ships and as a result of a specific effort to minimize ship operating costs by having them as nearly identical as possible. The DD–963 program is distinguishable from many large programs—the C–5A, for example—which have been the subject of criticism because this program does not involve any large-scale research and development effort. It is a design and production program—not a research and development program. The production is based on engineering state-of-the-art and the risks associated with it are minimal.

Let me remind the Senate that we very recently had before us the amendment by the distinguished Senator from Delaware (Mr. WILLIAMS) who is justly noted for his rugged honesty and integrity. The purpose of that amendment was to preclude the making of announcements of defense contract awards by Members of Congress and the primary reason advanced in support of the amendment was that it raised the suggestion of political influence if members were permitted to make such announcements. We all agreed with this thought and the amendment was unanimously adopted.

Now we have before us an amendment which would compel a subcontracting of approximately half of the DD–963 destroyer program, despite the contract award which has been made on its merits by the Navy. I can certainly understand that the Senator from Maine wants some of this business to go to his State, but the procedure which he would have us follow does far more than "suggest" political influence. His amendment, if adopted, would be political influence of the most direct, flagrant, and blatant type because the Senate, or a majority of it, will have passed final judgment on a military contract award.

Mr. President, if we adopt this amendment we may as well add another amendment to the bill, to the effect that no contract award by the Defense Department or any other Government agency shall be final or binding until it has been submitted to and approved by the Congress. If we interfere with one Government contract award by compelling the prime contractor to subcontract a portion of it, certainly we are taking upon ourselves the responsibility to look at others. There is certainly no reason to single out this contract which, so far as

the debate here shows, is entirely free of any suspicion or any irregularity whatsoever.

I hope that we will all look to the future and realize that if we establish this precedent that we are going to intervene and require a subcontract in such cases, we are inviting more trouble than can possibly be imagined. The contractor will no longer be certain of his position. He will necessarily have to increase his bid against the contingency that he might be required to subcontract a substantial portion of the program. The question of whether or not there should be subcontracts will no longer be determined upon the merit. It will finally be determined by who has the most votes or the most political influence in Congress. True competitive procurement will go out the window.

Mr. MUSKIE. Mr. President, may I say that on the record I have been opposed to the single-ship procurement policy from the beginning.

I have already recited for the RECORD this morning the circumstances which led to Bath's involvement in this procurement competition. Bath had bid on eight of 17 LST's about 4 years ago, and Bath's per-unit cost was $500,000 lower than that of the next lowest bidder. But because the Department was committed to this total procurement concept, Bath did not get that bid. All 17 ships went to the next lowest bidder.

I got in touch with the Department of Defense to ask specifically whether there was a future for Bath in the shipbuilding industry for the Navy, and we were told, with no options, "Either you get into this our way or get out of the shipbuilding business." This is why Bath was involved—not because I thought it was better to build all these ships in one yard, not because Bath thought it was better, but because there was no other choice.

That does not make it a sound policy, may I say to the distinguished Senator from Mississippi. I say to the Senator that this policy was not adequately reviewed by Congress at that time. We went forward with such a policy as the result of a decision in the executive branch, a policy which I think we ought to review at this time, while we still have a chance.

Let me summarize recent events which have occurred and the reasons why I believe a change in policy is mandatory at this time.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 4½ minutes.

Mr. MUSKIE. I yield myself 3 minutes.

During the past 3 years the fact that large and diversified shipbuilding backlogs are virtually unmanageable has become clearly evident. Schedule slippages and overruns at shipyards owned by Avondale, General Dynamics, Litton, and Lockheed are a matter of record.

Total package procurement has in large part been discredited, most recently by the Fitzhugh report—just issued this past summer—and the DD–963 program was essentially a total package procurement.

Evidence that the largest American corporation, such as Lockheed, the Penn Central Railroad, General Dynamics, and LTV, are susceptible to failure under certain circumstances has surfaced recently. This fact, in my opinion, makes highly questionable the wisdom of placing too large a percentage of our defense dollars in the hands of a single corporate entity.

The country's economy has taken a serious downswing which makes it more important than before to balance our defense spending geographically.

The Nixon administration's Blue Ribbon Defense Panel, headed by Mr. Fitzhugh, has within weeks recommended that huge defense contracts be divided where possible to avoid overconcentration and to maintain a reasonable mobilization base. If the report of this team of experts had been made 6 weeks earlier and if the Department of Defense had heeded the advice of this committee, it is probable that the Navy would have divided the DD–963 contract. And the contract should be divided now.

I yield to my distinguished colleague from Maine, Senator SMITH.

Mrs. SMITH of Maine. Mr. President, I listened with interest to the distinguished Senator from Mississippi when he stated that the Navy had told him that the increased cost would be $225 million. I think this is somewhat suspect, since Admiral Sonenshein increased that from $225 million to $600 million in about 6 weeks' time.

AMENDMENT NO. 862

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. EAGLETON). Without objection, it is so ordered.

Under the previous order, the Chair now lays before the Senate amendment No. 862 which the clerk will state.

The assistant legislative clerk read as follows:

SEC. . (a) In accordance with public statements of policy by the President, no funds authorized by this or any other Act may be obligated or expended to maintain a troop level of more than two hundred and eighty thousand armed forces of the United States in Vietnam after April 30, 1971.

(b) After April 30, 1971, funds herein authorized or hereafter appropriated may be expended in connection with activities of American armed forces in and over Indochina only to accomplish the following objectives:

(1) the orderly termination of military operations there and the safe and systematic withdrawal of remaining Armed Forces by December 31, 1971;

(2) to secure the release of prisoners of war;

(3) the provision of asylum for Vietnamese who might be physically endangered by withdrawal of American forces; and

(4) to provide assistance to the Republic of Vietnam consistent with the foregoing objectives.

Provided, however, That if the President, while giving effect to the foregoing paragraphs of this section, finds in meeting the termination date that members of the American Armed Forces are exposed to unanticipated clear and present danger, he may suspend the application of paragraph b(1) for a period of not to exceed sixty days and shall inform the Congress forthwith of his findings; and within ten days following application of the suspension the President may submit recommendations, including (if necessary) a new date applicable to subsection (b)(1) for congressional approval.

Mr. HATFIELD. Mr. President, I yield 30 minutes to the Senator from Iowa (Mr. HUGHES), one of the cosponsors of this amendment.

Mr. HUGHES. Mr. President, I thank the distinguished Senator from Oregon for yielding me this time.

Mr. President, as we move to consider the end the war amendment, we get to the target center of what is the overriding issue before the American people today.

Shall we, at long last, take the decisive steps to end American military involvement in Southeast Asia?

Or, shall we continue present policies, which, whatever their merits may be, give no real assurance of total military disengagement?

Whatever else we are accomplishing by this debate, we are keeping faith with the American people by bringing this central issue to a vote.

The debate on our military policies has been long and impassioned between responsible elected Representatives of the people. Representatives who are alike in their devotion to the national interests but deeply divided on exactly what our national interests are and on the policies that will most effectively implement those interests.

I am deeply grateful to the distinguished chairman of the Armed Services Committee, the Senator from Mississippi (Mr. STENNIS), and his colleagues of both parties, who have carried the administration's side of this issue, for the fair- and high-minded plane on which they have conducted the debate.

To question the motives of the dedicated men in this Chamber, who have fought the uphill battle against traditional public attitudes to bring about this vote on a definite plan to end the war, would be an incalculable disservice to a free people.

We disagree in matters of judgment—not in fundamental objectives nor in devotion to our country.

I have never met more devoutly patriotic men than the Senator from South Dakota (Mr. MCGOVERN), the Senator from Oregon (Mr. HATFIELD), and the other sponsors of the amendment to end the war.

If I am convinced of anything about the American people, it would be that every responsible American wants to support his President, in time of war, regardless of party differences.

The optimum solution for ending our involvement in Indochina would be for the President to take the necessary moves to get all of our troops out and to create the necessary preconditions for giving peace negotiations a credible chance of success.

I do not question that this is what the President wants.

But one after another of the current news reports tell us the familiar story of increasing involvement, as the dispatch of yesterday that said:

Fresh evidence that American planes are carrying out direct bombing missions in support of the Cambodians came through a Cambodian radio at a government strongpoint near Phnom Penh yesterday.

We are repeatedly told that the only way we can safely withdraw our troops is by extending our engagement.

The pronouncements of the Vice President in his recent trip to Southeast Asia give little solace to those who believe we should get out of Southeast Asia as soon as it can be safely and systematically done.

Although Mr. Nixon acknowledges that the settlement in Indochina must be political, not military, our policies, in point of fact, continue in hot pursuit of a military victory.

The President continues to refer to peace negotiations, and his appointment of Ambassador Bruce to the Paris peace talks was a commendable and statesmanlike move. But at the same time, Mr. Nixon pledges our country to the perpetuation of the Thieu-Ky regime in Saigon. Flatly, this objective and the objective of realistic peace negotiations in Paris are mutually incompatible.

In this country, the pendulum of public opinion about the Indochina war has swung back and forth between deep concern and apathy—or despair. For a number of months, following last November, an almost unbelievable amnesia enveloped the Nation—a lapse of memory about the on-going horror of the killing, maiming, and destruction in Vietnam. Then, for a time, the fog lifted.

The revelations of My Lai shocked us into awareness of how this war is brutalizing our own people. The discovery by news correspondents of the extent of our Government's involvement in Laos aroused new doubts and apprehensions. The invasion of Cambodia was the straw that broke the camel's back.

In the heat of the national concern over the Cambodia invasion, I believe that the passage of the amendment to end the war would have been assured.

Now the cutting edge of the public protest has somewhat dulled, although I am convinced that the deep-lying sentiment is as strong as ever.

In my own State, the untold story, as I see it, is of the peace movement that has emerged in the small communites of middle America—not among the youth, who were already with it, but among the calm and established adult citizens of these communities.

The on-going story of the Indochina war is one of abstract comparatives. There were "fewer casualties" this week than the week before—or than 6 months before. We tend to lose sight of the fact that the men killed are flesh-and-blood people, not statistics, and that for each one killed there are many others horribly maimed or otherwise incapacitated.

But I am convinced that an increasing multitude of people who have been quiescent up to this point are beginning to believe that our continued involvement, reduced in numbers and modified in form though it may be, cannot be justified as being in our national interest.

They no longer can accept the idea that the sacrifice of American lives is justified in our crusade to save Asia from communism—which, in Vietnam, amounts to perpetuating one corrupt, dictatorial military regime against another.

These middle Americans have become aware of what this war is doing to our economy, to our domestic order, to our hopes for meeting vital national needs in education, in welfare, in medical research, in equal opportunity, in the alleviation of poverty, in the preservation of our God-given natural environment.

We cannot take care of our sick and needy, purify our diseased waters, resolve racial tensions, or provide citizens equality of opportunity, because we are fighting a war—a war that many of us believe is not to protect ourselves, but to assert ourselves—in accordance with an outworn militaristic code.

I do not question for a moment the sincerity of those who believe that the President is getting us out of Southeast Asia. I do not question for a moment that this is his intention.

But the overwhelming evidence—the facts—simply do not support the thesis that we are really getting out.

I believe we should withdraw from Southeast Asia, not simply because the continuation and expansion of the conflict are senseless and destructive of our national interest, but because our involvement in civil wars between military dictatorships in a distant continent is wrong—ethically as well as practically wrong.

The effect of the expanding war on our economy, particularly on the prices the middle American is paying at the marketplace, is a compelling consideration. But what really hurts is what this war is doing to twist and dehumanize ourselves and other human beings.

And what really counts is how we are letting our domestic society—the front line of our national defense—disintegrate while we try to solve the political problems of the peoples of Asia who view our intervention with the same enthusiasm with which they would greet an onslaught of the plague.

What a confusion of purpose and idealism we show in the many facets of our war policy in Asia.

In my office recently, a 20-year-old Iowa boy told me:

I can't understand why people don't see that the aim of the so-called Vietnamization is the ultimate in immorality. It is simply an effort not to stop the war, but to shift the burden of the killing from white people to Asians, with the United States paying the bill.

We are the most powerful Nation yet seen by the human race. Yet there are finite limits to our power. Realistically, we cannot impose by military force the kinds of government we want on the countries of Asia. Moreover, we have no God-given right to do this. We have sacrificed 51,000 American lives, more than 260,000 wounded, and upward of $180 billion in resources to perpetuate a military dictatorship in South Vietnam that represents no more than 15 or 20 percent, by estimates, of the South Vietnamese people.

And think of what we have done to the people and the countryside with our strategic and tactical bombings, our napalm, our herbicides, our destruction of whole communities "in order to save them."

President Nixon has now been in office for 588 days. In that time, 12,908 men have died in combat and another 3,000 or so have died in accidents in Vietnam. During the same 588 days, an additional 94,889 men have been wounded.

Mr. Nixon has reduced the level of combat, for which he deserves full credit, but the average daily casualty rates remain at a level that I believe is simply unacceptable. Since January 20, 1969, an average of more than 22 American men have died each day; 165 men have been wounded each day.

Even if that rate should drop further—to 100 casualties a day, or 50—I am sure no one in this Chamber would call that "acceptable." What we need to do is to stop the sacrifice of American lives.

The President's policies have reduced casualties and brought some troops home. But they have not brought us closer to peace and total disengagement. And I am sure that this is what the American people believed Mr. Nixon had in mind when he said 2 years ago that he would end the war.

Mr. President, one of the most amazing and frightening phenomena of our times is the disparity between what our Government tells us is going on in Southeast Asia and what the news reports indicate really is going on.

The war has, in point of fact, expanded. It has widened in Cambodia without the consent of Congress and in direct violation of the will of the Senate. "Air interdiction" of supplies has become tactical support for the Cambodian army. The Washington Evening Star last week reported that the CIA is now operating guerrilla teams in Cambodia, as it has for years in Laos.

The longrun costs of the war are also still increasing. U.S. officials have now recommended an additional $200 million of aid for Cambodia. We are already giving $40 million per year in military aid. Laos is getting $50 million per year.

South Vietnam has requested an extra $200 million in economic aid. It is already receiving a half-billion dollars a year in military aid.

When will it all end?

One fact that seems to have escaped the public attention is that Mr. Nixon, since he has been President, has never, in my opinion, promised to withdraw all American troops from Vietnam. The most he has announced is a reduction to the 280,000 figure included in the present amendment. And newspaper reports suggest that the administration plans to keep residual forces of somewhere between 20,000 and 200,000 men.

Whatever the number of forces we leave in Vietnam, our leaving them spells prolongation, rather than cessation, of our military involvement.

In the course of my life, I have learned to admire men who have the courage to

admit that they have made mistakes. I believe the same truth applies to nations.

Many patriotic Americans believe that we made a catastrophic mistake by getting involved in Vietnam in the first place and that we tragically compounded that mistake by staying there and getting in more deeply.

While the war goes on, our country suffers. We suffer from the loss of 51,000 men who will never return to raise families or help their communities become better places in which to live.

We suffer because 150,000 men have been discharged from the service as invalids, over 10 percent of them totally disabled.

We suffer because the lifeblood needs of our society go unmet so that we can determine the political destinies of Asian peoples who detest us for our intervention.

Apart from all of the heartache, the loss of life and limb, the neglect of vital needs here at home, this war is costing the average American dearly—far beyond what he realizes. It cost the average American family $600 last year. Inflation, fueled by the war, cost the average American family another $350. Prices since 1964 have risen by over 25 percent. The middle American is paying for this war of unclear purpose and no visible end—and it hurts deeply.

What is the prospect if we do not change course?

Studies by Arnold Kuzmack and Charles Shirkey, both formerly with the Office of the Assistant Secretary of Defense for Systems Analysis, have concluded that, even at the current withdrawal rate and assuming no residual forces, 400,000 more Vietnamese will die; 5,400 more Americans will die and 42,500 will be wounded.

Many of these people can be saved—if we are willing to take the decisive step to end the war embodied in this amendment.

At some point, the step must be taken. Why not now?

Mr. DOLE. Mr. President, will the Senator yield for a question?

Mr. HUGHES. Mr. President, I am happy to yield to the distinguished Senator from Kansas for a question.

Mr. DOLE. Mr. President, the so-called end-the-war amendment provides that the war continue until March 1, 1972, as I understand it. How many casualties could be expected during that period of time?

Mr. HUGHES. The projected rate would depend on the rate of withdrawal and the duration of the war. I do not have the calculations before me.

Mr. DOLE. Mr. President, the point I make is that the amendment may be called an end-the-war amendment, but the war would continue under the amendment to March 1, 1972, about 18 months from now. If that is ending the war, it is a long last scene.

Mr. HUGHES. Mr. President, the Senator from Kansas is well aware of the fact that the sponsors of the amendment would like to end the war much sooner and that our amendment would permit an earlier termination. However, realizing the legislative process and the differences existing among the Members of the Senate, we modified the amendment to end the war to provide for the earliest possible total conclusion of the war. That was not the final product which most of us would like to have seen. But nonetheless, it is the best product that we thought we had an opportunity to win with.

Mr. McGOVERN. Mr. President, before the Senator leaves that point, will the Senator yield for a question?

Mr. HUGHES. I am happy to yield to the Senator from South Dakota.

Mr. McGOVERN. With reference to the timetable withdrawal deadline of this amendment would the Senator agree there is nothing in that amendment that requires us to stay that long? As a matter of fact, that is the outside limit unless there is some extension of the deadline by joint action of Congress and the President. But is there not a distinct probability that if we gave notice by passage of this amendment that we were withdrawing all American forces not later than 16 months from now, that would have the effect of inducing both sides to the negotiating table? It would have that effect in the case of Saigon because of the knowledge they could not count on us indefinitely to carry the major burden of the war and, therefore, they would be more inclined to settlement. In the case of Hanoi, by announcing a definite withdrawal timetable would we not remove much of the incentive they have for continuing the war in that it would not be in their interests if they knew we were leaving at a certain time, to be harassing our troops and making it difficult to carry out that withdrawal.

I ask the Senator if this amendment were agreed to would it not have a good chance of bringing about a cessation of hostilities even earlier than the 16-month deadline attached to the amendment?

Mr. HUGHES. Mr. President, I agree with the Senator that the probability is, that if this amendment should become the law of the land, many things would begin immediately to happen that would have force and effect on all nations involved: North Vietnam, South Vietnam, Cambodia, Thailand, as well as the United States, and perhaps also Russia and China with respect to supplies and shipping.

As the Senator pointed out, there is nothing to prohibit an earlier termination, if it is deemed logistically possible—as most of us believe it is—and practical, in trying to bring about a negotiated, diplomatic settlement of the war.

I believe the Senator is correct that Hanoi would appropriately conclude that chances for a negotiated settlement would be increased by the passage of this amendment, but that they would not increase activities against American forces remaining in Vietnam during withdrawal. I think it would have a tremendous impact on the Government of South Vietnam by implying to them that they are not going to be able to dictate a military settlement of the war, but that they must begin to negotiate with the objective of forming a government that is truly representative of the people of South Vietnam. Only through that process can they maintain peace in Vietnam and some hope of a democratic government in the process.

I believe that in our country the by-products would be immediately noticeable. We would see the product of our efforts not only in our young people, but also in large minority groups, which will realize that we are going to redirect our energies to take care of the cancerous problems of this Nation. Many of these things would start immediately upon the signing of the amendment into law.

I think the Senator is correct.

Mr. McGOVERN. It seems to me the converse is true under the present program. The present policy is an open-ended commitment today, and that is really what it is when the President says in effect that we are going to stay there until the South Vietnamese forces are prepared to take over. In other words, our policy is really attached at the present time to the maintenance of the Thieu-Ky regime. That seems to put our troops in a very dangerous position militarily because two things are happening under Vietnamization. On the one hand we are reducing the number of American forces but we are maintaining the same unacceptable political objective as far as the other side is concerned.

We are saying we are going to do whatever is necessary to keep the Thieu-Ky regime in power. That is clear, and it is something the other side will never accept. The war will go on as long as we insist that the Thieu-Ky regime stay in power, and our forces will stay there, if I interpret the President's Vietnamization statements correctly, until we feel that regime is powerful enough to stay in power without us. That, it seems to me, is an invitation to Hanoi and the Vietcong to continue the killing and the military pressure. All of that goes on at the same time we are reducing the level of our military forces in Vietnam. How much easier it would be if we announced that we were pulling out on a certain timetable; that we are not going to insist that the Thieu-Ky regime stay in power, and that we no longer see any political objective there that is worthy of a protracted war. That seems to be a much safer withdrawal posture for our forces.

Would the Senator generally agree with that analysis?

Mr. HUGHES. Yes, I would be in general agreement with the analysis of the Senator.

As the Senator knows, the Senator from Missouri (Mr. EAGLETON) and I introduced a resolution last fall which stated, in effect, that the administration in Saigon, the Thieu-Ky regime, should take all steps necessary to release political prisoners in Saigon, which are estimated variously between 16,000 and 100,000, and to allow free expression of the press. In the last calendar year 14 newspapers have been closed down. Many people who spoke out for peace or who advocated negotiation were put in prison, whether they were running for political office, writing editorials, or speaking in the Parliament of South Vietnam.

By proposing this resolution, we hoped to allow the people there to speak for themselves and to have a better opportunity to realize that our involvement there could be rapidly terminated with security and safety for our troops, and that it would probably be a better political solution for South Vietnam.

I am sure that those results would occur as a result of this amendment also.

Mr. DOLE. Mr President, will the Senator yield?

Mr. HUGHES. As the distinguished Senator knows, we are on controlled time. I am happy to yield to the Senator for a question regarding what I am stating, but he will have all the time he needs, and I assume it will be allotted to him by the chairman of the Committee on Armed Services. I am happy to yield to the Senator for a question.

Mr. DOLE. I understand we are on controlled time, but we should debate the amendment. I will be happy to yield to the Senator when I have time so the merits of the amendment can be debated.

Mr. HUGHES. I thank the distinguished Senator for agreeing to yield to the Senator from Iowa when he has time. I hope he will let me know when he takes the floor so I may have the opportunity.

Mr. DOLE. It will be today.

Mr. HUGHES. I thank the Senator.

Mr. DOLE. Why should the enemy negotiate if told in advance we are to get out not later than March 1, 1972; that is, if we give them notice we are going to pull out regardless, and I assume the Senator admits the amendment amounts to unilateral withdrawal and not one with reciprocity, regardless of the consequences.

Yesterday there was an example of what might happen. There was a shelling of an orphanage and 15 to 20 children were killed. This is the Vietcong terror we have read about and that some believe will never happen if there is a precipitate withdrawal by U.S. forces.

Why should the enemy be told in advance we are going to vacate South Vietnam no later than March 1, 1972?

Mr. HUGHES. I would like to comment that we do not condone the shelling of hospitals by the enemy and the killing and injuring of children any more than we do the indiscriminate bombing by the Vietcong or the North Vietnamese which has taken thousands of lives in Vietnam. The point we make is that we must treat our prisoners of war in such a way that the nations of the world will put pressure upon the North Vietnamese, the Vietcong, and others to treat our prisoners of war in accordance with the provisions of the Geneva Convention.

My point is that the North Vietnamese will not press when we are withdrawing and will be willing to negotiate.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HUGHES. Mr. President, will the Senator yield me 5 minutes?

Mr. HATFIELD. Mr. President, I yield 5 minutes to the Senator from Iowa.

Mr. HUGHES. I thank the distinguished Senator.

The North Vietnamese would understand that we were leaving and that we were leaving on an agreed-to timetable. Negotiations would then proceed, and it would be folly for the North Vietnamese to attempt victory. Negotiations at the peace table, with the North Vietnamese and the National Liberation Front represented, I am convinced, would lead to resolving the issues in a way that has not been attempted up to this time. I do not think that it would result in a hazard or that they would wait to begin a new war.

Mr. DOLE. In effect, we would be negotiating from weakness rather than from strength. That is what the amendment which I designate the amendment to lose the peace does. When we do not announce our timetable, we have some strength which would help bring about negotiations. We have an experienced negotiator there, an outstanding American, Ambassador Bruce. There is some hope that, within some weeks, they will get down to negotiations. In all sincerity, I believe that what we would do by announcing the timetable in advance would be to end any hope of ending the war through negotiations.

Mr. HATFIELD. Mr. President, will the Senator yield?

Mr. HUGHES. I am glad to yield, but first let me say that I have never doubted the sincerity of the Senator from Kansas. I share the hope that we will have peace in South Vietnam. We have differing views on how that should be done, but his sincerity, and that of any other Senator, is not in doubt.

I yield now to the Senator from Oregon.

Mr. HATFIELD. Mr. President, I would like to add to what the Senator from Iowa has said. Rather than ask the cosponsors of the amendment, the Senator from Kansas should have the administration answer his question, because this question was posed to the Vice President of the United States on CBS's "Face the Nation" on May 3. Peter Lisagor asked the Vice President of the United States why the North Vietnamese would want to negotiate in Paris when Mr. Nixon has already stated that our objective is withdrawal. The Vice President answered that question, as posed this morning by the Senator from Kansas, in this way:

> Let us not forget that we are not the only ones negotiating in Paris. We are not the only ones fighting in Vietnam. After we leave the South Vietnamese will be there for a very long time.

Adding to what the Vice President of the United States said, let me say that there are there 1.25 million men in the armed services and local policemen under the control of the South Vietnamese Government, over five times the number of the enemy they face in South Vietnam. Therefore, to add to and to support the Vice President's contention that our stated policy is to depart, we are not going to leave a vacuum there even after full withdrawal of American troops. So I suggest that we let the Vice President answer the question of the Senator from Kansas, because he eloquently answered the question on "Face the Nation."

Mr. HUGHES. I thank the Senator from Oregon.

I shall be glad to yield a little time to the Senator from Kansas to respond.

Mr. DOLE. Of course, that does not answer the question. That is an agreement with the Vice President which I welcome, but the Vice President never said we should set a date and tell the enemy in advance that on that date we are going to vacate South Vietnam. It makes no difference how we slice it, what the sponsors of the amendment have done is to embrace and endorse the Vietnamization program——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HATFIELD. Mr. President, I yield the Senator 5 minutes.

Mr. DOLE. But then in a kind of "one-upmanship" they fix the date, saying, "Well, the President says that we are going to have a 280,000 troop level by next April, but we want to fix the date and deny the President further flexibility."

It is incumbent upon the sponsors of the amendment to explain to the Senate today, or tomorrow morning, how the proposal differs from the Vietnamization program, except that it fixes the date, except that it notifies the enemy in advance of the time of that withdrawal, except that it prevents the President, whoever he may be, from negotiating for peace or the terms of withdrawal—and that right is reserved to the President in the Constitution. The Senator from Kansas is not the Commander in Chief, nor is the Senator from Iowa, nor is the Senator from Oregon, nor is the Senator from South Dakota. It is a serious question we must resolve, which I want to emphasize, before we vote on the amendment tomorrow.

Mr. HUGHES. Mr. President, the amendment to end the war provides for safe and systematic withdrawal of U.S. forces.

It provides for negotiation for the release of our prisoners of war in enemy hands.

It provides for asylum for any Vietnamese who might be endangered by our withdrawal.

It opens up the possibility of constructive peace negotiations by setting forth a definite schedule of withdrawal. But this schedule is flexible and does not tie the President's hands.

It is the way to terminate this conflict—not with dishonor, but with prudence and with pride in doing the right thing.

As Prof. A. Doak Barnett of Columbia University recently said:

> If we move in the direction of a definite total withdrawal on the basis of a timetable . . . it will stimulate the Asian countries to face up to a greater extent to their own problems, to grope for broader international relations, to try to see what degree of reasonable cooperation is necessary and possible.

In other words, it will foster the President's own avowed doctrine.

Combat soldiers from my own State have sent me from Vietnam some of the wisest commentaries on the war I have heard.

One GI wrote:

> We are still trying to win a military victory in a situation where there can only be a political settlement. Will we never learn?

Another wrote:

Don't worry about the young people of our country. If our national security is threatened, they can be counted on. But in this war, our national security is not being jeopardized. We are interfering in the internal affairs of distant peoples whose customs and national aspirations we don't understand. The Vietnamese look at us with hate and distrust. All they want is to till their land. They want us to get out.

Said one seriously wounded soldier:

I haven't seen anything over here that is worth the life of one GI.

And finally, an older GI who had been a schoolteacher wrote:

I realize our fathers turned out in 1941, almost without protest. But then they had some idea of what they were fighting for. . . . I have no complaints about my treatment here. But I would not want any of my friends, my relatives, or my sons—if I ever had any—to get involved in this nightmare.

Mr. President, the time has come to end American involvement in the Indochina war.

The time has come for a realization that the byproducts of that war are not confined to the South Vietnamese or the Cambodians or the Thais, but are internally affecting this country to the point where this Nation is divided as it has never been since the Civil War. This war has torn the this country asunder. It has resulted in some of the worst violence we have seen, to the point where people are losing hope.

I think it behooves us to realize that the mightiest Nation on earth, the Nation that has the greatest scientific and technological capabilities, the greatest educational system, and the greatest food- and fiber-producing capabilities ever seen in the history of mankind, certainly has the wit and reason, at this point, to realize the great internal damage to this country caused by this tragic war. We see a drug epidemic in our land. We hear people continually wondering aloud what the purpose of this Nation is.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. HUGHES. One-half minute.

Mr. HATFIELD. I yield the Senator from Iowa 1 additional minute.

Mr. HUGHES. Mr. President, I think this is the greatest soul-searching time for America in the last hundred years—a time to really try to understand what we are doing in Southeast Asia in the name of the United States of America—this great and free democracy.

It is time we realize that we have a responsibility to be a standard bearer in demanding an end to the destruction of lives and the environment of South Vietnam. We should also realize what this great country, greater than any other ever conceived by man, is doing to South Vietnam, in the name of defending the freedom and the rights of that country.

As we come to understand these things, surely we can reconcile ourselves to accept the fact that the final outcome of the war in South Vietnam will be a diplomatic and a negotiated decision, not a decision won by the military forces of this Nation. And we, in our hearts, must reconcile ourselves to lending the support we believe is absolutely essential to making this decision, which we all would like, in future years, to be able to look back upon as being one of the most courageous moments in the history of our country.

Mr. HATFIELD. Mr. President, I yield myself 1 minute.

I wish to say, as one who has been associated with the Senator from Iowa for many years, as a fellow Governor and now as a fellow Senator, that I have known him to be not only a man devoted to the political duties of his office, but one moved by his duty to his fellow man. I believe his speech has added not only political and diplomatic data to this debate, but that he has infused it with the warmth of compassion and humanity, demonstrating his devotion as a person concerned with the welfare of other people.

At this time, Mr. President, I am honored to yield 15 minutes to my very good friend and able colleague from New Jersey (Mr. CASE).

Mr. CASE. Mr. President, in my lifetime I have not known a public issue more perplexing or a problem more agonizing than that of American policy in Vietnam.

Other problems have had—and still have—more apocalyptic connotations, for example, the unleashing of atomic and nuclear energy, or those that we are just now beginning to recognize relating to mankind's destruction of the environment on which his and all other life depends.

But, however awful these latter matters, our role in regard to them has somehow been, and I think will continue to be, vastly less difficult than those we have faced, and still face, in regard to American policy in Southeast Asia. The answers, though drastic and of immeasurable consequence, somehow have been and are easier to come by.

A few people—perhaps they have been the lucky ones—have found or professed to find no difficulty in deciding what we should have done in Southeast Asia. But for most of us—certainly for me—this has not been true.

Despite nagging doubts, I felt that, on balance, for a time what we were trying to do made sense, that is establish an essential measure of stability in that great area of the world in which chaos threatened as a result of the destruction and upheaval resulting from World War II. I have never agreed, and still do not, with those who feel that our actions made no sense at any time and that the lives lost and treasure spent were frittered away in meaningless violence.

I do not mean to argue this now, but merely to sketch the background against which my thinking in regard to the war in South Vietnam has developed.

Some time ago I began to feel that, however good our intentions, however sound and even useful our actions may have been in the early and middle years of the conflict, the time had come for a fundamental reappraisal of American policy. It became more and more clear to me that the period of diminishing returns had set in and that a continuation of our policy as it had been carried out would lead only to an endless war with endless American casualties, and endless drain on our treasury, and endless destruction in Vietnam itself.

It had become clear that while we could not be defeated in battle, neither could we win a military victory without unacceptable risks of great power involvement and a third world war.

It had become clear, too, that unless the South Vietnamese regime took drastic and far-reaching steps to reform its policies, to broaden its base of support and to prepare itself for its own defense, it would never be able to survive upon our withdrawal—whether that occurred in 60 days or 6,000 years. It seemed clear, finally, that, since we were doing substantially all the serious fighting and were supporting their economy with billions of American dollars, they would never change their ways unless we forced them to by insisting that our support would continue only for such period as would give them a reasonable chance to shape up.

And, so, I became an advocate of the proposition that we should fix a definite date for our complete withdrawal, announce this decision publicly and stick to it.

Since I did not, and do not, want to see chaos result in South Vietnam after we leave, I have always felt, and I still feel that this date must present a reasonable period in which the South Vietnamese may put their own house in order. The only problem, then—and a most difficult one—is to determine what that date should be.

No one could be absolutely sure about this. But the best advice I could get was that given by Dr. Edwin Reischauer, one-time U.S. Ambassador to Japan and a lifetime student of the Orient. He suggested about a year ago that the end of 1971 would be reasonable. I have not seen anything which causes me to think his suggestion is very far from the mark.

And, so, I have been happy that the so-called Hatfield-McGovern amendment has been modified by its chief sponsors to provide, in effect, for American withdrawal from South Vietnam by the end of 1971.

I know that there are stated limitations on U.S. military activities in and over South Vietnam between April 30 and December 31, 1971, but the range of activities permitted during that period leaves with the President his full authority as Commander in Chief to provide for the defense of American forces in that period, and of this I fully approve.

The argument has been made that to fix a definite date for our withdrawal means only an enemy victory. It is claimed that North Vietnam will just sit and wait for the time to pass and then, when we are out, come in for the kill; that she will never negotiate because she has no need to.

The answer to this is, and I think always has been, that North Vietnam will never negotiate unless she feels that American withdrawal, whenever it occurs will leave South Vietnam able to defend itself. And the course I suggest, and that implicit in the pending amendment, is the only course offering a reasonable chance that the South Viet-

namese will make themselves capable of their own defense and of continued existence as an independent state.

And, so, by fixing a date for our withdrawal and sticking to it so long as that date is reasonable, we will be taking the only course which might lead to successful negotiations. The North Vietnamese will negotiate when they feel that they can get a better deal now than they might if they waited and had to face a South Vietnamese nation strong and determined to defend itself.

I applaud the President's decision to turn from escalation to deescalation of America's participation in the war and I approve of the actions he has taken over the past year to implement that decision.

My difference with the President on this matter is precisely this: He has made our continued withdrawals dependent upon South Vietnam's progress in building its own defensive strength. This, it has always seemed to me, leaves the initiative where it should not be—with Saigon, and not with the United States. South Vietnam can defeat our purpose by failing to take the steps necessary, and many of them will be hard steps, to assure she becomes capable of her own defense and continued existence as a nation.

The pending amendment would return the initiative in this matter to the United States, and this is where it must remain.

Is December 31, 1971, the right date? At this moment no one can be absolutely sure.

But one can say this. If the period is too long, the President can shorten the process of withdrawal to whatever extent he finds possible.

But what if the period is too short? The answer is equally clear. All the President need do is come to Congress and, with any kind of supportable case for an extension of time, he would surely get it. Why do I say this? I say it because if the President makes it clear to the country that a longer time is needed, the Congress will surely grant it. And if the case cannot be justified before the people of America, then it will not warrant further loss of American life and further expenditure of our material resources. I am confident that the people can be trusted to make the right decision in this matter and I am confident that the Congress can be counted on to reflect the people's will.

This is the way in which the great decisions of war and peace must be made in democratic America.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. CASE. I am happy to yield.

Mr. DOLE. The basic point is illustrated by the very able Senator from New Jersey. It is, When will we withdraw from South Vietnam? I am wondering how the Senator from New Jersey interprets the present version of the Hatfield-McGovern amendment, which is No. 5 or No. 6—from the President's Vietnamization program.

What is the difference between the President's program and the so-called end-the-war amendment? Even under the end-the-war amendment, the war can continue for 18 additional months. It may be that the President would end it before that time.

Why, at a time, as the Senator from New Jersey has pointed out, when the President has changed the course of the war, should we attempt now to say to this President, who will remove over 80 percent of the combat troops out of South Vietnam by next May, "The course you follow is incorrect; it is correct only if the Senate or Congress can fix an absolute date"? To me, this is Vietnamization with a fixed date. I do not know what else it can be called.

Mr. CASE. I am glad that the Senator from Kansas took my interposition seriously enough to engage in this colloquy, because I have tried to come to the nub of this matter in my remarks.

As I said in my remarks, I approve thoroughly of what the President has done in changing the course of the war. President Johnson's policy was to raise the ante. President Nixon recognized the fallacy of this, the great wrong in it, and changed the course of the war; and I think history will show that it was probably his greatest contribution as President of the United States. I applaud thi..

Where I differ with him, as I point out—and precisely the point of my difference with him—is that he has said that the continuation of the withdrawal of our troops must depend upon a corresponding increase in the South Vietnamese ability to defend themselves. This places the initiative on the South Vietnamese. It gives it to them instead of to us.

So long as, for example, under President Johnson we were doing the bulk of the fighting, the great bulk of the fighting, and were putting billions of dollars into their economy just to keep them alive—and literally hundreds of South Vietnamese were getting rich in the process, while our men were dying—they never would make any effort to change the situation. I must say that this problem was compounded by the failure of our military to the South Vietnamese at that time. I thoroughly agree with Secretary Laird's appraisal when he came back after his first trip abroad, after his appointment, and said that he was appalled at the condition of the so-called military forces in South Vietnam.

Much has been done in the right direction, but much has not been done. The time we are looking forward to now is that when the completion of the withdrawal of 150,000 troops, which the President has scheduled, has taken place and the condition that we will face at that time.

It is my sincere judgment that if we say we are going so long as they improve—but do not fix a definite, final date—they will never make the final hard decisions which will make them capable of defending themselves, whether it is now or in 6,000 years. That is why I think the fixing of a definite date is important.

Perhaps the amendment's date is too far in the future. Perhaps the President can get us out safely and without leaving chaos in our wake before that time. If so, nothing in the amendment prevents that. So the flexibility of shortening the process still exists. If, on the other hand, the time period is too short, then the President can come to Congress and to the country and get an extension for whatever time is reasonable. But within the context that we are not going to continue there indefinitely, as many pronouncements from South Vietnam suggest we may have to, unless the South Vietnamese change their thinking—and I do not think they have changed it—we may have to be there indefinitely, with the kind of support that will keep us involved and that will prevent them from taking the final steps necessary to develop an independent nation.

It may be that inevitably there will be a contest in Southeast Asia after we leave. We cannot prevent that. I think it is very possible that there will be some sort of internal wars going on.

What I am concerned about is that nothing that we have done, or do, should lead to making those wars more difficult, more horrible than they otherwise would have been.

We have taken on a responsibility. I am not one of those who say that we can just pull out. We did take on a responsibility for the lives of millions of people in that part of the world, and many thousands of American men have lost their lives in carrying out this country's mission, and I honor them for that.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. CASE. Will the Senator yield me 2 additional minutes?

Mr. HATFIELD. I yield 2 additional minutes to the Senator from New Jersey.

Mr. CASE. I say that what they have done has not been useless or in vain. But I do say that the time has come for a turn, that Congress has a role here, and that I think this amendment, in its present form provides us an opportunity to exercise that role in a wholly responsible way.

Mr. DOLE. Mr. President, will the Senator yield briefly?

Mr. CASE. I yield.

Mr. DOLE. Let me say at the outset that there is a very narrow difference of opinion with reference to my views and those of the distinguished Senator from New Jersey. I, too, believe that years ago there should have been more effort made to train the ARVN forces so that they might take over the battle. It is unfortunate that only in the last days under Secretary of Defense Clifford and President Johnson and now under President Nixon and Secretary Laird, this program has been accelerated. But I cannot believe that we strengthen our position by announcing in advance a withdrawal date.

Every Member of this body is committed to peace. Every Member of this body wants the war to end as quickly as possible. Certainly, the President holds that view. The Secretary of Defense and the Secretary of State have indicated that by June 1971, all combat forces will be out.

Thus, it appears to me that we are on the right course without any definite date being fixed.

I listened to the Senator's remarks with reference to the negotiations but

feel that we undercut whatever effectiveness David Bruce might have by telling the enemy in advance that we will get out in advance regardless, no later than March 1, 1972. Otherwise, we are in basic agreement.

Mr. CASE. I thank the Senator very much for, at least, trying to make my thoughts even more clear than I may have been able to do in my prepared remarks. The question is a narrow one. But it is a significant one.

The only further thing I should like to say, is that we need to do more than just bring them up to the mark militarily. We also must make the Vietnamese Government want to make itself into a strong representative government with broad enough based policies so that it will have a reasonable opportunity to attract the support of its people.

Mr. HATFIELD. Mr. President, I am very grateful to the Senator from New Jersey for his fine presentation this morning on this amendment. He serves with great distinction on the Committee on Foreign Relations and brings to bear on the subject that background, experience, and perception.

I am also grateful to the Senator from Kansas (Mr. DOLE) for his assist in bringing out some of the points we are making as part of our presentation. This is part of the responsibility of the Senate to focus and sharpen the points of differences which exist. If the Senator from Kansas wishes additional time, we certainly will be happy to yield it to him, to permit this colloquy to continue on any occasion.

Mr. President, at this time I yield 15 minutes to one of the cosponsors of the amendment to end the war, a man whom I have known for some time and has a great background and understanding of the great issues of the debate now engaged in, the very distinguished Senator from California (Mr. CRANSTON).

The PRESIDING OFFICER (Mr. YOUNG of Ohio). The Senator from California is recognized for 15 minutes.

Mr. McGOVERN. Mr. President, will the Senator from Oregon yield me 1 minute?

Mr. HATFIELD. I am delighted to yield 1 minute to the distinguished sponsor of the amendment.

Mr. McGOVERN. I wish to take this time to commend the Senator from New Jersey (Mr. CASE) for the statement he has made here today. For many years he has been one of the most thoughtful Members of the Senate in his consideration of the issues which face us in Southeast Asia. His support for this amendment and also the contribution he made in helping to draft the language which would be more acceptable to Members of the Senate is most important. I wanted to express my deep appreciation to the Senator for what he has done. I thank the Senator from Oregon for yielding me this time.

Mr. CRANSTON. Forty hours ago, yet another American died a violent death in America attributable both, I think, directly and indirectly, to the violence in Vietnam. That man was Ruben Salazar, a man of vast accomplishment, a man of even vaster promise. His loss is an utterly tragic one—I think immeasurable. I am deeply shocked and saddened by the news of the tragic death of Ruben Salazar. He was a peaceful and compassionate man who dedicated his life to the eradiction of poverty, injustice, prejudice, and ignorance. It was the occasion of a gathering called the Chicago moratorium against the Vietnamese war that he was covering as a newsman that led to the circumstances that caused his death. The Chicago moratorium was led by a man who did all he could to assure that it would be a peaceful demonstration against the violence in Vietnam. Its leaders were motivated primarily by the fact that an unfairly high proportion of those who bear the burden of combat in Vietnam and who have died or have been wounded are Americans of Mexican extraction. Somewhere on the periphery of the gathering some violence commenced and in the course of that violence Ruben Salazar was killed, although of course he was not engaging in the violence in any way.

Like many of us, Ruben Salazar was outraged by the senseless war both at home and in Southeast Asia. Violence has divided us, it has pitted us against each other, resulting in needless and tragic deaths.

The loss of Ruben Salazar is incalculable. His wife has lost a husband. His three children have lost their father. The entire community has been deprived of one of its most forceful and effective spokesmen. They have lost the wisdom, guidance, understanding of a compassionate man who never ceased to remind us of the problems which remain unfinished.

I do not cite the killing of Ruben Salazar as an argument to end the war. The killing of Ruben Salazar does symbolize for me and for so many who respected and loved him, what the Vietnamese war is doing to our beloved country.

Quite regardless of the differences among us on how to end this tragic war and our bloody involvement in it, I wanted to eulogize this great, fallen American in my first moments on the Senate floor after his tragic death. I thought there could be no more fitting context to refer to it than in this debate on the pending amendment.

Now, Mr. President, to turn specifically to the pending amendment before the Senate, let me first say that to one degree or another, each of us in this Chamber is disheartened by the prolonged war in Indochina.

Certainly, we are all anxious to end our involvement in the fighting there.

We disagree only on how best to bring this about.

I deeply hope that our debate on this amendment, however spirited it may be, does not increase the divisions in the Nation which have erupted in large measure because of the war in Vietnam.

It is the responsibility of the Congress, no less than that of the White House, to help pull this country back together again.

I believe President Nixon is sincere in wanting to end our military involvement in Vietnam.

He clearly is trying: The troop withdrawals he has made in the past, and the withdrawals he has announced for the immediate future, prove that.

This amendment impugns neither the President's motives nor his integrity.

Supporters of this amendment fear, however, that the policy of Vietnamization just will not work.

The President, of course, will stick to his word and reduce our forces to 280,000 men by next spring.

But what will happen then?

Will Vietnamization permit us to withdraw those remaining men safely and soon?

I gravely doubt that it can.

Vietnamization strikes me as little more than a new name for an old, unworkable policy followed by the Johnson administration.

It is based on the false assumption that the United States and the Saigon government can, by the continued application of military force, wrest from North Vietnam the political concessions which, in the President's words, will enable us to "Win the Peace."

While we have insisted through the years that we will bargain only from "a position of strength," we mistakenly continue to assume that the other side will be willing to negotiate from a position of weakness.

And our policy has been to pound them into this state of weakness.

But we were unable to succeed in doing this when we had 520,000 troops in the field and our planes were bombing North Vietnam around the clock.

If we could not succeed in wringing concessions from them then, how can we reasonably hope to do so now that we are withdrawing our ground combat troops and having them replaced by South Vietnamese?

If the best trained, best led, best equipped fighting men in the world—the American Army, Navy, and Air Force—could not "win the peace" in Vietnam, how can we expect poorly led, poorly trained, and poorly motivated South Vietnamese troops to perform this miracle?

The consequences of Vietnamization are beginning to be apparent.

By trying to win the war, we have succeeded only in expanding the war.

Our planes are engaged in combat missions over Cambodia.

Our enemies are at the gates of Phnom Penh, and they are showing ominous signs of increased activity in Laos.

Vietnamization is turning all of Indochina into a single battlefield.

Meanwhile back in Vietnam, the Saigon government continues to conduct its bad business as usual.

Anti-Communist political opponents of the regime are still being locked up.

Corruption and graft rage throughout all levels of society.

And 30 percent of South Vietnamese combat troops continue to desert every year.

There is a distressing parallel between the Saigon regime and the Chinese army of Chiang Kai-shek in the waning days of World War II.

In South Vietnam today, as in China in 1944, thousands of phantom soldiers—men who have deserted or who have died in battle—continue to pad the army rolls.

Their commanders carry their names

on active duty rosters, then pocket their salaries and sell their supplies.

The military arm of the Saigon regime is rotten from top to bottom.

We are repeating in Vietnam the same mistakes we made in China in 1944 by unwisely backing a corrupt military corps.

Worse yet, the economic and social fabric of South Vietnam has been torn apart over the past few years.

Millions of peaceful peasants have been turned into homeless refugees.

Inflation is rampant.

The cities have been turned into steaming cesspools of urban rot.

A rural, agriculture-based people have been transformed into a culturally disoriented people largely dependent on massive inflows of American aid and military might to keep from slipping into anarchy and starvation.

Sad to say, our efforts, no matter how well-intentioned, have turned a closely knit nation of small farmers into a rootless mass of camp followers.

Vietnamization, with its hope of winning political concessions through military means, is a fragile reed rooted in political quicksand.

Vietnamization is built upon a Saigon government that is a repressive, military dictatorship, ruling a corrupt and undependable army and a society of badly abused and thoroughly confused and dependent people.

Vietnamization, it seems to me, is a prescription for disaster—both for us and for the Vietnamese people we are supposed to be defending.

For America, the potential disaster in Vietnamization lies in the matter of the safety of our troops.

The President has made much of his concern for the safety of our men, and surely all Americans consider that our major, overriding concern.

Yet Vietnamization hides within it a possibly fatal flaw in this very respect.

As American ground combat forces are withdrawn, the men left behind will become more vulnerable to enemy attack.

Fewer in number, they will possess less firepower and less mobility.

But what is worse, they increasingly will have to depend on South Vietnamese forces for their protection.

The safety of our young men thus will be resting primarily on an army with a high desertion rate, with no real commitment to their cause, with little feeling of allegiance to their generals in Saigon, and even less feeling of allegiance to us.

There have been increasing reports of anti-American incidents in Vietnam.

American troops have been surrounded, hooted, and jeered at by South Vietnamese civilians in cities firmly under control of the Saigon government.

Half of the American deaths in Vietnam have resulted not from engagements with front line Vietcong or North Vietnamese troops, but from mines, booby traps, and sniper fire from second and third level Vietcong cadres, and their peasant sympathizers in the countryside who hate the Communists of the North, who hate the dictators of the South, and who hate the foreign intruders—first the Japanese, then the French, and now us.

Time after time, Vietnamese villagers have sat quietly by watching our boys walk into minefields and booby traps which they knew were there, and in many cases had planted themselves.

We have never announced our intention to withdraw all our forces from Vietnam.

This Nation has never officially declared that it does, indeed, ever intend to withdraw entirely from Vietnam.

Our enemies feel they cannot trust us.

And their uncertainty over our real aims and ultimate intentions about withdrawal can only heighten this distrust.

As we reduce our forces, we become a tempting target for attack.

The Vietcong and the North Vietnamese could hit our remaining troops very hard.

And who will be there to protect them?

We cannot be sure who the South Vietnamese will shoot at when they see us leaving for home and the major burden of the fighting falls on their shoulders.

We cannot even be sure they will stay around long enough to shoot at all.

Yet it is this very undependable ally on whom the very success of Vietnamization depends.

And it is this very unreliable ally on whom we will be relying to protect our men.

Mr. President, we have already asked much of the men we have sent into combat in Vietnam.

But this, I submit, is asking too much.

What would we do if the enemy were to achieve a breakthrough and imminently endanger our men?

We would not be able to rush reinforcements back in fast enough to stop them.

We would have to choose: Either a massive, amphibious retreat by sea, or a massive retaliatory strike, involving perhaps the use of tactical nuclear weapons.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HATFIELD. Mr. President, I yield an additional 6 minutes to the Senator from California.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. This, then is our probable future under Vietnamization: A choice between a bloody Asian version of Dunkirk and a bigger, bloodier reescalated war culminating in a nuclear strike.

The present policy of slow, erratic withdrawals of some American troops, while at the same time leaving the enemy uncertain as to when, if ever, we will withdraw all of them, is an unwise, militarily dangerous course.

And we compound the military risk by depending on the South Vietnamese to "protect our rear."

I fear that we are setting up a situation in which the introduction of nuclear weapons may become inescapable.

If that were to happen, I am convinced that the Vietcong and the North Vietnamese would turn to Red China for intervention and we would then face the prospect of the huge Asian land war, and possible nuclear holocaust, we have luckily avoided till now.

Experienced professional military officers, including West Point graduates who have served in Vietnam, have outlined this very scenario for me.

This is no nightmare dreamed up by a civilian; it is a very real military probability which many of our military men foresee and dread.

I believe this amendment offers the only safe way to end our military involvement in Indochina and improve the prospects for peace in the area.

As former Defense Secretary Clark Clifford has put it:

> Let's set a timetable, stick to it, and get out.

This amendment sets a date for the withdrawal of all our troops.

It keeps the safety of our men in our hands, rather than putting it in the hands of the South Vietnamese.

It assures the Vietcong and the North Vietnamese that we are committed to withdrawal by a specific, publicly announced date, thus eliminating their uncertainty and reducing the incentives for an attack against our remaining men.

Thus the amendment would enable us to effect our withdrawal in a safe, orderly, and systematic manner.

As Arthur L. Karp and Comdr. G. E. Everly, U.S. Navy retired, pointed out in their article on "The Safety of American Troops While Withdrawing from South Vietnam":

> If withdrawal is viewed in purely military terms, a systematic, planned military withdrawal is the safest way to disengage.
>
> Any other method, however attractive on the basis of political considerations, will impose greater military risks and a number of casualties that would depend on South Vietnamese performance.
>
> Once fully committed to other than a systematic military withdrawal, the U.S. will gradually lose control of the situation.
>
> A failure on the part of the South Vietnamese forces could confront the U.S. with the choice between very high casualties or re-entry into the country with a rescue force.
>
> A straightforward military withdrawal runs no such risks.

Equally important as its effects on our enemies, a set timetable would have a salutary effect on our so-called friends.

The amendment would serve notice on the Thieu-Ky regime that its days are numbered unless it broadens its political base and pushes ahead with land reform and democratic changes.

I am not talking about forcing a coalition government.

I am talking about bringing into the government non-Communist moderates and nationalists who are kept out of power, when they are not thrown into jail.

Just as the South Vietnamese military have no incentive for taking over the fighting as long as we remain, so the South Vietnamese politicians have no incentive for democratizing the government and bringing in opposing views.

As long as our tanks and planes are there, they feel safely ensconced in office.

There is real hope for persuading the enemy to negotiate a peace in the alternative offered by this amendment.

A strong, viable democratic government in Saigon, which is not alined with the "hated foreigner" and is making real strides in land reform, would have a wide

popular appeal and would erode Communist support.

This then would be a government which the North Vietnamese would have to negotiate with seriously.

For these reasons I strongly support this amendment. The Senate, as well as the President, has a responsibility to make its position clear and to share equally its constitutional duty in helping to bring this unhappy war to an end.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. CRANSTON. I am delighted to yield to the Senator from Kansas.

Mr. DOLE. On the issue, which I discussed last week with the Senator from Oregon on who should determine the time of withdrawal, it occurs to me that withdrawal is certainly the desire of the President, everyone in this body, and the other body. The issue resolves itself as to who should have the final determination. Should it be the 535 Members of Congress or the President of the United States?

As the Senator knows, the President is the Commander in Chief, whoever he might be. Congress has the right to declare war. In the early days, when they were discussing the Constitution, at one time they said that Congress should have the right to make war, and after some discussion they limited it to the right to declare war. It goes without saying that the President has the right to negotiate treaties ratified by the Senate.

The PRESIDING OFFICER. The time of the Senator from California has expired.

Mr. McGOVERN. Mr. President, I yield 5 minutes to the Senator from California.

The PRESIDING OFFICER. The Senator may proceed.

Mr. DOLE. So my basic question is, particularly in view of the President's successes in deescalating the war and reducing the troop level by 120,000 and it will be another 150,000 by next May 1—and all of our combat troops may be out by June 1, 1971—why should we now impose our restrictions, of the Senate and the Congress, on a President who is having some success?

Second, how does the so-called end the war amendment—which I designate "lose the peace" amendment—differ from the Vietnamization program, with one exception—that there is a final terminal date? How does it differ from the Vietnamization program? Under the amendment we would be at war for 18 months more and there would be more casualties and more men killed. I ask the Senator if there is not a very narrow distinction?

Mr. CRANSTON. First, Mr. President, I suggest the Senator from Kansas take another look at the Constitution. Rather incredibly he has overlooked a fundamental clause in that Constitution which provides that Congress shall provide funds for the Armed Forces. This is the one clause where a time limit was placed because of the urgent nature of this particular power. It was limited to 2-year appropriations at the most so that every 2 years Congress shall be required, if it is lax in the exercise of its responsibility, to review whether or not Armed Forces should continue in their present use and strength under the command of the President. That is a vitally important responsibility that this amendment would seek to remind Congress to once again establish. We are seeking through this amendment to share responsibility with the President. We are not dictating to him.

The revised amendment carefully provides also for the President to extend the date and he could have a further extension if he feels the safety of our troops—which is uppermost in our minds and the mind of the President—is jeopardized. That would be the key factor in determining what would be the wisest course in Vietnam.

Turning to the Senator's other question, I should say that this amendment does seek to set a time limit for our engagement in South Vietnam. It is our belief that it will reduce the bloodshed, that it will reduce the casualties, and that it will lead hopefully to an end of the war, so far as our participation, and perhaps to the war itself, well in advance of the fixed date set in the amendment.

It is our belief there are many, many reasons why the other side will be far more likely to negotiate an end to the conflict and our involvement in that conflict once the date has been set than under the present open-ended situation which, as I outlined in my brief, opens the door to more bloodshed of Americans than the alternative we are offering.

Mr. DOLE. The Senator agrees that under the amendment we would continue the war for 18 months. The President could come before Congress and continue it some time after that. If a situation arose where the President could not or did not withdraw within the 18 months, I assume Congress would go along with the situation.

The Senator did not state how he views this amendment to be different from the Vietnamization program that has been successful.

Mr. CRANSTON. We give notice to the South Vietnamese that we are not there forever; that the time has come for them to stand up on their own feet. As long as we do not serve notice to them that we are on our way out totally on a timetable why should they share the burden when we are prepared to do so much of the bleeding and dying for a government that we have propped up? Why should they make reforms like to solidify South Vietnam and the people of South Vietnam and raise them as a nation capable of standing on their feet with the capability of defending the sovereignty of the south against those who would overthrow that government by violence?

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOLE. Mr. President, will the Senator from Mississippi yield to me for 5 minutes?

Mr. STENNIS. I yield 5 minutes to the Senator from Kansas.

The PRESIDING OFFICER. The Senator from Kansas is recognized.

Mr. DOLE. I would like to continue the discussion if it is satisfactory to the Senator from California.

Not only do we serve notice on South Vietnam, which seems to be of great concern to the Senator from California, but we serve notice on the North Vietnamese and the Vietcong, who are the enemy in Southeast Asia. We tell them in advance that in the event this amendment is agreed to without change, that by March 1, 1972, we are going to vacate South Vietnam or Indochina. It goes beyond that. It seems to me what we are saying, in effect, to David Bruce, who hopefully will have some success in Paris, is that there is no need to negotiate. Why should the enemy negotiate or why should any one negotiate if they know that in 6 months, or 18 months they are going to achieve their objective and that we are going to walk off and leave 17 million Vietnamese, with whom we are rightfully or wrongfully engaged in a war? Why not move the time up until today, or make it 30 days or 60 days from now or as quickly as we can withdraw?

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr. CRANSTON. It is, of course, recognized that adoption of this amendment would serve notice to the North as well as to the South of our intention to withdraw on a certain timetable. It is our belief that this is far more likely than any present circumstance to lead to negotiations with the North, where they would be more willing to negotiate more rapid withdrawal of our troops under safe conditions so that none of them would be assaulted by the other side. In the absence of this, there is great danger that the enemy will decide to assault us when we are down to a reduced strength and we are depending more on the South Vietnamese for protection. when we would not be in a position to protect our own men to the same degree as when we had larger forces there.

When the South also begins to broaden its base, which will lead to strengthening itself, I believe then, at long last, the situation would develop where it would be to their interest to negotiate with the North, and they could get on with agreements over the border, which has for so long been the cause of the provocation which has led the Vietcong and the North to carry their war on with the South Vietnamese Government.

I would like to ask the Senator if he sees any sign, any hint, any token, that the present situation would lead to successful negotiations and to a cessation of conditions which existed first under the Chinese, then under the French, and now under us, where, decade after decade. they have been unwilling to negotiate. I see no sign of their willingness to negotiate in any serious way and have a conclusion of the violence.

Mr. DOLE. There is some sign, as the enemy's chief negotiator has returned to Paris. The criticism had been that we needed a top negotiator. The Nixon administration appointed David Bruce, an outstanding American of great ability and great competence. So there is that hope, just as there is in the Mideast, for some negotiated peace.

I happen to believe that the Vietcong and the North Vietnamese are at a very low ebb right now. I happen to believe that they are looking for a solution, not a military victory but a negotiated way to end the war, which would be satisfactory. It just appears that we say to

the enemy, "Stick around. Stay around. We are going to leave here by a time certain."

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOLE. May I have 5 additional minutes?

Mr. STENNIS. Mr. President, the Senator from West Virginia (Mr. BYRD) has come in on an emergency matter. I yield to him now. Has the Senator finished his colloquy?

Mr. DOLE. May I have just 2 minutes?

Mr. STENNIS. I yield 2 minutes gladly to the Senator from Kansas.

Mr. DOLE. What we have seen is a complete metamorphosis. The original advocate of end the war was the junior Senator from New York (Mr. GOODELL). He suggested a withdrawal by December 1, 1970. Then we had a resolution by the junior Senator from South Dakota and other Senators that suggested December 31, 1970. Then we had another resolution suggesting April 30, 1971. Then another resolution suggested December 31, 1971. Then another resolution suggested that if we are not out by December 31, 1971, we will give the President 2 additional months. Each additional change apparently meant more votes in the Senate for the so-called end the war amendment.

I am not certain how many votes the Senators believed they could attract by this proposal. I am not sure whether the Senator from South Dakota considered the fate of the South Vietnamese or the fate of Americans or primarily how many votes would be obtained in the Senate. So each time there was a new retreat. Each time there was a further step backward in an attempt to attract votes. Now we have reached the final version, the fifth or sixth version, of the so-called end the war amendment.

What is the amendment before the Senate? I am not certain which amendment it is that is before us——

The PRESIDING OFFICER. The time of the Senator has again expired.

Mr. CRANSTON. Mr. President, may I have 30 seconds?

Mr. STENNIS. I yield.

Mr. CRANSTON. I am sure the Senator from Kansas knows we are presently debating the amended version of the amendment to end the war. That is the pending business in the Senate.

Mr. STENNIS. Mr. President, I yield 5 minutes to the Senator from West Virginia.

Mr. BYRD of West Virginia. Mr. President, I want—as much as anyone else—to see American fighting men brought home from Vietnam.

But wishful thinking will not get us out of Vietnam, and we must face up to reality—whether we like it or not.

The so-called end the war amendment sounds good. We all want to see an end to the war. But I shall vote against the amendment. Why?

In the first place, it publicly states a deadline—December 31, 1971—for withdrawal of American troops from Vietnam. I would like to see American troops out of Vietnam—even before December 31, 1971—and I am for having, as a part of our own plans, a tentative timetable toward which we should aim.

But to enact legislation publicly announcing an arbitrary date for withdrawal would indubitably undermine our position at the peace table.

If Hanoi knows we will be out of Vietnam by a certain guaranteed date, why should she make any concessions? The enemy need only to sit tight until the announced deadline, and then take over.

Second, the amendment could, in effect, hamper the President in the protection of American forces in Vietnam, in that the amendment would substitute the judgment of 535 Members of Congress for that of the President, as Commander in Chief, as to what constitutes a "clear and present danger" to our troops for any period exceeding 60 days beyond December 31, 1971.

Moreover, the amendment could have an effect opposite to that which is intended on its face. Instead of ending the war, it could, in reality, create a situation which would endanger our remaining forces, and thus prolong our engagement.

Finally, the President is committed to a policy of gradual withdrawal, and he has already reduced our forces there significantly. Additionally, he has indicated that, by April 30 of next year, he will have the troop level down to a figure as low as or even below what the amendment would require.

With all due respect, Mr. President, to the sponsors of the amendment, and recognizing their good intentions, I must, nevertheless, oppose the amendment. I think, if enacted, it would be unworkable; it would prove to be a serious hindrance to negotiations at the peace talks; it would tie the hands of the President in his efforts to bring about an orderly and gradual withdrawal without rewarding Communist aggression, and it might impede rather than hasten that withdrawal; and it could result in jeopardy to our own troops in Vietnam.

In view of these and other objections to the amendment, I, therefore, shall vote against it when my name is called on tomorrow.

Mr. McGOVERN. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. McGOVERN. The Senator from West Virginia is a student of the Constitution and of the responsibilities of both the Congress and the President in issues of war and peace. I wonder if he is fully aware, in view of the anxiety he has just expressed about restricting the powers of the President, that there is nothing in this amendment that would prevent the President from exercising full tactical command power over American forces up until the time of their withdrawal?

The amendment does set an announced withdrawal date at the end of next year, with the proviso that the President, in an emergency situation, could extend that on his own authority, and that if he wanted another extension, he would have to come back to Congress.

Does not the Senator feel that is really the way that the Constitution intended that the powers of war be divided between the President and Congress, with Congress setting the limits, that is, fixing the time, defining the scope of American military operations abroad, and giving the President full tactical authority, as long as those troops are in battle, to order them as he sees fit?

I do not see where the amendment disrupts that constitutional balance at all.

Mr. BYRD of West Virginia. Mr. President, if I may respond to the Senator, I do think the war powers are to be shared between Congress and the President. But we are in a war in Vietnam. I do not think that Congress can or should set a timetable, because I think, as I have stated, that this would really undermine our negotiating position at the peace table.

What I really had reference to when I indicated that the amendment might put in jeopardy our troops, and where I think we may be going too far in that particular respect, lies in the provision that the President would have to come back to Congress after 60 days beyond the December 31, 1971, deadline.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. BYRD of West Virginia. Will the Senator from Mississippi yield me 1 more minute?

Mr. STENNIS. I am glad to yield it to the Senator.

Mr. BYRD of West Virginia. To do this would substitute, in my opinion, the 535 Members of Congress for the one position of Commander in Chief under the Constitution, with respect to a decision which I think should be the decision of the Commander in Chief in that particular emergency.

Mr. McGOVERN. I can only say to the Senator that I find that an interesting doctrine, that he would read the Constitution in that way, that the judgment of one man is so much to be preferred to the judgment of 535 that simply saying that ought to resolve the issue.

That is not my interpretation of the Constitution, if I may say so respectfully to the Senator.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. I yield the Senator from West Virginia 2 more minutes.

Mr. McGOVERN. I would read it that we, as the 535 Members of Congress, do have that responsibility, to make that judgment as to whether the presence of American forces should be continued on any particular military front. If the decision is made that they should be, then, of course, it is up to the President to command those forces for as long as Congress permits them to stay in battle. But I do respectfully urge the Senator to look at that constitutional aspect of the issue, because to me it is quite clear that we cannot give up that obligation, which is ours, to make these judgments about the commitment of American forces abroad, and that the President's power is limited only to commanding those forces in those areas of the world where Congress has sent them, and for whatever time we feel it is in our national interest to keep them there.

Mr. BYRD of West Virginia. Mr.

President, the Constitution, in article I, section 8, clauses 11, 12, 13, 14, 15, 16, and 18 sets forth the war powers of Congress. But it specifically states in article II, section 2, that the President shall be the Commander in Chief, and I think the Senator's amendment interposes the legislative branch into the constitutional responsibilities and powers of the President as they are derived from the Constitution; because I think the particular decision he is talking about now would be one for the President of the United States to make, depending upon what the circumstances are at the time.

The President is to determine the tactical decisions. It seems to me that for us to draw a line and say, "This far and no farther" in a situation in which our troops are already engaged, in a situation in which the President has already enunciated and is implementing a policy of orderly withdrawal and is committed to a policy of continued withdrawal, would be going too far. I think we would be tying the President's hands and contravening the President's powers under the Constitution. The authors of the Constitution decided there would be one Commander in Chief, the President of the United States. I think this amendment injects Congress into that area wherein the President has the clear authority under the Constitution to act.

Mr. McGOVERN. I have to disagree with the Senator. He makes his point, but I cannot see where there is any invasion of the Commander in Chief's function by Congress in its function of exercising judgment as to how long a particular military operation is in our national interest.

I think it is some measure of how far we have fallen into the view that the President should have a free hand in this area that the Senator is disturbed at the notion that Congress, even though it is 535 men—which, as far as I am concerned, increases its collective wisdom rather than decreases it—ought to have the responsibility and the authority to make a judgment on this matter.

Mr. BYRD of West Virginia. Mr. President, I think there is the added factor of practicality. I think it would be impracticable, in a situation which amounts to an emergency, for the President—I am talking about the situation which might come about 60 days beyond the expiration date of December 31, 1971—to have to come back to Congress and get the approval of Congress to act in a situation where the lives of American troops may be in jeopardy.

The Senator knows how long we debated the Cooper-Church amendment. He knows how long we have been on this bill. I would hesitate to think that Congress would pass a law that might tie the hands of the President in a dire situation 60 days beyond the scheduled termination date of December 31, 1971, when the lives of our troops might be at stake. So I think it is impracticable.

Not only do I think there are serious constitutional questions, but I think it is impracticable to legislate in this way, and it is certainly impractical to expect the President to carry out his duties as Commander in Chief under such a restriction.

Mr. McGOVERN. Mr. President, I can only say to the Senator, in response—

Mr. BYRD of West Virginia. May I say I respect the Senator; we just disagree.

Mr. McGOVERN. In reply to the Senator's last point, I would say that the Senator from New York (Mr. JAVITS) made the statement, in debate with Senator STENNIS, Senator TOWER, and myself on one of the television networks on Saturday, that perhaps an antifilibuster clause could be attached here, so that we could prevent that one possible emergency situation the Senator is talking about.

We do have written into this amendment language that would give the President the authority, during that 60-day grace period, to come to Congress and say, "Under these circumstances, I think additional time is necessary."

Then, if Congress concurred, the President would be free to assume his command function and direct the tactical operations of our forces.

It seems to me that is every precaution that is necessary, but if the Senator from West Virginia would want to suggest an antifilibuster clause in the amendment, perhaps we could consider that.

Mr. BYRD of West Virginia. Mr. President, I appreciate the Senator's suggestion with respect to an antifilibuster clause, and I recognize that such language could be written. I do not question that that could be done; there are precedents for that.

Mr. McGOVERN. Yes. For example, reorganization.

Mr. BYRD of West Virginia. In reorganization plans, and so on. But I think that overall, the amendment has too many other failings. Even if this obstacle were circumvented, I think the amendment has too many failings. I have stated my position with respect to its shortcomings.

I respect the Senator for what he is trying to do and I applaud his objective; however, I must respectfully disagree with the approach he is taking in this instance.

Mr. McGOVERN. I thank the Senator for yielding.

Mr. STENNIS. Mr. President, I now yield myself 20 minutes, or so much thereof as I may use, in opposition to the amendment.

Mr. President, we have a good faith effort here by very fine Members of this body to bring into focus this issue. I have talked with the Senator from South Dakota about this many times, and I accept his thought that he thinks he is strengthening the hand of the President of the United States. I do not believe that that is the import of his amendment. I believe it is just the opposite. But I am sure he believes that, and that neither he nor the Senator from Oregon, would be sponsoring this thing unless they thought it was best.

Mr. President, I believe that this is the certain way, to set a definite time, on a certain date, we are going to get out, regardless—you will be through with us and rid of us, too, if you will just wait this thing out. That is exactly what I think they will do—sit and wait. I want to make some preliminary remarks leading up to that thought.

Mr. President, thousands of words have been spoken on the McGovern-Hatfield amendment which is known as the so-called end the war amendment. This amendment in its present form would limit the use of funds in such a manner that the troop level in Vietnam would be no more than 280,000 after April 30, 1971, and thereafter funds could be expended only for the systematic withdrawal of all our Armed Forces by December 31, 1971, with the proviso that the President, in his own right, could suspend the December 31 date by 60 days; and, further, the President must within 10 days after any suspension submit for congressional approval any recommendation for a new date of termination. The amendment would permit the use of funds in connection with the release of prisoners of war and provision for the asylum of Vietnamese. I should note, also, that this limitation of funds applies to the "activities of American Armed Forces in and over Indochina."

Mr. President, it is my firm conviction that this amendment involves only one basic issue—the question of how we shall conduct our withdrawal from Vietnam; not shall we do it, but how shall we do it? There is no doubt that the goal of both the President and Congress is the same—that we shall wind down this war. The direction or trend of American combat activity is irreversible. It will be reduced on a systematic and orderly basis. The basic issue, therefore, is the wisdom of whether we should legislate the end of this war through the denial of funds and force the withdrawal of our forces on a definite date or whether we should provide the President as Commander in Chief with the necessary degree of discretion which will permit our withdrawal on an orderly and honorable basis.

Mr. McGOVERN. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. McGOVERN. Mr. President, I want to commend the Senator from Mississippi for drawing the issue precisely as it ought to be drawn. When he said that the basic issue is "how shall we conduct our withdrawal from Vietnam," I think he phrased the question we are debating here as well as it can be stated. Regardless of how one feels about the answer to that question, that is the issue.

The Senator has said on several occasions that he regards this amendment as a perfectly constitutional amendment, and I appreciate that. I do not think the issue is the question of whether this amendment is constitutional or not, because it is clear that Congress does have the power of the purse; that we can cut off funds for any military operation at any time we see fit.

So I rise not to interrupt the Senator's speech but simply to commend him for the fairness and the wisdom he demonstrates in drawing the issue as cleanly and as sharply as he can in a debate on how we can best disengage from this war.

Mr. STENNIS. I thank the Senator very genuinely. I think it is the duty of all of us to get at the issue the best we can. In saying that the basic issue is

"how," I do not try to discount all those who argue about the powers of a Commander in Chief on the battlefield. I believe in that doctrine, but I believe the overall question here now is the matter of how we are going to end it.

I include in my thoughts on "how," the proposition that we are not willing just to withdraw, just to leave in any way. I want to make that clear. I am not advocating that. I am sure the Senator understands.

Mr. McGOVERN. Yes. I did not want to make the Senator's argument for him, to try to put words in his mouth, but simply to say that I do think that what we are arguing about here or should be discussing is the question the Senator has raised. What is in our national interest? How can we best wind down this war and disengage with a minimum of danger to our troops, keeping in proper balance the Commander in Chief function of the President and the power of the purse of Congress? How can we best maintain our credibility as a nation in the world and our responsibilities to our own people?

All those things really go back, I think, to the question the Senator has raised as to how we can best wind down the war and disengage and bring it to an end.

Mr. STENNIS. I thank the Senator very much. I am going to say something against a legislative termination only, but I am going to say again, too, that I think the Senator's amendment is directly right on the button of the Constitution, that it is a limitation on appropriated funds, and only Congress has the power to appropriate money.

My opposition to this amendment does not mean that my desire to end the war and return all of our fighting men from Southeast Asia is less than that of any other Member of the Senate. I do not believe, however, that we should cut and run from Vietnam by a legislative termination date which will broadcast to the enemy and the world the precise nature of our plans. When we leave South Vietnam—and I hope this will be soon—I believe we should leave with the American flag flying proudly and not dragged in a disorderly retreat.

The adoption of this amendment would be interpreted around the world as the beginning of a disorganized retreat under the mandate of the legislative body.

I would observe, Mr. President, that the pending amendment is completely constitutional. There is not the slightest doubt that Congress has complete authority to limit the use of funds for this or any other war, or for that matter, on any other activity regardless of whether it is related to the Department of Defense.

Mr. President, we are under a mandate to provide for the national security, I know, in 2-year intervals. We have to support the Army and the Navy. But I do not think that language is broad enough to mandate the situation. So I think Congress has the duty and responsibility, and I have urged many times on the floor of the Senate that we pass these appropriations. Congress has the responsibility for doing that, and can put limitations on it. The clear and unequivocal constitutional authority of the Congress over the "power of the purse" removes any doubt as to the legality of this amendment. The only issue concerns its wisdom.

Let me briefly outline some of the issues raised by this proposal. This amendment extends notice in advance to the enemy as to our precise intentions. I can think of no more difficult position in which this proposal would place the President and the country. I say "the" President. I am not talking about Richard Nixon. I am talking about "the" President, whoever he may be at any time. All those who oppose us in Vietnam would have only to sit and wait. This is no way to conduct a systematic withdrawal of a military operation. I believe it is contrary to all known, recognized, and agreed principles of military operations in warfare.

I remember a story told in jest about the captain who had already lost one limb in battle, but he was able to get back to the frontlines, and things were getting so hot for everyone, he told his company, "Well, we will retreat at 2 o'clock but inasmuch as I am lame I will start out a little early even though it is just 1 o'clock."

I do not think we should send word to the enemy that we are starting our retreat irreversibly, and that by a certain date we will be gone.

Our principal objective in South Vietnam is the Vietnamization of the South Vietnamese forces—that is, to furnish them the equipment and training in such a way that they will be capable of defending the country with their own men and resources. Until that is done as part of the present plan, we will be staying there in unknown numbers and taking part to an unknown degree in the fighting. I had grave doubt as to the possible success of this program for a long time. I do not try to describe the long time but I think it will take some time. No one knows exactly. It could be some time or a long time. I think that more time would be required. It is my present belief that the Vietnamization effort will be a success. I believe that much more strongly now than I did at the beginning, even 6 months ago. We must, however, allow a degree of flexibility in order to insure that time will not be so inflexible as to preclude the completion of this vital program.

Let me emphasize, Mr. President, that I do not question the patriotism or sincerity of those who offer this amendment—their unquestioned patriotism, their fine war records, and the outstanding service they have behind them. However, I do question their judgment. To set publicly a day certain for terminating our operations in Vietnam and removing American troops, would only make the situation more uncertain and more dangerous by encouraging our enemies to avoid negotiation and, to the extent possible, to avoid combat until our troops have been withdrawn.

The only thing the enemy would have to do would be to sit down and wait. I do not say that is all they would do. They would sit down and wait in some parts but in others they would terrorize and "guerrillaize" us in many ways and in many places during that time. That is my estimate of their approach as to what it would be basically. They would not be forced to have to meet any timetable. They would just merely wait until we were out of the way.

Under the Nixon doctrine, we are continuing our efforts to help the independent nations of Southeast Asia to choose and shape their own future and are encouraging them to assume the burden of their own defense. I believe that we should continue in this direction and in the pursuit of these aims. I am not advocating that we assist the Cambodian Government or anything like that. I want to make that very clear. But in a general way and in a general direction we should pursue those aims.

I believe that we can rely on President Nixon's promises with respect to our plans in Southeast Asia and with respect to our plans in the Paris negotiations. Until those promises fail to be honored, the President deserves our support in his efforts to bring about genuine negotiations for a just settlement in Southeast Asia.

Mr. President, let no one scoff at the peace negotiations in Paris. I know a little about the heartbreak and the hard work that has gone into that effort over there by the present President and the preceding President. I know the genuineness of the efforts of our men in Paris and I know of the continued rebuffs they have endured. But I believe that, instead of torpedoing the negotiations and putting on a mandate here by the legislative branch, we should support the efforts of our Paris peace negotiators. They are sincere. The executive branch is doing everything it can to bring about results consistent with the predicament we find ourselves in, the honor we must maintain, and the leadership we are forced somewhat, against our will by circumstances, to assume throughout the free world.

Instead of thinking up ways to put a limitation on here, we should be thinking about ways to strengthen the hold of those charged with representing this Nation at the Paris peace negotiations. And who is that? It is our Chief Executive. It makes no difference what his name is. He is the only negotiator we have. He is the only man who can speak for our entire Nation. He is the only President we have. He is the only spokesman we have in all our international affairs, and that includes this war.

All of that is known around the world, of course, however little others may know about our system of government. They know that our President is the Chief Executive of this country and that he speaks for the Government of the United States. He is the one individual chosen by the people of this great Nation to act for them. As he has already declared, he wants to stop this war. I believe that he has shown that he does. I am not here to praise him. But he represents the voice of this Nation in all our international affairs. He was chosen by the people. This war has been one of the most important

things on his mind, as well as on the minds of all the people. He was chosen by them to conduct the war and to negotiate a peace.

The people want a peace they can live with, too, one that will not set a precedent and open the door to worse trouble than we are now in. There is no doubt about that.

I have no doubt about the sentiments of the Senate when the time comes to vote on the pending amendment. By a very clear margin, in my humble judgment, a majority of Senators will not agree to a cut-off date at a certain time. Every Senator wishes to end the war. The great majority of this body realizes what we are up against. They certainly know the system of government they represent and the type of enemy we have in Vietnam, and even though the going is rough, they are willing to "tough it out."

Mr. President, I believe that these efforts would be torpedoed by the adoption of this amendment, and I hope that it will be rejected.

Mr. McGOVERN. Mr. President, I yield myself 3 minutes so that I may respond to the Senator from Mississippi and ask a question.

The PRESIDING OFFICER (Mr. GRIFFIN). The Senator from South Dakota is recognized for 3 minutes.

Mr. McGOVERN. I should like to ask the Senator a question with reference to his fears that if we were to announce a time certain for withdrawal, the other side would simply sit and wait.

When we get right down to it, why would they be anymore likely to do that than they would merely to sit and wait out the President's withdrawal plan? The President says that it is irreversible, that we are getting out under his plan. That being the case, what difference does it make in terms of the enemy's plans, whether they wait until December 31, 1971, or wait out Mr. Nixon's plan? In either case, it is a matter of sitting and waiting.

Mr. STENNIS. Mr. President, the President said:

I am planning to come out. I am planning certain programs. Our overall program is to come out. Here is a part of the program.

The program did not guarantee a date or time. On the other hand, he said:

Nevertheless, if necessary I will use the power of this Nation in a progressive and forward way.

He said:

I am not promising under all circumstances that I will not hit them again.

He is very wise in taking that position. If we adopt this amendment, we will be catching his right arm up in the air and holding it and leaving him without the permission or authority to back up his word. We would be withholding power from the man in office.

Mr. McGOVERN. Mr. President, the Senator knows that the way in which the amendment is drafted, if the President needs authority, there is a provision in the amendment for Congress to give it to him.

As I said to the Senator from West Virginia earlier, that is where the Constitution intends to place the warmaking power, in Congress and the President jointly.

In addition, he has complete flexibility to do anything he would like prior to the deadline. And he could come back to Congress at anytime for additional authority.

Mr. STENNIS. Mr. President, I do not believe that the Senator had that provision in the original amendment.

Mr. McGOVERN. The Senator is correct. We did have a provision in the original amendment that the President could come back and ask for an extension of time. We did not give him a 60-day leeway without asking for an extension of time.

Mr. STENNIS. Mr. President, the enemy is saying, "They have a man at the head of the Nation whom they do not give any more authority than a 60-day emergency clause. We do not believe he has the influence to go back and get more time."

We would be killing off his powers.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield myself an additional 3 minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for an additional 3 minutes.

Mr. STENNIS. Mr. President, we would be torpedoing his powers and responsibilities. I say that we should keep the responsibility on him. I do not want to relieve him of a bit of it. Keep the responsibility on him and retain his duties as the Constitution declares them to be.

Mr. McGOVERN. Mr. President, if I can say so respectfully, that might be an easy way to put the responsibility on the President. But I do not think we can do that and dodge our obligation under the Constitution as Members of the Senate. We do have an obligation to carry that burden with the President.

Mr. STENNIS. Mr. President, I did not tell the President, "I am with you regardless of what you do." I never promised that. The reason that I did not promise it is that I have a responsibility, too.

Mr. McGOVERN. Mr. President, I call the attention of the Senator to the views of Mr. Townsend Hoopes with reference to the negotiations, writing in the July 1970 Foreign Affairs Quarterly.

He said:

The resulting deadlock at Paris ought not to be surprising; it reflects the fact that our present political aims exceed our bargaining power.

Then he goes on to make this interesting point:

To put it bluntly, the one thing we can negotiate at this stage of the war is the manner of our going. Averell Harriman, who speaks with a special authority on the subject of negotiations with the North Vietnamese, appears to believe that if we would declare our intention to leave South Vietnam, we could negotiate not only the return of our prisoners, but also the formation of a neutral government in the South, including but not dominated by the National Liberation Front, and committed to settlement and cordial relations but not merger with North Vietnam. According to Mr. Harriman, an unambiguous American declaration of departure could bring the Russians into a cooperating position, and could thus establish the preconditions for international guarantees of the negotiated arrangements, including, after a reasonable period, international supervision of all-Vietnam elections.

I ask the Senator if it is not just possible, and I think probable, that by announcing a definite time for our withdrawal we might break the deadlocked negotiations in Paris and the other side would find it advisable, knowing that we would move out at such and such a time, to negotiate questions with reference to prisoner exchange and the government in the south and perhaps asylum for people who might be jeopardized by our withdrawal.

It would seem to me that a whole series of things would be open for negotiations, whereas now nothing is happening, as the Senator knows, in terms of the negotiations in Paris.

As far as I know, in 2 years they have settled on nothing but the shape of the table, but no one has been around the table.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield myself 1 additional minute only.

The PRESIDING OFFICER (Mr. DOMINICK). The Senator from Mississippi is recognized for 1 additional minute.

Mr. STENNIS. Mr. President, we have a responsibility and authority here. I have read that article. I did not have time to read very much, but I did read that.

My reaction is the other way. As I understand the enemy and their record, I think that things would occur as I have said.

Mr. McGOVERN. I thank the Senator.

Mr. STENNIS. I thank the Senator very much.

Mr. President, I ask unanimous consent that if I am not on the floor when the Senator from Missouri finishes, that the Senator from Kansas (Mr. DOLE) be recognized for 10 minutes and that he have charge of the time on this side in my absence.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McGOVERN. Mr. President, I yield 10 minutes to the Senator from Missouri.

The PRESIDING OFFICER. The Senator from Missouri is recognized for 10 minutes.

Mr. EAGLETON. Mr. President, it is possible to understand how we became involved in Indochina. It is far more difficult to understand why we have not extricated ourselves.

We became involved in 1950 because of the cold war and the fears that were raised by the thrust of international communism.

After World War II, Russia—expanding, aggressive, and leader of the Communist world—was on the move eastward toward Western Europe, southward toward the Mediterranean and westward toward China and perhaps Japan.

Our response was firm, swift, and positive. It was a success partly because of our resolve and partly because our programs were specifically designed to meet a specific threat.

Townsend Hoopes points out that—

The restoration of Western Europe and Japan, and the effective blunting of Moscow's ideological military thrust, required only eight years.

Our efforts had been totally absorbing and unfortunately had shaped the thinking of an entire generation of policymakers. Containment and mutual security became all-purpose policies to be exported throughout the world.

These policies failed to delineate the difference between nationalists who were Communists but posed no threat to American national security, and expanding Russian or Chinese communism which could gravely affect us. Yet these policies still guide our destiny in the jungles of Southeast Asia.

The sad history of how we slid into Vietnam need not be recounted. It is done. We are there. We must get out.

But unless and until we change the overall thrust of U.S. policy—which the McGovern-Hatfield amendment does—we will find U.S. troops involved in South Vietnam indefinitely and, despite the best intentions of the Nixon administration, in Cambodia as well.

Recent events in Cambodia are all too familiar. We have seen the process before. The characters and places have changed, but it is still the same cold war script.

Instead of Dulles and Eisenhower propping up South Vietnam with economic and military assistance to keep the other countries of Southeast Asia from falling like dominoes, the Nixon administration is now helping Cambodia in order to protect South Vietnam.

A brief foray into Cambodia to capture enemy supplies and weapons was extended. It had, President Nixon told a group of Congressmen on May 5, a "subsidiary purpose" of relieving the Communist pressure against the Lon Nol government.

Then President Nixon stated on May 8, 1970, that he "would expect that the South Vietnamese would come out approximately at the same time that we do because when we come out our logistical support and air support will also come out with them." The South Vietnamese forces stayed, occasionally teaming with Cambodian forces far from the sanctuary areas.

Despite President Nixon's statement on June 3 that "the only remaining American activity in Cambodia after July 1 will be air missions to interdict the movement of enemy troops and material where I find that it is necessary to protect the lives and security of our men in South Vietnam," American planes are now flying support missions for Cambodian forces throughout Cambodia.

In addition to almost $50 million in military aid, another $200 million in economic aid is now reportedly on the drawing board.

Then last Sunday, the Vice President of the United States pledged that we would do "everything we can" to see that the government of Lon Nol survives, and raised the specter that if Cambodia falls, Vietnamization may grind to a halt.

And yesterday the Vice President went even further, stating:

American forces will not be involved in the Cambodian fighting unless in the judgment of the U.S. commander, General Creighton Abrams, and of course the people who have to make decisions, that the security of American troops is threatened.

To the Vice President, "people who have to make decisions" and President Nixon are synonymous, and the President has already spoken in a way that leaves a little doubt about his intentions.

On April 30, the President stated:

If the enemy succeeds, Cambodia would become a vast enemy staging area and a springboard for attacks on South Vietnam along 600 miles of frontier—a refuge where enemy troops will return from combat without fear of retaliation. . . . North Vietnamese men and supplies could then be poured into the country jeopardizing not only our own but the people of South Vietnam as well.

In other words, if military assistance, economic aid, close air support, and a generous helping of foreign troops from South Vietnam and perhaps Thailand are insufficient to save the government of Lon Nol, U.S. forces may intervene further.

But Congress too has decisions to make. Congress is charged with the constitutional responsibility to make decisions on whether this country goes to war, Vice President AGNEW notwithstanding.

And, by passing the McGovern-Hatfield amendment, Congress fulfills that responsibility. For, although the language of the amendment deals only with Vietnam, it offers a far broader blueprint for American foreign policy.

By writing the Nixon doctrine into law, as the McGovern-Hatfield amendment does, Congress is saying to countries in Southeast Asia and elsewhere that the United States cannot and will not do for you what you are unable or unwilling to do for yourselves; to the Thieu-Ky regime in Saigon, that 50,000 American soldiers will not remain indefinitely as hostages to your survival; and to Cambodia, that no American combat troops are coming.

And hopefully by implementing what the Nixon doctrine preaches but fails to practice, the passage of the McGovern-Hatfield amendment will mark the first step on the long road back to reality for American foreign policy.

Mr. McGOVERN. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield to the Senator from South Dakota.

Mr. McGOVERN. Mr. President, I commend the Senator from Missouri for his succinct and compelling statement for the amendment. I thank the Senator for the role he has played in helping us to draft this amendment and improve it as the situation changed.

Mr. EAGLETON. I thank the Senator.

Mr. President, I yield the floor.

Mr. DOLE. Mr. President, I will defer to the Senator from New York if the Senator from South Dakota yields time to him. The Senator from New York has a schedule to make.

Mr. McGOVERN. Mr. President, I am happy to yield to the Senator from New York such time as he may need.

Mr. JAVITS. I thank the Senator. I will only be 10 minutes and if I need more time I will ask for it. I am grateful to the Senators.

The PRESIDING OFFICER. The Senator from New York is recognized.

AN AMENDMENT TO END THE WAR

Mr. JAVITS. Mr. President, I have come to my decision on the so-called McGovern-Hatfield amendment very slowly, after much thought, and only based on its complete redrafting. To me it is a very basic decision and I think the individual terms are designed only in order to demonstrate the impact of that decision.

The basic decision between ourselves and the President is: Shall we fix a date for withdrawal from Vietnam or shall we leave it open? By leaving it open we would leave it to the President, giving him the benefit of all good faith, feeling, in terms of withdrawal, that we would do it "as soon as it possibly could be done." That, to my mind, is the issue.

Mr. President, in coming out for the McGovern-Hatfield amendment, I have come down on the side which says "fix a date." That is the real issue here.

Mr. President, during this legislative session the Senate has had its mettle challenged on numerous grueling occasions. There have been debates and decisive votes on many of the key issues of domestic policy. In the international sphere, classic struggles have been waged concerning policy in Cambodia, over the ABM and the nuclear arms race. Now, the Senate is being called upon to face up to its most important duty. That duty, simply, is to fulfill its constitutional responsibilities with respect to the war in Vietnam.

In my judgment, however, there is a great deal potentially to be concerned about if the Senate does not act positively by adopting this amendment. In a policy sense, the defeat of this amendment leaves up in the air possible further U.S. involvement in Indochina.

The Vice President already has asserted that:

We are going to do everything we can to help the Lon Nol Government:

He is further quoted as warning that—

It would be impossible for United States combat troops to pull out of South Vietnam if the Communists overthrew the Government of Lon Nol and took over Cambodia.

Mr. President, I am greatly concerned that this school of thought will be greatly strengthened in the councils of the Nixon administration if a date is not fixed for getting out of Vietnam.

Also, there is, in my judgment, a constitutional danger which might threaten the very foundations of our system of government and liberties; and that is the implication that the Presidency is beyond the control of Congress in the exercise of the Nation's war powers and the conduct of its foreign policy.

Within the course of this very year, it has been asserted that it is desirable that the President be deemed to have the power to acquire foreign bases without reference to Congress, to deploy the Armed Forces abroad without reference to Congress, and to take whatever action he feels necessary to protect these forces wherever he has deployed them—all

without reference to Congress. It has been asserted, too, that the President may take these actions without the advice of the Senate and that he may withhold pertinent information concerning those negotiations from the Senate on security grounds, although details may be freely communicated to foreign governments who are not a party to the negotiations.

Recent remarks of the Vice President even have hinted that the President is not bound by congressional action and appropriation in the expenditure of public funds. In commenting on the possibility of the Cooper-Church amendment becoming law, the Vice President is quoted as stating:

> There are many ways to bring about financial assistance to a friendly nation.

Mr. President, there has been considerable public comment about recent efforts within the Congress to reassert the war powers reserved to the Congress in the Constitution. I am a participant in this on-going effort and I believe that my oath of office requires me to do this.

What has been noticed, Mr. President, is that the reassertion of congressional authority has led to a countervailing hardening and intensification of assertions of unilateral and unfettered Presidential prerogative. Our action has produced a reaction. The situation is now a dynamic one, in which it is impossible for us to stand still. If we back off now, we may not be able to preserve even the position we now hold, because of the counter pressure of claims for the Presidency.

A further expansion of the powers of the Presidency, in present circumstances, could leave the nation dependent solely upon the good judgment and benign intent of the incumbent. And, though we have a high standard for eminence in the Presidency in our history, the centuries of the struggle for freedom teach us that our liberties require firmer institutional safeguards if they are to survive. This is the basis of our constitutional system of checks and balances.

To some of my colleagues who are most illustrious captains of earlier battles I would like to borrow a most apt exhortation from Shakespeare: "Once more into the breach, dear friends, once more."

The question before the Senate is amendment 862, principally sponsored by Senators McGOVERN and HATFIELD, along with Senators GOODELL, HUGHES, and CRANSTON and a considerable number of other Senators. As everyone knows, the language to be voted on today differs very significantly from the language of the original "end-the-war" amendment language first introduced on April 30. I commend the sponsors for the sincerity they manifested in their willingness to go that extra mile—by again revising their amendment—so as to make it conform to the approach of a broader group in the Senate.

And, I am gratified to have been able to join in bringing about the final revisions which are embodied in the amendment now to be voted upon. In my judgment we now have a formula which meets the basic criteria in a situation such as this. In a most responsible and carefully considered way, it says something significant while preserving flexibility and taking due account of the President's responsibility and prerogatives. I did not support the original version of the McGovern-Hatfield amendment because I did not think it met those criteria. I have cosponsored the present amendment because I am confident that it does.

The amendment is no longer structured in a way which suggests that the Senate has only the alternatives of declaring war or bringing about an abrupt end of military operations through a denial of further appropriations at the end of 1970. In my judgment. the differences between the present amendment and the original "end-the-war" amendment are well expressed in the editorial of the Washington Post on August 28.

To me the most significant difference between the original and the present amendments is in the difference in the views they articulate of the responsibility of the Senate with respect to the Vietnam war and the exercise of the Nation's war powers. Amendment 862 is a positive amendment. It is an affirmative assertion of the will and the authority of the Senate in conjunction with the President's exercise of his authority. It is not a dissenting amendment. It is not an "opposition" amendment telling the President that we are going to cut off money because we do not like what is happening.

This amendment presents the Senate with a unique opportunity with respect to the war in Vietnam. In adopting this amendment, the Senate will have asserted a national policy for ending the war through the establishment of a terminal target date for the disengagement of U.S. military forces.

This would be an exercise of the Senate's constitutional role of advise and consent in its highest sense.

The Senate has voted twice to repeal the Gulf of Tonkin resolution, by which it gave the President the broad authority to wage war in Southeast Asia without any time limitation. The Senate must now give its advise and consent to a policy of terminating the war in Vietman. In doing this we are not opposing the President in any fundamental sense. Rather, we are sharing with him, through a positive action in our own right, the responsibility for bringing an end to the Vietnam war.

In its most important provision this amendment established by statute the national objective of: "the orderly termination of military operations there and the safe and systematic withdrawal of remaining Armed Forces by December 31, 1971."

These are objectives—omitting the date—which the President himself has proclaimed publicly to the Congress and to the American people. The President is given great flexibility in achieving these objectives. In the final "proviso" clause there is a built-in mechanism which enables the President to extend the terminal date for military disengagement by 60 days, if this should be warranted by circumstances. And, he can ask the Congress for a new termination date altogether.

In saying that this amendment does not oppose the President. I was not trying to gloss over the difference of approach which undoubtedly exists between the administration and the supporters of this amendment concerning the Vietnam war. The virtue of this amendment is that it enables the Senate to express effective opposition to the war, without placing itself in a position of confrontation with the President. This is how our constitutional system is designed to work. The exercise of the Senate's constitutional responsibilities to declare war through this amendment in no way impedes the President's exercise of his constitutional responsibilities as Commander in Chief. The President may not be happy with the national policy of fixing a withdrawal date contained in this amendment, but he has no grounds for feeling that the Presidential power is invaded.

Mr. McGOVERN. Mr. President, will the Senator yield?

Mr. JAVITS. I yield

Mr. McGOVERN. Is it not a fact that the amendment leaves absolutely intact the President's function as Commander in Chief so long as there is one single American soldier in Indochina, up until December 31, 1971, or if it is extended, up until the end of that extension. The President is in total command, is he not, of any American forces that remain in the theater of operations?

Mr. JAVITS. That was my motive in selecting the language which I did. I must pay tribute here to my colleagues who are sponsoring the amendment for their willingness to amend their language, once convinced, and without being rigid adherents to their own draftsmanship.

I would like to make clear that the President remains Commander in Chief, but the power of Commander in Chief, and this is a constitutional question, does not include the power to declare war or to make war of a kind which can only result from a declaration of war. That is what we have here.

Mr. McGOVERN. Or to provide money for the war.

Mr. JAVITS. That is exactly right.

Mr. McGOVERN. If the Senator will yield further, I just want to take a moment to express the appreciation that I know every cosponsor of the amendment feels. The senior Senator from New York was a principal draftsman in improving the language of the amendment. He has worked very closely, patiently, and helpfully with the cosponsors of the amendment from the very beginning, and has given us generously of his legal and constitutional knowledge and his experience as a member of the Committee on Foreign Relations. I know I speak for many Members of the Senate in expressing the appreciation we feel for the leadership he has provided.

Mr. JAVITS. I am grateful to my colleague for his very kind remarks.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. JAVITS. May I have 5 minutes?

Mr. McGOVERN. I yield 5 minutes to the Senator from New York.

Mr. JAVITS. We know that no general has ever had enough troops. No general ever had enough transport. No general ever had enough time to deal with a military operation, whether it was for an attack or defense. Never in the history of warfare has any general conceded that he was completely ready.

The same thing is true for Vietnamization, which is finally under the control of the government of Saigon. Therefore, until they say they are ready, there is no completion of Vietnamization. If that is going to be our timetable, then it is without end. It has no date at all.

I do not think the President feels that way. I think the President has a date in mind. I am sure of that. He is intelligent and sensitive, a human being of high distinction. But unless that date is shared with the American people and the Congress, unless Saigon knows that is the end of the road, it is not going to pay attention. One can always talk with the President, which is a private matter. There is no desire to have an operation in Vietnam that is discreditable. If I were Mr. Thieu or Mr. Ky I would advise the President that, as between a published date and an unpublished date, the published date is worse for them—but better for us.

The veto in the hands of Hanoi is similar. Hanoi has taken the position that this is a civil war and as long as there are American troops in Vietnam, there is a foreign military power at work and the civil war cannot be settled between the parties.

In view of the fact that the President has announced withdrawal anyway, we might just as well give notice in the most effective way possible that we are ready to see a political settlement, this time between North Vietnam and South Vietnam, and just as South Vietnam could not exercise the veto on Vietnamization because there was a fixed date, so there would be an enormous inducement, both to Hanoi and Saigon, to negotiate a political settlement precisely because there was a fixed date.

Mr. McGOVERN. Mr. President, will the Senator yield at that point?

Mr. JAVITS. I yield.

Mr. McGOVERN. The Senator has made reference to the fact that there are really two vetoes over our policy in Vietnam now, one of those vetoes being held by Hanoi and the other by Saigon.

If what the Vice President told us a week or so ago is correct, that the whole thing is off if the Lon Nol government falls, that both Vietnamization and assured American withdrawal are ended if Lon Nol——

The PRESIDING OFFICER. The Senator's time has expired.

Mr. McGOVERN. I yield myself 5 minutes.

If all of that is true, that Vietnamization and the withdrawal timetable that we are presently on depend on the capacity of the Lon Nol government to survive, have we not now added a third veto that hampers the control of our policy?

Mr. JAVITS. We may very well have done so, except that, frankly, I can hardly believe that we have done that. I can hardly believe that American policymakers, aside from general remarks to buck up the Lon Nol government, are really engaged in such a commitment which, as the Senator properly says, if made would build yet a third veto into the situation, and keep us there perhaps even longer than the first two.

Mr. McGOVERN. I think the Senator has underscored, in his remarks today, a problem that has for years bedeviled us in Vietnam, and that is that there is a difference between our interests and the interests of our ally in South Vietnam.

The President has said, if I read him correctly, that we would be willing to consider a coalition government—I think he referred to it as a government representative of the major political interests in the South—but General Thieu says he will never consider that, he will never share his power with his challengers in the South.

I think the Senator is correct in saying that President Nixon is looking toward withdrawal at some time, but Mr. Thieu says it is ridiculous to talk about that now. When the President expressed the hope to the American people that the South Vietnamese forces would come out of Cambodia when we did, Mr. Thieu said, "That is silly talk from silly people."

I think all of this—and the thrust of the Senator's remarks makes this very clear—shows that we are involved in a situation where, until we do take control of our own policy, we are going to be tied to the government in Saigon, which has interests far different from our own.

Mr. JAVITS. Mr. President, I think that is of extreme importance. But it seems to me that we need not discredit the government in Saigon to make that acknowledgement. I have no desire to tear them down. When we leave, I hope they make it. As I say, I have no desire to tear them down; there is no need for it.

But let us face the issue that if they are ever going to have any political relationship with their own people who are fighting them—and there are plenty of those in addition to the North Vietnamese—we must provide a timetable within which they will have to do it.

Mr. McGOVERN. Is it not true that there is an army of some 1 million men under the command of General Theiu?

Mr. JAVITS. There is a million-man army, and they are beginning to develop an air force. They are showing considerable signs of self dependence in Cambodia, where some of their forces are now, and certainly in Vietnam.

It seems to me that every nation which goes in to do what we wanted to do, which was to help a small people achieve the right to determine its own future, must have some terminal point for its efforts. Really, on moral grounds, we had the same reason for going into Czechoslovakia under the United Nations Charter, or Hungary. Obviously, those would have been insane commitments. We took this one, which in my judgment was very improvident.

But, Mr. President, there must be some terminal point, some conditions, some outside parameter to that effort and Congress has a role in defining what it is.

That leads me to this question, which I think is basic here: the question of defeat as far as the United States is concerned. It reminds me, in the reverse, of what Senator AIKEN said one day, "Let us just say we won, and get out." We may as well say we lost and get out. The point is, we never went in to win or lose; we went in to give a small nation an opportunity to seek its own solution, its own way out. Our commitment was always limited, in many ways. We could wipe out North Vietnam in two afternoons; everyone knows that. But no one would want us to do that, in the beginning or now.

Besides that, we are not there to win and we are not there to lose; we are there to do a particular thing in terms of assisting the right of a small people to find its own place in the world. The President himself has now decided that issue. He himself says he is going to withdraw. So all we are talking about is what shall be the timetable, and shall it be in his mind or shall it be written into the law?

In my judgment, that is the central issue. There is no other issue involved. He himself says he is getting out as soon as he possibly can. The central issue is, shall we set a date? On that issue, I believe the weight of the evidence is now on the side of the proponents of the amendment, and that is why I have joined in supporting it.

Mr. McGOVERN. As far as simply saying we have won and getting out is concerned, it is my view that we have applied that doctrine in Cambodia, and I hope we can sustain it there.

Mr. HATFIELD. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senator's time has expired.

Mr. McGOVERN. I yield myself 5 additional minutes to yield to the Senator from Oregon.

Mr. HATFIELD. Will the Senator from New York yield at this time?

Mr. JAVITS. Oh, yes.

Mr. HATFIELD. Will the Senator comment a little further on this question about our commitments in Vietnam, as to the legal aspect of them, under President Eisenhower? Are we under an irrevocable and clearly defined legal responsibility, upon which we would be reneging to withdraw at this time?

Mr. JAVITS. No, I have never thought that. I do not think President Eisenhower thought that. He rejected that proposition himself, in refusing to send troops in to bail the French out of Dienbienphu.

I doubt that we ever subscribed to any proposition which took us beyond our national interest or our constitutional processes, both of which are basically built into the American freedom of action in respect of this situation.

The implication of the commitment was contained in a protocol to the Southeast Asia Treaty. Indochina was not even a party to that treaty in any affirmative sense of being a contracting party. It was a kind of third party beneficiary, to use a legal term, and always

on the basis of the volition of the United States, plus obedience to American constitutional processes.

On both grounds, the interests of our country and the right of our country to determine when it would or would not act in a given situation, and the assertion now of the congressional authority, seeking that it be joined with the Presidential authority, I see no legal basis which could lock us into Vietnam as against an exercise of the authority by the President and Congress which would be represented by this enactment.

Mr. HATFIELD. Mr. President, will the Senator yield further?

Mr. JAVITS. I yield.

Mr. HATFIELD. The Senator is a member of the Committee on Foreign Relations, where he has been serving with great distinction. In view of that service and his long involvement in concerns throughout the world of problems that lead to peace and war, would the Senator not agree that those who say that this is a neoisolationist move or a neoisolationist trend in this country are completely in error, because among other sponsors and supporters of this amendment are men who are well known for their concern about international commitments and international involvement? Would the Senator not agree that this kind of tiedown to an interminable period in Southeast Asia actually creates a possibility of less likelihood for the United States to assume its rightful role in other parts of the world, where there is a greater threat to the peace existing even today?

Mr. JAVITS. I agree with that, and I would like to make just one brief observation on that point. There is a lot of speculation in the world that the American people have somehow relinquished their interest in the world and are no longer concerned with playing an activist role in peacekeeping in the world. That does not mean we have withdrawn, but just that we will carry only our share.

I think the events in Vietnam and the terrible division in this country which they have engendered have intended to magnify that. I do not believe that the fundamental feeling of responsibility of the American people has changed, but I think it has been inhibited by the way in which events in Vietnam have gone. I believe that we would tremendously free America to take its role in the world in terms of building peace elsewhere, if we would end this particular involvement.

Mr. HATFIELD. I thank the Senator.

It seems to me, both from the standpoint of the statement made today on the floor of the Senate and the very outstanding contribution made by him on a national television program last Saturday night, the Senator from New York speaks not only as an authority with much background from the Committee on Foreign Relations and other involvements, but also as one of the outstanding constitutional lawyers in the Senate. Therefore, I think his testimony and his comments should weigh heavily in the minds of those who are uncommitted. I do not think anyone could charge the Senator from New York with being other than intimately and deeply concerned about all our involvements in the world, our leadership in the world, for the cause of peace and the upholding of our legal commitments and our legal responsibilities.

I thank the Senator from New York for his contribution in helping to revise the language of the amendment and the leadership he has given on the floor of the Senate and elsewhere on behalf of this amendment at this time.

Mr. JAVITS. I thank both my colleagues.

Mr. McGOVERN. Mr. President, how much time do the proponents of the amendment have remaining?

The PRESIDING OFFICER. The proponents have 26 minutes remaining.

Mr. McGOVERN. That is out of the 2½ hours that we are allocated today?

The PRESIDING OFFICER. That is correct.

Mr. McGOVERN. I yield 5 minutes to the Senator from Idaho.

Mr. CHURCH. Having achieved our basic objective of serious negotiations tied to an orderly withdrawal from Vietnam, what task remains for the doves to perform?

There are two major undertakings left. First, we must keep up the pressure so that President Nixon's withdrawal from Southeast Asia will remain as irreversible a process as Secretary of State Rogers says it is. Second, in absence of a political settlement in Indochina, we must work to prevent a Korean-type prolongation of our Vietnamese misadventure.

On the first count, the sudden aberration of the Cambodian invasion illustrates the danger that Mr. Nixon might yet be tempted to reverse gears and reescalate the war should the Vietcong and the North Vietnamese fail to lie low. Already the administration is having to eat most of its words of reassurance to the American public, as it keeps getting edged into further involvement in Cambodia. An entire speech would scarcely do justice to that subject. Suffice it to say now that the current situation makes it overwhelmingly clear why the Cooper-Church amendment, passed by the Senate on June 30, needs to be enacted into law. It would prohibit any full-scale return to Cambodia without congressional consent.

On the second count, it should be painfully evident that we must avoid the trap of keeping a vestigial military presence in South Vietnam for the indefinite future. An American military foothold there is unnecessary to our security, unduly expensive, and disruptive to a final resolution of the Vietnam—or Indochina—problem. Moreover, it would militate against any improvement in relations with China over the long term, which should be the central objective of American foreign policy in Asia.

The Korean example should be proof and warning enough of this thesis. Seventeen years after the end of the fighting, we are still locked into Korea. At great expense, we have kept a sizable army there all these years. Now, as fiscal pressures compel a reduction in this force, an indignant Korean Government demands another $3 billion in military assistance as severance pay.

Nevertheless, the pressures mount for making the same mistake all over again in Vietnam. Writing from Saigon, Washington Post correspondent Lawrence Stern recently warned in an article datelined August 26, 1970, that:

> President Nguyen Van Thieu will press the case for maintaining a 50,000 man "residual" American military presence in South Vietnam during his talks today with Vice President Spiro T. Agnew.
>
> This, as far as Thieu is concerned, will be "Topic A" in the conversations at Independence Palace, according to qualified official sources here.
>
> So far there has been no official communication between Presidents Thieu and Nixon on the size of the American troop commitment to South Vietnam in what the presidential palace has begun to call the "postwar" period.
>
> In a recent dinner with a few Western correspondents on July 30, Thieu first floated his proposal for a 50,000-man American military force in South Vietnam to "guarantee the peace" after 1973—in what might be described as the post-Vietnamization period. . . .
>
> "We still have many things to ask of you," Thieu said to American correspondents during the July 30 dinner.
>
> U.S. Ambassador Ellsworth Bunker is known to feel that Thieu's position is a reasonable one and has, in private conversation, cited the precedent of South Korea where the United States maintained a "peacekeeping" force of about 60,000 troops for 18 years.

In my view, the adoption of the McGovern-Hatfield amendment—as it has been refined—would demonstrate that we have learned something from past experience, and that we are determined to sever the military umbilical cord which fastens us so tightly to the Saigon government. It would remove the gnawing suspicion that Vietnamization might be intended to promote a lingering, though lessened, American military presence in South Vietnam for the indefinite future. It would guarantee the withdrawal of all remaining American troops by setting a deadline beyond which they could not be retained without congressional approval. It would thus make certain that, unless Congress approved, we would neither reescalate our involvement in Vietnam nor permit our engagement there to be transformed into another Korean-type garrison for American troops on the mainland of Asia.

For these reasons, I shall cast my vote in favor of the McGovern-Hatfield amendment.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 10 minutes.

Mr. DOLE. First, Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in this morning's New York Times entitled "Sound Motive, Dubious Method."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUND MOTIVE, DUBIOUS METHOD

The Senate will vote tomorrow on the Hatfield-McGovern amendment to set a timetable for ending the war in Vietnam, an objective devoutly wished by millions of Americans. The framers of the measure have labored responsibly and creatively to extend the deadline for withdrawal of American forces and to allow the President flexibility in applying that deadline.

The question the Senate must decide is

whether adoption of the resolution will enhance the prospects of negotiating an honorable settlement in Paris and genuinely extricating the United States from its disastrous adventure in Vietnam.

It is an excruciatingly difficult question for those who deplore—as we do—the lack of candor and the outright deception practiced by this and the two previous Administrations with regard to the American involvement in this Asian morass. And there can be no doubt that in the course of this ill-starred adventure the Executive has often bypassed or ignored the Congress.

There is genuine danger for the American system in Vice President Agnew's reckless assaults on Senators Hatfield and McGovern and their allies, honorable men whose records refute his "pacifist" and "isolationist" labels. They have long agonized over ways to help free this country honorably from a fruitless and divisive involvement and they deserve better than to be attacked as architects of "a blueprint for the first defeat in the history of the United States."

The basic question remains, however: is this amendment the right way either to redress the imbalance of power in the Government or to advance the prospects for American withdrawal and peace in Vietnam?

The argument is used that the timetable in the amendment is roughly the one the President has set for himself; and that its passage would thus be a contribution toward a joint Executive-Legislative policy. But the President is careful to preserve his options and it seems unwise to fix a withdrawal schedule for him by law, even one that contains the loopholes now put into it by the measure's sponsors.

Most important, in our view, is the probable effect of a withdrawal deadline on the peace talks in Paris. Mr. Nixon insists that, despite the lack of a new negotiating brief, David Bruce has been given latitude to explore all possible avenues to a satisfactory settlement. It is just such vagueness that has caused many Senators to despair that American troops will ever be out of Vietnam unless Congress applies an independent prod.

A prod undoubtedly would be useful; the question is what kind it should be. That Hanoi has been stonewalling in Paris is no excuse for Washington's failure to take the initiative there.

Our own belief is that the best way to end the stalemate in Paris is through prompt United States sponsorship of a proposal for a standstill cease-fire by all forces in Vietnam. A Senate resolution to this effect might help to end the war. The Hatfield-McGovern plan, which differs merely in timetable from the Administration's Vietnamization objective, would only end the American involvement—and assure that the war goes on. For there will be little incentive for Hanoi to negotiate a settlement if the President is under Congressional mandate to meet a deadline for evacuation, however diluted.

The sponsoring Senators have labored overtime to make their amendment more reasonable and flexible, but we cannot believe that its adoption will bring closer the goal they seek.

Mr. DOLE. Second, I ask unanimous consent to have printed at this point in the RECORD an editorial published in the Washington Sunday Star of August 30, entitled "Asia: America's Great Withdrawal Begins."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASIA: AMERICA'S GREAT WITHDRAWAL BEGINS

As Vice President Agnew winds up his four-nation Asian tour, it is clear that we stand at the end of one era and at the beginning of another. Three times in the last three decades, this country has sent ground units of its armed forces into battle on the Asian mainland. Now the great withdrawal has begun, and it is doubtful if ever again American troops will be committed on that huge land mass. That single fact is fraught with tremendous significance, not only for our own children but for the 60 percent of the human race which inhabits Asia.

The Western encroachment on Asia has deep roots. It began in the early years of the Sixteenth Century, when the Portuguese wrested control of the Indian Ocean from the Arabs. In the early chapters of that saga, the Portuguese, Spanish and Dutch contested with one another for the wealth of the Indies, with the French and British scrambling for their share a little later. In 1854, Commodore Matthew Perry's black ships opened up Japan, committing the United States to an Asian destiny more manifest to some than to others.

In a sense, it was inevitable that America should involve herself. From the moment the first settler set foot on these shores, he turned his back on Europe and felt himself drawn toward the setting sun. The course of empire saw the flow of a restless people across the great prairies until the shores of the Pacific were reached. But still the dying sun glowed red on the Western horizon and we followed it until our gunboats patrolled far into the interior of China. At the same time, the Russians were expanding their empire at the expense of China's western territories. At the apogee of the age of imperialism, foreign flags flew over virtually every Asian nation except China, Japan and Thailand. The harbinger of the end of that era was the defeat by Japan of Russia in 1905.

The seeds sown at Tsushima flowered in the 1940s and 1950s with the withdrawal of the British, Dutch and French from all but a few pockets of Asia. It was perhaps inevitable that the United States, in Korea in the 1950s and Vietnam in the 1960s, should attempt to fill the power vacuum left by the departure of the colonial powers.

Because the United States was a different country and the United Nations a different organization twenty years ago—and because that war was fundamentally a conventional one—we were able to prevent the Communist conquest of Korea, which commands that sea approach to north China, Manchuria and eastern Siberia, pointing like a dagger at the heart of Japan. Now, two decades later, we have 63,000 troops left in Korea. By next June, the United States will withdraw 20,000 of these, with total withdrawal, in Agnew's words expected in about "five years."

Historians of another era will have to judge whether the United States has "won" or "lost" the second Indochinese War. Clearly, despite the commitment of more than half a million troops, a military victory has not been achieved. Whether the time that has been purchased with so many deaths will prevent Communist domination of Southeast Asia in the decades to come remains to be seen. What is clear is that the American withdrawal of its fighting units has begun and is irreversible, given the country's present and foreseeable political sentiment. The presence of 49,000 U.S. troops in Thailand is unlikely to continue once the Vietnam phase-out is completed.

As a people, we have never been much on nuance and shading. We like our victories total and their surrenders unconditional. The failure to win such victories, to impose such surrenders, conjures up the danger that we may pick up our marbles and go home, turning our backs on Asia and the Pacific. Yet the United States cannot cease to be an Asian power. Five of our states are washed by the waters of the Pacific and one sits at the core of that ocean. We are committed to the defense of Taiwan and we have treaties—which President Nixon has promised we will honor—with no fewer than 18 Asian nations. In an economic sense, it would be disastrous for the United States to abdicate its interest in a continent which contains 92 percent of the world's rubber, 63 percent of its tin, 22 percent of its manganese and nearly half of its tungsten. As a world power, the United States can no more shirk its responsibilities in Asia than it can abandon its position in Europe.

Although Vietnam and the Middle East grab most of the headlines, it is in Northeast Asia in general—in Korea in particular—where the danger of great power confrontation in the 1970s looms largest. There, and there alone, do the interests of the two superpowers, the United States and the Soviet Union, and those of two aspirant superpowers, Communist China and Japan, intersect.

The Sino-Soviet quarrel, the outcome of which cannot be foreseen, has provided a temporary breathing spell in that sector. If this time is employed by Japan—a first-rate economic power but a tenth-rate military nation—to develop its security forces, the United States may be able to play a secondary role in this area. Until then, the security of South Korea, upon which that of Japan hinges, rightly will continue to be a matter of primary concern to the White House.

Walter Lippmann, who opposed the American involvement in Vietnam from the beginning, in our view takes a sound position in regard to what America's stance should be when we withdraw our combat troops from the mainland. Writing in 1964, Lippmann had this to say about the post-Vietnam era:

"A policy of stabilization in Southeast Asia demands that the American power and presence in the South Pacific shall not be withdrawn when our troops withdraw from South Vietnam. On the contrary, we should strengthen our position in the South Pacific. We should be able to do this if we do not forget, as we have allowed ourselves to forget, that we are a sea and air power."

Implicit in this is the suggestion that we must commit ourselves to the economic, political and military development of those Pacific island-nations which swing in a great arc from Japan in the north to Australia in the south. Inevitably, this will leave the small nations of Southeast Asia—South Vietnam, Laos, Cambodia, Thailand, Burma, Malaysia and Singapore—on a rather sticky wicket. While it is clear that the United States will continue to provide economic assistance and military hardware to these nations, the implications of Mr. Nixon's Guam Doctrine are that, with the exception of nuclear attack, they are pretty much on their own.

Ultimately, no Pacific settlement is possible until Communist China is admitted to the United Nations and the family of nations. This, of course, depends just as much upon the actions of Peking as it does on the attitude of Washington. But now that the excesses of the Cultural Revolution are behind it, China shows promising signs of wishing to normalize its relations with the rest of the world. Sir Robert Scott, a veteran British China hand, maintains that Peking's aims today "are little different from what they were fifty or a hundred years ago—unity, self-sufficiency, security." If this is so, the prospects for peace in the Pacific—or at least for the absence of large-scale war—are not as bad as they might be.

Russia's expansion of her high seas fleet and Moscow's peace efforts in the Middle East, which clearly are designed to procure the reopening of the Suez sea route to Asia, make it clear that the Kremlin intends to make its weight felt in the Pacific in the 1970s.

Under the circumstances, the United States, in the inevitable psychological depression of the post-Vietnam era, could make no greater error than to contemplate a withdrawal from off-shore Asia. In Japan and

Indonesia particularly, we have potentially powerful friends. Under the nuclear umbrella of the Nixon doctrine, these friends—and others—need to be encouraged and helped to build a Pacific Community of which the United States could be no more and no less than an equal member.

Mr. HATFIELD. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr. HATFIELD. I thank the Senator for yielding for just a moment.

Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the Washington Post of Friday, August 28, entitled "A National Policy to End the War," and an editorial published in the St. Louis Post Dispatch of Sunday, August 30, 1970, entitled "Two Critical Issues of the War."

Mr. DOLE. Mr. President, I ask unanimous consent that those editorials be printed in the RECORD following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. DOLE. I yield to the distinguished Senator from West Virginia.

MODIFICATION OF AMENDMENT NO. 754

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Wisconsin (Mr. PROXMIRE), I ask unanimous consent that amendment No. 754 to H.R. 17123, the military authorizations bill, be modified to make the language of the bill more consistent with itself. Legislative counsel has informed Senator PROXMIRE that the word "drafted" on page 2, line 12, should be changed to "inducted" in order to be consistent with the use of the word "inducted" on page 1, line 4, and on page 2, line 6.

I ask unanimous consent that this technical change be made, that the revised language of amendment 754 be printed in the RECORD at this point, and that the amendment as modified be printed and lie on the table.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 754

At the end of the bill add a new section as follows:

"SEC. . No funds appropriated pursuant to this or any other Act may be expended after the date of enactment of this section for the purpose of sending to South Vietnam, Laos, or Cambodia, any person inducted into the Armed Forces of the United States under the Military Selective Service Act of 1967, or any subsequent Act providing for the conscription of persons into the Armed Forces, unless funds are specifically authorized to be expended for such purpose by law hereafter enacted. The preceding sentence shall not apply in the case of any person inducted into the Armed Forces of the United States under the Military Selective Service Act of 1967, or any subsequent Act providing for the conscription of persons into the Armed Forces, who (1) Volunteers for duty in South Vietnam, Laos, or Cambodia, or (2) has voluntarily extended his military service obligation after having been inducted into the Armed Forces."

Mr. DOLE. Mr. President, first of all, because the proponents of the amendment have used up most of their time, I should like to take some of the time allotted to me to ask questions either of the Senator from Oregon or the Senator from South Dakota with reference to the most recent version of the so-called end the war amendment.

First I would ask the question of either the Senator from South Dakota or the Senator from Oregon with regard to section 3 of the so-called end the war amendment on page 2 which reads:

(3) the provision of asylum for Vietnamese who might be physically endangered by withdrawal of American forces;

I am wondering whether either Senator might clarify just what this provision may mean, whether there is any estimate or notion where asylum may be, in Kansas, South Dakota, Oregon, Guam, or why the provision was inserted. I address that question to either Senator.

Mr. HATFIELD. First I should like to say, this is not a figure, and there is no figure I know of because, first of all, it does assume there may be conditions which none of us can project at this time or predict which will create the necessity for some who might not wish to stay in Vietnam after our withdrawal. I would point out, it does not have to be based on the fact that they fear the Communists in Vietnam, they may fear non-Communists or other fellow countrymen within Vietnam. We have seen evidence today of how much terror there is in Vietnam and how much suppression and oppression there is on the part of Thieu-Ky regime.

In discussing and debating over the number of years of our whole involvement in Vietnam, the question has always been raised about what would we do with those to whom we have made some sort of political commitment, whether known or unknown, and if that might mean they would personally or physically be in danger if they remained after we left. That was the only reason for putting this in the amendment. I do not think it is anything terribly unique or extraordinary. It is just recognizing the possibility of a call for asylum by certain individuals with a change of political government or policy in the regime within South Vietnam.

Mr. DOLE. I might then ask, if there has been any thought given, because in this amendment was that carefully considered—it has been, because it has been changed four or five times, and each time it has brought forth other changes—but certainly some thought was given as to where the asylum might be, whether it would be somewhere in Southeast Asia. Has there been any thought given as to where we would provide this asylum in the event South Vietnamese were physically endangered?

Mr. HATFIELD. As the Senator from Kansas knows, there have been those already in South Vietnam who have sought asylum even before the Thieu-Ky regime came in. Many went to France. Madame Ngu, who became famous in South Vietnam, went to Italy. I do not know where these people might want to go. I think that we would have to wait and see, if this amendment prevails and these events take place. The point is, we have made provision for all contingencies, trying again to indicate that we are concerned about all the people in South Vietnam, not just our own American troops. That was the reason for providing this particular section in the amendment.

Mr. DOLE. I might also say there are about 1 million North Vietnamese who fled to South Vietnam.

Mr. HATFIELD. Let me go back to that. I suppose at one of the notable points in history, when there was an expansion of the population—and let us make the record clear on this—there were a number of people who came into South Vietnam, because it had been carefully documented, expected, and anticipated that an election would be held in 1956. So that many of those who went to South Vietnam did not go on the basis of any fear for their lives but for the purpose of voting for reunification and voting for the Ho Chi Minh regime of the North. I think it should be further pointed out historically that Catholic support of the regime in South Vietnam was an ingathering, to a great extent because of the cultural and religious affinity they had for one another.

Mr. DOLE. Were there not some, if I recall, who fled because of fear of terror?

Mr. HATFIELD. Yes. If the Senator will yield further on that point of terror, there was also terror within South Vietnam, let us not forget, under the Diem regime. One reason why that regime was challenged, not just by the Communists alone but by Communists and non-Communists, was due to the repressive measures which were taken by the Diem regime against its own people. So if we are going to talk about regimes of terror, it has been characteristic of both North and South.

Mr. DOLE. The Senator is not suggesting that there is more terror in South Vietnam than there is in the North?

Mr. HATFIELD. I do not believe that terror can be described that way. Terror is a matter of intensity wherever it exists.

Mr. DOLE. I call the attention of the Senator to the fact that when the elections were held in South Vietnam yesterday for 30 Senators there were acts of terrorism throughout South Vietnam, including the murder and slaughter of some 15 children in an orphanage. But let me come back to this question of asylum. With the adoption of the amendment, would that asylum be at the discretion of the President to determine, or would Congress determine it? Are we going to give the President that power?

Mr. HATFIELD. I think there are already well established precedents on aslyum in this country. When asked for by individuals seeking asylum, their requests are handled in the executive branch by the State Department. There is adequate historical and traditional precedent for such things. There is no attempt here to change the precedent. I am sure the precedent is already well established.

Mr. DOLE. Well, we seem to be trying to change this precedent, of how to end the war. I thought there was a new precedent for it in the pending amendment.

Mr. HATFIELD. I think the very opposite is true. The precedent we have is for trying to reestablish the role of Congress in this whole war in Vietnam. It has broken a precedent. Our action here

is to try to reestablish the historic precedent.

Mr. DOLE. There is no precedent at all. Despite all the wars we have been engaged in in this country, the fact is that we have here—at least I can find no precedent—a precedent for cutting off funds. That would be a precedent, would it not?

Would the Senator comment on how our prisoners of war would ever be released? I do not understand how we can strengthen the hand of any President or any Congress by adopting this amendment to end the war, with reference to our prisoners of war, because once we have withdrawn that leverage, what strength would we have, how could we negotiate for the release of our prisoners of war when we have no strength, no viability in the country of South Vietnam? How would that be determined? Would that be determined by the President or would it be determined by the Senate?

The PRESIDING OFFICER (Mr. BENNETT). The time of the Senator has expired.

Mr. DOLE. Mr. President, I yield myself 10 additional minutes.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 10 additional minutes.

Mr. HATFIELD. I should like to respond to that statement, but I think my colleague from South Dakota would prefer to comment on it. Let me say to the Senator from Kansas that I enjoy this kind of repartee or colloquy to bring out the points he wanted to question us on, but I feel that since I am only one of the coauthors of the amendment, I should yield part of the opportunity to respond to the Senator from Kansas in this way, to my colleague from South Dakota.

Mr. McGOVERN. The Senator from Kansas mentioned the question of asylum. He specifically made reference to the possibility of refugees from Vietnam. Under the provisions of the amendment, and having mentioned possibly South Dakota as a location, let me say that as one resident of South Dakota, if it would bring about an earlier end to the war in Vietnam, I think I could say with complete certainty for the people of my State, that we would much prefer to have a few Vietnamese coming to South Dakota to stop the flow of young South Dakotans going to the jungles of Vietnam, if that is the choice. There is no question in my mind, about it, I believe it would be resolved sooner.

Mr. DOLE. The Senator says a few. There are 17 million people in South Vietnam. Of course, I do not know how many would be physically endangered but certainly more than a few. I share the view expressed by the Senator from South Dakota, as it is certainly nothing new for our country to provide asylum for refugees. We did it in the Cuban crisis and would do it again if necessary.

That is not the point the Senator from Kansas makes. The point is that apparently the sponsors of the amendment recognize that many who remain in South Vietnam, if there is a precipitate withdrawal because of some fixed date by the sponsors, will be physically endangered.

It is my hope that under President Nixon's plan, which is working and has exceeded the expectations of most everyone, there will be no one physically endangered when the last American leaves South Vietnam.

Mr. McGOVERN. Mr. President, on that point, is the Senator aware that a public opinion survey was conducted in South Vietnam in which the South Vietnamese people who responded indicated that 65 percent would like to see us withdraw now; 30 percent said they did not have any opinion on it; and only 5 percent expressed any desire to have our forces stay.

I have not seen any other surveys. I wonder if that does not indicate that the Senator's fear of a blood bath in the event of our withdrawal is somewhat stronger than the same anxiety that might exist on the part of the people of South Vietnam.

I think that what they fear are the enormous destructive blows being struck on that country as a result of the massive firepower of our own weapons that have been introduced in that war.

I do not find it hard to understand a public opinion poll on the part of the rank and file of the people in South Vietnam when they say, in effect, that they would like to have us go home.

Mr. DOLE. Mr. President, I find it hard to find that public opinion poll. The Senator referred to it on a national network program and has referred to it again on the Senate floor.

It would be most interesting if we might have a copy of it, if such a poll exists. The Senator from Kansas has never been able to find it.

Mr. McGOVERN. Mr. President, the results of the poll were released by an ABC correspondent in Saigon. It was reported after that that it had been repressed by the American command in Saigon.

The results of the poll were published by the Senator from Ohio (Mr. YOUNG) in the CONGRESSIONAL RECORD 2 weeks ago. There has been no denial or no refutation from anyone in the State Department or in the Pentagon.

I have no reason to doubt it. The poll has been suppressed, and that is why it has been difficult to get a copy of the poll.

Mr. DOLE. Mr. President, I have discussed this particular poll with the Defense Department officials. They have no knowledge of it.

Getting on to the more important question, it appears to me, as I have said before, that what the sponsors have done in an effort to obtain more votes for their amendment is to redraft the amendment on five different occasions.

It appears now that in effect the sponsors are embracing the Nixon program of Vietnamization. But they are saying, in effect, "While we are for Vietnamization, while we endorse the principles, we want a piece of the action. Therefore, all that has to be done is to put a date on the withdrawal. President Nixon has done everything else. The Vietnamization program is working. But he has not announced his timetable. He has not shown his hand to the enemy. Therefore, we in Congress want to write in a date."

I find it difficult to find any vast difference between what the principal sponsors of the amendment have proposed in the so-called end-the-war amendment and what President Nixon was doing.

Would the Senator from Oregon care to comment on that?

Mr. HATFIELD. Mr. President, I think the Senator from Kansas has already posed two previous questions that have not been answered in his colloquy. I would like to go back to them first.

The Senator from Kansas indicated first what would happen to those who might have to seek asylum or who would have to leave Saigon. Let me point out that we have had previous occasions when people have had to leave Vietnam because of a turnover or change of administration or regime.

I do not have to cite the fact that Madam Ngu said that she felt it was vital for the safety of her life that she leave Vietnam after the fall of Diem.

This is not a change from a non-Communist to a Communist regime. General Big Minh had to leave Vietnam. He felt it was wise for the safety of his life that he leave.

We have heard examples of turnovers of regime when people have had to leave Vietnam and seek asylum elsewhere.

The Senator brought up the matter of what would happen to our prisoners of war. I do not know of anyone who has spoken on the floor more frequently about the prisoner-of-war situation than I have. I do not know of any other Senator who is more deeply concerned about the matter of our men who have been so heinously treated.

Mr. DOLE. My point is, should we leave that up to the Senate or to the President?

Mr. HATFIELD. In the present situation we have not been successful in getting a release of the prisoners of war. We have not been able to take up the issue.

Consequently, it seems to me that if we set a time specificly for our withdrawal and declare that all American troops will be out on that particular date, we set the stage for meaningful negotiation of the question of American prisoners of war that no longer have to be held as hostages and levers and prods to try to get negotiations underway. I think we would have a better chance to get negotiations started then for the release of prisoners of war than we have experienced up to this point.

Mr. DOLE. Mr. President, would the Senator from Oregon comment on how this amendment differs in any respect from the Vietnamization program, with the exception of setting a fixed date.

Mr. HATFIELD. Mr. President, let me say that I cannot speak for all my colleagues who are cosponsors. The Senator from Kansas knows very well that when we were shoulder to shoulder last week on the draft amendment, there are different emphasis and different points that each cosponsor might wish to give as the reason for his support of the measure.

I have been publicly on record and have stated and restated that up to the point of Cambodia I supported President Nixon's Vietnamization program. There is no mystery or cloud of misunderstanding on that matter. I stood solemnly for President Nixon's Vietnamization policy up to the point of Cambodia.

I believe this amendment gives the Vietnamization program its best chance of success. This is not a confrontation. If the Senator will go back to the amendment in its original form, he will note that the amendment was introduced the day the invasion of Cambodia took place. That is the reason we had to modify the language, in view of the events that were unfolding. The Senator from South Dakota and I introduced the amendment the day before Cambodia.

On that occasion, it was our hope that the President would support the amendment. There was no aim to have a confrontation, to put us in juxtaposition with the President, but rather to undergird the President and assist him in shouldering this responsibility.

In March 1968, when President Johnson gave his famous speech about not being a candidate, I think that most of the people accepted the fact that this was Mr. Johnson's war and that, therefore, it would be impossible for him to seek renomination.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOLE. Mr. President, I ask unanimous consent to continue for 5 additional minutes.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 5 additional minutes.

Mr. DOLE. Mr. President, I yield to the Senator from Oregon.

Mr. HATFIELD. Mr. President, on the occasion when the amendment was introduced, Mr. Larry O'Brien, the chairman of the Democratic Party, expressed in a public forum an indication of the war becoming Mr. Nixon's war.

The Senator from Kansas realizes that we are both standing on this side of the political aisle. I do not think the war should be known as Mr. Johnson's war or Mr. Nixon's war. I do not think we should make a political point of the war. I do not think it should be connected to a certain policy.

This amendment can make the war become, in effect, an American people's war rather than a certain President's war. I think the Senator from Kansas would agree that the burden of this war should not be borne on the shoulders of one man, having him take full responsibility for every life lost in Vietnam or the future course of Vietnam operations.

This asks the President to take his own course for 16 months and then, in a transitional period, let Congress stand up and quit "Monday morning quarterbacking" the President and assume its proper role.

This is not a challenge to the President. This is a challenge to our colleagues to stand up and assume the responsibility the Constitution has placed on our shoulders.

Mr. DOLE. I thank the Senator from Oregon. As I said at the outset, in my opinion debate is what we need on this amendment. We need high-level debate to discuss the provisions and determine in depth the meaning of the provisions. If there are differences of opinion, perhaps they can be resolved; but the amendment to end the war, the present version, would extend the war for another 18 months.

I would also indicate, as earlier, that in my opinion President Nixon has made great progress and is on the way to complete disengagement. Both the Secretary of Defense and the Secretary of State have indicated that by June 1971 all combat troops will be withdrawn from South Vietnam, and to me this indicates additional progress. But, in any event, if that goal is not reached by next May 1, 80 percent of our combat forces will be withdrawn from Vietnam.

When President Nixon took the oath of office on January 20, 1969, this war was an actuality, it was a fact, it was on his doorstep. He did not ask for any of the appropriations which had financed escalation; he did not ask for the war; he was not a party beginning or expanding to it. Yet the war has continued.

Had there been a continued escalation of the war, perhaps this effort by Congress to fix a timetable might have more validity. But I have difficulty understanding why we should force the President or why we should expect the President, whatever his name may be—Nixon, Johnson, Kennedy, or Eisenhower—or whoever might succeed President Nixon, to say in advance that unless he comes back to Congress we will quit in South Vietnam, or any other country, or in any other conflict.

Mr. HATFIELD. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr. HATFIELD. I think one of the most important reasons why we should ask him to do that, and I say this as a fellow Republican, is that since the days of Herbert Hoover—and I have been to many conventions where this has been stated—it is the Democrats who have usurped the power and centralized the power and it was up to Republicans to be elected to reverse that trend established under the New Deal. This is the opportune time for Republicans who express this concern that has been expressed over centralization of power in one man. I am speaking of the constitutional questions, especially article I, section 8 of the Constitution.

Mr. DOLE. I might point out that the section of article I, section 8, of the Constitution which the Senator mentions refers only to armies and has no reference to the Navy. The Navy is mentioned separately and without a 2-year limit on appropriations. But in any event this is the first time that Congress—perhaps the second time—has attempted to cut off funds. It occurs to me, as the Senator from Mississippi pointed out earlier, that there must be some one American, the President, to speak for the people.

As the Senator from Oregon knows, those who drafted the Constitution at one time thought of changing in the Legislative Article the word "declare" to "make" but decided the word should be "declare"—because only one person, the President, should determine how a war should be expanded and contracted.

We should not defuse the control and authority, particularly at a time when President Nixon is on a path to peace. Perhaps the withdrawal is not as rapid as everyone would like, but he is engaged in a program to bring about peace.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOLE. Mr. President, I yield myself 5 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for 5 additional minutes.

THE CASE AGAINST THE M'GOVERN-HATFIELD AMENDMENT

Mr. DOLE. Mr. President, Winston Churchill once said:

> Patience and perseverence must never be grudged when the peace of the world is at stake.

These words have particular relevance to this time in our Nations' history and to the debate which the Senate is conducting today.

Never before in nearly two centuries of our country's life has national patience and perseverence been tried more severely than by the conflict in Vietnam. But at the same time, never has the future of the cause of peace been more gravely jeopardized.

THE NEW ISOLATIONISTS

A new kind of isolationism has risen in our country in the last few years, perhaps as an outgrowth of war weariness, perhaps because some Americans have become so deeply immersed in the internal problems of our country, and perhaps because some have seen a political opportunity in the understandable deside of our people tc achieve an end to this war and the beginning of peace.

This new isolationism is taking a number of directions, none of them in the best interests of our country if we accept the premise that a nation's domestic, internal vitality is related to and fundamentally dependent upon that nation's strength and vigor in the international arena.

This being so, we must strike the balance between spending for internal needs and spending for defense to insure that the United States can survive as a free nation in a world where all nations are not our friends.

This proposition is being largely overlooked or ignored by some segments of our population including, in my opinion, some in the Congress of the United States.

One of the forms this neoisolationism has taken has been a growing unwillingness by some to bear with President Nixon while he brings the war in South Vietnam to a just and honorable conclusion—a conclusion which will—because it must—maintain America's credibility with all nations and strengthen the American people's faith in themselves.

This means ending the war in such a way that South Vietnam is in a position to defend itself, in such a way that leaves our allies sure of our commitments to them, and in such a way that leaves our present and potential enemies equally

sure that we will keep those commitments.

As I said, there are those who are not willing to wait for this kind of peace. They seek an "instant peace" they apparently think can be obtained by phrasemaking and legislative fiat.

The current vehicle for accomplishing their aims is known by three names. The press calls it the McGovern-Hatfield amendment. The principal sponsors and their supporters call it the "amendment to end the war." Those of us who support the President and who believe in an honorable peace call it the "amendment to lose the peace."

I do not question the motives of the amendment's supporters, which include many who are rumored to have presidential aspirations.

But, I do question their judgment. They tell us—time and again they tell us—that they do not seek to retreat or surrender, nor do they not seek to thwart the President, because they oppose him. They say they only want to share the the burden and the responsibility with him. But what they would share or more aptly, usurp, is the President's sole responsibility as Commander in Chief. They would relegate to themselves the authority to order unilateral and precipitate withdrawal. They would legislate themselves the power to impose a one-sided deadline. But they cannot—nor do they wish to—assume the responsibility for these actions. The President alone bears that responsibility, the Constitution assigns it to him, and no legislative pronouncement, Madison Avenue commercial slogan, or emotional television appeal can remove or diminish that responsibility.

NO FALSE PEACE

No one disputes the proposition that peace needs to be restored in Southeast Asia. Nor should anyone quarrel with the proposition that peace must be durable and just. Peace, after all, is much more than an absence of war. It also means a system wherein the rights of every Nation are respected—such fundamental rights as national independence, self-determination, security, and freedom from intimidation.

We must be careful, therefore, that in our understandable desire to end hostilities in Southeast Asia we do not leap into a false peace, a peace that is precarious, impractical, or unjust. There are essential building blocks to be put in place before we can sit back and say that the structure of peace in Southeast Asia is solid enough to withstand the battering of subsequent events.

The element of timing becomes vital at this juncture. This is not the time to establish any arbitrary date or indulge in any other action which would narrow or restrict our efforts to end the war honorably and build peace successfully.

We already are well along the road to ending our combat role in Vietnam, as the President has promised. The number of U.S. combat troops in Vietnam has dropped by 120,000—from 550,000 when the President took office to 430,000 by the middle of this year. An additional 150,000 of our combat troops are scheduled to come home by May 1971. This is nearly one-half the number of troops that were in Vietnam when he took office. By that time, according to the President's senior military advisers, the Government of Vietnam forces will be able to handle ground combat operations.

Reversing the trend of American military engagement, and reducing American casualties, is only one facet of the Vietnamization program.

Another critical factor is the ability of the South Vietnamese to assume for themselves the task of their own defense and nation-building. They have done much in this regard, even in the midst of war. But they need time and assistance to broaden and deepen successes already achieved.

An equally critical factor is Hanoi's intentions. Let us acknowledge that the enemy is tough and resilient, and should not be underestimated. We can hope that the level of combat can be further reduced; but at the same time we must be prepared for new enemy offensives. To adopt any other stance would be foolhardy. It would jeopardize all the progress we have made in the past 19 months. The President was right and deserves our full support when he said on November 3 last year, and several times since, that if he concludes that increased enemy action endangers our remaining forces in Vietnam, he will not hesitate to take strong and effective measures to protect the members of our Armed Forces. He could do no less as Commander in Chief.

Neither should the element of timing be overlooked in regard to negotiating a settlement of the war in Indochina. We have demonstrated again and again a willingness to negotiate. But that stipulated willingness could be undercut if Hanoi were to conclude that it can wait us out. We can and should continue our search for genuine negotiation. Simultaneously, we must continue to demonstrate our resolve here in the United States to gain a just and lasting peace; and we must continue to support the common defense efforts of threatened nations of Asia.

THE UNITED STATES AS AN ALLY

There is one particular aspect of the issues raised by the McGovern-Hatfield amendment which in my judgment needs continued emphasis. It involves the role our country is to assume in world affairs as we face the challenges and opportunities of the 1970's.

Our ultimate goal is a world at peace. Sadly, a just and durable peace around the globe is not yet in sight. It is incumbent upon us, therefore, to develop creative policies and pursue feasible actions which not only minimize threats to our own security but create confidence among our allies as well as move us down a realistic road to peace.

The President outlined a blueprint to do just that in his report to the Congress last February on "U.S. foreign policy for the 1970's." In that report, he laid special stress on the fact that we are now dealing with a world of stronger allies. The central thesis which springs from the fact is that the United States no longer will have to bear the great burdens we undertook in defense of the free world 25 years ago. Other nations now have an ability and responsibility to deal with local disputes.

The time has not yet arrived, however, when all of our friends in Asia can stand alone. We still must help in varying degrees where it makes a real difference, and where it is considered in our own interest. We cannot live in isolation. We are a power in the Pacific and, therefore, we remain involved in the Pacific.

A key element in current strategy is partnership. Responsibilities in Asia once borne by the United States at such great cost can now be shared. The United States has embarked on a policy of encouraging Asian initiative, and the Vice President carefully articulated this policy to major Asian leaders last week. But we and they are only at the beginning stage of that policy. It is as unwise as it is untimely if we now start to draw lines which could constrict Asian initiative and undermine the Nixon doctrine for U.S. policy.

The McGovern-Hatfield amendment would be construed as constrictive by our allies throughout the world. Although it deals only with Indochina, it would be read elsewhere as a declaration that the United States was adopting a "sink or swim" approach where the interests of security and peace are concerned.

This is hardly the essence of the partnership role we have proclaimed. We have said we stand ready to meet our commitments. Yet this amendment, if passed, would mean our friends really could not be sure of our staying power. If we are going to rely on them to do more for themselves, they must be able to rely on us to do what we have said we would do. If their belief in our commitments is eroded, they may lose the essential incentive or will to handle their own self-defense. The stamina of our policies is at stake.

There should be no doubt that our stamina is being weighed by our opponents. This simply is not the time to specify by hour, day, week, or even year—as the McGovern-Hatfield amendment would—a limit to our involvement. Even with the most careful planning, there must be some latitude in making certain choices of action. The President needs latitude, not constrictions, as he tries to effectuate his strategy for peace.

A POTENTIAL BLOODBATH

A picture on the front page of today's Washington Post captioned "Death at the Orphanage" which is far more eloquent that the associated story on page 12, but I wish in particular to call it to the attention of the supporters of this amendment.

As we are all aware, one of the considerations the President has felt must be taken into account as he attempts to disengage the United States from South Vietnam is the fate of those who have actively resisted the Vietcong and the North Vietnamese.

Experts on Vietnam, including Douglas Pike and Stephen T. Hosmer, have foreseen the possibility of a wave to terrorism against the South Vietnamese when we leave, and if the North Vietnamese gain control, a bloodbath that could take over a million lives.

Even the supporters of McGovern-

Hatfield recognize this possibility by providing that the President can spend money for sanctuaries for those South Vietnamese who may be threatened.

However, the question arises: Who is to tell who the endangered South Vietnamese are or where they may be?

Terrorism, including murder and torture, is practiced as a political weapon by the North Vietnamese and Vietcong. One does not have to be an overt opponent to be a victim.

Since 1964, Vietcong and North Vietnamese terrorism has been responsible for about 50,000 kidnapings and more than 23,000 murders, not counting the great Tet bloodbath of 1968 where thousands were murdered in the city of Hue alone.

Mr. President, this brings me to today's story. I will insert it in the RECORD, but first let me read a paragraph or two:

Spokesmen said many of the enemy targets were populated regions that had lived in relative peace for several months. Forty-two civilians were reported killed and 120 wounded, some in attacks against rural voting centers.

Troops described by survivors as uniformed North Vietnamese rampaged through a Buddhist orphanage and hospital 22 miles southwest of Danang, hurling grenades and dynamite bombs. The 30-minute attack left 12 dead and 45 wounded.

I ask unanimous consent to have the article in full printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, August 31]

FIFTY-FIVE KILLED IN ATTACKS BY VIETCONG

In their sharpest coordinated attacks across South Vietnam in four months, North Vietnamese and Vietcong troops inflicted heavy casualties Sunday just before nationwide elections began.

Fifty-five South Vietnamese were killed and 140 wounded in more than 50 overnight attacks on towns, military installations and in scattered ground fighting, military communiques said.

The U.S. Command reported only seven attacks against U.S. units or positions, with light casualties.

Spokesmen said many of the enemy targets were populated regions that had lived in relative peace for several months. Forty-two civilians were reported killed and 120 wounded, some in attacks against rural voting centers.

Troops described by survivors as uniformed North Vietnamese rampaged through a Buddhist orphanage and hospital 22 miles southwest of Danang hurling grenades and dynamite bombs. The 30-minute attack left 12 dead and 45 wounded.

Informed sources said North Vietnamese and Vietcong forces might attempt to maintain the momentum of their attacks for several days to mark North Vietnam's national day Wednesday and the first anniversary Thursday of the death of President Ho Chi Minh.

Others thought the overnight attacks were geared only to the elections.

Mr. DOLE. It is obvious that these premeditated attacks were a part of official Communist policy. They are a part of a strategy of terror aimed not at defeating South Vietnam in military combat but at destroying South Vietnamese morale by killing, wounding, and pillaging. No matter that the victims are the sick, the wounded, the orphaned.

Visualize what could happen then, Mr. President, if the United States cuts and runs on December 31, 1971, or on February 29, 1972, before the South Vietnamese Army is trained well enough to protect the countryside.

Today's front page picture would be mild by comparison to any record of the North Vietnamese and Vietcong premeditated policies of murder and torture which will sweep through South Vietnam if we abandon our commitments, our principles, and our allies, as the sponsors of McGovern-Hatfield wish us to do.

CONCLUSION

One of Abraham Lincoln's remarks concerning the trying search for peace during the Civil War is compellingly appropriate to the issues before us today. He said:

A man watches his pear tree, impatient for the ripening of the fruit.

Let him attempt to force the progress, and he may spoil fruit and tree.

Let us not in our impatience for peace and an end to war heed a rash, popular, or expedient course which would spoil either the fruit of that peace which we seek or the tree of freedom at home or abroad.

EXHIBIT 1

[From the Washington Post, Aug. 28, 1970]

A NATIONAL POLICY TO END THE WAR

The Senate has an opportunity during the next few days to write a rational and responsible policy for ending the war in Vietnam. For many months the Senate has been itching to reverse its 1964 endorsement of a blank check to President Johnson to initiate and carry on that war. It adopted the Fulbright resolution designed to give Congress a voice in future national commitments, and a few weeks ago it attempted to forbid widening of the war to Cambodia through the Cooper-Church amendment, although the language got pretty muddy before the final action came and the House would have none of it. Now the Senate has a chance to go on record for an orderly and timely liquidation—an objective that is earnestly sought by an overwhelming majority of the American people.

This issue has been distorted in the past by the simplistic manner in which some senators sought to hasten the withdrawal from Vietnam. A scuttle-and-run policy was said to be the only alternative to a declaration of war. Widespread opposition to any action by Congress on the war was aroused by the argument that it could be, and should be, cut off by a snap of the congressional fingers.

As the issue is now being debated in the Senate, however, it assumes a very different posture. No longer is there any effort to say that American troops must be out of Vietnam within six months. In its present form (the text is presented, for the record, elsewhere on this page today) the amendment to the military procurement bill originally offered by Senators McGovern and Hatfield would now require the withdrawal of American armed forces by Dec. 31, 1971—leaving a liquidation period of 16 months. If any emergency should arise, the President would be authorized to extend this period by 60 days, and if that did not allow enough time for safe evacuation of Southeast Asia the President would so report to Congress within 10 days so that Congress could authorize a further extension.

Rigidity has thus given way to flexibility. As reshaped by the Foreign Relations Committee, this is quite a different proposition, which would have the great virtue of enacting a national policy for termination of the war without putting the President into a straitjacket. In effect Congress would enact the President's withdrawal formula as a sound national objective, without saying that it would have to be carried out in any and all circumstances. This achievement of firmness in the statement of a national policy, along with elbow room in actually carrying it out, is a tribute to the good judgment of all those who have contributed to it.

Up to now, the administration has remained in opposition to any congressional action in this sphere. In part this may be attributed to the sound objections raised against earlier versions of the McGovern-Hatfield amendment. No doubt it also reflects an automatic White House preference for a free hand. In this case, however, the White House as well as the country has an enormous interest in having the Congress on record for termination of the war in an orderly and responsible fashion. If the outcome should turn sour—by no means a remote possibility—it would be much better to have the President and Congress jointly responsible.

In our view, the White House could well regard this proposal before the Senate as a fortuitous opportunity to put Congress on record in favor of the Nixon withdrawal policy or something close to it. The requirement that our Vietnam troop-level be reduced to 280,000 men by next April 30 and that the remaining forces be brought home by the end of next year is specifically recognized in the language of the amendment as a reflection of the President's own statements. Unless the President wishes to deviate from this withdrawal policy, there are compelling reasons why he should welcome a congressional reaffirmation of it.

The President has, to be sure, opposed past efforts to set a date for the windup of the Vietnamese affair. He has feared that the fixing of a date would take pressure off the North Vietnamese to negotiate an end of the war. But if Congress fixes a date which the President could postpone or even eliminate with the consent of Congress, when the time came, the North Vietnamese would, as the Foreign Relations staff memorandum notes, have no assurance that mere stalling would redound to their advantage.

In any event, it seems to us that the advantages of having a congressional withdrawal policy on the books greatly outweigh any disadvantages that might be encountered at the negotiating table. Such legislation would put the President under pressure to carry out the evacuation at the earliest feasible date. It would put our military leaders—and our diplomats, as well—on notice that the national policy is irreversible. Saigon also would have a clearer understanding of what the score is and would be able to adjust its policies accordingly. So long as there is hope that the President may change his mind under pressure the Thieu government is more likely to avoid the hard decisions that are essential to a future for South Vietnam without American manpower for its defense.

Behind all the arguments for and against this amendment is the even more vital fact that the Senate is making a bid to get back into the policymaking arena in regard to war and peace. We think the President should welcome that effort as a bedrock imperative of American democracy. If the present amendment is not satisfactory to the administration in all particulars, amendments can always be suggested. But it would be tragically shortsighted for the administration to take an arbitrary stand against congressional action designed to underscore and give congressional support for the President's own policy. Orderly termination of the war as soon as feasible ought to be the joint policy of the two political branches, and it is doubt-

ful that there will be a better opportunity than the present to make it so.

[From the St. Louis Post Dispatch, Aug. 30, 1970]

TWO CRITICAL ISSUES OF THE WAR

Two critical issues are at stake in this week's Senate vote on the McGovern-Hatfield amendment to end the war. One is the question, not whether some troops shall be withdrawn from Vietnam, but whether a quarter of a million young Americans shall stay there indefinitely after 1971. The second question is whether the decision on this matter shall be made by the President alone, or shall be shared by Congress, as the Constitution intended when it gave Congress the exclusive power to declare war.

On both counts, we think the McGovern-Hatfield amendment should be adopted. Vice President Agnew has sought to smear all supporters of the amendment as cowards and isolationists who seek American humiliation and defeat in SE Asia. The fact is that the kind of specific timetable of withdrawal which the amendment contemplates has been proposed behind closed doors by high officials of the Administration itself. They urged it, not because they wish to "lose the war" but because they felt a definite schedule of troop withdrawals would compel Saigon to accept a reasonable political settlement.

This judgment, shared by McGovern-Hatfield backers, may be right or wrong, but those who hold it are entitled to be heard as honest citizens, no less brave or patriotic because they differ with official policy.

When not denouncing McGovern-Hatfield as an instrument of surrender, the Administration tries to convince the people that its own objectives are the same as the amendment's to withdraw American troops, to end the war. What many Americans do not realize is that while Mr. Nixon promises to bring home 150,000 men by next spring, his policy calls for sending some 250,000 other men out to Vietnam during this period, and maintaining that troop level perhaps for years to come.

Thus it is true that Mr. Nixon is committed to reducing our force level sharply from the 540,000 reached under Lyndon Johnson. But he has never committed himself to reduce it below 250,000 men, or roughly half. This is what the argument is about. Even if the President's rate of withdrawals is considered satisfactory, the question remains what happens after next spring when the garrison has been cut to about 250,000?

It is strange and in a way incredible that some Americans, and some members of Congress, should be willing to leave the answer entirely to one man's discretion. Most of us agree now that, whatever our differences may be on how to get out of Vietnam, it was a tragic mistake to become so deeply involved there in the first place. In doing so we permitted the crucial decisions to be made by President Johnson and his military advisors without the effective participation of Congress and the people, as the Constitution contemplated. Having thus permitted one man to decide whether 40,000 Americans should die and thousands more be wounded, is it not time to redress the balance so that Congress will at least help decide how many other Americans shall die and be wounded in the years ahead?

All of history argues that if by the latter part of 1971 there is good reason to keep American troops in Vietnam on the end of the year, President Nixon can persuade Congress to authorize it. Even if he were to ask for a declaration of war, there is little question that he would obtain it. The question is whether he shall be required to consult Congress, to justify the course he chooses. McGovern-Hatfield would make Congress a full partner in future decisions on Indochina, and that is as it should be.

However the McGovern-Hatfield goes, it will be an important indicator of Senatorial attitudes toward the war, and toward the role of Congress in the waging of war. We expect Sens. Symington and Eagleton to declare themselves unequivocally on those questions, and we think Attorney General John C. Danforth, who seeks to replace Sen. Symington should do so as well.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 5 minutes to the Senator from Florida.

Mr. HOLLAND. Mr. President, no Member of this body nor any other knowing citizen could for a moment challenge either the strong convictions of the authors of the pending amendment or their proven patriotism in battle and under the most difficult circumstances of battle.

The Senator from Florida, after making that clear, also wants to make it clear that he feels that the approach used in the pending amendment by its authors is, in his judgment, most unwise, unfair to the President, unfair to the Nation, and most unfair to the several hundred thousand Americans whose lives are directly affected by what goes on in Vietnam because of their presence there.

Mr. President, I shall not belabor the question of the effect of the adoption of this amendment upon the Paris peace talks, which have led us to no satisfactory conclusion as yet, and whose promise is not very good at this moment. I shall dwell instead upon the fact that the very amendments which have been offered by the sponsors of the pending amendment—and this is the fifth version of the proposal—show how completely changing the picture is, and how much it has changed even in the opinion of the sponsors of the amendment since the time when they first offered their original bill last fall.

The Senator from Kansas stated there were six versions of the approach to this question. The first version, however, was offered by the Senator from New York (Mr. GOODELL), the other five—four of which have been offered and one debated but not offered—by the sponsors of the present amendment, the Senator from South Dakota and the Senator from Oregon.

It will appear from even a casual reading of these five versions of their approach to the problem how greatly the judgment of the sponsors of the amendment has changed during the period while we have been debating this subject. I shall not go into the matter in such detail as to quote provisions from these five differing approaches, but, beginning with the content of Senate Concurrent Resolution 39, offered last fall, and going through all of the other four versions of the proposal, it would appear that not only have the views of the sponsors——

The PRESIDING OFFICER. The 5 minutes of the Senator from Florida have expired.

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 56 minutes.

Mr. STENNIS. I yield the Senator 5 minutes.

Mr. HOLLAND. Not only have the views of the sponsors of the amendment as to the time which should be specified as the date by which this war should be ended changed materially from time to time, but also their opinions have changed to other conditions which they felt were fair, and I am sure they felt they were fair both toward the Chief Executive, toward our fighting men, and toward the country. Those conditions also have changed, as shown by the content of the several provisions which the Senators have offered.

I repeat, I think the sponsors have offered them with deep conviction. The point I am making is that we are dealing with a very serious matter, in which conditions are changed from day to day, from week to week, and from month to month; and nowhere is that better illustrated than by reading the five versions of the approach adopted by the sponsors of this amendment.

Therefore, Mr. President, it seems to me that it should be very clear that it is unwise for us now to try to pick a date to end this war, that it is unwise for us now to handicap our negotiators in Paris, or the President, by such an adoption; and that it is unwise for us to give what looks like a period of grace, as provided by the last version of the amendment, of 60 days to the President, in the event he is not successful in bringing the war to an end by the end of next year, December 31, 1971, and in the event he has not been able by that time to get all of our personnel out of South Vietnam.

Mr. President, I think that the mere reading of those five provisions, all coming from the highly conscientious minds of the sponsors of this proposal, shows how changing the proposal is, how changing the opinions of these distinguished Senators have been during this relatively short period of time, and how clear it is that even in their opinion the time for ending the war and the conditions in connection therewith have greatly changed.

Mr. McGOVERN. Mr. President, will the Senator yield at that point?

Mr. HOLLAND. I shall be glad to yield in just a moment if I have time, but I want to finish this thought.

It seems to me that it is very clear that it is unwise, unsound, and unsafe to try, at one time—and these sponsors have tried at five different times to state their conscientious views as to what the facts existing at that time required—to embody any inflexible condition at any fixed time, and that means at this time as well as at any of the preceding times when the Senators drew amendments which they thought would deal effectively with this matter.

Mr. President, with that thought, I am glad to yield to the Senator from South Dakota, assuming that I have the time to yield.

Mr. McGOVERN. Mr. President, I merely wanted to call the Senator's attention to the fact, since he has made

considerable point of the changes that have been made in the amendment since it was first introduced, that the fundamental change is in the date for withdrawal, and the basic reason for setting back the time is that a number of months have passed since the amendment was introduced.

I do not know what the fifth version is that the Senator is talking about. There have actually been four versions of the amendment, the first having been introduced on April 30, the day before the Cambodian invasion.

At that time, we had thought that possibly a vote could occur in 30 days, and we set the withdrawal deadline a little over a year hence, June 30, 1971. But with the passage of the spring and the summer months, and with September 1 coming upon us tomorrow, it seemed prudent, in order to meet our original purpose, which was a withdrawal deadline about 1 year in the future, that we move that deadline back to December 1971.

The essential purpose of the amendment, which is to set a definite, announced withdrawal date at a reasonable time approximately a year in the future has never changed. I wanted to make that point, rather than to leave the impression that there has been a radical change in the purposes and goals of the sponsors of the amendment. As far as I am concerned, there has been very little change in our essential purpose.

We have added one other matter that I think is significant, and that is the 60-day grace period in which the President could extend the deadline without any further consultation with Congress. In the original version, he would have had to come back to Congress even for a 60-day extension.

Mr. HOLLAND. And the Senator has added also another additional condition that I think should be called to his attention. That is the one that no money may be spent on the maintenance of our troops when more than 280,000 remain there, should they remain there after April 30, 1971.

So there are two removal dates fixed now, instead of the one set by the earlier version.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. McGOVERN. I thank the Senator.

Mr. HOLLAND. Mr. President, if I may have 1 more minute——

Mr. STENNIS. I am glad to yield the Senator 1 additional minute.

Mr. HOLLAND. I thank the Senator from South Dakota for his comments. I think all Senators, including the sponsors of the amendment, should realize that if there is one person in the United States who is most eager to bring this war to an end and bring our men back, it would be the President of the United States because he had a commitment looking to that end—without attempting to quote the words—in his race; because, being a human being, he would like to succeed; because, being a human being, he would like to be nominated and, if possible, elected for a second term. We all know that is his natural ambition. And he knows what the continuation of the Vietnam war did to his predecessor.

It seems to me just as clear as day itself that if we want to trust this matter to a man who not only has all information down to the minute, at any fixed minute, but also to a man who has probably most at stake personally in the bringing of this war to an end and bringing of our troops back, we should leave it to the President of the United States. The Senator from Florida is willing to do just that.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. STENNIS. I yield 2 minutes to the Senator from West Virginia.

ORDER FOR ADJOURNMENT UNTIL 8 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I have been asked by the majority leader to revise the time for the convening of the Senate on tomorrow morning. Therefore, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 8 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM—UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, immediately following the prayer and the disposition of the reading of the Journal tomorrow morning, the Executive Calendar and unobjected-to items on the legislative calendar be called—not necsssarily in that order—following which the able Senator from Iowa (Mr. HUGHES) be recognized for not to exceed 10 minutes; that at the conclusion of the remarks by the Senator from Iowa (Mr. HUGHES), the able Senator from Ohio (Mr. YOUNG) be recognized for not to exceed 20 minutes and that, following the special orders for recognition of Senators, there be a period for the transaction of routine morning business, with statements made therein by Senators limited to 3 minutes; that the period for the transaction of routine morning business end at 9 a.m.; that at 9 a.m. the amendment offered by the able Senator from South Dakota (Mr. McGOVERN), amendment No. 862, be laid before the Senate and made the pending business.

Mr. STENNIS. Mr. President, reserving the right to object—and I do not expect to object—I believe the Senator made a request regarding tomorrow morning's early session.

Mr. BYRD of West Virginia. Yes.

Mr. STENNIS. That leaves the situation as it was with reference to the end the war amendment, with debate on it from 9 a.m. to 10 a.m.?

Mr. BYRD of West Virginia. That is correct. The order on scheduled amendments would be unchanged.

Mr. STENNIS. I do not object.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 5 minutes to the Senator from Kansas.

Mr. DOLE. Mr. President, if the Senator from South Dakota is willing, we might discuss some of the additional provisions of the amendment and some of the shortcomings the Senator from Kansas feels are contained in the amendment.

It would be helpful to the Senator from Kansas, and perhaps the entire Senate, if the Senator from South Dakota would clarify and expand upon section 4, on page 2, which reads:

> To provide assistance to the Republic of Vietnam consistent with the foregoing objectives.

Would the Senator comment on that provision?

Mr. McGOVERN. The purpose of that provision in the amendment is to make clear that nothing in this amendment should prevent Congress, if it so decides, from offering assistance to the government and to the people of South Vietnam.

Mr. DOLE. Could that be extended beyond December 31, 1971?

Mr. McGOVERN. Yes. If it is covered by congressional action, it could be. It is to make clear that, while the amendment terminates the military operations that involves American personnel either on the ground or in the air, nothing in this amendment would preclude any action by Congress that it wished to take with regard to the granting of assistance—military, economic, or otherwise—to the people of South Vietnam or to other countries in Indochina.

Mr. DOLE. There is another question. With reference to the unnumbered proviso on page 2 which states:

> That if the President, while giving effect to the foregoing paragraphs of this section, finds in meeting the termination date that members of the American Armed Forces are exposed to unanticipated clear and present danger.

It would be helpful, again, if we could clarify or at least elaborate on "clear and present danger." It means one thing, from a legal standpoint, and perhaps has another interpretation from a military standpoint.

Mr. McGOVERN. It is designed to give the President, as Commander in Chief, the leeway he needs to meet an emergency situation. We would anticipate and take very seriously the December 31 withdrawal deadline. But some Members of the Senate felt that a situation might

develop in which the President would not have time to come to Congress and ask for additional authority to meet a crisis—perhaps an attack on our troops or some other contingency that we could not foresee—and that, therefore, a grace period was needed, during which the time the President could move without any further consultation with Congress.

It further provides, though, that if he uses that option to extend the time by 60 days, he would have to come to Congress if he wanted any additional time and present the case for a new withdrawal deadline within 10 days after exercising the option for a grace period.

But for 60 days, all that is required is a finding by the President. He would interpret the standard himself.

Mr. DOLE. I believe the amendment is clear, but, the amendment does require unilateral withdrawal. Is that correct? No reciprocity is required by the North Vietnamese.

Mr. McGOVERN. That is correct. It puts the complete control of the withdrawal timetable within the hands of the U.S. Government, and it has no reference at all to any withdrawal timetable by Hanoi or by any other forces.

Mr. DOLE. Finally, the Senator from South Dakota, again in accordance with the amendment, would be opposed to any residual support force remaining beyond December 31, 1971, or February 29, 1972, or some additional time determined by Congress, whether it be logistics or construction or communications, airpower, or military or any other residual support force.

Mr. McGOVERN. That is correct. The amendment bars any kind of American military forces—logistical, supporting, or any other kind.

Mr. DOLE. Another question: Would the amendment have any effect on the troops now stationed in Korea and the troops now stationed in Thailand?

Mr. McGOVERN. No; it would not. It relates only to American forces in what was once referred to as Indochina. That would be the two Vietnams—North and South Vietnam—Cambodia, and Laos.

Mr. DOLE. Would it be fair to say that, perhaps, in addition to the basic question of who makes the determination, the President or the Congress, another issues involved is the pace of withdrawal. The Senator from South Dakota and the Senator from Oregon, as I understand it, feel that it should be a more rapid pace.

Mr. McGOVERN. Yes. It would be more rapid that that schedule. It would be one that would have to be completed by the end of 1971 unless the President exercised the 60-day option. But the important thing about it, as I see it, is that there is a definite target date announced, as opposed to a plan with no target date at all. That is really crucial. We are not telling the President how many forces have to be out, except for the one provision that by April 30 he should achieve the 280,000 force level he himself has announced.

Mr. DOLE. Mr. President, I ask unanimous consent that a story in today's Evening Star, entitled "Cambodian Town Captured, Viet Orphans Killed," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Aug. 31, 1970]

CAMBODIA TOWN CAPTURED, VIET ORPHANS KILLED

PHNOM PENH.—Viet Cong forces overran the town of Srang, 26 miles southwest of Phnom Penh, and forced Cambodian defenders into what the government called a tactical withdrawal yesterday.

The South Vietnamese command said North Vietnamese troops killed 10 persons and wounded 44 in an attack on a South Vietnamese orphanage.

"This is just plain murder," said Maj. Thomas J. Pentacost of Camp Lejeune, N.C., of the attack on a Buddhist compound near An Hoa, 352 miles northeast of Saigon.

The report said uniformed North Vietnamese troops also seized a Buddhist monk, dragged him from his pagoda, bound his wrists and shot him to death when he refused to give them his money. The troops also robbed the orphanage treasury and fled with pigs and chickens, the report said.

SEIZURE OF SRANG

Communiques from Phnom Penh said Communist troops had seized the town of Srang. Spokesmen said Cambodian troops withdrew "to avoid the Viet Cong pressure and give airplanes a clear target."

Heavy air strikes were called in to try to force the Viet Cong out of the area around Srang. The spokesman declined to say whether American jets took part in the attacks.

Allied officials in Saigon reported 40 shelling attacks overnight, 20 fewer than the previous night. At least 42 civilians died and 114 were wounded in Communist shellings and ground attacks early yesterday.

The 60 rocket and mortar attacks throughout South Vietnam late Saturday and yesterday morning were the most since 96 were carried out June 4, military spokesmen said. Allied officials described "enemy activity" at its highest level since early May. They say it is an apparent attempt to disrupt South Vietnam's senatorial elections.

A South Vietnamese military doctor and 12 government troops who seized a hospital and began sniping at passersby at NHA Trang Air Base, 188 miles northeast of Saigon, were subdued today after the doctor, Capt. Ha Thuc Nhom, unsuccesfully tried to commit suicide. Three persons were killed in the six-day siege, including a U.S. soldier.

Fighting across Cambodia was light following the Viet Cong seizure of Srang.

There was no estimate of the number of Communist troops around Srang. The fighting broke out Friday with a series of harassment attacks and ended yesterday with a successful Communist assault on the town.

"I do not believe the Viet Cong will stay in that town too long," the military spokesman said. He did not elaborate.

ATTACK NEAR CAPITAL

Military officers at Moat Krasas Krao, six miles east of Phnom Penh, said the Viet Cong control the area around the town's Roman Catholic Church and a reinforced Cambodian company has fortified government positions in the town in expectation of an attack by 200 Viet Cong.

The Viet Cong moved into the area Saturday. It was the closest battle to the capital so far.

Allied military sources in Saigon said the level of enemy activity remained high today, but the shelling attacks fell off from weekend levels.

Mr. STENNIS. Mr. President, I yield 10 minutes to the distinguished Senator from South Carolina.

The PRESIDING OFFICER (Mr. COOK). The Senator from South Carolina is recognized for 10 minutes.

Mr. THURMOND. Mr. President, I rise in opposition to amendment No. 862, the so-called end the war amendment, now pending in the Senate. This amendment has been revised a number of times, the latest version requiring that no funds shall be provided to maintain a troop level greater than 280,000 after April 30, 1971. Further, it is required that after April 30, 1971, funds provided in the act may be used only for the following purposes: First, orderly termination of all military operations and the withdrawal of remaining forces by December 31, 1971; second, to secure the release of U.S. prisoners of war; third, provision for the asylum of Vietnamese who might be endangered by the U.S. withdrawal; and fourth, assistance to the Republic of Vietnam consistent with the foregoing objectives.

Amendment No. 862 also provides that in the event these deadlines may endanger U.S. personnel, the President may extend the December 31, 1971 date, 60 days. If such action is taken the President shall inform the Congress forthwith of his findings and within 10 days of the suspension the President may submit recommendations, including—if necessary—a new date for congressional approval.

Even though this amendment has been altered several times in the past few days, it is still a bad amendment and its passage could result in serious consequences both for United States and South Vietnamese forces in South Vietnam.

Mr. President, there are a number of reasons why I oppose this amendment. First among them is the fact that despite the lengthening of the withdrawal date, the amendment would still limit the flexibility of the President as regards our commitments in South Vietnam. This brings us to a key point in this entire discussion. Should the President of the United States, as Commander in Chief, continue to direct this country's disengagement in Vietnam or should the Congress take over? I submit that this country would be making a grave mistake if the Senate accepts this amendment and restricts the President in his powers as Commander in Chief. If the Senate wishes to speak on this matter it should do so with a resolution rather than a restrictive amendment. The President has made good on his promises involving the war in Vietnam. We are in fact well along on our program of reducing U.S. forces from Southeast Asia. Our experience with promises by the Secretary of Defense leads us also to believe when he says, as he has several times, that U.S. forces remaining after June 1971 will be mainly support forces or protecting U.S. support forces.

But our plans and actions in Southeast Asia must take into account both the continued safety of U.S. forces. In the absence of a negotiated settlement successful implementation of the program of Vietnamization must be attained if we are to assure the right of the people of South Vietnam to choose their own Government. To impose upon the President an arbitrary deadline and special limitations unrelated to those objectives would prejudice and could preclude attainment of a just and durable peace in South Vietnam.

Second, it is equally important that in our planning we take into account the matter of prisoners of war. We have sought in every imaginable way to bring pressure on the enemy to abide by the Geneva Conventions and to treat our men humanely. In Paris, we have tried repeatedly to conduct meaningful talks on the prisoner of war issue. Earlier this year the government of Vietnam released unconditionally 62 sick and wounded North Vietnamese Army prisoners of war and transported them to the shores of North Vietnam. Our Government has also spoken out at the United Nations.

As individuals, we have supported resolutions by the Congress and initiatives by other organizations. This effort was intended to enlist the support and influence of world opinion in the cause of our men now held prisoner in North Vietnam and elsewhere in Southeast Asia.

A public, fixed schedule of withdrawals likely would adversely affect chances to get U.S. prisoners of war back. Our military forces in Southeast Asia give us some leverage in negotiations for better treatment and release of U.S. prisoners in enemy hands.

Third, the December 31, 1971, date for total withdrawal is too great an acceleration to allow the South Vietnamese to achieve a sufficient capability in all requisite fields to cope with the enemy. Training of South Vietnamese in complex skills will not be completed by this date. In this connection, I am referring to the training of pilots and those personnel who operate and maintain sophisticated equipment. This training cannot be accelerated significantly. While I recognize that the vast majority of our military personnel will be out of Vietnam by the end of next year, we will still need some soldiers there for training purposes in the areas I have just mentioned.

Fourth, this amendment precludes a military assistance advisory group—MAAG—considered necessary to insure continued progress by the South Vietnamese. While such a group would not be large, its technicians are needed to assist the Vietnamese in managing and logistically supporting the large military structure we will leave behind. If we fail to provide such support, we would thus significantly reduce the capability of our allies to secure their own defense. Thus, we would reduce the chances of continued freedom for the South Vietnamese.

Finally, for these reasons I oppose this amendment and urge my colleagues to defeat it. While the amendment has been altered considerably to bring it in line with President Nixon's timetable, it is still unwise to impose a set schedule on him.

Mr. President, some have called this amendment the lose-the-peace amendment. There is a lot of truth in that charge. Our history shows us we have often won the war but lost the peace. In Vietnam we have not won the war. We certainly cannot afford to lose the peace.

If we take this action it would reduce U.S. international credibility and bring all U.S. obligations and treaties into immediate review by our allies. It would be clear that these obligations had unspecified time limits which are apt to grow shorter if subject to pressure.

I submit to my colleagues that the winning of the peace in Vietnam will be especially difficult if we accept this amendment. We have lost a lot of men in this war. We owe them our best in bringing our involvement in South Vietnam to a successful conclusion.

It would be a crime to lock ourselves into schedules and timetables which would throw away our chances to make this commitment worthwhile. Three Presidents have been involved in this commitment. We must not bind the one whose actions will decide the fate of the South Vietnamese people and the fruits of our efforts in Indochina.

The country knows of the concern of every Member of Congress regarding our commitment in Southeast Asia. The President has gone to extremes to reassure the people in this area. In the heat of this debate let us reject this amendment so as not to destroy the efforts of the past 10 years.

Mr. President, I ask unanimous consent that an editorial entitled, "The White Flag Amendment" published in the New York Daily News of Monday, August 31, 1970, be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WHITE FLAG AMENDMENT

The "White Flag Amendment"—which masquerades as the "amendment to end the war" comes before the Senate tomorrow for a showdown vote.

This bugout scheme is co-sponsored by Sens. George McGovern (D-S.D.) and Mark Hatfield (R-Ore.). And despite some last-minute chopping and changing to sucker fence-sitting senators, the proposal remains what it has always been, a blueprint for a U.S. surrender in Vietnam.

It would force a pell-mell pullout of American forces there by cutting off all funds for the Vietnam war as of Dec. 31, 1971. It represents the kind of simple—and simple-minded—solution to Vietnam for which arch-doves and pacifists (as well as the defeatists and Reds who lurk behind them) have long clamored.

This amendment wears the phony tag of a "peace" plan. More accurately, it constitutes a first step toward whittling Uncle Sam down to pygmy size in the world power scales; it would fill our enemies with glee and our friends with dismay.

McGovern-Hatfield might appear a cheap out from Vietnam. But we would pay for it dearly later in other challenges and confrontations as the Communists probe, as they inevitably do at any sign of weakness, to determine the exact jelly content of America's spine.

The McGoverns, Hatfields, Fulbrights, Goodells and their ilk would have the nation believe that its only choice lies between their skedaddle scheme and an endless war. That is a lie.

President Richard M. Nixon has a program for ending America's commitment in Vietnam, and it is now under way. It involves an orderly cutback in U.S. forces.

The White House method assures the South Vietnamese at least a fighting chance to stand on their own feet and determine their own future after we leave.

Equally important, it tells the world the U.S. is not about to pull the covers over its head and duck out on its responsibilities as leader of the free world.

We urge the Senate to slap down the McGovern-Hatfield amendment, and scuttle with it any notion that America is willing to buy off noisy dissidents at the price of its honor.

The PRESIDING OFFICER. Who yields time?

Mr. McGOVERN. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from South Dakota is recognized for 2 minutes.

THE PROPOSAL TO END THE WAR

Mr. McGOVERN. Mr. President, I call to the attention of the Senate an excellent editorial that appeared in the Boston Globe of last Saturday. It is a rather lengthy editorial and sets forth the reasons why the amendment to end the war should be agreed to. I think it is one of the most cogently reasoned editorials that has ever come to my attention.

I ask unanimous consent that the editorial to which I have referred be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PROPOSAL TO END THE WAR

If the Hatfield-McGovern proposal to end the war in Vietnam is defeated in the United States Senate when it comes to a vote Tuesday, the reason will have to be that some senators, including several from New England, have not yet recovered from the brainwashing they got at the White House when the proposal was in its original and largely unacceptable form.

There now is no discernible reason for the White House itself, let alone its most loyal Senate supporters, to oppose the proposal (an amendment to the $19.2 billion military authorization bill) unless it be, as some White House dissidents have stated to their Senate confidants, that "the President does not want the Senate to take the play away from him in an election year."

The Hatfield-McGovern proposal, as amended within the last few days, yields to every legitimate claim the President could make that his constantly asserted powers as commander-in-chief of the armed forces, would be diluted. The proposal, as meticulously amended by Senate constitutionalists, preserves all of the President's legal prerogatives. It denies him only the "right," so dubious that not even his most ardent Senate backers have asserted it, to prolong and widen the war in any manner that he may deem fit.

On April 20, Mr. Nixon asserted, "I tonight announce plan for the withdrawal of an additional 150,000 American troops to be completed during the spring of next year. This will bring a total reduction of 265,500 men in our armed forces below the level that existed when we took office 15 months ago."

Give or take a man or two, this is almost precisely what the Hatfield-McGovern proposal, as amended, would do. It leans over backwards to protect the President's asserted prerogatives, even though many Senate constitutionalists believe he has grievously overstated them. The arithmetic of the President's proposal would leave between 260,000 and 270,000 men in Vietnam after next spring. The Hatfield-McGovern proposal would permit him 10,000 more than this after next April 30. And while it provides for the cutoff of all funds for troop maintenance in Indochina by Jan. 1, 1972, it also gives the President a 60-day grace period if he wants it and provides, in addition, that the President thereafter may ask Congress for further extensions. It gives him all reasonable flexibility.

If the White House, then, is really serious about winding down the war and is holding nothing up its sleeve, its opposition to Hatfield-McGovern is inexplicable except for

the above-stated political reasons. An incidental fact possibly worthy of note is that the Administration's announced withdrawal timetable is already behind schedule. Withdrawals which had been averaging 12,500 a month have been cut back to between 7000 and 7500. Another interesting incidental is the way the American people have reacted to news developments, as these reactions have been noted by senators.

After the invasion of Cambodia, the mail was running 12 to 1 in favor of the Hatfield-McGovern resolution. After the withdrawal, the public fears appeared to be allayed. There was very little mail one way or another. Now (and this may be a bit of an eye opener at the White House) the volume of mail overwhelmingly favoring the "get out" amendment has picked up considerably as a consequence of such warlike speeches as the one in which the Vice President told a veterans' convention, "The nation will not go down to humiliating defeat on the battlefield, I promise you that." His most recent utterance, in Bangkok, should give even further pause to those who have reason to believe this war could drag on for years if senators now run out on their own responsibilities:

"If my visit to Cambodia gave the Communists the impression (that the United States was contributing to an escalation of our involvement there), that is exactly what we had in mind."

The ambiguity in this and other pronouncements of the executive branch should give senators a feeling of uneasiness, at the very least. They would do well to ponder the counsel of Sen. Edward W. Brooke, himself a recent convert to the Hatfield-McGovern proposal as it has been amended:

"The proposal lends congressional sanction to a responsible program (for ending the war). It provides a reasonable and flexible means for harmonizing legislative and executive policy on this perplexing issue. . . . It can bolster the President. . . . It can strengthen the chance for peace. . . . It can open the path to reconciliation for the American people."

What more can senators want? And what less can the disturbed American people demand?

LEGAL EXPERTS SUPPORT M'GOVERN-HATFIELD AMENDMENT

Mr. McGOVERN. Mr. President, in a similar vein, a letter to the editor published in the New York Times of August 30, 1970, signed by five distinguished legal scholars—Bruce Bromley, William T. Coleman, Jr., John W. Douglas, Roger Fisher, and Paul C. Warnke—advances the thesis that the important question here really centers on the issue of whether we should announce a time certain, a definite date for the withdrawal of our forces or whether we should proceed on the policy advanced by the administration and leave that withdrawal date uncertain and the time for our disengagement open ended.

I ask unanimous consent that the letter to the editor of the New York Times to which I have referred be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEBATE ON MCGOVERN-HATFIELD AMENDMENT URGED

To the Editor:

As the Senate approaches a vote on the McGovern-Hatfield "Amendment to End the War," it is imperative that citizens and legislators alike focus on the central issue—the wisdom of setting a time limit on our military involvement in Indochina. Unfortunately, too much attention in the debate has been devoted to irrelevant argument about whether the President or the Congress should control military tactics.

Some opponents of the amendment have characterized it as an attempt by Congress to dictate military tactics to the President and to infringe upon his powers as Commander in Chief of our armed forces.

The fact is, however, that the amendment does not deal with military tactics. It is wholly concerned with the basic issue of the use of our military force to make war in Indochina and calls for an end to our direct military involvement in that area by Dec. 31 of 1971. Up until the time that our forces are disengaged, the President will retain full control over tactical decisions.

We recognize, of course, that the President has far-ranging powers as Commander in Chief. In an emergency situation like Pearl Harbor, it is his responsibility to take the immediate action necessary to meet the particular emergency.

In a war authorized by Congress, it is his responsibility to make the day-by-day civilian decisions on the tactics to be employed, how that war shall be fought, whether to take an offensive or defensive position, and what conventional forces should be used in a particular battle.

The President's powers, however, do not extend to the basic policy question of when our national objectives shall be pursued by military means. That is the responsibility of Congress. The President is not free to decide on a unilateral basis when, where, how long and against whom the United States shall wage war.

The division of responsibility between the Congress and the President is made clear by the Constitution itself. To insure that the elected representatives of the people would decide to what use any standing army would be put, the Constitution provided that no appropriation for an army shall have a term longer than two years. No comparable limitation on any other type of appropriation is to be found in the Constitution.

This restriction was designed to compel Congress to exercise its responsibility to review and, if necessary, restrain, international military activity. In the Federalist No. 26, Alexander Hamilton, a supporter of a strong executive, makes clear the intention of the Constitutional Convention in this regard.

The most recent example of Congressional exercise of its constitutional duty is Section 643 of the Department of Defense Appropriations Act of 1970, which provides that "none of the funds appropriated by this Act shall be used to finance the introduction of American ground combat troops into Laos or Thailand." The bill was signed by the President without constitutional objection.

Similarly, the Selective Training and Service Act of 1940 included a prohibition against the employment of persons inducted under the act beyond the limits of the Western Hemisphere, except in U.S. territories and possessions.

We recognize that the present Administration inherited our military involvement in Indochina. We also recognize that the manner by which that involvement may be terminated is open to question. But what is needed as the vote on the McGovern-Hatfield Amendment approaches is a straight-forward debate on the merits of setting a date for termination of the Indochina war, uncluttered by any argument that Congress is attempting to usurp Presidential power or prerogatives.

CASUALTY AND COST PROJECTIONS FOR DIFFERENT VIETNAM WITHDRAWAL PLANS

Mr. McGOVERN. Mr. President, two former experts in the systems analysis section of the Assistant Secretary of Defense, Charles Shirkey and Arnold Kusmack, have prepared a series of projections on what the casualties and cost projections are likely to be under the various alternatives for ending our involvement in the war in Indochina.

The first projection deals with the cost in dollars and the number of Americans who might be killed in action and the number of Vietnamese casualties that would develop if we were to follow the withdrawal plan outlined in the pending amendment.

Another projection deals with the costs in all of those categories if we were to continue at the present withdrawal rate as outlined by the administration.

Another projection deals with what the likely casualties and costs would be if we were to continue our present withdrawal schedule but leave a residual force of either 50,000 or 200,000 men, which is another figure that has been referred to.

I think that Senators will find these projections to be of great interest and assistance in reaching their vote on this amendment tomorrow.

Mr. President, I ask unanimous consent that this tabulation be printed in the RECORD.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

CASUALTY AND COST PROJECTIONS FOR DIFFERENT VIETNAM WITHDRAWAL PLANS

	Cost (billions)	Increase over case 1	Americans killed in action	Increase over case 1	American casualties	Increase over case 1	South Vietnamese killed in action	Increase over case 1	Total Vietnamese killed in action	Increase over case 1	South Vietnamese casualties	Increase over case 1	Total Vietnamese casualties	Increase over case 1
1. Withdrawal by end of 1971	$15.0	----------	3,800	----------	33,900	----------	130,000	----------	370,000	----------	500,000	----------	1,045,000	----------
2. Current withdrawal rate, out by early fiscal year 1973	19.7	4.7	5,400	[1] 1,600	47,900	[2] 14,000	140,000	10,000	400,000	30,000	540,000	40,000	1,130,000	85,000
3. Current withdrawal rate, residual force of 50,000 men	25.7	12.7	7,400	3,600	65,450	31,550	195,000	65,000	555,000	185,000	750,000	250,000	1,565,000	520,000
4. Withdrawal delayed in fiscal year 1972, residual force of 50,000 men	31.5	16.5	9,500	5,700	84,000	50,100	215,000	85,000	600,000	230,000	810,000	310,000	1,695,000	650,000
5. Continuing force of more than 200,000 men (fiscal year 1975)	46.4	41.4	14,700	[1] 10,900	130,300	[2] 96,400	265,000	135,000	715,000	345,000	960,000	460,000	2,025,000	980,000

[1] Killed in action.
[2] Wounded.

Note: All projections are based on the period, fiscal years 1971–75. "Casualties" means dead and wounded.

REBUTTAL TO NEW YORK TIMES EDITORIAL OF AUGUST 31, 1970

Mr. HATFIELD. Mr. President, I yield myself 4 minutes.

The PRESIDING OFFICER. The Senator from Oregon is recognized for 4 minutes.

Mr. HATFIELD. Mr. President, the New York Times this morning published an editorial which describes the "amendment to end the war" as having a "sound motive" but being a "dubious method." I believe that the New York Times has misunderstood the nature and import of the amendment, and several points which are raised in the editorial need clarification and correction.

The New York Times maintains that "it is unwise to fix a withdrawal schedule for—the President—by law" because it would restrict presidential options. The fact is that this amendment does not curb the President's powers to achieve a safe and systematic withdrawal from Vietnam, which is the President's own stated objective. The amendment provides flexibility for the President in meeting the deadline of December 31, 1971; it offers a 60-day extension of the deadline; and if additional time is necessary to withdraw American troops safely, Congress may grant that time at the request of the President.

Furthermore, this amendment imposes no restrictions on the President in his search for a negotiated settlement to the Vietnam conflict or in his determination of a sound military strategy during the next 15 months. It does, however, distribute the responsibility for the future course on the war between the Congress and the President. That is where the Constitution places the responsibility for war; that is where it ought to be now and remain in the future.

The New York Times also objects that this amendment would not contribute to a negotiated settlement of the war but only end American involvement in the conflict.

It claims that Ambassador Bruce would have additional difficulties in breaking through the deadlock in Paris because "there will be little incentive for Hanoi to negotiate a settlement if the President is under congressional mandate to meet a deadline for evacuation."

The facts contradict this analysis. Hanoi and the Vietcong have always stated that a stipulated withdrawal date of all American troops is the primary precondition for a negotiated settlement. If this amendment is passed, if we declare that all American troops will be withdrawn by the end of 1971, a breakthrough in Paris might at last be a possibility.

The New York Times advocates a declaration of a ceasefire as the means to move negotiations forward, but President Thieu in his speech of July 31 has already rejected an unconditional ceasefire and has committed himself only to a cease-fire based on negotiations. Therefore, a cease-fire declaration cannot be a "prod" to negotiations, but only the result of negotiations.

Let us keep in mind that a withdrawal does not eliminate the possibility of a cease-fire; rather, it provides a satisfactory basis for both sides to reach a conclusion to reduce or stop the fighting.

Furthermore, the critical relationship at Paris talks is not between the United States and Hanoi but between the Vietnamese themselves. As long as Saigon has the assurance of an indefinite presence of American troops in Vietnam, it has no incentives to negotiate seriously in Paris. As long as Hanoi has no concrete indication of our desire to leave Vietnam completely, it will continue to fight and to resist any American negotiating proposals.

We agree with the New York Times that "a prod would undoubtedly be useful" in Paris. A cease-fire which has already been rejected by the South Vietnamese provides little hope of being such a prod. An announced withdrawal date does.

It would compel Saigon to confront the political realities within South Vietnam and encourage the Government to broaden its base and seek a just accommodation of all the contending groups.

Furthermore, a fixed withdrawal date would provide Hanoi and the Vietcong with new incentives to make the concessions necessary for a negotiated settlement. For the first time, it could be possible to negotiate effectively the release of prisoners of war. A cease-fire and de-escalation could be instituted to secure the safety of American troops during withdrawal; the level of conflict in Laos and Cambodia could be reduced and the political impasse in South Vietnam might at last be penetrated.

This amendment neither restricts the Presidential options in bringing the war to an end nor does it represent a threat to the Paris negotiations. Instead, it is a reasonable, rational proposal for bringing this war to an end and saving human lives—American and Vietnamese.

SAVINGS TO BE EFFECTED BY THE AMENDMENT TO END THE WAR

Mr. HATFIELD. Mr. President, the subject of the economic stability of this country after the Vietnam war is the concern of every citizen. Inflation has affected nearly all areas of the country and every sector of the economy. The amendment to end the war would result in substantial savings for the Federal Government, savings which could be used for domestic needs. I would like to commend to the Senate two articles by Peter T. Knight, entitled "The Conversion Problem: Can Swords Be Beat Into Plowshares Without Severe Economic Dislocations?" and "The War, Inflation, and the Housing Market." Both articles discuss the effect which the war has had upon the American economy and the economic effects of the amendment to end the war. The author holds a Ph. D. in economics from Stanford University. I ask unanimous consent that these two articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE CONVERSION PROBLEM: CAN SWORDS BE BEAT INTO PLOWSHARES WITHOUT SEVERE ECONOMIC DISLOCATIONS?

(NOTE.—Peter T. Knight, the author holds a Ph. D. in economics from Stanford University. He wishes to thank Charles Shirkey, Reuben McCornack, Len Ackland, Philip Musgrove and Arnold Kantor for helpful comments on an earlier draft of this paper.)

"Peace in the world should be a hopeful prospect. And one of the ways to create such a prospect is to assure, through rational conversion planning, that the anvil on which peace is hammered out is not the heads and backs of demobilized servicemen and displaced defense workers and their families."

"When a defense worker gets laid off in a helicopter plant in Texas or in a plant in Southern California, or in Connecticut or in Massachusetts, he will not be quiet if you tell him that the economy will eventually solve his problems by creating a job for him half way across the continent, if he somehow finds it possible to survive."—Walter P. Reuther, testimony before the Senate Committee on Labor and Public Welfare, hearings on *Postwar Economic* Conversion, December 1, 1969.

INTRODUCTION

The principal issue to be discussed in this paper is whether a publically announced timetable for withdrawal from Indochina according to the Hatfield-McGovern Amendment (Senate Amendment 862), which would reduce *military* spending by about $2.6 billion in FY 1971 and $8.2 billion in FY 1972, would cause serious dislocations in our national economy.[1]

It is a political fact that resistance to reductions in expenditures for war will be encountered unless viable job alternatives are provided for people engaged in military work, whether such persons are currently in the armed forces or involved in defense production. The immediate problem is posed by the demobilization of military personnel and cutting back of production in defense plants which have been supporting the war in Southeast Asia.

Reducing the "baseline" military budget (FY 1964 level corrected for inflation) beyond the level proposed by the Nixon Administration, considered desirable by many people in view of the changed international situation and pressing demands for new domestic programs, is a separable issue. It is not dealt with by the Hatfield-McGovern Amendment and will not be considered specifically here.[2] However, many of the existing programs and policy proposals discussed in this paper are also applicable to cuts in the "baseline" military budget.

The problem of converting productive capacity from wartime to peacetime use, both in terms of personnel and plant and equipment, is not one without precedents for the U.S. economy. Defense spending fell from 37.5 percent of GNP in 1945 to only 6.6 percent in 1947, a period of only two years.[3] In the same period 9,850,000 men were demobilized from the armed forces.[4] In FY 1970, total government purchases of goods and services for national defense amounted to 8.2 percent of GNP and the incremental cost of the war in Southeast Asia, as calculated by the Department of Defense ($17.4 billion) came to 1.8 percent of GNP.[4] U.S. military personnel in Southeast Asia, including Naval Forces averaged about 600,000 in FY 1970, not all of which would leave the armed forces when withdrawn from the theatre of operations.

Assuming a GNP of $1014 billion in FY 1971 and $1075 billion in FY 1972 measured in the prices expected to prevail in those years, the cutbacks in military spending implicit in the Hatfield-McGovern Amendment ($2.6 billion in FY 1971 and $8.2 billion in FY 1972) amount to 3 tenths of one percent and 8 tenths of one percent of GNP in these years, respectively.[5]

Now that the relative magnitudes of these reductions in war expenditures have been placed in perspective, the body of this paper

Footnotes at end of article.

will discuss policies and programs for dealing with the conversion problem at both the macroeconomic level—maintaining adequate aggregate demand in the economy—and at the microeconomic level, where the focus is on the individuals, communities, and firms which are likely to be affected by cutbacks in war spending.

A. *Maintaining the Level of Aggregate Demand.*—The effect of reductions in war and other military spending, other things being equal, is deflationary. If the economy were overheated, cutbacks in military spending might present a welcome opportunity to reduce excessive demand. Today, however, the economy is already in a mild recession.

There is ample room for debate concerning the proper mix of fiscal and monetary policy to restore price stability and healthy economic growth such as we enjoyed in the years preceeding the escalation of the Vietnam war. But few economists would argue that we should cut military expenditures without taking offsetting stimulatory action. The real issue in maintaining a favorable economic climate in which the conversion process can take place is whether reductions in military spending should be offset by:

(a) increases in federal spending on high priority programs in the areas of pollution and crime control, health care, housing, nutrition, poverty, mass transport systems and the like;

(b) tax reductions;

(c) easing the restrictive monetary policies which have severely depressed residential construction and more than doubled the cost of borrowing for state and local governments since the war was escalated in 1965; [6]

(d) some mixture of the above;

Only if none of these policies were followed would there be any danger that cuts in military spending would help precipitate a generalized recession.

If we are serious about reordering national priorities, alternative (b), tax cuts, must be ruled out, however attractive it might appear at first glance. For while valuable human and material resources have been sacrificed to the war effort, our environment has deteriorated, an acute housing shortage has developed, urban and racial problems have continued to worsen, our system of medical care approaches collapse, and hunger has been discovered in America—in short, the very fabric of our society is being torn apart. John Kenneth Galbraith has stated the case eloquently.

"I am not sure what the advantage is in having a few more dollars to spend if the air is too dirty to breathe, the water is too polluted to drink, commuters are losing out in the battle to get in and out of cities, the streets are filthy, the schools are so bad that the young wisely stay away, and hoodlums roll citizens for the dollars they save in taxes." [7]

A successful attack on these problems is sure to require far more than the funds that would be released by ending American participation in the war. Nevertheless, the money saved by adopting the Hatfield-McGovern Amendment could make substantial contributions. For example, the $2.6 and $8.2 billion in FY 1971 and FY 1972 respectively could purchase the following: [8]

Item or program	Fiscal year 1971	Fiscal year 1972
Low cost housing units of 3.5 to 4.5 rooms in typical developments of approximately 270 units at an average construction cost per unit of $14,500; or	179,000	566,000
Public health centers at an average cost of $550,000 for a center serving a population of 50,000 to 100,000 and providing such services as physical checkups, presymptom screening, immunization, health education, family planning, diagnostic services, rehabilitation services, drugs, etc.; or	4,700	14,900
Hospitals of 125 beds each at an average cost of $19,716 per bed for building and fixed equipment costs at a cost of $24,047 per bed for total project cost. Average facilities of such a hospital to include blood bank, central supply, clinical laboratory, electrocardiograph, medical record department, outpatient and emergency departments, pharmacy, X-ray diagnosis, operating rooms, delivery rooms, postoperative recovery room, medical library, premature nursery, and physical therapy department; or	865	2,728
New public elementary and high school classrooms; or	39,000	123,000
Full 4-year scholarships for tuition, board, and room at public colleges and universities; or	260,000	820,000
Acres of city parks, approximately half at an average of $75,000 per acre and the balance of $4,000 per acre; or	65,800	207,600
Multiply expenditures for air and water pollution control proposed in the fiscal year 1971 budget by the factors indicated; or	5.0	15.6
Multiply Federal expenditures for urban mass transport programs proposed in the fiscal year 1971 budget by the factors indicated; or	8.7	27.3
Multiply Federal expenditures for law enforcement proposed in the fiscal year 1971 budget by the factors indicated	2.1	6.5

Summarizing, the best method of neutralizing the deflationary impact of cuts in *military* spending would probably be some combination of increased government spending on civilian programs to meet urgent social needs and a less restrictive monetary policy. The latter would be a first step forward making up the housing deficit which has accumulated during the war and allow state and local governments access to the capital market on more favorable terms.

B. *Helping Individuals, Firms, and Communities.*—It is sometimes argued that, to accomplish the transition to a peacetime economy, all that is needed is to maintain a satisfactory level of aggregate demand in the economy as a whole. While assuring a healthy economic environment at the national level is *necessary* for assuring a smooth and orderly conversion, it is by no means *sufficient*. This argument neglects the fact that some individuals, firms, and communities are likely to be especially hard hit during the transition period. To neglect their very real fears and anxieties would be to court their political opposition.

What are the dimensions of this problem? First of all, some productive capacity can be re-converted to civilian use as was done after World War II—for example, firms making military uniforms can easily make clothes for civilians—but for other firms the problem is not reconversion but simply conversion. They have grown up catering to the military and have little experience producing for the civilian market.[9] This problem is less severe for capacity related to the conventional war in Southeast Asia than that which was designed to produce highly sophisticated weapons systems, such as missiles, nuclear weapons, and esoteric items for the military space program. Nevertheless, it is a problem most importantly for munitions plants and manufacturers of helicopters and jet fighter-bombers.

But what percentage of the decreases in military expenditures which would occur if the Hatfield-McGovern plan were carried out would consist of cutbacks in munitions, aircraft, and other types of production which might present conversion problems? This question cannot be answered authoritatively with official figures, but it is possible to make some estimates which should be fairly accurate. Since breakdowns of incremental Southeast Asia war costs are not available for FY 1971 and FY 1972, our starting point will be FY 1970. According to the statement presented to the House Appropriations Subcommittee on the Department of Defense by Robert C. Moot, Assistant Secretary of Defense (Comptroller) on March 3, 1970, the breakdown for FY 1970 was the following: [10]

[Dollars in billions]

	Amount	Percent of total
Military personnel	$5.375	30.8
Operations and maintenance	5.438	31.2
Procurement	6.283	36.1
Research, development, testing, and evaluation	.112	.6
Military construction	.220	1.3

To be very conservative (i.e., provide an upper limit for military demand which could result in "hard core" conversion problems), assume that 25 percent of the operations and maintenance expenditures (O&M) and 75 percent of the procurement expenditures consist of purchases of munitions and sophisticated military equipment. Next assume that each of these categories, O&M and procurement, will be the same fraction of total incremental war costs in fiscal year 1971 and fiscal year 1972 as they were in fiscal year 1970. Incremental costs of the war in fiscal year 1971 and fiscal year 1972 respectively are estimated at $11.2 and $11.1 billions if the President withdraws only the number of troops he has announced to date.[11] According to the same source, the savings by following the Hatfield-McGovern plan would be $2.6 billion in fiscal year 1971 and $8.2 billion in fiscal year 1972, in the projected prices of those years, that is taking into account expected inflation. Finally assume that O&M and procurement are the same percentages of these cost *reductions* as they are of estimated costs if the war proceeds according to the Nixon plan. That would mean cutbacks in demand for hard-to-convert defense production on the order of $.9 billion in fiscal year 1971 and $2.9 billion in fiscal year 1972, or one-tenth of 1 percent of projected GNP in fiscal year 1971 and three-tenths of 1 percent in fiscal year 1972.[12]

A rough estimate of the people employed in hard-to-convert military production which would be affected is 35,000 in fiscal year 1971 and 110,000 in fiscal year 1972.[13]

Thus it would appear that the magnitude of the "hard core" conversion problem is not that great. But even this relatively small "hard core" problem should not be ignored, since it could mean real hardships for the individuals, firms, and communities affected.

Planning for meeting the conversion problem will, of course, be facilitated by having a publicly announced timetable of troop withdrawals. The following paragraphs review existing and proposed programs at the microeconomic level which might be utilized to smooth the transition to a peacetime economy.

1. *Programs to Assist Individuals.*—Most existing and proposed programs in this category are designed to maintain an affected person's income while he is searching for or preparing himself for a new job and to increase labor mobility through retraining, the provision of information on job openings, the payment of moving costs, and the like.

(a) Income maintenance: Coverage and benefits obtainable under unemployment compensation systems in the United States varies widely from state to state and is usually insufficient to permit a worker to maintain his previously experienced level of living unless he has substantial private reserves. Residence requirements severely curtail the incentive to seek out new jobs outside the labor market area where the worker currently resides. A negative income tax would help remedy the situation, as would the federalization of existing unemployment compensation schemes. The Trade Expansion Act of 1962 and the proposed Trade Act of

Footnotes at end of article.

1970 (H.R. 18970, currently before Congress) contain provisions for income maintenance as well as retraining and other benefits for workers who lose their jobs due to tariff liberalization or other U.S. commercial policy.

(b) Retraining: The Manpower Development and Training Act of 1962, as amended, provides limited funds for "brief refreshers or reorientation courses in order to become qualified for other employment" to assist people "who have become unemployed because of the specialized nature of their former employment." A greatly expanded program under this act could be a major contribution to a smooth transition. Another precedent for retraining and transition benefits is the Trade Expansion Act of 1962.

On August 14, 1970, Senator Edward Kennedy introduced the Conversion Research and Education Act of 1970, a bill (S. 4241) which would, among other things, provide funds to "retrain scientists, engineers and technicians so that they can contribute constructively to civilian research and development activities" and "conversion fellowships to highly qualified scientists, engineers and technicians", according priority to "applicants . . . who have been or anticipate being out of work because of reductions in defense related research and development expenditures." The funds would be administered by the National Science Foundation Conversion Program. This proposal is directed at those highly trained scientists, engineers, and technicians which Richard Barnet suggested might become "a new class of $20,000-a-year hard core unemployed." [14] It might be added that while unemployed, they could be expected to be highly vocal and susceptible to political organization.

(c) Job information: The existing Federal-State Employment Service does not really function smoothly at the national level. The Nixon Administration's proposed Manpower Training Act of 1969 (S. 2838 and H.R. 13472) would, besides consolidating all Federally assisted manpower programs and their funding sources under the Department of Labor, require the Secretary of Labor to establish a computerized job-bank program:

"(1) to identify sources of available manpower supply and job vacancies;

"(2) to match the qualifications of unemployed, underemployed and disadvantaged persons with employer requirements and job opportunities on a National, State, local or other appropriate basis;

(3) to refer and place such persons in jobs; and

(4) to distribute promptly and to assure availability of information concerning manpower needs and resources to employers, employees, public and private job placement agencies and interested individuals and agencies." [15]

Work on this type of bank should begin immediately and in the meantime, increased resources should be provided to help handle increased demands on the existing Federal-State Employment Service.

(d) Travel and relocation costs: There is currently no provision, other than the exemption of moving costs permitted for income tax purposes, which would facilitate a displaced worker's moving to a new job once he found it, assuming this were necessary. Since the elimination of defense jobs would arise from an act of national policy, it would be just for the nation as a whole and not individuals affected to bear the financial costs of the relocations involved. There is a precedent in the Trade Expansion Act of 1962 for paying travel and relocation costs for persons who lose their jobs due to tariff liberalization.

(3) Homeowner assistance: Some provision must be made to prevent a worker who must leave an affected community from losing his equity in his home due to depressed prices and high brokers' fees. This problem is likely to be particularly severe when isolated military bases or production facilites are closed. Special FHA and VA mortgage forbearance procedures might be utilized here in special cases to avoid foreclosures, but there is no program to avoid a heavy loss if a home must be sold in a depressed market.

"2. *Programs for Private Business.*—At present there is no ongoing program designed to provide incentives for conversion from military to civilian production. On March 4, 1969, Senator McGovern introduced a bill to establish a National Economic Conversion Commission (S. 1285). Noting that a study by the Arms Control and Disarmament Agency of 12 cases of attempted diversification by defense contractors had found that "successful diversification needs the commitment of top management to the program. Such commitment is made difficult by several factors:

"There is a discouraging history of failure in commercial diversification efforts by defense firms;

"There is doubt that the defense customer wants diversification of these firms;

"There is little indication that the owners of defense firms or the financial community wish defense manufacturers to diversify;"

S. 1285 requires that "each defense contract or grant hereafter entered into by the Department of Defense or any military department thereof, or by the Atomic Energy Commission, shall contain provisions effective to require the contractor to define his capability for converting manpower, facilities, and any other resources now used for specific military purposes, to civilian uses."

The late Walter Reuther, in his testimony before the Senate Labor and Public Welfare Committee on December 1, 1969, said that he agreed with the intent of the bill and the motives of those who proposed it, but observed that ". . . unless you put some teeth into it . . . it will remain a noble declaration of purpose without any practical hope of being implemented, and I take it the worker in Texas, who is about to be laid off, will not be able to give a copy of that to the landlord or the guy who is trying to collect the next payment on his house." [16] To remedy this deficiency, he proposed an ingenious plan of economic incentives designed to force defense contractors to prepare and execute viable conversion programs in their own self interest. This proposal is described in great detail in Reuther's prepared statement to the Senate Labor and Public Welfare Committee.[17] The essence of the proposal is that 25 percent of each contractor's profits from defense production be required to be set aside as a conversion reserve to be held in a government trust fund. As Reuther explained it,

"Monies deposited in the trust fund would be released to carry out a conversion plan filed with the government by the contractor and to pay certain types of benefits to the contractor's workers to minimize hardships from which they might suffer during the transition to civilian production.

"Impounded profits released to the contractor by the trust fund for physical conversion of his facilities and for retraining of his workers would be no different, in principle, from profits voluntarily set aside and later reinvested by a civilian production corporation to reequip and retrain for manufacture of a new product when the market for an old one dried up.

"The fact that a portion of the impounded profits might have to be released to tide workers over the transition period is the spur to sound planning for conversion and effective and expeditious execution of the plans. For any impounded profits remaining after completion of conversion, plus interest on the entire amount deposited in the trust found, would be returned to the contractor. In consequence, successful and quick conversions, which would avoid or minimize benefits payable to workers in the transition period, would maximize the amount of impounded profits returnable to the contractor.

"The fact that impounded profits would be released to meet conversion costs only insofar as such costs were incurred *under a plan* filed by the contractor would tend to assure that he would plan seriously and carefully. The planning would be his and not the government's. Execution of the plan would also be in his hands. And his money would be at stake." [18]

Title IV of Senator Edward Kennedy's proposal, the Conversion Research and Education Act of 1970 (S. 4241) authorizes the Small Business Administration to make grants to small business concerns which have engaged in defense-related B&D activities within the three year period immediately prior to the date of enactment of the bill to pay up to 80 percent of the cost of enrolling eligible personnel of such concerns in any retraining programs set up by academic institutions, non-profit organizations, and business firms under Titles II or III of the same bill.

Both the McGovern proposal to create a National Economic Conversion Commission, as modified by Reuther's suggested incentive plan (with the government possibly sharing the cost by allowing the conversion fund to come from *pre-tax* rather than *post-tax* profits) and Kennedy's Conversion Research and Education Act would appear to meet real needs and should be given serious consideration by Congress.

3. *Programs to Assist Communities:* There are a number of existing programs which might be enlisted and possibly consolidated to provide assistance to communities which are severely affected by military cutbacks. Improving these existing programs and seeing that they are adequately funded should be an important part of any overall conversion program since there are a number of important labor markets—such as Seattle, San Diego, the San Francisco Bay region, St. Louis, parts of Connecticut and Massachusetts, and a number of areas in Texas—with high concentrations of defense industries. Particularly hard hit may be smaller communities which have grown up around isolated military bases or production facilities which might be closed.

The Department of Defense has an Office of Economic Adjustment to assist and encourage local leadership in impacted areas to identify and exploit their resources for economic growth. Staff members from this office visit such communities, provide ideas and advice, and help identify Federal programs applicable to local problems, putting community officials in touch with the approriate government offices. AEC and NASA have similar operations.

Perhaps the broadest legislation in this field is the Public Works and Economic Development Act of 1965 (PL 89–136). Under this act, an area designated a "Redevelopment Area" by the Secretary of Commerce becomes eligible for grants and loans for public works, development facilities, and a wide range of services. Areas in which the Secretary determines that "the loss, removal, curtailment, or closing of a major source of employment has caused within three years prior to, or threatens to cause within three years after, the date of request an unusual and abrupt rise in unemployment of such magnitude that the unemployment rate for the area at the time of request exceeds the national average or can reasonably be expected to exceed the national average by 50 percentum or more unless assistance is provided" may qualify for such assistance. Recently Seattle has been declared a redevelopment area due to the cutback in production at the Boeing plants in that city, which was not connected with the Indochina war. Richard Barnet has suggested that Federally owned military installations and/or defense

Footnotes at end of article.

production facilities be turned over to the affected community at nominal cost upon receipt of a plan for the utilization of the property.[19]

C. SUMMARY AND CONCLUSIONS

There is no need to fear a generalized recession as the result of major reductions in military spending. Offsetting fiscal and monetary policies can maintain a healthy level of aggregate demand in the economy while attacking some of the urgent social problems which have been allowed to accumulate while we have sacrificed valuable human and financial resources to the war effort.

But a healthy economic environment is not sufficient to insure a smooth transition to a peacetime economy. At the same time we seek to facilitate rational planning for conversion by calling for a publicly announced timetable of withdrawal from Vietnam, we must make every effort to minimize the inevitable disruptions which will affect specific individuals, firms, and communities if we seek to enlist their support in ending the war. This paper has reviewed some of the existing and proposed programs which might be used to achieve this end.

While it is hard to estimate what costs associated with the conversion effort might be incurred in any of these programs, they would be small in comparsion with the costs of continuing the war. Much of the necessary conversion is likely to occur without any assistance from the government as our flexible free enterprise economy reacts to changing demands which in turn reflect changing national priorities. Furthermore, any conversion costs incurred can be viewed as an investment in the future productive capacity and health of our society that are likely to have high returns. War expenditures finance a perverse kind of consumption which is parasitic on the economy and has proven dangerous to the social fabric of the nation. There is no reason to believe that the only way our dynamic economy can prosper is by continuing to pour good money after bad pursuing military "victory" in what is essentially an Asian civil war.

FOOTNOTES

[1] For a discussion of how these estimates were arrived at see Charles P. Shirkey, "Alternative Vietnam Withdrawal Plans and Budget Deficits in FY 1971–72," inserted in the *Congressional Record* August 27, 1970, and Arnold M. Kuzmack, "Casualty and Cost Projections for Different Vietnam Withdrawal Plans," inserted in the *Congressional Record*, August 24, 1970. See also the Appendix to the present paper, which is taken from Shirkey's paper.

[2] The number of persons serving in the armed forces on June 30, 1964, was 2,685,000. Of these, 21,000 were serving in Southeast Asia, leaving a "baseline" force of 2,664,000. However, the 2,482,000 man force existing on June 30, 1961, is perhaps a better estimate of the baseline force, since most of the difference between the 1961 and 1964 figures, 182,000 men, can be considered part of the buildup in the conventional forces within the United States designed to fight and support wars such as Vietnam. For the purposes of this paper, however, the "incremental costs" of the war will be based on the 1964 baseline which the DOD favors. Personnel statistics are from *The Budget of the United States Government for the Fiscal Year Ending June 30, 1966*, USGPO, Washington, 1965, page 70, and *Budget of the United States Government, Fiscal Year 1969*, page 83.

[3] Data from DOD, OASD (Comptroller), FAD 119, 24 January 1967.

[4] Calculated from data in Council of Economic Advisers, *Economic Indicators*, August 1970, page 2 (GNP and Defense Spending). Incremental costs of the war from Statement by Hon. Robert C. Moot, Assistant Secretary of Defense (Comptroller) before the Subcommittee on the Department of Defense of the House Appropriations Committee which may be found in the published hearings entitled *Department of Defense Appropriations for 1971*, USGPO, 1970, page 454.

[5] The FY 1971 and FY 1972 GNP figures assume a growth of real GNP of 2 percent in FY 1971 and 4 percent in FY 1972, with inflation of 4 percent in FY 1971 and 2 percent in FY 1972 for a total of 6 percent growth in monetary GNP in each year.

[6] The average number of public and private housing starts for the five war years 1965–69 was 3.9 percent below the average for the pre-escalation years 1960–64. During the first half of 1970 (annual rate) they were 10.1 percent below the 1960–64 average. These figures conceal a strong trend toward construction of apartment buildings and other multiple family dwellings as opposed to single family homes. The ratio of single family private housing starts to total private housing starts declined from an average of 68.9 percent in 1960–64 to 62.5 percent in 1965–69 and was running at 57.0 percent in the first six months of 1970. Meanwhile the number of new families seeking housing has been increasing rapidly as the children produced in the post World War II "baby boom" begin to marry and have children. The effect of the war on the housing market will be discussed in much greater detail in my forthcoming CYPPA paper, "The War and the Housing Market." All data cited above is from the publications of the Council of Economic Advisors: *Economic Indicators* (August 1970) and *The Annual Report of the Council of Economic Advisors, 1969*. Interest rates (Standard and Poors) for high grade municipal bonds have risen from 3.27 percent in 1965 to 6.69 percent in the first six months of 1970. (*Economic Indicators*, August 1970).

[7] Quoted in Jack Anderson, "After Vietnam—What? Will Our Economy Tumble if Peace Comes?," *Parade*, August 21, 1969.

[8] Friends Service Committee on National Legislation, calculated from data in "What a Billion Will Buy at Home," Charles L. Schultze et al., *Setting National Priorities: The 1971 Budget*, The Brookings Institution, Washington, D.C., 1970.

[9] A number of articles documenting this fact are reprinted in *Postwar Economic Conversion*, Hearings before the Committee on Labor and Public Welfare, United States Senate, Part 1 (USGPO, 1970). Testimony before the committee is also supportive of this assertion.

[10] Calculated from Tables 4 and 5, Statement of Hon. Robert C. Moot, *Department of Defense Appropriations for 1971, Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, Part 1*, USGPO, 1970, pages 488 and 489.

[11] See Appendix.

[12] .25 times 31.2 percent (O&M) +.75 times 36.1 percent (procurement) =34.9 percent. This percentage of 2.6 and 8.2 gives the figures cited, .9 and 2.9.

[13] These estimates were obtained by calculating the value of shipments per employee in two industries, aircraft and parts (SIC 372) and ordnance and accessories (SIC 19, which includes guns, howitzers, mortars, missiles, ammunition, tanks, small arms, etc.) for 1966 and then taking their simple arithmetic average, which is $22,733. (Data from U.S. Department of Commerce, Bureau of the Census, *Annual Survey of Manufactures, 1966*, USGPO, 1969). Assuming no change in labor productivity and a price increase of 14 percent between calendar year 1966 and FY 1971 and 16 percent for FY 1972 (based on the wholesale price index for industrial products), the value of shipments per worker was estimated as $25,916 for FY 1971 and $26,370 for FY 1972. The estimates of cutbacks in demand for the products of these industries was then divided by the estimated value of shipments per worker to give the figures used in the text. It should be added that the number of workers would be *less* if labor productivity in these industries improved over the period between 1966 and FY 1971–72.

COST AND SAVINGS OF ALTERNATIVE VIETNAM WITHDRAWAL PLANS [1]

[In billions of current dollars]

	Fiscal year 1971		Fiscal year 1972 [2]	
	Incremental cost	Savings (−) from current administration plan	Incremental cost	Savings (−) from current administration plan
Current administration plan: Current fiscal year 1971 funding level and withdrawals announced to date (150,000 out in fiscal year 1971) [3]	$11.2		$11.1	
Alternative 1: 223,000 residual force ending fiscal year 1972	11.2		9.4	−$1.7
Alternative 2: 50,000 residual force ending fiscal year 1972	11.2		5.9	−5.2
Alternative 3: Continue current withdrawal rate: all out by early fiscal year 1973	11.2		5.8	−5.3
Alternative 4: Total withdrawal January 1972 (Hatfield-McGovern amendment)	8.6	−$2.6	2.9	−8.2

[1] All of these calculations are based on troop level reductions below the actual figure of 538,000 men in Vietnam at end Fiscal Year 1969, before the 1st withdrawal was announced. Thus at the end of the latest 150,000 reduction, the level will be 273,000. Recent statements by Secretary Laird are based on troop ceilings, which were 549,000 at end fiscal year 1969 and will be 284,000 when the latest 150,000 are withdrawn. The incremental costs are the additional costs, all of which could be saved if we were not in Vietnam. All cost estimates include about $1,000,000,000 for military assistance to South Vietnam.

[2] Assumes a 7-percent price deflator in fiscal year 1972, to reflect pay and price increases.

[3] Announced by President Nixon in his televised address on Apr. 20, 1970.

Note.—This table is taken from Charles P. Shirkey, "Alternative Vietnam Withdrawal Plans and Budget Deficits in Fiscal Year 1971–72," inserted in the Congressional Record Aug. 27, 1970.

THE WAR, INFLATION, AND THE HOUSING MARKET

(By Peter T. Knight, a Ph.D. in economics from Stanford University)

INTRODUCTION

No major sector of the American economy has been more distorted by the Indochina war and the means used to finance it than residential construction. Record high interest rates have been caused by the reliance upon restrictive monetary policies and inflationary deficit finance to pay for an unpopular war. Residential construction is more influenced by interest rates than most economic activities, and of the factors influencing residential construction, interest rates are by far the most important. The monetary policies of the Johnson and Nixon administrations have succeeded in choking off residential construction and channeling the funds released into the business sector where they helped finance war production. The result of sky-high interest rates and severely curtailed residential construction is that a critical housing shortage has developed while the rate of new family formation has been rising as "war babies" produced in the post World War II "baby boom" marry and begin to have their own children.

With both mortgages and housing expensive and difficult to come by, a significant segment of our population, young married couples especially, find their dreams of owning their own homes frustrated. What they are also beginning to realize is that the housing shortage is directly attributable to the same war which the young husbands have in many cases been forced to fight against their wills, the same war which has created a massive draft resistance movement and alienated a whole generation. They have been asked not only to sacrifice years of their lives as conscripts, but also their hopes of owning their own homes. This realization is rapidly being transformed into political demands that something be done to alleviate the housing shortage, which is sure to be a key issue in the 1970 congressional elections. The McGovern-Hatfield Plan offers the best chance short of a quick negotiated settlement for ending the drain on the economy and the strain on our society imposed by a war which almost everyone now admits was a grave mistake. Following the McGovern-Hatfield plan could free sorely needed funds for new housing construction, approximately $2.6 billion in FY 1971 and $8.2 billion in FY 1972, should Congress direct that the money saved by a planned withdrawal be spent in this fashion.[1]

The remainder of this paper provides documentation and analysis to support the assertions made in the first paragraph.

1. *The principal cause of inflation was the escalation of the war in the second half of 1965 and the failure to apply normal wartime measures such as war taxes and wage and price controls.*

Most economists, including those on the President's Council of Economic Advisers, agree that the U.S. economy was operating at very close to its maximum potential in 1965, when war expenditures escalated sharply.[2] These increased military expenditures required a reduction in the goods and services which would have been available to the nonmilitary sectors of the economy in the absence of the war. Freeing the resources needed from use in the domestic economy was accomplished by a combination of deficit spending, large reductions in private investment (especially residential construction), a deterioration in the balance of payments with foreign countries (reduced exports) and some increase in taxes.[3]

The acceleration in war spending need not have resulted in inflation if sufficiently stringent stabilization policies had been followed. For example, a prompt increase in taxation as advocated by the Council of Economic Advisers in 1966 could probably have prevented it, and such a tax hike certainly would have allowed the Federal Reserve Board to pursue a less tight monetary policy. Wage and price controls, urged by many economists, might also have helped. However, even wrapping such measures in the American flag was not likely to be politically opportune in the case of an unpopular war. For three years after the initial escalation in the latter half of 1965 no major tax increase was passed by Congress. Then in June 1968 the Revenue and Expenditure Control Act, which combined a reduction in nonmilitary government expenditures with a 10 percent surtax was finally enacted.[4] Wage and price controls have not been instituted to the present day.

There is considerable agreement among economists and businessmen that war spending was the major factor throwing the economy into an inflationary spiral. In April 1968 the Committee for Economic Development, which is composed of leading U.S. businessmen, said the following in their report entitled *The National Economy and the Vietnam War:*

"The requirements for military hardware that builds up after the middle of 1965 were met without much strain, largely because inventories were ample and defense production industries had available capacity. However, the economy as a whole felt the impact of the total military demand. The defense build-up soon led to inflationary pressures. In a period of two years the value of resources devoted to national defense rose by about 50 percent. Largely as a result of this, the nation's total purchases of goods and services increased rapidly, accelerating at a rate in excess of the growth of real output. A jump in the rate of price increases inevitably followed." [5]

Similarly, President Johnson's own Council of Economic Advisers, in their 1968 *Annual Report* also noted that the inflationary spiral was linked to sharp increases in war spending.

"Around mid-1965, the growth of demand for industrial products suddenly accelerated as the direct and indirect consequences of the enlarged commitment of U.S. forces in Vietnam.

"Prices of consumer services began to accelerate, as service firms found it more difficult to obtain workers. With rising food and service prices and stronger demands for labor, upward pressures on wages intensified in both the organized and unorganized sectors. In the industrial area, the impact of demand on prices was strongest in the defense-related and capital goods sectors, where shortages of both capacity and skilled manpower were most pronounced. But prices also advanced in many other areas.

"The upward pressures on prices and wages in this period reflected both the speed of the advance and the high level of resource utilization which the economy achieved. These pressures tripped off a price-wage spiral." [6]

Deficit spending rather than increased taxes was used to finance the war and we experienced an increasing rate of inflation. Inflation is in reality one of the cruelest taxes since it strikes hardest at those least able to defend themselves—retired people living on past savings, white collar workers such as teachers and government employees, welfare recipients, and unskilled workers.

When a substantial tax increase was finally voted in 1968, inflationary expectations were so strong that even now the Nixon Administration considers increasing unemployment as the only means of restraining price increases to a tolerable level. As of July 1970, the seasonally adjusted unemployment rate had risen to 5.0 percent from 3.5 percent in December 1969.[7]

Finally the testimony by Louis B. Lundborg, Chairman of the Board of the Bank of America, the largest bank in the country, before the Senate Committee on Foreign Relations on April 15, 1970, is worth citing. Mr. Lundborg charged that "While there is room for a wide range of opinion concerning proper tax policies during this period, especially over the timing and magnitude of tax increases, and the proper role of monetary policy, *the basic cause of the inflationary forces was a sharp increase in federal spending associated with the escalation of the conflict in Vietnam.*" (emphasis added)

2. *The principal causes of high interest rates in recent years have been the heavy reliance on monetary policy and deficit spending by the federal government and the expectations of continued inflation caused by the war-induced inflationary spiral.*

No American President has dared ask Congress for war taxes for this unpopular war. As Charles Cicchetti has pointed out, "even the surtax of the late 1960's, which President Johnson proposed and later President Nixon endorsed, was presented to the American people as a fiscal device to control inflation and not as a tax to pay for the war, which was the direct cause of inflation." [8] Monetary policy was the principal tool used for restraining the economy in 1966, resulting in sharply increasing interest rates and the notorious "credit crunch" of that year.

In the subsequent two years the Federal Reserve supplied massive assistance to the money market as it struggled to adjust to excessively large demands for credit, thus temporarily delaying the worst of the problems. But as inflation continued, lenders became increasingly reluctant to place their money in fixed-income securities, since they expected inflation to continue. This resulted in further rises in interest rates. In 1969 the Federal Reserve again shifted to severe monetary restraint and the credit markets were left unassisted to deal with mushrooming demands for borrowing from both the private sector and the government. The result was skyrocketing interest rates which are still with us today. Some of the principal interest rates over the period being discussed are shown in Table 1.

3. *Federal monetary policy was successful in choking off residential construction, thus freeing funds to finance war production.*

Econometric research has provided empirical confirmation of what bankers have long known—one of the principal determinants of the number of new housing starts for single family dwellings is the rate on mortgages.[9] Other kinds of interest rates, for example those on corporate and municipal bonds, may also influence housing starts for private and public rental units. Columns 1–3 of Table 1 show that each of these three key interest rates was substantially higher in the five war years (1965–1969) than in the "peace" years (1960–65) and that in the first six months of 1970 there has been another dramatic rise.

Columns 4–7 present various indicators of residential construction activity, all of which were running at a lower level during the war years than during the "peace" years, and again the situation has deteriorated in a striking fashion in the first six months of 1970. Single unit private housing starts have shown the sharpest drop, 28.2 percent below the 1960–64 level for the first half of 1970.

In part this reflects a continuing trend toward multi-family units (mostly rental) and away from owner-occupied single family homes.

The degree to which the monetary policies of the Johnson and Nixon Administrations have succeeded in diverting loaned funds from residential mortgages to the business sector, where they helped finance war production, is shown in Table 2. During the five "peace" years, 1960–64, an average of 30.3 percent of the funds raised went into residential mortgages and 34.5 percent to business. During the war years, 1965–1969,

Footnotes at end of article.

mortgages accounted for only 21.6 percent of the available funds and the business sector absorbed 46.4 percent.

4. *The number of families in the U.S. has gone up faster during the war years than during the preceding "peace" years, while residential construction has declined, resulting in a growing housing shortage.*

Column 8 of Table 1 shows that the average annual increase in the number of families in the United States was 24.8 percent higher during the years 1965–69 than it was prior to the war escalation in 1960–64. In 1967 the first children born in the post World War II baby boom reached the age of 21. Thus during the war period there has been a spurt in new family formations as the "war babies" marry and begin to have children of their own. Coupled with the decline in residential construction during the same period, we have all the ingredients for a housing shortage.

Column 9 of Table 1 shows that the vacancy rate (vacancies to total housing units available) has dropped from an average of 3.5 percent in the period 1960–64 to 2.9 percent in the period 1965–69. The situation was worsened still further in the first quarter of 1970 (2.3%). These figures are the statistical evidence of what real estate people like to call "a very tight housing market."

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 6 minutes to the Senator from Michigan and more time if he needs it.

The PRESIDING OFFICER. The Senator from Michigan is recognized.

Mr. GRIFFIN. Mr. President, I know and appreciate the genuine concern, the sincerity, and the deep convictions of the sponsors and supporters of the pending amendment.

Along with most Americans and the President, I share the abiding desire of the sponsors to see an end to our involvement in the Vietnam war. I, too, want to see our troops come home as soon as possible from this unpopular war.

This has been a long, costly and frustrating war. In addition to the tragic losses on the battlefields, it has produced agonizing dissent here at home.

It may be appealing—but, I suggest

most respectfully, that it is misleading, even deceiving—to suggest that the war can be ended simply by passing an amendment. Yet, that is the proposition before us, and on which the Senate will vote tomorrow.

I am disturbed about this proposal for a number of reasons. It holds out promises to the American people which may, or may not, be realized. If the amendment were adopted, our action would be misunderstood by our friends throughout the world and in Asia particularly. In addition, and of even more concern, it would be misinterpreted and could lead to miscalculations on the part of the enemy.

This proposal ignores the harsh realities of the world in which we live and the difficult task of disengaging from the war in Vietnam.

Even the sponsors of the amendment have recognized this to some extent, for they have produced one version after another of the amendment.

As originally proposed, the amendment would have required the withdrawal of all American forces from Vietnam by June 30, 1971. In what the press has interpreted an effort to attract more votes, the rewritten amendment was rewritten within the last week to extend the withdrawal deadline to December 31, 1971.

In still another change, which also was interpreted as an effort to win more votes, the amendment was revised again just before it was made the pending business before the Senate.

The latest version would give the President an additional 60 days on the deadline for withdrawal—making it March 1, 1972—if he found that American troops in Vietnam were exposed to unanticipated clear and present danger.

It seems rather obvious that there has been almost a desperate effort to make palatable an unpalatable product—to make acceptable the unacceptable.

In the Senate cloakrooms and elsewhere the revised amendment is being appropriately referred to as "the amendment to extend the war." And that is what it could be—in either its original or its revised form.

At best, the amendment is superfluous. At worst, it is mischievous.

It is unnecessary because the President has turned the war around in Vietnam and American troops are coming home on an orderly basis that protects the safety of American forces as well as our national interest.

Since the Nixon administration took office on January 2, 1969, more than 115,000 troops have been withdrawn.

Under a schedule made public by the President, an additional 150,000 troops will be withdrawn by next April 30, and 50,000 of them by October of this year.

President Nixon has kept his promises. Indeed, he has moved faster than many dared to hope. He is moving on a course toward full and complete disengagement.

The proposed amendment is mischievous because it intrudes unnecessarily on the flexibility that the President needs as Commander in Chief of the Armed Forces and on his conduct of the delicate diplomatic moves which could lead to a negotiated settlement of the war.

As the showdown on this issue approaches, it is well to recall a statement made by President Nixon on September 26, 1969:

> It is my conclusion, that if the administration were to impose an arbitrary cutoff time—say, the end of 1970 or the middle of 1971—for the complete withdrawal of American forces in Vietnam, that inevitably leads to perpetuating and continuing the war until that time and destroys any chance to reach the objective that I am trying to achieve of ending the war before the end of 1970 or before the middle of 1971.

If we should tie the President's hands by law to a fixed and publicly proclaimed timetable schedule—it would serve only to make an orderly withdrawal more difficult—and quite possibly, more dangerous for our men in Vietnam. Surely, we do not wish to force a Dunkirk-type withdrawal from the beaches of Vietnam—and yet, that could be the effect if such a decision were to be cast in legislative concrete.

Reference has already been made to the disastrous impact that adoption of this amendment would have on the peace talks which have been resumed in Paris.

No one on the other side of this debate has ever provided a satisfactory answer to this question: Why would an invading army negotiate a settlement once the defenders have announced a timetable for complete, unilateral withdrawal?

To put it simply: Adoption of the proposed amendment would trumpet loud and clear to the Communist enemy the message that he need not negotiate at all, that he could attain by default what he has not been able to win on the battlefield.

Mr. President, in addition to other objections to this amendment, it would also have the effect of disrupting our Vietnamization program which has attained, in the judgment of Secretary of Defense Melvin Laird, a high degree of momentum. Vietnamization of the war is the surest way of speeding the withdrawal of American forces, and it seems to me that we should be encouraging—not disrupting—our Vietnamization program in every practical way.

President Nixon is in the process of winding down our participation in the Vietnam war. He is bringing American boys home. President Nixon deserves—and has earned our support. I am confident the Senate will register that support by voting on this amendment.

Mr. STENNIS. Mr. President, I yield 6 minutes, or such time as he may need, to the Senator from Pennsylvania.

Mr. SCOTT. Mr. President, Senators are ambassadors from their States. Senators may know more of irrigation, grazing, urban rehabilitation, or may feel they do, than others. Some Senators, indeed, feel they know more about how to conduct a war than those entrusted with its conduct. They are entitled to their opinion, although I suspect it is not universally shared.

In my opinion Senators just cannot negotiate, in freehand style, their own schedule for disengagement from this war.

This is an unpopular war. There are no prowar Senators. So far as I know, there is no respectable body of prowar Americans. We are all antiwar; we are all for disengagement; we are all for getting out. Some of us believe competent people are engaged in that process and, indeed, I am satisfied that is exactly what the Commander in Chief is doing.

Mr. President, the many versions of this amendment, offered in succession, and often in contradiction to the full-page ads on the same amendment, have compounded confusion upon confusion in an effort to pick up support from one person here or one person there.

Certainly the many versions of this amendment are more revealing, contrasted to the one of disengagement presently being pursued and adhered to on schedule by the Commander in Chief.

This amendment, if agreed to, would cast into limbo any trust other nations would have in us, and notify negotiators from Hanoi there can be no possible peace until the end of next year. So why, indeed, should anyone pursue any possibility of peace? Why should the dove of peace which hovers like a halo over some advocates of this amendment, find any nesting place in Paris when the notice goes out that there is no peace, there can be no peace, there will be no peace because on a certain date we are leaving, horse, foot, and dragoon, bag and baggage, and on that date nothing remains but for the enemy to pick up the marbles, reap the gains, close the doors on the free world and say to the Congress of the United States "much obliged."

The amendment is, as has been said, an attempt to reassert congressional war-making power. It is far too restrictive and impractical. It is an attempt to accomplish more than withdrawal. Any firm and public completion date of total U.S. withdrawal would severely limit our flexibility in reacting to North Vietnamese threats and possibly temporary setbacks in Vietnamization. The latest date for total withdrawal—although I point out the amendment is still open to amendment and new versions may yet occur—so far given us is too great an acceleration to allow the South Vietnamese to achieve a sufficient capability in all requisite fields to cope with the North Vietnamese.

Training of Vietnamese in complex skills—pilots, maintenance, operation of sophisticated equipment, and so forth—will not be completed by then; such training cannot be accelerated significantly.

The amendment precludes a military assistance advisory group—MAAG—considered necessary to insure continued progress by the South Vietnamese. While not large, this group of U.S. technicians is needed to assist the Vietnamese in managing and logistically supporting the large military structure the Vietnamese have built in a short time. Withdrawing these technicians and advisers prematurely may significantly reduce the capability of South Vietnamese forces.

A public fixed schedule of withdrawals likely would adversely affect chances to get U.S. POW's back. Our military forces in Southeast Asia give us some leverage

in negotiations for better treatment and release of U.S. prisoners in enemy hands.

The McGovern amendment would, if enacted, undermine the Paris negotiations by bringing all North Vietnamese goals in Southeast Asia within reach. Further, it would reduce U.S. international credibility and bring all U.S. obligations and treaties into immediate review by our allies; it would be clear that these obligations had unspecified time limits which are apt to grow shorter if subject to pressure.

In other words, what nation would ever make a treaty with us again if it knew that any treaty made with the United States, after it had been confirmed by the Senate, might be subject to some Senate whim or some public pressure or some election campaign, or some other motivation which perhaps is not now present, which would cause the Senate of the United States to withdraw and say, "We are sorry we made it; we are going to say goodby to the obligation. We are going to reverse the agreement and we are going to unilaterally quit?"

Now I yield to the distinguished Senator from South Dakota.

Mr. McGOVERN. Let me say on that point——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SCOTT. May I have 2 additional minutes?

Mr. STENNIS. I yield 2 additional minutes to the Senator.

Mr. McGOVERN. Is the Senator saying we would be violating a treaty if we withdrew our forces from Vietnam?

Mr. SCOTT. The Senator is saying that we would be violating something which is more inviolate than a treaty, and that is our commitment to our own forces in Vietnam, and is citing that if we were to withdraw under the hardest kind of commitment, which is a commitment on the field of battle, under orders from the U.S. Senate, then no nation would see fit to believe that a future treaty could not be abrogated or substantially altered by Senate amendment.

Mr. McGOVERN. I cannot see how the Senator can feel that the United States has gone back, or under the terms of this amendment would go back, on any commitment we had with the people of South Vietnam. We never at any time, as I understand it, made any commitment to stay there indefinitely. We said we would assist them, and we have done that, it seems to me, beyond any reasonable criterion of generosity, investing the lives of tens of thousands of Americans and billions of dollars. It seems to me this amendment is well within our constitutional processes——

The PRESIDING OFFICER. The time of the Senator has again expired.

Mr. STENNIS. Mr. President, I yield the Senator 2 minutes.

Mr. McGOVERN. The Senator from South Dakota is proposing, under the terms of this amendment, that it is in our interest as a nation to set a definite timetable so that our friends in Vietnam and our enemies in the North, and others, will know what the limits of our commitment are.

Mr. SCOTT. Is the Senator contending that when we went into Vietnam, or as we pursued a course ratified by several Presidents, at any time we told the South Vietnamese we would be out of there by December 31, 1971?

Mr. McGOVERN. No; I am not suggesting that at all. I think they are entitled to a fair warning. That is why I think this date ought to be at some future time. But that is 16 months hence. There is also the escape provision to meet any emergency situation that might develop.

I suggest that this is not a "bugging out" or running out on our commitment. We have been more than generous to the people of South Vietnam. What we propose under the amendment is to give them a reasonable time to get their house in order, if they wish, and take over the struggle, or, failing that, work out an arrangement with those that challenge them in that field.

Mr. STENNIS. Mr. President, I yield an additional 2 minutes to the Senator.

Mr. SCOTT. May I say, in conclusion, that I know of no promise made by the President which has not been kept. I myself hope that we can accelerate withdrawal even further. I would like to see volunteers instead of draftees ultimately. I would like to see many things done. But, above all, I would not like to see us take the credibility of the United States and toss it up for grabs in world opinion by a decision that on a certain calendar date the Commander in Chief is directed by the Senate of the United States to stop whatever we are doing, even though at that time we may be engaged in a difficult military situation, or even though at that time our prisoners of war are not released—and, as I understand it, the distinguished Senator from South Dakota is not willing to condition the termination upon the release of the prisoners. If he were, he might pick up some help there. I do not know——

Mr. McGOVERN. The amendment has a provision that funds will not be cut off for that purpose, and it gives the President, as I have said, the option of exercising 60 days' additional time. If he feels that is not sufficient, he can come back and ask the Congress for additional time.

Mr. SCOTT. I can only say, with all due respect, that that, to my mind, is hardly the way to get our prisoners of war back.

Mr. McGOVERN. We are not getting very many back under our present procedures.

Mr. SCOTT. Our last leverage, our last best hope, of getting those prisoners out would not be served by withdrawing all of our forces under a calendar restriction, because, as the Senator has said, if we did not get them out when his magic date on the calendar arrives—the Senator has had several magic dates; if this last magic date does not suffice, we have another 60 days in which the President can say to the Congress——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SCOTT. Mr. President, may I take the liberty of yielding myself 2 additional minutes? I ask unanimous consent to do so.

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Mississippi, I ask unanimous consent to yield 2 minutes to the Senator from Pennsylvania.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. Yes, the President may come to the Congress and say, "I am sorry, our best leverage is gone; our prisoners are still there; we did not make any provision for them. Will the Congress give us 60 days more to get the prisoners of war out?" That will be read in Hanoi as it is in Washington, and the prisoners of war will not come out.

Mr. McGOVERN. I cannot conceive of the President's permitting American prisoners of war to remain after our troops are withdrawn.

Mr. SCOTT. That is what the amendment says.

Mr. McGOVERN. It does not require that.

Mr. SCOTT. It does not require that. It permits it.

Mr. McGOVERN. It does not require that at all, and I cannot see the Senate of the United States denying a request of the President to do all that was necessary to bring about the release of the prisoners.

Mr. SCOTT. But the Senator's amendment does deny the request of the President in the first instance.

Mr. McGOVERN. It does not.

Mr. SCOTT. Yes, it does; to continue with the deescalation of the forces, and if the Senate will deny the President the right to permit him to continue winding down the war on his schedule, then the Senate can and perhaps would deny the President the 60 days additional to get out the prisoners of war, because the Senate is composed of reasonable men, and the Senate would know they would not get them out in 60 days; they would not have any leverage to get them out with.

Mr. McGOVERN. Mr. President, the Senator is completely misreading the amendment. There is nothing in the amendment that restricts the power of the President to bring about the relief of prisoners. There is no way that I know of that we are ever going to get the prisoners out of there, if we continue on our present course.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. SCOTT. I ask for 2 more minutes.

Mr. BYRD of West Virginia. Mr. President, how much time remains on both sides?

The PRESIDING OFFICER. The Senator from Mississippi has 5 minutes, the Senator from South Dakota 15.

Mr. McGOVERN. I had promised the Senator from Maine 15 minutes. Will he yield back 2 minutes of it, to complete the remainder of the colloquy?

Mr. MUSKIE. Yes; I would be delighted to do so.

Mr. McGOVERN. I yield the Senator from Pennsylvania 2 minutes so that we can complete the colloquy.

Mr. SCOTT. I will conclude with this inquiry, if the Senator will permit: How does the Senator from South Dakota plan to get the prisoners of war out of North Vietnam?

Mr. McGOVERN. I think the burden for that answer ought to be on the Senator from Pennsylvania.

Mr. SCOTT. I pass it to the Senator from South Dakota, whose amendment it is.

Mr. McGOVERN. Mr. President, I intend to comment on that later, but I remind the Senator that our prisoners have now been held for a number of years. There is no evidence that our present course is ever going to effect the release of a single prisoner. I think they are being held as hostages of the policy that has not produced an end to the war.

Here we are offering an alternative proposal which we think will bring about an end to the fighting. We feel that thus we have reduced the reason for those prisoners being held. When we make it clear to the other side that our forces are coming out, I think when that date is announced, it will increase the likelihood of negotiations getting underway.

There are two things the other side has said block them from negotiating with us: First, the presence of the Thieu-Ky regime in Saigon, and our backing of that regime, and second, our refusal to agree to the full withdrawal of our forces.

By meeting those two objectives, as this amendment would do, I think for the first time we shall have opened up the possibility for release of the prisoners, who have not been released under the present policy.

Mr. SCOTT. I thank the Senator for the admission that there is no plan for the release of the prisoners.

Mr. MUSKIE. Mr. President, I support the pending amendment to the military procurement bill, H.R. 17123.

It is time to make clear our commitment to end the war in Vietnam.

And this amendment would do so—at the same time as it would preserve all of the President's constitutional powers.

The cardinal issue is whether our involvement in the conflict in Indochina must be regarded as open ended and indefinite in duration, or whether the time has come to establish a definite deadline for our military participation there.

Those of us who support this amendment believe that the best interests of the United States—both at home and abroad—would be served by its enactment.

Those who oppose it, including the administration, insist that our military presence must continue while the South Vietnamese attempt to win the military victory which has eluded our own efforts for so many years.

I submit, however, that the advantages of a clearcut withdrawal policy would be substantial, not only in terms of our own domestic concerns, but in terms of peace in Vietnam itself.

Control of our conduct would clearly be in our hands, not those of the North Vietnamese or the South Vietnamese. And a climate for meaningful negotiations might finally be established.

The administration has argued that a publicly announced withdrawal timetable would give Hanoi no incentive to negotiate seriously in Paris. But the negotiations are already at a virtual standstill and there seems to be no prospect for improvement so long as Vietnamization remains our only policy.

The administration has also argued that a publicly announced timetable would permit Hanoi to attack our forces once they were sufficiently reduced in size. But it seems obvious that Hanoi could do so anyway once enough Americans are withdrawn, whether or not a timetable for their withdrawal is announced.

And finally, the concept of a withdrawal timetable has been criticized as leading to an eventual bloodbath in South Vietnam. However, nothing in our present policy can guarantee against the possibility of reprisals once we are out of Vietnam in any event. For example, even were the Communists to accept the President's proposals for free elections and come to power through this means, nothing in our policy could guarantee against reprisals at that point. Besides, is it not clear that the war itself is a bloodbath and that this certainty must be weighed against any speculative possibility?

In formulating our withdrawal plan, we must, of course, accept the responsibility for evacuating and resettling those who wish to leave Vietnam.

On the matters we most care about—the return of our men held as prisoners of war and the safety of our troops as we withdraw—there is every likelihood of reaching an understanding with Hanoi once we indicate our willingness to set a firm date for our withdrawal.

Prospects for a broader political settlement in Vietnam may also improve. For the generals who control the South Vietnamese Government may seriously consider sharing their power once they realize that their weakness can no longer keep us in Vietnam indefinitely. And once the leaders in Hanoi know we are leaving, they may also be ready for serious negotiations as long as we can exercise some leverage at the peace talks in Paris.

No one can argue that our enormous contributions to South Vietnam over a 7-year period have fallen short of the commitment we originally made.

The basic question now is whether a specific deadline should be set for the withdrawal of all U.S. military personnel from Vietnam, not what that date should be. The McGovern-Hatfield amendment provides a realistic and sensible deadline of December 31, 1971.

That amendment represents no challenge to the President's constitutional responsibilities as Commander in Chief. It does not dictate the day-by-day tactics to be employed to protect our forces while military operations continue. But is does reflect Congress' determination to respond to its constitutional responsibility of deciding how long these forces will be committed to that war.

Nor does the amendment constitute a political challenge to the President. Rather, it offers to share the political responsibility for the hard decision that must be made. Whatever date for withdrawal is set, there is no easy way out of Vietnam.

In my opinion, the establishment of a specific deadline is the best among nothing but bad choices, and to make the choice will involve political costs and political courage.

But the issue is one that transcends purely political considerations. It must not be approached from the standpoint of possible political advantage; for only by distorting the motives of those who support the establishment of a deadline can this cardinal issue be turned into a partisan political debate.

A consideration of the issue on the merits is required. And such consideration, in my judgment, can lead only to affirmative support of the principle set forth so clearly in the McGovern-Hatfield amendment.

Mr. President, I yield back the balance of my time.

Mr. McGOVERN. Mr. President, before the Senator yields the floor, I would like to commend him on what I think has been one of the most thoughtful statements yet made in support of the amendment.

The Senator made one statement that especially interested me, when he said that there is no really good solution to this war.

I think that some years ago it was Mr. Lippman who said:

> You can't back away from a mistake with great glory and grace.

But, recognizing the fact that no matter how we settle this war, it will probably draw some objections in some quarters, a good many people will not feel happy with any kind of solution short of a total victory. That being the case, is there not some advantage in a democratic society such as ours of spreading the responsibility for that decision as broadly as we can—in short, of involving Congress, so that Senators and Representatives, representing every district in this country, can vote on the question of whether they would like to see American military operations continued or terminated at a definite date?

It seems to me that, from the standpoint of the President, it would be an advantage to him to share this burden and this responsibility as broadly as he can with the elected representatives of the people.

Would not the Senator think that that is one of the ways of minimizing the danger of scapegoating that might set off division and bitterness in our national life after the withdrawal of troops from Indochina?

Mr. MUSKIE. I agree with the Senator.

I should like to add a few thoughts that buttress the point he is making.

First of all, I do not know of anybody's plan, including the administration's, that will result in a withdrawal with the tidying up of all the loose ends. The administration has told us that it has an irrevocable policy of complete withdrawal. But whenever that comes, there will be a great deal of untidy loose ends that will create political problems for the government in Saigon, for the government in Hanoi, and for ourselves. So that the question of tidying up is a question that I think has no relevance to the amendment before us.

The second point I should like to make

is this: If we were to accept a deadline of this kind, I think that almost immediately we would begin to reap some of the benefits of the withdrawal itself. These benefits, as I see them, would be these: First of all, we could begin immediately to heal the divisions in this country which have been created by this tragic war and its consequences for us here at home. Once the country understands that the end is in sight, we could begin to act as though it had arrived, not only with respect to our attitudes toward each other but also with respect to planning the future commitment of our resources here at home and elsewhere.

Second, with respect to nations around the globe, I suspect that the setting of such a deadline would result in an almost audible breathing of relief throughout the world, especially among our friends, as they come to understand that their great friend and ally, the United States, had made the tough decision to cut off its involvement.

So I think that the beneficent effects upon our relationships with other countries around the world would be most useful.

Finally, with respect to the people of Vietnam themselves, it seems to me that such a clear-cut target would have less repercussions.

Mr. McGOVERN. I again commend the Senator on his excellent statement.

Mr. DOLE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOLE. How much time remains?

The PRESIDING OFFICER. The time of the Senator from South Dakota has expired. The Senator from Mississippi has 5 minutes remaining.

Mr. STENNIS. I yield 2 minutes to the Senator from Kansas.

Mr. DOLE. Mr. President, the focal question appears to be who shall make the determination, Congress or the President, with reference to peace in South Vietnam and the rate of withdrawal and when they may come about.

Some years ago, in his renowned "Commentaries on the Constitution," Justice Joseph Story said:

> Of all the cases and concerns of government, the direction of war most peculiarly demands those qualities, which distinguish the exercise of power by a single hand. Unity of plan, promptitude, activity and decision, are indispensable to success; and these can scarcely exist, except when a single magistrate is entrusted exclusively with the power. Even the coupling of the authority of an executive council with him, in the exercise of such powers, enfeebles the system, divides the responsibility, and not unfrequently defeats every energetic measure. Timidity, indecision, obstinacy and pride of opinion, must mingle in all such councils, and infuse a torpor and sluggishness, destructive of all military operations.

Mr. President, I believe that summarizes very well the basic argument. Some one person must speak for America. Some one person must speak for our country. Some one person must negotiate.

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

Mr. STENNIS. I yield 1 additional minute to the Senator from Kansas.

Mr. DOLE. It appears to me that whether that person be a Republican or a Democrat, whether it be this year or next year or 10 years ago or 10 years hence, that one person must be the Commander in Chief, the President of the United States.

Despite the good intentions and despite the wishes of every Member of this body that the war in South Vietnam end and end quickly, we must recognize that only the Commander in Chief can bring about peace and can negotiate peace and bring an honorable end to the war in Vietnam. To impose a timetable on the Commander in Chief and on the President would do a disservice not to Richard Nixon but to the Office of the President and to the President in his efforts for a just and lasting peace; and, above all, it would serve notice on our allies around the world that we will cut and run, that we do not honor our commitments.

Therefore, I strongly urge that the amendment be rejected.

Mr. STENNIS. Mr. President, reference has already been made to this New York Times editorial, which has an analytical question and comment. I want to read one sentence:

> The basic question remains, however, is this amendment the right one either to redress the imbalance of power in the government or to advance the prospects for American withdrawal and peace in Vietnam?

It answers that question "no" in both instances. I think that is a very fine summary.

In addition, this amendment, hardened into law, would give away to the other side every possible advantage that we could possibly have. It would take all the judgment and discretion away from the man who has to speak and has the responsibility of negotiating for our side, for the people of the United States.

I am certain in my mind that the majority of the Members of this body never will be willing to walk up here and say, regardless of everything else, "I am going to take away what discretion and judgment and consideration the President of the United States has; I am going to take it away from him and write it into hard law." That must not happen and will not happen.

Mr. President, I judge our time is up. We shall have 1 hour tomorrow. I yield the floor.

OVER 10,000 IN AUSTIN, TEX., SIGN PETITIONS FOR HATFIELD-McGOVERN AMENDMENT

Mr. YARBOROUGH. Mr. President, I have received petitions in favor of the Hatfield-McGovern amendment from over 10,000 Texans from the city of Austin. I hold these petitions in my hand, and exhibit them in the Senate for the inspection of any Senator. There are 439 sheets of names, generally with 25 names per page, and the names are followed by addresses of the signatories.

Each separate sheet of these petitions begins with this paragraph:

> We, the undersigned, in support of "The Amendment to End the War," petition the President and Congress to terminate United States involvement in Vietnam by June 30, 1971.

The amended Hatfield-McGovern amendment calls for the termination of American involvement in the Southeast Asian war by December 31, 1971.

These petitions were gathered by representatives of the University of Texas branch of "Outreach" and given to Representative JAKE PICKLE of that District to be given to Senator McGOVERN or Senator HATFIELD, sponsors of this amendment.

I am a cosponsor of this amendment, and feel that I should call the attention of the entire Senate to these petitions in support of the Hatfield-McGovern amendment, from my home city of Austin, Tex.

This 3-inch high stack of petitions represents such tremendous support of the amendment that I am tempted to place all of the names and addresses in the CONGRESSIONAL RECORD, as I have often seen voluminous petitions printed in the CONGRESSIONAL RECORD. However, I have been informed that to print these petitions with the more than 10,000 names on them would consume about 75 pages in the CONGRESSIONAL RECORD, which, at $128 a page, would cost the taxpayers approximately $9,600. As much as I would like to exhibit to the Senate this support for the Hatfield-McGovern amendment, I will forgo placing these 10,000 names from Austin, Tex., in the RECORD to save the taxpayers money—parenthetically, the cost of placing the names of these 10,000 Austin, Tex., citizens who favor the termination of the war in Vietnam in the RECORD—about $9,600—is about one-fifteenth of the cost to the taxpayers of killing one Vietcong, which costs the taxpayer about $146,000.

I ask unanimous consent to have printed in the RECORD the letter from Representative JAKE PICKLE by which these petitions were transmitted to me.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., August 17, 1970.

Hon. RALPH W. YARBOROUGH,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR: Last Friday in my Austin office, I had the pleasure of visiting with three representatives of the University of Texas branch of "Outreach". At that time, they officially presented me with the attached petitions bearing the names of approximately 10,000 students and local residents in basic support of the McGovern-Hatfield Amendment.

During the course of the conversation, they requested that I make the petitions available to either Senator McGovern or Senator Hatfield. I told them that I would be happy to do so, and that I would ask that you forward the names on, particularly since you are our senior Senator and these are your constituents also.

The outgoing President is Mr. Ray Flugel, 1714 East Woodward, Apartment No. 212, Austin, Texas; and the new President is Bob Hall, 4200 Avenue A, Apartment No. 207, Austin, Texas.

Thank you for your assistance.

Sincerely yours,

J. J. PICKLE.

Mr. McGOVERN. Mr. President, I should like to take this few moments to

thank the Senator from Texas for bringing these petitions to the attention of the Senate. He may be pleased to know that without any strenuously organized effort, something over 2 million names have come in from all over the country attached to petitions of that kind. My guess is that there are many times that number of petitions moving around the country in various towns and cities in the States across this country. When I was in my home State a few months ago, I ran into petitions everywhere I went. It is an encouraging outpouring of support and I commend the Senator from Texas for bringing his petitions to our attention.

ORDER OF BUSINESS

The PRESIDING OFFICER (Mr. HUGHES). Under the previous order, the Senator from Illinois (Mr. PERCY) is now recognized for 30 minutes.

S. 4305, S. 4306—INTRODUCTION OF BILLS RELATING TO VETERANS

Mr. PERCY. Mr. President, I have two issues to speak on today. The first deals with two veterans' items which the President called for the elimination of in a message to Congress on February 26, 1970.

Mr. President, on August 6, 1969, these proposals were submitted to the Congress, and referred to the Finance Committee where they have seen no action, and have not been introduced as legislation to the Senate. In a time when we face a deficit as large as $10 billion, it is my conviction that we should act promptly and responsibly to cut back on needless expenditures. It was for this reason that I decided to identify areas with fiscal 1971 budget where $4 billion could be saved. With these two items today of $100 million, I have now identified areas amounting to $1.7 billion.

Mr. President, I will continue to search out those areas of excess in the budget, and I urge the Congress to act swiftly and favorably on these and other areas.

These two issues I have spoken of today are an excellent example of money misspent. This $100 million could have been used to upgrade veterans' hospitals or for other higher priority needs. Instead, it has been used needlessly and thus wastefully. It is the duty of the Congress to see to it that the taxpayer's money is not spent unwisely, and that money be saved wherever feasible at a time when we face a large budget deficit. This is my goal, and I hope and believe that it is the goal of every Member of this body.

Mr. President, on February 26 of this year, President Nixon proposed to the Congress areas in the budget that should be reduced, terminated, or restructed. Many of these proposals are included in the Federal Economy Act of 1970 which is currently pending before various Senate committees including the Finance Committee, the Commerce Committee, the Agriculture Committee, and the Labor and Public Welfare Committee.

However, certain of the President's proposals were not included in this bill. In my search for areas where we can cut Federal spending by as much as $4 billion, in fiscal 1971, I believe that we should pay particular attention to those areas that the administration itself has identified as wasteful.

Consequently, today I am introducing two bills which, when enacted, will save $100 million. I ask unanimous consent that these two bills be printed in full at the conclusion of my remarks in the RECORD.

The PRESIDING OFFICER (Mr. HUGHES). The two bills will be received and appropriately referred; and, without objection, will be printed at the conclusion of the Senator's remarks as requested.

Mr. PERCY. Mr. President, those bills deal with certain veterans benefits that the administration has identified as wasteful.

In 1926, tuberculosis was a dread disease. Few persons suffering from TB could be expected to live more than 20 years. In the continental United States in 1926, the death rate from respiratory TB was 76.6 per 100,000 population. Medical authorities contended that those with arrested TB did not have and would never have the strength to meet the demands of their previous employment and hence that a significant curtailment in economic activity was required to avoid recurrence of the disease. Faced with these facts in 1926, the Congress decided to compensate veterans whose service-connected TB had been arrested. Since the disability was actually a recognition of an earlier disease and a potential of a future disease, the rating of disability and the payment of compensation did not fit neatly into the schedule then employed by the Veterans' Bureau. Thus, the Congress choose to compensate these veterans with a statutory award consisting of a minimum monthly rate of compensation.

In 1949, the Congress enacted into law provisions that designate the following disability ratings: a 100-percent rating for 2 years following the arrest of the disease, a 50-percent rating for the succeeding 4 years without the necessity of establishing any physical or economic impairment, and a 30-percent rating for a further period of 5 years. This section of law also provides a permanent 30-percent rating for veterans who had far advanced lesions, and a 20-percent permanent rating for veterans whose disease had been moderately advanced if there is continued disability.

Since the time of the passage of this legislation, medical science has made tremendous advances with respect to the treatment of this disease. Modern methods of treatment have been so successful that the death rate from this disease has been lowered to a point of relative insignificance. For example, in 1965, the death rate from pulmonary TB in the United States was 3.8 per 100,000 population. In addition, data now available show no unusual residual impairment in cases of arrested TB. Following the modern course of treatment, these individuals are able to return to their homes with assurance of normal industrial acceptance and generally to full-time employment. Recurrence of the disease is not anticipated.

Considering these medical advances, the Veterans' Administration, several years ago, requested a number of medical authorities in the field of tuberculosis to study the present situation with respect to the disease. Following many months of deliberation, these consultants concluded that statutory awards are medically unsound, and disability ratings assigned to the disease should be related to demonstrable physical impairment.

This is obviously the correct conclusion. From the standpoint of equality, veterans with arrested tuberculosis should be provided compensation for their average impairment on the same basis as is used for those with other diseases and injuries. A statutory rate is not based on impairment, and is thus discriminatory as it represents preferential treatment for this special class of veterans. It provides them compensation without requirement of disability.

Last year, the Congress enacted Public Law 90–493. This law abolished special compensation for future cases of arrested TB. However, there are still about 44,000 individuals now receiving compensation for arrested TB. The bill I am introducing today would resolve this inequity. Statuatory disability would no longer be granted; compensation would only be granted on the basis of disability. By enacting this legislation, an annual savings of $46 million could be realized.

In this instance, the Congress must catch up with enlightened and advanced medical knowledge and take this opportunity to provide equitable compensation for all veterans while at the same time saving $46 million.

Mr. President, the second bill I am introducing today deals with the cost of burial expenses of veterans with wartime service. In the past 20 years, social security and other legislation has been enacted which tends to duplicate the benefits provided under the VA law. Under current law the VA provides $250 for such burial expenses. This legislation would limit the VA payment to the difference between $250 and the amount of various non-VA benefits due to each veteran's survivors.

This provision dates back to the War Risk Insurance Act of 1917. The historical purpose of this burial allowance was to avoid the burial of war veterans in a potter's field. However, as other Federal benefit assistance programs have been adopted, or broadened, for various elements of the general populace, the need for a special burial allowance for veterans to avoid burial in a potter's field has decreased, and the problem of duplicate Federal benefits directed toward the same purpose has arisen.

Burial and funeral allowances, or lump-sum death payments, are now paid under many different provisions of law, which include the Federal Employees' Compensation Act, the Social Security Act, and the Railroad Retirement Act.

This bill would limit the payment of the burial allowance to the difference between the amount of similar purpose benefits paid by the United States, and $250. It still would insure the payment of at least $250 in Federal burial and funeral expenses benefits.

This bill would in no way defeat the historical purpose of the burial allowance. It would, however, eliminate dupli-

cate payments by the Federal Government for the same purpose, and it would result in annual savings of $54 million.

The bills, introduced by Mr. PERCY, were received, read twice by their titles, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 4305

A bill to amend section 902 of title 38, United States Code, to eliminate certain duplications in Federal benefits now payable for the same, or similar, purpose

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 902 of title 38, United States Code, is amended to read as follows:

"§ 902. Funeral expenses

"(a) Where a veteran dies—

"(1) of a service-connected disability; or

"(2) who was (A) a veteran of any war; (B) discharged from the active military, naval, or air service for a disability incurred or aggravated in line of duty; or

(C) in receipt of (or but for the receipt of retirement pay would have been entitled to) disability compensation;

the Administrator, in his discretion having due regard to the circumstances in each case, may pay a monetary allowance (hereinafter referred to as a 'burial allowance'), which does not exceed an amount computed as provided in subsection (b) of this section, to such person as he prescribes to cover the burial and funeral expenses of the deceased veteran and the expense of preparing the body and transporting it to the place of burial. For the purpose of this subsection, the term 'veteran' includes a person who died during a period deemed to be active military, naval, or air service under section 106(c) of this title.

"(b)" The maximum burial allowance payable under this section in any one case shall be $250 reduced by any amount payable under section 202(i) of the Social Security Act (42 U.S.C. 402(i)) or any other Act providing for the payment of expenses of funeral, transportation, and interment.

"(c) Except as hereafter provided in this subsection, no deduction shall be made from the burial allowance because of the veteran's net assets at the time of his death, or because of any contribution from any source toward the burial and funeral expenses (including transportation), unless the amount of expenses incurred is covered by the amount actually paid therefor by a State, any agency or political subdivision of a State, or the employer of the deceased veteran. No claim shall be allowed (1) for more than difference between the entire amount of the expenses incurred and the amount paid by any or all of the foregoing, or (2) when the burial allowance would revert to the funds of a public or private organization or would discharge such an organization's obligation without payment."

SEC. 2. This Act shall take effect on the first day of the second calendar month following enactment.

S. 4306

A bill to repeal the savings provision of Public Law 90-493 protecting veterans entitled to disability compensation for arrested tuberculosis

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection 4(b) of Public Law 90-493 is hereby repealed.

(b) This Act shall take effect on the first day of the second calendar month following enactment, and any reduction or discontinuance of compensation required as a result of enactment shall be effective on that day.

INTRODUCTION OF S. 4307—THE ENVIRONMENTAL QUALITY IMPROVEMENT ACT OF 1970, TO ESTABLISH A CORPS OF ENGINEERS ENVIRONMENTAL ADVISORY BOARD

Mr. PERCY. Mr. President, the decade of the 1970's has been declared the decade to preserve our environment. On April 22, Earth Day, this country witnessed a unanimity of spirit that has too often been lacking in recent years. The Nation as a whole, young and old, conservatives and liberals alike, stood up en masse and dedicated themselves and this Nation to an unspoiled environment. However, most of the actions taken by this Nation have been reflex actions, reactions to critical situations that already exist. When it was discovered for instance, that there was a dangerous concentration of mercury in our waters, immediate action was demanded. It was for this reason that I introduced S. 4210 which provides maximum penalties of up to $10,000 a day for those who so poison our waters. This was a necessary reaction, but one that would have been unnecessary had farsighted planning been taken a decade ago.

This lack of comprehensive planning is evident in many other areas of congressional responsibility. The Army Corps of Engineers has been a continual object of criticism in this regard. The corps is charged with the responsibility of developing, maintaining, and improving our waterways. However, time and time again it has been accused of not giving due weight to environmental considerations. The Cross-Florida Barge Canal is a case in point. Construction of the canal was authorized in World War II to enable allied shipping to bypass the threat of Nazi submarines stationed in the Carribean and Atlantic. Yet, construction of the canal did not begin until 1964. Since that time, many voices have been raised in opposition to the construction of the canal. Some of our most prominent ecologists have expressed concern that this project will cause great harm to the environment of the area. Secretary Hickel, himself, wrote a letter to the Secretary of the Army requesting that construction be delayed for 15 months to allow an environmental study. Unfortunately, these pleas have gone unheeded. If a method had been provided whereby this issue could have been resolved before the environment was threatened, the whole affair could have been avoided. As I said, this is only one example where the actions of the corps have raised cries of alarm from conservationists, but previous commitments made by the corps have allegedly "locked in" the projects.

The Corps of Engineers has for years been dredging Chicago area waterways contiguous with Lake Michigan. They have dumped into the lake in recent years the equivalent of a dozen Merchandise Marts, the largest building in the world, in mass volume of polluted dredgings. The corps is well aware that this practice contributes to the pollution of the Great Lakes but maintains that Congress does not appropriate sufficient funds to dispose of the dredgings elsewhere. No one focuses proper attention on the environmental effect of their actions undertaken for commercial purposes.

Mr. President, I have great admiration for the Corps of Engineers. It has a great many outstanding accomplishments and is comprised of a group of highly dedicated men.

General Clarke, who serves as the Chief of the Army Corps of Engineers, is to be commended for taking the first steps toward the creation of the Environmental Advisory Board. Having invited six noted environmental experts to serve on the Board, General Clarke has given the legislation I am introducing today its initial impetus.

This latest undertaking by Clarke is characteristic of the high quality performance he has and continues to tender the United States through his military service. His work as engineer commander for the District of Columbia from 1960 to 1963, as director of military construction from 1963 to 1965, and most recently as commandant of the U.S. Engineering School at Ft. Belvoir is well known to us here in Congress. He is a man distinguished both in his public and private life, a fact further acknowledged by his having been decorated with the Legion of Merit.

It is a source of great satisfaction to me, as I introduce this legislation today, to think that when passed it will be administered at the outset by General Clarke.

But I think we must take into account the fact that in the past the Congress of the United States and the country have never given proper attention to the environmental effects of the actions of the Corps of Engineers nor to the actions of many other agencies of the U.S. Government, for that matter.

It is for this reason that I raise this issue at this time, not as a point of criticism, but as a means of trying to find organizationally the best way to adapt ourselves to new conditions and the new priorities the Nation and the Congress feel should now be placed on the environmental effects of activities of the Corps of Engineers and other governmental agencies as well.

I was pleased, therefore, to cosponsor the bill the administration sent to Congress to deal with this problem. It calls for a discontinuance of the disposal of polluted dredged materials into the Great Lakes by the corps and by private interests. Containment areas are to be made available as a suitable alternative.

The point is, however, that Congress should not have to legislate on each specific project of the corps when it has been found, after the fact, to be in violation of the general environmental interest. By providing a structure whereby the environmental interests can be systematically considered prior to the undertaking of specific projects, we can save the ecology and also save the Congress.

Recognizing then the need for some mechanism whereby environmental considerations could be given prime attention within the corps, I am today—on behalf of Senator RANDOLPH, chairman of the Senate Public Works Committee,

Senator COOPER, ranking minority member, and myself—introducing legislation which will provide this mechanism. I consider it absolutely essential to the protection of the environment. Mr. President, I ask unanimous consent that the bill be printed in full at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PERCY. Mr. President, the corps has itself appointed an ex officio Environmental Advisory Board partially in response to the criticism it has received. It consists of six men authorized to advise the corps concerning environmental issues. While the Board gives every sign of being a good idea, I believe it is not nearly effective enough as presently structured. What is worse, it carries no promise of improvement in the future. The legislation I am introducing today builds on the principle and structure that the corps itself has chosen and in my judgment strengthens it to insure its effectiveness.

It is my plan to establish a permanent, statutory Environmental Advisory Board within the Corps of Engineers. The Board shall consist of six members to be chosen by the Secretary of the Army from a list of candidates submitted by the President's Council on Environmental Quality. This, hopefully, will insure that only highly qualified environmentalists be nominated to the Board, but it enables, at the same time, the Secretary of the Army to exercise a certain degree of flexibility in choosing those to serve.

The Board's primary function will be to submit a recommendation on each corps project to the Secretary of the Army before any construction has begun, or any permit issued. Their recommendation will be based upon the environmental considerations surrounding the proposed project. If the Secretary of the Army decides to act contrary to the recommendations of the Board, the matter will automatically be forwarded to the Secretary of Defense who shall, after reviewing the Board's recommendations and the Secretary's reasons for not following them, make a final decision. In addition, the Board shall be represented at each hearing conducted by the corps, and possess the right to hold initial hearings and/or subsequent hearings.

The annual report of the corps to the Congress shall include a summary of the Board's recommendations to the corps, the actions taken by the corps in response to those recommendations, and any other comments concerning the operations of the corps with respect to the environment which it deems pertinent.

Mr. President, the enactment of this legislation will stand as a benchmark in the history of environmental legislation. It will for the first time provide a structure to insure the consideration of the environment in all projects proposed to be undertaken by the corps. More importantly, it will establish the important precedent for creating in each governmental department a method for the systematic inquiry into these questions.

Perhaps some might comment that this legislation is unnecessary since the corps has already established an Advisory Board. I would point out, however, that this Board, though conceived some 5 months ago, has met only once and has not yet been asked to submit its opinion on any project. I am sure that the corps is sincere in its desire to protect the environment, but it is my opinion that so far its work represents only a good beginning. By statutorily establishing this Board, by specifying the manner in which the members of the Board shall be chosen, and by spelling out its functions, this legislation promises prime attention to the environment. If, for any reason, the Secretary of the Army, or the Secretary of Defense decide to go against the Board's environmental recommendations, I am confident that their reasons will be justifiable since both the public and the Congress will have the opportunity to keep close tabs on these issues.

Mr. President, each Member of the Congress can site innumerable examples of where the views of reasonable citizens concerning some project of the Corps of Engineers have been unnecessarily squelched. Had this Board existed 10 years ago, these controversies might never have arisen.

Each of us in this body knows that there are some bills which have been introduced which received considerable publicity, but which realistically do little to solve our environmental problems. This bill, though, is not a grandstander. It is a bill that is a down-to-earth practical solution that will work.

The idea behind this Board is long overdue. In order to protect the environment, in order to protect the rights of all citizens to an unspoiled environment, and in order to enable the corps to carry out its duties, this legislation deserves the immediate and favorable consideration of the Congress.

I am grateful for the powerful support offered by the co-sponsorship of Senators RANDOLPH and COOPER who have distinguished themselves through the years in their concern for preserving our environment.

The bill (S. 4307) to amend the Environmental Quality Improvement Act of 1970 in order to establish a Corps of Engineers Environmental Advisory Board, introduced by Mr. PERCY (for himself, Mr. RANDOLPH, and Mr. COOPER), was received, read twice by its title, referred to the Committee on Public Works, and ordered to be printed in the RECORD, as follows:

S. 4307

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Environmental Quality Improvement Act of 1970 is amended (1) in section 205 by inserting after "to be appropriated" the following: "to carry out the preceding provisions of this title," and (2) by inserting after such section a new section as follows:

"CORPS OF ENGINEERS ENVIRONMENTAL ADVISORY ROARD

"SEC. 206. (a) There is established in the Department of the Army a Corps of Engineers Environmental Advisory Board (hereinafter in this section referred to as the 'Board'). The Board shall be comprised of six members appointed by the Secretary of the Army for terms of three years each, except that (1) of the initial six members of the Board, two shall serve for terms of one year each, two for terms of two years each, and two for terms of three years each as determined by the Secretary at the time of appointment, (2) a member shall continue to serve until his successor is appointed, and (3) a member appointed to fill a vacancy in an unexpired term shall be appointed for the remainder of such term. Each member of the Board shall be appointed from among at least two individuals proposed for such appointment by the Council on Environmental Quality, except that on the effective date of this section any individual serving as a member of the environmental advisory board to the Corps of Engineers in the Department of the Army may be appointed as one of the initial six members of the Board. The Board shall annually elect one member to serve as chairman. Members of the Board shall be entitled to receive compensation at a rate fixed by the Secretary of the Army but not exceeding the rate specified for grade GS–18 in section 5332 of title 5, United States Code.

"(b) The Board shall review all functions of the Secretary of the Army being carried out through the Corps of Engineers for the purpose of making such recommendations to the Secretary with respect to each function as the Board determines will best carry out the purpose of this title and the National Environmental Policy Act of 1969.

"(c) Any report submitted to the Congress as part of such functions by the Secretary with respect to any examination or survey or recommending any improvement for river or harbor or flood control purposes shall include the Board's recommendations, if any, with respect to any activity proposed in such report.

"(d) In any case where the Board submits a recommendation to the Secretary of the Army relating to an authorized program to be carried out by the Secretary and the Secretary determines not to carry out such recommendation in its entirety, the Secretary shall submit such recommendation, along with the reasons for not carrying it out, to the Secretary of Defense who shall make a final determination with respect to carrying out the recommendation prior to its implementation.

"(e) In each hearing conducted by the corps, the Chairman of the Board or his designee shall attend.

"(f) The Board is authorized to conduct initial and/or subsequent hearings upon finding that (1) the corps has under consideration a project which will substantially effect the environment and for which the corps will grant or deny a permit, (2) the corps has conducted initial inquiries which in the Board's judgment did not adequately deal with all the appropriate issues or (3) that the public interest has been sufficiently represented to the Board to warrant further official inquiry.

"(g) There shall be included in the annual report submitted by the corps to the Congress a summary of the recommendations made by the Board to the corps, and the actions taken on the basis of those recommendations; plus such other comments as the Board shall determine to be necessary or desirable with respect to the operations of the corps as such operations relate to environmental protection.

"(h) The Board is authorized to employ such officers and employees (including experts and consultants) as may be necessary to carry out its functions under this section.

"(i) The Board shall have access to any information in the possession of the corps and may request the Corps to obtain or develop such information as it may require; the corps shall make available to the Board such staff and facilities as may be required.

"(j) There are authorized to be appropriated such amounts as may be necessary to carry out the provisions of this section."

ORDER OF BUSINESS

The PRESIDING OFFICER. The senior Senator from West Virginia is recognized.

Mr. BYRD of West Virginia. Mr. President, does the Senator from Illinois still hold the floor?

Mr. PERCY. Mr. President, does the distinguished Senator wish the floor? I would be happy to yield it to him.

Mr. RANDOLPH. Mr. President, the Senator from Illinois may yield the floor and I will take the floor in my own right.

Mr. PERCY. Mr. President, I would be very happy to yield the floor.

Mr. BYRD of West Virginia. Mr. President, I think it would be well if the Senator yielded to the Senator his remaining time, because I am about to propound a unanimous-consent request.

Mr. PERCY. Mr. President, I yield the remaining time to the senior Senator from West Virginia.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that once the Senator yields the floor, there be a period for the transaction of routine morning business with a time limitation on statements made therein for 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, does the distinguished Senator from Kentucky desire to make remarks on this matter?

Mr. COOPER. Mr. President, I understand that the Senator has yielded to the senior Senator from West Virginia. If there is any time remaining I will speak on the matter.

The PRESIDING OFFICER. The Senator from West Virginia has 13 minutes remaining. Following that time, there will be a period for the transaction of routine morning business with a period therein not to exceed 3 minutes.

CONTINUATION OF DEBATE ON THE INTRODUCTION OF A BILL TO ESTABLISH A CORPS OF ENGINEERS ADVISORY BOARD

Mr. RANDOLPH. Mr. President, I am gratified to join the able Senator from Illinois (Mr. PERCY) as a cosponsor of his bill to establish an Environmental Advisory Board in the Corps of Engineers.

The Senator from Illinois has quite properly called attention to the very substantial impact on our natural environment by the civil works projects constructed by the Corps of Engineers. It is important that this impact be fully recognized and that projects under the jurisdiction of the corps be planned and executed in such a way as to avoid undesirable results.

I commend my colleague from Illinois for taking the initiative to create a body which would concern itself exclusively with the important work of the Corps of Engineers, and its relationship to the environment.

If the measure is enacted, I do not anticipate that the Environmental Advisory Board would relieve the Council on Environmental Quality of any of its responsibilities as established by the National Environmental Policy Act of 1969.

I envision, rather, that the Environmental Advisory Board of the Corps of Engineers would complement and reinforce the Council in its function of reviewing and appraising the environmental impact of all Federal activities. The relationship of the two bodies, in fact, is indicated in the bill by the requirement that members of the Environmental Advisory Board be appointed from a list of candidates submitted by the Council on Environmental Quality.

Furthermore, by confining its area of responsibility to the Corps of Engineers, the Board could be of considerable value in helping the Council on Environmental Quality develop its own expertise in this area.

Many projects undertaken by the Corps of Engineers are of such a large scale that their effect on the environment is substantial. Surely, a large dam can make its presence felt over a wide area, just as can a series of locks on a major waterway or even a small watershed project. All of these activities by the corps have worthwhile and productive goals, but we must assure that they do not also produce undesirable side effects. The very scope of many corps projects makes this assurance essential, for they are prominent examples of Government activity that must prominently reflect Government concern for the environment.

The Subcommittee on Flood Control, Rivers and Harbors of the Committee on Public Works, under the chairmanship of the distinguished Senator from Ohio (Mr. YOUNG), has already conducted extensive hearings on legislation relating to Corps of Engineers activities. The subcommittee has additional hearings scheduled, and I hope it will be able to consider this bill soon. This bill to establish a Corps of Engineers Environmental Advisory Board is a timely and worthwhile proposal. I hope it will receive the prompt and affirmative attention of the Senate.

The Senator from Kentucky (Mr. COOPER) has been alluded to by the Senator from Illinois as the ranking minority member of the Committee on Public Works. We have discussed this proposal. At the outset there was some question in our thinking as we developed our action which leads us to join the Senator from Illinois.

Mr. President, How much time do I have remaining?

The PRESIDING OFFICER. The Senator has 4 minutes remaining.

Mr. RANDOLPH. Mr. President, I yield to the Senator from Kentucky, or, if he desires, I will yield the floor.

Mr. COOPER. Mr. President, will the Senator from Illinois yield to me?

Mr. PERCY. I have yielded the floor.

Mr. RANDOLPH. Mr. President, I have 4 minutes remaining. I yield to the Senator and I am sure we could get further time if necessary.

Mr. COOPER. Mr. President, I thank the Senator from West Virginia and the Presiding Officer for their generosity.

The distinguished Senator from Illinois (Mr. PERCY) has stated well the purpose of the bill which he has introduced, and in which the Senator from West Virginia and I have joined.

I think it is fortunate that the Senator from West Virginia (Mr. RANDOLPH), chairman of the Committee on Public Works, is a sponsor of the bill. As the ranking Republican member of the committee, I wanted to join in sponsoring the bill so that our committee in a bipartisan way, could study this bill and explore the very important issues it raises.

In the last 5 years the Committee on Public Works has engaged in the consideration of many problems about which very little was known throughout the country. We held hearings and Senate bills have been passed dealing with air pollution control, water pollution control, control of oil spillage, and on solid waste management. In connection with the Federal highway system we have dealt with comprehensive bills to give greater protection to the environment and the ecology from the intrusion of even necessary highways.

Now, through bills like that introduced by the Senator from Illinois (Mr. PERCY), we could begin to place more emphasis on the Corps of Engineers activities and the necessary protection of the environment which should accompany those activities. We owe much to the Corps of Engineers. In my State, the Corps of Engineers has reconstructed locks and dams on the Ohio River and made it the greatest artery of water traffic in the world. The corps activities involve water quality and storage; they have given us flood protection to save the lives of people.

Now, we believe it is important to look ahead. In many instances it may be too late. We think it important that we begin to study the enactment of necessary legislation to protect as best we can the environment and ecology in our river valleys.

Mr. President, I wish to pay tribute to our colleague from Illinois for his thoughtfulness and initiative in introducing this legislation. I assure him that in the Committee on Public Works the Senator from West Virginia (Mr. RANDOLPH), and I, as well as others, will give this matter our fullest attention.

I thank the Senator.

Mr. PERCY. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. PERCY. Mr. President, I wish to express my deep appreciation for the comments that have been made this afternoon by my distinguished colleagues. I have had a great deal of respect for the work they have done in the Committee on Public Works. I do not think many Members of this body fully appreciate the amount of time and attention it takes to consider these projects all over the country. The time and attention required should not be underestimated.

I have been constantly amazed, as I have testified before the committee, at the depth of the understanding the committee members have of the projects. I

know they themselves have been deeply concerned about the environmental protection.

I think the solution we have arrived at today via the legislative process will strengthen the credibility and enhance the reputation, which is already high, of the constructive work the corps has done. It will provide both a visibility and a mechanism whereby we can provide adequate funds and thought to each undertaking in evaluating the effect it promises upon the environment and upon society.

I thank my distinguished colleague once again.

The PRESIDING OFFICER. What is the pleasure of the Senate?

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Pursuant to the previous order, the Senate will now proceed to a period for the transaction of routine morning business, with statements therein not to exceed 3 minutes.

STATEMENT BY SENATOR PROXMIRE ON THE PROXMIRE-NELSON-HUGHES DRAFT AMENDMENT

Mr. BYRD of West Virginia. Mr. President, at the request of the able Senator from Wisconsin (Mr. PROXMIRE), I ask unanimous consent to insert in the RECORD a statement by Mr. PROXMIRE on the Proxmire-Nelson-Hughes draft amendment.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR PROXMIRE ON THE PROXMIRE-NELSON-HUGHES DRAFT AMENDMENT

Mr. President, tomorrow the Senate will vote on the Proxmire-Nelson-Hughes amendment which would provide that no draftee would be sent to Vietnam, Laos, or Cambodia without his consent.

The amendment provides that after the date of enactment of the Military Authorization bill, no funds may be expended for the purpose of sending draftees to South Vietnam, Cambodia or Laos, unless specifically authorized by Congress at a later date, or unless they volunteer.

It is now both possible and practical to do this.

"Numerically, it is now possible to end the practice of sending draftees to Vietnam. At the present time, there are only 107,400 draftees serving there. This figure represents less than 4 percent of our total U.S. military strength of 3.1 million men, and only 8 percent of the 1.3 million men now serving in the U.S. Army. There should be more than enough other military personnel to fulfill any obligations we may have in Vietnam without sending more draftees.

"Furthermore, the total of 265,000 men President Nixon has announced will be withdrawn from South Vietnam by next spring is two and a half times larger than the 107,400 Army draftees now serving in that country.

There is one further fact which makes it practical to stop sending draftees to Vietnam. Secretary Laird stated in May that by the end of fiscal year 1971, American ground troops in Vietnam will not be assigned to combat missions. While some of our troops will still be there, they will not be assigned to combat duty.

There is thus no reason to send further draftees to Vietnam, because the only argument now for draftees in Vietnam is because they are a very large part of the combat units—disproportionately large and without draftees it would otherwise be difficult to send new combat units to Vietnam.

A FAIR PROPOSAL

It is not only practical, but it is also a fair proposal.

"The draftee serving in South Vietnam today is assuming a highly disproportionate share of the fighting, and the dying, in that country. This has, in fact, been the case for several years now.

"In 1965, only 16 percent of total combat deaths in Vietnam, including all branches of the armed forces, were draftees. By 1968, this percentage had risen to 34 percent; by 1969 to 41 percent. Today, although draftees comprise only a quarter of all our men in Vietnam, their percentage of combat deaths has risen to 46 percent. Thus, while draftees comprise just over 10 percent of all military personnel, they comprise almost half of combat deaths in Vietnam. That is unfair.

"Statistics for 1969 further substantiate the fact that draftees are becoming the cannon fodder of the Vietnam War. During this period, Army draftees were being killed in action at a rate of 31 per 1,000. By contrast, Army enlistees were killed at a rate of 17 per 1,000. Thus, Army draftees were killed at nearly twice the rate of non-draftees in Vietnam last year.

"Facts and figures do not, in themselves, reveal the entire nature of the draftee's burden. For the draftee is, by definition, an involuntary inductee. He is serving in Vietnam by command, not consent. He has no choice in the matter. The vast majority of draftees in Vietnam are there against their will, fighting a war Congress has not even declared.

"The draftee has assumed a disproportionate share of the combat role in the Vietnam War. Now the combat role is being phased out. Last week 52 Americans were killed in action in Vietnam, the lowest total in three years.

"We no longer need the draftee in Vietnam. His role as the combat soldier can be and should be phased out. We have men to replace him, men that will go to Vietnam as volunteers, not involuntary inductees. This policy of an all-volunteer armed force in Vietnam is not only feasible, but right."

I want to make it clear that the amendment does not withdraw the draftees now in Vietnam at a faster rate than others or prevent them from continuing to fight. But it would prevent sending other draftees to Vietnam if the amendment is passed.

AMENDMENT WOULD EQUALIZE DRAFTEES AND VOLUNTEERS

In a very real sense what the amendment would do is to give the draftee the same option that the volunteer now has.

At the present time if a man signs up voluntarily for the military, he can most often choose his specialty or his training. The effect of this is to exempt him from combat duty in Vietnam.

In addition, men in combat in Vietnam are offered opportunities to leave Vietnam or to escape from combat, if they sign on for an additional period of time.

Again, the practical effect has been that the non-draftee fights only if he volunteers to fight, but the draftee—in very large proportions—is forced to fight.

The amendment, by giving the draftee a choice much like the choice of the non-draftee—would tend to equalize this presently very unequal situation.

The Proxmire-Nelson-Hughes amendment has been co-sponsored by Senators Cranston, Young of Ohio, Church, Yarborough, McGovern, and Goodell.

It deserves to be passed in order to provide some semblance of equality in who is required to fight in Vietnam in the few remaining months when combat missions will still be assigned.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. METCALF):

The petition of Frances Bogatoy, of Youngstown, Ohio, praying for the enactment of legislation relating to revenue sharing; to the Committee on Finance.

A letter, in the nature of a petition, from George F. Bern, of Youngstown, Ohio, praying for the enactment of legislation relating to revenue sharing; to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McGEE, from the Committee on Post Office and Civil Service, without amendment:

S. 4227. A bill to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes (Rept. No. 91–1155).

By Mr. YARBOROUGH, from the Committee on Appropriations, with amendments:

H.R. 16900. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1971, and for other purposes (Rept. No. 91–1156).

DISASTER ASSISTANCE ACT OF 1970—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (S. REPT. NO. 91–1157)

Mr. BAYH. Mr. President, from the Committee on Public Works I report favorably the bill S. 3619, the Disaster Assistance Act of 1970, with an amendment.

In accordance with the agreement of the chairmen of the Public Works and the Banking and Currency Committees after the bill was ordered reported from the Public Works Committee on August 12, it was referred to the Banking Committee for review, comments and possible amendment.

The Banking Committee on August 25 considered the bill and suggested certain changes which have been incorporated in the bill as reported.

I ask unanimous consent that the individual views of the Senator from Kansas (Mr. DOLE) be printed together with the report.

The PRESIDING OFFICER (Mr. COOK). The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Indiana.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. ERVIN:

S. 4303. A bill for the relief of Maria Irma Majano de Reyes; to the Committee on the Judiciary.

By Mr. McGOVERN:

S. 4304. A bill to amend Section 402(a)(10) of the Social Security Act; to the Committee on Finance.

(The remarks of Mr. McGOVERN when he introduced the bill appear below under the appropriate heading.)

By Mr. PERCY:

S. 4305. A bill to amend section 902 of title 38, United States Code, to eliminate certain duplications in Federal benefits now payable for the same, or similar, purposes; and

S. 4306. A bill to repeal the savings provision of Public Law 90-493 protecting veterans entitled to disability compensation for arrested tuberculosis; to the Committee on Finance.

(The remarks of Mr. PERCY when he introduced the bills appear earlier in the RECORD under the appropriate heading.)

By Mr. PERCY (for himself, Mr. RANDOLPH, and Mr. COOPER):

S. 4307. A bill to amend the Environmental Quality Improvement Act of 1970 in order to establish a Corps of Engineers Environmental Advisory Board; to the Committee on Public Works.

(The remarks of Mr. PERCY when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. STEVENS:

S. 4308. A bill for the relief of the estate of Lowell W. Gresham; to the Committee on the Judiciary.

By Mr. HRUSKA (by request):

S. 4309. A bill to amend the Immigration and Nationality Act, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. HRUSKA when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 4304—INTRODUCTION OF A BILL TO AMEND THE SOCIAL SECURITY ACT

FAMILY ASSISTANCE ACT OF 1970—AMENDMENTS

AMENDMENTS NOS. 870 THROUGH 874

Mr. McGOVERN. Mr. President, today I am proposing three changes in the administration's family assistance proposal, included in five amendments to that bill, and one amendment to the Social Security Act a bill that would make it easier for welfare recipients to accept work.

Without objection I request that at this point my statement before the Senate Finance Committee, and the bill and amendments be printed in the RECORD.

The PRESIDING OFFICER (Mr. COOK). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD; and the amendments will be received and printed, and will be appropriately referred; and, without objection, the amendments and statement will be printed in the RECORD.

The bill (S. 4304) to amend section 402(a)(10) of the Social Security Act; introduced by Mr. McGOVERN, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 4304

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 402(a)(10) of the Social Security Act is amended—

(1) by inserting "(A)" immediately after "(10)";

(2) by inserting at the end thereof the following:

"(B) provide that, effective April 1, 1971, whenever any family whose eligibility for such aid is terminated by reason of the acceptance of employment by any member thereof, such family may (within one year after such eligibility was so terminated), by filing a simple sworn declaration as to pertinent factual information, immediately re-establish its eligibility for such aid;".

The amendments (Nos. 870 through 874), submitted by Mr. McGOVERN, were referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 870

On page 30, line 3, strike out "(a)", and
On page 30, strike out lines 15 through 24.

AMENDMENT NO. 871

On page 25, lines 10 and 20, strike out "or supervise the carrying out of".

AMENDMENT NO. 872

On page 4, line 3, insert the following: "(a)"

On page 34, line 7, strike out "1964" and all that follows, and insert in lieu thereof, "1964."

On page 34, between lines 7 and 8, insert the following new subsection:

"(b) It is the intention of Congress that the Secretary of Health, Education and Welfare and the States in administering the Assistance Programs established by Title IV of the Social Security Act as amended by this Act, will to the fullest extent feasible, insure that the seniority, pension, and other rights and benefits enjoyed by those who were employed in the Administration of programs under such title as in effect prior to the effective date of this Act, will be preserved and protected."

AMENDMENT NO. 873

On page 16, beginning with the word "The" on line 16, strike out all through "applications,", and insert in lieu thereof:

"The Secretary shall provide for the use of a simplified statement, to establish eligibility, and for adequate and effective methods of verification of applicants and recipients through the use of sampling and other scientific techniques, and shall provide for".

AMENDMENT NO. 874

On page 27, beginning with the word "or" on line 7 strike out all through the word "payments" on line 9.

On page 27, line 18, beginning with the word "unemployed," strike out all through line 2 on page 28, and insert in lieu thereof: "unemployed."

On page 28, line 12, strike out the word "part," and insert in lieu thereof the word "title,".

The statement, presented by Mr. McGOVERN, is as follows:

STATEMENT OF SENATOR GEORGE McGOVERN BEFORE THE SENATE FINANCE COMMITTEE, AUGUST 25, 1970

It is a special pleasure for me to appear before this Committee to testify on the Administration's Family Assistance Plan. The Administration's initiative in this area has opened an opportunity for all of us to participate in what can be a truly historic step forward in the fight for an adequate and dignified program of public assistance in America. I know that this is something all of us desire, though we may have some differences over the details. We all want to make sure that Family Assistance is a really workable reform of the present system, not simply another flop which disappoints Americans who support it through their taxes and Americans who hope to improve their lives through its benefits. There is no question of the good intentions of the Administration in proposing this measure. But we all know where good intentions alone may lead. The potential significance of this legislation requires that it be given the most searching inquiry. I know that this Committee is doing just that and I hope my remarks here today will be of some help in that regard.

Before discussing the details of the program itself, however, I would like to respond to what I feel have been some unnecessary and unjustified remarks emanating from various quarters of the Administration. Since Family Assistance passed the House of Representatives, Administration spokesmen have repeatedly charged that its final passage by the Congress is being obstructed by liberals. I am frankly mystified by these charges, for, as best as I can tell, it has been the so-called liberals who have been consistently in the forefront of those supporting Family Assistance. Admittedly, this support has been expressed with reservations but the support has been there nevertheless. In fact, the Administration's criticism of those who basically support its effort makes one wonder about its understanding of the legislative process and its seriousness about enacting legislation. Let there be no doubt about this fact. Liberals want a Public Assistance reform just as badly as its most vigorous proponents downtown. But they want a bill that will really work. And, I for one, have serious doubts that the Administration proposal, unless significantly modified, will work. Let me just add, in passing, that this Committee is performing an important service to us all in exposing the discrepancies between the realities of Family Assistance and some of the more extravagant claims that have been made for it. Family Assistance is no panacea for the varied ills of our society. It can be one reasonable and practical step forward, however, in the developemnt of a larger national income maintenance strategy.

As you know, I have been deeply interested in the poverty-related problem of hunger and malnutrition in this country and have had the privilege of chairing the Senate's Select Committee on Nutrition and Human Needs. One of the major efforts of the Committee has been to press for an expanded food stamp program that will reach every hungry family until their cash resources may become adequate. At this point in time, only some six million persons participate in the food stamp program. Least understandable is the failure of many recipients of public assistance to participate. We believe that failure is often due to separate administrative structures. I see the mechanism of Family Assistance as a means of ensuring that food stamps reach every needy family. To that end, I have offered an amendment to HR 16311—the Simplified Food Stamp Distribution System—to combine the administration of Family Assistance and Food Stamps. This amendment, I believe, helps fulfill President Nixon's pledge "to put an end to hunger in America itself for all time." It would ensure that every public assistance family at least receives a minimum income of $2,400: the basic $1,600 under Family Assistance and $800 from the Food Stamp Program. The Administration has already announced its intention of taking a step in the direction of my amendment by permitting Family Assistance recipients living in Food Stamp areas to "check off" whether or not they want to buy stamps. This does not do anything for the assistance recipients now dependent on unsatisfactory surplus commodity distribution programs. I see no reason why assistance recipients in commodity counties should not also have the right to check off their desire to receive stamps. Not only would this amendment take us farther in assuring that food assistance reaches all in need, it would result in millions of dollars saved through streamlined administration.

I know that this Committee has spent a

considerable amount of time discussing problems of work incentives and disincentives, much of the debate centering on so-called notch problems or loss of benefits that may result from increased income. It has been brought out that the Food Stamp Program, when considered along with Family Assistance, creates one of these so-called notches. F.A.P. incidentally, represents an improvement over the present arrangement. It is possible to diminish the size of the notch by technical changes in the food stamp schedule, changes that do not damage the integrity of the program. But, failing that, I must say in all candor that I prefer the small risk of a notch disincentive, to the risk of millions of needy persons being deprived of food assistance. It is for this reason that I am disturbed by the revised food stamp schedules submitted to the Committee by the Department of Health, Education and Welfare. They appear on pages 46–58 of your June publication of "The Family Assistance Act as revised and resubmitted." A close look at those tables reveals that all earned income would be counted for purposes of calculating a family's food stamp purchase price and bonus stamps. Under the present system for calculating income, a recipient is allowed certain mandatory deductions and $360 in exempt income to arrive at a net income for purposes of food stamps. Under F.A.P. we were told there would be $60 a month, or $720 a year of exempt income. But the HEW charts indicate that any earned income would mean an immediate rise in the cost of food stamps, and an immediate reduction in the value of the bonus stamps. That would work a particular hardship on those aged, blind and disabled persons who have some small source of income beyond public assistance and those AFDC mothers who do part-time work. The revised schedule would not apply to all of these persons once FAP goes into effect. The $110 assistance benefit for single persons, for instance, puts some of those persons beyond food stamp program eligibility.

But we have reason to believe that the Administration intends to implement their new food stamp schedule shortly. Thus, those persons now using the program would be penalized for future program accommodation. And it is those who do take the initiative to secure a little in earnings that will suffer most. If this is the kind of revision the Administration actually plans, I will oppose it vigorously. Family Assistance must be used as a means to make sure that people are adequately nourished, not as a means to deprive them of nutrition to satisfy mathematical symmetry.

Let me speak, for a moment, directly to the issue of the notch problem and work. I do not believe that many Americans want a free ride on the dole. Welfare, with all the stigma attached to it, is not an attractive alternative to self-support through work. Most people do not choose to be maintained by welfare unless they have no choice. The notch problem is not new. There have always been points at which earned income in some amount would mean the end or sharp reduction in welfare and in-kind benefits. People do not reject earned income and accept public assistance. For most poor people the welfare categories established by law do not permit the able-bodied that choice. For the others, the only work available too often does not provide them with the kind of security they need to keep body and soul together.

I believe that whether people work or do not work is more a function of our manpower and education policies, and the general condition of the economy, than it is a function of some mathematical formula dreamed up by the economists. I believe the availability of jobs at living wages constitute a *work incentive* and that a lack of jobs, or jobs only at unfair wages, are the real *work disincentives*. The question of whether people will quit welfare to take work, or quit work to take welfare, has always been with us. The answer the poor have always given us is that they will work when work is available, especially when that work offers real security. This is the key. Security. It is a basic need of every human being. It is most important to people who have spent their lives on the edge of insecurity, on the edge of hunger, of homelessness, of poverty.

I heartily support real work incentives. I strongly oppose the kind of work incentives that in reality only protect the idea of cheap labor in America. The real answer to encouraging poor persons in America to work is to build into any work requirements the fundamental protections that our great labor organizations have struggled so hard to win: safe working conditions, living wages, retirement and sickness benefits. The answer to the question of how to encourage the poor to work does not lie in how we phrase a work requirement that harrasses and humiliates the poor. Provide the jobs, and the wages, and the poor will solve the notch problem. Other senators are offering ways to meet this problem. Senator Nelson has proposed a program of public service employment so that decent jobs at liveable wages will be available. Within the Family Assistance Program, Senators Harris and Ribicoff have also proposed that jobs be provided. I believe their efforts should be supported. I myself hope to address this problem of a sense of security, at least in part, with an interim amendment I have offered to enable welfare recipients to move more easily from public assistance to employment and back to public assistance when that is necessary.

As I have followed the proceedings before this Committee, I could not help being reminded of the welfare debates that have taken place since I have been in Congress. You will remember them as well. In 1956, we voted for the first Social Service Amendments as a solution to the welfare problem. In 1962, we voted again for service amendments. In 1967, I recall very vividly the work requirements tied to the Work Incentive Program and the provisions for finding deserting fathers. Each time the debates have been the same and so have been the results—rising welfare rolls and costs. Each time the hope that we will turn welfare recipients into earners and taxpayers proves hollow. If I am skeptical that the Administration's Family Assistance proposal will solve our problems, it is because all the proposals of the last 15 years have made the same claim, and for mechanisms very similar to what we are asked to vote on this year.

There are really three central issues in this year's debate: How we will treat work, how much money we will spend, who will administer whatever program emerges.

I want to make a few more comments about work. I have no quarrel with work incentives; I believe welfare programs should not be designed to discourage people from taking jobs. I have no quarrel with providing training and day care for those who are able to work. I do have a serious quarrel with the idea of using our public assistance programs to institutionalize low wages, unsafe working conditions, and poor labor practices. To do that is to freeze the poor into permanent welfare status, with no hope of being released from its terrible dependency.

Let me expand on this a bit. In 1969 there were nearly five million poor families; 3.2 million of those families had one, two, three or even more wage earners. Even Secretary Richardson tells us that 39% of our poor families were headed by a fully-employed worker whose earnings were less than a poverty wage. Just last week a small news story held that 500,000 federal employees earned wages below the poverty line. Given these facts I find it difficult to understand why the Congress of the United States should make it legal and virtually inevitable that millions of American households be supported through a system of welfare payments rather than a system of adequate wages. If we have adequate wages and a mechanism to compensate for family size, we would have no working poor.

That brings us to the matter of what is an appropriate referral for work. I believe it sound to require that job referrals be mandatory only at the higher of either the prevailing wages for such work in an area, or the federal minimum wage. Senator Harris has made such a proposal and I believe it deserves support. At the same time, if we took the single step of raising the minimum wage to $2.00 per hour, a full time worker would earn $4,100. At least one estimate, and I believe it conservative, indicates that this would result in better than a half billion dollars saving in payments to the working poor.

But it is not just a dollar amount that is at stake. Other protections have been built into our labor system to protect workers from exploitation. Specifically, recipients of Unemployment Insurance have been granted a variety of safeguards which I would find it unacceptable to omit. At the very least, we must restore that language guaranteeing that referrals would be made only to suitable work or training.

There are now many individuals who fall between the cracks in our public assistance/labor market system. There are partially disabled adults who do not qualify for public assistance and cannot get or hold jobs. There are men and women in their sixties not yet old enough to qualify for Social Security or Old Age Assistance living in areas where the only income available is from stoop labor in the hot sun—work for which they are no longer physically able. There are individuals too blind to get jobs and not blind enough for public assistance standards. It is these who will be exploited if we do not write employment protections into FAP. And it is their children who will suffer with them.

It is not enough to recognize that there are unpleasant jobs in any society. We must also recognize that in some parts of this country public assistance would be denied to mothers who refuse to work for 60 hours in a week as a domestic help, while their children are said to be in adequate day care if an older neighbor child looks after them. It is likewise true that some parts of this country men with "brown lung," for whom a return to the textile mills or coal mines would prove fatal, would be denied assistance if such jobs existed. There are places in this country where assistance is now, and would in the future, be denied to everyone when a fruit or vegetable crop was due for harvest. There are migrant and mining camps in this country in which conditions are admittedly substandard in such basic areas as housing, sanitation and water supplies. Those jobs—mining, manufacturing, harvesting—may indeed be required by society. But if our society requires that those jobs be performed then we must be prepared to pay the workers involved and to protect their rights to work and live in physical safety.

Liberals have also been charged with wanting to increase the amount of money in Family Assistance to an unreasonable level. I do not think this is an accurate charge. I fully appreciate the inflationary pressures in our economy and the need to keep a lid on federal expenditures. I do not understand why the real human needs of our people—health, education and welfare—must always be sacrificed to those pressures rather than some other, less important programs. Be that as it may, I believe there is some money within the limits of this year's budget which can and should be applied to improving Family Assistance. For instance, I understand that the Department of Health, Education and Welfare now estimates it could not implement Family Assistance before July of 1972 or even later. Why then could not money earmarked for start-up costs in 1971 be used to restore state benefits for intact families with an unemployed parent present, or to

create actual jobs, or to expand day care opportunities more rapidly. Another improvement that will not cost more money this year or next, but which would ensure the ultimate success of the new system, would be built-in steps to raise the basic payment to the federal poverty line by 1975, or steps toward higher federal payments but reduced state burdens over time. Simply put, this is not a question of how to use available money in the first year of the program, but a commitment to its future. A commitment to make sure that Family Assistance doesn't become a dead-end for America's poor.

The last critical issue I want to discuss is the Administration of the program. It often seems to me that we operate our welfare programs on a principle of reverse responsibility. Unlike other programs, we have given the most significant discretionary controls in welfare to that level of government which contributed the least to its financial support. Under AFDC, local governments exercised most control and paid only about 10% of the cost. States controlled the rest and bore about 30% of the cost. Washington picked up the bill, issued regulations and gave advice, but really did very little by way of controlling the programs.

There was once good reason for this. Originally federal programs were simply adjuncts to state efforts. But with the introduction of Family Assistance and an expressed commitment to a single, nationally uniform program, I believe there is good reason to correct this imbalance. If the federal government is paying the bill, then the federal government should have the most say over how the program is run. We should move, now, from the very outset to make sure that this is so. If we permit the program to be turned over to the state lock, stock and barrel from the beginning of the program, it is not going to be easy three or five years hence to get the program back. For this reason, I am offering amendments to eliminate the option for full state operation of the program, as well as the third level option of county level administration. As long as states continue to share the financial burden of the program, then shared federal and state administration makes some sense. County control makes no sense at all. Full federal administration makes the most sense because only through such unitary control will state by state variations be eliminated.

Federal administration is necessary from another perspective as well. There has been much talk in recent weeks of "national standards," as though standards would, of themselves, ensure national uniformity. While it is true that national standards are important and necessary, standards alone are not enough. Without federal administration, it will still be possible, within broadly set limits, for states and localities to exercise discretion in the operation of the programs. I have been made dramatically aware of this problem in the operation of our federal food programs, where local discretion has been used to keep eligible applicants from receiving assistance. Federal administration is not a cure-all but it would go a long way to more even-handed, uniform administration of our public assistance programs.

So, let me say in conclusion, that the time has come for reform, real reform, of our inadequate, inefficient, demeaning system of public assistance. The Administration has proposed a program. And we have the opportunity to improve on it. I hope we will all have an opportunity to vote on a final measure which includes the improvements that I have outlined today and that other senators are vigorously pursuing. I hope we will not have to face the choice of voting for a measure that does not include those improvements, that does not truly reform the present system, because I do not believe that kind of measure merits our support.

ADDITIONAL COSPONSOR OF A BILL

S. 4215

At the request of the Senator from Wyoming (Mr. HANSEN), on behalf of the senior Senator from California (Mr. MURPHY) the junior Senator from California (Mr. CRANSTON) was added as a cosponsor of S. 4215, to authorize the Secretary of the Interior to engage in a feasibility study of the Salton Sea project, California.

SENATE RESOLUTION 458—SUBMISSION OF A RESOLUTION AUTHORIZING THE PRINTING OF A HISTORY OF THE COMMITTEE ON AGRICULTURE AND FORESTRY AS A SENATE DOMUMENT

Mr. ELLENDER submitted the following resolution (S. Res. 458); which was referred to the Committee on Rules and Administration:

SENATE RESOLUTION 458

Resolved, That a brief history of the United States Senate Committee on Agriculture and Forestry and landmark agricultural legislation 1825–1970 be printed as a Senate document, and that there be printed nine thousand additional copies of such document for the use of the Committee on Agriculture and Forestry.

ADDITIONAL COSPONSOR OF A RESOLUTION

SENATE RESOLUTION 454

At the request of the Senator from West Virginia (Mr. BYRD), the Senator from Colorado (Mr. ALLOTT) was added as a cosponsor of Senate Resolution 454, expressing the sense of the Senate that the United States should enter into agreements with other nations relating to measures to be taken against persons who unlawfully endanger the life and freedom of any official of a government of another nation or international organization, or a member of his family.

SHARING THE COST OF HEALTH INSURANCE FOR FEDERAL EMPLOYEES AND ANNUITANTS—AMENDMENT

AMENDMENT NO. 869

Mr. McGEE. Mr. President, I submit an amendment intended to be proposed by me, to S. 1772 which was reported by Senator BURDICK on August 27, a bill to increase the Government contribution to the cost of health insurance for Government employees, and ask that the amendment be printed and lay on the table.

This is a technical amendment merely changing an incorrect printing in the bill as reported. The bill provides for a July 1, 1970, effective date but the committee intended for the effective date to be October 1, 1970, to avoid administration problems of retroactive increases in insurance premiums already paid.

When the bill is called up for floor action, I hope that the majority leader, if I am not present at that time, will ask unanimous consent for the adoption of this technical amendment.

The PRESIDING OFFICER (Mr. EAGLETON). The amendment will be received and printed, and will lie on the table.

FAMILY ASSISTANCE ACT OF 1970—AMENDMENTS

AMENDMENTS NOS. 870 THROUGH 874

Mr. McGOVERN submitted five amendments, intended to be proposed by him, to the bill (H.R. 16311) to authorize a family assistance plan providing basic benefits to low-income families with children, to provide incentives for employment and training to improve the capacity for employment of members of such families, to achieve greater uniformity of treatment of recipients under the Federal-State public assistance programs and to otherwise improve such programs, and for other purposes, which were referred to the Committee on Finance and ordered to be printed.

(The remarks of Mr. McGOVERN, when he submitted the amendments, appear below under the appropriate heading.)

ADDITIONAL COSPONSORS OF AN AMENDMENT

AMENDMENT NO. 754 TO H.R. 17123

At the request of the Senator from Wisconsin (Mr. PROXMIRE), the Senator from New York (Mr. GOODELL) was added as a cosponsor of amendment No. 754 to H.R. 17123, the military appropriations authorization bill.

ADDITIONAL STATEMENTS OF SENATORS

CONQUEST OF CANCER RESOLUTION

Mr. YARBOROUGH. Mr. President, on Friday the Senate adopted Concurrent Resolution 675, which was passed by the House on July 15, 1970. The resolution was submitted by the gentleman from New York, the Honorable JOHN J. ROONEY, on March 4, 1970, as House Concurrent Resolution 526, and was submitted under its present designation of House Concurrent Resolution 675 on July 8, 1970, to provide for a minor and inconsequential change in language.

The resolution is one which expresses the sense of Congress with regard to cancer. It is fitting that the Senate joined the House in expressing its dedication to the solution of this dread disease. In April of this year the Senate adopted Senate Resolution 376, which was submitted by me on March 25 of this year. That resolution provided for the appointment of a panel of cancer experts to explore the cancer problem and recommend what needs to be done about it. That is appropriate, now that the House and Senate have combined their common sentiment and in the terms of this resolution dedicated the entire Congress to the necessary legislation and appropriations to accomplish the same purpose.

It is estimated by the National Cancer Institute and the American Cancer So-

ciety that 330,000 persons will die from cancer this year. Eminent scientists and physicians in the study and treatment of cancer are convinced that a significant number of these deaths could be averted if only sufficient commitment and resources were available. Furthermore, there is reason to believe that an enhanced research effort will lead to further breakthrough in the management and treatment of persons suffering from cancer.

I am delighted that under the able and distinguished leadership of Representative ROONEY this resolution was agreed to by the House. The Senate has approved the House joining us in this vitally important endeavor.

Mr. President, the action of this body in adopting House Concurrent Resolution 675 is another forward step toward the goal the Senate has previously set to find the cause and cure of cancer by 1976, the Bicentennial of American independence. We seek to find American independence from cancer by 1976.

APPROPRIATIONS FOR THE SUPERSONIC TRANSPORT

Mr. MUSKIE. Mr. President, I ask for unanimous consent to have printed in the RECORD a statement made by me on Friday, August 28, 1970, before the Transportation Subcommittee of the Senate Committee on Appropriations, concerning appropriations for the supersonic transport.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR EDMUND S. MUSKIE BEFORE THE TRANSPORTATION SUBCOMMITTEE OF THE SENATE APPROPRIATIONS COMMITTEE ON APPROPRIATIONS FOR THE SST, AUGUST 28, 1970

Mr. Chairman, in 1963 President Kennedy announced that the Federal Government would embark on a program to develop a supersonic transport. He pledged a $750 million limit on Federal support of the project.

We have now spent almost $700 million on this project and are beng asked to appropriate $290 million more. It is now likely that the prototype costs to the Government will rise to at least $1.3 billion. Many people suspect that the Government will even be asked to finance production of these aircraft.

It is now time, Mr. Chairman, to take a second look at the SST . . . to re-evaluate it . . . and to ask whether we can afford to continue the program.

This is an appropriate time to take a second look . . .

For this year Congress passed the National Environmental Policy Act. We said that major Federal programs must be carefully examined in light of their potential impact on the environment.

This year we are considering significant changes in our national transportation policies. We recognize the need to spend our money more carefully and more wisely . . . on programs that do the most good for the most people.

And this year we are faced with substantial unemployment in one-fifth of our major labor markets. We must deal with this problem effectively and quickly.

So we should ask what the SST means to us . . . with respect to our environment, our priorities and our people.

To many Americans, the SST is a symbol of man's lack of concern for his planet.

I am aware that proposed rules would prohibit SST's from flying over populated land areas. But this does not answer the questions of—

What effects sonic booms would have on ships at sea, and on fish and animal life;

What effects sideline takeoff noise four or five times that of the 747 would have on people who work in the airports or live in neighboring communities;

What effects jet vapors would have on the upper atmosphere, on world climate, and on radiation levels.

Even the Chairman of the President's Council on Environmental Quality has stated that this last question "has not received the attention it deserves." The MIT Study of Critical Environmental Problems concluded recently that "the projected SST's can have a clearly measurable effect on the world climate." The National Academy of Sciences has reached a similar conclusion.

I know that proponents of the SST have promised that these problems will be studied as soon as the prototypes are built and before the production phase.

I hope that an increasing financial commitment would not weaken that resolve. But I am concerned that this research would occupy environmental research resources that are being stretched thin as we seek to solve the problems of air and water pollution that we have already created.

We should ask whether new research on the environmental effects of the SST—research that would be admittedly necessary before production—is the wisest use we can make of our limited capacity.

I am also concerned, Mr. Chairman, with the question of whether the FAA has complied with the National Environmental Policy Act.

Section 102 (2)(c) of the act requires a "detailed statement" from the agency on the environmental impact of any major proposal—whether or not work on the project had begun before passage of the act. The FAA has not submitted a detailed statement.

Section 102 (2)(c) of the act requires each agency to "study, develop and prescribe appropriate alternatives to recommend courses of action." The FAA has not submitted those alternatives.

The Appropriations Committee should not report the appropriations bill to the floor until the requirements of section 102 of the Environmental Policy Act have been met.

Then the Senate can make its own decision on the merits. At this time too many environmental questions have not been answered.

* * * * *

We should also ask whether we *need* the SST . . . as much as we need new mass transit systems for our cities, new airport facilities for the planes already flying, or new schools, homes and a clean environment.

These programs also cost money—as much or more than the SST. And the funds must come from the same kitty . . . resources that are limited.

This year's budget for air pollution control is $106 million. To restore our air to a breathable, healthy level will cost the Government almost $400 million a year. Appropriations bills for medical care, Education and Housing have been vetoed . . . yet *these* needs are not being met.

We cannot afford everything under the sun. We must face the realities of difficult choices . . . and say "no" to some things we should like but do not need.

Those are the questions we must ask about our priorities.

Finally, Mr. Chairman, we ask what the SST means to our people.

The level of unemployment in the State of Washington is unacceptable . . . as unacceptable as in thirty other major labor markets across the nation.

We cannot ignore the fact that the problem in Washington may get worse if the SST program is halted. But we know that the program will not reverse the rising levels across the nation . . . and this must be our first concern . . . with first call on our resources.

We must meet the challenge of unemployment nationwide. It will take new programs, more imaginative ideas and perhaps more expensive efforts. It is a problem that affects all our States . . . and that demands remedies for all our States.

The SST program is not without merit, Mr. Chairman—

It *would* provide job opportunities;

It would be a technological victory;

And it *would* be an exciting advance in air travel.

But at this time, Mr. Chairman, it is not the best use of our resources . . . the environmental, social and human costs are too high.

And at this time, with the kinds of needs that have gone unmet, dropping the SST is the kind of difficult decision we must make.

MILITARY AID FOR CAMBODIA

Mr. FULBRIGHT. Mr. President, on July 23 the President signed a determination, required by law, which authorizes up to $40 million in military aid for Cambodia in fiscal year 1971. This will be in addition to the $8.9 million already given Cambodia in fiscal year 1970.

The last sentence of the determination, which was in the form of a memorandum from the President to the Secretary of State, stated:

> You are requested on my behalf to report this determination and authorization promptly to the Senate and House of Representatives.

This is in accord with the requirement in the Foreign Assistance Act that the Congress be notified promptly of such decisions. Webster's defines "prompt" as "Done or rendered readily; given without delay or hesitation." The determination, transmitted by a letter from the Department of State dated August 21, was received by the Committee on Foreign Relations on August 24. Another reporting requirement, contained in the Foreign Assistance Appropriation Act, requires that determinations of this nature be reported to the Congress "within 30 days after each such determination." It was 29 days from the date of the President's signature to the date of the Department's transmittal letter. I note, however, that the basic information had been leaked to the press well before the committee received any official notice of the decision. I ask unanmous consent that the President's determination be printed at this point in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
July 23, 1970.

PRESIDENTIAL DETERMINATION NO. 71–2

MEMORANDUM FOR THE SECRETARY OF STATE

Subject: Determination and Authorization Under Section 614(a) of the Foreign Assistance Act, and Under the Foreign Assistance and Related Agencies Appropriation Act, Permitting the Furnishing of Defense Articles and Services to Cambodia up to $40 Million

In accordance with the recommendation in your memorandum of June 27, 1970, I hereby:

(a) Determine pursuant to Section 614(a)

of the Act that the authorization of the use of up to $40 million of funds available for the grant of defense articles and services to Cambodia, without regard to the limitations of Section 505(a), 505(b)(2), second clause, 509, 620(t), or any other provision of the Act limiting the furnishing of military assistance to Cambodia, is important to the security of the United States;

(b) Authorize pursuant to Section 614(a) of the Act such use of up to $40 million for the grant of defense articles and services to Cambodia without regard to the limitations of the Sections of the Act referred to in (a) above:

(c) Determine pursuant to the third proviso of the military assistance paragraph of Title I of the Foreign Assistance Act, 1970, that military assistance to Cambodia for FY 1971 in an amount of up to $40 million is essential to the national interest of the United States.

You are requested on my behalf to report this determination and authorization promptly to the Senate and House of Representatives.

RICHARD NIXON.

Mr. FULBRIGHT. Mr. President, unfortunately, the Secretary of State's recommendation, which contains the justification for the President's decision, is classified "Secret" and cannot be made public.

The handling by the executive branch of the requirements of law which must be met prior to furnishing military aid is practically a rerun of the earlier decision to send arms to Cambodia, which involved a determination made retroactive a month from the President's signature in order to legalize arms shipments which had been made a month before. The Foreign Assistance Act, quite properly, contains a number of restrictions which must be satisfied before arms aid can be given to a country. These restrictions were designed both to insure the most effective use of our citizens' tax dollars and to act as a restraining influence on executive branch relations with arms aid recipients. Here are the requirements of the Foreign Assistance Act that have been waived in the decision to give more arms to Cambodia:

First. Section 505(a) requires that military grant aid not be given unless the country has agreed to comply with a number of specific requirements, pertaining to use, transfer, and U.S. access to the equipment. Such an agreement was proposed to the Cambodian Government on August 20, 4 months after aid was first given, but apparently the agreement has not yet been concluded.

Second. Section 505(b)(2) requires that any defense articles totaling more than $3,000,000 in a fiscal year cannot be furnished unless the President determines that the arms will be used to maintain its own defensive strength and "the defensive strength of the free world."

No such determination has been made nor is one likely to be made in view of Cambodia's claim of neutrality.

Third. Section 509 requires that before any defense article having a value greater than $100,000 be given to another country that the head of the appropriate U.S. group in Cambodia certify 6 months prior to delivery that the country "has the capability to utilize effectively such article."

No such assurance has been given and we have no information on what type of equipment we plan to give her that costs more than $100,000. A $100,000-plus weapon would hardly fit in the "small arms" category, however.

Fourth. Section 620(t) requires that, in the case of a country that has broken diplomatic relations with the United States, diplomatic relations must be restored and a new aid agreement negotiated before military aid is provided.

We do not have an aid agreement with Cambodia.

However, section 614 of the act gives the President general authority to waive all of those and any other requirements of the act "when the President determines that such authorization is important to the security of the United States." The President used this authority to waive the requirements I have listed. He is perfectly within his rights in exercising that authority. And the State Department is fully within its legal rights in waiting 29 out of the 30 days allowed by the statute to send the determination to the Congress.

But the issue involved is not so much one of legal niceties as it is of comity between the legislative and the executive branches of Government. In recent years there has been a great erosion of the executive branch's credibility in the Congress. Instead of mutual trust and confidence there is now mutual distrust and suspicion, not only on foreign policy but across the board. I cannot believe that the President is conscious of the erosive effect on the relationship between the two branches caused by actions of this nature. In the handling of such a matter he is, I believe, a captive of a bureaucracy which, in large measure, seems to have little respect for the legislative branch. Credibility is a fragile thing and once destroyed is very difficult—and often impossible—to restore. This most recent incident is of little practical consequence but it does, I think, illustrate the operation of a way of thinking now prevalent in the bureaucracy of the executive branch. It is an attitude which seems to consider the Congress of little importance in the running of this country's affairs—foreign or domestic. There is a lesson here for every Member of Congress.

LACK OF ADEQUATE INSPECTION OF IMPORTED MEATS

Mr. YOUNG of North Dakota. Mr. President, I never could quite understand why the people of the United States are so concerned about the strictest kind of inspection of meats of all kinds slaughtered in the United States and at the same time have very little or no concern about the lack of adequate inspection of vast amounts of imported meats.

It is wrong to believe that much of this imported meat is subjected to anything like the careful and stringent inspections made of our domestic meat products.

Mr. President, an excellent article on this subject appeared in a recent issue of the Western Livestock Reporter. It was written by Mr. Patrick K. Goggins, the publisher. It is an article that I think would be of real interest to the vast consumer public in the United States. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AS I SEE IT . . .

In this world and in this age of laws and regulations and rules it certainly seems odd how the United States Department of Agriculture and others can turn a blind eye on inspection of foreign meat.

The absolute whammy that they are putting on the American packer, both at the federal and state level is unbelievable and yet, they turn their back on the uncleanliness and the standards of inspection of imported meat.

This particular item has been fought out the last three weeks in Congress to a fair-thee-well. I don't know exactly what is going to come of it but there are more Republicans and Democrats alike joining arms in the fight to get something done. And it certainly needs to be done.

Dr. H. M. Steinmetz, Assistant Deputy Administrator of consumer protection of the USDA is one of the biggest fighters against any passage of any kind of a meat import inspection bill. He comes up with some pretty weak arguments in my estimation of why we shouldn't touch it.

Of course the State Department, the Department of Consumer Affairs and the USDA all feel that if any kind of stringent, more strict inspection law is put into effect, the foreign countries will then counteract and put quite a lot of pressure upon American products that they buy through similar acts.

Bruce E. Hackett from Overbrook, Kansas testified in a letter to Senator Robert Dole (R. Kansas) that he and his family lived and had a trucking business in Australia from September 1963 to December of 1967 and that his brother is still there running that business.

He testifies that on in-plant handling the meat was moved from building to building in non-refrigerated cars. They did not have refrigerated vans for in-plant and that most of the meat is hauled in flat cars or flatbed type trailers with a canvas over the top of it from the plant down to the docks where it waits in the hot sun for up to 8 to 10 hours without refrigeration before it is loaded into ships.

The few inspectors we have over there who are trying to get something done, can't begin to. Here is a paragraph for instance on page 20, paragraph 53 of the Rules and Regulations of the Commonwealth of Australia: "When an officer considers that vermin are likely to come in contact with meat at an export establishment—this is on processing meat to be sent out of the country—the establishment, require the occupier to cause to be taken effective measures for the purpose of destroying the vermin."

In other words they can use poison to get rid of the rats but nothing is done with the meat. Here in the U.S., if rats get into meat, the whole lot is condemned and goes in the tank. When it gets here to the U.S. approximately 180 pounds out of 32,000 pounds is looked at and looked at quite hastily. The U.S. inspectors then put USDA Inspected and Passed on these crates.

Now hear this: This same meat can then go into interstate shipment. It can go to federal inspected plant.

Now we have our state packers who are under state rules, who are under the same regulations as our federal packing houses. They cannot ship meat interstate. They have to ship intra-state. Our regulations won't even let this state inspected meat even get near a federal inspected packing house. Why should this imported, uncleaned meat be allowed to enter those channels without any strings attached.

They kill horses in the same plant that they kill cattle in Australia. They kill rabbits for people in the same plants as they do cattle.

And the 14 roving inspectors that we have over there don't live in Australia or New Zealand or Argentina, they live in the United States and maybe see the plant once a year. Then when they inspect, they inspect their systems, but they don't inspect livestock.

Then you look at the U.S. packer. He's forced to pay U.S. inspectors overtime anytime he works over 8 hours and when there is an inspector on the line, the whole packing house stops, because they want to look at every carcass and do.

The packing industry in the United States has paid in excess of $15 million dollars last year alone in over-time to USDA meat inspectors to keep their plants running. This was just to the inspectors themselves, not to mention all the man-hours and loss of time waiting for these inspectors while the whole process stopped and employee pay scale went on.

Then in Australia they allow wild rabbits that are destroyed on ranches to be brought in to their meat establishments to be prepared for export without inspection.

Now maybe many of you ranchers who have not written to your Senators and Representatives and the President of the United States will do it. Something has got to be done. . . .

This is a very unfair, unhealthy situation for you in the cow business. Because one of these days some kind of a disease is going to break out over this deal and you know who is going to get the black eye . . . meat producers.

PRAISE FOR THE TROOPERS OF CASPER, WYO.

Mr. McGEE. Mr. President, many Senators, at least those who share my interest in football, undoubtedly had the opportunity last night to witness the halftime show put on by the troopers of Casper, Wyo., at the New York Jets-Minnesota Vikings game in Bloomington.

Those who did witness this show saw an example of the skill and precision of an outstanding youth organization. Casper, and indeed all Wyoming, is vastly proud of the drum and bugle corps which recently took its second straight class A world open title in competition in Lynn, Mass., on the heels of a first-place win in the Veterans of Foreign Wars national drum and bugle competition in Miami, thus capping its most successful season to date.

The troopers, a band of dedicated youngsters who train and work year-round under the direction of equally dedicated adult leaders, are Wyoming's official musical ambassadors, Mr. President. They are expected to arrive home in Casper late tomorrow, in time for the youngsters to get back to the classroom after another victorious sweep of the country. As always, Casperites will turn out by the thousands to welcome the troopers home. For those people, and for all of us, really, this organization represents living proof of the determination to excel, the willingness to work hard, and the talent to achieve success which is present in America's young people.

A BRIGHT SIDE TO EVERY PROBLEM

Mr. BELLMON. Mr. President, in a recent editorial, the Daily Oklahoman points out that there is a bright side to almost every problem facing our Nation. In our efforts to right our wrongs, we tend to look only at the negative side, that which we hope to better.

Occasionally it is good to know a positive side to many problems does exist. Therefore, I ask unanimous consent that the editorial entitled "There Is a Bright Side" be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THERE IS A BRIGHT SIDE

Americans want more optimism from their public officials and business leaders, President Nixon is reported to have told recent visitors to the San Clemente White House.

It is natural for any elected leader to prefer that the voters look on the bright side of life, especially in an election year. In Nixon's case, his concern that we may be forgetting what is right with America in our concern with what is wrong was the theme of his speech to the Jaycee convention in St. Louis some weeks ago. It has some basis.

Much of the gloom and doom polluting the national atmosphere emanates from a noisy clique in Congress. Some Senators see the end of civilization in our involvement in Southeast Asia's fight to remain independent. The same Senators see equally dire consequences if America does not take a more active part in Israel's fight to survive. Almost the same names are signed to every cry of despair over the pollution of the atmosphere, lakes and streams, and seashores. They seem to find nothing inconsistent in demanding an end to atomic power projects and an immediate end to power blackouts in the same areas.

There is a bright side to almost every problem facing this nation. In Southeast Asia, withdrawal of more and more American military units and men is accompanied by increasing self-confidence and independence among the local peoples. Instead of deploring their lack of skill with modern weapons, Americans ought to be organizing cheering squads, and maybe "bundles for Vietnam" programs to help them help themselves.

American involvement in the Middle East is nearly as old as this republic. American universities at Cairo and Beirut have educated many thousands of business and governmental leaders who now regard the current alienation between this country and the Arab states as temporary. For over two decades, we have also been in the mainstay of Israeli independence. There is a wealth of untapped good will and confidence for Secretary of State Rogers' peace proposals to take root in.

Nuclear power plants are the subject of hysterical protests. Yet in this ecology-happy era, we should note that they do not emit noxious gases, sulphur dioxide, or particle pollutants into the air. Their byproducts that do give some trouble are heat—which any energy plant involves—and radiation in fuel wastes, which can be disposed of safely. A dozen heat dissipation schemes are under study or test. Instead of screaming about possible dangers from these cleanest of all power plants, while we gag on existing air pollution, we should be rejoicing that we know how to furnish the energy needs of our growing population.

The new jumbo jets are smokeless. Older model airliners are being fitted with new engines that leave no black plumes in their wakes. The good news that this annoyance is being dealt with is drowned out by the wails of those whose only contribution to solving problems is wailing.

There is so much that is right about America, and the world, that it is unhealthy to look only at the problems not yet fully solved.

RECENT DEVELOPMENTS IN CAMBODIA

Mr. FULBRIGHT. Mr. President, on April 27, 3 days before the President's speech announcing the U.S. intervention into Cambodia, the Committee on Foreign Relations held a meeting with the Secretary of State to discuss recent developments in that country. The discussion between committee members and the Secretary concentrated on the questions concerning possible U.S. military aid to the Lon Nol government.

At the close of the meeting I asked the Secretary to supply for the record answers to a list of questions which we had either not been able to discuss or to cover adequately during the course of the meeting. Three months later on August 20, the Department submitted the unclassified replies to these questions. In view of the fact that the replies provide additional information concerning the administration's policy on Cambodia and other aspects of the war in Southeast Asia, I ask unanimous consent that the questions and answers be printed in the RECORD.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
Washington, D.C., August 20, 1970.

Hon. J. W. FULBRIGHT,
Chairman, Committee on Foreign Relations, U.S. Senate.

DEAR MR. CHAIRMAN: The Secretary has asked me to reply to a mimeographed list of questions which was handed to him after his appearance before your committee on April 27, 1970.

I have enclosed the answers to your questions.

If I can be of assistance to you at any time, please do not hesitate to let me know.

Sincerely yours,

DAVID M. ABSHIRE,
Assistant Secretary for Congressional Relations.

CAMBODIA

1. Would you explain how the Nixon Doctrine applies to the situation in Cambodia?

The Nixon Doctrine calls for a threatened country to make maximum efforts and assume the major responsibility for providing the manpower for its defense. Cambodia is certainly doing that. Second, the policy stresses regional cooperation and Cambodia's neighbors are providing help to assure Cambodia's continued independence and neutrality. Third, the U.S. is to assist self-help and regional actions where our participation can make a difference and this is being done through the supply of small arms and other materiel. Finally, we are also considering a program of economic assistance as are other nations.

2. (a) Does the Administration plan to consult with the Committee *before* a decision is made concerning the furnishing of arms to Cambodia? the sending of advisors? Air strikes in Cambodia?

We have already informed the Senate Foreign Relations Committee of our initial grant of 8.9 million dollars in small arms and other material to the Cambodian Government and our plans for additional military assistance. We intend to continue to inform the appropriate Congressional Committees of any further Presidential Determinations concerning assistance to Cambodia.

The President has made clear there will be no U.S. advisors with Cambodian units and that U.S. air strikes will be authorized only

as necessary to protect U.S. forces in Viet-Nam.

(b) Did U.S. personnel participate in drawing up Cambodia's arms request?

No.

(c) Will the Administration make public *any* agreement with Cambodia, or any other government, concerning U.S. aid to or military action in Cambodia? Can you assure us that there will be no repeat of the experience in Laos or Thailand?

We have no plans for any secret agreements concerning U.S. aid to, or military action in, Cambodia. We have provided the facts concerning the extent and limits of U.S. involvement in Cambodia and will continue to do so. In order to satisfy the requirements of the Foreign Assistance Act, on August 15 we exchanged notes with the Government of Cambodia whereby that government undertook to abide by the obligations of the Act. These notes in no way involve a new commitment.

3. (a) Do you think that arms can be supplied to Cambodia, and used effectively, without sending in American advisors to train the Cambodians in how to use the equipment?

The request from the Cambodian Government was for arms support only, and we are supplying small arms and other materiel that can be used immediately without advisors by the Cambodian military. We have no plans to provide more complex equipment which would require advisors for training purposes.

(b) Did the Cambodians ask for arms alone, or both arms and advisors?

The Cambodians asked for arms alone.

4. (a) Have any Asian nations offered to supply Cambodia with arms?

Yes. The Republic of Viet-Nam has supplied and intends to continue supplying weapons captured in enemy sanctuaries in Cambodia to the Cambodian government. The Thai Government has also supplied military equipment to Cambodia including river patrol craft and individual equipment.

(b) Is the United States doing anything to encourage Thailand, South Korea, or other Asian nations to give arms to Cambodia? Have we offered to reimburse, or otherwise pay for aid that other countries may give to Cambodia?

The President announced that we will encourage and support the efforts of those countries which wish to furnish Cambodia with arms and materiel. We have no present plans to reimburse nations taking such initiatives, but the question of replacement of armaments expended could arise, in which case we would hope to consult with the Committee.

(c) Would the Administration look with favor on an offer by Thailand or South Korea to send advisors or troops to Cambodia?

This would depend on the Cambodian view of any such offer, and on the military situation at the time. We do not think a large number of foreign troops are needed at present.

5. (a) Are U.S. officials consulted, or notified, in advance by the Vietnamese of plans for combat operations in Cambodia?

Yes.

(b) Have the combat operations by South Vietnamese forces across the Cambodian border been carried out with the approval of U.S. officials? If not, have any attempts been made to prevent further attacks?

ARVN operations in Cambodia are coordinated with U.S. counterparts in South Viet-Nam to prevent weakening of joint operations or defensive positions there by the deployment of ARVN forces in Cambodia.

(c) Have any U.S. personnel participated in the planning of operations in Cambodia by South Vietnamese forces?

As indicated above, to the extent that ARVN operations in Cambodia are relevant to joint operations and positions in South Viet-Nam, U.S. counterparts are consulted.

6. (a) Have any U.S. personnel—military or civilian—crossed the South Viet-Nam-Cambodian border since the trouble began? If so, give the details.

After the withdrawal of U.S. combat troops on July 1, 1970 no U.S. personnel have crossed the South Viet-Nam-Cambodian border except those assigned to, or visiting, the U.S. Embassy in Phnom Penh.

(b) Has there been any change in the orders to U.S. personnel concerning "hot pursuit" as a result of the change in the situation in Cambodia?

No.

(c) Have any U.S. aircraft flown into Cambodia, either on combat or cargo missions, since the new government took over? If so, what are the details?

This question has been overtaken by events. The Committee is aware of U.S. air strikes to interdict enemy supply and troop replacement activities, as authorized and announced by President Nixon. There have also been flights carrying arms for the Cambodian Government, as well as supply and support missions for our Embassy at Phnom Penh.

7. What is your assessment of Viet Cong and North Vietnamese intentions in Cambodia? Do they view the developments there as favorable to their objectives?

In view of recent developments in Cambodia, we suspect that the Communist Vietnamese themselves are unsure of their ultimate objectives there. It will take them some time to reorganize and resupply their operations. In view of this fact, it is very difficult to estimate whether they view recent developments as favorable to their interests or not. Clearly, our attacks on their sanctuaries delivered a severe blow to their short term interests.

8. (a) Do you think Cambodia's forces could hold out if the enemy forces make a determined effort to take over the country?

In order to answer such a hypothetical question we would have to know with complete accuracy enemy intentions and capabilities. However, the Cambodian forces (FANK) recently have shown an increasing capability to fight effectively on their own.

(b) If not, how much help would they need from outside sources—in personnel and supplies? What effect would this have on the military situation in South Viet-Nam?

We are studying Cambodia's needs at the present time pursuant to its request for military aid, and we are heartened by the determination shown by the Cambodian Government thus far in its own defense. The amount of assistance Cambodia would need if the enemy made a "determined effort" would be a function of the assets which the enemy would be prepared to devote to the conquest of Cambodia and this, of course, is impossible to determine.

(c) What effect would a Communist takeover in Cambodia have on the U.S. position in South Viet-Nam? In Laos?

If the Communists were to take over and secure all Cambodia, giving them, *inter alia*, free access to the deepwater port of Kompong Som (formerly Sihanoukville) there would be a serious adverse effect on our position in South Viet-Nam and Laos.

(d) What are the alternatives available to the United States if the Communists should move to take over Cambodia?

As noted above, the intentions of the Communists are unclear. In any event, the President, in recent public statements, has clearly defined the policy we will follow in Cambodia.

(e) What would the United States do if Sihanouk returned to Cambodia and set up a government in the Viet Cong controlled area?

Again, we are not prepared to speculate upon questions of such a hypothetical nature. If Sihanouk were to return to Cambodia our policy would be contingent upon a consideration of other related, and as of now indeterminate, factors.

9. (a) What are the prospects for the development of a united front against the United States by the enemy forces of North Viet-Nam, South Viet-Nam, Laos and Cambodia?

The above mentioned enemy forces already operate as a *de facto* united front. If they were establish a united front in name, the military situation would not be altered to any significant degree.

(b) What would be the likely effects of such a move?

The enemy might attempt to exploit such a move as a propaganda victory.

10. How many U.S. government personnel are now in Cambodia? Are there any plans for sending more people in, even on a temporary basis?

All operational military personnel have been withdrawn from Cambodia. 36 positions have been authorized at the U.S. Embassy, of which 9 are Defense Attaches and 5 Marine Guards. Only 24 of the 36 have arrived on post, but 26 additional personnel are on temporary duty in connection with reconditioning of the new Chancery and establishment of other facilities. This staffing pattern will be subject to reconsideration, as conditions require.

11. Is the Administration giving consideration to permitting U.S. bombing of enemy bases in Cambodia? What would be your position if such a request came from our military officials?

Covered by 2(a) above.

VIET-NAM

1. Did the President's speech last week represent, in any way, a change in U.S. policy? If so, in what respect?

The President's April 20 speech and his TV news conference in Los Angeles on July 20 did not represent any change in U.S. policy. The President also made clear, in response to a question, that President Thieu's position with regard to negotiation is "on all fours" with ours. "We have consulted with him and he with us before any negotiating positions have been presented."

2. Is the United States considering any new initiatives in Paris? the replacement of Ambassador Lodge?

As President Nixon has said, Ambassador David K. E. Bruce, the new head of our delegation in Paris, has wide latitude in the negotiations. We hope our move in sending a senior negotiator will be reciprocated by the North Vietnamese and that serious negotiations will ensue.

3. Do you think the military situation in South Viet-Nam has improved, or deteriorated, as a result of developments in Cambodia?

The military situation in South Viet-Nam has improved considerably since the beginning of the combined allied attacks on the North Vietnamese sanctuaries in Cambodia. The destruction and capture of arms and supplies have prevented the enemy from mounting large offensives in the center and south, thus allowing Vietnamization and pacification to proceed with less interference than before. Operations against North Vietnamese forces in Cambodia have confirmed that an impressive improvement has taken place in the South Vietnamese Army (ARVN) recently. These operations have also increased ARVN confidence and self-reliance.

4. Are there any plans for replacing Ambassador Bunker?

There are no present plans for replacing Ambassador Bunker.

LAOS

1. Has there been any change in the basic military situation in Laos in recent weeks?

There has been little or no change in the basic military situation. The rainy season, which slows down North Vietnamese military activities, is in full progress. The capture of

Saravane by North Vietnamese troops on June 9 was more significant as a political psychological setback for the Royal Lao Government (RLG) than it was as a military one. Nonetheless, although north Laos has quieted, continued hostile pressure in south Laos, particularly in the area contiguous to northeast Cambodia, continues to concern us.

2. (a) What effect, if any, have developments in Cambodia had on the political situation in Laos?

The political situation in Laos bears a close relationship to the course of military events in the field. The allied operations against communist lines of communication in Cambodia probably contributed to the North Vietnamese decision to attack isolated Government-held pockets in south Laos, thereby provoking discussion in Vientiane about the viability of neutralism. The U.S. government has made it clear that our support both for the Prime Minister and Lao neutralism remains steadfast.

(b) Have there been any further exchanges between the Pathet Lao and Souvanna Phouma?

Prince Souphanouvong wrote on June 12 to Souvanna Phouma essentially reiterating the Lao Popular Front (LPF) terms of March 6 which called for an unconditional halt in U.S. bombing as a prelude to talks among the Lao factions. The RLG replied on June 25 that the LPF precondition of a complete and unconditional halt in American bombing in Laos, without the withdrawal of the more than 60,000 North Vietnamese troops in Laos, was unacceptable. The RLG, however, reiterated its willingness to send representatives to talk with Souphanouvong's envoys, and proposed a site. The RLG also said that a bombing halt could be dealt with as a priority topic in talks between the Lao factions. In early July, the Pathet Lao representative in Vientiane told the Prime Minister that a high-ranking LPF emissary would be sent to carry the LPF's formal reply to the RLG and would be empowered to discuss modalities for holding talks. This emissary, Prince Souk Vongsak, arrived July 31 and he has entered into preliminary discussions with Souvanna and other members of the Government. From these discussions it is still not yet completely clear whether the LPF has abandoned its bombing halt precondition as the price of beginning the talks, but in any event this item will be of first order of priority if and when talks are held. Further discussions with Souphanouvong's emissary—possibly including reference back to LPF headquarters—will be necessary to conclude final agreement on modalities put forth by the two sides.

3. What is your assessment of North Viet-Nam's intentions in Laos?

The North Vietnamese intend to protect their western border with a band of territory sufficiently controlled so that their war effort in South Viet-Nam can proceed and major threats to the homeland are avoided or minimized. They doubtless further wish to see areas immediately to the west (i.e. the Mekong valley), if not directly under their hegemony, at least not in unfriendly hands.

4. What has been the reaction from the Soviet government to the release of the transcript of the hearings on Laos? From China?

At the time it was released publicly, the report of the Symington Subcommittee hearings on Laos was mentioned prominently in the Soviet mass media. The Soviets maintained that public and Congressional pressures had forced the Nixon Administration to acknowledge certain U.S. military actions in Laos.

Although the Symington Subcommittee transcript provided the Soviet media with readily usable source material, it did not cause a basic shift in the Soviet position.

The Symington report was briefly mentioned in the first week of May in New China News Agency broadcasts, but was not mentioned in later broadcasts. (It was incorporated in a long and detailed propaganda blast in English to Southeast Asia by the Pathet Lao Radio on July 21 commemorating the 8th anniversary of the signing of the Geneva Agreements.)

5. Do you think that it is possible to reach any kind of settlement on Laos as long as the war in South Viet-Nam continues?

In view of the many interconnections between the situation in Laos and the war in South Viet-Nam, particularly the North Vietnamese use of the Ho Chi Minh trail, it is difficult to foresee a long-term settlement in Laos at this time. However, current exchanges between Souvanna and Souphanouvong may indicate that some aspects of the Laos situation can be worked on despite the continuation of the war in South Viet-Nam.

SOUTHEAST ASIA ISSUES IN GENERAL

1. (a) Do you think the prospects for bringing peace to Southeast Asia are better, or worse, now than they were before the fighting began in Cambodia?

As a result of our operations in Cambodia the enemy is in a weaker position. It remains to be seen whether they will now begin to negotiate seriously or whether they choose to prolong the fighting. Nevertheless, our operation has won time for the South Vietnamese to train and prepare themselves to carry a greater burden of their defense, and it has contributed to the continuance and success of our withdrawal program.

(b) Has the United States political position improved, in your view, as a result of recent developments? Is the United States negotiating position better?

The United States political position has improved in the sense that more of the world is now aware of what the Communists have been doing and continue to do in Cambodia. Strictly speaking, our negotiating position remains the same: that is, we have publicly and privately offered generous and forthcoming proposals for settlement of the war; we have not presented these proposals on a take-it-or-leave-it basis, but we are quite prepared to discuss them. We have appointed Ambassador Bruce as head of our delegation in Paris, and we have given him great flexibility in the conduct of the negotiations. The other side remains intransigent, but we hope they will soon recognize that it is in their best interests to negotiate, now rather than later.

(c) How do you think the other side views the recent developments—as a setback for them or as creating a greater dilemma for the United States?

As the President said, the Cambodia operation, from a military point of view, was the most successful operation of this long and difficult war. To world opinion the communist occupation of large areas of Cambodia is a blatant violation of Cambodia sovereignty and neutrality. The other side must certainly recognize that it has suffered these setbacks. On the other hand, so long as the Cambodian government is in a weak and precarious position, the other side hopes that we will face an insoluble problem of helping the Cambodians defend themselves while carrying out our troop withdrawals from Viet-Nam.

2. (a) Are developments in Cambodia likely to have any effect on Russia's willingness to help bring the war to an end?

The Soviets recognize that an expanded or protracted war in Indochina would ultimately be to the benefit of China and to their own disadvantage. In order to maintain their influence in the area, they would seemingly want to help end the war. Nevertheless, it remains true that they are anxious to avoid the appearance of forcing Hanoi to make any substantial concessions to the U.S.

(b) If China encourages a united front in Southeast Asia against the United States, can the Soviet Union afford to do any less?

Certainly one of the motivations of the Soviet Union is its concern with maintaining influence with the Communist parties of Southeast Asia, particularly with that of North Viet-Nam. Naturally, Chinese actions to increase its degree of influence in SEA must be taken into account by Moscow in determining its own positions on such issues as the united front.

(c) Do you think the Soviet Union is likely to agree to a Geneva-type conference as long as North Viet-Nam is opposed to such a move?

Probably not, because of the strong tangible and ideological interests which bind the two.

3. Do you think that recent developments in Southeast Asia make it more imperative that there be a political settlement which affects the entire area?

Recent developments indicate the continuing desirability of a political settlement, without which dangers of expansion or escalation of the war remain, regardless of current military trends. A viable peace must be based upon a general agreement that all the countries of Southeast Asia have a genuine political role to play in the future of the region, and without such an agreement a limited but highly undesirable level of hostilities could persist indefinitely.

WORLD BEGINS TO REALIZE JUSTICE OF COMPLAINTS AGAINST NORTH VIETNAMESE FOR PRISONER CRUELTY

Mr. HANSEN. Mr. President, this is the last day of August, and for most Americans that means summer is nearly at an end. It has been a summer of great concern for America, concern about the war in Vietnam, and concern about domestic tranquillity. For some this concern has been self-centered and in some cases self-serving. But for most Americans this concern has gone far beyond self and has centered on the great issues and problems of the day.

Among the issues that have been the focus of attention has been that of the Americans being held prisoner by the North Vietnamese. Although few in number, these Americans have become a cause that far outstrips their numerical strength. They have, indeed, become a thorn that pricks the conscience not only of this Nation but of the world.

The brutal and inhumane treatment to which these men have been subjected has caused a great revulsion against the Communists both here in America and among thinking, feeling people the world over. By the tactics they have used the Communists have demonstrated to the world the nature of their system and the harshness of their type of government.

We in America must continue through the coming seasons to work with utmost diligence and skill toward the release of these American prisoners. In the task we can now count on more and more support from all free nations everywhere. Our cause is just; the realization of its justice is spreading across the globe.

STATUS OF HUMAN RIGHTS CONVENTIONS

Mr. PROXMIRE. Mr. President, today I wish to review the status of the major human rights treaties pending before the

Senate. For more than 3 years I have urged the Senate to ratify three of these treaties—the Genocide Convention, the Political Rights of Women Convention, and the Convention of the Abolition of Forced Labor. As of today, none of these have been ratified by the Senate. Hearings were first held on the Genocide Convention in 1950. No further action was taken on the convention until just recently, when the Committee on Foreign Relations reopened hearings. Unfortunately the committee has not yet reported the treaty to the Senate.

Hearings were held on the Political Rights for Women Convention in 1967 in the Senate Foreign Relations Committee. Like the Genocide Treaty, it has never been reported out of committee.

The Convention on the Abolition of Forced Labor was submitted to the Senate on January 22, 1963. Hearings were held on the treaty in 1967, but the Foreign Relations Committee did not report it for Senate action.

Mr. President, we cannot delay action on these treaties any further. I strongly urge members of the Foreign Relations Committee to give these treaties careful consideration. Senate action on the Genocide Convention is long overdue. Twenty years have passed since hearings were first held on the treaty. There can be no excuse for delay in ratifying these treaties. I urge the Senate to act on these treaties now.

NIXON ADMINISTRATION PROGRESS ON THE INFLATION FRONT

Mr. BENNETT. Mr. President, the efforts of the Nixon administration to bring the inflation which it inherited under control without seriously disrupting the economy continues to make progress. Even the President of the AFL–CIO, Mr. George Meany, in an interview published in this morning's Washington Post, concedes that the economy is basically sound.

I think the President and his economic advisers are to be commended for their efforts and policies in helping to stop inflation gradually and in a reasonable way without any economic reversals and without a costly recession.

President Nixon has proved to be a farsighted and capable manager of domestic economic problems. Recently the Detroit Sun News and the Des Moines Register published editorials describing the Nixon policies. I ask unanimous consent that these editorials be included in the RECORD as a reflection of responsible press opinion recognizing that problems do exist in the economy but also admitting that President Nixon is having success in pursuing the only reasonable alternative.

My purpose in doing this is to counteract those prophets of gloom who in the forthcoming election will try to blame all of the economic problems on President Nixon, who inherited them but has managed to bring them under control without serious disruption. This coupled with his continuing success in the field of foreign policy convinces me that we have at the helm a wise and able administrator.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

YEAR OF THE TURTLE?

It's exasperating but it looks as though 1970 will be the Year of the Turtle. The economy is moving slowly but surely along a plateau just above recession and just below rapid growth. In many ways, it is the best course even though the nation has never had turtle-like patience in waiting for economic recovery.

The spurt of economic news, mostly statistical, coming from Washington in recent days is "quietly encouraging." The indicators show the economy is growing, although marginally and with persistent but moderating inflation.

As a result, fears of a deep or prolonged recession no longer seem reasonable even as an outside chance. Still, the figures are not exuberant enough to justify the expectation of a surging economic rebound. We know the economy, like the turtle, is moving but it's hard to resist the temptation to push it along a bit faster.

Yet what other course would we choose? With unemployment at 5 percent and likely to go higher on a temporary basis, no one wants the economy to halt dead in its tracks. With inflation still proceeding at a 4.3 percent annual rate in the June quarter, few people would trade the turtle for the hare.

Our economic goal is full employment with relative price stability. We stand a better chance of reaching the goal line with a steady turtle than the flash and fade-out of the fabled hare.

"RECESSION" ENDED?

The major economic activity indicators showed a modest rise in July, and the economy managed a slight growth in output of goods and services in the second quarter of the year. The statistical trend has changed enough to cause several government economists to say the "recession" has ended.

Actually, the performance of the economy in the last year has been such as to hardly justify the term "recession." The turndown in GNP in the last quarter of 1969 and first quarter of 1970 was very small. Industrial production this July was only 3 per cent below that of July 1969. In the postwar recessions of the 1950s, industrial output fell from 5 to 14 per cent.

However, it is premature to declare "no recession." One reason the industrial production index rose in July was the return to work of several large groups of strikers. Without their return, the figure would not have looked so good. Industrial output also rose last March, with three successive declines after that.

If the downturn in GNP really has reached bottom, as optimistic government economists think, the Nixon Administration will be in a position to claim a "first" in economic management.

In a time of serious inflation, President Nixon has had the nerve to avoid the slam-bang, crackdown type of inflation restraint which appealed to former Treasury Secretary George Humphrey. Instead, he has insisted upon gradualism in both fiscal and monetary policy. He has chosen to permit a greater degree of inflation rather than to precipitate a serious recession and heavy unemployment.

This episode is not yet over. Inflation is still troublesome, although there have been some recent signs of cooling down. The stock market is still sagging and dragging. Unemployment stands at 5 per cent. Nixon and his advisers are not out of the woods and may yet have to turn to stronger measures than the wage-price "alerts" they have started issuing.

But the July economic figures indicate that the deep recession predicted to set in this fall has been stalled off, if not prevented. That is a considerable feat. It is especially noteworthy that Nixon, a Republican with broad support among businessmen and financiers, has been able to take a "liberal" line in economic policy. That is, he has chosen a policy which favors people over dollars; employment stability over "sound currency."

Nixon was greatly impressed by the three recessions of the 1950s, while he was Vice-President, and he has learned something from them.

THE SST: THROWING GOOD MONEY AFTER BAD

Mr. PROXMIRE. Mr. President, last week the Janesville, Wis., Gazette published an excellent editorial on the SST, which hits the nail on the head. The editorial urges the Senate not to be swayed by the fact that we have already spent $700 million on this frill into voting money for a venture which "could cost taxpayers $3 billion, earn little or no return, pollute the upper atmosphere and benefit few people except for the Boeing Corp. and jet-set travelers who want to get to Europe a few hours sooner."

The editorial also has the perfect answer to Congressman BROWN's suggestion that we might have never discovered the New World if the Joint Economic Committee had been advising Queen Isabella in 1942. The Gazette notes:

We can think of a more pertinent analogy: If the efficiency committee had been advising Congress when funds were first committed for the SST, we would be $700 million to the good right now instead of $700 million in the hole. Too bad it wasn't.

Mr. President, I ask unanimous consent that the editorial entitled "Throwing Good Money After Bad," published in the Janesville Gazette of August 24, 1970, be printed in the RECORD. I also ask unanimous consent that excerpts from the report of August 17, 1970, by the Economy in Government Subcommittee of the Joint Economic Committee entitled "Federal Transportation Expenditure" be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THROWING GOOD MONEY AFTER BAD

We heartily concur with a Senate efficiency panel's recommendation that the government get out of the program to develop a supersonic transport plane (SST).

This commercial venture financed at public expense ($700 million so far) could cost taxpayers $3 billion, earn little or no return, pollute the upper atmosphere and benefit few people except for the Boeing Corporation and jet-set travelers who want to get to Europe a few hours sooner.

The House, to its discredit, has approved $290 million more for this airborne white elephant. Now the Senate is being asked to do the same.

Sen. William Proxmire of Wisconsin, chairman of the efficiency committee, opposes any additional funds for the SST. "If Congress succeeds in reordering priorities this year, there is no doubt in my mind that the SST will wind up right at the bottom of the list, where it belongs."

Rep. Clarence J. Brown of Ohio, however, dissented from the majority viewpoint, saying that if the efficiency panel "had been advising Queen Isabella, we would all still be in Barcelona waiting to prove the world round before daring the Atlantic."

We can think of a more pertinent analogy: If the efficiency committee had been advising Congress when funds were first committed for the SST, we would be $700 million to the good right now instead of $700 million in the hole. Too bad it wasn't.

FEDERAL TRANSPORTATION EXPENDITURE

I. INTRODUCTION AND SUMMARY

In May of this year, the Subcommittee on Economy in Government of the Joint Economic Committee held hearings on Federal transportation expenditure policy. This examination was part of the subcommittee's continuing study of Economic Analysis and the Efficiency of Government. This subcommittee does not yet regard this study as complete and hopes to continue its examination of Federal transportation policy as well as of other major Federal activities which lend themselves to economic analysis. We have as yet given little attention to such important areas of Federal transportation expenditure as airport and airways development or rail transit. Nor have we fully examined the regulatory aspects of Federal transportation policy. However, the hearings which we have already held have revealed some serious deficiencies in the economic analysis available to Congress. Thus we feel it is important to report at this time, in order that the Congress may have available the results of our study as it proceeds with major transportation expenditure decisions during the current session.

Our report is concerned both with the general capability of Congress and the executive branch to conduct and to evaluate economic analyses of transportation programs and with the application of general principles of economic analysis to the Federal-aid highway program and to the supersonic transport development program. Our principal conclusions are as follows:

A more unified approach to transportation expenditure decisions is needed, in Congress as well as in the executive branch.

The provisions of the Department of Transportation Act relating to the Department's authority to conduct investment analysis should be re-examined. If it is found that these provisions restrict the Department's authority to perform investment analysis essential to Government program efficiency, the law should be amended.

The executive branch should provide the Congress with more comprehensive analysis of the social costs and benefits of Federal transportation programs, and Congress should improve its capability for evaluating such information. Since existing authorizations for the Interstate Highway System extend into fiscal 1974 Congress would be well advised to postpone action on further authorizations until more adequate analysis of the social costs and benefits of further Interstate Highway expenditures can be made available.

NOTES

Senator John Sparkman states: "The responsibilities of my position as Chairman of the Senate Banking and Currency Committee, together with my other committee assignments, made it impossible for me to participate to any great extent in the hearings leading up to this report. Accordingly, I do not feel that I should join in it."

Senator Symington states: "Because of unusually heavy commitments in connection with other committee responsibilities, I was unable to participate in all the hearings on which this report is based; therefore I do not wish to endorse it."

Transportation expenditures should be subjected to all the usual procedures of budgetary review. Congress should take such legislative action as is required to provide for the orderly but expeditious phasing out of the highway trust fund and the return to the financing of transportation expenditures out of general revenues.[1]

Federal programs of highway aid should contain incentives for the development of efficient road pricing. Existing Federal restrictions on the use of tolls should be reexamined.

The diversity of Federal financing formulas which distorts choices among alternative types of transportation investment should be corrected, and restrictions on the uses to which States can apply revenue from State gasoline and motor vehicle taxes should be removed.

The Federal aid highway program, the supersonic transport development program, and most other transportation investment programs clearly fall within the scope of section 102 of the National Environmental Policy Act of 1969, which requires full reporting of the environmental consequences of proposed Federal programs. Authorization and appropriation requests for these programs should not be approved until the required information has been supplied.

Few significant public benefits appear likely to result from the supersonic transport (SST) development program. On the other hand, very significant social costs are associated with this program. More productive uses of Government resources are clearly available. No further Federal financial support of the supersonic transport development program is justified at this time.

If the SST program is continued, the total cost to the Government is likely to reach $3 billion or more. There is little prospect that the Government will earn a reasonable rate of return on its investment. It is entirely possible that the Government will recover none of this investment.

Unless new technology for reducing engine noise can be developed, adherence to the administration's commitment to avoid degradation of the noise environment in the vicinity of airports—a commitment which we strongly support—will make it difficult or impossible for the SST to operate from existing U.S. airports.

The British-French Concorde does not pose a competitive threat of sufficient magnitude to justify continued Federal Government support of the U.S. SST.

Further work on the SST prototype is premature at this time. Research efforts should be concentrated on investigating the effects on weather and climate of introducing additional moisture into the stratosphere; on new technology to reduce engine noise; and on efforts to eliminate the sonic boom. When more progress has been made in overcoming these serious environmental effects, the SST may look like a much more attractive commercial proposition. When the SST does become an attractive commercial proposition, we believe that private financing will be available, and there will be no need for direct Government investment in SST development.

II. ECONOMIC ANALYSIS OF FEDERAL TRANSPORTATION EXPENDITURE

The establishment of the Department of Transportation in 1967 was envisaged as a major step toward coordinated transportation policy decisions; decisions based on analysis of investments in different modes of transportation as alternative means of meeting the Nation's need for mobility; decisions designed to produce fast, safe, and convenient transportation in an efficient manner. The opening sections of the Department of Transportation Act state:

SEC. 2. (a) The Congress hereby declares that the general welfare, the economic growth and stability of the Nation and its security require the development of national transportation policies and programs conducive to the provision of fast, safe, efficient, and convenient transportation at the lowest cost consistent therewith and with other national objectives, including the efficient utilization and conservation of the Nation's resources.

(b)(1) The Congress therefore finds that the establishment of a Department of Transportation is necessary in the public interest and to assure the coordinated, effective administration of the transportation programs of the Federal Government; to facilitate the development and improvement of coordinated transportation service. * * *

As yet these goals remain far from realization. The Department of Transportation is handicapped by legislative restrictions which discourage the needed analysis of alternatives. The way in which Congress handles transportation legislation—with urban mass transit considered by the Banking and Currency Committees, highways by the Public Works Committees, other forms of transportation by the Commerce Committees, and trust fund legislation by the Ways and Means and Senate Finance Committees—places further obstacles in the way of a coordinated approach to transportation policy.

A more unified approach to transportation expenditure decisions is needed in Congress as well as in the executive branch. The decisionmaking process should be organized so as to permit and require full review both of the relative costs of alternative ways of meeting a given transportation need and of the priority which a proposed transportation investment should be accorded relative to alternative uses of public resources.

Legislative restrictions which discourage adequate investment analysis should be removed

Section 4(b)(2) of the Department of Transportation Act states:

Nothing in this Act shall be construed to authorize, without appropriate action by Congress, the adoption, revision, or implementation of—

(*a*) any transportation policy, or

(*b*) any investment standards of criteria.

Section 7(a) reads in part:

The Secretary, subject to the provisions of Section 4 of this Act, shall develop and * * * revise standards and criteria consistent with national transportation policies, for the formulation and economic evaluation of all proposals for the investment of Federal funds in transportation facilities or equipment, except such proposals as are concerned with * * * (5) water resource projects; or (6) grant-in-aid programs authorized by law.

Both the general prohibition of section 4(b) and the major specific exceptions to section 7(a) would appear to seriously restrict the authority of the Department of Transportation to conduct investment analysis. In 1968 Dr. M. Cecil Mackey, who was at that time Assistant Secretary of Transportation for Policy Development, supplied the following statement in response to questions raised by this subcommittee concerning the possible need to amend these sections of the Department of Transportation Act:

There would not appear to be special reasons for imposing particular restrictions such as those in sections 7(a) and 4(b)(2) on DOT's authority to manage its programs * * *. The amendment of section 7(a) of the Department of Transportation Act would facilitate implementation of effective economic analysis. There does not appear to be any important administrative or noneconomic reason why the act should remain as it is.[1]

Another witness, testifying before the subcommittee in September 1969, interpreted these two sections of the Department of Transportation Act as "explicit caveats" against engaging in "economic analysis of costs, benefits, and appropriate discount

---

Footnotes at end of article.

rates."[2] While the present Assistant Secretary of Transportation indicated in our most recent hearings on this subject that he did not feel these provisions were "unduly restrictive," and were designed "to insure that rigid cost-benefit criteria are not * * * made a benchmark against which projects wind up on a go-no-go basis," the subcommittee feels that, at the very least, these provisions of the law should be reexamined with respect to their effect on the authority of the Department to perform needed economic analysis.

Legislative restrictions which discourage or prohibit adequate investment analysis should be removed. The relevant provisions of the Department of Transportation Act should be reexamined. If it is found that they restrict the authority of the Department of Transportation to perform investment analysis essential to Government program efficiency, the law should be amended.

Social costs and benefits must be fully included in investment analysis

While cost and benefit estimation is a valuable tool in the decisionmaking process, it is subject to abuse if the concepts are applied too narrowly. Since Congress is concerned with the public value of Federal investments, the social, or external, costs as well as the direct monetary costs must be fully considered. A similarly broad concept must be applied to the estimation of benefits.

In the case of highways, for example, the social costs include such things as noise, air pollution, dislocation of homes and businesses, neighborhood disruption, creation of barriers between neighborhoods, loss of recreational lands, and the like. Some of these, such as housing dislocation, are at least partially reflected in the actual dollar costs to the Government of highway construction. Others such as noise and air pollution are not (except to the limited extent that damages may have been awarded to individuals who have brought court actions). Some of the social costs, such as neighborhood disruption, are extremely difficult, and in some cases impossible, to quantify. Additional efforts to measure such costs should be undertaken. Where such costs cannot be quantified, they can and must be explicitly recognized as qualitative factors which should be fully considered in making program judgments.

In the case of benefits, such relatively simple techniques as the estimation of traffic volume obviously are not a sufficient measure of social benefit. A rural highway may have a relatively low traffic volume, but it may provide residents of the area with their only means of mobility, and hence their only access to jobs, schools, and community services. It may open up to industry and tourism areas which were previously inaccessible. By contrast, a new urban highway may bring more cars onto already congested city streets, while at the same time discouraging use of alternative means of transportation. In this latter case, the volume of traffic using the road may on balance be a cost to urban residents and commuters rather than a benefit.

It is also necessary to know how the social costs and benefits of a transportation investment will be distributed among different groups in the population. In the case of highways, for example, the benefits accrue largely to users of the highway (although many of these might prefer alternative means of transportation if adequate alternatives were available) and to owners of strategically placed commercial property. Under our present financing system, the dollar costs of highway construction are paid by purchasers of gasoline, tires, and diesel fuel, regardless of the extent to which they will benefit from the construction of a particular highway. The costs of highway maintenance and repair, as well as the cost of feeder roads, are not, however, financed from Federal gasoline taxes.

Many of the social, or external, costs of highways are paid either by those who must move out to make way for the highway or by those who must continue to live in close proximity to it. Another, more generalized type of social cost is borne by the substantial fraction of the population who are nondrivers—the young, the aged, the poor. These groups are at a growing relative disadvantage as society becomes increasingly dependent on the private automobile. Is it good public policy to assess costs against some groups in order that other groups may benefit? This is a judgmental question relating to the real distribution of income in our society. Fuller information as to the probable distribution of costs and benefits would improve the ability of the Congress to make wise judgments.

The highway "need" estimates contained in the national highway needs reports, which are required to be submitted to Congress every 2 years, are not based on these broad considerations of social cost and benefit. "Need" as used in these reports refers to "capacity adequate to accommodate the highway travel forecast for a given target year."[3] Since funds are apportioned to the States in accordance with their estimated "needs," the financing system contains a considerable incentive to produce inflated travel forecasts. Furthermore, there is persuasive evidence that the "demand" for highways, as measured by traffic volume, is partly a function of highway availability. Increasing the highway mileage may merely stimulate more automobile travel.

Based on the misleading concept of equating need with travel forecast, the most recent highway needs report estimates that there is a "need" to devote $320 billion worth of our national resources to road construction over the next 15 years. We do not believe that anything like this enormous sum can or will be spared for road construction. The crucial question, however, is: Which parts of this total highway "need" offer a social rate of return sufficient to justify the expenditure of public funds? A more specific and pressing question which the Congress must decide is the extent to which the social value of the remaining segments of the Interstate Highway System justifies the authorization of additional funds. It is now estimated that completion of the presently designated 42,500 mile system will require approximately $12 billion in Federal funds, beyond currently authorized amounts, and this estimate contains no allowance for any future cost increases.

At our recent hearings, Assistant Secretary of Transportation Baker described to the subcommittee analytic efforts currently being undertaken by his Department which are designed to yield conclusions about the comparative value of investment in different modes of transportation. The target date for completion of this analysis is not until 1972. In the meantime, the background information needed to make a major new decision on Federal-aid highway authorizations is simply not available.

In making transportation expenditure decisions, Congress needs access to more comprehensive analysis of social costs and benefits than is currently available. The appropriate agencies of the executive branch should make such information available at the time authorization requests are introduced, and Congress should improve its capability for evaluating such information. Specifically, such analysis should include:

(1) Estimates of the full costs and benefits of proposed transportation investments. External costs and benefits should be included, and an adequate discount rate should be applied to the estimation of future benefits; (2) estimates of the distribution of the costs and benefits of the proposed project among different groups in society, together with an analysis of the extent to which fully adequate compensation of those who are adversely affected by such investment is feasible.

Adequate information of this type is not presently available with respect to uncompleted portions of the Interstate Highway System. Since existing authorizations for the Interstate System extend into fiscal 1974, we believe Congress would be well advised to postpone action on further authorizations until more adequate analysis of the social value of further Interstate Highway expenditures can be made available.

If there are proposed sections of the Interstate System which cannot demonstrate a high social value, Congress should have this information when further authorizations are considered.

Federal Transportation Expenditures Should Be Subjected to Regular Budgetary Review

The previous two sections of this report have stressed our belief that more complete economic analysis of proposed transportation investments is essential. Such analysis will really be of value, however, only if our financing system is sufficiently flexible to permit rational use of the analytic evidence. Evidence that a particular transportation need can be met most efficiently by improving the public transportation system, for example, is apt to be ignored if funds are available only for highway construction. Similarly, evidence that urban transportation problems could best be eased by enabling people to live closer to their jobs may be primarily of academic interest if funds are available for transportation systems but not for housing and urban reconstruction.

From its initiation in 1916 until 1956, the Federal aid highway program was financed out of general revenues, so that highway appropriations were subjected to all the usual procedures of budgetary review. In the mid-1950's, it was decided to give a very high budgetary priority to the construction of a comprehensive national highway system. A special financing arrangement, the highway trust fund, was created. Revenues from the Federal gasoline tax and certain other motor vehicle-related taxes were placed in this fund, and the use of these revenues was restricted to the financing of federally aided highway construction.

The receipts of the highway trust fund now exceed $5 billion per year. Total receipts from 1956 through its scheduled expiration date in September 1972 will approach $60 billion. For 15 years now this important source of revenue has been insulated from any real consideration of the relative value of highway and nonhighway uses. We believe the time has arrived when provision should be made for Congress to again have the opportunity to review annually the uses of this revenue.

It is sometimes argued that it is somehow unfair to use revenues from the gasoline tax and other road-user charges for anything except highway construction. There are several reasons why we do not accept this argument. First, since the average family finds it very difficult to get along in today's world without an automobile, this family has little choice except to pay gasoline taxes. There is no logical basis for regarding payment of these taxes as a "vote" for more highways. Second, we do not view our other excise taxes this way. Alcoholic beverage taxes, for example, are not used to build distilleries, nor are they dedicated to use in constructing facilities for the treatment of alcoholics. Third, even if we were to accept the view that the proceeds of the gasoline tax should be expended only for the benefit of road users, new highways are clearly not

Footnotes at end of article.

the only investment from which road users might benefit. A witness at our recent hearings told of a study he had made indicating that 35 percent of the benefit of a proposed new subway line would accrue to road users, rather than subway users.[4] Yet we do not finance rapid transit from the gasoline tax. Many road users would benefit from making our central cities livable again, so that urban streets would be less clogged with commuters from the suburbs. Yet we do not finance urban reconstruction through the gasoline tax.

There have recently been a number of proposals put forward for broadening the uses to which highway trust fund revenues can be put. These range from the relatively modest proposals put forward by the administration this year to finance forest and public land highways and the highway safety and beautification programs out of the trust fund to sweeping proposals to finance Federal investment in all modes of transportation out of a general trust fund made up of receipts from all the existing Federal transportation user charges, perhaps supplemented by transfers from general revenues.

The Assistant Secretary of Transportation indicated in his testimony before our subcommittee that the Department has various proposals for a general transportation trust fund under active consideration. Several other witnesses at our recent hearings advocated this general trust fund approach. Many of their arguments are quite persuasive. A general trust fund offers one major advantage over the proliferation of separate trust funds for the various modes of transportation, a proliferation evidenced by the establishment this year of an airport-airways trust fund. With a general trust fund it would become possible to allocate funds rationally among transportation modes choosing in each individual situation the mode which will most efficiently and effectively serve our need for mobility.

The disadvantage of the general transportation trust fund approach arises when we come to the question of a rational allocation of budget resources between transportation and nontransportation uses. How can we be sure that we would not lock ourselves into a situation in which we would overinvest in transportation while underinvesting in other aspects of economic development and public well-being? There is clearly, for example, a tradeoff between patterns of residential location and our need for urban transportation. But the establishment of a general transportation trust fund would provide no incentives to analyze housing investment and transportation investment as alternative solutions to the problem of urban mobility, nor would it provide the opportunity to allocate expenditures in accordance with the results of any such analysis.

Thus, while some broader concept of a transportation trust fund would contribute to a more rational allocation of Federal expenditure than at present, this objective would be more completely realized by a return to the financing of transportation investment out of general revenues. There is, of course, need for some assurance of financing continuity where investment projects take several years to complete, but this problem is not unique to transportation investment, and we believe it can be satisfactorily handled without the segregation of revenues into special funds.

Transportation expenditures should be subjected to all the usual procedures of budgetary review. In keeping with the previous recommendation of this subcommittee, subsequently endorsed by the full Joint Economic Committee, that "the trust fund should be abolished as an instrument for financing Federal programs involving investment, construction, or the provision of facilities or services," Congress should take such legislative action as is required to provide for the orderly but expeditious phasing out of the highway trust fund and the return to the financing of transportation expenditures out of general revenues.[5 6 7]

Economically efficient pricing of publicly provided transportation facilities is lacking

One aspect of transportation policy on which we found widespread agreement among our witnesses was that in the United States we have largely failed to employ user charges as a method of insuring efficient use of publicly provided transportation facilities. User charges for services and facilities provided by government are the equivalent of the prices which are charged for goods and services in the private marketplace. These prices perform the important function of efficiently allocating resources among competing uses. If the price (user charge) is below the cost of the service, demand for the service will be greater than if the user had to pay the full cost, and resources will be diverted to this use which would be more productive in other uses. Users of the service will be being subsidized by someone. Where there is some public purpose to be served by encouraging use of a particular service, an argument can, of course, be made for public subsidization of that service. In such cases, however, the extent of the subsidy should be explicitly recognized and weighed against alternative uses of public resources.

The purpose of user charges for those parts of our national transportation system provided through the private market is well understood. Travelers by train or commercial airline buy a ticket, the price of which is at least roughly related to the cost of operating the service. The role of user charges for those parts of the transportation system provided by the public sector is much less well understood. Introduction into general usage in this country of the British term "road pricing," or more generally, "transportation pricing," would aid in gaining wider public understanding of the pricing function served by user charges.

There are many aspects of our present transportation pricing system which violate principles of both equity and economic efficiency. Public subsidization of general aviation is one glaring example. Another, which we discuss later in this report, is the potential subsidization of supersonic flight by passengers on subsonic flights. Road pricing is another major area where public policy has failed to follow sound economic principles.

Road pricing, in the form of tolls, was at one time quite common in this country, but with the development of the Federal aid highway program this approach was largely abandoned. Federal law now provides that, with certain exceptions related to the retirement of bonded indebtedness, all highways built with Federal aid "shall be free from tolls of all kinds." Highways today are financed by the gasoline tax and other related charges, but these Federal funds can be used only for the construction or major reconstruction of highways, not to cover the maintenance costs of the use of existing roads, nor to compensate for the congestion, noise, air pollution, and similar social costs associated with the use of existing roads.

A further major limitation of the gasoline tax as a road pricing device is that it bears little, if any, relation to the cost of using a particular road at a particular time. The amount of gasoline tax paid is essentially the same whether the driving is done on an uncongested rural highway or in the middle of the city at rush hour. Efficient pricing of our road system would require that the cost of operating a motor vehicle be higher under conditions which impose a higher social cost. By providing free use of urban highways at congested times of day, while requiring users of public transportation to pay their own way (or a large part of it), we encourage the use of the private automobile relative to the use of public transportation. Society at large is in essence subsidizing the rush hour driver.

We found widespread agreement among the witnesses at our recent hearings that several approaches to the differential pricing of road use—including tolls, special licenses for rush-hour driving, parking charges, and perhaps special metering devices—are technically feasible, but they have been largely neglected in the United States. Much more extensive investigation of the practical possibilities for road pricing has been undertaken in Great Britain, and the subcommittee was fortunate in having some of the results of these studies described by Dr. Cristopher Foster, formerly Director General of Planning for the British Ministry of Transport. Dr. Foster explained that urban roadspace should be regarded as a scarce commodity, and then explained:

Where there is scarcity private enterprise—and Government—usually uses the price mechanism to ration the commodity rather than allowing people to form lines and jostle it out. On urban roads we let people form lines. It would be a much more efficient solution if an economic price * * * were set on highways.* * * In my own country there has been great interest in new methods of urban road pricing since the report of the Smeed Committee in 1964.[8]

This may be compared with the description by another witness of his experience in discussing road pricing with officials at different levels of government in this country:

No one had really considered the possibility of using peak-hour tolls as a device to manage the use of the road system.* * * No assessment has been made, or even contemplated, of the costs and benefits of peak-hour tolls under any circumstances.* * * Development of rational parking policies * * * is another unexploited possibility for increasing the efficiency of urban transportation systems at virtually zero cost.* * * Parking policy in most cities is unbelievably bad.[9]

The potential for road pricing devices as a means of reducing urban road congestion and of obtaining an efficient allocation of resources into urban road construction and maintenance should receive much more attention at all levels of government. Federal programs of highway aid should contain incentives for the development of efficient road pricing. Existing Federal restrictions on the use of tolls should be reexamined.

Federal financing formulas should not distort the allocation of State and local Resources

The Interstate Highway System was initially conceived as a national highway system, designed to provide an efficient means of traveling between cities and, therefore, designed to yield significant national benefits. It was thus thought appropriate for the Federal Government to assume 90 percent of the cost of building the Interstate System.

In fact, however, many urban portions of the Interstate have come to be used primarily, not to connect cities, but to move local residents around within a given metropolitan area. Since other federally aided urban highways receive no more than 50 percent Federal aid and since Federal aid for urban mass transit has been almost nonexistent, a substantial incentive was created for local governments to attempt to meet their local transportation needs through the Interstate System. In many instances these local transportation needs could have been met at lower total cost and in a manner more consistent with clear local preferences through improvement of existing roads, development of express bus service or, in larger

Footnotes at end of article.

cities, construction of rail rapid transit. However, the disparities in the level of Federal support for different types of transportation have distorted local choices and discouraged selection of the economically most efficient alternatives.

If the purpose of Federal support of urban transportation investment is to assist metropolitan areas in meeting their local needs, then surely alternative ways of meeting these needs should be examined on the basis of comparative cost and compatibility with local preferences.

Under the present method of allocation of interstate highway funds, if a proposed section of the Interstate is not built, the funds for it revert into the highway trust fund. The choice facing State and local governments is thus one of going ahead with a proposed highway section or of losing the Federal money entirely. The alternative of using the Federal funds to meet the transportation need by some other means is not available.

The Department of Transportation has recently identified a number of segments of the Interstate System which will be particularly difficult to complete either because of local opposition to the highway or because the cost seems excessive. It is estimated that the proposed "Chicago Crosstown" route, for example, will cost approximately $1 billion, or $50 million per mile, to construct. Although the number of miles involved in these segments is a very small percentage of the total Interstate System and none of the segments is regarded by the Department of Transportation as essential to an integrated national system, the combined cost of these segments is estimated to be $4 billion. Consideration should certainly be given to deleting segments such as these from the Interstate System. Consideration should also be given to making available to the States and localities involved some portion of the funds they would otherwise have received for these interstate projects for use in meeting their transportation needs by alternative means, provided that such alternatives were approved by the appropriate Federal officials.

Diversity of financing formulas has a tremendous impact on local decisions, but it is not the only provision of Federal transportation law which influences State and local expenditure decisions. Another which we feel should be reexamined is the restriction placed in the Federal law 36 years ago requiring the States, as a condition of Federal aid, to earmark their own revenues from gasoline and motor vehicle taxes to highway construction. Today the States continue to be obligated to devote at least that portion of these taxes which was in effect in 1934 exclusively to highway use. Just as we favor making the Federal revenues which now go into the highway trust fund available for general use, we feel States should also be free to allocate their revenues to the uses they determine to be of highest priority.

States and localities should be encouraged to use their Federal assistance, as well as their own funds, in the most efficient way. The diversity of Federal financing formulas which distorts choices among alternative types of transportation investment should be corrected and a full evaluation of the way in which Federal transportation law restricts or influences State and local decisions should be undertaken. Restrictions on the uses to which States can apply revenue from State gasoline and motor vehicle taxes should be removed.[10]

III. MEASURING THE ENVIRONMENTAL EFFECTS OF TRANSPORTATION INVESTMENT

Section 102(c) of the National Environmental Policy Act of 1969 requires that all agencies of the Federal Government shall:

Include in every recommendation or report on proposals for legislation and other major Federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on—

(i) The environmental impact of the proposed action;

(ii) Any adverse environmental effects which cannot be avoided should the proposal be implemented;

(iii) Alternatives to the proposed action;

(iv) The relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity; and

(v) Any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.

Prior to making any detailed statement, the responsible Federal official shall consult with and obtain the comments of any Federal agency which has jurisdiction by law or special expertise with respect to any environmental impact involved. Copies of such statement and the comments and views of the appropriate Federal, State, and local agencies, which are authorized to develop and enforce environmental standards, shall be made available to the President, the Council on Environmental Quality and to the public. * * *

It is obvious that any major transportation investment will "significantly affect the quality of the human environment." In his testimony before our subcommittee, Russell Train, Chairman of the Council on Environmental Quality, indicated that in his judgment proposals for legislation relative to the two programs in which the subcommittee was especially interested, the Federal-aid highway program and the supersonic transport development program, should be accompanied by the information specified in Policy Act. As yet no such reports have been section 102 of the National Environmental prepared with respect to the SST, and the Department of Transportation, was unable to assure the subcommittee that this information would be submitted before the ending of this session of Congress. The subcommittee is pleased to note, however, that the report required under the act is expected to be issued shortly with respect to the administration's request for extension of the highway trust fund.

As we have stated earlier in this report, environmental effects of transportation systems are an important part of the social costs and benefits which must be taken into account in measuring the public value of an investment. The environmental consequences of the transportation programs with which we are concerned are very great and should be a major element in decisions on whether to proceed with funding. It is essential that full information on environmental effects be made available before expenditure decisions are made.

Section 102 of the National Environmental Policy Act of 1969, which requires full reporting of the environmental consequences of proposed Federal programs having a significant environmental impact, must be complied with. The Federal aid highway program, the supersonic transport development program, and most other transportation investment programs clearly fall within the scope of this act. The Department of Transportation should make the required information available to Congress as promptly as possible. Authorization and appropriation requests for these programs should not be approved until such information has been supplied.

IV. THE SUPERSONIC TRANSPORT DEVELOPMENT PROGRAM

Federal participation in the development of a commercial supersonic transport has aroused a great deal of controversy. Numerous attempts to analyze the public value of this program have failed to produce a clear justification for Federal participation. Arguments have been advanced by responsible public officials that the development of a commercial SST would advance scientific knowledge, strengthen the U.S. balance of payments, contribute to the health of our aerospace industry, provide employment and enhance our national prestige. Other equally responsible public officials have concluded that the SST would more likely hurt than help the balance of payments, would have a negligible impact on employment, would contribute seriously to noise pollution at airports, might potentially have serious effects on weather and climate, would be utilized by only a small fraction of our population, and is unlikely to be a commercial success. For example, the Under Secretary of the Treasury for Monetary Affairs concluded in March 1969 that "the balance of public benefits or losses may well be negative," and the Director of the Office of Science and Technology concluded that "the Government should not be subsidizing a device which has neither commercial attractiveness of public acceptance."

In view of the many pressing demands on the Federal budget and in view of the recommendation of the Joint Economic Committee in its 1970 Annual Report that Congress take prompt action to meet "the need to reduce or eliminate expenditures for space, the supersonic transport, and highways," the Subcommittee on Economy in Government in its May hearings undertook an extensive review of the social costs and benefits of the SST program. We heard testimony from Federal officials responsible for the program and from private experts. Representatives of the Boeing Co., which is building the SST prototype, declined our invitation to appear before the subcommittee, but made extensive written information available to us. The chairman of the subcommittee also requested and received written comments from the members of the ad hoc committee of Government officials which reviewed the SST program at the President's request early in 1969. The subcommittee thus feels that its review of this program has been quite thorough and that efforts have been made to obtain all points of view.

It is our conclusion that few significant public benefits appear likely to result from the supersonic transport development program. On the other hand, very significant social costs are associated with this program. More productive uses of Government resources are clearly available. No further Federal financial support of the supersonic transport development program is justified at this time.

The SST offers few public benefits

Employment Benefits of the SST.—The country is suffering from excessive and rising unemployment at the present time, and much of this unemployment is in the aerospace sector of the economy. We strongly advocate effective action to restore full employment. However, the employment impact of SST prototype development is extremely modest. The Boeing Co. estimates that the *production* phase of the SST program will provide employment for 50,000 persons. This figure has been widely publicized, but it has seldom been pointed out in conjunction with this estimate that the production phase of the program will not, at the earliest, be reached until the mid-1970's. The Under Secretary of Transportation stated during our hearings that "the employment peaks in this program would not occur until the latter half of the 1970's."

The current phase of the program, the *prototype* phase, is estimated by Boeing to employ 20,000 persons. This is only 0.02 percent of the civilian labor force, and only 0.5 percent of total employment in the elec-

Footnotes at end of article.

trical and transportation equipment industries. It is only 0.5 percent of the 4 million unemployed in May 1970. The unemployment problems of this country can only be solved by promoting an economy which provides job opportunities on a much more massive scale, and this means productive jobs providing goods and services which society regards as useful and desirable. The SST does not qualify on these grounds.

Our conclusion with respect to the minimal employment impact of the SST is confirmed by the Assistant Secretary of Labor for Manpower, who wrote to the chairman of the subcommittee on April 30, 1970, that "although the overall employment situation in the country has certainly shifted since last year, we would still conclude that the net employment increase from the SST would be negligible."

Balance of Payments.—The difficulty of estimating the balance-of-payments impact of the SST is evidenced by the widely different estimates made by competent and responsible Government officials. In testifying before us in May, the Under Secretary of Transportation estimated that SST sales would have a total favorable impact on the U.S. trade balance through 1990 of as much as $16 billion. This estimate is based on assumed sales of at least 500 U.S. SST's and on the further assumption that in the absence of a U.S. SST, the U.S. airlines will import some 300 British-French Concordes. For reasons we discuss below, both of these sales assumptions are very hard to accept. Furthermore, this balance-of-payments estimate ignores the potential impact of the SST in generating increased foreign travel by U.S. citizens. A more complete estimate of the balance-of-payments impact would consider the foreign travel impact as well as the direct impact of aircraft sales.

Using this broader method of estimation, both the Treasury and the State Department have concluded that the SST is at least as likely to hurt as to help the U.S. balance of payments. In a letter to the chairman of this subcommittee on May 1, 1970, the Under Secretary of the Treasury for Monetary Affairs confirmed his earlier judgment that "the potentially adverse impact on our travel account from development of a U.S. SST could equal or outweigh the positive impact on the aircraft sales account." The Department of State also confirmed, in a letter to the chairman of the subcommittee on May 7, 1970, that they continue to share this view that the balance-of-payments impact of the SST could well be adverse.

Competitive Threat Posed by the Concorde.—Many of the arguments advanced in support of the SST, especially those relating to the balance of payments and the preeminence of the U.S. aerospace industry, are based on the assumption that if a commercial U.S. SST is not developed, a large and lucrative market will be lost to the British-French Concorde. Consequently, the subcommittee endeavored to obtain as much information as possible concerning the Concorde. We found no convincing evidence that a commercially viable Concorde will be developed and sold on the world market in quantities sufficient to damage either our balance of payments or the health of our areospace industry.

Although the Concorde prototype is now undergoing test flights, serious technical problems remain. It has not yet been demonstrated that the Concorde can carry passengers across the Atlantic without refueling. The weight of the plane has increased substantially over original estimates, meaning that it must carry more fuel in order to give it trans-Atlantic range. It is quite possible that there will be no room left in the plane for any significant "payload" (passenger and freight-carrying capacity). In such an event, substantial redesign of the plane would be required. It is not at all certain that the British and French governments would continue with Concorde development in the face of another major cost increase.

Even if a commercial Concorde is developed and put on the market, purchase is not likely to be a commercially attractive proposition for the airlines. The British and French airlines, which are government-owned, can and probably will be required to buy the Concorde, and can be subsidized for operation of an uneconomic plane. In this event, other major airlines might feel obliged to purchase a few Concordes for competitive purposes even though they would be operated at a loss. However, the likely sales of the Concorde to U.S. airlines are far below the 300 assumption on which some estimates of the impact on the U.S. balance of payments have been based. World airlines currently have options for 74 Concordes, but these options represent a minimal financial investment and imply no obligation to actually buy these planes.

The Concorde does not pose a competitive threat of sufficient magnitude to justify continued Federal Government support of the U.S. SST.

Scientific Advance.—The advance in scientific knowledge, the so-called "technological fallout," is undoubtedly useful, but this knowledge could be obtained in other ways, at lower cost. The Government officials who reviewed this question at the President's request last year concluded that "the value of this benefit appears to be limited. * * * In the SST program, fallout or technological advance should be considered as a bonus or additional benefit from a program which must depend upon other reasons for its continuation." This panel, which included a representative of the Department of Defense, further concluded that "The SST program cannot be considered as providing unique technological inputs to military programs." This conclusion was confirmed by the statement in a letter from the Department of Defense to the chairman of this subcommittee on May 8, 1970, that "there are other avenues of research which could develop the technology which would accrue from the SST."

National Prestige.—As to the contribution of the SST to the health of the aerospace industry and the prestige of the United States, we find it hard to believe that either will be enhanced by spending billions of dollars to produce an airplane which will have a seriously adverse environmental impact and for which the prospects of commercial success do not appear sufficiently bright to attract private financing. If our aerospace industry is to maintain its preeminent position it must do so by continuing to show the initiative to privately develop and finance products which can find a successful commercial market. When and if commercial supersonic flight becomes an attractive commercial proposition, private financing will be forthcoming. The appropriate Federal role is one of protection of the public interest by requiring that aircraft meet standards of safety and environmental quality. We can best enhance our national prestige and that of our aerospace industry by protecting the public interest.

The social costs of the SST are greater than is generally recognized

Actual Dollar Cost to the Federal Government.—The monetary cost to the Government of SST prototype development is now estimated to be about $1.3 billion, including the recently revealed cost growth of $76 million. Some idea of the increase in cost of this program since the initial decision to proceed with the program can be obtained by comparing this $1.3 billion with the statement made by President Kennedy in 1963 that in no event would the cost to the Government be permitted to exceed $750 million.

Numerous technical problems remain to be resolved during the prototype phase—the basic structural material has recently been changed from titanium "Stresskin" to aluminum brazed titanium honeycomb; a satisfactory fuel sealant has not yet been developed; and the engines still require substantial modifications to reduce takeoff noise. With serious technical difficulties still to be overcome, experience with the development of other U.S. aircraft, both military and commercial, and British-French experience with development of the Concorde all suggest that further substantial cost increases during the prototype phase must be expected. Cost estimates on the Concorde have now approximately quadrupled since the original estimate in 1962. Dr. Richard Garwin, who recently headed a group of technical experts who reviewed the SST program for the Office of Science and Technology, expressed the opinion during our hearings that cost increase of 30 to 40 percent over present estimates could be expected during the prototype phase of the U.S. SST. Such an increase would bring the cost through the prototype phase to $1.7 or $1.8 billion.

Between $600 and $700 million has been spent on the SST through the end of fiscal 1970. This is substantially less than one-half of what we regard as a realistic estimate of the costs through the prototype phase. Two hundred and ninety million dollars has been requested for fiscal year 1971. If the program is terminated now, the cost to the Government, while large, would be only a fraction of the eventual total costs of prototype development.

Even more disturbing than the probable cost increase during the *prototype* phase is the likely need for Government support for the actual *production* of the aircraft. Financing requirements for the production phase were estimated by the Under Secretary of Transportation to be about twice those for the 747 jet, or about $1 billion. Although officials responsible for the program have repeatedly expressed a belief that the production phase will be privately financed, they have been unable to produce evidence in support of this belief and unwilling to give a commitment that Federal support for SST production would not be sought. Indeed, the Under Secretary of Transportation expressed to us his intention to recommend Federal support of SST production, should that prove necessary, when he stated, "I am on record * * * with the statement that while I was of the opinion that private financing would be available, if it were not at that time, and if we felt that we had a successful SST program * * * and it required some Government-guaranteed loans, then I think that we would so recommend."

Other witnesses expressed the belief that the total cost of SST development and production would be on the order of $5 to $7 billion. They expressed great skepticism about the availability of private financing, in the absence of Government guarantees. They felt that the Government's share of the cost of the SST program might well reach $3 to $4 billion. This skepticism concerning private financing is due to the very shaky prospects of the SST for commercial success and to the readily available opportunities for private capital to find alternative uses which appear both safer and more profitable.

Our witnesses felt that the estimates being used by the advocates of the program that 500 or more SST's can be sold were entirely unrealistic. The airlines have heavy financial commitments over the next several years for the purchase of 747's (jumbo jets). Operating costs for the 747 will be far below those for the SST. The number of travelers willing to pay the premium necessary to cover the higher cost of operation of the SST will be very small. In a tight financial situation and with more than adequate capacity already available, the airlines are unlikely to purchase many SST's. For those SST's which are put

Footnotes at end of article.

into commercial operation, fares are likely to be set below full cost of operation. This loss will probably be covered by keeping fares higher than otherwise necessary on subsonic flights. Thus, all air travelers will help subsidize the SST. Asked about the views of airline executives regarding the SST, Gen. Elwood Quesada, who is a director of American Airlines, told us, "There are a lot of people that say that the airlines wish the [SST] airplane would go away. And I am one of them."

Adding to our skepticism about the commercial success of the SST and its ability to attract private financing is the apparent inability of the Boeing Co. to come up with a financial plan as required under its contract with the Government. The contract as amended in July 1969 required Boeing to submit by December 31, 1969, a plan for financing of the production phase, but the subcommittee was informed that this requirement had been waived by mutual agreement until June 30, 1972. Thus the Congress is being asked to appropriate $290 million this year for a program for which no assurance can be given that there is any upper limit on the eventual total cost to the Government.

The SST has sometimes been defended as an appropriate use of government money on the grounds that the Government will recover its investment. Even if it were correct that the Government investment will be fully recovered, this argument obviously does not justify Government participation in a program. On the basis of this argument, the Government should feel free to invest in any commercial enterprise, just so long as the prospects for recovery of the investment were good. However, we have concluded that, in any case, the prospects of the Government fully recovering its investment are remote. The contract is designed to produce recovery of the Government dollars invested upon sale of the 300th SST. Subsequent royalties cease when the Government has earned 6 percent on its investment. Thus, the maximum potential return to the Government under its contract with Boeing is recovery of its investment plus 6 percent.[11] Six percent is obviously not a full rate of return to capital in today's market. The average cost of Treasury borrowing has been consistently above 6 percent since early 1969.

Should sales total less than 300 planes there is no assurance that the Government would get any money back at all. The contract already allows deferment of royalties, by mutual agreement, until after 100 airframes have been sold. One can easily imagine further royalty deferment if poor sales are causing losses to the private investors. Another weakness of the contract is that it defines "airframe" as one designed to fly at speeds between Mach 2.2 and Mach 3.1. Should Boeing redesign the aircraft to fly at Mach 2.1, its financial obligation to the Government would aparently be terminated.

Our private witnesses did not feel the prospects for selling 300 SST's were very bright. When we asked General Quesada how much the Government might lose if, for example, only 279 aircraft were sold, he replied, "I think the Government in all probability would lose all of its investment."

No satisfactory evidence has been presented that the production phase of the SST program can be financed entirely from private sources. If the SST program is continued, the total cost to the Government is likely to reach $3 billion or more. There is little prospect that the Government will earn a reasonable rate of return on its investment. It is entirely possible that the Government will recover none of this investment.

Environmental Costs of the SST: Sonic Boom.—There are at least three major types of environmental cost associated with the SST. These are sonic boom, airport noise, and possible damaging effects on the upper atmosphere through the introduction of additional moisture and the destruction of ozone. In an effort to meet the sonic boom problem, the FAA has issued notice of a proposed rule prohibiting supersonic flight over populated areas. We regard strict adherence to such a rule as essential. This rule, however, will greatly reduce the prospects for commercial success of the SST since operation will be restricted to overseas routes. There is thus reason to expect that great pressure will be brought to bear to relax this rule, particularly if the SST does not prove commercially successful when restricted to overseas operation. The language of the proposed rule is such as to raise doubts that the rule would be adhered to in the face of such pressures. The notice of proposed rulemaking reads in part:

Sonic boom producing flights over populated areas within the United States are believed to be economically and technologically "unnecessary" as that word is used in section 611 of the Federal Aviation Act of 1958. Traffic demand studies have concluded that from 500 to 800 supersonic transport airplanes will be in operation by the year 1990. Available studies conclude that these expected traffic demands are sufficient to insure an economically viable supersonic transport, even assuming a sonic boom restriction of the kind proposed in this notice.

A restriction on sonic boom producing flights over populated areas is supported at this time by the inconclusive results of research concerning the effects of sonic boom on the surface environment.

Will this rule be adhered to if the belief that boom-producing flights over populated areas are "economically unnecessary" does not prove to be correct?

Airport Noise.—While the problem of airport noise created by the SST has not received nearly as much public attention as the sonic boom, the dimensions of this problem appear to us to be equally as serious. The high level of sideline noise on takeoff may very well preclude use of many of our existing major airports for SST flights. The costs of airport modification and of construction of new airports designed to accommodate the SST will be enormous. These costs have not been taken into account in estimating the cost of the SST. Furthermore, new airports will have to be constructed at a considerable distance from major centers of population. The time spent traveling to the airport could largely negate the flight time savings achieved by flying at supersonic speeds.

The FAA has recently set a limit on sideline noise at takeoff for new subsonic planes of 108 perceived noise decibels. In terms of the noise measures used by the FAA, the SST will be three to four times louder than this standard, and it will be four to five times louder than the 747. In terms of the noise measure cited by Dr. Garwin in his testimony the SST will produce as much noise as the simultaneous takeoff of 50 jumbo jets satisfying the 108 perceived noise decibel requirement.

In testifying before us, Russell Train, Chairman of the Council on Environment Quality, announced a commitment by the Administration that:

The guidelines with respect to noise certification of the supersonic civilian transport should assure that the noise environment in the vicinity of airports at the time of the introduction of supersonics will not be degraded in any way.

In the course of questioning, Mr. Train revealed that in order to fulfill this commitment to avoid degradation of the noise environment, it will in all probability be necessary to prohibit the SST from landing at most of our existing major airports:

I believe that if we set our standard for the supersonic aircraft in a way which insured that the noise environment in and around our airports will not be degraded, that it will be exceedingly difficult if not impossible for the SST as presently designed and the Concorde as we now know it to operate from U.S. airports.

Eventually the technology necessary to overcome this noise problem will undoubtedly be developed. But such technology is not presently available, nor is an adequate effort to develop such technology apparently being undertaken. Mr. Train told us:

The present level of research in sideline noise, as well as the other environmental problems and uncertainties to which I have referred, is not at a level that we think it should be.

Dr. Gordon McDonald, a member of the Council on Environmental Quality, added:

Using current technology, the chances of obtaining an economically viable airplane and meeting what we propose as the noise criterion are slim. However, there are alternatives ahead that might very well lead to a quieter engine.

We strongly support the commitment made by the Administration that the supersonic transport will not be allowed to degrade the noise environment in the vicinity of airports. This commitment should be incorporated into regulations setting airport noise standards for supersonic planes; standards equally as stringent as those already established for new subsonic planes. The Congress should, however, be aware that unless new technology for reducing engine noise can be developed, adherence to this commitment will make it difficult or impossible for the SST to operate from existing U.S. airports.

Atmospheric Effects.—The third major environmental problem associated with the SST, the possible damage to the upper atmosphere, has also received inadequate public attention. When the Chairman of the Council on Environmental Quality called this area of concern to the attention of our subcommittee, he made it clear that the possible effects on weather and climate are not well understood at this time. It is known that SST operation will introduce substantial additional moisture into the stratosphere. This moisture may destroy some fraction of the ozone in the atmosphere, leading to an increase in the ultraviolet radiation which reaches the earth. This moisture may also increase our cloud cover.

Mr. Train told us:

The increased water content coupled with the natural increase could lead in a few years to a sun shielding cloud cover with serious consequences on climate. * * * The effects should be thoroughly understood before any country proceeds with a massive introduction of supersonic transports.

With respect to the destruction of ozone and the consequent increase in ultraviolet radiation, little is known at this time about what the harmful effects might be. The ultraviolet radiation which presently reaches the earth causes such familiar effects as sunburn. Life could not exist on the surface of the earth if the earth were not shielded by ozone from the full effects of ultraviolet radiation. It is not presently known just what adverse effects small increases in ultraviolet radiation might have on leafy plants and other sensitive life forms. Dr. McDonald of the Council on Environmental Quality stated at our hearings:

This is potentially such a significant problem that we really must understand it before proceeding in any way to alter the water vapor content of this part of the atmosphere.

It seems clear to us that further work on the SST prototype is premature at this time. Research efforts should be concentrated on investigating the effects on weather and climate of introducing additional moisture into the stratosphere; on new technology

Footnotes at end of article.

to reduce engine noise; and on efforts to eliminate the sonic boom. When more progress has been made in overcoming these serious environmental effects, the SST may look like a much more attractive commercial proposition. When the SST does become an attractive commercial proposition, we believe that private financing will be available, and there will be no need for direct Government investment in SST development.

Separate views of Representative Clarence J. Brown

If the Joint Economic Committee had been advising Queen Isabella we would still be in Barcelona waiting to prove the world round before daring the Atlantic. The same kind of thinking displayed in this report would have kept the American Government of the last century from developing transcontinental railroads—or President Kennedy 10 years ago from undertaking a program to reach the moon.

While suggesting that there may, indeed, be two sides to the story, the committee does not present in this report the very persuasive arguments or authorities in favor of developing the supersonic transport. The report is a collection of unsubstantiated "concerns" from "experts" who are given equal weight in spite of widely varying degrees of competence. Reasonable men can differ on whether an American SST should be developed at this time. But this report woud have been much more helpful in reaching a sound conclusion on this question and the broader issues of transportation policy had it presented the arguments pro and con, made some differentiation between facts and opinions, and indicated the degree to which the latter are or are not substantiated.

Disregarding its conclusions, this report has blurred facts with suspicions and used tortured (frequently contradictory) logic to come to conclusions about future U.S. transportation policy which will not bear the test of close examination.

There is a natural tendency to over-emphasize our own importance akin to the tendency in human nature which resists change. From time to time in various ways, all of us wish we could slow down technological progress and freeze things as they are.

Opponents of developing an American SST argue as if the United States alone were deciding whether there will be a supersonic aircraft. Neither the Joint Economic Committee nor the U.S. Government will determine whether the supersonic carrier is developed. The British-French Concorde has been flying regularly for over a year and has accumulated hundreds of test hours successfully. Supersonic transport aircraft are currently a reality.

Further, ever increasing numbers of passengers travel by air to more and more places for one primary reason—shorter trip times. Time is money and the airline industry sells time-savings. An industry that is in the business of conserving time will take advantage of any technological change that enables it to perform more productively. Everyone may not like today's emphasis on speed, but like it or not, it is a fact which must be accepted.

If the SST is technically and economically feasible, the airline industry will buy supersonic aircraft (which they have indicated they intend to). The issue then becomes whose aircraft will then buy. The U.S. aircraft industry presently supplies over 85 percent of all commercial planes and parts in use throughout the free world. If the United States does not maintain our technological momentum and our leadership in commercial aviation, our position will disintegrate, and such a disintegration would mean a significant change in our balance of payments (an estimated loss of $22 billion through 1990) and an equally enormous loss in domestic employment which may be even more important.

Some opponents to the SST say that the development of a supersonic aircraft is fine, but that it should be done entirely with private financing and that Government assistance weakens our successful free-enterprise tradition.

This argument is unsound and should not be the basis for failure to support the SST. Development of the SST is estimated to cost $1.5 billion. No private financial arrangement in the present economic circumstance can produce that kind of financing, particularly since the SST program will have stretched over 18 years from the time the Congress started appropiating funds to the time of the first delivery to airlines. No industry could afford an investment of this magnitude for such a long period before getting a return on its money. The $1.5 billion figure approaches the entire net worth of our major commercial transport producers. Thus it should be obvious that the SST business is in fact competition between countries.

While I sympathize with the support of free enterprise given by the SST opponents, their argument overlooks the sizable participation of the Federal Government in the historic development of our railroad system in the 19th century, construction of the Federal Highway System, support of navigable waterways, and the development of atomic energy in the 20th century.

Rather than being an abandonment of the free enterprise system, Government participation in a development the size of supersonic transport is an enormous assist to the continued growth and prosperity of one of our largest private industries which has been of great benefit to our Nation and the world.

The report attempts to make its points against the SST by arguing first that the SST will be economically and technically infeasible. Then it turns around and argues that the SST will be so successful that its development by the United States will worsen our balance-of-payments situation by encouraging Americans to travel abroad and spend U.S. dollars there. Can both things really be true?

Ignoring for the moment which of these contradictory assumptions about the feasibility of the SST is true, one must question the logic that says SST planes will be taking Americans abroad so American companies should not build them. If Americans will be adversely affecting our balance of payments by traveling in foreign countries, that presumed economic disadvantage might be ameliorated at least by retaining the present leadership the American aviation industry holds in making and selling a U.S. product in world markets. If American technical and economic leadership could produce a commercially successful SST before foreign competitors market their plane (and parts and collateral services and activities), it might even benefit U.S. airlines by enhancing the success of their service to both American and foreign travelers in the United States and abroad and further offset any adverse balance of payments impact from added foreign travel by Americans.

And that gives no consideration to the positive impact on trade balances which would accrue to the world's leading manufacturer and marketer of products from being able to open up new parts of the world to swift trade. It will not be interstate travel in the United States that benefits from the development and use of the SST. Nor will the greatest benefit be in cutting the flight time to Europe from 8 hours to half a working day. The real benefit will come (as it did a few years ago in European travel) when almost anyplace in the world is available on an overnight flight. The movement of civilization and cultural development throughout world history has depended upon such shortening of trade routes.

No one can say with certainty whether the supersonic transport will be a commercial success. If such answers could be prophesied with accuracy, there would be no need for this report. Without such assurance, however, how does the evidence argue? The French and the British apparently feel it lies on the side of developing an SST in the hope of seizing a bigger chunk of aircraft markets in the world. And orders (which must necessarily be optional until a working version flies) have clearly demonstrated the airline industry's confidence in the commercial feasibility of the SST if actual costs of the plane come within estimated limits. In spite of the one distinguished spokesman from the industry who opposes the SST, the general business judgment of the aircraft and airline industry would seem superior to that evidenced in the majority report. The entire history of the aerospace industry, from the Wright brothers through the 747, is full of scenarios similar to the one in which we find ourselves. Doomsayers had similar negative views of the 707. History records the same problem for Robert Fulton and his steamboat, but the reaction to the concept of the wheel has been lost in the past.

The entire history of the airlines is based on the productivity of the aircraft available. To the airlines, productivity is the number of available seat-miles-per-hour that an airplane will produce. The SST will be a significant improvement, being nearly twice as productive as the 747. Without the periodic improvements in productivity and the continuing research and development in American aviation technology, we would still be flying DC–3's, fare levels would unquestionably be higher and the problems of airport and airway congestion would make air travel as we know it today impossible.

Suffice it to say, the committee makes no case that the SST will not fly and do so to economic advantage. The market is there to get to Europe faster and vast new markets will be opened further away even as recent aircraft developments took European travel from ships. Today 43 percent of the American public has flown and the curve is sharply upward. That percentage will hit 60 percent by 1985, according to present estimates.

The report properly indicates difference of opinion about the cost to develop a supersonic plane to serve a growing portion of this growing market. It is axiomatic, because of recent rates of inflation, that SST development is costing more now than it was originally predicted to cost. So does everything else. This trend makes for legitimate differences of opinion on what final costs may be. But two facts stand out clearly. To stop development now means that resumption of development at some future date will be much more costly than to finish the job now. And to suspend development now—even temporarily—will result in a loss of some significant portion of the $700 million the Federal Government has already invested since President Kennedy first recommended the program be undertaken.

Based on optimistic estimates of prospective sales of an American SST, the Federal investment would be fully returned with a modest rate of interest before we take into account any social and technological benefits which might derive from having an American version of the plane. And, of course, this does not include the debatable economic benefits to our balance of payments. At this rate, the SST becomes a better investment than the transcontinental railroads, the one-time canal system and many public works projects. Even at the committee's most pessimistic market estimates, it seems possible that technological and other benefits might offset some of the lack of direct cash return to Federal coffers. But what benefits will accrue from abandonment of the $700 million invested thus far? The committee suggests none.

With no thought of downgrading economic

questions involved with the decision on whether or not the Federal Government should invest funds in the SST development, it is difficult to avoid the feeling that the real core of the committee antagonism to the project involves environmental concerns—an area in which there is legitimate widespread interest, but in which this committee is not necessarily expert. Given the political climate of any question relating to the environment, one doesn't have to be an expert to raise a bogeyman that would appear to be sufficient to create Government action—or inaction, as in this case. Obviously we must be cautious about any program which would damage our environment, particularly if such injury might be permanent. But if all Federal or private programs are to proceed only on a "guilty until proven innocent" basis, progress will indeed come slowly in a wide variety of areas. Under such a case, any question raised can be determining.

Claims of a new ice age, fundamental alterations in weather patterns or deterioration of marine life if SST's take to the air fall more in the area of conjecture not unlike the arguments against the use of aluminum pans in cooking. While they have not been disproven, they have certainly not been proven to any impressive extent. If all technological change must await proof of its safety, then technological change will be slow indeed. In the past, technological change has been successfully undertaken with a view that it would benefit mankind and any harmful effects could be corrected—by technology. This approach brought man out of the cave. Some confidence might come from that. But the fact that Government, which presumably speaks for all of us, is involved in the development should give the committee some further confidence that nothing would be finally approved that would be detrimental. (One is inclined to ask how the United States would prevent use of the Concorde outside American airspace should it be proven detrimental. Perhaps we ought to undertake the development to assure the world a safe SST.)

The President has already announced that the Government will not permit supersonic flights over land, if there are resulting sonic booms. At this time there is no evidence that sonic booms over the ocean or ice cap will injure anything. The military has been conducting such flights for many years with no apparent damage.

Much has also been made of the airport noise factor. At the present time the industry and the Government are in the midst of a concerted research effort to reduce the airport noise of the SST. Competent testimony indicated SST noise would be only slightly higher than the 707 at the present state of development. The problem of airport sideline noise is but one of many which experts argued would succumb to our superior technological ability. In the related, and more important area of community noise, the SST will be quieter than subsonic jets because of its faster climb capability and quieter operation during approach to landing.

While it is difficult to disagree with the rest of the committee's report, since it contains many beautiful thoughts and is basically harmless, I do not think that the report offers much in the way of sensible, practical, specific recommendations for proceeding. No one can reasonably argue that someone ought not to examine the efficiency of our transportation programs, but I hope that in the future it is done less superficially.

Governing is hard. The decisions are not easy. I question that this report helps anyone much. I favor, as I assume everyone does, considering all of the factors in locating highways. I strongly supoprt a more unified approach to transportation policy, and hope the committee continues to hold hearings in this area. But it is one thing to observe that we ought to consider "social costs" and another to quantify them.

Conversely, the report insists that we quantify social costs for highways, particularly urban ones, but does not mention that the social costs of public transportation, such as inconvenience, lost time, and so forth, be considered. The social costs—and perhaps more important, the practicality—of all proposals ought to be considered.

I worry about the inconsistency of the committees report. It finds fault with the rural highway user having to pay a gasoline tax dedicated to the building of an Interstate Highway System he will not use (and which the committee feels has social disadvantages not present in a rural lane); but then it later suggests that interstate highway users (and presumably anyone else paying a gasoline tax) ought to happily pay the bill for the construction of urban mass transit systems which they might never use.

I agree with the committee, and hope that the proposal is thoughtfully reviewed that our current highway trust fund undoubtedly has distorted some decisions because of the financing available, but I am confused as to whether the committee favors financing all transportation out of general revenues, which seems to be what is advocated on page 5 and pages 7–8, or a specific user charge, which seems to be advocated in the remarks about road pricing on page 10.

I strongly support, as I trust the committee does, an approach to our transportation which considers all modes, their interrelationships, and a careful consideration of all costs and benefits. I hope that we move toward viewing our actions involving one mode as unquestionably influencing another mode. Indeed, I have continuously advocated that this policy be applied to transportation regulation also.

However, I cannot help but feel that the report sheds little light on the subject; it is long on superficial, nice-sounding, ideas and short on practical analysis and applications of the views expressed. The report sounds good, but adds little in the way of hard facts or logic by which to measure transportation policy. It is a vehicle for flaying the supersonic transport program, but not a very convincing one because of its lack of logical conclusions drawn from any hard facts.

[3] 1970 National Highway Needs Report, p. 11.

[4] Christopher Foster, testimony before the Subcommittee on Economy in Government, May 6, 1970.

[5] Representative Patman states: "I approve the report with the exception of the recommendation to abolish the highway trust fund. In my opinion, it would be more practical to expand the existing trust fund to cover the extremely urgent need of mass transit. I believe this would be a more effective way of meeting immediate mass transit needs and also serve the purpose of reordering priorities in the field of transportation."

[6] Senator Percy agrees there is a great need for better budgetary control over transportation spending, but feels that the best way to meet the transportation needs of this Nation—especially for urban transit—would be through the use of a general transportation trust fund.

[7] Representative Conable believes that since the Federal highway trust fund was created to finance the construction of the interstate highway system, it would be premature to advocate abolishment of the fund before the system, as presently envisaged, is complete. Therefore, he does not endorse this recommendation at the present time.

[9] John Kain, testimony before the Subcommittee on Economy in Government May 6, 1970.

[10] Senator Percy believes a general transportation trust fund would allow for such flexibility and permit State and local governmental units the freedom to allocate funds among different modes of transportation in the most efficient manner to meet the particular needs of each State and locality.

[11] In a Summary of Current Economic Studies of the U.S. Supersonic Transport prepared by the Federal Aviation Administration in September 1969, it was estimated that the Government's rate of return assuming the sale of 500 planes would be only 4.3 percent, while the after tax rate of return for Boeing would be 15 percent and for General Electric, the engine manufacturer, 11.2 percent.

THE FAMILY ASSISTANCE PLAN

Mr. WILLIAMS of Delaware. Mr. President, last Friday the President, recognizing that there are serious flaws in the administration's new welfare plan—family assistance plan—as passed by the House, suggested as a compromise that the effective date of the bill be deferred 6 months or until January 1972, and in the meantime run a $50 million pilot project to determine how the bill would work.

Postponing the effective date of the administration's family assistance plan by 6 months and then running a pilot project during the interim does not alter the situation, nor does it answer the question of whether this is or is not a bad bill.

To enact an entirely new welfare program with an annual cost factor of $4 or $3 billion over the existing law and then delay the effective date until a pilot project can be run to determine the feasibility of the law seems to be putting the cart before the horse.

Furthermore, it is unrealistic to figure that Congress can act on this new welfare plan before the recess for the November elections; and that raises the further question: Should a new $4 to $6 billion welfare program of this far-reaching magnitude, which more than doubles the present welfare rolls, be acted upon a lameduck Congress?

One other point to be considered is that we are already confronted with a deficit of over $20 to $25 billion during this 1971 fiscal year, and can, or should, the taxpayers be asked to bear the burden of the increased taxes that will be required if this new multi-billion-dollar welfare law is enacted?

In my opinion, it would make better sense to authorize the $50 million pilot project and then await the results of the experiment before deciding on what type of law we want to enact.

PROBLEMS WITH AUTO REPAIRS AND AUTO INSURANCE

Mr. HART. Mr. President, as all Senators know—from the old reliable source, the mail—consumers have been having more than a few problems with auto repairs and auto insurance.

The Subcommittee on Antitrust and Monopoly has conducted lengthy hearings on both, developing explanations as to what the problems are and why they exist. In the next few days I shall introduce proposed legislation to cope with some of the problems.

Because Senators do not have the time to examine all such reports in depth, it is always most helpful when members of the press give an assist.

Frances Cerra, of Newsday newspaper of Long Island City, N.Y., has done an excellent job of that in two articles published in the August 24 issue. Miss Cerra has managed to highlight the problem areas and discuss possible solutions in a light, readable style which makes education a painless process.

I ask unanimous consent that the article entitled "The Auto Repair Business: A Call for a New Model" and "And Some Realignment in Car Insurance, Too," be printed in the RECORD.

There being no objection, the article were ordered to be printed in the RECORD, as follows:

THE AUTO REPAIR BUSINESS: A CALL FOR A NEW MODEL

(By Frances Cerra)

The car stalls. You turn the ignition key, the starter gives a healthy whir and the engine kicks over, but as soon as you put the car in drive it faints dead away. Serious symptoms, and you wouldn't want the patient to die unexpectedly in the middle of a busy highway.

Bucking and stalling, you jerk your way to the closest state diagnostic center. There, for about $10, expert mechanics in clean blue striped shirts and ties gently take charge of the patient while you anxiously wait in an adjoining room. A few minutes later a mechanic leads you to a consultation room. His diagnosis: carburetor trouble.

The cure will cost about $25, he reassures you, and definitely is not fatal. Clutching a written explanation of the diagnosis you drive the now gasping patient to your family garage. Charley, the master mechanic, reads the diagnosis and gives you a price, $42. Fine. He admits the patient and promises to complete the repairs in two days.

Two days later you return to Charley who hands you a bill with his signature certifying that the carburetor has been fixed properly. Now driving your healthily humming car, you return to the diagnostic center. For $1 more, the repair is checked. Your car is cured.

Simple, uncomplicated—and fiction. Getting a car fixed today is too often an exasperating, traumatic experience. Car owners have been complaining to state and federal officials for years about their problems and expose has followed expose in detailing dishonest practices and simple incompetence.

In 1969, car owners in this country paid $8.8 billion for repairs and mechanical parts, an average of $138 for each of the 64,000,000 passenger vehicles on the road. (There are 100,000,000 motor vehicles in all.) The total cost of car maintenance, including crash repairs, tires and tubes, came to somewhere between $25 billion and $30 billion. Using the most optimistic statistics at hand, Sen. Philip Hart (D-Mich.) estimates that one third of all repairs are done unsatisfactorily, which could mean that $10 billion was wasted by car owners in 1969.

"The loss to consumers runs into the billions, without giving a dollar amount to the frustration and inconvenience," said Hart in opening hearings on car repairs last October.

Besides loss of money, improperly repaired cars also cause loss of life, how much is not yet known. But the death toll on the road becomes horrifying when put in perspective: 55,200 persons died in car accidents in 1968, a number that exceed the total number of U.S. servicemen killed in Vietnam from 1966 to 1969.

But there is hope. Prodded by public outcry into recognizing the existence of auto repair problems, the auto industry itself is beginning to work on the problem and the government appears ready to force some changes that may improve the situation. Sen. Hart, in fact, is expected to introduce legislation within the next two weeks that will cover a broad spectrum of auto problems. This, together with private efforts, may bring about radical changes in the present systems of car repairs and car insurance coverage within the next five years. Here are some of the major changes that may be in the offing.

The shortage of car mechanics will have disappeared and car mechanics will either be licensed or nationally certified; the cost of car insurance will be based on how susceptible the car is to damage; car diagnostic centers, such as the one in the fictional story, will be common; and cars will be designed to resist damage and to be easily repaired when they are damaged.

Many of the prerequisites for these changes exist now. The idea of a diagnostic center is not new and several, such as the Mobil Car Repair Center in East Meadow, already exist. The center is one of three run by Mobil around the country as an experimental project begun in 1964. Instead of mechanics, the center employs specially trained diagnosticians in clean shirts and ties who place a car in a special bay where they attach to it electrontic equipment.

Like doctors, the diagnosticians' tools are laid out in neat rows: all sizes of wrenches, pressure gauges, battery testers and appropriately, a stethoscope with a metal probe on the end. That is used to pinpoint the source of a rattle or ping.

The car being diagnosed moves into the bay where it is first visually inspected for things like loose wires and belts, and holes in the tailpipe or muffler system. A wheel is pulled off and the brake drum inspected and measured for wear.

Then the car moves on to special rollers in the floor which are connected to a machine called a dynomometer. This tells the diagnostician whether the brakes are pulling and releasing property and about the condition of the ignition system, the fuel pump, carburetor and other running parts.

After the diagnosis is finished, a mechanic informs the car owner of the results and gives him the option to have the repairs performed right at the center or of taking the diagnosis sheet to a garage for repairs. The diagnosis itself cost $9.95. Unlike the fictitious diagnostic center, Mobil will not verify that another mechanic has performed a repair properly.

In the legislation that Sen. Hart will introduce soon, he reportedly will call for implementation of the federal car inspection requirements throughout the country, for stricter inspection standards and for mandatory inspections after crash repairs are performed. Hart's staff and the Department of Transportation have been working with RCA to develop a mobile motor vehicle inspection station which is expected to be unveiled soon. According to knowledgeable sources, the inspectiton station consists of sophisticated diagnostic equipment contained in a big truck which can be set up in 40 minutes. Sen. Hart's staff believes that these mobile units could become state-run diagnostic centers in addition to inspection stations so that the quality of auto repairs could be controlled. Thus the fictitious diagnostic center would be a reality.

However, even with the most sophisticated diagnostic equipment, repairing a car depends on the skill of the mechanic.

For three generations, the Scutaros have been auto mechanics. Bob Scutaro, a slight, dark-haired man, has been a mechanic for 18 years, and now he is the service manager at Mobil. Recently he opened the hood of a 1970 Oldsmobile 442, an expensive, highly powered car with an air foil mounted on the trunk lid to make it look like a sophisticated racing car. "See what they've got on here?" he asked Bob Hamblet, manager of the center, motioning toward a spring-mounted air filter sitting on top of the engine. It was a new type of filter, he said, designed to cut down on the air pollution produced by the big engine of the car.

"I think car repairing is getting more difficult," said Scutaro, who lives in Farmingdale. "Young men figure that being a mechanic is being a grease monkey. It isn't. It's as complicated as being an airplane mechanic and it takes three years of training to be a competent auto mechanic."

This "grease monkey" image, plus what many mechanics consider inadequate pay, has led to an acute shortage of trained auto mechanics. In 1950, there was one mechanic for every 73 cars and trucks. Now there are 130 cars and trucks for each mechanic, about 50 more than each can handle. At the beginning of 1969, it was estimated that mechanics earned an average of about $6,500 a year not enough to keep the good ones from looking for employment in other industries.

Auto mechanics also have the problem of convincing prospective employers that they know how to do the work. "With a secretary you check her typing and shorthand and have a pretty good idea of her ability," said Hamblet, the Mobil manager. "With a mechanic there is no way of testing, and you usually make a decision on whether to keep him after a 30-day trial period on the job so you can see the quality of his work."

A test for auto mechanics is being developed now, however, by the Educational Testing Service in Princeton, N.J., under a contract with the National Automobile Dealers Association and the auto manufacturers. Frank McCarthy, executive vice president of the dealers association, said that the objective of the tests is to make it possible to certify mechanics under standards that are accepted nationwide.

"We are definitely committeed to establishing a certification program," said McCarthy, "and we would like this to be considered as a substitute for licensing."

In the past, critics of auto repair practices have recommended that auto mechanics be licensed like electricians or even hairdressers. Some critics have suggested licensing all mechanics. Others urge the licensing only of master mechanics who would be responsible for all the repairs in their shops and would verify by their signatures that repairs had been done properly.

But recently many critics, including Sen. Hart, have been convinced that (at least temporarily) a voluntary certification program is a more desirable idea. They feel that too strict a licensing test would force many existing mechanics out of their jobs, and worsen the repair situation, while too easy a test would give government sanction to persons who are really not qualified to do all types of auto repairs.

"If you can stimulate the individual by giving him the goal of certification, and if you can identify this individual to the dealer, he can be rewarded financially and with prestige," said McCarthy.

McCarthy hopes that certification will attract more men—or women—to the field

of auto mechanics. Right now there is ample training available for people interested in the field. Department of Labor Manpower Training programs will in some cases even pay a person's salary while they are learning auto mechanics. All of the car manufacturers run training schools, and many new car dealers will cooperate with local high schools in work-school programs to interest teenagers in the field. General Motors will train any member of the armed forces in the basics of auto mechanics, free of charge, if he simply applies before he is completely out of service. The problem, according to McCarthy, is not that there is a lack of training opportunities, but simply too few people interested in the field. Certification may change that situation.

Having enough competent auto mechanics and setting up diagnostic centers would go a long way toward solving their repair problem, but many believe that even this is not enough. Cars are hard to fix, harder than necessary, and have in the past been made in such a way that leads critics to charge that they are deliberately made so that they are easy to damage and expensive to repair. No proud owner of a shiny new car needs to be told what one trip to a shopping center can do to the side door panels or the rear bumper. Did you know, for example, that the fan blade of a 1968 Rambler American is about two inches from the radiator? That means that if the front bumper is hit, the fan blade is pushed into the radiator and damages it. Cost of repair, as much as $70.

That piece of information came from Louis Baffa, president of the Auto Body Association of America, when he testified in December, 1968, at hearings of the Senate subcommittee on antitrust and monopoly. The same situation, he said, existed in a 1966 Pontiac Tempest.

Recent studies have shown, in fact, that if a car is run into a wall at only five mph it will be damaged to the tune of $200 on the average and perhaps as high as $305. What this means in terms of insurance costs is staggering since 75 per cent of all collision claims are for $200 or under.

Sen. Hart's subcommittee heard a number of witnesses testify on the ways in which modern cars are made to "perpetuate the flow of high profits by design vulnerability to damage of normally encountered operating hazards," in the words of Norman Bennett, a member of the Society of Automotive Engineers. On the question of bumpers, Bennett has plenty to say.

"Today, and for many recent years," Bennett told the subcommittee, "the expensive and highly decorative bumpers are mounted so that they easily deform and readily result in $150 or more damage from a minor blow that could have been easily avoided, by intelligent and considerate design . . . This type of design is not only unnecessary but inexcusable except for one reason—it results in expensive repairs. The extremes that the manufacturers will go to place easily damaged components such as lights and body projections in vulnerable positions is ludicrous."

The manufacturers deny this. John Bates is the director of the service section of General Motors in Detroit and responsible for their corporate effort in repairability and mechanic training. "That's a completely false accusation," said Bates in reply to the charge that the cars are deliberately made to be damaged easily. "We would be our own worst enemies if we constructed cars so that repairs would be inordinately expensive. Our job is to give the purchaser of a product the optimum in transportation and durability." Asked why bumpers have become more flimsy over the years, he said that the current design is a "compromise between absorption of impact and rigidity." He said, "We've been working for years on an absorbing bumper, but we haven't been able to come up with anything and neither has anyone else."

Sen. Hart is apparently aware of the morass that this debate over deliberately vulnerable design could be and so has devised a way around it that would save the consumer a great deal of money. His legislation will reportedly set up a car rating system administered by the Department of Transportation.

Each model car will be crash-tested to determine how vulnerable it is to damaging itself and its occupants. The rating will determine, in part, the cost of auto insurance. Hart hopes that by providing consmers with a visible, immediate incentive, through lower insurance premiums, they will pick up the safer and more economical car. The Detroit automakers will then be forced hopefully by their desire for profits, to make sturdy, safe cars.

Owning a car today is an expensive proposition, a $100 billion proposition, in fact, for Americans each year. Through these measures—licensing or certification of mechanics, damage rating of cars, diagnostic equipment and better car design—Hart hopes to save the American public an estimated $8 billion to $10 billion a year.

AND SOME REALIGNMENT IN CAR INSURANCE, TOO

(By Frances Cerra)

Nobody wants to be in a car accident. But some people, wise in the ways of insurance companies, have a plan of action ready so that they can collect "a little gravy" in the event of a minor collision.

"If anybody ever hits me in the rear, I'm going to immediately open the door, slide out on to the ground and lie there until an ambulance comes," said one Wyandanch resident. Others plan to clutch at their necks, utter the magic word "whiplash" and institute a suit against the other driver. Of 250 people who said at the time of their accident that they had been just shaken up, 96 per cent ended up suing the other driver, according to attorney Roger Hunting, author of a book called "Who Sues." Said Hunting, "They told us they weren't looking for big money, just a little extra, a little gravy."

Chances are that such people can recover a lot of gravy. Statistics show, in fact, that one-third of the people involved in minor accidents receive at least one and a half times their economic loss in insurance settlements, and that if the true loss is $500, the odds are that the payment will be $2,250.

What is not so widely known is how people fare when they are involved in serious accidents. Recently completed studies by the Department of Transportation show that if the accident actually costs you $25,000 in medical expenses, loss of time on the job and other costs, you will probably recover only about $7,000. In fact, 71 per cent of the victims of serious accidents get back less than one-quarter of what the accident cost them, and 45 per cent of such people actually have to lower their standard of living as a result of the accident.

What's more, the same insurance system that allows your whiplash, real or imaginary, to finance a trip to Acapulco two years after the accident happens may force the victim of a serious accident to remain crippled for the rest of his life. It takes an average of 15 months and three weeks to settle auto accident claims in New York State, but physical therapy must be started immediately after an accident. Paying for it can't be delayed.

It is statistics such as these, numbers that coldly suggest a staggering amount of human suffering, that have spurred the drive to overhaul the present system of auto insurance. Massachusetts has just passed a halfway reform measure and other states will probably follow soon. The New York State Department of Insurance has labeled the present so-called "fault" system as "part lottery and part bazaar," and Gov. Rockefeller has strongly advocated beginning a "no-fault" system. Change will probably be forthcoming on the federal level too. Sen. Philip Hart (D-Mich.) plans to introduce legislation soon which will reportedly blend the no-fault system with parts of the present system.

The basic trouble with the "fault" system is that it does not protect people from financial disaster while at the same time it is extremely expensive. The immensity of the problem hits home when you realize, to quote Sen. Hart, that auto accidents cost $61 billion from July 1965 to Dec. 1969, three-fourths the cost of the Vietnam war during the same period. In addition to this financial cost, the current system is the major cause of court congestion.

Auto insurance is different from other kinds of insurance which guarantee the policy holder that he will be reimbursed for his losses. Health insurance, for example, pays off when you get sick. Auto liability insurance instead protects you from being sued by someone else in case you are in an accident where you may have been at fault. If your guilt is proven in a court case, the insurance you've been purchasing at such a big expense will reimburse some stranger, the guy in the other car, for his losses.

As for your medical expenses, the work time you lost and any other personal expenses, tough luck. You were to blame so you have to pay your losses out of your own pocket. (If you carry collision insurance, the cost of damage to your car will probably be covered.)

This fault system is a throwback to the days when only the rich owned horses or cars and had to protect themselves from being sued by people they ran over. Today, when everyone drives and especially when crashes are most often caused by a combination of mistakes by both drivers, faulty cars and poor highway design, the entire concept of fault is considered to be outmoded by many.

In practice the system develops further faults. The small claim of $1,000 or less is a nuisance to insurance companies so they generally settle them quickly regardless of the actual loss a person suffers or of who is to blame. On the other hand, in large cases, the tortured, time-consuming and expensive suit procedure is carried on for years, wearing down the patience of the injured and making them settle eventually out of court. In fact, 99 per cent of all auto-accident cases are eventually settled out of court but not before the pre-trial and other judicial proceedings have tied the courts up. In fact, legal authorities agree that the major cause of court congestion is the automobile accident case.

All of this waste and inefficiency shows up in unnecessarily high insurance premiums. Let us start with $1 for auto liability coverage. Immediately the administrative costs of the insurance companies and their agents use up 33 cents. Lawyers and claims investigators use up another 23 cents. That leaves 44 cents of the $1 to compensate accident victims. But 44 cents does not end up paying for the losses of those victims.

First of all, because of a peculiarity of law, eight cents goes for medical or other expenses that have already been paid for by some other form of insurance such as Blue Cross. Another 21.5 cents rewards people for their "pain and suffering." As we have seen, the pain and suffering payments generally go to people involved in small accidents.

Finally, out of this $1, only 14.5 cents goes to people for their actual damages. Put another way, New York State residents pay $7 in insurance premiums to gets $1 back for damages they suffer.

On a national scale, this is even more stag-

gering. Total auto premiums in 1968 totaled $11.7 billion, and even assuming that 20 per cent of that total went to reimburse actual damage, at least $9 billion is wasted.

The minimum liability insurance required by law in New York State costs an average of $125 a year. Many people pay far more. The New York State Insurance Department estimates that auto insurance premiums could be cut in half if a no-fault system replaces the current one.

The principle of the no-fault system is that when an accident occurs each driver's insurance company will reimburse him directly for all his losses. There would be no attempt to determine who is to blame so that suits would be eliminated. That is all there is to the idea.

The American Insurance Association has estimates showing that lawyers as a group get from 10 to 30 per cent of their income from auto accident cases. A no-fault system would end this source of income. It is no surprise to proponents of the no-fault system that the New York State Association of Trial Lawyers vehemently opposes the idea with public statements like these:

The so-called "No-Fault" plan . . . deprive the innocent of their day in court and of an opportunity to have their rights adjudicated by their peers," read one press release.

Aaron Broker of Kings Point, counsel to the Committee on Community Affairs of the association, was quoted as saying, "The movement afoot (for no-fault insurance) is calculated to reduce those injured through no fault of their own to a reliance upon a dole akin to charity."

Major segments of the auto insurance industry are also opposed to the idea, arguing that they are not convinced that there would be substantial cost savings from the system and that, "The New York plan would make an innocent victim of an automobile accident pay for his own injuries and property damage and would bar him from taking legal action against the wrongdoer," in the words of Vestal Lemmon, president of the National Association of Independent Insurers.

In Hunting's book, he points out that long delays in settlement of accident cases benefit the insurance companies. "They have the money in interest-bearing investments all that time, for one thing," he said. "And then they get people to settle for less because they can't put up with the delays."

It is apparent though, that insurance company and lawyer opposition will not be strong enough to prevent at least partial reform of the current system. The new Massachusetts law eliminates the fault idea in all cases under $2,000 but preserves it in larger cases. This will probably reduce premiums and relieve court congestion but will not, of course, correct the problem of adequately reimbursing persons involved in serious accidents.

Reformers in other states and on the federal level are seeking other compromises. In any case, the one crucial factor—public acceptance of the no-fault system—seems assured. The Department of Transportation has found that once the new idea is explained to them, more people prefer to give up their chance at "a little gravy" than to maintain the present system.

—Cerra.

THE WAR IN INDOCHINA

Mr. McGOVERN. Mr. President, Foreign Affairs Quarterly for July 1970, contains three valuable articles on various aspects of the issues raised by the current debate on the McGovern-Hatfield amendment. They are: "Legacy of the Cold War in Indochina," written by Townsend Hoopes; "From the Vietnam War to as Indochina War," written by Jean Lacouture; and "Vietnamization: Can It Work?" written by Robert H. Johnson.

All three gentlemen are distinguished and knowledgeable observers of our Indochina policy. I ask unanimous consent that their helpful articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

LEGACY OF THE COLD WAR IN INDOCHINA

(By Townsend Hoopes)

A question recently posed by a distinguished colleague is central for anyone who earnestly seeks to understand how an entire generation of American political leaders, with the best will in the world, pushed the country onto the slippery slope that led ever downward into the engulfing morass of Indochina. The question is this: "Why did so many intelligent, experienced and humane men in government fail to grasp the immorality of our intervention in Vietnam and the cancerous division it was producing at home, long after this was instinctively evident to their wives and children?"

As a nation we are still only beginning to address this prickly and uncomfortable question. The New Left has of course long since rendered its own verdict: namely, that the entire leadership was venal, and was moreover acting within the compulsions of an imperialist system. For those, however, who still value reason and believe in factual, proportioned discourse as the most reliable road to approximate truth, the question is serious and compelling; ultimately it is inescapable. While we remain at some distance from a complete answer, it seems certain that an important part of the answer lies in what has been called the cold-war syndrome and in its ramified legacy. Every American over 40 (especially those between 40 and 60) shares involuntarily in this legacy, to a greater or lesser degree, because the cold war was the pervasive reality of the years in which that generation came to its political maturity. By cold war I mean, of course, the highly charged and dangerous power struggle that billowed up out of World War II between a monolithic communist structure directed by Stalin and a rather more loose, hastily reassembled coalition of nations led by the United States.

There is a tendency today, especially among younger people, to denigrate the Stalinist threat, to discount the challenge and the perils it presented, and by various efforts at historical revisionism to conclude that the cold war was an unnecessary happening provoked by American imperialists and militarists. The evidence of those who helped to formulate the democratic response, or who merely lived through the period, is of course quite different. The cold war was a real and bitter struggle touched off by Stalin's utterly serious efforts to subvert and capture Western Europe, to penetrate the Mediterranean basin, and to gain a major influence in the strategic Asian anchor, Japan. No doubt, U.S. insistence on free elections in Eastern Europe confirmed the worst suspicions of Soviet leaders that a universalist American capitalism intended to deny Russian paramountcy in the belt of states through which Hitler's terrible invading force had marched, a buffer zone regarded by Stalin as the minimal requirement of Russian security. But it was not merely the case of a Kremlin leadership understandably paranoid in the aftermath of unprecedented human loss and physical devastation inside its homeland; it was also the case of a leadership impelled by the iron logic of a messianic ideology, a fact that made the Soviet Union compulsively expansionist and thus something quite different from the classic nation-state. Through his far-flung operatives Stalin discerned, in the war-bred chaos beyond his borders, new opportunities to extend Soviet power.

Disciplined, activist communist parties all over the world were almost instantly responsive to central direction from the Kremlin; and they were bent upon widespread disruption and seizure, stimulated by the brute fact that much of the civilized world lay physically and economically prostrate in the immediate wake of World War II. To meet and turn back a fundamental challenge to the power balance which we had fought that war to restore, we were thrust by irresistible logic into a series of dramatic salvage operations—to aid the Greeks and Turks, rebuild Europe through the Marshall Plan, establish the North Atlantic Treaty Organization, stand in Berlin, fight in Korea. As the one free nation with the necessary strength and coherence to lead the resistance, we were forced by the steady pressure of postwar crises to exertions of a scale and character that seemed to make our universal involvement a permanent necessity. While, in fact, the restoration of Western Europe and Japan, and the effective blunting of Moscow's ideological-military thrust, required only about eight years, the effort was totally absorbing. Combined with the harsh lesson in power realities taught by World War II, its effect was to shape the thinking of an entire American generation with respect to the way power is organized in the world and with respect to the requirements of U.S. security.

II

The Korean war in particular shaped our national attitudes about the developing situation in Vietnam and thus made probable, as early as 1954, our ultimate military intervention 11 years later. For the attack on South Korea was a Russian decision—a command by Stalin to send a Russian-trained puppet army across an established international boundary line. Washington saw the attack as a naked, centrally directed aggression, a bold attempt to upset the precarious postwar balance, a dagger aimed straight at our vital interest in Japan. This grave view was confirmed by the United Nations, not only in resolutions, but in sending to battle combat forces from 14 member nations. Such a vigorous response, mingling free-world idealism with a practical determination to defend the global power balance, was a singular triumph for the collective security idea. As it redeemed the dismal failures of the League, so also it confirmed the suspicion that the communist menace excluded no means in pursuing its expansionist aims.

Washington had thought it discerned the Russian hand in Southeast Asia even before this event. A month before the attack on Korea, the United States extended military and economic aid to those three petty states to which France had in 1948 granted a nominal independence within the French Union. Announcing the new policy from Paris, May 8, 1950, Secretary Acheson said in part: "The United States, convinced that neither national independence nor democratic evolution exists in any area dominated by Soviet imperialism, considers the situation to be such as to warrant its according economic aid and military equipment to the Associated States of Indochina and to France in order to assist them in restoring stability. . . ." While the policy reflected, in part, a price demanded by France for her cooperation with NATO, it seems fair to assume that the language was of American choosing. As the Korean war deepened, so did our assistance to the French forces in Indochina. A joint statement in September 1951 by high diplomatic and military officials of the two governments expressed "complete agreement that the successful defense of Indochina is of great importance to the defense of all Southeast Asia" and emphasized that

American and French policies in Indochina "are not at variance." The United States promised faster deliveries of military equipment. A similar communique of June 30, 1952, expressed "unanimous satisfaction over the vigorous and successful course of military operations;" it added that the "excellent performance of the Associated States' forces in battle was found to be a source of particular encouragement." Already underwriting one-third of the total cost of the Indochinese war, we proceeded further to expand our military aid to "the French Union."

In 1954, we were just a year beyond a painfully achieved Korean truce, after three years of bloody fighting. The communists had won the civil war in China, a result which brought severe psychological shock to Americans, who had nurtured sentimental notions of the Chinese people and of U.S.-Chinese relations. Mao was consolidating his control over that vast land mass and its population then numbering 600 million people. Chinese communist intervention in the Korean war, brought on by a serious misreading of diplomatic signals on both sides and by the Truman-MacArthur decision to march to the Yalu, had highly charged America's fears of the Yellow Peril; more broadly, it had reinforced our perception of a precarious coalition of free states under assault across the entire globe by a seamless international conspiracy. In the circumstances, it was almost inevitable that the United States would view the impending French departure from Indochina as merely the opening of another avenue for communist expansion in Asia.

The possibility of local, independent communist action lay outside the range of our cold-war vision. As Secretary Dulles said in June 1954: "At the moment, Indochina is the area where international Communism most vigorously seeks expansion. . . . The problem is one of restoring tranquility in an area where disturbances are fomented from Communist China, but where there is no invasion by Communist China." From the penetrating analyses of George Kennan, the leading Russian expert of his time, the somewhat undiscriminating inference was drawn that *every* form of communism flowed without limit into power vacuums and open crevices wherever they presented themselves. And Indochina without the French seemed to fit that interpretation almost precisely, with Ho Chi Minh dominant in North Vietnam and the Chinese land mass controlled by Mao.

America's policy, engineered by President Eisenhower and Secretary Dulles, thus set about building an anti-communist counterforce in the South—first by helping to establish the de facto reality of a new sovereign nation, next by finding and installing a new national leader (Diem), and then by endowing him with abundant economic and military assistance. The United States was not a signatory to the Geneva Agreements (nor to the Final Declaration of the conference which spelled out the agreement to all-Vietnam elections in 1956); as President Eisenhower explained it on July 21, 1954, the agreement "contains features which we do not like." In a separate statement at Geneva, the United States declared that, while it would refrain from the threat or the use of force to upset the terms of the settlement, it would take a grave view of any renewal of communist aggression in the area. It then moved urgently to conclude the SEATO alliance and to bring under its protection Cambodia, Laos and one-half of Vietnam, *i.e.* "the free territory under the jurisditcion of the State of Vietnam."

In July 1955, the new government in Saigon took, with U.S. encouragement, the next logical step; it rejected the North Vietnamese invitation to discuss elections, on grounds that were above suspicion in the West, given the context of total struggle against "International Communism." Saigon argued that the people in the North would be unable to express their will freely, and that falsified votes in the North could outweigh genuine votes in the South. Underlying every specific move was the firmest American determination to prevent any further communist advance.

It is significant that these policies and actions were strongly supported by the American people; there was no dissent from within government, very little from Congress or the press, and nothing significant from scholars or other close observers of foreign affairs. As a nation we had little perception that we might be frustrating a widely supported national independence movement by lending our aid and our prestige to what were at best colonial puppets, who suffered an innate incapacity to win over any sizable segment of the Vietnamese people to their side, and who, as it turned out, could not govern at all without the direct presence and support of a vary large U.S. expeditionary force. What we saw predominantly was another disagreeable but utterly necessary effort to plug the dike against further communist expansion in Asia.

III

It is very difficult to argue today that that judgment did not reflect the historical and political truth for America at the time, for it was based on direct, chilling and bloody encounters with Stalinism at many strategic points on the globe. The trouble and the tragedy have been that the American response to the cold war generated its own momentum and, in doing so, led us progressively to actions beyond the rational requirements of our national security. Looking back, one can see why men of good conscience—even men with a sense of history—were vulnerable to the developing *hubris*, for the major elements of our national response had roots in some of the noblest American traditions. From Woodrow Wilson down through Franklin Roosevelt we were bequeathed the legacy of America's democratizing mission in the world. And whatever retrospective cynicism Americans might have felt at having fought in 1918 "to make the world safe for democracy," it did not make the "Four Freedoms" or the "Atlantic Charter" any less compelling as political aims in 1945. From Woodrow Wilson and Henry Stimson came the strong belief in the need for collective security against aggression, a conviction reinforced by the disastrous failures of the League of Nations in the 1930s which had led us to the holocaust of World War II. From the tense confrontation with Stalinism came a semi-official, increasingly dogmatic anti-communism.

Each of these strands of policy was legitimate and useful, if applied with a sense of proportion. But what began happening after, and as a result of, the Korean war can be seen with the benefit of hindsight as extension pressed to the point of distortion. Stimson's doctrine held that collective action was required to prevent rather clear-cut aggressions by great powers against the *vital* interests of other great powers, in order to maintain or restore a working balance of power among those leading states. But John Foster Dulles, who practiced a devil theory of communism, began to apply the collective security idea to cases where great power involvement was merely speculative or tenuous, or where the U.S. interest, seen in proportion, was only marginal. The Central Treaty Organization (CENTO), viewed by Dulles as a barrier to a Soviet military attack southward into the Middle East, merely generated improvements in the road network and other communications linking Iran, Afghanistan and Pakistan; it also provided Pakistan with arms in order to balance off India.

CENTO did not, however, prevent Soviet penetration into the Middle East; that feat was accomplished bloodlessly by the proven Western strategem of offering military equipment—in this case to Egypt, Syria and Yemen. The South-East Asia Treaty Organization (SEATO), created in response to what was seen as the danger of communist Chinese hordes pouring down through Southeast Asia and on into Malaya, Burma and Indonesia, brought together a strange collection of physically weak or politically disabled partners. Indeed the unlikelihood that they could or would ever act effectively in concert was so apparent that the alliance provided only the thinnest cloak for what was privately understood to be its underlying purpose: namely, the protective exercise of U.S. power. Six months before the treaty was signed, Secretary Dulles had warned of a possible communist Chinese invasion of Southeast Asia. "If such overt military aggression occurred," he said on June 11, 1954, "that would be a deliberate threat to the United States itself. The United States would of course invoke the processes of the United Nations and consult with its allies. But we could not escape ultimate responsibility for decisions closely touching our own security and self-defense."

By these and similar pronouncements the Chinese communist menace was inflated, and the American defense line drawn through the heart of Southeast Asia. Thus were distortions of threat and interest progressively embedded in the unspoken suppositions of policy formulation, accepted by both political parties and sustained by American public opinion. From 1950 onward, we underwrote, for example, a large Nationalist Chinese Army on Taiwan, a policy based partly on the rationale that it was necessary to guard against a large-scale invasion from the communist mainland; more objective analysis showed in 1965 (when Mao's armed forces were better organized and equipped) that his chances of sending a sizable amphibious force across 120 miles of open water in the face of Nationalist aerial surveillance, the Seventh Fleet, and quickly available U.S. combat airpower was approximately zero.

By a similar process of inflation, the proportioned impulse that produced the Marshall Plan led later to the delusion of "nation-building" in Vietnam, and to Lyndon Johnson's expressed hope of bringing the full fruits of the Great Society to the Mekong. Prudent and rational anti-communism, which recognized Moscow and Peking as major adversaries in the international arena, but understood that ideology is transient while national interests endure, degenerated for a time into a sort of religious obsession which saw the threat as a changeless, all-encompassing evil; the result was to becloud clear thought. The pressures thus arising from a combination of real and spurious threats, and from our assumption of vast responsibility in a world seething with change and discontent, moved U.S. policy—and American opinion—toward a Pavlovian tendency to see every local uprising as a mortal test of wills between a communist octopus and the free world coalition. The trouble was, of course, that this view of our various adversaries as a monolith persisted long after the facts on which it was based had begun to shift.

The sea changes in the communist situation that occurred in the late 1950s and the 1960s are now well known; one needs therefore to cite only the major developments as reference points: (1) the Sino-Soviet breach, which split the vaunted unity of communist doctrine and thus progressively undermined the Soviet position as Mother Church; (2) developments within the U.S.S.R. itself—caused by years of effective NATO containment, the aging process, and the effects of affluence—which moved Russia toward the posture of a status quo power and noticeably reduced Soviet revolutionary fervor in relation to the underdeveloped world: (3)

Moscow's progressive loss of appeal to and control over communist parties throughout the world that lie beyond the physical reach of Russian military power; and (4) the growing uneasiness of the Soviet position in Eastern Europe, brought about by broader economic and cultural relations with the West and the radiated effects of de-Stalinization in Russia. The latter process led, of course, over a period of years, not only to signs of public criticism of the official system in Russia, but also to varying kinds of self-assertion in Eastern Europe, where latent nationalism needed only opportunity to be rekindled. The invasion of Czechoslovakia in 1968 seemed to mark the end of officially tolerated post-Stalin liberalism, but it did not end Russian uncertainties in Eastern Europe; moreover, it once again showed the world a siege mentality that could hardly enhance the attraction of communism in other places.

Notwithstanding these developments—which between 1954 and 1964 were of course unevenly paced, partially disguised, and incomplete—every American policy action in Vietnam during that period, under three Presidents and ranging from economic aid to military training to military supply to the sending of advisers, continued to be based on what seemed a self-evident proposition: namely, that the expansion of "International Communism" presented everywhere, and in nearly every form, a direct menace to U.S. security that had to be stopped—in the last resort by whatever means were necessary.

We thus embarked upon large-scale military intervention in 1965 because the President's advisers, and the President who accepted their advice, remained the prisoners of their cold war experience at a time when communist power had in fact ceased to be monolithic and was breaking up into ideological and political fragments. Intellectually aware of this fragmentation, American leaders were neverless unable to acknowledge and apply the implications of that process for either "International Communism" or the U.S. interest in Southeast Asia. Still impelled by the long shock wave produced by the communist victory in China and the French collapse in Vietnam, they saw instability in that area as primarily the consequence of alien subversion; they also saw it as intolerable—and remediable.

The cold-war syndrome prevailing in Washington in 1965 thus represented no break with the Eisenhower and Kennedy periods. None of those responsible perceived the necessity—or the possibility—or redefining our interests or our role in the world in ways that would permit the drawing of more careful distinctions between those commitments and involvements that are in fact vital to our national security, and those that spring more or less from our deeply held view of what the world "ought" to be and of how it "ought" to be organized. A few viewed the prospect of a protracted testing of wills in insurgent-counterinsurgent combat with missionary zeal, accepting as an article of faith the dubious notion that an insurgency blocked in Vietnam would deter an insurgency planned in Jordan or Trinidad. Convinced absolutely of Americas altruism, they were persuaded that only through the application of American-guided "nation-building," American counter-guerilla doctrine, and, if need be, American military forces could backward nations be saved from the scourge of instability and brought to their rightful place in the modern world.

Our efforts on behalf of South Vietnam through 1964 are not, I believe, fairly construed as immoral, if one thus understands the origins of the governing U.S. attitudes and the formidable new strength and dimension they were given by the relentless pressures of the cold war. Though flawed by progressive misconceptions, U.S. policies toward Southeast Asia were well intentioned and pursued in the earnest belief that we were defending freedom. Yet at each of several critical junctures—in 1962 when President Kennedy (at the prompting of General Maxwell Taylor and Walt Rostow) introduced artillery and fighter-bomber aircraft into South Vietnam and raised U.S. advisory sterngths from 700 to 16,000; after the overthrow of Diem in November 1963; in the autumn of 1964 when the collapse of the carbroard regime in Saigon seemed imminent—American leadership failed to grasp the central truth: namely, that the U.S. interest in Southeast Asia is limited, not vital; that while a limited effort to shore up South Vietnam was warranted, a total effort to save a government founded at low tide upon the receding sands of the French colonial empire was both alien to our interest and destructive of our reputation. The sudden discontinuity in the American presidency may well have been the decisive factor after 1963.

In any event, the chances for restraint, for acknowledging mistakes with reasonable grace, and for an intelligent cutting of losses were missed. The nation went over the brink and down the slippery slope. We failed to see that the realization of our ostensibly limited objectives in Vietnam required in fact the total frustration of the other side's aims, and thus might well involve a wholly open-ended commitment. North Vietnam's unexpected tenacity, deriving from the fact that the war was for Hanoi a vital struggle, led us in the event to the application of progressively unlimited means. This loss of proportion led to wanton destruction, to a gross disparity between ends and means, and therein lies the immorality.

It would be, of course, incorrect and unfair to place all of the blame on President Johnson and his advisers, for, as is evident, we are dealing with what has been a national state of mind. It is well to remember that the advisers were widely regarded when they entered government as among the ablest, the best-informed, the most humane and liberal men who could be found for public trust. And that was a true assessment. President Johnson himself reflected a fateful duality, with overtones of personal tragedy. In late 1964, before the decision to insert American combat forces was taken, there is evidence that he clung to very real doubts concerning the wisdom of further U.S. military involvement in Vietnam, and that he resisted the contrary advice of major cabinet officers. But once he was overborne by the felt pressure of events or the collective weight of his advisers' experience, once he was committed, then his visceral preference for victory came into the open. From that point onward, his domineering personality and his strong allergy to dissent within the bosom of his official family made it almost certain that advice to him would continue to be homogeneous.

Three years later—with a half-million Americans waging no better than a military stalemate, with physical and human destruction in Vietnam on a rising scale, with our domestic scene punctuated by protests, draft resistance and the fateful merging of anti-war and racial dissension—it still required a near cataclysmic event to arrest a policy of open-ended escalation. To put the matter more precisely, it required the dramatic, undisguisable shock of the Tet offensive to knock the props out from under the contrived structure of official optimism, to create heavy public pressures for change, and thus to enable a few well-placed and determined men within the government to restore a measure of proportion to our policy in Vietnam.

IV

What are the outlines of the situation today, a little more than two years after the Johnson decisions that put a ceiling on the war? They suggest the tenacity of the legacy. Shopworn, altered by circumstance, lacking the full confidence of old, the cold war syndrome appears nevertheless to be alive and well and living in Washington.

One perceives that President Nixon had the opportunity (like President Eisenhower with respect to Korea in 1953) to take definitive steps toward liquidating the war during his first months in office, without political risks for himself, indeed with political benefit for both his own party and the cause of national unity. In fact, his opportunity was broader. It was no less than the chance to lead the nation firmly away from a decade of self-deception in Indochina, to admit a national mistake and by that cleansing act begin to uncoil the contradictions and restore the national balance. He could have set himself the task of demonstrating that, after five years of major fighting, we had done as much as we could do to assist South Vietnam, and that our proper course should now be an orderly but unswerving withdrawal, recognizing two central realities: that the tangled political issues which torture and divide Vietnam, growing as they do out of long colonial repression and the consequent struggle to define a national identity, can be settled only among the Vietnamese themselves; and that contrary to the erroneous assumption on which U.S. military intervention was based, the particular constitutional form and ideological orientation of Vietnamese politics do *not* affect the vital interests of the United States.

It is significant that the new president did not take that road, but meditated upon the problem until the honeymoon period was over and the war had become unmistakably his responsibility and that of the Republican Party. Why did he do this? One is drawn by his actions and utterances to the conclusion that he personifies the ambivalence of his generation, which is now in uneasy transition from the ingrained certitudes of the cold-war syndrome toward somewhat unpalatable new truths. He is somewhere between believing in the essential rightness of this war and understanding that the American interest requires its liquidation. He has evolved a policy that seems aimed at substantially reducing and possibly ending the American role, but so conditionally and gradually as to make the process almost imperceptible. At the same time, he has been unwilling to abandon either the rhetoric that supported our intervention in the first place or the implicit insistence that our proxy must prevail even if we depart. Like his immediate predecessor, he appears to lack the scale of mind and the inner security required to risk even a transient loss of national prestige for the sake of a healthy national adjustment to reality in Southeast Asia.

On November 3, 1969, Mr. Nixon said he was proceeding on two fronts: "a peace settlement through negotiations or, if that fails, ending the war through Vietnamization." Negotiations have thus far failed—chiefly because the U.S. negotiating position does not reflect current realities. With minor embellishments, this position still rests on the President's proposals of May 14, 1969, calling for mutual withdrawal of United States and North Vietnamese forces followed by internationally supervised elections, which would be arranged by a special commission in which the National Liberation Front would participate. But Hanoi has never been prepared to accept arrangements for elections worked out under the auspices of the Thieu government and in which the winner would take all; and the U.S.-South Vietnam military position (now affected by the withdrawal of 110,000 American troops and the announced intention to remove another 150,000) is not sufficient to compel the withdrawal of North Vietnamese forces. The resulting deadlock at Paris ought not to be surprising; it reflects the fact that our present political aims exceed our bargaining power.

To put it bluntly, the one thing we can negotiate at this stage of the war is the manner of our going. Averell Harriman, who speaks with a special authority on the subject of negotiations with the North Vietnamese, appears to believe that if we would declare our intention to leave South Vietnam, we could negotiate not only the return of our prisoners, but also the formation of a neutral government in the South, including but not dominated by the National Liberation Front, and committed to settlement and cordial relations but not merger with North Vietnam. According to Mr. Harriman, an unambiguous American declaration of departure could bring the Russians into a cooperating position, and could thus establish the preconditions for international guarantees of the negotiated arrangements, including, after a reasonable period, international supervision of all-Vietnam elections.

It does not seem impossible that a clear-minded President could lead American opinion to an understanding that firm action along this line need not be cause for a national nervous breakdown; in fact, the military and economic, as well as the psychological, advantages of removing our leg from the quicksand are fully demonstrable. Our power and influence would not evaporate. We would not be rendered incapable of defining and defending our vital and legitimate interests. On the contrary, our ability to reassure our NATO and Japanese treaty partners, and our capacity to exert a firm and steadying influence on the dangers in the Middle East, could only be enhanced by the restoration of our global poise. Our industrial, technical and cultural achievements would continue to astound and attract the world.

President Nixon remains convinced, however, that American prestige in Asia rides on the survival of an anti-communist regime in Saigon. He thus sees an approach such as the Harriman proposal as leading to "humiliation and defeat for the United States." He employs the scare tactic of a "bloodbath" if we should depart under conditions that would leave the survival of the Thieu regime in doubt. In this he misrepresents the known facts concerning Hanoi's treatment of Catholics in the North since 1954, and ignores: (a) the clear reality that an announced U.S. intention to depart would create a strong incentive for compromise settlement among virtually all South Vietnamese, except the inner circles of the Thieu regime; (b) the marked Vietnamese capacity and penchant for accommodation; and (c) the fact that a bloodbath exists in Vietnam *here and now*—in the form of indiscriminate killing and destruction produced by B-52 saturation raids, search-and-destroy operations, "free fire" zones, and atrocities such as those perpetuated at Song My. From such a perspective, the President was not moved to modify his negotiating position at Paris, but to invade Cambodia in what most experienced observers regard as an illusory attempt to force Hanoi to negotiate on his terms.

Thus strapped to a negotiating position that cannot succeed, he is thrown back upon the policy of Vietnamization. This is a policy of a certain virtue, but it is important to understand what it can and cannot accomplish. If linked to a definite deadline for total withdrawal it can be a vehicle for the relatively rapid extrication of American forces; if not so linked, it can become the deliberate or inadvertent centerpiece of an argument designed to show that the permanent retention of sizable American forces in South Vietnam is an inescapable necessity if we are to avoid "humiliation and defeat." In neither case, however, is Vietnamization likely to lead to an ending of the war through political settlement. For by enlarging and strengthening South Vietnamese armed forces, it buttresses Saigon's natural resistance to compromise negotiation; on the other hand, it cannot change the military balance sufficiently to modify Hanoi's refusal to negotiate on Saigon's terms. Unfortunately, President Nixon is trying to leave the impression that Vietnamization is somehow equivalent to negotiations, in the sense that it leads to "a just peace;" in fact, it moves in the opposite direction—toward making the war interminable.

The Nixon policy thus comes down to a continuation of the strategy of attrition, hopefully at lower and therefore politically acceptable levels of violence, and ending hopefully at some distant date in a sort of triumph by survival for the Thieu régime. It is a policy built on the gossamer dream that the Thieu forces can in fact be enabled to stand alone against North Vietnam within the time-frame defined by American domestic pressures for the withdrawal of U.S. forces. It is a policy which seeks to control events in Southeast Asia, while at the same time reducing U.S. forces and thus U.S. bargaining power and influence in the area. It is a policy which declines to come to grips with the hard choices that must be made if U.S. forces are to be protected as their numbers decline and the war continues.

In particular, the insistence on a very gradual, very conditional departure creates vulnerabilities that are potentially grave. The lingering nature of the process makes it vulnerable to unanticipated intervening events—like the Lon Nol coup in Cambodia—which knock it off balance, create new pressures for compensatory military action, and thus further confound an already complicated set of equations. At the same time, the conditional nature of the process—the uncertainty over whether we intend to leave totally or only partially—precludes a negotiated settlement and works against the development of even a tacit understanding with the other side with regard to lowering the level of violence. It thus increases the jeopardy of U.S. forces. It also keeps alive the hopes of those who, erroneously believing the 38th and 17th parallels present analogous issues, want to "do a Korea;" that is, apply indefinitely whatever American muscle is required to transform South Vietnam into an anti-communist bastion.

It is reasonable to suppose that the perception of some or all of these weaknesses in present U.S. policy, and a desire to escape their consequences, was what led President Nixon to his watershed invasion of Cambodia. That decision, taken virtually without consulting any person or institution that shares his Constitutional responsibility, brought to a climax an already growing crisis of confidence in the national leadership. It showed how seriously the President had underestimated the risks of his policy for the continued cohesion of our own society. It showed that the Indochina issue is more than ever a virulent poison in the national bloodstream, reaching now to all segments of the population, but permeating those citizens under 25 years of age who are called upon to do the actual fighting and who by 1975 will comprise nearly half the population. It made blindingly clear the grave peril of extending our national preoccupation with the Indochina war for an indefinite period.

These are somber indicators of the prospect before us; yet the shocked and impassioned general reaction to the Cambodian adventure may in fact point the way to more hopeful developments. For that reaction seems to show that, while the President and a small, influential segment of the foreign-military bureaucracy remain residually hooked on the cold-war syndrome, there is rapidly widening agreement in the Congress, the press, the intelligentsia, and even in the putative silent majority on these propositions: (1) the United States does not and cannot control events in Southeast Asia, either at the present level of effort or with a much larger commitment, and neither can the Russians or the Chinese; (2) the United States has no vital interest at stake in Indochina; we can accept and adjust to whatever outcome is arrived at by the people who live there; (3) the United States must wholly terminate its military role in Indochina within a short time (by the end of 1971 at the very latest) or else accept grave risks of our own national disintegration; and (4) if our elected leaders will cease their appeals to the emotionalism that unavoidably surrounds the concepts of "national commitment" and "national prestige," and will deal in true proportion with the real choices facing us in Southeast Asia, there is no reason why our rich and powerful country cannot extricate itself with reasonable poise and dignity, without a traumatic loss of self-confidence, and without a lapse into mindless isolation.

The highest test of character is to learn from the past, to admit one's mistakes, and to act on that admission. This remains the course of honor and reason and sanity for United States policy in Indochina. Any other course can only compound the present contradictions and lead us to the kind of trauma that could quite literally dissolve the bonds of our political union.

FROM THE VIETNAM WAR TO AN INDOCHINA WAR

(By Jean Lacouture)

During the last week of April 1970 the Vietnam war became the Second Indochina War. On April 24 and 25 representatives of the four movements of the Indochinese Left convened at a certain spot in south China to seal an alliance that had been contracted many years before by three of the movements—the North Vietnamese Lao Dong, the Pathet Lao and the South Vietnamese National Liberation Front (NLF)—and to which Prince Sihanouk, overthrown a month earlier by the Cambodian Right, was now adhering in a conspicuously unconditional manner. The *Indochinese* revolutionary front thus came into being.

Five days later, President Nixon announced the entry into Cambodia of sizable American contingents backed up by South Vietnamese units. This operation, dubbed "Total Victory," was presented in Saigon as an attempt to wind up the war and be done with it. In this manner a strategy was defined which confuses the idea of victory with that of extending the conflict outside Vietnam. In the light of the disclosures made two weeks before by a subcommittee of the Senate Foreign Relations Committee regarding American participation in the fighting in Laos, the conclusion is inescapable that on April 30, 1970, the United States embarked on what is now the Second Indochina War.

Thus Richard Nixon became the first Republican President to increase the responsibilities of the United States on that Asian landmass into which Washington's best strategists have so often insisted that no American army must ever plunge. And the operation was launched under conditions that the worst enemies of the United States might have hoped for. "We must have two or three Vietnams!" Ernesto "Che" Guevara had trumpeted in 1967 in the name of the worldwide revolution. And there they are, from Luang Prabang to Kep: two or three Vietnams, that is to say, the whole of that territory of Indochina which French colonization seems, in retrospect, to have put together to serve as the framework for a revolutionary undertaking—a framework that is more open to Vietnamese energies than the restricted territory of Vietnam alone.

The very word "Indochina" was created by colonization and for colonization; the Danish-born geographer Malte-Brun coined the term in 1852. In 1887, an Indochinese administration was set up, under the authority of

a governor general presiding sometimes in Saigon and sometimes in Hanoi, composed of the following elements—the colony of Cochin China in the South; the protectorates of Annam in the east, which retained a ceremonial sovereign residing in Hué, and of Tonkin, in the north, where an "imperial delegate" resided; and the kingdoms of Cambodia and Laos in the west, whose monarchical systems were left intact by the colonizers. This arrangement was a strange combination of three Vietnamese countries strongly marked by Chinese influence and Confucian historical tradition and the little kingdoms of the Mekong, which belong, rather, with the cultural sphere of India and are wholly dominated by the strictest form of Buddhism.

In concocting this amalgam of nations and civilizations, the French colonizers were, like their British rivals in Nigeria, attempting to set up the most economical kind of operation, one by which some of the colonized peoples are made to exploit the others. And to a large extent they succeeded. In Vietnam they managed to maintain a class of mandarins, which enabled them to develop an artful indirect kind of colonization. In Laos and Cambodia, a class made up of Vietnamese petty officials, small businessmen and artisans served as the motor of French colonization. In this way a relatively economical system of exploitation was established, and the three peoples to be dominated were, in appearance, lined up against one another.

In fact, the French colonizers overshot their objective; in spite of themselves they united, in a strange way, these three different peoples, at very dissimilar levels of development, and in so doing imposed on them a single historical framework which the revolutionaries are now making use of for their own puposes. Of course, the Vietnamese intermediaries did inspire ill feeling and hatred of the kind which recently exploded in Cambodia. But this ill-will does not appear to be great enough to deflect the three peoples from developing together on converging courses in the years to come.

II

This Indochinese concept, intimately bound up with history and with colonial methods, was, indeed, very quickly seized upon by the revolutionaries, who retained the framework imposed by their enemy the better to struggle against him. This was what one of the founders of the Vietminh dubbed one day the strategy of "the glove turned inside out."

On February 3, 1930, in Hong Kong, the Vietnamese Communist Party was founded; Ho Chi Minh (then Nguyen Ai Quoc) immediately became its top leader. But six months later the leader called his comrades together in another conference in the course of which he gave the party a new name, rechristening it the Indochinese Communist Party (ICP). It was after consulting with the leaders of the Third International that the future president of the Democratic Republic of North Vietnam reached this decision, which in his eyes had the merit of giving the revolutionary effort he had just launched a more international character. It is worth noting, moreover, that the program which Nguyen Ai Quoc promulgated at that time included the following aims: (1) to overthrow imperialism, feudalism and the reactionary bourgeoisie in Vietnam, and (2) to achieve the complete independence of Indochina. Thus the first strategist of communism in this region restored a distinction consonant with the inequalities of the three countries in terms of development by calling for a *social* revolution in Vietnam and a *political* one in the peninsula as a whole.

It must be admitted that this Indochinese strategy was for a long time quite artificial, since the ICP remained for many years essentially Vietnamese. And it must be noted that when the Laotians and Cambodians truly embarked on revolutionary action they founded their own organizations—the Pathet Lao for the first and the Pracheachon for the second.

It was on an almost exclusively Vietnamese basis that Ho Chi Minh and his comrades launched the revolution in 1945. In the two neighboring countries the independence movement was sparked by very diverse forces: in Cambodia, they were, at first, two traditionally educated intellectuals, Hiem Chieu and Son Ngoc Minh, and in Laos a curious triumvirate of half-brother princes: the feudalist Petsarath, the liberal Souvanna Phouma and the Marxist Souphanouvong. Very quickly, moreover, the Vietnamese revolutionaries were to set up cells within the Laotian movement, while in Cambodia the local revolutionaries were to conserve a much greater degree of autonomy.

In 1951, six years after the outbreak of the colonial war against France, the three Indochinese movements concluded a Viet-Lao-Khmer alliance for the purpose of preparing to extend the fighting to the whole of the peninsula. Two years later, indeed, General Giap, pinned down by the French expeditionary corps in the key zones of the deltas of the Red River and the Mekong, suddenly decided to widen the theater of operations and entice his enemies onto new battlefields. In April 1953 he drew the French general staff toward Laos, encouraging them little by little to think that that was the terrain on which they could smash him. Between November 1953 and May 1954 came the creation, then the resistance, and finally the collapse of the entrenched camp of Dienbienphu. In broadening the First Indochina War, Giap faced the loss of everything. (This was a lesson which American strategists do not seem to have remembered: I shall have more to say on the subject.)

The Geneva Conference in 1954 was to bring the First Indochina War to an end. The Indochinese front was not, indeed, much in evidence at those councils: since the revolutionary parties had not had sufficient time to coördinate their efforts, Laos and Cambodia were represented there by governments whose only wish was to separate their problems from those of Vietnam and to draw a veil over the existence on their territories of groups that were more or less Marxist. But these groups were to grow bigger in the course of the ensuing years, and at the second Geneva Conference, the one devoted to Laos in the summer of 1962, the Indochinese theme was invoked much more often. The delegate from North Vietnam, Ung Van Khiem, hinted that a neutralization of the Indochinese region would be salutary. He specifically excluded the Democratic Republic of North Vietnam from this, but left the door open for the future.

This idea was taken up again in a much more precise and intesting form in various programs promulgated by the National Liberation Front of South Vietnam, founded in December 1960, which went on record as favoring an alliance of neutral nations comprised of Cambodia, Laos and South Vietnam. It seems astonishing today that observers at the time did not take greater note of the very great originality of this program and the audacity it took for those South Vietnamese underground fighters to place their future within a framework in which, at least for a time, Cambodia and Laos would be closer to them than North Vietnam. Of course, for most of the American experts the NLF did not exist except as an echo of hypocritical orders dictated by Hanoi.

It was at the beginning of 1965, on the initiative of Prince Sihanouk, that Indochina emerged clearly as the major theme of all struggle against the American intervention and for political and economic reconstruction. On February 14, 1965, a "conference of Indochinese peoples" met in Phnom Penh. For Sihanouk this was most importantly an opportunity to have his country's frontiers guaranteed by the North Vietnamese and the NLF, whom he saw as the eventual victors and thus as his future neighbors. For Hanoi and the Front it was a chance to demonstrate the solidarity against imperialism of the revolution and neutralism, of the national masses and the national bourgeoisies, of the Vietnamese and their neighbors.

Geopolitical front, socio-economic alliance: at Phnom Penh were to be found all the factions opposed to American hegemony, from the intellectuals, mostly bourgeois and Catholic, of Tran Van Huu's "Committee for Peace and for the Renovation of South Vietnam" to the guerrilla fighters of the Pahet Lao and the bureaucrats of the Cambodian Sangkum. The major theme of the Phnom Penh meeting was the search for a formula for the neutralization of the whole of Indochina, the first step toward which might be an international conference like that of 1962, broadened to consider the future of the three countries. But the delegate from Hanoi, Hoang Quoc Viet, opposed this idea of Prince Sihanouk's: the bombardments of the North by the U.S. Air Force had just stiffened Hanoi's atitude still further. The Phnom Penh conference made no advance along the road to peace; but it confirmed and made manifest the "Indochinese" theme, and brought to light aspirations held in common by the most diverse delegations. It was, on this level, a success.

The American bombing of North Vietnam also contributed to the "materialization" of Indochina. It did this in three ways. First, the Vietnamese revolution, attacked at the very center of its strength, sought any and all means of hitting back, and all fronts thereafter became acceptable for striking a blow at the enemy. Secondly, this retaliation, with priority targets in South Vietnam, required a set-up in the transport of men and supplies from North to South by way of the Ho Chi Minh Trail, which goes through Laos for several hundred kilometers and through Cambodia for about a hundred. And finally, this aerial strategy gave an impetus to the increase of flights by American aircraft over the most diverse objectives—including, among others, frontiers; from this across a multiplicity of aerial incursions, in 1965 and 1966, which progressively nudged Cambodia into the war.

It was, however, in Laos that the greatest extension of the war outside the frontiers of Vietnam occurred. Since 1964—that is, since the actual dissociation of the neutralist coalition government formed in 1962, a sort of modus vivendi had been established, dividing the kingdom into two zones: in the west, seven provinces, from Luang Prabang to Savannaket, controlled (less and less) by the Vientiane government of Prince Souvanna Phouma, and to the east, from Sam Neua to the Cambodian frontier, five provinces controlled by the Pathet Lao and traversed by the Ho Chi Minh Trail. The double neutralization, both diplomatic and governmental, imposed by the 14 powers participating in the second Geneva Conference had thus given way to an actual partition.

After the halt of the bombings of North Vietnam in November 1968, however, the American bombers stepped up their raids on the Ho Chi Minh Trail linking North and South Vietnam across Laos and part of Cambodia. The frequency and amplitude of these bombings were described in a report of a Senate Foreign Relations subcommittee published in April 1970. Testifying before this subcommittee, Senator Stuart Symington declared that these raids had practically supplanted the raids over North Vietnam that had been halted, and revealed that the U.S. ambassador in Vientiane had the authority to order these bombings and specify

where the bombs were to be dropped, which, according to the Senator from Missouri, made that diplomat virtually a "military proconsul." Directly challenged on this matter, former Ambassador Sullivan declared that since he had been replaced in Vientiane by his colleague Godley these bombing raids had doubled.

So Laos, where almost 40,000 North Vietnamese soldiers are permanently entrenched in a zone which covers almost half the country and against which the U.S. Air Force daily launches from 300 to 400 aerial strikes, has certainly been "in the war" for several years. But operations there took on a new dimension in February 1970, when the Pathet Lao, aided by its Vietnamese allies, overran the Plaine des Jarres, the strategic crossroads of the country, which the tacit partition of Laos had provisionally kept outside its sector. The strategic ascendacy of the communist forces was thus affirmed: it was becoming increasingly obvious that Prince Souphanouvong and his allies held the country in their hands, and that if they did not take either Vientiane or Luang Prabang it was in consequence of a political decision and not a stratgic incapacity. (What is more, in spite of the redoubling of operations by the U.S. Air Force after the capture of the Plaine des Jarres, the Pathet Lao's military and political ascendancy grew still more, so that it was able, at the beginning of May, to take an important center in the south, Attopeu.)

But this strategic ascendancy has not been used (or not yet) by the leaders of the Pathet Lao in pursuit of "total victory." After his forces had seized the Plaine des Jarres, Souphanouvong sent his half-brother and rival Souvanna Phouma an offer to negotiate within the framework of the 1962 agreements, to the end of establishing a coalition government, restoring territorial unity and cutting short all foreign intervention. Obviously, the successes it had achieved in the course of the preceding months would enable the Pathet Lao to increase its demands and its share of power. But the situation of the Vientiane government was so bad that it accepted the principle of negotiation, with Washington's approval.

It will be up to future historians to find out whether or not this trend toward "appeasement" in Laos helped to set in motion the operation of March 1970 in Phnom Penh, and whether or not it was to prevent the initiation of a process which might have led to a generalized negotiation of Indochinese problems as a whole that the "ultras"—South Vietnamese, Cambodians, Thais (and perhaps, but not probably, Americans)—prepared and carried out the Phnom Penh coup d'état.

III

For it is, in any case, the Cambodian episode that has just given the war its true dimensions. We must inquire into the background of it, for the overlapping of strategic combinations and internal intrigue may throw light on the probable future evolution of Indochina as a whole. The affair began in the summer of 1966. Within a few weeks, the Sihanouk régime, which had managed until then to keep the kingdom out of the war and maintain a precarious balance at home between a feudal system adapted to the needs of a nascent capitalism and a progressive intelligentsia (very small in numbers but very active), found itself in a shaky condition at the very moment when the visit in August of General de Gaulle served to shore it up.

One may recall that General de Gaulle's speech at Phnom Penh caused a considerable stir. From then on, Sihanouk became the accomplice in what the entire anti-communist cause in Southeast Asia considered a most troublesome program. In their view, this outpost of Gaullist subversion had to go. In the end it was to be gotten rid of more easily than they imagined because Sihanouk's great ally in Paris was eliminated, and because his successors would turn out to be less attached to the policy General de Gaulle had defined in Phnom Penh.

But Sihanouk found himself on dangerous ground both internationally and at Phnom Penh. He had allowed his relations with Peking to degenerate, thus weakening himself in dealing with the Americans. At home, a few weeks after General de Gaulle's visit, general elections were held—elections which the Prince had wanted to be "freer" than such events had ever been before in Cambodia. The result was to bring a majority of influential landowners into the parliament. Khmer society became represented by those controlled by money and by feudal relationships. Sihanouk had wanted to pay tribute to democracy; instead, he placed the noose of feudalism around his neck.

In the next four years, his personal power was steadily eroded by private interests and those friendly to the Americans. At the same time, neutrality was encouraged and a start was made in establishing state control of the economy. In 1967, one of the leaders of the Left intelligentsia, Chau Seng, who under Sihanouk had held almost all the high offices except the ministries controlling the army and the police, warned the comrade-prince that intrigues were being brought to a boil by the chiefs of the former party of "national renovation," the traditional Right. The names of two of these had already been singled out: Prince Sirik Matak and General Lon Nol. Sihanouk had long been wary of the former and had sent him abroad from one embassy to another. But Lon Nol? He was a soldier, therefore disciplined; and since he was not even a prince, how could he possibly be ambitious enough to think of substituting himself for a descendant of the kings of Angkor?

From 1967 to 1969 Sihanouk, more and more responsive to pressures from the Right, seemed to be letting his relations with Peking become strained, allowing private interests to regain complete control over foreign commerce and banking, and launching a "red hunt" and an anti-Vietnamese campaign.

But why, in the fall of 1969, did Prince Sihanouk go so far as to entrust General Lon Nol with power three months before setting off on a long sojourn in France? Why did he thus entrust his regime to a man he had been warned against, and whose friendly relations with the West had long been known? This can be seen as an overestimation of his own charismatic power, which he believed to be so vast that he could wield it from afar. Or it can be seen as a sign of lassitude. Or it may be considered a Machiavellian trick. Like everyone else, Sihanouk was aware of the growth of the Vietnamese presence in his country. It is possible that in order to avoid having a direct confrontation with his associates, who were beginning to threaten his neutrality, he wanted to stand aside, leaving to General Lon Nol the chore of "cleaning out" Cambodia of the Vietnamese presence, to come back later with his hands clean and his country freer. This is only an hypothesis, but it cannot be completely discounted. One can be too subtle and be mistaken, not so much as to the objective as to the means used. Sihanouk underestimated either the ambition or the convictions of Lon Nol, and the influence of the general's friends in Saigon, if not in Washington.

Sihanouk, who was on the point of slipping into the Western camp, thus found himself abruptly recaptured by the party of revolution. This did not come about wholly by chance. With all his sudden changes of fortune and his diplomatic acrobatics, Norodom Sihanouk had fought almost constantly for over 15 years for peace and neutrality—a neutrality frankly oriented to the East and much more favorable to the interests of Peking and Hanoi than to those of the West. So it was not altogether surprising to find him at the opening of that curious conference of Indochinese revoluntionaries which, as I said, was one of the two most obvious signs of the extension of the conflict, both ideologically and strategically, to the entire peninsula.

IV

The inspiration for the Indochinese conference which convened on April 24, 1970, in a little village in southern China about a hundred kilometers south of Canton came as in 1965 from Norodom Sihanouk. But it was no longer 1965. And it was no longer the colorful, laughing leader, the "star" of Phnom Penh loaded down with unshared powers, the ironic virtuoso of diplomatic tightrope-walking between East and West, who met with the "serious" revolutionary chieftains of Vietnam and Laos. This was now an exile struggling to throw his rivals out of Phnom Penh, a leader flung back by a Rightist coup into the arms of the very same *Khmers Rouges* he had been hunting down three months before. He was now a revolutionary, and as such all the more radical for having been recently converted.

It was in a barracks guarded by soldiers in coarse blue uniforms and surrounded by barbed wire emplacements, a barracks which the Chinese hosts entered only to find out whether the visitors needed anything, that the four groups of Indochinese leaders met for two days. The atmosphere of these sessions, one of the participants informed me, was "brotherly." The chosen language was French, which is spoken perfectly by the lawyer Nguyen Huu Tho, president of the NLF, by the engineer Souphanouvong, the leader of the Pathet Lao, by the militant Marxist Pham Van Dong (the son of a mandarin) and by Prince Sihanouk. It was, another witness said, a meeting of "old Indochina hands," a phrase that is all the more colorful for being the same one used by aging French ex-colonials when they get together in some dusty, sunny café in Marseilles or Nice for nostalgic chats about the good old days.

The greater part of the conference was given over to drafting the final communique, a mixture of threats to the United States and its "lackeys," optimistic proclamations of "final victory," and rather prudent or moderate reminders of the concluding texts of the Geneva conferences, denounced long since by Peking as null and void. An amusing (or significant) incident occurred at the last session. Prince Souphanouvong was in the chair: he called in turn upon his Cambodian and South Vietnamese colleagues to speak. He was preparing to wind up the proceedings himself when Pham Van Dong protested: "You've forgotten me!" "Our friend has anticipated the unification of Vietnam," Prince Sihanouk remarked, making everybody laugh except the delegate from the NLF.

The most interesting themes developed at that conference seem to have been three. First came the affirmation of a very firm *solidarity* among the four movements—but a solidarity sufficiently flexible not to have led the chiefs of "red Indochina" (or those who aspire to being such) into creating a common combat structure. Second, there was the proclamation of the *original nature* of the different struggles and their diversity, from Hanoi to Phnom Penh and from Saigon to Vientiane. Clearly, Pham Van Dong and his delegation wanted to avoid the impression of being imperialists, or even excessively forceful federators. "They were very diplomatic," a witness told me, thinking perhaps that this diplomacy was not necessarily, in the long run, disinterested. And third, there was the reminder of the *"neutralist"* themes explicitly or implicitly formulated in the Geneva texts of 1954 and 1962, and in the political platforms of the NLF and the Pathet Lao (not to mention, of course, the Sihanouk

"line")—theses which could be of use in later negotiations. So in proclaiming themselves certain of military victory the Indochinese leaders were careful to leave out any form of political settlement. Militant Indochina is, then, not just a war cry: it can also be a program for peace.

V

In the meantime, the war is spreading and wreaking havoc. What is most startling in President Nixon's decision of April 30 is its suicidal aspect. I am not speaking here about the consequences of this move for internal American politics, or about the effects it will have on relations between Washington and Moscow. I do not even wish to comment on the obvious contradiction between the two aspects of a strategy which claims that it will rapidly reduce the number of men fighting in the Asian war while it enlarges the field of battle. I prefer to confine myself to a more specifically Indochinese aspect of the question.

There is, first of all, what might be called the gift that has been made to General Giap. In all his steady stream of writings over the last 10 years or so, Hanoi's commander-in-chief has never ceased to assert that every extension of the field of battle serves the revolutionary interests. This is so, he explains, for two reasons: (1) because it is to the advantage of the side with the greater firepower and superior heavy equipment on the ground to concentrate the fighting, while it is obviously in the interest of the side with the greater mobility and lighter armament to break up the fighting and seek to enlarge the combat zone; and (2) because the revolutionaries basically count on the complicity and support of the people, whereas a foreign force has to devote a great deal of time and effort to winning over or controlling by force the people among whom the fighting is going on.

For months, observers had been wondering whether Giap would dare apply his own doctrine and himself extend the front and the battle-zones outside the areas of Vietnam within which he had been more or less held in check since the counterblow that stopped the Tet offensive of February 1968. Now it is his enemies who are spreading the fighting to all of Indochina, under conditions which, in Cambodia, are uniting the masses behind a prestigious political chief who is entering the fray against these enemies. Thus, the operation launched on April 30 seems to me to be contributing to the revolutionary unification of the old colonial Indochina.

Will such a united Indochina become the satellite of China? Mao's speech of May 20 gave many observers the impression that Peking was finally ripping off the mask and proclaiming China's right to control the Indochinese area, much as the Soviet Union held Eastern Europe in thrall after World War II. In my view, this interpretation is wrong. Of course the Chinese leader took the opportunity the Cambodian operation afforded him to attack in the harshest terms the American role of world policeman, and to rejoice in seeing American power entrapped in the Asian rice paddies. But it is noteworthy that his speech did not mention any precise threat or specific action. His appeal was to world revolution, for moral aid and approval, not a call for military escalation. It was a song of triumph rather than a war-like gesture.

The evolution of the Indochina war is the fulfillment of Peking's hopes. The character of the conflict more and more clearly illustrates the validity of the warning of Lin Piao regarding the strategy of countryside versus cities, *i.e.* what is happening in Laos and Cambodia is as it was in Vietnam. The Chinese strategists do not predict complete victory. Revolution in Indochina does not mean Chinese domination. But while a united Indochina, more or less inspired by Hanoi, cannot oppose China, it can limit Chinese expansion. At present, Indochina is fighting under a Chinese banner but its aim is to survive under its own colors.

Vietnamization: Can It Work?

(By Robert H. Johnson)

The uneasy public quiet on Vietnam which the President achieved with his speech last November 3 was shattered by the large-scale U.S. military intervention in eastern Cambodia. Once more U.S. policy in Southeast Asia became the subject of major controversy. In this situation there is some danger that we shall become so caught up in the immediate issues that we neglect more fundamental questions with respect to current American strategy. The new actions are a product of a basic fault in the structure of U.S. policy but do not, by themselves, define that fault.

In his November 3 speech the President offered a strategy based upon the twin approach of negotiations and Vietnamization of the war, accompanied by withdrawals of American forces. He was pessimistic about the outlook for negotiations but told us that Vietnamization would permit the United States to disengage from the war even if negotiations failed. In the period since, the United States has further downgraded negotiations as an essential part of any solution. The only subsequent hint that the government might not consider the Vietnamization strategy sufficient by itself was provided by the President's speech on April 20 announcing future troop withdrawals, in which both the volume and tone of his discussion of negotiations implied a recognition that they were important. He stated explicitly that negotiations at least provide "a better, shorter path to peace." But there was no evidence following that speech of a change in the U.S. position in the Paris negotiations, and the President's action in Cambodia 10 days later clearly gave priority to Vietnamization. This priority was reflected in the renewed emphasis upon the use of military means to end the war and in the justification of the Cambodian intervention on the grounds that it was needed to protect American lives and to "guarantee the continued success of our withdrawal and Vietnamization program."

The basic question therefore remains: Has the President been right in de-coupling Vietnamization and American troop withdrawals from negotiations or are the two strategies essential complements to each other?

The search for an answer to this question must begin with an effort to project into the future the probable results of the Vietnamization and withdrawal policy. Three principal factors will determine the outcome of that policy: North Vietnamese and Vietcong reaction to its implementation; the stability and general viability of the government of South Vietnam; and the closely related question of the ability of the South Vietnamese government and armed forces to cope with the problems of the South at various levels of American withdrawal. As we turn to an examination of these factors, we should realize that now, as in the past, there are almost no agreed "facts" with respect to Vietnam and that any estimate of the future is certain to be disputed.

No one in Vietnam or elsewhere has any clear idea as to likely military reactions by the communists as the United States withdraws from Vietnam. However, we do have the warning last December of General Giap, North Vietnam's Defense Minister, that Vietnamization will be a "tragedy" for U.S. and South Vietnamese forces and that these forces "which have taken severe beatings will get yet harder ones."

It is very clear that the communists wish to see the United States withdraw as quickly as possible. It seems likely that their reactions will depend upon their estimates of U.S. intentions. If the United States were clearly going to remove all American forces quickly, the communists would probably lie low and let us get out with minimum casualties. However, if, as has become increasingly evident, the United States plans to maintain a substantial residual force in South Vietnam for some time, the temptation to undertake some kind of military action against American or South Vietnamese forces will be quite high. The communists would hope to induce pessimism, political change in the South and a more nearly total withdrawal. In April Hanoi did, in fact, call upon communist forces to kill American soldiers at a rate "far beyond the 100-a-week level, which the United States ruling clique has considered bearable." After this, American battle-deaths began to rise significantly above that level.

Political stability in South Vietnam will also be very difficult to estimate in a changing situation. President Thieu is coming increasingly to resemble the late President Diem in critical respects: he is becoming, in the words of a Senate Foreign Relations Committee Staff Report, "increasingly autocratic, secretive and isolated." Like Diem, he seems much more concerned with assuring the absolute security of his present narrow political base than with broadening it. The deep distrust which permeates Vietnamese political relationships is likely to be accentuated by the strains imposed upon the government as it assumes increased responsibility for the war.

The ability of the Thieu régime to cope with the problems of the South will be even more affected by its administrative and military capabilities. While there is considerable optimism in the U.S. government at present about the progress of the rural pacification program, the Senate committee staff report notes that many American officials in the field consider the gains to be fragile and heavily dependent upon the ability of the army of Vietnam (ARVN) to continue to hold the countryside as the Americans leave. Of six factors that are reported as accounting for improved ARVN performance in the past year, four are based upon U.S. matériel, planning, operational and advisory support.[1] Even though most of these elements of support may be continued during an intermediate period after withdrawal of U.S. combat troops, the American ability to influence Vietnamese military planning and action is likely to decline with the elimination of the most important direct U.S. contribution to combat. Moreover, the complex military operations which the United States has mounted in order to exploit the full capabilities of its sophisticated military equipment may be beyond the capacity of the Vietnamese to manage on their own.

The situation in the one area from which all U.S. ground combat troops have been withdrawn, the Mekong Delta, has generally been viewed with considerable euphoria as evidence that Vietnamization is succeeding. But the quiet in this area does not simply reflect a weakening of the communist position but also a clear communist policy of lying low while they rebuild their military forces and political structure for the continuing future struggle.

The predominant, but not unanimous, opinion of senior U.S. and Vietnamese officers in Vietnam is that the North Vietnamese are no longer capable of defeating the ARVN with a massive attack. The issue, however, may be incorrectly posed. The U.S. military ever since 1954 has tended to believe

---

[1] As noted in the Staff Report for the Senate Foreign Relations Committee already mentioned ("Vietnam: December 1969," Washington, United States Government Printing Office 1970). The other two factors are improved ARVN leadership and increased South Vietnamese confidence. This latter factor is certainly also related in some degree to U.S. support.

that massive communist attacks represent the main danger of military catastrophe in South Vietnam. Yet when, in late 1964, the ARVN was on the ropes and about to cave in, its weakness was created more by a combination of political malaise and smaller-scale punishing attacks than by massive military actions. The continuing high rate of desertion from the ARVN is certainly not reassuring as to its ability to sustain high losses without grave effects upon morale and effectiveness.

It is evident from President Thieu's cautions views as to the appropriate timing of U.S. withdrawals, as well as from the continuing flow of news reports on the views of American officers in South Vietnam, that many in Vietnam—aware of the persistent, long-standing weaknesses of the ARVN's military efforts—are rather less sanguine than U.S. policy-makers about the prospects for a reasonably early U.S. pullout.

The U.S.-South Vietnamese military action in Cambodia warrants separate treatment since, potentially, it affects all of the factors just discussed. In the short run it is likely to reduce somewhat the capacity of the communists for military action in the Delta and the Saigon area. Longer-run effects are much less certain.

By placing renewed emphasis upon a military solution to the war and raising new questions in the minds of the communists as to the pace of future U.S. troop withdrawals, the action will reduce the incentives the communists have had to lie low in order to encourage such withdrawals. In any event, past communist behavior suggests that they will seek to make some kind of significant military or politico-military riposte to the Cambodian operations. The idea of "cleaning out" the communist sanctuary in Cambodia may seem attractive, but prior experience with "cleaning out" communist base areas should remind us that this is not a once-for-all operation. Communist forces will return after U.S. and South Vietnamese forces withdraw and the United States is now, in effect, committed to an indefinite continuation of such cleaning-out action. The rationale that argued for the original action will argue for its continuance.

Moreover, if the operation seems initially successful, there may be increased pressure for a similar "cleaning-out" operation in southern Laos (the so-called "Panhandle"). This is a very old idea; proposals for doing it were being made at least as long ago as the beginning of the Kennedy administration. While U.S. and South Vietnamese covert military actions in the Laos Panhandle have reduced the pressures for such an operation, "success" in Cambodia is likely to produce renewed demands by the military for more massive and open intervention. The Laos corridor is, after all, a great deal more important than the Cambodian sanctuary to the war in Vietnam. The political arguments against taking such action will seem weaker now that fuller publicity has been given to our involvement in Laos.

Thus, in undertaking to clear out the Cambodian sanctuaries we have increased our long-term responsibilities. The capability of the South Vietnamese to continue such complex, large-scale military actions by themselves is open to question. Moreover, to transfer such responsibilities to the South Vietnamese will, in the longer run, risk serious political difficulties in view of traditional animosities between the Vietnamese and Cambodians (or Lao). But the more basic long term dangers relate to the responsibility the United States may now have assumed for the survival of a non-communist government in Cambodia, a question that can best be discussed as part of a broader consideration of the options open to the communists as the United States withdraws from Vietnam.

For purposes of a more specific analysis of the probable outcome of a Vietnamization and withdrawal policy, we can project three stages or levels of U.S. force withdrawals. In making these projections it is assumed that the administration will not significantly alter its present negotiating position. This will permit us to focus, in this initial analysis, upon the possible consequences of a policy which is based wholly upon a Vietnamization strategy.

II

Withdrawal of most U.S. ground combat forces. The first projected level would involve the removal of all U.S. ground combat troops except for those forces needed to protect base areas containing other U.S. military elements. It would leave about 225,000 military personnel in Vietnam consisting mainly of a full-scale logistic support element, air and artillery elements, and a large-scale military advisory group. Such a withdrawal probably represents the maximum for which specific planning has been undertaken. In late March, a withdrawal down to this level was contemplated by mid-1971, but events since may have set back this target date somewhat.[2] In this situation it seems highly likely that the United States would also retain more or less its present large nonmilitary establishment in Vietnam. Aid, intelligence, information and other such personnel would be needed for their contribution of advice and support to quasi-military and nonmilitary counterinsurgency operations.

The principal danger which the U.S. government appears to foresee under these circumstances is the possibility of major communist attacks upon U.S. forces during withdrawal, or after its completion. Such communist attacks seem a genuine danger, especially if there is no evidence of definite U.S. plans for the early withdrawal of remaining forces. Communist attacks would be designed to demonstrate the dangers of retaining such a residual force in Vietnam and to shake the confidence of the South Vietnamese. The residual forces would have some capability for self-defense of their immediate base areas, but would be dependent for broader area defense upon South Vietnamese ground forces.

If the communists attacked, they would risk U.S. reescalation of the war, perhaps in the form of resumed or expanded air attacks upon the North. They would probably not consider it likely that the United States would reintroduce any substantial number of the withdrawn ground forces. While North Vietnam would certainly prefer to avoid a resumption of air attacks upon itself, past experience has demonstrated to Hanoi and to us that such attacks are unlikely to have a significant effect upon the outcome of the war. Other escalatory steps such as the mining of Haiphong Harbor, a ground invasion of North Vietnam or nuclear action would carry such high political and military costs or have such limited military value as to seem implausible as a threat and very unattractive to America as a form of action.[3]

Any such reescalation of the war would certainly produce a very substantial political reaction in the United States and would recreate the difficult problem of how to de-escalate.

But the communists would have other options. One alternative would be to leave U.S. forces alone but to undertake greatly expanded attacks upon the armed forces and civilian personnel of the government of South Vietnam designed to shake its confidence in its ability to go it alone. American withdrawals to date have apparently not yet seriously disturbed the confidence of the South Vietnamese in their capacity to cope, because those withdrawals have not yet reached the critical point, and perhaps because the government of South Vietnam remains to be convinced that we shall, in fact, withdraw all combat forces in the foreseeable future.

To the communists, major attacks upon South Vietnamese elements could be more attractive than attacks upon U.S. forces. Such attacks would be more likely to raise serious questions about the validity of U.S. assumptions underlying its Vietnamization policy; would be somewhat less likely to provoke U.S. reescalation; and, most important, could very favorably affect the political situation in the South, which must, in all circumstances, be the central communist objective.

A third option, and one which the communists could exercise under all of the scenarios discussed here, is a major military move in Laos. Such a move could have two immediate objectives—to remind the United States of the dangers of continuing to remain on the ground in mainland Southeast Asia and to point to the fact that the Laos problem cannot be settled by Vietnamization of the war in South Vietnam, but must be settled as part of a larger negotiation. Whether moves in Laos earlier this year had some such motivation or were part of the continuing jockeying for military and political position in that country is difficult to say.

Depending upon how far the communists carried their military action, such a move could present the United States with an excruciating dilemma. Continued non-communist control of that part of Laos that borders the Mekong River is viewed as crucial by the Thais and they would certainly place very heavy pressures on the United States to respond to communist action which threatened their Mekong frontier. But open, direct U.S. military involvement in Laos is a very unattractive proposition as President Kennedy perceived in 1961 when he opted instead for a negotiated settlement. It is also obvious that the Laos nerve of the Congressional opposition is exceedingly sensitive.

While we have no explicit commitment to the defense of Laos, we do have rather strong explicit and implicit commitments to the defense of Thailand. Under the Rusk-Thanat agreement, which was a by-product of the 1961–62 Laos crisis, the United States undertook to fulfill what it considered to be its obligations under the South-East Asia Treaty Organization (SEATO) in the event of a threat to Thailand, whether other SEATO members agreed to act or not. Moreover, by participating directly and indirectly in the combat in South Vietnam, the Thais have committed themselves to "our side" in a manner that is quite unprecedented in past Thai foreign policy. To the Thai, the principle of reciprocity in social and political relationships is of key importance. They are

---

[2] *The New York Times*, March 25, 1970, p. 1. To reach this level, a withdrawal of 225,000 men would have been required by mid-year, as compared with the withdrawal of 150,000 by the spring of 1971 announced on April 20. More recently, however, Secretary Laird has said that U.S. involvement in ground combat will end by July 1971.

[3] In the view of many experts an invasion of North Vietnam is the one action that would very probably trigger direct communist Chines involvement in the war. While it seems most unlikely that the United States will ever employ nuclear weapons except in a situation involving an attack upon the United States, there is a marginal possibility that the threat of nuclear action might be seen as useful in inducing a political settlement. It is possible that the President's thinking on this subject may be influenced by the view that it was a veiled threat of nuclear attack on North Korea by Eisenhower that produced the Korean settlement in 1953. This is, at best, a debatable proposition and the analogy with Vietnam is open to most serious question.

very likely to view their commitment to us as entailing a reciprocal obligation on our side in the event that they are seriously threatened through Laos.

Even though the Thais have begun to hedge their foreign-policy bets somewhat and may be looking toward a future accommodation with North Vietnam and communist China, we cannot assume that they will not ask for major U.S. support in the event of a serious threat to their Laos frontier. Moreover, the question of Thailand aside, it would be very difficult for the United States to sit still during a military conquest of Laos, both because of the broader international political consequences and because of the potential effects upon Vietnam.

Finally, recent developments have provided the communists with new opportunities for action in Cambodia. They are able to back a leader, Sihanouk, who still possesses considerable popularity and an aura of legitimacy among Cambodians. Utilizing this political base and a combination of Vietcong and North Vietnamese forces with existing Cambodian communist and tribal resistance movements, the communists could make life quite difficult for a weak Lon Nol government. While the establishment of a major full-fledged guerrilla movement will take some time, the communists are likely to be capable of major military forays or the establishment of liberated zones without meeting much effective resistance from the Phnom Penh régime unless that régime receives direct U.S. or South Vietnamese military support.

The United States has now implicitly, but clearly, accepted responsibility for the security of a non-communist government in Cambodia. In his April 30 speech, the President argued that the communists posed a threat to the independence of Cambodia and he represented the military action against the Cambodian sanctuaries as response to the Cambodian government's plea for outside aid. The United States, "with the chips down," had come to the support of a small nation under attack. While the President has since denied that we have undertaken a new commitment, the administration has apparently given its blessing to a developing de facto alliance between Thieu and Lon Nol. Thus, the commitment has not been eliminated, but only made somewhat indirect.

In any of these situations, the United States would face some very difficult and unattractive policy choices. So long as there continues to be a substantial U.S. presence in South Vietnam, America is inextricably caught up in the defense of South Vietnam. Moreover, our actions have increasingly committed us to the continued survival of the Thieu government. Yet, as our experience since 1965 demonstrates, we cannot even begin to redeem our commitments without employing U.S. ground combat forces. Thus, in a situation where the communists attack U.S. or South Vietnamese forces and the South Vietnamese demonstrate an inability to cope with the attacks, the United States will very likely face the options of letting the attacks succeed or of reintroducing ground forces. The potential problems presented by Laos and Cambodia illustrate the now obvious fact that we are caught up in an Indochinese struggle and that a solution confined to Vietnam is no complete solution.

III

Withdrawal of logistic support forces. At the second projected level, with both ground combat and logistic support forces withdrawn, the U.S. military presence would be reduced to an advisory effort and, perhaps, continued air and artillery support. An advisory group of 25,000 to 50,000 has been mentioned in the press. If nonmilitary as well as military personnel are included, 50,000 would seem a fairly conservative estimate in view of the fact that 23,000 civil and military advisers remain in the Mekong Delta after withdrawal of all U.S. combat troops from that corps area. (There are four corps areas in South Vietnam.)

The immediate military arguments for retaining U.S. air and artillery support under these circumstances are likely to seem quite compelling. Such support would strengthen South Vietnamese capabilities, help protect American advisers and give those advisers more leverage in their attempts to influence Vietnamese military and nonmilitary actions. But arguments based upon longer-term political, military and ethical considerations would be much more negative. To mention the ethical argument only at this point—we draw back in horror from the Mylai massacre, yet, so long as we continue to bomb South Vietnam, we unavoidably perpetrate many such indiscriminate killings, differing from those at Mylai only in their more impersonal character and in the presumed intent of those involved in the killing.

If the United States reduced its involvement to an advisory effort, would we be well out of the woods in Vietnam? The answer, quite clearly, is no. We would simply have begun to get out of Vietnam the way we came in and, along the way, would very probably confront the old dilemmas that caused us to deepen our involvement so drastically in 1965.

If the communists had permitted us to withdraw U.S. forces to this level without reacting in one of the ways earlier discussed, their failure to react would perhaps reflect an assumption that the faster the United States withdrew, the less effective the U.S. program of Vietnamization and the better the prospects for early communist success. They would have taken us at our word that U.S. withdrawals would be related, in part, to the level of communist activity. Only if withdrawals were occurring at a quite steady and rapid pace would such a strategy be likely to seem attractive to the communists.

Once we were down to a residual advisory force (with, perhaps, air and artillery support) and it appeared that we were likely to maintain that force in South Vietnam for the indefinite future, the incentive situation would change. The communists would then very likely see it in their interests to undertake a program of political and military pressures directed against South Vietnamese forces and officials designed to produce major political changes in the South and to make the United States confront the untenability of its policy. They would seek, in this effort, to exploit war weariness and the adverse morale effects of the withdrawals in the South. They would probably consider it quite unlikely that the United States would respond by reintroduction of ground forces.

Would the government of South Vietnam be able to cope with renewed pressures? Clearly, estimating becomes extremely hazardous because this point is quite far down the road and much could happen on both the communist and non-communist sides between now and then. If the pessimists with respect to prospects for successful Vietanmization are correct, the South Vietnamese government could be in serious trouble. Moreover, many observers in South Vietnam who are optimistic about the ability of the South Vietnamese to defend themselves militarily are skeptical of the Thieu government's ability to survive in a political struggle with the National Liberation Front. Furthermore, and rather paradoxically, if Vietnamization should succeed in providing relative military security, that very security might encourage the reëmergence of the atomistic, dog-eat-dog politics so characteristic of Vietnam, which would provide increased political opportunities for the communists.

Confronted by these uncertainties, one proposition of which we can be quite certain is that the communists would not stop trying to cause serious trouble in the South. Another proposition of an almost equal degree of certainty is that the South Vietnamese government and its forces would not be free of serious vulnerabilities. From these propositions we can draw the rather obvious conclusion that there would be some clear risks that the communists would produce significant political and military deterioration in the South.

If such deterioration should occur, the presence of U.S. advisory elements could present the United States with serious dilemmas. The possibility that our large advisory group might be caught up in a politically or militarily collapsing situation would be likely to seem as horrendous a contingency to policymakers in, say, 1974 as it evidently seemed to President Johnson and his advisers in 1965. If we were faced by political deterioration, the strong temptation would be to shore up the government of the day in the South or to back whatever leadership promised to continue the struggle against the communists. Even a gradual, relatively peaceful, takeover by the communists would be embarrassing, to say the least, if it occurred with 25,000 or more U.S. advisers and billions of dollars of U.S. military equipment still in Vietnam.

Thus we return to the rock-bottom fact that so long as the United States is committed physically and politically to any degree in South Vietnam, there is always a risk that we shall pay, and pay dearly, for that commitment. As in the past, our first inclination in a weakening situation will be to throw more economic and military materiel into the breach. But if that fails, we would confront the question of military reinvolvement. If we retained U.S. air and artillery forces in the South, we would have more to work with from a military point of view, but it would, by the same token, be easier for us to slip into a deeper military involvement.

IV

Withdrawal of all special U.S. advisory elements and all combat forces. For purposes of analysis, it is assumed that, at this level, the United States would withdraw all special civil and military advisory missions and, if they had been retained earlier, all air and artillery units. Such a withdrawal would be based upon the assumption that the South Vietnamese no longer needed such support. In effect, we would consider that we had "won" the war, temporarily at least. Our relationship to South Vietnam would revert to the situation that existed prior to 1961 before the Kennedy administration build-up of advisory and air units. While no one seems to be thinking of this as a serious possibility for the foreseeable future, it is a case worth examining because it presumably represents the final goal of a policy based wholly upon Vietnamization of the war.

We must assume that in such a situation we would continue to be involved in a substantial aid program to South Vietnam. Unless the communists had faded almost completely away—a most unlikely contingency—the South Vietnamese would need to maintain a substantital military establishment for some time. The large quantities of military supplies and equipment which we have supplied in the past, and are presently augmenting under the Vietnamization program, would need to be maintained and replaced. Even in the very unlikely event that there was little sense of immediate threat, the United States would be likely to pour substantial amounts of materiel into Vietnam for the indefinite future if for no other reason than as insurance to reduce the risk of future combat reinvolvement.

A large South Vietnamese military establishment would place demands on the South Vietnamese economy which would force the

continuance of substantial U.S. economic aid. Reconstruction needs would require additional assistance. These military and economic aid programs would, in turn, mean a continued large aid establishment in South Vietnam. Hundreds—very likely thousands—of U.S. military and civilian personnel would remain in the South.

In the absence of a negotiated settlement, the United States would very probably confront the question of security guarantees for South Vietnam. The government of South Vietnam would be likely to press strongly for some kind of bilateral or multilateral guarantee before the last American combat elements departed. The Geneva Accords machinery, established in 1954, has broken down quite completely and could hardly be glued back together again without a new international agreement. While current U.S. public opinion, Congressional attitudes and stated administration policy would all suggest that we would be unlikely to commit ourselves in any way that might seriously risk future combat reinvolvement, what would an administration which is formally committed to the continued independence of South Vietnam do in such a situation? It would be unlikely to feel that it could cast South Vietnam adrift after having "won" the war; it would fear that such action would simply encourage the communists to resume the struggle after our departure.

To assume that we shall arrive at this point within the context of a policy based upon seriously intended Vietnamization is to assume that the military capacity and the political threat of the communists have been temporarily, at least, severely blunted. It is not to assume, however, that the communists have no significant military or political capabilities and it is decidedly not to assume that they have given up the struggle. Hanoi has an interest in South Vietnam that is, ultimately, deeper than our own. We may leave, but the communists will not quit. The communists would, following a U.S. departure of this scale, very likely initiate a gradually mounting program of pressures. How severe these pressures would be would depend in part upon the extent to which our withdrawal was made possible by our genuine success versus the extent to which it was made possible by a deliberate communist policy of lying low in order to encourage the final departure of U.S. combat and advisory units and to preserve communist assets for the future struggle.

The ability of the United States to stay out of that future struggle would be inhibited by our continuing substantial presence in South Vietnam and by our probable commitments to its continued survival as an independent entity.

V

The preceding discussion suggests some of the problems ahead and directs our attention to action that might minimize the risks involved in our policies. That discussion and what follows are based upon the assumption that, as indicated by the President's statement last November, the United States sees Vietnamization as a viable substitute for negotiations leading to a political settlement in the South. One must, however, bear in mind the possibility that the administration has not, for tactical reasons, revealed its full strategy and that its planning has, in fact, linked the strategies of Vietnamization and negotiated settlement along lines discussed below. Alternatively, the President may have hoped that a Vietnamization and withdrawal policy would induce the communists to lie low and thus permit us to get out of Vietnam with minimum casualties even without a negotiated settlement. The administration may have been willing to accept a fairly high probability of a communist takeover thereafter. Both of these speculations run counter to past public explanations of policy, and in the wake of the Cambodian action and the justifications that have been offered for it, both now seem quite unlikely interpretations of administration intentions.

Increasingly it has become evident that, as Chalmers Roberts noted some months ago in *The Washington Post,* President Nixon, like President Johnson before him, wants to "win" the war in Vietnam in the sense that he wants to leave behind a non-communist government in Saigon able to withstand any communist threat. This objective has been reflected in our continued support of the Thieu government in its opposition to any agreement in Paris which would clearly provide for substantial participation by the communists in political power in South Vietnam. Seen in this perspective, the Vietnamization strategy is clearly a strategy for winning the war. A serious U.S. negotiating position would involve acceptance of the fact that, while we have not lost the war in a military sense, neither are we capable of winning it. Being incapable of winning it and confronted by a foe who is certain to outlast us because of the higher relative value he places on success in the effort, we have in effect, even though not in fact, lost the war.

One of our recurrent hopes, which was revived in connection with the Cambodian operation, is that a show of great determination will cause the commission to see negotiations our way. But neither border operations nor resumed bombing of the North is any more likely to achieve this objective than past efforts to bomb North Vietnam into reasonableness.

Four specific defects of a policy based wholly upon Vietnamization have been suggested:

1. Vietnamization makes no provision for a political accommodation between the communist and non-communist forces in South Vietnam. It therefore leaves the central issue of the Vietnam struggle unresolved. With this issue unresolved we can anticipate continued political instability and continued political and military strife in the South.

2. Vietnamization by itself provides no assured basis for the total withdrawal of U.S. military personnel, including military advisers, within a reasonable time period. If the struggle continues, therefore, it is quite likely that we shall remain involved in it, with all the risks attendant thereto as sketched above.

3. Without new international machinery, obtained through negotiations, the United States will lack any body or arrangement to which it can shift the burden of responsibility for Vietnam. (I am not sanguine that, under the best of circumstances, we shall obtain very strong machinery. But some kind of machinery, weak though it may be, is essential if we are to lay our burden down in a reasonable period of time.)

4. Vietnamization fails to deal with the problems of Laos and Cambodia. Laos is a serious vulnerability for America; a convenient pressure point for the communists. For both it is a secondary theater of the Vietnam war. So long as the United States maintains a significant presence in South Vietnam—or even if it is largely out of South Vietnam, but remains committed to its defense—it can hardly agree to a settlement in Laos which would give North Vietnam free access to the corridor through eastern Laos into South Vietnam. To accept a Laos settlement which precluded the harassment of communist movement through the Laos corridor would be to leave South Vietnam with a serious vulnerability which would certainly be exploited by the communists in the absence of a political settlement in South Vietnam. On the other hand, without a political accommodation in the South, the communists are most unlikely to agree to a Laos settlement which effectively inhibits their use of the Laos corridor. Thus, a settlement of the central issue of the Vietnam war is necessary to a meaningful agreement with respect to Laos.

In Cambodia we have assumed a double responsibility: first, for preventing the border areas from being used by the communists to threaten U.S. and South Vietnamese forces; and second, for maintaining a non-communist government in Phnom Penh. We are unlikely to be able to divest ourselves of either responsibility so long as the political struggle continues in South Vietnam.

Because each of these defects could give the United States most serious trouble and because none of them could be resolved without serious negotiations, it is clear that Vietnamization without such negotiations is most unlikely to succeed in extricating the United States from Vietnam within a reasonable time.

Given limitations of space, it is hardly possible to do more than sketch out below the manner in which the policy of Vietnamization might be re-coupled to a negotiating strategy. Vietnamization represents a useful and necessary part of any plan for extricating ourselves from Vietnam. It involves a return to the principle upon which President Kennedy insisted and which we abandoned with the escalation of 1965—the principle that this is a Vietnamese war which ultimately can only be won, if it can be won at all, by the Vietnamese themselves. It is useful to return to this principle not only because it is correct but also because it provides the United States with a reasonable and understandable policy posture, both in the United States and in Asia. Reliance upon this principle will help reduce the political costs of U.S. withdrawal. The main danger in the Vietnamization policy is that it will be taken too seriously in the sense that we come to believe that it offers a real prospect for a "successful" outcome of the war.

A genuine effort to reach a truly viable settlement must begin with the recognition that the political role of the communists in the South is the heart of the matter. However, as Henry Kissinger, Assistant to the President for National Security Affairs, recognized in an article published in *Foreign Affairs* in January 1969, any agreement on this issue must be achieved, among the parties in South Vietnam itself. This places the United States in the difficult position of being dependent upon the government of South Vietnam for achievement of a settlement through negotiations, just as it is dependent upon that government in any effort to achieve success in the South through Vietnamization. If the United States is willing to abandon the concept of Vietnamization as a kind of "win" strategy and view it instead as an essential part of a political settlement strategy involving negotiations, it can be a useful tool in creating the conditions for a political accommodation in the South.

Under these circumstances, the policy of Vietnamization and U.S. force withdrawals would be utilized to make clear to the political elite of South Vietnam that it must decide, in a relatively limited period of time, what kind of political arrangements in the South are supportable on a long-term basis without continuing substantial U.S. assistance. In order to force such a decision, the United States would need to set a quite early deadline for the withdrawal of *all* U.S. forces, including logistic support, advisory and air and artillery elements.

It could be argued that such a deadline should be given to the South Vietnamese privately in order to maintain the theoretical bargaining leverage provided by communist uncertainty as to how long the United States will stay in Vietnam. But as a practical matter any deadline given to the South Vietnamese will soon be known by the North. Moreover, a public declaration of intent has the advantage of making the decision more irreversible and thus forcing the South Viet-

namese elite to confront its situation more quickly and frankly. It also has the virtue of reducing the likelihood of dilemma-creating attacks by the communists on U.S. or South Vietnamese forces.

A public American commitment to total withdrawal by a specified deadline, rather than reducing communist incentives to negotiating an agreement, could under proper circumstances actually enhance them. It is already evident from communist behavior that they feel little, if any, incentive to negotiate under present circumstances in which the United States refuses to confront the central political issue in the South and in which it seems bent upon withdrawing at least its ground combat forces at no price to the communists. A commitment to withdrawal which is part of a strategy clearly directed toward achievement of an accommodation between communists and noncommunists in South Vietnam would encourage, and could necessitate, a serious negotiating effort by the communists.

Even though the communists may believe that the political odds clearly favor them, they too confront uncertainties about the future which could be reduced, though not eliminated, by a negotiated settlement. The most obvious uncertainties are those relating to the effects of the Vietnamization program upon the military capacity of South Vietnam, especially if the United States continued "normal" military and economic aid programs after its force withdrawals.

Although the United States cannot itself negotiate political arrangements in the South, it can utilize an active secret diplomacy for exploration of the issues involved and, in this manner, could put additional pressure on Saigon. It is likely that the Thieu government's initial response will be to stiffen its already tough negotiating stance. A policy of continued active, unqualified support for Thieu is inconsistent with a successful American negotiating strategy. We need to draw back from our embrace of Thieu. He is providing us ample excuse for doing so in his increasingly repressive political actions. As we did in 1963 in the case of Diem, we need to make evident to the Vietnamese elite, including the military, that we are not committed irrevocably to the present government.

If, as rumored, Ambassador Bunker will soon leave Saigon, we shall be provided with an opportunity like that which occurred in 1963 with the shift from Ambassador Nolting to Ambassador Lodge to disengage from the existing regime. Our objective should not be the overthrow of the Thieu government, but rather the creation of a set of political pressures which would make political accommodation with the communists more likely. These pressures might lead to the replacement of Thieu, but Thieu might, if he comes to accept the necessities of the situation, be the leader of the effort to reach an accommodation.

If we can resolve the central political issue of the role of the communists in South Vietnam, it should then be possible to negotiate a new international framework—or to revive the Geneva framework—so that we can rid ourselves of our unilateral responsibility for the future of South Vietnam. It is hardly realistic to deal with the problem of Laos in a sentence, but the most obvious solution would be to negotiate a de jure partition along the lines of the present de facto partition. Such an arrangement would offer the Thais protection of their Mekong frontier while permitting the communists to continue to hold the areas that they have so long occupied and from which we are, in any event, incapable of dislodging them. However, with a settlement in South Vietnam, a less linear solution to the Laos problem may be more likely and more feasible. The Cambodian situation is too fluid for prescription, but an agreement to put back in power a Sihanouk, who at the moment is communist-leaning, might provide a solution that we could swallow and that would be acceptable to the communists.

The strategy proposed here rejects a simple U.S. pullout, such as is espoused by many critics of the war. Such a pullout would be likely to be seen by some Asians who are still important to us as a simple abandonment by the United States of its assumed responsibilities and would be likely to carry international political costs that it would be better, if possible, to avoid. On the other hand, the strategy is based upon the assumption that we cannot win the war through Vietnamization or any other means. It would require us to accept what would be, at best, a communist-leaning government in the South and a strong likelihood of the future reunification of all of Vietnam under communist auspices. Such a unified Vietnam is quite likely, however, to be able to maintain its independence from communist China.

It is obvious that it is precisely because this is the likely outcome of any serious negotiation that both President Johnson and President Nixon have resisted taking the actions necessary to produce an agreement. While such an outcome is regrettable in terms of the objectives we have sought in the postwar era, it is also inescapable. It is even more regrettable that we did not recognize this outcome for the necessity it was in 1965 and that we have had to pay such a tremendous price in lives lost and domestic problems unsolved in order to learn some lessons about revolutionary warfare in Vietnam and about the limitations of our power. To continue to refuse to recognize this necessity is to perpetuate the error and the costs.

A LOOK BACK AT THE WEIMAR REPUBLIC—THE CRY WAS, "DOWN WITH DAS SYSTEM"

Mr. SAXBE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "A Look Back at the Weimar Republic—the Cry Was, 'Down With Das System,'" written by Walter Laquer, and published in the New York Times Magazine of August 16, 1970.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LOOK BACK AT THE WEIMAR REPUBLIC—THE CRY WAS, "DOWN WITH DAS SYSTEM"

(By Walter Laquer)

(NOTE.—Walter Laquer is director of the Institute of Contemporary History and Wiener Library in London, and a professor of politics at Brandeis University.)

To understand their own troubled times, to find comfort and guidance, men and women always look to the past. The American Revolutionists turned to 17th-century England, the militants of 1793 drew inspiration from revolutionary episodes in Roman history, the 19th-century decadents were fascinated by the decline of the Roman Empire. Such immersion in the past is only partly motivated by a thirst for knowledge; at least equally strong is the desire to find proofs and arguments to support political beliefs already held. As Anatole France said about one of his heroes: He looks in the history books only for the *sottises* which he already knows. But the invocation of the spirit of the past is no less interesting for the myth-making involved.

Seen in this context, the growing attention paid in America in recent years to the culture and politics of Germany between her defeat in World War I and Hitler's accession to power is not surprising. It was a fascinating period in almost every respect, but this is not why it figures so prominently in recent discussion. Some writers have detected striking parallels with present-day America, but even those who deny this feel sufficiently troubled to devote much time and effort to disprove these analogies.

The debate itself is a manifestation of deep malaise, common apparently to both ages, and reflected in the disintegration of established authority, the contempt shown for the "system," the cult of violence, unreason and intolerance, the belief that almost any political and social order would be preferable to the present, and the alienation of large numbers of the young generation.

This is not to say that the political situation in America today resembles that of Germany after 1918. Germany had been defeated in war, the Kaiser had been expelled, a harsh peace treaty had deprived the country of substantial parts of its territory and had imposed reparations which it was clearly unable to pay.

Power was at first in the hands of the Social Democrats, but at no time did they have an absolute majority. Nationalist passions were running high, millions of Germans were convinced that their armies, victorious in the field of battle, had been stabbed in the back by the enemy within. The confidence gained in the years of normality after the political and economic breakdown of 1922–23 was destroyed by the impact of the world economic crisis (1929–32), and support for the radical parties of the left and the right became overwhelming. Their mounting strength effectively paralyzed the democratic process.

Both left and right referred with contempt to an outmoded liberalism which did not express the popular will, to the rottenness of parliament, the sickness of society. "In the liberal man German youth sees the enemy *par excellence*," wrote Moeller van den Bruck, who coined the phrase *"das dritte Reich"* (the third Reich). Most students favored a socialism of sorts and demanded the overthrow of *das System;* many of their elders were proud of their fighting spirit and their revolutionary ardor.

There were some dissenting voices; in a speech in October, 1930, Thomas Mann warned against the new wave of barbarism, fanaticism and ecstasy, the monotonous repetition of slogans "until everyone was foaming at the mouth." Mann with all his skepticism had grown up in the humanist school of the 19th century with its optimistic view of human nature and of progress; to him and others of his generation the retreat from reason seemed not only utterly abhorrent but totally inexplicable.

The political history of the Weimar Republic is a tale of almost unmitigated woe; culturally, with all its tensions and despair, it was a fertile period, a "new Periclean age" as a contemporary called it. These were the years of the revolutionary theater and the avant-garde cinema, of psychoanalysis and steel furniture of modern sociology and sexual permissiveness. It was a time of exciting new ideas and cultural experimentation, of the youth movement and youth culture. German literature and the arts, the humanities and science, were generally considered the most advanced and most authoritative in Europe. Christopher Isherwood's Berlin was the most exciting city in the world.

Weimar culture had an impact that outlasted the Third Reich and can easily be discerned in America today. The rediscovery of Brecht and Hesse, of George Grosz, the Bauhaus, and "Dr. Caligari," of psychoanalysis and modern Marxism (to mention only some of the more fashionable imports) are obvious cases in point. Certain cultural parallels are almost uncanny: the chic radicalism of New York clearly evokes memories of the drawing-room Communism of Berlin West. The phenomenal revival of astrology

and various quasi-religious cults, the great acclaim given to prophets of doom, the success of highly marketable *Weltschmerz* in literature and philosophy, the spread of pornography and the use of drugs, the appearance of charlatans of every possible description and the enthusiastic audiences welcoming them—all these are common to both periods.

Yet at this point the resemblance ends, for with all its perversities Weimar culture had a creativeness and a depth without equal in present-day America radical culture (and counterculture), which is largely eclectric and secondhand. The difference in the general cultural level, to put it bluntly, can be measured by the distance between "Portnoy's Complaint" and "The Magic Mountain." This is all the more remarkable since what is now commonly defined as "Weimar culture" was produced (and consumed) by a small group of people: some tens of thousands, rather than the millions who today constitute the American intelligentsia.

Political comparisons between the Weimar Republic and contemporary America are not, as I have said, very helpful. The United States was not defeated in a world war; aggressive nationalism and revanchism are not the main issues at stake today; democracy in America is not a foreign importation of recent date, as it was in Germany after 1918, where it failed to strike root. The extreme right in America is not a great dynamic force and racialism is on the retreat. The American crisis, such as it is, is not the result of a major economic crisis; on the contrary, it is the outcome of a long period of unprecedented prosperity.

And yet, with all the differences, Germany serves as a useful object lesson in one vital respect: to show what happens in a country where reason abdicates, where democratic authority disintegrates, and political freedom is sacrificed as those who should know better are afflicted by a failure of nerve.

The German radical intelligentsia of the left showed little wisdom in face of the Nazi onslaught. Following the Communist lead, they regarded the Socialists, not the Nazis, as their main enemy. They claimed (as some of their American successors do now) that there was no basic difference between Fascism and liberal democracy. In 1931, when Germany was a parliamentary democracy, they asserted that Fascism was already in power, so that as far as they were concerned Hitler's take-over came as an anticlimax. The German left-wing intelligentsia (unlike the French) jettisoned in its politics not only patriotism—which by itself would have been suicidal—but too often common sense as well.

The main weakness of the moderate Socialists and the German liberals was that they lacked not just inspired leadership, but the courage of their convictions. They were incapable of decisive action when the advent of Fascism could still have been averted. Unlike the Nazis and the Communists, they had no ideas, no faith or promise to offer to the young generation, only the sober, reasonable, unemotional, and tired explanation that democracy was probably the least oppressive of all political systems. This was not very satisfactory for a young generation in search of the Holy Grail. The German democrats, of whom in any case there were not too many, suffered from a paralysis of the will to survive.

Individual Jews took a prominent part in the radical movement of the left. Some were in key positions in the mass media and suffered from the delusion that their calling was to act as the conscience of the nation—as they understood it. They never realized how much out of tune they were with the mood of the nation. Having lost their own moorings in history, dissociating themselves from the Jewish community but not fully accepted by the Germans either, it was easy for them to deride national symbols—always, of course, on behalf of a great messianic idea.

The majority of their co-religionists had nothing to do with them, but in the eyes of the public they represented the urge to negation and destruction and their tactless behavior increased the latent anti-Semitism. Lacking political instinct, they did not realize that they were harming the very cause they wanted so much to promote. In the end even the extreme left deserted them.

The right-wing intelligentsia behaved disgracefully at its time of trial. Communist workers and monarchist land-owners occasionally put up courageous resistance, but only a handful of intellectuals opposed Hitler. There were still many simple, uneducated people in Nazi Germany whose scale of moral values had not been perverted and who felt in their bones that Nazism was evil and that there would be a day of reckoning.

The young intellectuals, on the other hand, trained to provide an ideological apologia for every abomination, were in the vanguard of the Nazi movement. Hitler's party won a majority in most universities well before it gained strength in the country at large. The clamor for a political university teaching only one political doctrine met no resistance from weak-kneed professors and administrators. The old humanist traditions and the idea of the inalienable rights of men were rejected as irrelevant. The conformism which overtook the academic world was frightening; the great majority plunged into the wave of the future, some out of cowardice and opportunism, others from sincere conviction.

Having said all this, one must point to certain extenuating circumstances which explain, though they do not excuse, this weakness and confusion. Germany was facing a crisis of unprecedented magnitude. Since 1914 it had experienced only five years of relative stability and prosperity (1924–29). In 1932 industrial production was only 60 per cent of what it had been three years previously, and more than one-third of the labor force was out of work.

The Government seemed utterly unable to deal with the crisis, and the conviction rapidly gained ground that only a strong leader could save the country from chaos. The German intelligentsia was numerically small and politically uninfluential; Hitler would have come to power whatever its behavior.

After 1945 those who had voted for Hitler disclaimed responsibility. They had meant to support a movement of national and social revival, not a terrorist regime and a relapse into barbarism. How could they possibly have known what Nazism would be like? Equally those who supported Communism in 1930 could claim that the Soviet experiment, still in its early stages, was much more promising than the movements for piecemeal reform. The realization of Lenin's dream of a revolution that aimed not merely to seize political power but to share it among the people, of a far more progressive and democratic system, seemed just around the corner.

Four decades and a dozen revolutions later, history has shown that the outcome of any attempt to establish a socialist regime which bypasses democracy, is bound to be a dictatorship, oppressive, fundamentally reactionary in character, and not unrelated to Fascism.

The last years of the Weimar Republic were a period of almost unmitigated gloom. But there is, I believe, one basic difference between 1932 in Central Europe and present-day America. Whereas the German disease was imminent and in all probability incurable, the confusion and loss of balance in America are to a large extent self-inflicted.

There are, to be sure, serious problems: Vietnam, the race question, the growing realization that traditional liberalism may no longer have the answers to the problems besetting the country. But serious problems are not usually solved by apocalyptic predictions about Babylon the Great, the mother of harlots and abominations. (The language of American radical literature, let it be noted in passing, seems to owe more to the Revelation of St. John the Divine than to the Communist Manifesto.)

The retreat from reason is gathering strength; a distinguished Princeton professor recently wrote in an equally distinguished journal that the moderate majority on campus sees the world in much the same way as it was seen by the New Left in April. It has absorbed many of the New Left's ideas but has impatiently pushed the S.D.S. leaders to one side, rejecting their tired rhetoric.

Which takes us right back into the world of the German cinema of the early nineteen-twenties, of "Dr. Caligari" and "Dr. Mabuse," of lunatic asylums where the psychiatrists take on the role of the psychotics, determined to show what learned madmen are capable of doing provided they jettison restraint and good sense.

Periods of grave mental confusion are less infrequent in history than is commonly thought, and they have to be studied with detachment and sympathy rather than with anger and moral indignation. Intellectuals are not necessarily the most reliable guides in such unhappy periods. By long tradition they are second to none in their sensitivity to the inequities of the world. At the same time many of them lead a sheltered life.

Even the students of society and politics among the academics all too often have little contact with real life; questions about next year's curriculum are the most important issues they have to decide. In their seclusion there is a constant temptation to devise political constructions firmly rooted in mid-air, in which everything seems possible, in which governments and political authority in general are replaced by communes of free and equal individuals, in which society exists without repression, and domestic policies require no sanctions, diplomats always tell the truth, and a foreign policy is pursued in which the wolf lies down with the lamb, and the leopard with the kid, under the supervision of Prof. Noam Chomsky.

Such utopianism may be needed as a corrective to the cynicism of the professional politicians and to unthinking conservatism. But once the divorce from reality becomes too pronounced, the results are ludicrous or dangerous or both.

Nowhere is this danger greater than in America, which has never accepted Max Weber's dictum that he who seeks the salvation of the soul, his own and others', should not seek it along the avenue of politics, for whoever engages in politics lays himself open to the diabolical forces lurking in all violence.

The present wave of cultural discontent and protest has appeared in all democratic countries, but some societies are more vulnerable than others. Certain causes are sociological: the expansion of the universities with a heavy preponderance on subjects which no longer prepare their students for any specific job in society; the emergence of the intelligentsia as a class with its own unfulfilled ambitions in the struggle for political power.

Some aspects of the present unrest are familiar to students of youth movements (of which Fascism, incidentally, was also one); others confirm the findings of those who have investigated the pattern of aggression found among young adolescents in society, both primitive and modern.

(This can be seen in the communal riots in Ireland and India or the Charrot factions of Byzantium. A student of war wrote the other day in The Times of London: "It involves confrontation with taunts, grimaces,

'pointing' and war cries, while the adversary is called animal names, usually monosyllabic: long hair and aggression often go together, e.g. in Vikings, Sikhs, and Chindits. . . . The war urge comes first and the *casus belli* after, instead of the other way round. . . . If one cause of grievance is removed or shown to be nonexistent another is quickly found. The act of removal is merely a further irritant and may even of itself be dangerous.")

Beyond these general features there are some specific ones which make America especially vulnerable. Measured by absolute standards, America is no doubt full of repression; compared with other periods and countries it is one of the freest societies that have ever existed. It faces enormous problems; yet compared with those confronting other countries they are, to the outside observer, not exactly overwhelming. How then to explain that for so many young Americans and for some of their elders, their country has become the epitome of repression, a country unfit to live in, a society doomed to perish?

To the outside observer this is perhaps the greatest riddle. It may be connected with the traditional exaggeration in American speech which Dickens derided more than a hundred years ago, and which in recent years has reached new heights of absurdity. The use of terms such as genocide, Gestapo, Auschwitz, is disturbing, for it betrays a lack of historical perspective, a provincialism and narrowmindedness so monumental as to make rational discourse impossible. It may be partly rooted in the traditional American hypochondria (also reflected in the enormous number of pharmacies and surgical operations), the state of mind in which any physical or social affliction, real or imaginary, immediately turns into a fatal illness.

Perhaps it has to do with the traditional American naiveté and the surfeit of idealism—engaging qualities in themselves but potentially dangerous. For they reflect a predisposition to be taken in by demagogues and their slogans. How else to explain the enthusiastic support given by so many well-meaning young Americans to causes and movements which, below a thin veneer of "progressive," anticapitalist, anti-imperialist verbiage, are unmistakably proto-fascist in character and which, if given power, would establish a rule of terror and oppression such as America has never known?

Which demagogue in history has not demanded "Power to the people," has not promised freedom and social justice? Yet such are the confusion and the blindness that no one wants to hear about history and the experience of other countries. It is this unthinking acceptance of slogans which constitutes perhaps the closet and most frightening parallel to the lost generation of the nineteen-thirties in Europe.

Commenting in his French exile on the suicidal policy of the governments of the day, Trotsky once wrote that he felt like an old physician with a lifetime of experience behind him who was not consulted at a time when someone dear to him was mortally ill. Europeans who lived through the nineteen-thirties and who have not been infected by the disease will react in a similar way.

Whether they have any cure to offer is less certain, and anyway it will hardly be accepted. The historical memory of a new generation does not reach back very far and the lessons of historical experience cannot be bequeathed by will or testament. Each generation has to commit its own mistakes and will have to pay for them.

Unlike Europe, America has never experienced a ruthless dictatorship or foreign invasion; civil liberties of a precious kind are taken for granted by the middle-class radicals; there is a great deal of loose talk about creeping dictatorship, but few of them have the faintest idea what it would really mean. It will be (if it should come to that) a rude awakening and it may be—as a generation of Europeans realized at the time to its detriment—too late for second thoughts.

For this much seems certain: society does not suffer anarchy for very long. It is impossible to predict whether authority will be reimposed by the right or the left if the crisis should deepen further, or by a populist mixture of both, but in any case democracy as we know it may not survive the process.

In contrast to widespread popular belief, history does not repeat itself; luckily therefore a repetition of the German catastrophe is not a foregone conclusion. But in one essential respect serious damage has already been done. World peace, the independence of Western Europe, security in the Middle East and other parts of the world depend at present on the balance of military power between the United States and the Soviet Union.

It is a highly unsatisfactory situation; it would be vastly preferable if it depended instead on the wishes and hopes of men of goodwill all over the globe. Regrettably this is not the case. No particular gifts of prophecy are needed to predict the future course of world politics if this balance is radically upset by a paralysis of American foreign policy, an inevitable by-product of the trend toward neo-isolationism.

This trend may be only the beginning of a disastrous process which could eventually affect other parts of the world. Such a prospect may not give rise to alarm among those who would welcome a defeat of their country, because, as they see it, it would mean the victory of "revolution."

But those not living in the fantasy world of the New Left know that the only revolution likely to prevail is that which now rules in Czechoslovakia and the thought does not fill their hearts with joy. If America's position in the world were that of Sweden, the present crisis could be regarded with greater equanimity. Sooner or later it will no doubt run its course, and, for all one knows, the country may emerge stronger from it. But America, for better or worse, is not Sweden, and it is not the future of America alone which is at stake.

It is unfortunate that the role of leadership should have been thrust at the end of the Second World War on a nation unprepared for the role. It is largely Europe's fault; unable to make a concerted effort, it has not asserted its role in the world and taken on itself part of the burden which has become too heavy for the United States. It is the foreign political aspect of the American crisis which now looms most prominently in the eyes of outside observers, for it is this which makes it potentially more dangerous than the European crisis of the nineteen-thirties.

These concerns and fears will not be shared by those deeply immersed in their debates on repressive desublimation and the merits of vaginal orgasm, not to mention other subjects of topical and cosmic relevance.

Kurt Tucholsky, the great writer who in many ways was the epitome of the radical intelligentsia of the Weimar Republic, wrote in 1935 from his exile in Sweden that "we have to engage in self-criticism, in comparison with which sulphuric acid is like soapy water." A few days later he committed suicide.

ORDER OF BUSINESS

The PRESIDING OFFICER. What is the pleasure of the Senate?

Is there further morning business?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ALLEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLEN. Mr. President, I ask unanimous consent that I may proceed for 12 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator is recognized for 12 minutes.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENTS

OPPOSITION TO THE MUSKIE AMENDMENT

Mr. ALLEN. Mr. President, I rise to oppose the Muskie amendment to H.R. 17123 because of the added expense it will cause, because it will impair the obligation of a valid contract, because it will cause disorder and confusion and will raise many serious questions.

Among the questions raised by the amendment is the following: What will be the contract price for the 15 destroyers to be built by the subcontractor?

The bid by the Bath Co. was $9 million per destroyer more than the bid of the Litton Co. If the contract is taken away from the Litton Co., which has the contract for the 30 destroyers, and the Bath Co. is given a contract for 15 destroyers, it is certainly very definite that the price that the Bath Co. would charge would be at least $9 million more per destroyer than the amount for which the Government now has a contract.

What would then be the price for the 15 destroyers to be built by Litton? Their contract is for 30 destroyers. If the contract is cut in two, so that the number to be built by Litton is reduced to 15, quite obviously the price would have to go up on the 15 destroyers retained by Litton.

Then it is contemplated by the amendment that the Litton Co., which has the contract for the 30 destroyers, would remain as the prime contractor, recognizing that it has a valid contract for the building of the 30 destroyers, but requiring it to subcontract 15 of those destroyers.

This amendment, with all due respect, would create a great state of confusion and would open a Pandora's box. Certainly it would create more problems than it would solve.

It is provided that—

> No funds authorized by this Act may be expended for the procurement of DD 963 class destroyers unless (1) the prime contractor with whom the United States contracts for the construction of such destroyers is required under the terms of such contract to subcontract to another United States shipyard and (2) the total number of such destroyers set forth under the terms of the prime contract is divided substantially equally between the prime contractor and subcontractor.

Nothing is said about the amount of the subcontract. Nothing is said about whether it will be at the price that the Litton Co. bid. Nothing is said about whether the price shall be raised or whether the price shall remain the same. It requires the present prime contractor to subcontract 15 of the destroyers for which it now has a contract. Obviously

the price at which it could subcontract the destroyers would have to be less than it is receiving, or else the contract cost is going to have to go up millions of dollars.

The Acting Secretary of the Navy, Mr. John W. Warner, in a letter dated August 29, 1970, to the distinguished Senator from Mississippi (Mr. STENNIS), points out that if this contract were split 20–10—that is, 20 retained and 10 going to the Bath Co. or a successful subcontract bidder—it would increase the cost of the contract for the procurement of the 30 destroyers by $225 million. Naturally, if it were split 50–50, the cost would be increased even more.

The Navy Department suggests that if it is desired to spend additional money, some $225 million or more, that it not be spent by splitting the contract, but that it be spent by authorizing additional ships much needed by the Navy.

So any change in the present procurement plan as proposed by the amendment would result in a serious program disruption and essentially nullify most of the benefits of competition and series production.

Mr. President, this amendment, if it is adopted, would leave the Navy on an uncharted sea without a compass. Nothing is said about the cost of the destroyers. The Navy now has a firm contract for the delivery of these destroyers, and the bid of the present holder of the contract was $9 million per destroyer less than the bid of the other company.

So why impair the obligation of the contract? Why break a validly existing, validly executed contract in order to divide it up?

The company that now seeks a part of the contract had every opportunity to bid on it, and did bid on it; and now, being dissatisfied with the result, it comes in and says, "Let us change it; let us require that half of these ships be supplied by others."

Nothing is said about the price. It leaves the Navy without any ships being built—because the amendment says that none of the funds authorized in this act may be expended for the procurement of any of these destroyers unless half of the contract is subcontracted to another company. There is no subcontract existing at this time, so until such a subcontract is entered into, the present contract would have to remain in abeyance under the amendment.

Will the subcontract require the subcontractor to build these 15 destroyers at the amount of the Litton contract? There is nothing said about that. Will it be more or less than the present contract? Are we going to add $225 million to the cost of the contract for the procurement of the 30 destroyers?

Say 15 of them are subcontracted. We all know that a prime contractor gets some sort of compensation when he lets a subcontract. He does not give the full contract price. So it is certainly fair to assume that the prime contractor would add some 10 percent to the amount the subcontractor is to receive, adding more and more to the cost to the U.S. Government—to the American taxpayer, if you please—if this contract should be broken by legislative action.

Mr. President, it occurs to me that a valid contract has been in existence for some time. The Navy gave notice to Congress in 1967 and in subsequent years that this contract was going to be let to one contractor, one shipbuilder. That suited everyone until the Litton Co. came up with the low bid, by $270 million, on the contract. Are we going to toss the contract out the window, disregard it, and impair the obligation of the contract? I do not believe the U.S. Government does business that way. I would be very disappointed if I found that it did.

So, Mr. President, it occurs to me that this amendment is not in the interest of the American taxpayer. It is not in the interest of the Navy. It is not in the interest of the Defense Department in the task of procuring ships with which to provide, or help provide, for the national security.

Mr. President, for that reason I oppose the amendment, and point out that by its very terms, it would leave the status of this contract in a great state of confusion, resulting, very probably, in costly delays, confusion, arguments, and possible litigation, because you just do not, by legislative act, seek to break a contract which has been validly entered into.

So, in the interest of the defense of this country, in the interest of the American taxpayer, and in the interest of our national honor, Mr. President, the amendment should be defeated.

The PRESIDING OFFICER. The Senator's time has expired. Is there further morning business?

THE FAMILY ASSISTANCE PLAN

Mr. GRIFFIN. Mr. President, in a statement issued from the Western White House at San Clemente last Friday, President Nixon made a strong appeal for Senate action in this session on the administration's family assistance plan.

The President accurately described this proposal as "the most important piece of domestic legislation of the past 35 years."

I ask unanimous consent that the President's statement be printed in the RECORD at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE PRESIDENT ON FAMILY ASSISTANCE

The most important piece of domestic legislation proposed by this Administration is the Family Assistance Act. It has properly been described as the most important piece of domestic legislation of the past thirty-five years, one of the dozen or half dozen such bills in the Nation's history.

I have emphasized the need for this welfare reform on repeated occasions since this proposal was made one year ago—in a speech to the National Governors' Conference, in a speech before the White House Conference on Hunger, Nutrition and Health, in the State of the Union Message, and in my remarks in St. Louis at the 50th Annual Convention of the Jaycees. Most recently, I have spoken about it privately to several members of the Senate Finance Committee.

I am gravely troubled by the fact that the remaining days of the 91st Congress are fast running out and Congressional action has not been completed on welfare reform. The present legislation is too far advanced, the need for reform is too great, for this to be permitted to happen.

The House of Representatives passed the Family Assistance Act on April 16, but the bill has been delayed by the Senate Finance Committee ever since. We have made numerous proposals for modification in the plan to meet the objections of Committee members. But ultimately the Senate as a whole must be given the chance to work its will on this issue and this bill. I urge this great and conscientious Committee of the Congress to conclude its public hearings and to get down to the hard business of marking up a bill as expeditiously as possible.

The House of Representatives, in its detailed and meticulous examination of the Administration proposal made a number of changes which were clearly improvements, and which have been wholeheartedly accepted by the Administration. The Nation is much in the debt of Congressman Wilbur D. Mills and John W. Byrnes who led this enquiry, and who are the authors of the legislation which passed the House overwhelmingly in April.

There is every reason to think a similar process will take place in the Senate, and every reason to welcome this prospect. Thus it has been proposed that nationwide operation of the Family Assistance Program be preceded by a period during which the program would be field-tested. This testing period would begin January 1, 1971 in a number of areas chosen by the Department of Health, Education, and Welfare. Thereafter the program would go into effect on a nationwide scale on January 1, 1972.

With time running out, and an historical social reform at stake, I have consulted with several co-sponsors of the bill including Senators Hugh Scott, Robert P. Griffin and Wallace F. Bennett, and we have agreed that if the Senate accepts this modifying amendment it will be acceptable to the Administration.

The Nation needs this legislation. The House of Representatives has acted. The Senate now must act. I have every confidence that it will.

Mr. GRIFFIN. As one of the sponsors of this legislation, I am pleased that the President has indicated his willingness to accept a suggestion that the plan be tested in a pilot basis for a year before it would go into effect nationwide on January 1, 1972.

I am confident that the members of the Senate Finance Committee, who have worked long and diligently on this proposal, will do all they can to see that this administration proposal, with such modifications as they deem appropriate, will be reported out in time for consideration during this session of the Congress.

Mr. President, I wish to commend the distinguished majority leader (Mr. MANSFIELD) for his clear statement, made over the weekend, that he wants to see that the family assistance plan considered before this session adjourns.

Finally, Mr. President, I ask unanimous consent that a statement by the distinguished Republican leader (Mr. SCOTT) concerning the family assistance plan, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR SCOTT

As the principal sponsor in the Senate of the Family Assistance Plan, I applaud the President's reaffirmation of support of the program including a testing period.

I think it is important that this plan become operative and even to start a testing period next year, after enactment, will be of great help.

I would hope that the Senate Finance Committee would report as soon as possible a bill to the floor so that it may be considered and passed before adjournment.

This is a most meaningful Welfare Reform Program advanced by this Administration, and I believe in the interest of all our people, it should be speedily enacted.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. STEVENS. Mr. President, I send to the desk an amendment, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

At the end of the Act, insert the following: "SEC. . No modifications or changes in the command structure of the United States Armed Forces shall be made until the Senate Committee on Armed Services and the House Committee on Armed Services of the Ninety-second Congress shall have had 60 days to examine the document known as the Fitzhugh report."

Mr. STEVENS. Mr. President, this amendment is quite similar to my amendment No. 847, which provided 90 days for the Armed Services Committee to examine the Fitzhugh report. There has been some indication that the Pentagon will not act precipitously in implementing the recommended changes in the command structure of the Armed Forces, but I feel very strongly that it is a matter that should be reviewed. We all know that we are coming down to the end of this session.

The only thing this amendment would do is prohibit a premature change in the command structure of the Armed Forces, following the Fitzhugh report, until the standing committees of the House of Representatives and the Senate have had an opportunity to review it. It will not in any way prohibit implementing those decisions if, after that review, the appropriate Committees of Congress see fit not to make any recommendations; but there are sweeping recommendations in it that would effectively downgrade the Joint Chiefs of Staff, eliminate the Alaska Command and the Southern Command, and create three new Deputy Secretaries of Defense with broad and sweeping powers; and it seems to me that the action recommended by the Fitzhugh report is the type of action that the standing committees of Congress should review.

I do not serve on either of those committees, but I would like to make certain that the administration's actions would be delayed until they are properly reviewed by the two committees.

Mr. STENNIS. Mr. President, in response to the statement of the Senator from Alaska, he mentioned this matter to me some 2 weeks ago, and had his amendment ready at that time. I had not had a chance to look into the Fitzhugh report at all at that time with reference to this command matter, and actually I have not looked into it yet, because of the pressure of time. I have learned, however, that it is a broad enough subject that it is going to require a great deal of study by the committees, by the services, by the Defense Department, and it should. It is a far-reaching matter. I certainly would not commit myself one way or another. It may be that something needs to be done. I have an open mind with respect to it. At the same time, I can understand the Senator's concern about the Alaska Command. I know of his manifestation of interest, and I am glad to take his amendment to conference, with the understanding that this matter will be explored further and we will consult with the conferees and the committee of conference and see what further can be done about the matter.

I am glad that the Senator has brought up his amendment, and I am glad to recommend that it be agreed to as a part of the bill.

The PRESIDING OFFICER. Does the Chair correctly understand that the Senator from Mississippi accepts the amendment?

Mr. STENNIS. That is correct.

Mr. STEVENS. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article published in the Anchorage Daily Times of August 21, relating to the Fitzhugh plan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAIRD EXPECTED TO DISREGARD FITZHUGH PLAN

(By Mary C. Berry)

WASHINGTON.—A presidential panel's recommendations for a sweeping reorganization of the Pentagon—including abolition of the Alaskan Command—are not likely to be implemented.

At least that is the implication of a speech made Thursday by the Pentagon's number two man, Deputy Secretary Vance Packard.

Packard was talking specifically about a proposal put forward by the panel's report—the Fitzhugh Report—that the Defense Department should be reorganized with three deputy secretaries, one of whom would be directly in charge of command operations. The report is named after the chairman of the panel, Gilbert Fitzhugh.

Speaking in Los Angeles, Packard said Defense Secretary Melvin Laird wasn't likely to implement this change any time soon.

"We don't want to create a structure that adds more top-involvement," he said. "Three deputies would tend to pull even more decision-making up to the top and we don't want to move in that direction."

Robert C. Jackson, another panel member, held a similar dissenting opinion in a proposal published with the Fitzhugh report last July 1.

"Two separate joint staffs at the national level would create a highly unsatisfactory situation," Jackson wrote in that opinion. "I believe it would be chaotic to set up another large military staff in Washington to parallel the work now done by the Joint Chiefs of Staff.

Jackson was also referring to the most controversial part of the Fitzhugh report—the recommendation that the Joint Chiefs be removed from day-to-day military operations. Thursday night in Los Angeles, Packard said this idea was still under review but added that if it is done at all it will be done "on a step by step basis".

For obvious reasons, the military objects strenuously to what they consider a "downgrading" of the Joint Chiefs.

All this is directly related to the future of the Alaskan Command (Alcom).

The proposal to abolish as such and give its functions to the Pacific Command is part of the broader plan to create three deputy secretaries of defense with broad but specific powers. One would be in charge of defense operations and would take over responsibilities in this area now belonging to the Joint Chiefs of Staff. The reorganized commands, including the merged Alaskan-Pacific Command, would be under his jurisdiction.

Jackson also objected to changes in the organization of the commands, particularly changes in the area commands, of which Alcom is one. The present area commands were formed after mature consideration. "They work well in practice," he wrote, "and there is no revolutionary change in the art of warfare that requires them to be altered in a radical way."

Whether any of the Fitzhugh Report's recommendations are implemented is up to the Defense Department and Laird shows few inclinations to make these changes. Although congressional approval might be required for some things, the 1958 Defense Department Reorganization Act gives the secretary broad powers to do much of the reorganization himself.

It looks very much as though the Fitzhugh report will join Washington's library of similar recommendations, all made in good faith and urgency, but never heeded.

The PRESIDING OFFICER. Is all time on the amendment yielded back?

Mr. STENNIS. I yield back the remainder of my time.

Mr. STEVENS. I yield back the remainder of my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back. The question is on agreeing to the amendment of the Senator from Alaska.

The amendment was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. GRIFFIN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

THE MUSKIE AMENDMENT

Mr. STENNIS. Mr. President, if there are no other amendments, I should like to address the Senate briefly on a matter which will be pending tomorrow.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. I have reference to the amendment offered by the Senator from Maine (Mr. MUSKIE) that in effect seeks to set aside a contract that has been awarded already with reference to the destroyers.

A great deal has been said about preserving the mobilization assets of our Nation in case of further need or in case of an emergency.

Mr. President, it occurs to me that in this particular contract, after all, the main mobilization background and qualities involved concern the massive material that will be used in these destroyers and the subcontracts that the prime contractor will make all over this Nation for this material. That would involve the labor that goes into it, the capacity to make the proper motors, and so forth. The greatest part of the mobilization in this contract is in the 45 States that will supply the material and the labor for the material and the fixings, the units that go into these destroyers. Those contracts will go out over 45 of the 50 States and will constitute 60 percent of the amount spent for the cost of these destroyers. It will involve a massive number of factories and industrial plants, with skilled and unskilled people and every other kind of ability that goes into the making of these products, some of which require highly skilled people, and all the complications of electronics and modern weapons and modern output of all kinds. That is the great mobilization base.

If the contract had gone to Bath, Bath would have been largely an assembly plant for putting together this 60 percent of the cost that is spread out all over this Nation. If it goes to Litton-Ingalls at Pascagoula, that will be the assembly plant that will put the pieces together, gathered from all over this Nation.

The putting together, the assembly plant, is not a complicated matter with reference to a destroyer. Modern as they may be, the modernity parts will be made throughout the length and breadth of our Nation. So for this kind of ship, I do not want Senators to get the idea that everything is made there and that no other area is involved.

Time will be quite brief in the morning, but I have a list of the shipyards—I do not have the list at hand at this time—that would be capable of making destroyers should this country need them on very reasonable notice.

Something has been said about the 20 additional destroyers above this amount. I think that is way in the future somewhere. However that may be, that would be a different type of destroyer, a different design destroyer, and Pascagoula would not have any running start to run away with that contract, should it materialize. My opinion is that it would be a long time before the Navy got the allocation of enough money through future budgets, future budget years, looking ahead, to build any additional destroyers in any large number such as 20 to follow this 30. The reason they are getting 30 now is that, because of the long delay, year after year, the Navy has had to put off a real chance to modernize their destroyer fleet. They have a hard time getting the money now, but the submarine threat from other sources, both the fighter attack submarines and those of the Polaris-type that the Soviets have launched into in such a strong way in the last few years, made this priority go up. That is why we have a contract now.

This has been an orderly process; it is an orderly contract. There is not a thing in the world unusual about this, except one thing: The Navy laid down these ground rules to start with. They were going to try to get more for their money. They were going to try to go over to a more modern shipyard concept. It is just commonsense that with a larger package, you get a better price. I recall that when I was a small boy we got two bananas for a nickel, but we got five for a dime. That economic principle is still true, and the Navy tried this out and it worked.

They got a good price for the destroyers. The GAO went over the figures very carefully. The charges were made that this was a buy-in. Their report does not sustain the allegation. Nowhere did the GAO conclude that it was a buy-in or that any of the figures of Ingalls were unsound. In a former speech I made, there is an analysis of the difference in price of $9 million per ship, and that the profits were small. Another point was on the estimate of their ability to get the material for a certain price, which the Navy checked into. The GAO auditors went into that, and they did not condemn it.

To be brief, they found no indictment, and no fault to lie at the foot of Ingalls. The low bid was found to be reasonable.

They said something about taking a chance. Well, where is there anything that a businessman does not have to take a chance on in the Government's buying of its products? Where is the case where everything is certain? Of course, there is no such thing.

Now, Mr. President, a great drive is going around here by other competitors who say in effect, "Well, we want our Senators to get us in and give us a chance to get at that contract."

I have not heard any of them saying they will do it for a smaller amount, much less a lesser amount than Ingalls. No one makes a proposition of that kind, that they will give the Government a better price.

Bath is one of the finest quality organizations in the Nation. We already know that it will not give a better price, or did not at least. They had the chance. Their bid was $9 million more per ship. There were three others in the running, and under the flair rules laid down by the Navy, they dropped out before they got down to the end.

Mr. President, if we are going to do business in that way, the Federal Government, as much material and as many weapons and so forth, it has to buy—planes, ships, tanks, everything else—so complicated and expensive—if it is going to make offers of good faith and say to the industrial units that come in here, "We will let contracts under the ground rules. Here they are. Everyone is bound by them." That is what happened here. They worked on it. They bid on it. Finally, there was a race to the wire. The last two competitors in the end, one was $9 million per ship under. That is about it. If it turns out to be for 30 ships, that will be $270 million—more than a quarter of a billion dollars.

This matter has come up about a single yard many times. It has been considered by two Secretaries of Defense, two Secretaries of the Navy, and a great host of naval officers. It has also been considered by Mr. Packard, one of the able industrial leaders in this Nation. I know it was considered, because he told me so himself. It was always their conclusion that this was a better course to follow in this particular case. We knew about that. We passed on it directly in Congress last year.

If we are going to come in now and let the ones that bid second get the contract set aside, or we have to give them half, where will that leave the Government with reference to making other purchases?

I know where it will leave the Senators. Every Senator will be having the experience in the course of the next few months where—I will not say a disgruntled contractor but I will say a disappointed contractor will say, "We want another chance. We want our Senator to get that contract set aside and get it altered. We bid for it, and we did not get it, but still we want half anyway."

Mr. President, let us not be fooled. That is what it will lead to. The shipbuilders, the planebuilders, and all the other builders who think they can set aside contracts with immunity when they need to get a contract and are not successful, they will all be in here. We just cannot afford to get into the legislative business of rewriting contracts that we have already committed the executive branch to carry out according to its best judgment and ability.

Mr. President, that is all I have to say at this time. I am sorry to have taken the time of the Senate at this point, but there is such a limited time available in the morning with only 30 minutes to a side, that I wanted to sum up now some of the high points of this matter.

I thank the Chair and I yield the floor.

S. 4309—INTRODUCTION OF A BILL TO AMEND THE IMMIGRATION AND NATIONALITY ACT

Mr. HRUSKA. Mr. President, I introduce, for appropriate reference, a bill to amend the Immigration and Naturalization Act. It is introduced at the request of the Attorney General and Department of Justice, on their own behalf and that of the Secretary of State. I ask that it be appropriately referred.

The PRESIDING OFFICER (Mr. HUGHES). Without objection, the bill will be received and appropriately referred.

The bill (S. 4309) to amend the Immigration and Nationality Act, and for other purposes, introduced by Mr. HRUSKA, by request, was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. HRUSKA. Mr. President, this bill is introduced so that it may serve as a vehicle for the consideration of much needed changes in some portions of the present immigration laws of this country; particularly as they effect the Western Hemisphere. Although I have great faith in the drafters of this bill and am confident that much of the material included in the bill has great merit, I do not endorse the bill section-by-section at this time as it is a most complicated matter.

It will require expert examination and a good deal of study before we can determine in what form and detail it should be adopted. It is my hope that this draft will serve as a springboard for a comprehensive study of our entire immigration procedures.

America has been, since its beginnings, a nation which opened its arms to the people of other lands. Immigrants have traveled to our borders for many different purposes, but with one common goal: to find a better life.

The past decade has produced tremendous change in America, as in other nations. However in spite of allegations to the contrary by some who dwell within our borders, the United States is still regarded by people all over the world as a nation which can indeed provide a better life. Because of this steady influx, we found it necessary in 1952 to set up comprehensive rules on immigration which were intended to strike a balance between the needs of this country and those of foreigners who wish to come to America. In 1965, the Congress extensively revised these preferences and exemptions which modify the established quota limitations applicable to the Eastern Hemisphere. At the same time, the Congress provided for the first time a limitation on immigration from the Western Hemisphere—one which contained no system of preferences as we have for the Eastern Hemisphere.

Mr. President, since July 1, 1968—when the Western Hemisphere limitation became effective—it has become increasingly evident that further reforms of the Immigration and Nationality Act are necessary, with particular regard to the Western Hemisphere.

The bill I am introducing today was transmitted by the Department of State with the concurrence of the Department of Justice, and is designed to alleviate many of the difficulties and inequities which now exist in the field of immigration and naturalization.

This is a comprehensive bill, the product of extensive experience and study. It would, among other things, apply the identical preference provisions to Eastern and Western Hemisphere quotas, thereby creating a worldwide system compatible with the principles of family unity and national need inherent in our immigration laws. As a further refinement, however, this proposal recognizes the special relationship we have traditionally enjoyed with our contiguous countries, and creates a special allotment of 35,000 visas each to Canada and Mexico. These numbers would exist outside of any numerical restriction applicable to any other country, and outside the preference system as well.

The bill would accomplish further reforms. For example, with regard to refugees. Presently, the seventh preference, which provides for refugee admission, applies only to the Eastern Hemisphere, and in an amount no more than 6 percent of the total hemisphere limitation. Under the proposal, the seventh preference would apply to both hemispheres in an increased amount of 10 percent of the established hemisphere limitations. This increase is in recognition of the fact that these troubled times resulted in an exhaustion of our refugee allocations in fiscal 1969 and 1970 well before the end of those years. We must not disappoint the persecuted and homeless whose sole hope is America.

Mr. President, this measure would make many other changes in the law too numerous to mention at this time. A summary of its major provisions includes:

First. Continues present 170,000 numerical limitation for Eastern Hemisphere and establishes numerical limitation of 80,000 or Western Hemisphere exclusive of Canada and Mexico.

Second. Provides separate annual allocations of 35,000 each to Canada and Mexico.

Third. Applies identical preference provisions to Eastern and Western Hemisphere quotas.

Fourth. Makes various modifications in preference classes and allocations within established quotas. Of particular interest is the grant of second preference status to parents of permanent resident aliens, and limitation of the fifth preference to unmarried brothers and sisters of U.S. citizens.

Fifth. Increases the maximum allocation for dependent areas from 200 to 600, and specifies that this limitation will be applied to the hemisphere in which the dependency is located. A special proposal would authorize the grant of permanent resident status to all West Indian workers now in the Virgin Islands in temporary status.

Sixth. In regard to refugees, the bill authorizes increase of the seventh preference allocation in each hemisphere to 10 percent. However, it does not modify the general parole authority now set forth in the statute and does not disturb the existing arrangements for the reception of Cuban refugees.

Seventh. Conditions the admission of H–2 temporary workers upon a certification from the Department of Labor. This proposal would transfer final authority to determine the labor acceptability of such temporary workers from the Department of Justice to the Department of Labor.

Eighth. Provides for waiver of nonimmigrant visas for certain 90-day visitors in order to encourage tourism.

Ninth. Provides discretionary waiver of inadmissibility for rehabilitated criminals, prostitutes, and visa misrepresenters with no close relatives in the United States upon their showing 10 years of good behavior.

Tenth. Restores adjustment of status for Western Hemisphere aliens except natives of contiguous countries and adjacent islands who are not immediate relatives.

Eleventh. Eliminates quota charge upon the grant of adjustment of status to Cuban refugees.

Twelfth. Proposes a number of changes urged by the Immigration and Naturalization Service to aid its enforcement responsibilities, including the following:

First, new criminal penalty for knowingly employing aliens in the United States in violation of law;

Second, new criminal penalty for remaining in the United States after illegal entry;

Third, new criminal penalty for acceptance of unauthorized employment in the United States by a nonimmigrant;

Fourth, amendment in the statute dealing with judicial review of deportation orders in order to minimize frivolous challenges; and

Fifth, clarification of statute dealing with waiver of deportability for aliens with close relatives in the United States who entered this country through fraud by specifying that the waiver is discretionary and that it does not apply to independent grounds of inadmissibility.

Thirteenth. Proposes a number of changes in the nationality laws in order to eliminate inequities and ambiguities.

It is a measure deserving of thoughtful and immediate consideration, and the administration is to be commended for the effort which has gone into its preparation. In justice to those who would seek to enter our borders and contribute to America's life force, I urge that this proposal receive early consideration.

Again let me say that I introduce this bill in the hope that the Judiciary Committee will examine all of its provisions in light of its expertise in these matters to see what portions of the bill should be adopted and what other changes in our immigration laws are needed and would be beneficial. The text of the bill is long so I do not ask that it be printed in the RECORD, but I do ask unanimous consent that a section-by-section analysis provided by the Department of State be printed in the RECORD at the conclusion of my remarks.

There being no objection, the section-by-section analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS OF ADMINISTRATION OMNIBUS IMMIGRATION AND NATIONALITY BILL

Section 1 contains the short title of the bill.

Section 2 amends the table of contents.

Section 3 amends section 101(a)(13) to redefine "entry" by specifying that a person who obtains an adjustment of status will be regarded as having made an entry for the purposes of the immigration laws. This would place such a person in parity of status with one who enters through a port of entry. At present, the statute discriminates irrationally in favor of a person who improperly obtains adjustment of status, not subjecting him to deportation for his illegal action and relieving him from proceedings for rescission of his improper adjustment after the lapse of 5 years. The proposed amendment would treat both classes of immigrants alike, subjecting them to like consequences and time limitations (if any), and granting them identical benefits, when benefits are available.

Sections 4 (a) and *(c)* amend section 101(a)(15)(E) and (I) in identical fashion to provide derivative nonimmigrant status for "members of the immediate family" of treaty traders and investors and of information media representatives, rather than only for the spouses and children. This would enable dependent relatives (parents, unmarried daughters, etc.) of such nonimmigrants who normally are members of the household to receive the same nonimmigrant treatment accorded to the principal alien.

Section 4(b) amends section 101(a)(15)(F) to confer upon the Secretary of Health, Education, and Welfare the responsibility for approval of school to be attended by nonimmigrant students. In addition, the amendment would eliminate the reference to "approved" schools. Presently some schools use

the phrase "Approved by the Attorney General of the United States" as part of their advertising. This gives a connotation that the Attorney General approves the school in all aspects. The amended statute retains for the Attorney General a measure of supervision, in authorizing him to prohibit the entry of students coming to schools which fail to furnish required reports of termination of attendance.

Section 5(a) amends subparagraph (A) of section 101(a)(27) to delete the present definition entirely and to substitute a definition including only aliens born in contiguous territory (Canada and Mexico), their spouses and children. Two provisos are included: (a) to limit to 35,000 the number of immigrant visas which may be issued to natives of any single contiguous foreign state in any fiscal year, exclusive of immediate relatives and other special immigrants; and (b) to provide that an alien described therein cannot be deemed to be qualified for such classification until he has obtained a labor certification if he seeks to enter the United States to perform skilled or unskilled labor. This amendment to establish a separate numerical limitation of 35,000 on immigration from each of our two neighboring countries is in recognition of the special relationship which exists between us.

Section 5(b) amends subparagraph (D) to provide special immigrant status for religious functionaries as well as for ministers of religion. This amendment would make possible the admission as immigrants without numerical limitation of other religious workers as well as ministers of religion.

Section 5(c) amends subparagraph (E) to delete the requirement that the approval by the Secretary of State of special immigrant status under this subparagraph be upon a finding that "exceptional circumstances" exist in the case of the applicant concerned.

Section 6 amends section 101(b)(1)(E) to amend the definition of "child" to include adopted children who have been in the legal custody of, and have resided with, the adoptive parent or parents for a period of one year rather than the present two years. The proposed amendment would also permit peirods of residence prior to the issuance of the adoption decree to be counted. Since the purpose of the period of residence is to insure that a stable family relationship has been established it is not considered to be significant when that period of residence occurred.

Section 7 amends Section 106 of the Immigration and Nationality Act, 8 U.S.C. 1105A. As enacted in 1961, Section 106 sought to minimize dilatory, repetitious challenges to deportation orders by providing a single, unitary review proceeding in the United States Court of Appeals. Experience has demonstrated that this alm has not yet been fully achieved. Frivolous and repetitious litigation is still being brought, obstructing the administrative process and overburdening the courts. In part, this development is attributable to ambiguities in the statutory language, which have led some courts to suggest the need for clarifying amendments. In part, it is attributable to the statute's provision for an automatic stay of deportation upon the filing of a petition for review, no matter how frivolous or repetitious it may be.

The amendments would clarify the statute and would limit the possibilities for dilatory use of the automatic stay of deportation. They would specify that the statute's unitary review proceedings would include review of determinations ancillary to the deportation edict, and would eliminate automatic stays of deportation, and resultant unjustified delays, for aliens who bring repetitious review proceedings.

Section 8 amends section 201(a) to establish a separate numerical limitation of 80,000 per annum and 22,000 quarterly for the Western Hemisphere, other than Canada and Mexico for which a specific limitation is set forth in section 5. The dependent areas physically located within the Western Hemisphere would be included within this overall ceiling. Together with the amendments in sections 9 and 10, this amendment places all countries of the Western Hemisphere (other than Canada and Mexico) under a system identical to that now applicable to the Eastern Hemisphere.

Section 201(b) is also amended to provide "immediate relative" status derivatively for the spouse or child of any alien entitled to immediate relative classification, whether or not such spouse or child may also be entitled in his own right to such status.

Section 9 amends section 202 in the following ways—

(a) a separate annual ceiling of 600 is established for each dependent area and this ceiling is charged against the overall limitation for the hemisphere in which the dependent area is located rather than against the 20,000 foreign state limitation of the governing country. These changes would relieve serious backlogs of immigration demand in certain dependent areas of the world where, in many cases, the present ceiling of 200 is insufficient even to provide for immigration by spouses and children of resident aliens. They would at the same time avoid having this increased demand preempt the foreign state limitation of the governing country, especially that of Great Britain to which the immigration from the vast majority of the dependent areas is chargeable at present.

(b) the provisions relating to alternate foreign state chargeability for a spouse or child following to join the principal alien, as well as one accompanying such an alien. This change will prevent problems which can arise under present law when a spouse and child are unable, for valid reasons, to accompany the principal, only to find they face long delays in following to join him because of unfavorable foreign state chargeability.

Section 10 amends section 203 in the following ways—

(a) the percentage reserved for the first preference categroy is reduced from 20% to 10%;

(b) the definition of aliens entitled to second preference classification is expanded to include the parents of a permanent resident alien if the permanent resident is at least twenty-one years of age;

(c) the percentage reserved for the third preference category is increased from 10% to 15% and provision is made for the visa numbers unused by higher preferences to "fall down" to third preference;

(d) the percentage reserved for the fifth preference category is reduced from 24% to 20% and the class of aliens entitled to fifth preference classification is restricted to the unmarried brothers and sisters of United States citizens;

(e) the percentage reserved for the sixth preference category is increased from 10% to 15% and provision is made for visa numbers unused by higher preferences to "fall down" to sixth preference;

(f) the percentage reserved for seventh preference refugees is increased from 6% to 10%;

(g) the definition of "refugee" is amended to add a requirement that an alien not be firmly resettled in any country in order to qualify for refugee status under section 203(a)(7).

These amendments adjust the preference system to make more visa numbers available to professionals, needed workers and refugees. Very heavy backlogs have developed in the third and sixth preference categories and the amount of visa numbers available for refugees have proven inadequate to meet the legitimate demand in that category. These revisions of the percentages allocated to the various preferences will provide a more realistic distribution in terms of the demand for immigration by relatives and by aliens having skills this country needs.

The enlargement of the second preference category to include the parents of an adult permanent resident recognizes the hardship that can be imposed if the adult son or daughter cannot confer preferential status on his parents until after he has qualified for citizenship.

The restriction of the fifth preference category to unmarried brothers and sisters retains preferential treatment when the ties remain close while taking into account the fact that a person who marries transfers his primary loyalty from his other relatives to his spouse and children.

Section 11 amends section 204 to require the filing and approval of a petition to accord special immigrant status to a religious functionary under section 101(a)(27)(D), and to require, as a prerequisite to the approval of a third or sixth preference petition, a certification pursuant to section 212(a)(14) instead of "consultation with appropriate government agencies."

Section 12(a) amends section 211(a) to delete the references therein to the transition period from December 1965 to July 1, 1968.

Section 12(b) restores discretionary authority to waive innocent defects in visas presented by entrant aliens. Subsection (c) of section 211 of the Immigration and Nationality Act was repealed by section 9 of the Act of October 3, 1965. Since the effective date of the latter act no relief has been available to an alien who innocently was not entitled to the classification shown in his visa at the time of his admission. The experience under former section 211(c) and its predecessor, section 13(d) of the Immigration Act of 1924, emphasizes the need for discretionary authority to deal with the cases of worthy immigrants in a humanitarian manner. The amendment would in effect restore subsection (c), and would authorize the Attorney General to grant relief where an entry is defective for technical reasons.

Section 13(a) amends section 212(a)(14) to add nonimmigrants under section 101(a)(15)(H)(ii) to those classes of aliens to whom the section is applicable and to provide that the exemption from the provisions accorded to certain special immigrants under section 101(a)(27)(A) shall be available to the parents of a permanent resident only if the permanent resident is at least twenty-one years of age. The present reference to exemption on the basis of a specified relationship to a United States citizen has been deleted, inasmuch as such relatives are eligible for "immediate relative" status and are thereby excluded automatically from the provisions of section 212(a)(14).

Section 13(b) repeals section 212(a)(24) relating to ineligibility of an alien applying from contiguous territory or adjacent islands if the alien arrived in such place within two years preceding the application on a nonsignatory transportation company. This provision is considered to be obsolescent.

Section 14 amends section 212(d) by—

(a) making an editorial change in paragraph (4) and by deleting the word "unforeseen" therefrom; and

(b) by adding to the section a new subsection (9) to provide that certain grounds of ineligibility specified in section 212(a) shall be inapplicable to aliens seeking admission as nonimmigrant visitors for business or pleasure for periods not exceeding ninety days and who are nationals of countries designated by the Secretary of State on a basis of reciprocity or a finding that the designation would be in the national interest. The grounds of ineligibility which would be made inapplicable include that relating to

the nonimmigrant visa requirement, waiving, in effect, the visa requirement for aliens who fall within the purview of the provision. The subsection provides that aliens admitted pursuant to it may not have their stay extended beyond ninety days from date of admission, may not change to any other nonimmigrant category, and may not have their status adjusted to that of permanent resident under section 244 or 245. In addition, provision is made for placing an applicant for an immigrant visa further down on the appropriate waiting list if he had previously been admitted under this provision and had violated the terms of his admission by overstaying, accepting employment or otherwise.

Section 15(a) amends section 212(g) to add aliens afflicted with psychopathic personality or a mental defect to those aliens who may benefit from the relief provided in the section if a qualifying relationship exists between the ineligible alien and a citizen of the United States, a permanent resident alien, or an alien to whom an immigrant visa has been issued.

Section 15(b) amends section 212(h) to incorporate the provisions of present section 212(i) relating to ineligibility under section 212(a)(19) and revises the relationships which will qualify an ineligible alien for the relief to match identically those contained in section 212(g).

Section 15(c) amends section 212(i) to add a "statute of limitations" on the operation of certain grounds of ineligibility by authorizing the Attorney General, in his discretion, to waive ineligibilty under sections 212(a)(9), (10), (12), or (19) in the case of an alien if (1) the act or acts giving rise to the ground of ineligibility were committed more than ten years prior to the date of application for a visa; (2) if any conviction in a court of law resulting from the commission of the act or acts occurred more than ten years prior to the date of application for a visa; (3) if any period of confinement resulting from such a conviction terminated more than ten years prior to the date of application for a visa; and (4) during the ten year period immediately preceding the date of application for a visa there was a clear record of the alien's rehabilitation.

Section 16 amends section 221(a) editorially to change the word "quota" to "foreign state limitation", where appearing. It also amends section 221(b) to authorize the Secretary of State and the Attorney General to waive, in their discretion, the fingerprint and photograph requirement in the case of a nonimmigrant alien. Section 221(c) is amended to require reciprocity in the setting of nonimmigrant visa validity, if practicable, rather than "to the extent practicable," and by removing the requirement that an alien to whom a replace immigrant visa is issued pay again the issuance and application fees.

Section 17 amends section 223(b) to extend the period of validity of reentry permits to three years, removing the provision for renewal. The present statute makes a reentry permit valid for one year, and authorizes a one year renewal. The proposed change would amply meet existing needs, and would materially conserve manpower and funds in eliminating the need to deal with thousands of applications for extension of reentry permits.

Section 18 amends section 238 by—

(a) repealing section 238(a) which is related to section 212(a)(24), also being repealed as obsolescent;

(b) by redesignating subsections 238(b) through (e) as (a) through (d);

(c) by amending subsection (d), redesignated (c), to authorize the Attorney General to contract with private carriers for the departure of aliens admitted under section 212(d)(9) (see Section 14 of this bill); and

(d) by making technical amendments to the definition of "transportation line" contained in section 238(e), redesignated (d).

Section 19(a) amends section 241(a) to remove from the grounds of deportability enumerated therein paragraph (10) relating to deportability for entry in violation of the conditions of section 238(a) which is repealed by section 18(a) of this bill.

Section 19(b) amends section 241(c) to provide that an alien's visa could be considered to have been obtained by fraud or willful misrepresentation within the meaning of section 212(a)(19) if the marriage to the citizen fiance or fiancee of an alien admitted under section 101(a)(15)(K) were terminated within two years.

Section 19(c) amends section 241(f) to eliminate inherent ambiguities and administrative difficulties in the statutory provisions for waiver of deportability for misrepresentations in connection with entry.

Generally speaking, section 241(f) of the Act, as judicially interpreted, exempts an alien with specified close family ties from deportation on the ground that he gained entry with a fraudulent visa, and on grounds relating to documents or numerical limitations. In its original conception, as applied by the Departments of State and Justice, this Act had a limited purpose, and merely excused from deportability based solely on misrepresentations, where an alien had close relatives in the United States. In *Immigration and Naturalization Service* v. *Errico*, 385 U.S. 214 (1966), the Supreme Court interpreted the statute very broadly. The scope of this decision, and the extent to which it sanctions waivers of deportation, are unclear, and this uncertainty has bred considerable litigation. The proposed amendments would clarify the statute and eliminate the undesirable consequences of the *Errico* decision.

The proposed amendments would accomplish the following major results:—(1) would specify that deportability can be waived for a person who entered through fraud only if he is not deportable on an additional ground other than those based on the misrepresentation itself, e.g., if he is in the immoral, subversive or criminal classes; (2) would make the waiver of deportation discretionary, and thus would make possible the denial of the relief in an undeserving case; (3) would specify that relief under this section is available only to those who enter as immigrants, thus making its benefits unavailable to those who enter surreptitiously, or on a false claim to be U.S. citizens, or as nonimmigrants; (4) would specify that an alien whose deportability is waived shall be regarded as lawfully admitted for permanent residence.

Section 20 amends section 244(d) to remove the requirement that a nonpreference visa number be deducted from the applicable numerical limitation in connection with the suspension of deportation of an alien under the provisions of section 244. The deletion of this requirement would not significantly increase the number of aliens admitted for permanent residence and would avoid noncompliance with the law in cases in which aliens are chargeable to a foreign state limitation under which nonpreference visa numbers are not available.

In addition section 244(f) is technically amended to bring it into conformity with the amended provisions of section 212(e) relating to the imposition of the two-year foreign residence requirement upon former exchange visitors.

Section 21 amends section 245(c) to restrict the prohibition against applying for adjustment of status in the United States to aliens born in contiguous territory or adjacent islands. The amended section would include two exceptions to the general prohibition in that aliens born in contiguous territory or adjacent islands would nonetheless be entitled to apply for adjustment of status if they were—

(1) classifiable as immediate relatives; or

(2) the child of parents, both of whom were entitled to apply for adjustment of their status.

Section 22 repeals section 246 of the Act, 8. U.S.C. 1256, which deals with rescission of adjustment of status. The provisions for rescission of adjustment of status will unnecessary in the light of the amendment of the definition of "entry" in Section 3, under which an improper adjustment of status will be subject to the same consequences as an improper entry.

Section 23 amends section 248 to provide that an alien in the United States as an "exchange visitor" under section 101(a)(15)(J) would be entitled to change to another nonimmigrant status without restriction unless he were subject to the two-year foreign residence requirement of section 212(e) as recently amended.

Section 24 amends section 251(d) to increase from $10 to $500 the fine for failure to report to the Service the illegal landing of an alien crewman. The amendment of section 251(d) is prompted by the belief that some carriers might be tempted not to report an illegal landing which would lead to a $1,000 penalty under section 254(d). Because of organizational changes in the Bureau of Customs, the term "district director of customs" is substituted for the term "collector of customs."

Section 25 amends section 254(a) to provide that the penalty for failure to detain an alien crewman on board until inspected, or a failure to detain an alien crewman on board after inspection when no landing permit or parole has been authorized, or failure to deport an alien crewman when required to do so, be increased to $2,000 from $1,000. The purpose of that increase is to induce carriers to exercise greater precautions to prevent unauthorized landing of crewmen. Mitigation to not less than $1,000 would be permitted.

Section 26 amends section 274 to impose criminal sanctions on those who knowingly employ aliens who are illegally in the United States or in an immigration status in which such employment is not authorized. Failure of the employer to inquire whether the prospective employee is an alien or a citizen, and to request production of an alien registration card by an alien is prima facie evidence of the defendant's knowledge that the alien was in the United States in violation of law. In the interest of effective and efficient administration of the law, the penalty for this offense is made a "minor offense" within the meaning of Section 302(f) of the Federal Magistrates Act (82 Stat. 1107–1119), so as to make the offense triable before federal magistrates, facilities prosecutions, and not unnecessarily encumber already overcrowded federal court dockets. The amendment would also repeal the proviso in which states that mere employment of aliens shall not be deemed to constitute unlawful harboring of such aliens.

Section 27 amends section 275 to provide for a penalty for attempted illegal entries, not provided in the present statute, as well as a penalty for wilfully remaining in the United States after an entry in violation of law and the violator may be prosecuted whenever encountered or located. Violations of this section, which relates to unlawful entries, will be misdemeanors, and could be tried before federal magistrates. More serious offenses now classified as felonies, which are detected at time of attempted entry, i.e., 18 U.S.C. 1546 (falsification or misuse of entry documents), could, when deemed appropriate, be handled as a violation of this amended section and tried before a federal magistrate as a misdemeanor. The added provision for this minor offense would often be more in keeping with the nature of the offense, would facilitate prosecutions and

would alleviate excessive burdens on the courts.

Section 28 adds new section 278A to prescribe a new criminal offense for the acceptance of employment by a nonimmigrant during the period of his authorized stay or within one year thereafter.

Section 29 amends section 287 by adding a new subsection (d) to specifically authorize immigration officers to carry firearms. Such authority has been exercised for many years as a necessary consequence of the law enforcement activities of such officers. However, in the absence of explicit statutory authorization, this authority may be open to challenge.

Section 30 amends section 301(a) to simplify the conditions for acquisition of United States citizenship by children born abroad to U.S. citizens by making uniform the conditions precedent for acquisition of U.S. citizenship by the child, whether the child has one or two citizen parents at that time. In both situations, one year of prior continuous physical presence in the United States of one citizen parent will be sufficient.

Section 31 amends section 301(b) with regard to retention of U.S. citizenship. Where a child acquires U.S. citizenship at birth abroad to a single citizen parent the condition subsequent for retention of such citizenship is made more lenient, by requiring that the child be physically present in the United States for an aggregate period of two years between the ages of 18 and 23, and by providing that the retention provisions become inapplicable upon the timely naturalization of the alien parent.

Section 32 amends section 301(c) to apply the same liberalized condition subsequent for retention of U.S. citizenship to children born abroad to a single U.S. citizen parent subsequent to May 24, 1934.

Section 33 amends section 316(a) to liberalize the residence requirements for naturalization by providing that a petitioner who has been physically present in the U.S. for 3 years of the 6 year period prior to naturalization can qualify.

Section 34 amends section 316(b) to liberalize the permissible absences from the United States during the prescribed period of qualifying residence by extending the statute's benefits to aliens employed by recognized philanthropic organizations and to owners or partners of business concerns.

Section 35 amends section 316(c) to liberalize the requirement of one year's continuous physical presence in the United States prerequisite to obtaining approval of an extended absence from the U.S. by a naturalization applicant, by permitting absence aggregating 60 days during such one year period.

Section 36 adds a new subsection (d) to section 316 to extend eligibility for approved absences from the United States by naturalization applicants to the spouses and children of aliens to whom such approval is granted, and makes appropriate editorial changes in the other subsections.

Section 37 amends section 319(a) to extend naturalization benefits available to the spouse of a U.S. citizen to any alien who is or was married to a citizen and lived with such citizen in marital union for 3 years. This change would mean that termination of the marriage after such 3 year period of living together would not affect the alien spouse's eligibility for naturalization.

Section 38 amends section 319(b) to permit immediate naturalization of the alien spouse of a U.S. citizen who is regularly stationed abroad in connection with specified employment, eliminating the 30 day waiting period now required.

Section 39 amends section 320 to authorize derivation of U.S. citizenship upon naturalization of a citizen parent having legal custody of an alien child, and enlarges the age limit for derivation of such citizenship to 18. This amendment simplifies and liberalizes the complicated rules in the present statute for derivation of citizenship through the naturalization of parents.

Section 40 repeals, as no longer neecssary in the light of Section 39, the present statutory provisions (section 321) for derivation of citizenship through the naturalization of alien parents.

Section 41 amends section 322 to facilitate naturalization of the alien child, under 18 years of age, of a U.S. citizen, upon application filed by the citizen parent in lieu of a petition for naturalization, and upon taking the oath of allegiance before a naturalization court.

Section 42 amends section 323 to facilitate naturalization of an adopted alien child, under 18 years of age, of a U.S. citizen, upon application filed by the citizen parent in lieu of a petition for naturalization and the taking of the oath of allegiance before a naturalization court. Burdensome residence requirements for the child are eliminated, and the amendment substitutes the simple prerequisites that the adoption must have taken place when the child was under the age of 16 and that the child is in the legal custody of the citizen adoptive parent at the time of naturalization.

Section 43 amends section 328(a) to liberalize special naturalization benefits for honorably discharged veterans with three years service in U.S. armed forces by eliminating limitation of such benefits to those who apply within 6 months after discharge.

Section 44 amends section 328(b)(2) to eliminate the requirement of witnesses to support for naturalization under military veterans statute.

Section 45 adds a new paragraph (4) to section 328(b) to eliminate the requirement of lawful admission for permanent residence by aliens seeking special naturalization benefits on the basis of three years honorable service in U.S. armed forces.

Section 46 makes necessary adjustments in section 328 on the basis of changes in Sections 43, 44, and 45.

Section 47 adjusts section 329(b)(5) in light of the change made in Section 44.

Section 48 amends section 332(b) to extend to approved nonprofit organizations the present statutory provisions for sending to schools the names of naturalization applicants and for distributing citizenship textbooks.

Section 49 amends section 334(a) to eliminate, as burdensome and no longer useful, the requirement that a naturalization petitioner produce two citizens as verifying witnesses.

Section 50 amends section 334(f). While retaining provision for filing declaration of intention, although such declaration is no longer part of the naturalization process, this amendment provides that such declaration must be approved by and filed with the Serivce, instead of with the naturalization court.

Section 51 adjusts statutory language of section 335(b) because of the elimination of a requirement for verifying witnesses to the naturalization petition under Section 49.

Section 52 amends section 335(d) to eliminate the awkward and unprecedented provision that the designated naturalization examiner and the Attorney General may make separate recommendations to the naturalization court in regard to a petition for naturalization court in regard to a petition for naturalization, specifying that the decision of the Attorney General shall be controlling as to the recommendation to be made to the naturalization court.

Section 53 eliminates statutory provisions in paragraphs (f) and (g) of section 335 dealing with verifying witnesses, in light of elimination of the requirements for such witnesses under Section 49.

Section 54 makes editorial changes in paragraph (h), redesignated (f), of section 335 to make it consistent with provisions authorizing temporary absence of applicants performing religious duties abroad.

Section 55 redesignates paragraph (i) of section 335 as paragraph (g) and amends it to authorize transfer of naturalization petition upon approval of the Attorney General when the petitioner changes his residence during the pendency of the petition. The present statute also requires approval of both courts, which serves no useful purpose.

Sections 56, 57, and 58 amend section 336 to adjust the statutory language because of the elimination of the requirement for verifying witnesses under Section 49.

Section 59 amends section 340(f) to specify that children who acquired U.S. citizenship upon naturalization of a parent do not lose such citizenship if the parent's naturalization is later revoked on grounds not involving fraud.

Section 60 eliminates statutory provisions for expatriation under section 349(a) which have specifically been declared unconstitutional by the United States Supreme Court.

Section 61 eliminates the statutory provision in section 352 for expatriation by residence abroad of a naturalized U.S. citizen, which was declared unconstitutional by the United States Supreme Court in *Schneider v. Rusk,* 377 U.S. 163 (1964).

Sections 62, 63 and 64 adjust the statutory language in sections 353, 354, and 355 by eliminating provisions relating to the statutory provision repealed by Section 61.

Sections 65 and 66 amend several statutes relating to enforcement of narcotics and smuggling laws to provide that the Attorney General may provide for the seizure and forfeiture of vessels, vehicles, and aircraft used to transport illegal aliens. The statutes amended already contain provisions granting such authority to the Secretary of the Treasury with respect to vessels, vehicles and aircraft used in smuggling narcotics or other articles into the United States. These statutes would be amended by adding appropriate references to the Attorney General.

Section 67 is a "savings clause" designed to protect and retain the entitlement to immigrant classification of (1) married brothers and sisters of United States citizens who are beneficiaries of petitions filed prior to the effective date of this Act; and (2) of certain Western Hemisphere-born aliens who have qualified as visa applicants on the basis of current regulatory and statutory provisions, but for whom no entitlement to such qualification would exist after the effective date of this Act.

Section 68 would amend the Act of November 2, 1966, by adding a new section 5 which would provide that visa numbers need not be used in connection with the adjustment of status of Cuban refugees in the United States under the provisions of section 1 of that Act.

The present requirement that these refugees compete with other immigrants from the Western Hemisphere has two undesirable effects: (1) it increases the waiting period for other Western Hemisphere immigrants; (2) it delays the opportunity for these refugees to benefit from legislation enacted specifically to permit the ready regularization of their status in this country.

Section 69 establishes, for a three fiscal year period, a special program under which aliens who have been admitted to the Virgin Islands in a nonimmigrant status and who possess an indefinite labor certification granted by the Secretary of Labor pursuant to 212(a)(14) and remaining valid may, without regard to numerical limitations and notwithstanding the prohibition of section 245(c) against the adjustment of status of certain classes of aliens, have their status adjusted to that of permanent resident or be issued immigrant visas. The spouse and

minor unmarried children of any such alien would also be entitled to benefit from this provision.

Section 70 repeals section 21(e) of the Act of October 3, 1965. This section provided for the establishment of the numerical limitation on immigration by aliens born in independent countries of the Western Hemisphere and would be incorporated into the Immigration and Nationality Act itself through section 8 of this bill.

This section also repeals section 8 of the Act of September 11, 1957, which provided authority for waiving the fingerprinting requirements for nonimmigrant aliens, now incorporated into section 221(b), as amended by section 16 of this bill.

Finally section 16 of the Act of September 11, 1957, is repealed. This section provided for absences of up to 12 months during the period of residence and physical presence required under section 301(b) for retention of citizenship.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, for the information of the Senate, what is the pending question before the Senate?

The PRESIDING OFFICER. The McGovern-Hatfield amendment, No. 862.

Mr. BYRD of West Virginia. Mr. President, I thank the distinguished Presiding Officer.

I am authorized by the majority leader to state that following the disposition of the military procurement bill on tomorrow, it will be the plan of the leadership to call up and dispose of the bill making appropriations for the Treasury and Post Office Departments.

The majority leader wanted Senators to be on notice that such action is contemplated.

ADJOURNMENT UNTIL 8 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 8 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 11 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, September 1, 1970, at 8 a.m.

NOMINATION

Executive nomination received by the Senate August 31, 1970:

DEPARTMENT OF STATE

John N. Irwin II, of New York, to be Under Secretary of State.

EXTENSIONS OF REMARKS

RESOLUTIONS ADOPTED BY NATIONAL SOCIETY OF SONS OF THE AMERICAN REVOLUTION

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 31, 1970

Mr. THURMOND. Mr. President, the National Society of the Sons of the American Revolution held its 80th annual congress June 7 through June 10 at Houston, Tex. and at that time adopted 11 resolutions.

Because of the importance of these resolutions I ask unanimous consent that they be printed in the Extensions of Remarks.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS

The National Society of the Sons of the American Revolution, at its 80th Annual Congress, assembled from June 7 to 10 at the Rice Hotel, Houston, Texas, adopted by unanimous vote, the following resolutions:

RESOLUTION NO. 1

Whereas: The message of the American Revolution of 1776 was that the State exists for the People, not the People for the State, and that the rights of the individual must be protected from governmental oppression and from every form of tyranny; and

Whereas: It is the responsibility of every American to understand and maintain this American way of life and to pass it on so that it may be enjoyed by succeeding generations; and

Whereas: The best government is that which recognizes and protects the dignity and freedom of the individual to:

Worship God in one's own way;

Free speech and a free press;

Own property and enjoy its use;

Engage in business for a profit;

Work in endeavors and locations of his choice;

Bargain with his employer or employees;

Keep and bear arms to protect his person and property;

Enjoy those other benefits guaranteed by our Bill of Rights; all without arbitrary governmental regulation and control.

Resolved: That the National Society of the Sons of the American Revolution unequivocally supports:

1. The voluntary reading of the Holy Bible and the voluntary offering of prayers in our public schools.

2. The control of our public schools by the Sovereign States.

3. The reduction of government spending and the balancing of our national budget to curb inflation.

4. The minimization of competition of the Federal Government with private industry.

5. The stabilization of our currency.

6. The abolition of all programs which reward indolence and destroy initiative.

7. The strengthening of law enforcement and order on our streets, campuses, and in our communities.

8. The right of the individual to keep and bear arms without the necessity of registration, either direct or indirect.

9. The right of the States to exercise all those sovereign powers not specifically granted to the Federal Government.

10. The withdrawal of the United States from the United Nations and its removal from our country.

11. Discontinuance of all trade with Communistic nations and their satellites.

12. Adherence to the Monroe doctrine.

13. Appropriate concern by the judiciary for the general welfare of all our citizens as well as for that of the wrongdoer.

RESOLUTION NO. 2

Whereas: The Pledge to the SAR was originally drafted to read:

"We descendants of the heroes of the American Revolution who, by their sacrifices, established the United States of America, reaffirm our faith in the principles of liberty and American Democracy, and solemnly pledge ourselves to defend them against every foe"; and

Whereas: The words: "our Constitutional Republic" should have been used instead of the words: "American Democracy";

Resolved: That the National Society of the Sons of the American Revolution reword the Pledge to the SAR to read: "We descendants of the heroes of the American Revolution who, by their sacrifices, established the United States of America, reaffirm our faith in the principles of freedom and our Constitutional Republic and solemnly pledge ourselves to defend them against every foe.

RESOLUTION NO. 3

Whereas: North Vietnam has continuously refused to publish the names of War Prisoners held by their Government and denied the prisoners of war their right to communicate with their families; and

Whereas: North Vietnam has refused the International Red Cross permission to inspect their prison camps; and

Whereas: The North Vietnamese have stated that all captured Americans are regarded as war criminals and they will be tried by their "Peoples Court";

Resolved: That the National Society of the Sons of the American Revolution strongly protest North Vietnam's total disregard of the Geneva Convention and urge that all available steps be taken to secure fair treatment and the release of our Prisoners of War.

RESOLUTION NO. 4

Whereas: The 59th Congress of the United States of America at its first Session, convening on December 4, 1905, and subsequent amendments thereto, incorporated the National Society of the Sons of the American Revolution; and

Whereas: Section Two of said Charter states the purposes and objectives of said corporation and declared it to be patriotic, historical, and educational, and among other things to carry out the position expressed in the Preamble of the Constitution of our country and the injunctions of Washington in his farewell address to the American people; and

Whereas: The National Society of the Sons of the American Revolution meet periodically and address themselves to these purposes and objectives in the form of action programs and resolutions; and

Whereas: The purposes and objectives of this Society cannot be fulfilled by resolutions of its position of such purposes and objectives if not forcefully brought to the attention of the appropriate governments and to the people of our Republic;

Therefore, be it resolved at the 80th Annual Congress meeting at Houston, Texas, June 10, 1970, that the officers and trustees of this Society, during the next year, develop through its processes of bylaw amendments and administrative procedures a definite system whereby resolutions and positions taken by this National Society may be more forcefully implemented through educational means to the governments and the people.

RESOLUTION NO. 5

Whereas: The National Society of the Sons of the American Revolution, desirous of preserving the spiritual and moral principles upon which these United States of America were founded, has, through the years, passed

Resolutions which become the Policy of the National Society, but are often ignored:

Resolved: That the National Society, Sons of the American Revolution call upon all chapters and all members to support all facets of our Society;

Resolved: That the National Society, Sons of the American Revolution commend those chapters and members actively supporting the National and State Societies, and remind those not so doing that they are failing in their duty to the Society as a whole.

RESOLUTION NO. 6

Whereas: The privilege of voting is a solemn responsibility involving maturity and sound judgment concerning which the attainment of 21 years of age is generally regarded as the minimum age limit; and

Whereas: To lower the voting age would permit many minors who lack the necessary experience to manage their own affairs to vote and participate in the management of the affairs of our nation;

Resolved: By the National Society of the Sons of the American Revolution that we oppose any reduction in the age level as a voting requirement.

RESOLUTION NO. 7

Whereas: The responsibility for the defense of our nation should be borne by all eligible citizens, in order to insure the preservation of the liberty of this Country and that this responsibility should be borne by all and not become the exclusive responsibility of a professional military;

Resolved: By the National Society of the Sons of the American Revolution that we call upon the responsible Federal officials to continue the present system of the American tradition of the "citizen-soldier" so that the obligation of military service shall be equitably distributed throughout the able-bodied population of this Nation, without regard to rank, wealth or other distinction than patriotism and love of country, as against any proposed strictly voluntary army.

Be it further resolved: We reaffirm our support of the ROTC.

RESOLUTION NO. 8

Whereas: We see and read where some young and old engage in parades, marches and demonstrations, in which the flag of North Vietnam is displayed; and

Whereas: Such an act is in fact giving aid and comfort to our communist enemies, and contains all the elements of treason save and except that there has been no formal declaration of war against North Vietnam; and no such act would be committed save by an enemy of this country.

Resolved: By the National Society of the Sons of the American Revolution meeting at Houston, Texas, that we denounce the display of the flag of North Vietnam in such circumstances as traitorous and unforgivable, and call upon the proper law enforcement offices to stop such display and if present laws are not adequate we call upon Congress to enact suitable laws concerning such display.

RESOLUTION NO. 9

Whereas: The United States has not only joined Britain in backing the United Nations sanctions toward friendly Rhodesia, but has closed the United States consulate and severed diplomatic relations with Rhodesia; and

Whereas: These sanctions, imposed without public approval, unfairly penalize a friendly nation, are inimical to American defense and economic interests, and give an extraordinary price monopoly to Soviet Russia on some vital commodities, such as chrome, thereby rewarding the Soviets who are the chief source of supplies to the forces killing American men in South Vietnam;

Resolved: That the National Society of the Sons of the American Revolution support the economic and strategic interests of the United States of America and to that end urge the immediate establishment of diplomatic relations and resumption of trade with the Republic of Rhodesia.

RESOLUTION NO. 10

Resolved: That we support the President of the United States in his policy of going into Cambodia to win and ending all enemy sanctuaries and that the President be so advised.

RESOLUTION NO. 11

A Resolution to express appreciation to those whose time and energy went into the 80th Annual Congress of the Sons of the American Revolution.

Whereas: The 80th Annual Congress of the National Society of the Sons of the American Revolution has been exceedingly successful, and

Whereas: Our appreciation should be extended to the many individuals and groups that contributed to the success of this Congress;

Now, therefore, be it resolved: That the National Society of the Sons of the American Revolution hereby expresses its most grateful appreciation to President General James B. Gardiner for the time and effort he has given to make his administration an outstanding one, and

Be it further resolved: That our appreciation be given to our Executive Secretary, Warren S. Woodward, and his lovely wife, Gisela, who made the arrangements, and took part in the excellent program which was presented. Also our special commendations to Executive Secretary Woodward on account of the two awards, for the second straight year, received by him from the Freedoms Foundation, one for the SAR Magazine and the other to its Editor; and

Be it further resolved that our grateful appreciation and thanks be extended to:

The Color Guard of the Houston Independent School District R.O.T.C.

The Honorable Weaver Moore who represented the Governor of the State of Texas in an address of welcome;

The Honorable Walter Gage Sterling who represented the Mayor of Houston in an address of welcome;

The Honorable Louie Welch, Mayor of the City of Houston, for having officially proclaimed the week of June 7 through 13, 1970, as S.A.R. Week.

Compatriot Dixon H. Manly, General Chairman of Arrangements for the Congress, Compatriot Edwin D. Martin, Ph.D., General Co-Chairman of Arrangements for the Congress, and the members of the Texas Society who assisted them;

The Christ Church Cathedral for its kindness in furnishing facilities and assistance for the Memorial Service;

Mr. Dan Smoot, for his address at the luncheon on Monday;

Major General Thomas A. Lane (USA, Ret.), for his address on Tuesday evening;

The Honorable Clark R. Mollenhoff, Special Counsel to the President, for his address on Wednesday evening.

Mrs. Walter G. Sterling, Chairman of the Ladies Affairs Committee; Mrs. Robert I. Sonfield, Chairman of the Hospitality Committee; and Mrs. James T. Anderson of the Information Committee for their kindness and efficiency during the course of this 80th Annual Congress;

Mrs. Wilson K. Barnes, Organizing Secretary General, National Society, Daughters of the American Revolution, representing Mrs. Erwin F. Seimes, President General, National Society, Daughters of the American Revolution;

Dr. Margaret Willoughby, Senior State President, Texas Society, Children of the American Revolution, representing Mrs. Robert S. Hudgins, Senior National President, Children of the American Revolution;

Mr. Thomas McCune Slick, National Chaplain, Children of the American Revolution, representing Mr. Lance D. Ehmcke, National President, Children of the American Revolution.

Mr. Thomas T. Currie, President, Texas Society, Sons of the American Revolution.

Mrs. Ford Hubbard, Sr., State Regent, Texas Society, Daughters of the American Revolution.

Lt. David Alan York, USMC, a member of the Kentucky Society, Sons of the American Revolution, representing the Armed Forces of the United States.

Be it further resolved: That the National Society, Sons of the American Revolution, in this 80th Annual Congress assembled, hereby express its sincerest appreciation to all others whose efforts contributed to the success of this Congress.

LEGISLATION TO REQUIRE THE OPEN DATING OF PACKAGED FOOD—XII

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FARBSTEIN. Mr. Speaker, last June, I filed a petition with the Federal Trade Commission asking it to require the last date a food can safely be kept on the grocer's shelves to appear on the label of all perishable, semiperishable, and canned foods. The objective is the same as that of H.R. 14816, legislation I first introduced last November, and which currently has 60 cosponsors in the House.

I filed the petition because of my belief that coded dating is a violation of section 5 of the Federal Trade Act and that the FTC has the authority through regulations to require open dating. While the objective of the petition is identical to that of my legislation, administrative action by the FTC could be taken more easily and quicker. The Congress will not be able to begin hearings on the proposal until the beginning of the 92d Congress, the FTC can act now.

The Washington Post on Saturday carried an editorial urging the FTC to take quick action on my petition .

I hope the FTC will heed the Post's call, and that interested consumers will write the FTC chairman to let him know that they are watching the action or lack of action by the Commission on this subject as an indication of whether the recent changes in the FTC's image are genuine or merely the result of good public relations .

The text of the editorial follows:

[From the Washington Post, Aug. 29, 1970]

SHELF LIFE

When a consumer returns from the supermarket or grocery store, opens a can of food for dinner and finds the contents spoiled or rotting, does he or she conclude, "well, that's my bad luck"? Or does the consumer suspect that perhaps canned foods are not good indefinitely, and that some date should have been printed on the can to say when it should have been pulled before spoiling set in? The answer, in our view, is that canned items probably do have a maximum safe "shelf life"—that there is a limit on how long a food keeps those qualities of nutrition and flavor for which the consumer bought it.

Rep. Leonard Farbstein, long a speaker for

consumers, has recently acquired facts that canned food, contrary to the claims of the National Canners Association and the Food and Drug Administration, does not last "indefinitely." Among his facts are those supplied by the Defense Department whose laboratory in Natick, Mass., does extensive testing on a large number of items from apples to yeast and concludes: "Rarely . . . would one call these foods good indefinitely." Other evidence includes the consumer in Baton Rouge, La., who bought a case of strained baby meats last May that turned out to be eight years old; a Pennsylvania consumer who purchased a jar of mayonnaise that was two years old and rancid; a Chicago shopper with a can of five-year-old chicken.

The FDA has tried to face the issue of shelf life. In its "fact sheet," the agency writes: "How long will canned foods keep? Canned foods will keep as long as nothing happens to the container to make it leak." One feels secure until it is discovered that the FDA's wording is strangely similar to that in a "consumer services" publication of the National Canners Association: "How long will canned foods keep? Canned foods will keep just as long as nothing happens to the can or jar to make it leak." Curious, Representative Farbstein checked out the similarity in wording. The FDA fact sheet, admitted an FDA official, was partially based on information sent over by the Canners Association.

The Federal Trade Commission has been asked to investigate this matter by Representative Farbstein. Action is obviously needed, not only to tell the consumer that canned foods do not last "indefinitely," but to force the local store manager to remove canned foods from the shelf before the safe date expires. Although the canners say that "a regular turnover about once a year is best," legislation is needed to require the dating of canned foods so that it is not left to the retailer to count the months before turnover time. The evidence is strong that canned food is not spoiled only by leaks or punctures in the can.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?
